The Baltimore Shooting Association has made rules governing the competition for the Pentz pin and Macalester cup. For the former the following applies: It shall be contested for by members only in a series of seven live-bird races of 10 birds each. The series, which began Sept. 30, continues on the second Saturdays of October, November, December, January and February, and the final race is to be shot March 10, 1900. The contestant scoring the highest number of points in any five races of the series is to own the pin. Each bird scored as dead constitutes a point. If there are any ties at the end of the series of seven races they will be shot off at 10 birds April 14, 1900, until the winner is declared. If there are not five entries in each of the races of the series the event will be postponed until the following Saturday. The handicaps will consist of distance and a number of birds allowed. Messrs. Malone, Hicks and Mann will do the handicapping, and are empowered to change the handicaps at any time they see fit. A majority of the handicap committee shall decide finally all questions. The foregoing will govern the Macalester cup, except as to dates and the number of races. For this cup there will be seven races, the first to be held Oct. 21, and continuing every third Saturday of November and December, 1899, and January, February and March, 1900; the final race of the series to be shot April 21, 1900. All ties are to be shot off April 28, 1900.

In the fore part of the present week bids were opened for the construction of the great fence which will surround the boundary of Interstate Park where it adjoins the highways. This fence will be 10ft. high, over a mile long, closely boarded, and the material will be of good quality. The grass, sown late in the fall, is growing with luxuriance and vigor. Within the next two weeks the architect's plans for the Casino will be completed in all the details ready for the builder. The financial support is most gratifyingly strong, and it is now but a question of construction to prepare the grounds and buildings for the greatest shooting events America has ever had.

A letter from Mr. W. R. Elliston, secretary of the Belle Meade Gun Club, informs us that the Schmelzer trophy will be contested for on the second day of the tournament, Oct. 24, and on the first day, Oct. 23, Messrs. De Bow, of Nashville, and Elliott, of Kansas City, will contest for the cast iron medal. In consequence of the large number of letters received from all sections and the general interest manifested, additional traps for live birds and targets have been installed, so that now there are three sets of traps for live birds and four sets for targets. Mr. Elliston states that from present indications it looks as if 100 or more entries will support the tournament. Mr. John Parker, we have been informed, well known and popular, will assist in managing. He has had great experience in all that pertains to the skillful conduct of a tournament. The fame of Gen. Jackson's beautiful home and stock farm, Belle Meade, is surpassed only by the fame of his illimitable hospitality. There is much of interest there besides the tournament. There are the fine horses for the admiration of lovers of the horse; fine dogs, among which are the celebrity, Dash Antonio, and his son Fitz; and there are the beautiful springs of pure water, which, with lovely women and fine horses, have done much to make Kentucky's fame world wide.

The officers of the Walsrode Gun Club, Trenton, N. J., are: President, Dr. Elmer Barwis; Vice-President, Frank J. Eppele; Secretary, George N. Thomas; Treasurer, Dr. James I. Woolverton. These officers, together with William B. Widmann, Chas. O. Lutes and Edward Titus, constitute the Board of Governors. Mr. Widmann is chairman of the board. Following are the members: Jenkins, Taylor, Clarence Jaques, Police Justice Charles G. Cook, Thomas Harrison, Dr. E. H. Ginnelly, W. M. Petitt, C. L. Francis, John Ginder, J. Sterling Worthington, James D. Hall, Fred Smith, Charles Cole, William M. Mickel (field captain), Charles E. Stokes, Charles H. McDermott. Associate members: Dr. C. H. Dilts, William Dickinson and Frank Bowers. In the gold badge contest at the monthly shoot, Oct. 11, Mr. Wm. Widmann was the winner, on a score of 14 out of 15.

The Baltimore Sun has the following: "The scheduled prices for the use of a gunning craft, equipped with sinkbox, decoys and a crew of three men for duck shooting on the Susquehanna River flats daily during the month of November follow: There are three days each week—Monday, Wednesday and Friday—when it is lawful to shoot ducks an the flats. The season begins Nov. 1, and this year the 1st falls on Wednesday, which is a shooting day. For the first day an outfit to accommodate from 1 to 6 men can be had for $50; second day (Friday), $35; third day (Monday), Nov. 26, $25; fourth day, Nov. 8, $20. Any other shooting day in the month, $15. The shooters supply their own ammunition and food, pay their own railroad fare to and from Havre de Grace and tip the crew for supposed extra attention."

Mr. C. C. Beveridge, called Dominie for short, has proved beyond peradventure that a steady diet on yellowleg chicken is the best method of training for a warm competition at live birds. He has not been doing much shooting lately, though dieting as aforementioned; but witness his performance at the N. J. S. S. A.'s tournament last week, where he killed 7 straight; then in the 15-bird individual championship event he again killed straight, the only one out of fourteen contestants who did so, and now has the title of live-bird champion of New Jersey. The proceeds of the next contest of this kind go to the Dominie, and he has already cautioned his host of friends to keep the event in mind and save money to enter.

Mr. Paul R. Litzke, in his interesting news budget, "Arkansas and the South," mentions this week that the Kansas City team of ten men is organized for competition with a like team from Omaha, in furtherance of which invitation will be sent to the latter team to appear on Nov. 23 to join issue and later in the day to participate in a banquet. He further mentions that there is a probability of a contest for the individual target championship trophy between Dr. A. U. Williams, the holder, and Mr. C. E. De Long, the challenger, both residents of Hot Springs, Ark. Also that Messrs. Buddard and Gilbert have claimed Aug. 28 to 30, 1900, for their second tournament at Lake Okoboji, Ia.

Mr. Geo. C. Lebohner, proprietor of Lebohner's Dexter Park, Jamaica avenue and Enfield street, Brooklyn, has issued invitations to the first open live-bird shoot arranged since he took charge of Dexter Park. Shooting commences at 10 o'clock, Oct. 30. There are four events on the programme, class shooting; all contestants stand at 28yds. The first event is at 3 birds, $2; the second and third are at 5 birds, $3; the fourth at 10 birds, $7, birds extra at 50 cents a pair in the first three events; they are included in the entrance to the fourth event at 60 cents a pair. Added money as follows: If ten or more entries, $10; fifteen or more, $15; twenty or more, $20. If there is spare time extra sweepstakes will be shot.

Mr. Thomas Donley has fixed upon Dec. 5 to 8, inclusive, for his third annual international tournament, at St. Thomas, Ont. Both target and live-bird events will be in the programme, with about $1,500 guaranteed. The main event will be 25 birds, $25, $750 guaranteed. Mr. John Parker, the expert transhooter, who is now in the South on a business trip in the interests of his company, will be the manager. Mr. Donley was the only Canadian who ventured to compete in the Grand American Handicap this year.

Dr. A. A. Webber, the famous pistol and shtogun expert, is rapidly recovering the use of his right eye, which was grievously injured at the Hell Gate Gun Club's shoot a few weeks ago. The eye is still weak, however, and a rest is enjoined, so Dr. Webber and wife have arranged to take an outing of a week or ten days in the wilds of Luzerne County, Pa., where the ruffed grouse fly merrily through the mountain cover, and the sad-eyed woodcock dart through the wildwood shadows.

Col. T. Martin, of Bluffton, N. C., was among the contestants at the N. J. S. S. Association's tournament, on the second day, when live birds were the attraction. As a testimonial to the esteem in which he is held as a live-bird shot, he and Mr. Harold Money were placed at scratch, 31yds., and they gave a good account of themselves at that, as the scores will demonstrate.

The next regular live-bird shoot of the Hackensack River Gun Club will be held on Friday of this week, Oct. 20, at H. Heflich's Hotel, Hackensack River Bridge, Paterson Plank Road; Hoboken, Jersey City and Rutherford cars pass the grounds. After the shoot there will be a supper at the club's expense. The secretary is Mr. John Chartrand, Hoboken, N. J.

On Oct. 10, at Memphis, Tenn., Mr. John Parker, of the Peters Cartridge and King's Smokeless companies, shot a friendly live-bird race with Mr. Abe Frank, on the grounds of the Memphis Gun Club, at 25 live birds. The race was remarkably close, Mr. Frank killing straight, while Mr. Parker lost but 1 bird, his 24th.

Under date of Oct. 14 Mr. Fred Gilbert, the expert trap shot, challenged W. R. Crosby to contest for the target championship trophy, the E C cup, and duly qualified by forwarding a deposit to Mr. Edward Banks, secretary of the E C & Schultze Gunpowder Co.

On Oct. 12, at Holmesburg Junction, Philadelphia, Messrs. H. B. Fisher and L. Finletter shot a two-men team race against Messrs. J Rothaker and T. S. Dando, 100 live birds per man, 30yds. rise, $200 per team. The former won, 177 to 170.

Mr. John J. Sumpter, of Hot Springs, Ark., retained possession of the Busch medal in a contest with Mr. S. A. Thompson, at St. Louis, Oct. 7. Each shot at 25 live birds. Sumpter scored 23, losing two dead out, and Thompson scored 21, losing 3 dead out.

In the contest for the E C cup, emblematic of the target championship of America, between Messrs. Rolla O. Heikes, of Dayton, O., and Mr. W. R. Crosby, of O'Fallon, Ill., the latter won by the score of 132 to 130.

Mr. D. C. LeFevre, of Buffalo, N. Y., informs us that the Burgess Arms Company, of Buffalo, N. Y., has sold its entire gun business and patents to the Winchester Repeating Arms Company, of New Haven, Conn.

Mr. J. D. B. De Bow has challenged Mr. J. A. R. Elliott to contest tor the cast iron medal, with the request that some day of the Belle Meade tournament be fixed upon for the contest.

Mr. James Atkinson, of New Castle, Pa., made the excellent average of 92 per cent., at the shoot of the Warren Gun Club, Warren, O., Oct. 12, breaking 161 out of 175 shot at.

Capt. A. W. Money shot in great form at the Carteret Gun Club's opening day of the season last Saturday, killing nearly all the birds he shot at during the day.

BERNARD WATERS.

Abe Frank vs John Parker.

MEMPHIS, Tenn., Oct. 10.—The match between Mr. Abe Frank and Mr. John Parker was close, there being but 1 miss in the race, as shown by the scores herewith. The match was at 25 live birds and was shot on the grounds of the Memphis Gun Club. Both shooters used Ideal shells, loaded with 3drs. of King Smokeless and 1¼oz. of No. 7½ shot, and both used Parker guns. The scores:

A Frank	2222222222222222222222222—25
J Parker	2221111121211121112212201—24

Rothaker and Dando vs. Fisher and Finletter.

HOLMESBURG JUNCTION, Philadelphia, Oct. 12.—There was a very interesting team race, two men on a side, this afternoon, on the grounds of the Keystone Shooting League. The conditions were 100 live birds each, 30yds. rise, $200 a team, each man to pay for his own birds. There was no wind. The day was ideal. The birds were mixed, good and poor.

Messrs. J. Rothaker and T. S. Dando were against Messrs. H. B. Fisher and L. Finletter. The latter team won by the score of 177 to 170.

Rothaker shot inhard luck, at first having several fall dead out of bounds, and this seemed to take his nerve, and he lost steadily, while his partner kept killing them all. Finletter made high score for his team, getting 90 out of 100, losing 2 dead out. His highest runs were 18 and 15. He shot a steady race, however, and was admirably backed up by young Fisher, who surprised some of the crowd by scoring 87 and losing 4 dead out of bounds. He also made second high run, killing 41 straight from his 45th to his 88th bird.

Dando and Fisher drew the hardest birds, the latter getting the worst, but had lots of luck in gathering his birds. Rothaker and Finletter drew many easy birds, and most of those missed were comparatively easy ones.

Finletter won the toss and sent the opposite side to the score first. Rothaker opened the ball and all killed their first 5 except Dando, who missed a hard right-quarterer. Fisher and Rothaker each scored 19 out of the first 25, the former losing 3 dead out and Fisher 2. Finletter got a lead by killing 24 to Dando's 21. Finletter's 14th bird, a hard left-quarterer, dropped dead out. Rothaker went to pieces in his second 25, losing 9, while Fisher scored 21. Dando held up his side by killing his 25 straight, while Finletter lost 6. This gave Finletter's side a lead of 2 birds on the 50.

Dando kept up his good work by killing his next 25 in fine style. Fisher also improved, and did the same. Finletter outshot Rothaker by scoring 23 to his 20, and at the end of 75 birds Finletter's side led by 5 birds. All hands took a brace, and the last 25 birds was a pretty race. Dando kept up his great score and killed straight until his 81st bird, a hard, low-flying dark bird, which died over the boundary. He killed all the rest, running out with a score of 95. Rothaker also improved and shot 16 straight, and then lost 5 in his last 11 birds. Fisher ran his straight up to 41 birds, losing his 88th bird, a difficult towering incomer, and lost 2 afterward. Finletter finished strong, killing all of his 25, but lost 1 dead out of bounds.

Mr. H. Febeger acted as referee. The contest began at 1:15, and in one hour 100 birds had been shot. The second 100 were finished at 3:10, the third at 4:10, and the race was concluded at 5:10.

Warren Gun Club.

WARREN, O., Oct. 14.—On Thursday, Oct. 12, there was an invitation shoot held on the grounds of the Warren Gun, Club. The visiting shooters were Jas. Atkinson and H. P. Shaner, New Castle, Pa.; E. W. Hull, Akron, O.; F. H. Snow, Brooklyn, O.; Mr. Dunn, Akron, O.; Dr. Gaston, Mineral Ridge, O.; Messrs. Lyman and Smith, Kent, O.; Egley, Young and Douds, Canton, O.

The regular programme consisted of ten 15-target events, and a two-men team event. The attached sheet shows the results of the events. Mr. Shaner's 25 straight in the team shoot landed the prize for New Castle, with an aggregate of 47 out of 50.

Upon completion of the programme several extra and novel events, evolved by the fertile brain of Mr. H. P. Shaner, were run off, adding pleasure to the occasion.

C. L. SCHOONOVER.

The Target Championship.

NEW YORK, Oct. 16.—*Editor Forest and Stream:* I have to-day received a letter from Mr. Fred Gilbert containing a challenge to Mr. W. R. Crosby for the E C inanimate target championship cup now held by him.

Mr. Gilbert incloses $25 as forfeit to bind the match under the conditions governing all contests for this cup.

Mr. Crosby has been duly notified of Mr. Gilbert's challenge.

EDWARD BANKS, Sec'y.
The American E C & Schultze Gunpowder Co., Ltd.

Sodus Rod and Gun Club.

SODUS, N. Y., Oct. 5.—Sodus Rod and Gun Club held the fall tournament Oct. 5 and 6. They were favored with fine weather and a large number of shooters, representing different clubs in this State. Five dollars in gold was donated by Mr. E. N. Snider for the one making the best average; $2.50 in gold by James Harris for second; $2.50 in gold by W. W. Wood for third, and $2.50 by J. Van Tassel for the poorest average. Also a fine line of merchandise, valued at $105. Following scores were made:

Trap Around Reading.

SINKING SPRING, Pa., Oct. 12.—The attendance at the two days' shoot of the Independent Gun Club, of this place, held Oct. 11 and 12, was very light, although the shoot was a success. It was the club's second annual target and live-bird tournament. Targets were used the first day, while live birds were shot at the second day. The live birds were of an excellent quality, of strong flyers. The day being warm made the birds a little sluggish, although there were but three "duffers" throughout the day. Capt. Hunsicker, of the Independent Gun Club, had charge of the target events, while Manager Fink, of Reading, looked after the live-bird events on Thursday. Buckwalter made the best average at targets.

The out-of-town sportsmen present were J. H. Miller and Buckwalter, of Phœnixville; Gundy, of Womelsdorf; Geo. Johnson, of Fritztown; Wertz, of Temple; McShane and Cowan, of Philadelphia; Kerr and Adams, of the South End Gun Club, Reading; Ritter, Hill, Haas and Fink, of Reading. Scores:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	10	10	15	10	15	10
Spatz	10	8	8	9	12	6	10	6
Wertz	7	8	9	8	12	9	10	10
Buckwalter	9	9	10	10	11	10	15	10
Miller	6	8	9	9	11	8	8	9
Gundy	9	5	..	..	..	..	..	7
Hill	4	5	3	7	9	5	..	7
Johnson	7	..	..	5	..	..	..	..
Hunsicker	..	..	..	6	..	7	..	7
Ritter	..	..	..	10	..	7	..	9

Independent introductory, 5 birds: Adams 5, McShane 4, Kerr 5, Spatz 5, Fink 4.

Suburban handicap, 5 birds: Adams, 29yds., 5; McShane, 28yds., 5; Kerr, 29yds., 4; Spatz, 29yds., 5; Fink, 28yds., 5.

The following miss-and-out events were also shot:

McShane	0	2	6	0	0	1	Kerr	..	..	5	..	..
Spatz	2	0	6	2	3	0	*Adams	..	..	1	..	..
Cowan	1	6	2	3	4	..	Kessler	..	..	..	0	..
Hill	..	6	4	..	..	..	Haas	..	..	..	1	..
Adams	..	..	0	..	..	..	*McShane	..	..	3	..	..

*Re-entry.

Three-cornered match, 9 birds, $5 a side: Cowan 9, Spatz 8, McShane 5, withdrew.

DUSTER.

E C Cup Championship.

Oct. 13.—The E C cup contest for the championship of America, at targets, was shot at Batavia, N. Y., on Oct. 13, between Messrs. W. R. Crosby, the challenger, and R. O. Heikes, the former winning by the score of 132 to 130. The weather was pleasant.

In his contest for it at Atlantic City, N. J., Aug. 23, Crosby scored 139. The scores follow:

R. O. B. MULES, Sec'y.

IN NEW JERSEY.

New Jersey State Sportsmen's Tournament.

The two days' tournament of the New Jersey State Sportsmen's Association, Oct. 11 and 12, was favored with good weather—calm, still days, with a good light, all favorable to good scores. In point of attendance, it was not up to what was expected. Extra events at targets were shot before the regular programme of the first two days and after it was finished. The tournament was held on the grounds of Smith Brothers, Foundry street, Newark. Mr. L. H. Schortemeier was manager.

On Oct. 11 the Association held a meeting in the home of Smith Brothers, Foundry street, Newark, N. J. There were present: Maplewood Gun Club, W. R. Hobart; Climax Gun Club, Neaf Apgar; Bergen County Gun Club, E. A. Jackson; South Side Gun Club, I. H. Terrill; Endeavor Gun Club, Edward Banks; Newark Gun Club, Jacob Pentz; Boiling Springs Gun Club, Harold B. Money; East Side Gun Club, H. C. Koegle; Dunellen Gun Club, W. M. Hooey; Lyndhurst Shooting Association, T. W. Morfey.

The minutes of the last meeting were approved as read by the secretary.

The treasurer's report showed a balance of $118.84 in the treasury, with no outstanding indebtedness.

Officers were elected as follows: President, Capt. A. W. Money; First Vice-President, M. Herrington; Second Vice-President, H. C. Koegel; Third Vice-President, F. C. Bissett; Secretary, H. B. Money; Treasurer, I. H. Terrill. Board of Directors: The president and secretary, ex-officio, with Messrs. George Piercy, N. Apgar, E. A. Geoffroy, Walter Smith and John G. Lindsley.

The president ruled, in reply to a question by Mr. Koegel, that the cup, concerning which there had been some previous debate at other meetings of the Association, had been won fairly by the Lyndhurst Shooting Association.

Tuesday, Preliminary Day, Oct. 10.

Events 3, 4, 5 and 6 were at 25 targets each, which was to have been a 100-target event, handicap, but it was finally made four distinct events, the 100-target race being abandoned. Shooting on this day began at 1 o'clock. Events 9 to 14 were extra.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Wednesday, Second Day, Oct. 11.

Extra events were shot before the regular programme began and nine were shot afterward. Nos. 7 and 8 were the individual championship match, entrance price of targets. Nos. 9 and 10 were the three-men team championship, 30 targets, entrance price of targets. There were but three teams entered, as follows:

Boiling Springs Gun Club—Capt. Money 28, H. Money 29, T. Morfey 25; total 82.

East Side Gun Club—H. C. Koegel 24, G. Piercy 26, E. A. Geoffrey 23; total 73.

Dunellen Gun Club—N. Apgar 27, F. C. Bissett 25, W. M. Hooey 18; total 70.

The scores in the individual championship were: Dominie 37, Piercy 46, Herrington 40, H. Money 45, Morfey 44, Capt. Money 44, Apgar 44, Bissett 27, Hooey 36, Wilson 41, Schortemeier 45. The non-residents who shot in this event, but who were ineligible for the cup, were Van Allen 37, Swiveller 41, Banks 45, Keller 35, Fulford 35, Chase 36, Waters 38.

The regular programme events were:

Events:	1	2	3	4	5	6	9	10	11	12
Targets:	10	10	15	15	20	20	15	15	10	10

Thursday, Third Day, Oct. 12.

The weather was exceedingly pleasant, much like that of the summer time. There was a good attendance to participate in the live-bird contests, among whom were many famous shots, Mr. Schortemeier acted as referee.

In the first event, at 7 live birds, $5 entrance, three moneys, out of the twenty contestants nine tied on straight scores, while five tied on 6 and four killed 5. The scores follow:

H Money, 31	2222222—7	Otten, 28	1112021—6
Koegel, 28	2211211—7	Bissett, 27	2121201—6
Van Allen, 28	2112222—7	Ferguson, 27	2221210—6
Piercy, 29	2111212—7	Steffen, 28	1211220—6
Capt Money, 30	2222221—7	P O N, 29	2022202—5
Hassinger, 28	1211112—7	Doty, 30	11222*0—5
Col Martin, 31	2122212—7	Woodruff, 29	2*12022—5
Dominie, 28	2222122—7	Grieff, 29	22*0222—5
Geoffroy, 29	1121222—7	David, 27	2*21200—4
Morfey, 30	2222220—6	Hooey, 27	0010221—4

In the three-men team championship three teams entered, representing the Boiling Springs, East Side gun clubs and Lyndhurst Shooting Association. The race was very close, the first-mentioned two tieing on 28, with Lyndhurst but 1 bird behind. The tie was shot off on 3 birds, and four attempts were made before a conclusion was reached. Each scored 8, 8, 9 and on the fourth attempt the Boiling Springs team scored 9, 1 better than the East Side, and won the trophy. Harold Money killed straight in the ties:

Boiling Springs Gun Club.		East Side Gun Club.	
Capt Money	2211222111—10	C Feigenspan	2222222222—10
G H Piercy	2222221212—10	H C Koegel	2102222222— 9
H Money	2222*02222— 8—28	E A Geoffroy	212122111*— 9—28
Lyndhurst Shooting Association.			
C C Beveridge	2221222222—10	T W Morfey	2220*20222— 8—27
A Doty	2202222222— 9		

Ties, 3 birds:

Boiling Springs Gun Club.				
Capt Money	011	121	221	121—11
H Money	222	222	222	222—12
Piercy	222	2*2	111	211—11—34
East Side Gun Club.				
Feigenspan	222	2*2	222	222—11
Koegel	222	222	222	220—11
Geoffroy	202	121	222	112—11—33

The individual championship had fourteen competitors, and of these Dominie (C. C. Beveridge) killed straight alone and took the honors. Harold Money was next with 14. Nearly all the contestants retired on the first miss, it being practically a miss-and-out. The scores:

Dominie	222122222221222—15	Piercy	2222220w
H Money	2222222221212220—14	Doty	222*w
Geoffroy	212121111111120w	Erb	2120w
Hassinger	222122222122110w	Capt Money	210w
Koegel	222122222*w	Morfey	20w
P O N	22222220w	Bunn	0w
Canon	21102010w	Bissett	0w

Event No. 2 was at 10 birds, $7, birds extra, four moneys, handicap. Doty, Col. Martin, Piercy and Van Allen killed straight, while there were seven who tied on 9, and three on 8.

Event No. 2, 10 birds, $7, birds extra, handicap:

Morfey, 30	2222220222— 9	Van Allen, 28	2222212222—10
P O N, 29	2022220222— 8	Geoffroy, 29	1211211210— 9
Doty, 30	2221222222—10	Koegel, 28	2202222122— 9
Bissett, 27	2022121110— 8	Erb, 28	1111111101— 9
Col Martin, 31	2222121222—10	Pony, 27	2021200222— 7
Wanda, 27	2002002202— 5	H Money, 31	22122222*2— 9
Steffens, 28	1210111112— 9	Capt Money, 30	1122012121— 9
Piercy, 29	2222222221—10	Woodruff, 29	2121121020— 8

Friday, Fourth Day, Oct. 13.

The main event, which began at 1:15 and ended at 4:25, was the 25 live-bird handicap, $10 entrance, birds extra, four moneys, class shooting. In this Harold Money and S. M. Van Allen tied on a straight score, Capt. Money being alone in the 24 class. The scores follow:

H Money, 31	2222222222222222222222222—25
Van Allen, 28	2222222222222222222222222—25

Arkansas and the South.

St. Louis Doings.

ST. LOUIS, Mo., Oct. 7.—John J. Sumpter managed to retain possession of the Busch medal, for which young S. A. Thompson had challenged him. While it was generally conceded that this youngster had ventured out of his class, he nevertheless gave a good competition, and made Sumpter extend himself all the way, for it was not until the 15th round that the latter could obtain any advantage, and though Thompson was ultimately beaten 2 birds he actually missed but 1 of his 4 lost, as 3 of these were dead out of bounds. Sumpter's 2 losses were also due to the same cause. This makes Sumpter's second win of the trophy.

Intercity Team Contest.

So far as the Kansas City sportsmen are concerned, everything is now arranged for the team contest between a ten-men team for their city and a like team from Omaha. A meeting of the Federation of Gun Clubs of Kansas City was held at the Midland Hotel Tuesday night, and it was then decided to invite the Omaha team to visit Kansas City Nov. 23 to 25 and meet the local club in contest. Nov. 23 will be given over to sweepstake shooting, and on the remaining two days the team race will occur. The principals in this will shoot at 50 birds, and the affair will be for the price of birds only. It is the intention of the Kansas City sportsmen to entertain the visitors with a banquet, and in view of this the following were appointed to act as entertainment committee: A. H. Glasner, E. F. Sweeney, J. B. Porter, C. C. Herman and J. W. Bramhall. Mr. James Whitfield was appointed to act as secretary, and he will look after all the correspondence, while Messrs. G. M. Walden, R. S. Elliott and James Whitfield will constitute the committee, who will select the team. In addition to the regular ten men there will be a like number selected to act as alternates. The only thing that now remains to make this event a fixture is the acceptance of the Omaha shooters. The time chosen for the contest is opportune, as the birds at this season of the year should be strong and hardy.

Challenged.

Dr. A. U. Williams, of Hot Springs, the present holder of the individual target championship trophy, has been challenged to contest for it by a fellow townsman of his, Mr. C. E. DeLong. Just when said event will occur has not been settled yet, though Mr. DeLong's forfeit is now in the possession of Mr. J. B. Speers, treasurer of the State Association, and he having therefore complied with all the conditions imposed on him, it is now up to the Doctor, and it only remains for him to name the date.

Claimed.

Both Charley Budd and Fred Gilbert requested me to claim date for their second annual tournament at Arnold's Park, Okoboji Lake, Ia., next August, the dates being 28 to 30. This, they say, is done to avoid any possible conflict, and the time chosen is such as will enable those who attend the shoot to indulge in some chicken shooting, for the season on these birds opens in Iowa Sept. 1. Aside from this the inducements they will offer this year will be far superior to those of their first efforts, as the added money will be considerably increased, and it may possibly reach the sum of $1,000. There is no more beautiful place for the holding of such an event than Arnold's Park and Okoboji Lake.

Here and There.

Mr. Chris S. Gottlieb writes me that he finds it will be impossible for him to attend the Belle Meade and Cincinnati tournament, as he had planned earlier. Chris' smiling and genial countenance will be greatly missed, while the absence of so strong an arm and true an eye will remove a great factor from the competition.

Shooters universally who had the pleasure of Mr. Chris L. Funk's acquaintance will regret to learn of his untimely and tragic demise. Mr. Funk was assaulted by footpads in his native city, Pueblo, Colo., which resulted in his death. Mr. Funk was of a genial and magnetic nature, and possessed the happy faculty of making friends of all with whom he came in contact. In his death Colorado loses one of its best shots and noblest sportsmen.

PAUL R. LITZKE.

WESTERN TRAPS.

Garfield Opening Live-Bird Shoot.

CHICAGO, Ill., Oct. 14.—Garfield Gun Club, of Chicago, to-day held its first live-bird shoot for the season, a very pleasant and successful affair, and unmarred by hitch or hindrance. There were sixteen entries for the trophy event, and it was hotly contested, with the result that Workman, Leffingwell and M. H. Shaw start even for the race for the season medal. The trophy event was followed by a warm sweep at 6 birds, $2, seven men tieing straight. This tie was shot off miss-and-out, and was won on the 14th bird by Kuss. The ties on 5 divided. At the conclusion of this race it was so dark that the shooters could hardly see, and it was necessary to trap white birds, in order to help out their eyesight and settle the tie. The birds to-day were very good summer birds, with an occasional young one which hesitated at the traps. The weather was cool, with a hazy light, and a freshening wind blew from left to right across the score. Three ladies were present, and one, Mrs. Shaw, took part, her score of 9 in the trophy event being a very creditable one. Following are the scores:

Trophy contest, 10 birds:

Kuss	1212212101— 9	Dr Shaw	2202222222
Dr Meek	2121*12211— 9	J Wolff	1111112222
Workman	2211122111—10	T Eaton	1101102101
Kehl	22*212200*— 6	M H Shaw	2222221212
Barnard	1121212101— 9	Hellman	2011*1*11
Nusly	220102*110— 6	Russell	1110010102
Gardner	1112002001— 6	L Wolff, Sr	0102002010
Palmer	1212222*22— 9	Mrs Shaw	1202212112
Leffingwell	1122212222—10	Dr Royce	2111201102

Sweepstake, 6 birds, $3: Kuss 6, Palmer 6, M. H. Shaw Barnard 6, Nusly 6, Leffingwell 6, J. Wolff 6, Eaton 4, Dr. S 5, Kehl 4, Russell 3, Gardner 4, Dr. Royce 6, Dr. Meek 5.

Garden City Gun Club.

The live-bird shoot of the Garden City Gun Club was set Watson's this afternoon, and it was confidently expected tha least a dozen shooters would appear. Only two members, ever, turned out, and the meeting was a failure, some shoo perhaps being called away to other grounds. The two mem on hand were Messrs. J. H. Amberg and H. Levi. Mr. Am has been quite ill for some days, but was well enough to ki out of 20 very fair birds, Levi scoring 15. The light was brilliant, and the wind was fresh. Score:

H Levi	01120212111100122220
J H Amberg	21121122112221111202

Live-Bird Season Open.

Although we shall not have any really good birds here next month, it may be said that the live-bird season at the l clubs is now open, and we may expect more and more prac matches, sweeps, etc. Nothing startling is on the string her the moment. Next Wednesday Audubon, the old-time gun of Chicago, has its regular meet, at Watson's, and on the follow Friday the sportsmen's trophy contest takes place—third of series. This event is apt to bring out about as many shooter any we have. As Garfield does not conflict, but splits weeks the Sportsmen's trophy, several of the Garfield men will no d be on hand for the latter contests, thus giving such shoo a chance for a good sweep each week, one on Friday and one Saturday.

Belle Meade.

Belle Meade, of Nashville, attracts earnest attention here, and programme is a liberal one. Our shooters pick Elliott to win cast iron badge over Mr. De Bow. As to the Schmelzer trophy, targets, that is anybody's race in the aggregation which will be hand at this tournament. Three sets of traps for live birds and for targets looks as though the Tennesseans intended to set a pace for competitors in the tournament line.

THE INTERNATIONAL YACHT-RACE.

THE unfortunate outcome of the America Cup races of 1895 gave occasion to a comment on the part of an English yachting journal to the effect that international contests were undesirable and detrimental to sport through the ill feeling engendered by them between nations as well as clubs and individuals. We were almost willing to accept this opinion at the time, and it has been forced upon us more forcibly since then in the lamentable bickerings over smaller international contests.

If such is really the rule, as proved by a full generation of international races, the present contest is a notable exception, as it has from first to last been marked by good feeling and fair sportsmanship on both sides. The challenge was accepted freely, the negotiations were conducted in a fair and business-like manner, the races were sailed without a protest or even an excuse for making one, and the result has been accepted without complaint or excuse not only by the challenger and his yachting associates, but by the British press as well.

We hope that this means far more than that those directly connected with the races for the time being on both sides are gentlemen and sportsmen; and that it inaugurates a new era in the chief event of the most scientific and intellectual of all sports, yacht racing.

On the part of the holders of the Cup, it has been proved in the present and the two preceding races that they have abandoned all ancient traditions and all claims to special advantages against the challenger, and that they are prepared to lose the Cup when they are no longer able to retain it by superiority of design under equal conditions. As soon as this is fully recognized abroad, the feeling engendered by the one-sided conditions of all the earlier Cup matches and intensified by the illegal tampering with the deed of gift in 1887 is likely to disappear.

On the part of that public opinion which, in spite of its dense ignorance of yachting usage, is nevertheless an important agent in fomenting international ill feeling on the occasion of a Cup race, there has been of late years a marked improvement. Those who not long ago considered it perfectly fair and sportsmanlike to match a single challenger with the largest fleet that could be gathered to oppose her, have at last begun to appreciate the fact that the mere continued possession of the Cup was a discredit as long as the conditions were not absolutely the same on both sides.

There is just now little prospect of a race in 1900, but we hope that Sir Thomas Lipton may adhere to his expressed intention of challenging again in 1901. If he does this with a yacht that is plainly faster than the new defender of the year, few on this side of the water will grudge him the possession of the Cup.

FALL.

SUMMER is gone like a tale that is told. The thistledown drifts down the north wind, the bloom of the goldenrod is faded on its browning bulbed stalks, the constellations of blue and white asters are thinning and fading in the cool, damp shade of the woodside. Under skies of cold steel-blue or somber gray, and over naked woods and fading yellow stubble and fields where green is growing brown with successive frosts, the straggling legions of crows move steadily southward, outstripped by swifter squadrons of wild geese making their aerial march to the wild clangor of clarions.

All sounds proclaim the season. The woodland echoes speak with changed voices, for they come with fuller, less broken tone from the naked woods and rocky hillsides than when each leaf seemed to give back its quivering ripple of sound. The brooks babble in muffled tones under the drift of fallen leaves that covers them and now clogs some tiny waterfall and now sets free the dammed current.

The mellow baying of the hound, the frequent report of the gun, the solemn boom of falling trees are befitting sounds; and the subdued hum of the vagrant bumblebee, quite bereft of its roistering summer swagger, the faint, slow creak of the cricket, and the bluebird's sad song of farewell are sounds that belong only to fall.

The sere and silent marshes are of uniform dun hue save where a veil is woven over them by innumerable spiders, and shines all day in the sun like unmelted hoar frost. The muskrats are laying their last thatch of sedge in the roof of their huts, unseen by day and unheard but as they stir the dead stalks of tangled weeds along the borders of their watery paths. A grebe wrinkles the glassy channel with its wake and sinks noiselessly beneath it as the prow of a late angler's skiff comes nosing its course around the nearest bend.

After a few days wherein the stripped earth dreams of its bloom and leafage and song which seem so possible to this genial air and summer sky, the way of the swimming waterfowl and the boat will be a crystal-paved way for the feet of the skater.

The grebe sounds the depths of far-away southern streams where water plants grow all the year round, and the angler sits by his fireside with pipe and glass, telling tales of his summer's fishing. The wind moans among the naked trees and brings from afar the sad song of the sea to the pines; it whistles dismal tunes to the bleached grass that such a little while ago listened to the blithe songs of the lark, bobolink and sparrow whose nests its greenness sheltered, and drifts the dead leaves into the hollows of the frozen earth.

Then from the gray roof of the sky that rests its arch upon the mountains, the snow descends and covers the earth's unseemly nakedness, and the freshness of the spring, the bloom and fruitage of summer and the glory of autumn are but dreams of the past and the future.

THE SIDE-SADDLE.

AN Ohio health society has recently taken strong ground against the use by women of the side-saddle. It expresses the view that the side-saddle is uncomfortable alike for rider and horse, and unsafe; that the natural way for women as well as for men to ride is to bestride the horse; and urges that hereafter women shall ride in that manner, wearing the ordinary riding trousers and the divided skirt.

This is certainly good doctrine, and we wish the Ohio health society all success in its efforts to bring about this reform. The side-saddle is uncomfortable for the horse and for the rider. Hardly one woman in ten can sit straight on it, and the result is that the saddle drags off to one side and is very likely to gall the horse's withers.

Far more important than this, however, is the danger to which every woman is exposed when she mounts her horse. However skillful a horsewoman she may be, her seat and her safety depend absolutely on the integrity of the saddle girths. If these break, a fall is inevitable for her, and hampered as she is by skirts she can do nothing to save herself. If she is not a good horsewoman, if she depends on her reins or on her stirrup to hold her in the saddle, her case is just so much the worse. For if the stirrup breaks, and she becomes frightened or loses control of the horse, it takes but a little while for her to be shaken out of the saddle.

Most girls and women are not at home on a horse's back, and a bolting or shying horse is likely to unseat them. If unseated they have not the chance afforded to every man who is thrown from his horse, that of simply rolling out of the saddle and striking the ground. Instead of that a woman may be hung from the pommel by her skirt and may be dragged about and shockingly mutilated by the horse's hoofs, where a simple fall from the horse would have given her no more than a jar. Cases of this sort occur with such frequency that it appears singular that no one has as yet preached the abolition of the side-saddle as a reform whose importance would justify a crusade.

The natural way to ride a horse is astride the animal. It is in this way that men ride everywhere; the women too among savage or semi-civilized people, and children of both sexes everywhere. The little girl, when she gets her first pony, bestrides it bareback, as her brother does, and gains confidence in herself while riding in this position. The young woman on the distant prairie, who is obliged to ride ten miles into town for her mail, rides in this way until she reaches the very outskirts of the town, when she changes her position and uses the horn of the man's saddle for a pommel. In proportion to its use we believe the side-saddle to be responsible for more deaths and accidents than any other implement which is employed in connection with outdoor life. Its use should be abandoned, and no doubt will be before very long, for this is an age of progress in outdoor matters, and women are eliminating from their lives many of the antique conventionalities, which have nothing to recommend them except long-established custom. There are to-day many young women who during their travels and their hunting trips in the West never think of using side-saddles, and there is thus, in some of the larger Eastern towns, a nucleus of women who understand that the man's saddle means freedom from fetters that they have always borne, and from limitations which are not only irksome but positively dangerous.

No woman who has ever ridden a bicycle need be ashamed to mount a horse astride, and it may be hoped that the day is not far distant when nine-tenths of the women seen on horseback will be riding in the natural, comfortable and safe way.

SNAP SHOTS.

In an interview with Commissioner Babcock of the Fisheries, Game and Forest Commission last week, Governor Roosevelt is said to have insisted that the Adirondack protectors who are remiss in their duties should be removed at once. The names of the culpable officials were not given, but the Commissioner might well enough make a beginning with Protector Fletcher Beede, of Essex county. He may not be worse than others, nor as bad as some; but there is quite enough in his record to offset the "pull" he is presumed to have on account of his brother, Assemblyman Beede. We took occasion last year to direct attention to Mr. Beede's worthlessness as a protector of game. He appears to be quite as inefficient this season. Whether by reason of stupidity, helplessness or cowardice, he gives the deer hunters in his district free range; stops his ears to the cry of the hounds, shuts his eyes to the sight of dogged venison, and ignores alike the hounders and the statute which forbids their hounding. We understand that the theory commonly held by those who know the protector is that he gives the law breakers immunity because he is afraid of them and lacks courage to arrest them. Whatever the explanation of existing conditions in Essex county, a remedy should be found for them. If by reason of being the brother of his brother Mr. Beede must have a place, by all means give him one, but let it be one in which the enforcement of the game laws can not be made a farce by him.

Is there anything in it? askes a correspondent who sends a newspaper report of an eagle having carried off a child. The story is one which is frequently told; it is almost as much a part of the annual lore of the press as is the hoop snake and the horn snake; and the horn snake's cycle brings it around about once in six months. Despite the frequent reports of children borne to the clouds by eagles, we have always received the tale with incredulity. It is very ancient. Alexander Wilson, who wrote in the early years of the century, relates, in illustration of the "intrepidity of character" which distinguishes the bald eagle, an incident which happened in his time. Near Great Egg Harbor, in New Jersey, a woman who was weeding a garden had set her child down near by, when a sudden and extraordinary rushing sound was heard; and startled by the child's screams "she beheld the infant thrown down and dragged some few feet and a large bald eagle bearing off a fragment of its frock, which being the only part seized, and giving way, providentially saved the life of the infant."

The hard fighting which is now taking place in South Africa between the British forces and the Boers of the Transvaal Republic lends an especial interest to Mr. Frank J. Thompson's account of life years ago in the land of the African Dutchman. Probably no American knows these people so thoroughly in their homes, on their farms and on the veldt, as Mr. Thompson. And it is very interesting at this time to have the glimpses which he can give us into their patriarchial and in some respects primitive mode of life. In another contribution shortly to be printed, Mr. Thompson deals more directly with these people and offers us much information that is of the highest interest.

The Sportsman Tourist.

Types of Sportsmen.

IV.—Joe Hager.

One drowsy midday in summer many years ago—away back in paper collar days—an old white-haired and bearded man came down the Harvard Turnpike from the hills beyond. Beside him, and with an oft-repeated look of affection from one to the other, there trotted a tawny-colored setter dog. As they passed the roadside hazel bushes the dog moved beneath them, and the quiet of the Bob Whites, bluejays and catbirds was disturbed. "Don't bother the birds now, Argus; it's too early in the season," said the master. "What we wish is to find a home, and if the good people down there in the valley will allow of it we will stay with them for the rest of our days." And they did so.

Part way down the slope and nestled among the huge elms a cottage with a small stable adjacent boded cheer for man and dog, and with respectful manner each approached the hostess as she busied herself in spreading huckleberries in pans and exposed them to the hot rays of the sun. The old lady was somewhat startled by the sudden appearance of strangers. "Land sakes! who be ye, and whose dorg is that?" He replied, "They call me Joe Hager, and the dog is mine, and I am his; we are friends and wish to be friends with you; we are homeless and looking for some place to call home, so can you tell me as to whether we can find some little hut or cottage in the village, and can I, do you think, procure work to pay my way?" "Gracious me! Come into the house. You look all het up and hungry. Keep that dorg away from them there berries. Well, let him come in too, only keep an eye on to him. My name is Stockwell—Aunt Eliza Stockwell, they call me when they don't call me an old fuss and sich things. I may be fussy; I'm a widder, and my only child, my boy, I fear is dead. He went out with the 6th Regiment, and they say he is missin'. He was a good boy, but he would go, and I didn't blame him for leaving me alone when he was needed. I'd go myself if I were a man. If my boy did a soldier's duty and faced the right way and died for his country, I cannot complain; but I loved him, and cannot hear from him."

Tears flowed from the old people's eyes, and Joe Hager was very much upset and finally said, "I have an object in coming to this village. When the war broke out I was a practicing physician in Boston; I saw the campaign banners of Lincoln and Hamlin, Douglas and Johnson, Bell and Everett, Breckenridge and Lane. I heard the bands play at rallies, and I heard the throb of the drum and saw the flags whipping in the wind. I could not go as a soldier, so I went as a surgeon, and I knew your boy, and here is a ring which he gave me to pass to you. Cheer up, my good woman; he died in the beautiful Shenandoah Valley, and as a brave man should. I did what I could for him, and told him that if I survived I would see you and convey to his mother his last words. I was wounded the same day and went into the hospital and was delirious; sick for months. During that time I lost or forgot your locality, but I found the ring on a locket chain which has been around my neck for years. I traced his company to this town, and knowing his name I intended to seek you, and it happens that you are the first one I meet."

The message was sacred to the mother, and to her let us leave it. It sufficeth to say that she was a Spartan mother, and in Joe Hager she found the link which connected her with her loss, and henceforth the friendship existing between them was grand to see.

Aunt Eliza assisted in renting a small cottage near the village church, and inasmuch as she owned it it was a simple matter to induce the agent to fix a low rental. After a few days some things came in on the afternoon freight train, and among them was a case of books, a gun, a fishing rod, a case of surgical and scientific instruments, and some furniture; and these, together with what Aunt Eliza gave and a few purchases, caused a little home to blossom out into an asylum, where in after days children of the village flocked for sympathy, for assistance in difficult studies, for the relief of pain or a burdened conscience. Here the good and the bad boys gathered, and the good boys stayed good and the bad grew better. To demonstrate: They were playing ball in the street, and a dispute arising little fists were doubled up, and the oaths flew thick and fast. The old man came out, and raising his hand said, "Boys, that is too good a name to use in the trivial game of ball; it is a name to be used quietly either in church yonder or in your simple prayers at night. Kindly don't repeat it, and use some simple words to express your indignation if you must lose your tempers."

One day the boys carried one of their number to him and said that a rusty nail was in his foot. Among the metatarsal bones was a bad wound, and Joe Hager, holding the foot tenderly, inserted a small splinter of smooth pine to obtain the direction and depth, and then telling the little fellow to grit his teeth and have courage, he met the end of the pine splint with a lance thrust from above, and forced through from top to bottom some antiseptic solution, which carried off all deleterious substance, and in a few days the boy was barefoot again and kicking a football.

In the field at the rear of the house he taught me to shoot, and many an hour did he spend tossing up objects for me to practice on, and noting points for correction.

Happy the lad who went fishing with him, and often one could be seen on the way to the brook looking up into the old man's face with the same spirit that animates the countenance of the little drummer boy in that fine painting of "The Spirit of '76."

Aunt Eliza and Joe Hager's interests in each other grew apace, and caused much comment among the garrulous neighbors; but Aunt Eliza said, "They needn't fret; I ain't no Cleopatra and Joe Hager ain't no Marc Antony."

Joe Hager's common sense of propriety and regard for the rights of others was unusual. His love for mankind, his sympathy for the unfortunate and his readiness to help and to defend them were demonstrated in the case of "one more unfortunate" "who loved not wisely but too well," and when bitter words of reproach were spoken a little well-worn Bible came forth from his pocket, and the admonition in regard to "casting the first stone" was pointed out to the speaker. When the Baptist minister called with the object of increasing his flock, the old gentleman was non-committal. Taking a book from the shelf he asked if he might read from Leigh Hunt. Consent granted, he read what may well be reprinted and re-read at this time:

ABOU BEN ADHEM.

Abou Ben Adhem—may his tribe increase!—
Awoke one night from a deep dream of peace,
And saw, within the moonlight in his room,
Making it rich, and like a lily in bloom,
An angel writing in a book of gold.
Exceeding peace had made Ben Adhem bold,
And to the presence in the room he said,
"What writest thou?" The vision raised its head,
And with a look made of all sweet accord
Answered, "The names of those who love the Lord."
"And is mine one?" said Abou. "Nay, not so,"
Replied the angel. Abou spoke more low,
But cheerily still, and said, "I pray thee, then,
Write me as one that loves his fellow men."

The angel wrote and vanished. The next night
It came again with a great wakening light,
And showed the names whom love of God had blessed,
And, lo! Ben Adhem's name led all the rest."

Joe Hager told the village boys what caused the war, and as we sat on his door step evening after evening the subject became more interesting until it became necessary to go back in history to the landing of the Pilgrims, and from that back to the Spanish occupation of more southern coasts. When Richmond fell he shared the jubilee, and taught us how to fire the anvils. We drilled a small hole to meet the large square one reaching up from the base, and then placing another anvil on top with a leather patch between, we fired the powder with a long heated rod; then the glass broke in the neighborhood and the homeless dog mourned his loss. No one was more pleased than Joe Hager when the strife was over—none more in favor of confederation of the world—and he advocated universal peace eloquently.

Then came over the wires the report of the assassination of President Lincoln, and as Joe Hager passed a group of idlers sitting on the steps of the village store Phin Holden, a rank Copperhead, remarked: "Served him right." It was too much for the patriotic old man, and with flaming eye and bitter tongue he reproached the speaker. Holden, angered at the old man's words, arose to strike him, and then what a transformation took place! An old man renewed his youth. Stepping aside to avoid the blow, one hand reached the ear of Holden, and a quick pull on the upper works and a foot interposed below landed the freak on his head in the road, and Argus, the dog, believing his master to be in danger seized the most available portion of Holden and shook him vigorously. Joe called the dog away, and Phin looked to and asked Jerry Hurley for sympathy, and got it as follows:

"Ye dom Copperhead, do yez think bekase Oim a Dimecrat and an Oirishman that Oim a thraitor and a sneak? The worst Mick living doon by the thrack bees more of a man than ye is. Ye is only fit fur 'laping the bounty,' and when yez war drafted yez promised Dick Kinsley three hundrid dollars to take y'r place, and not wan penny did ye pay, and Dick died in y'ur place. G'wan wid ye, ye dom skunk. Joe Hager is a good man, and he is koind to the children; and w'u'd Oi raise me hond to kape him from killin' yez? Not Oi, sor! And if Oi iver hear wan more wurred from ye ag'in the did Presidint or that ould mon Oi'll smash the dom head off yez betwane me two fists and the strate beyant, and l'ave ye to die; and may the dog die too that w'u'd rowl in yez carrion. Gintlemin, twinthy-wan years ago Oi left the ould sod to come here, and Oi love me home as a mon should, but Oim thrue to this country besoides, and yez all know that they would not enlist me whin Oi thried, with wan leg too short and meself siventeen years too ould."

The old surgeon helped the boys to rig the springboard at the "big spring hole," and taught them how to dive and swim, and often could be seen with some white-skinned little fellow standing in the stream regardless of wet clothes, while he supported the little form with his extended palms. We boys tramped the trodden paths beside the meadow brook many, many times with him, and the pickerel, perch, bream and pouts that came to us were, at his suggestion, given to sick people or to some poor family.

In the wanderings he gathered wild flowers, and his botany class of boys and girls dissected them, and all parts were described and names given them.

Once, while squirrel hunting with him, a half-dozen young grays disappeared suddenly, but we found the next hole high up on the tree trunk. He "boosted" me up, and upon reaching the nest I could see down in the hollow trunk the silvery backs of the squirrels. I called down to him, "Catch them in your game bag, Uncle Hager," and he said, "Don't put your arm in there; you will be bitten." "What have I got a doctor with me for? Hold back, Uncle." He did so, caught five of the six as I threw them down, and I caught as many painful bites. He said, "No one but a crazy boy would do that," and I think he was right. I wouldn't do it to-day; but fools step in where angels fear to tread. We tamed the squirrels, and they played around his cottage for a long while afterward.

In the days of grouse hunting he could be seen leaving the village dressed roughly, but with gray hair and beard white and glistening in the sunlight. His dog trotted cheerfully along beside him, and upon his return at night or the next day some one in the village with delicate appetite was sure of the capture of the day. It was his delight to dress and cook partridges at Aunt Eliza's cottage, and frequently were there children invited to the feast following.

I left the village about this time, and for a few years came reports of the old man's kindness and love of the woods. Then came the news that he was dying. They were cutting ice on the overflow meadows, and two of the village boys went out in a feed box in lieu of a boat to push shoreward the floe of ice, and upsetting were thrown into the chilly water and were drowning. Burly and rugged men stood helplessly, while the old doctor, in his love for the little fellows, slipped over the icy edge and waded in water up to his neck to save them. One was secured easily, but the other had gotten under the floe in his struggles, and the brave old man sinking beneath the ice rescued him from his perilous position.

The shock and effort were too much for Joe Hager and he died of pneumonia in Aunt Eliza's best room in a few days. Sorrow came over the village, for all had learned to love him. They closed the school on the day of his funeral, and the sobs of the children went out on the chilly air of the wind-swept cemetery.

His faithful dog did not long survive him. The land adjoining the cemetery was owned by Aunt Eliza, and she caused the burial of the faithful brute to be made over the wall within a few feet of his master's grave.

I passed through the cemetery a few years ago and found his resting place, and over him the children had erected a stone bearing this inscription:

JOE HAGER,

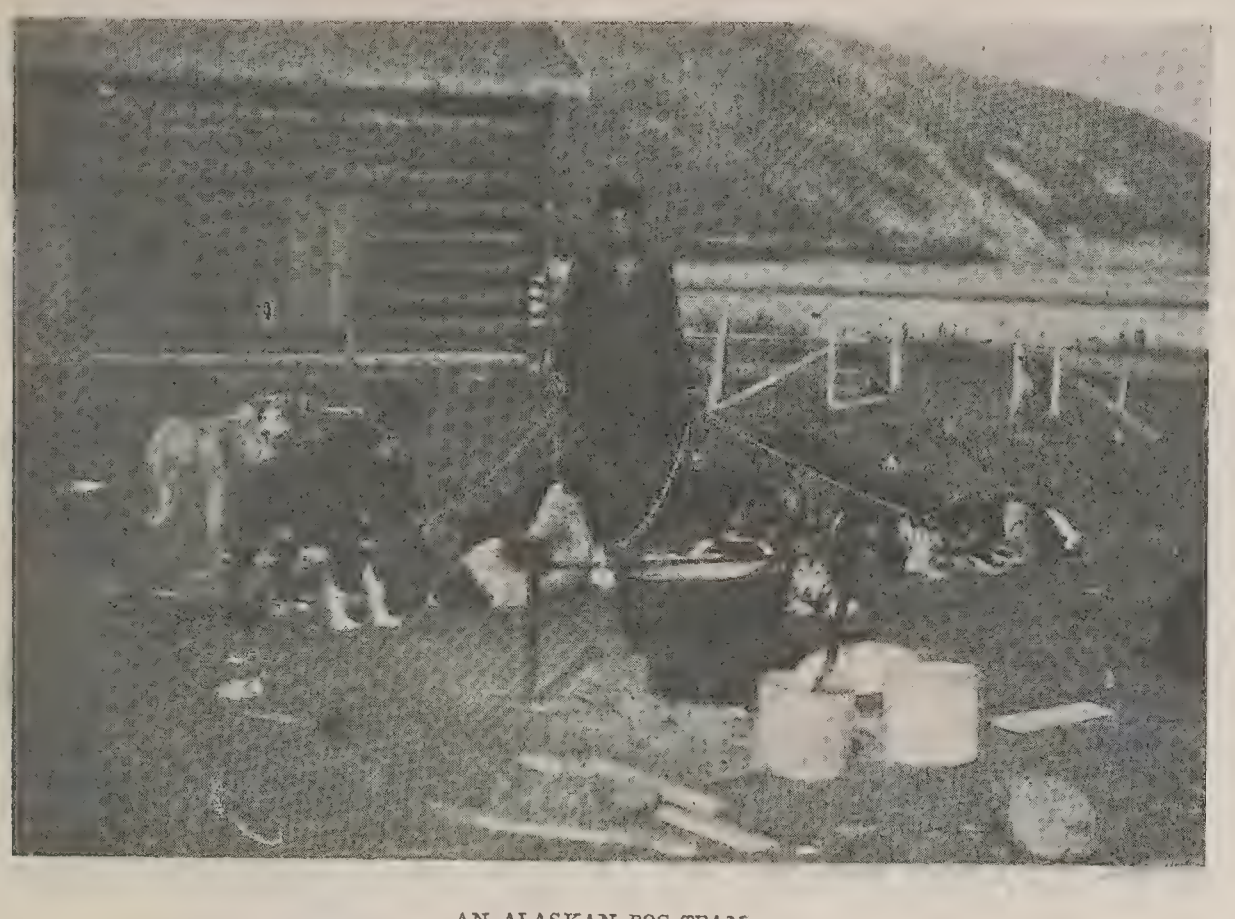
Age 76.

"Greater love hath no man than this:
That he lay down his life for his friends."
—St. John 15 1.

W. W. Hastings.

Alaska Before the Spring Rush of 1898.

Forty-Mile, April 1, 1898.—I inclose you a photograph of a dog team and its Malamoot Indian driver "at home." This was taken at Forty-Mile Post, Yukon Territory. This Indian is known under the soubriquet of "Monkey," and I am quite sure that his looks do not belie his nickname. He was raised at St. Michaels, 1,700 miles down the river. St. Michaels is an island sixty miles from the mouth of the Yukon River in the Bering Sea, and is the transfer station for all passengers and freight from the ocean to the rivers.



Some of these dogs are what we call Malamoots and some of them Siwash. They are all part wolf, and will steal anything from a lash rope to a loaded dog sled. I have seen Doc (the dog with the black spot on his back lying down) come trotting into the yard at 5 o'clock in the morning, when everything was perfectly quiet, carrying half a slab of "sow-bosom" (as the boys here call it) in his mouth. When he had eaten all he could manage (which was about half), he deliberately took the remainder around behind an old cabin, laid it on the ground and calmly laid himself down beside it, using the bacon for a pillow, and proceeded to have a quiet snooze. Unfortunately for him, however, Monkey happened to pass by just then, and notwithstanding the piteous look with which Doc regarded him, seized the bacon and laid it up on the roof out of danger until feeding time, looking at me with a grin and remarking, "Dog hi yuh muck a muck," which, liberally translated, means "big lot good stuff to eat," which was his idea of the transaction.

The distinction between the Malamoot and the Siwash dog is that the Malamoot dog proper comes from the lower Yukon River, while the Siwash is the upper Yukon River Indian dog. Usually the Malamoot is white or grayish with some black or white, while the Siwash is mostly black with a little white in places. The black dog with the white front feet on the left of the picture came from Fort Hamlin, 560 miles below here. I got him when a pup of four months from Chief Stevens, an Indian near Fort Hamlin. The dog's name is Steve, and he is "the thief of the world." Innocent looking as a babe, extremely affectionate, and withal will steal everything he can lay his paws on. He took the liberty one day of going into a squaw's cabin while she was hanging out clothes and had left the door open, jumped up on the table, seized his prize, and decamped with it out the open door before she caught sight of him. She saw him just as he turned the corner of the cabin, and realizing what he had done, started after him pell-mell. Then ensued a foot race for the woods in which Steve won out and departed to devour the "spoils of war," while Malamoot, or "Pie-Faced Annie," returned to her cabin to find that Steve had seized as contraband 2lbs. of butter in a tin, which left her just $2 out, butter being $1 a pound. It is very easy on looking at her to see where she got the nickname of Pie-Face, as she has got an extremely large, flat face with a little flat nose resembling nothing so much as a hump on an apple pie, wedged into the middle of it. Like a good many of the Lower River Indians, her face shows unmistakable signs of Japanese blood.

But I was speaking of dogs. They have the precedence over human beings in this country, in that they have the right of way everywhere. Every man is obliged, and expected, to build a cache to put his stuff on, as the dogs run everywhere, and if you should do such an unpardonable thing as to kill one you are liable to arrest by the Northwest Mounted Police and to have to pay a fine of $200; in default of which you would most likely have to saw wood for the police barracks for six months. Why, if a Cherchocko just from the States comes down the river and leaves his boat for an hour or two tied to the bank of the stream, he is liable to return and find half his bacon missing, and notwithstanding the fact that he finds dog signs about, he has no redress, and has nothing left to do but to "look pleasant." The better rustler a dog is, however, the more valuable he is. Some of them are extremely valuable. In the winter of 1897 and 1898 dogs sold all along the river for from $150 to $200, and some of the larger and better ones fetched from $250 to $300. In December of 1897 Capt. Barnett paid John Shuman, a Porcupine River Indian, $1,200 for a dog team of four dogs, only to be sure this was the best team in Alaska or the Yukon Territory. They were bought near Fort Yukon, and their first trip was 990 miles, from Fort Yukon to Skaguay. They come from Hudson Bay Company stock on the Mackenzie River, and are called "Huskies." They are a short-tailed dog, built like a running horse, and stand as high, or nearly as high, as a

Great Dane. There seems to be quite a difference in the ideas of a good many old-timers regarding the feasibility of raising sled dogs with either long or short tails. Without tails, when you have a team of seven dogs you can hitch them much nearer together and they are thus much nearer the sled and consequently can pull the sled much easier. On the other hand, in extreme cold weather both the regular Malamoot and the Siwash dogs sleep with their noses covered up with their tails, thus affording them quite a protection.

I have owned dogs sent in from the States and also native dogs. Dogs sent in from the States are all right for short distances. Most of them are stout and hardy and look as if they could stand most anything, but at the same time if you are going to take a trip of 600 miles, never take the "outside" dog; always take the native, as they can stand hardship much better than the other. A native dog will kill a dog from the States on a long trip. Their feet never get sore and even when the thermometer is 70 degrees below zero they never freeze. We feed the dogs once a day, along toward night, always carrying a dog kettle to cook the feed in, on all our trips. We generally use bacon and flour for feed, preparing it as follows: We cut the bacon in small pieces, cook for an hour, then stir in the flour and cook for twenty minutes, then let it cool for one-half hour and then feed. We keep up the wolf strain in our dogs by catching a wolf pup in the spring and breeding them next spring to the bitches. In this way we keep up the wolf stock, and have dogs that can stand the cold climate and the terrible hardships required on a long trip.

AN ALASKAN DOG TEAM.

I would say to the readers of the FOREST AND STREAM that Alaska is not all alike, but the different parts of the country differ as much as Key West and the North Woods of Maine in the United States. One thing I have been informed of which always seems rather curious is, that taking the extreme Western coast of Alaska at the Straits, with Asiatic Siberia only twenty-six miles across, as the Western boundary of the United States, the center of the United States would lie 200 miles west of San Francisco, or in the Pacific Ocean. C. JAY.

Collecting Menagerie Animals.

II.—Among the Boers.

(*Concluded from page* 328.)

ON my arrival in Durban, Natal, I rented a small place on the outskirts of town, built some sheds, purchased wagons and oxen, and made all my preparations for a trip to the interior. As it was necessary that I should take up the country all the lumber required, I was forced to buy Baltic deals—equivalent to our joist—and have them sawn into boards, etc., suitable for making the cages. I never started on a trip with less than two wagon loads, and as a Cape wagon is a huge affair, drawn by fourteen oxen, and constructed to transport 5,000lbs. of wool, one can easily imagine that my lumber bills amounted to quite a figure, besides the amount invested in rod and hoop iron, nails, etc. I always took two carpenters, in addition to my keepers, teamsters, etc., so that my outfit and traveling expenses each trip made quite a sum.

My first trip had convinced me that I could not make a success by simply wandering about and trusting to the chances of picking up specimens from the Boers, who had captured them while young on their hunting trips. I therefore managed to get the addresses of parties who kept stores in the vicinity of the game regions, and forwarded them lists of animals, with the prices affixed, which I would pay at their doors. They would then communicate with their customers, giving them the sums they would allow in barter, which is the mode of conducting all mercantile business in the interior. The principal articles obtained from the Boers are wool and skins, which once a year they take to the nearest store and trade for all the commodities needed for the next twelve months. One can imagine the profit in the business from the following transaction: At one store I had agreed to take five white-tailed gnus which a Boer brought in, and for which I was to pay £5 per head. While I was busy securing them in temporary quarters the Boer passed into the store, completed his bartering and came out with the proceeds in a small bundle, which he carried under his arm.

Of course, my wagons could not carry all the animals which I obtained on each trip; therefore I was compelled to hire those belonging to Boers to assist me in transporting them down to the coast, where they generally succeeded in getting return loads for some store located in their neighborhood. Consequently, my train of wagons on my return trips frequently amounted to six or eight, creating quite an excitement as they passed through the various villages in the vicinity of the coast.

I will endeavor to relate some of the incidents which occurred during my various trips up into the interior. My little place at Durban was but a short distance from the target range, and one afternoon on hearing the roar of elephant guns in that direction I determined to introduce my Winchester rifle, the first one ever taken to South Africa, to the notice of the old hunters who I suspected were practicing at the targets. On my arrival at the grounds I found my surmise to be correct, and joining in the sport I was so fortunate as to make the best score. During the practice I carefully kept the rifle as much out of sight as possible, but at the conclusion there was a general desire shown to inspect the gun which had surpassed the old regular standbys of the crowd. After a critical examination, the sweeping verdict was that it was simply a Yankee gimcrack, fit only for small game, and so valueless for killing hippopotami, elephants, etc. Whereupon I immediately offered to wager the champagne for the party that I would kill the first hippopotamus at which I might fire. The bet was immediately accepted, and one of the party suggested that we at once adjourn to the hotel and have the wine, as the result was inevitable. I protested, and finally succeeded in getting a grudging assent given to defer the settlement of the wager until a trial was made.

THE ANIMAL WAGONS AT DURBAN.

It so happened that nearly two years passed before I had an opportunity of testing my conceit. I was up among the branches of the Limpopo River, when my oxen went astray, and lying under one of my wagons, pulling at a pipe, I was anxiously awaiting the return of my teamsters, who had gone off hunting them, when one of a party of Kaffirs, who were following my party for the purpose of getting the refuse of the carcasses that I killed for my own men, came running up and shouting, "Lumvubu, n'kos," which translated simply meant, "Hippopotamus, boss." On questioning him, I learned that he had found one in a pool but a short distance from my camp. Taking the Winchester, I followed him to the stream, where he pointed out the spot where he had seen the animal rise in order to breathe. Stepping back so as to conceal myself among the bushes, I found a convenient fork for a rest and sighted the rifle for the center of the pool. I had but a short time to wait before the hippopotamus' nose was raised above the surface of the water, when he received a shot directly through his nostrils, which prevented him from again closing them. After some terrific floundering the animal slowly sank to the bottom, and I went back to the wagons, after giving the Kaffirs orders to notify me as soon as the body rose to the surface. I had not long to wait, and quickly had the body drawn to the bank and the head cut off, giving the remains to the hungry Kaffirs. As I could not preserve the entire head, I had the flesh and muscles removed, keeping the skull only. Suddenly it flashed across my mind that there was no mark of the bullet to show how the animal had been killed, as he had been wounded merely in the muscular portion of the nose, all of which had been cut away. I felt much disappointed, but determined to try and get another chance. The vagrant oxen were found that afternoon, and I told the Kaffir contingent that I would remain in camp a short time longer if they would find me another hippopotamus. On the second afternoon they brought the news of another find, when I carefully fired, so that the ball would pass through that portion of the skull between the eyes and the nostrils, which might be closed, but the water would pass behind them into the nasal passages and from thence into the lungs. My surmise proved correct, and the skull was carefully packed in Guinea grass and lashed to one of the wagons for transportation down to the coast. On the night after my arrival at headquarters I had the Kaffirs carry it into town to the hotel where the hunters were accustomed to spend their evenings, and unpacking it they instantly saw how they had been outwitted, and unanimously pronounced it "a cursed Yankee trick." However, they called for the wine, and just as the fun was at its height there was a rap on the door, and on opening it a Kaffir's head was thrust in, with the remark, "It is very cold for naked men to be waiting on the outside for their boss, and couldn't they have a bottle of rum to raise their corporeal temperature?" One was passed out to them, and a short time subsequently I started for home, and after proceeding but a short distance came across my native contingent on their way to the lock-up in charge of a policeman. On inquiry I found that they had managed to get into a fight with some of their countrymen; but when I told the officer the cause of their inebriety and offered to become surety for their good behavior he laughingly released them, and I hurried them home.

The first hippopotamus ever brought to the United States came in charge of a party of the name of Cushing, who purchased it in London. On its arrival in New York it was stored in a building at the southeast corner of Broadway and Lispenard street. On the next corner above stood the Florence Hotel, which was headquarters for showmen. Of course, the arrival of such a rare zoological specimen caused quite a stir among the managers of the different traveling shows, and Cushing had but little trouble in securing an engagement at a good percentage of the receipts. I was a frequent visitor to the basement, and on one occasion took an artist friend with me, who wished to make a sketch of the animal and its Egyptian keeper, who had taken care of it from its capture. Very naturally he plied him with divers questions, and I was much amused with the answer to the following: "How large was this animal when it was captured?" "Leetle, so, keg beer," holding his hands about as far apart as the distance between the two heads of a keg. After experiences proved that Ali's estimate was very nearly correct, as I frequently encountered them riding on the backs of their swimming mothers.

Near the mouth of the Umgeni River, but a short distance from Durban, there was pair of hippopotami which had been preserved by the sugar planters of that vicinity in spite of their destruction of the cane. It so happened that one of the community received a visit from a friend fresh from England, who, as soon as he saw the hippopotami, was frantic to have a shot at them. As his sole weapon was a common fowling piece, the planter laughingly consented, chuckling at the verdancy of his visitor. But it happened that he was so closely concealed that the female passed within a few feet of the muzzle of his gun, so that when he fired a single shot reached the brain and dropped the animal in her tracks. The exultation of the "tenderfoot" was dampened by the dejection of his host and neighbors, while the newly made widower became as mad as a March hare, and furiously charged everything that crossed his path. After several days of such violent behavior he suddenly disappeared, and a short time afterward reappeared, accompanied by a fresh frau, to the great delight of the whole neighborhood. To accomplish this remarkable feat he had had to ascend the river some fifty or sixty miles or descend to its mouth and then pass up the coast to St. Lucia Bay, at either of which points were herds of hippopotami in their native state. I have always been puzzled how he made a success in so short a space of time. Did he vanquish some unlucky spouse and ruthlessly seize on to his better half, or did he happen to meet one of the opposite sex who had not yet entered into the "holy bonds of matrimony"? In fine, how did he manage to convey to his newly acquired bride the impression that his hearthstone was bare?

When I first arrived in South Africa I was quite anxious to procure some Cape ant-bears, traces of which could be seen very frequently; but the parties to whom I applied said that it was impossible to dig them out of their holes, as they always made their lairs in sandy soil,

and as soon as the attempt was made to dig them out they would burrow away faster than they could be followed with pick and shovel, and thus always escaped. Cogitating over the matter, I conceived a plan which I thought would prove successful, and made one of my neighbors promise to inform me as soon as he discovered another den. But a short time elapsed before I received notice, and going to the entrance of the hole I thrust in a bamboo rod until I could feel the animal. The rod was then withdrawn and laid on the ground so that its tip would be just over the animal. Ten paces were then stepped off and a ditch was sunk at right angles with the trend of the animal's hole; the Kaffirs were started digging from the entrance. In a short time the ant-bear unexpectedly to himself tumbled into the transverse ditch and was secured before he could make a fresh excavation. By this device I captured several, but they all died in transit to Europe and I gave up the job. A short time afterward I refused to purchase one which was picked up by a homeward-bound captain who was lucky enough to land it in London in good condition and received a long price for it from the zoo.

Several times I assisted the Boers in the capture of entire litters of the Ethiopian wart hog, which was effected in the following manner: As soon as the lair, which was generally a hole in a bank or an ant heap, was discovered a party would go to it, and while some attended to the digging the others would station themselves on the surrounding ant heaps and shoot the old ones, which would make a fighting charge through the grass as soon as they heard the squeals of captured youngsters. Should the shots not prove immediately fatal it required some pretty lively dodging to escape being badly hurt by their enormous tusks.

I confess that I never had any hairbreadth escapes from lions, as I generally hunted them in the company of the Boers, who are capital rough riders and excellent rifle shots. Their mode of procedure was to badger them with dogs and shoot them from the saddle. Should the quarry prove to be a female in milk, immediate search was made for the litter, which would be picked up and reared by hand. In one of my trips I was lying in my slowly moving wagon on an intensely hot day, when I heard a hubbub among my Kaffir contingent, and called out to January, my body servant, to know what was the matter. His answer was, "Lions, boss." Seizing my Winchester rifle, I sprang out and caught sight of the Kaffirs massed on a slight eminence near the road, shouting, beating their assegais against their shields and raising a terrific din. On reaching them, I caught sight of a pair of lions at a comparatively short distance, slinking away from the body of a freshly killed Burchell zebra. The pinging of a bullet from my hastily fired rifle hastened their departure into a convenient thicket, and the Kaffirs instantly secured the carcass.

Of all the fiery, ill-disposed animals which I met in my wanderings, I must confess that the Cape buffalo bore the palm. Shortly after my arrival in Durban one was brought in from a neighboring farm, where it had been reared by a cow; but as it grew in age it increased in irritability until it became a terror to the neighborhood. The owner sold it to a captain, and after a deal of trouble managed to box it. It was lightered out to the vessel after she had anchored outside of the bar, and as the crew were busy getting ready to make sail there was a crash and every man suddenly had business aloft, while the buffalo took charge of the deck. After promenading for a while he took a header over the bulwarks and swam over half a mile before reaching the beach. He charged up the main street of the town, putting everything to flight, and did not stop until he reached his old home, where he was shot a few days afterward.

I made frequent hunting trips into Zululand in the company of some Boers who lived in the Transvaal, just across the Buffalo River from Newcastle, Natal. One was made especially for getting buffalo hides, and we hunted in a country governed by a queen, and for the privilege gave her a half-bushel of salt. Whenever a buffalo was killed the skin was carried into our camp by women, but their husbands were always sure to be on hand to collect and divide the double handful of salt which was paid for the service. On our return trip one of the Boers had a narrow escape from a buffalo bull which charged into our party as we were passing along the banks of a stream. He was forced to plunge headlong into the water and swim underneath it for some distance in order to escape a vicious lunge of the brute, which was shot by the other members of the party.

When I first went to Natal, it was a common practice to make trips across the Tugela River into Zululand for the purpose of hunting elands in order to secure the meat for salting and biltong, which consists of strips of the flesh hung up and dried in the sun. On one of our expeditions we were accompanied by a young German, who had recently arrived in the colony. We were very lucky, and in a comparatively short time had our wagon loaded with meat and started on our return. One afternoon, as we were hurrying along in order to reach a good camping spot which we knew was but a short distance ahead, the new arrival stopped to have a bath in a convenient pond instead of continuing with the party. It was nearly dark when we reached camp, and completely so by the time we had finished supper. Much to our surprise the newly arrived did not put in an appearance, and several shots were fired to serve as a guide if he had happened to have lost his way. Waiting for the moon, which was about full, to rise, we armed ourselves and started on the back track to try and find out what had become of him. When we reached within a short distance of the bathing place the absentee was descried perched in an enormous euphorbia tree, while underneath a huge buffalo bull was playing sentry. A cautious advance was made, the sentry was dropped in his tracks by a volley from the party, and the prisoner released. On reaching terra firma he was found to be clothed in nothing but his shirt, while the rest of his clothing was in shreds at the foot of the tree. His story was that he had just time enough to scramble up the tree in order to save his life. For several days afterward the tortures the poor fellow suffered were indescribable, as the euphorbia is a Brobdingnagian cactus, teeming with countless spines.

FRANK J. THOMPSON.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

A Camp Tid-Bit.

Editor Forest and Stream:

It seems that friend Ransacker has "got 'em again." Somebody must have been poking him up in his mountain lair with something sharp to cause such an emission of spitting and clawing as appears in this number of FOREST AND STREAM. But whoever is at the bottom of this ebullition of humorous bad humor is entitled to the thanks of FOREST AND STREAM readers, for Ransacker is unique and interesting, whether he appears in the role of Jupiter Tonans in a mimic thunder cloud or as the genius of "gentle spring" in the "sunshine of a May morning."

I do not offer any apology to Ransacker for being thus personal in my remarks, because I have a grudge to settle with him of long standing.

Some months ago I was invested by FOREST AND STREAM with the high dignity of special judge to sit on the trial of Raccoon versus Man. I had scarcely begun to feel at ease in contemplating the prospective adornment of the "judicial ermine" and how well I should become such adornment, when comes a withering blast from the cynical pen of Ransacker, suggesting a doubt of my qualification for the responsible duty assigned to me, because my "judicial poise" might have been disturbed by the "whicker of the coon in my cornfield." This it seemed to me was a far-fetched notion, and a baseless attack upon an innocent man—a very innocent man, seeing that I never owned a cornfield in my life and never heard a coon "whicker" either in my own or any other cornfield; and as to my "judicial poise," if I ever possessed such a commodity it must have been "unconsciously assimilated," perhaps from Ransacker himself.

In consideration of the foregoing, I feel warranted in treating his innuendo with "silent scorn," as you perceive. More recently I was called upon by Ransacker to account for certain eccentricities in the behavior of his dog and cat, in exhibiting marks of a repulsive feeling when presented with a nicely baked rattlesnake. I can only account for their perverse conduct on the theory of bad raising.

That crotalus is good to eat when properly cooked and under a thin disguise of cognomen, as here used advisedly, I have perfectly authentic evidence in the statement of my friend and brother tripodist, Charley Barton; and be it known that all those who go down into the great woods behind the tripod and there "behold the works of the Lord and His wonders in the deep (woods)" may be implicitly relied upon in the matter of veracity. Mr. Barton relates that not long ago, being engaged in making a survey among the heavy canebrakes of Sunflower county, a large rattlesnake was killed by one of the party. As it was desired to secure the skin, the snake was divested of that garment, which he no longer needed. The flesh of the snake looked so inviting that it was cut up into sections, and one of the negroes was directed to carry an armful to camp. Just before reaching camp the negro lightened his burden by dropping some of the sections of snake. The remaining portions were duly fried by the camp cook and placed before the party of hungry engineers. Each one eyed the mess askance, and manifested a diffidence about showing greediness for the decidedly novel dish. But Barton, being the instigator of the plot, said he determined to eat a piece "if it killed him," which he proceeded to do, when all the others followed suit.

The dish proved so toothsome that it was all eaten, and the negro who brought it to camp was sent back to find the portions he had dropped on the way.

In all seriousness, the above was related to me by Mr. Barton as true, and he is a sober-minded man, who never takes liberties with the truth under any circumstances.

MISSISSIPPI, Oct. 15.

Snails in Cuban Style.

BOSTON, Mass.—*Editor Forest and Stream:* The article in your issue of Sept. 9 on "Snails as an Article of Diet" reminds me of something I saw in Cuba last winter. I was up at Alto Songo in the Province of Santiago. There were quartered there at the time two companies of colored troops. Their white captains, gentlemen from Mississippi and Texas, respectively, were our hosts. It is almost needless to say that nothing could exceed the generous character of their hospitality. One of them—the Mississippian—was very fond of hunting, and reported wild guinea fowl abundant in the vicinity. We planned an early morning hunt for them, but were delayed in our start till the sun was too high and the shy birds had left their morning feeding grounds and were safe in dense cover, where it was almost useless to try to follow them. So we were fain to try for mourning doves.

I got just one shot—my only one in Cuba, as it turned out—and surprised myself by grassing my bird in the most approved manner, for he was quartering swiftly over some small trees, and I had but a glimpse of him, and I hadn't pulled trigger for a long time at anything flying.

Rejoining the Captain, who had three or four birds, we remounted our horses and rode slowly back up the long slope to Alto Songo, I all the while taking in with keenest interest the sights and sounds so novel to me.

The dense growths of tall bamboos—most graceful and plumy—were a delight to me, and no less did I admire the great groves of the royal palm and the thick, green foliage of the mangos.

Animal life seemed mainly confined to birds, and these were far less abundant than I had hoped and expected to find.

All the morning, however, I had heard at short intervals a peculiar, plaintive cry or whistle which I found was made by a blackbird—to me very like our common American blackbird, for which I should have taken it but for its note.

We passed a large number of workmen—Cubans—who, under the direction of an American, were engaged in clearing out and making over into serviceable condition an old road that here crossed the island. They had cut the short brush which cumbered the ground and set it on fire, and behind them long winrows of it were here and there slowly burning. My companion stopped to try to buy from an old Cuban workman a handsome Spanish machete which he was wielding. I rode slowly on, and presently was aware of a continuous crackling and popping in the slowly burning brush. At the same time I discovered a good number of blackbirds in close attendance on the windward side of the fire. They would follow up the creeping flame so closely as to be in some apparent danger of being burned. I was, of course, curious to know what caused this temerity and what they were after. They were so intent on their work that I could ride very near to them, and I discovered that they were picking from the charred twigs the land snails that adhered to them in fabulous numbers, and which had been nicely roasted by the fire. A diet of roasted snails, then, was what attracted these island epicures—the blackbirds. They could not be suspected of having had much experience with this sort of food, one would suppose, but had evidently been quick to discover it and to avail themselves of it after the fires were started.

Was it the bursting of the snails under great heat that caused the snapping and popping I had heard in the burning brush? I certainly must suppose it was, unless some one can show that snails will not so explode when the fluids in their inmost whorls are turned into steam. I don't doubt that roasted snail is good eating or that in life the univalve, clinging closely by suction to the twig, is hard if not impossible for a blackbird to get at. There are many species of these land snails in Cuba, and they are found in wonderful abundance. It is fair to suppose that the Cuban blackbirds join in the general approval of Gen. Wood's wise and energetic efforts at Cuban road-making.

C. H. AMES.

Forests and Forest Fires.

BOSTON, Mass., Oct. 17.—*Editor Forest and Stream:* I notice in your edition of Oct. 7 an article written by Mr. Charles L. Paige, of California. It is too long an article to quote from extensively, and I will only quote one paragraph:

"In so far as applies to the region of northern California, the subject is one with which all observant mountaineers are familiar; but, as far as any practical effort is made, it would seem that legislators never conceive of any method of forest protection other than the enactment of laws prohibiting about the only protection to California forests that is possible. As a matter of unmistakable fact, the only practical protection for mountain forests is to keep down the accumulation of debris and undergrowth. The longer fire is prevented, the more complete is the destruction eventually. Fire is the only preventive of wholesale conflagration in extensive scopes of forest. It is the natural regulator of the wilderness, and the more necessary where saw mills and settlements have changed natural conditions."

It must be that Mr. Paige is not familiar with timberlands or their handling, or he never would advocate burning them over to prevent fires. It is impossible for a fire to run in a forest without injuring the living trees, causing the bark to stick, and eventually meaning their death, although not, perhaps, immediately.

If Mr. Paige's plan was adopted, for instance, in the Adirondacks, what would be the result? There would be nothing left there, for it would be impossible to burn underbrush except in a dry time, and in a dry time there would be nothing left but rocks and gravel.

In the Adirondacks there is an accumulation of rotten wood which, when dry, resembles peat. This is from 1 to 3ft. deep in different places, and if a fire starts in a dry time it will run under the roots of the trees and tip over large quantities of fine timber, which would be entirely destroyed.

I am the owner of quite a tract of land in the Adirondacks, and I was camping in the woods this season during the dry time. All that saved the Adirondacks this year was the fact that we did not get a high wind, for fires were burning all around in the woods, which had been set by hunters, also by people maliciously inclined. These fires were quite extensive in some cases, but if we had had a high wind, the same results would have occurred that happened in Wisconsin several years ago. I employed more or less men constantly for three weeks, staying with these fires to keep them from spreading on my land. The largest one of the fires near my land burnt over a space of about 500 acres, and just crossed my line.

The New York law relative to fires is a good one, but does not go far enough. They have a system of fire wardens, which is a great help to subdue fires and prevent their spreading; but it should be made illegal for any one to set a fire on any other person's land for any purpose whatever, without a permit to do so, and then he should also be held accountable for any damage that might be caused thereby if a fire is allowed to spread after being set under a permit for camping or other purposes.

Lumbermen are now very careful about fires, and go to great expense to prevent them, some keeping watchmen to go about their woods continually for that purpose.

The danger of forest fires is now from hunters, malicious persons, and settlers. I think more fires are caused by settlers building fires that get beyond their control than in any other way.

FRANK A. CUTTING.

Off for the Ten Thousand Islands.

TARPON SPRINGS, Fla., Oct. 16.—The Kingfisher is in commission. She sails to-morrow on a two months' cruise south'ard.

I am hoping the international race will have been sailed by that time, so that we may know whether the Cup will go or stay.

The Kingfisher, in company with Maud, will spend a short time on Okeechobee, afterward going to our old cruising ground, the Ten Thousand Islands. We hope to find old man Gomez hale and hearty.

Will try and keep FOREST AND STREAM well posted, at least when we are where postals can be forwarded. Expect to do a little shooting and some fishing, and to get lots of fresh air.

TARPON.

Game Bag and Gun.

Adirondack Deer Hounding.

r Forest and Stream:

is generally admitted that the law which forbids the of dogs in hunting deer has been and is unpopular ost parts of the Adirondacks.

e natives in the central and eastern portion of this n believe in the use of dogs, and liked the old law stood until three years ago, except that many were sed to the early opening of the season, and it was y generally believed that a limited hunting season in ber would be better both for the hunters and for the .

ere was consequently a strong public sentiment ist the law which first came into force three years prohibiting hounding. It was contrary to all ideals me rule, for it enforced a principle antagonistic to convictions of nine out of every ten men lived and hunted in the Adirondacks, and over it entailed hardship and pecuniary loss many of the backwoods settlers, who were ved of the means of securing a very desirable on of their food supply, and who had ten, twenty or fifty dollars of their capital invested in dogs which the passage of the law lost all commercial valuation. the first the law was not enforced. The game pro- rs realized the hardships which a thorough and ef- e execution of their powers would entail, and in cases it was more than their positions were worth ick up against public sentiment and antagonize the nunity in which they lived by a strict enforcement of cxt.

e protectors themselves were not apt to be in sym- with an innovation which made illegal the method unting which had been pursued as far back as the t inhabitant could remember, and the necessity of h innovation was by no means apparent, and it is wonder that the non-hounding clause in the law ves only a perfunctory and superficial attention.

t it be noted that what has been said and what is to w has no bearing on the merits of the law.

rsonally, the writer believes that the time has come e Adirondacks, as it has elsewhere, when such a law t only admirable, but necessary for the continuance y satisfactory game supply.

blic sentiment in the Adirondacks is slowly but y coming around in favor of the law. Particularly he outskirts of the woods, where there are witnesses very act of hounding who may, through personal ity, cause the hounder to suffer, the deer have in- sed, and they are found to-day in places where they not been seen for ten or fifteen years. There could o stronger argument in favor of the law. With public iment aroused by so favorable an object lesson, it ld seem the protectors' golden opportunity to step in by a sharp, vigorous campaign clinch the matter and tually put an end to general hounding. Early in the on there was reason to believe that such a policy ld be inaugurated. To-day, however, as far as his ob- ation goes, the writer is convinced that little or noth- has been done to put the law on a proper basis of rcement. Apparently the law will continue as here- re to be a dead letter throughout a large part of the ting country. The following facts apply particularly Essex county and its protector, Fletcher Beede, of ne Valley.

r. Beede has a large territory to look after. Essex an area of 1,800 square miles. Deer are found over a e portion of the county, and the western side con- s the roughest mountain area in the State. Beede's, ch is a postoffice at the head of Keene Valley, is, how- , at the geographical center of the region, and for the of not appearing to be unfair to Mr. Beede I shall cite cases where the law is being violated within a short distance of his home.

certain outsider whose name can be given if required ticipated in a hounding expedition within three miles Game Protector Beede's home, guided by a man who said to be a deputy for Mr. Beede. The outsider, had previously hounded in the Adirondacks, was un- re that the law had been changed, and wrote to the le to procure dogs and arrange for the hunt. The sider had only a day for the trip, and was horrified n back in the woods to learn that the law was being ated. The guide, who supposed all along the out- r knew and was intentionally evading the law, tried ssure the outsider by saying that there was no danger rrest, as he was the man who made arrests and no one would trouble them. The hunt was terminated then there, however, and the guide did not receive his ex- ted bonus.

he hounding in Keene Valley itself was never good. nearest free territory of much consequence to Pro- or Beede's home is in the neighborhood of North dson, which is about half a day's drive to the south- d over a well traveled road. At this point I am of opinion that a protector who had the sand to enforce law could arrest twenty-five men any Sunday with icient evidence to secure their conviction, and not k over two miles in making the arrests or be at any e more than a quarter of a mile distant from his buggy. other days of the week he would find men breaking law, but more are out on Sunday, and they are bolder ause of the confidence which numbers give.

On Sunday, Oct. 8, three deer were killed by hounding hin a radius of three-quarters of a mile of the old dge across the Schroon River, just below the old Sharpe ce. There were eight hounds at the old Sharpe place t day. One deer was killed on Lindsay Brook, a short tance from the main road, one on the main river on George Shaw place, and one on West Mill Brook, ar Mrs. McAuley's. Much of the venison is sold. Early the season venison brought fancy prices; now it can bought cheaper than beef. Some of it is as cheap as cents a pound. There are two organized sets of men o do the hunting. If the hounding is to be stopped se men must be taught a sharp lesson. Among them- yes they say Protector Beede is afraid to go off the aten road to make an arrest. They know he is capable of doing it, for Protector Beede has high abilities as a woodsman, and he knows all about hounding and just where to go to get his men.

Last November I camped in an old lumber camp three miles up West Mill Brook. The hounds were running every day and frequently jumped the deer I was still-hunting. At the "Roll Bank" and other stands were a full quota of watchers. It was known that my sentiment was in favor of upholding the law. The cabin which I occupied and other buildings and the buildings at two other camps were burned between that time and the present hunting season. Apparently I was *persona non grata.*

My sympathy is and always has been with the native hunters, for though I think the present law is best for the game, I am a believer in home rule, and I think the natives should have been consulted in making their own laws.

The hounds and shooting can be heard from the road, and every one knows that the hounding law is practically a dead letter. When I came out with a small buck killed as the law provides I passed a fur buyer in the outskirts of Elizabethtown (the county seat) bargaining with a farmer for some coon skins and several moth-eaten deer hides. I drew up and asked him what he would give for a deer skin.

"Where's your hide?" said the man.

"In the bottom of the wagon on the deer," I replied.

One of the bystanders asked when and how the deer was secured, and on my replying that he was killed still-hunting there was a general laugh.

"Yes, you'd say so," said the man who had the skins for sale; " we all understand about that. Yesterday they ran a nice buck across my place with a couple of hounds, and to-day the butcher is peddling his meat. The hounds had nothing to do with it, though. It's against the law to hound."

And again the laugh went round. It did not require a diagram to explain the joke. The Yankee has an elastic conscience where game laws are concerned, and so long as he doesn't get caught illegal hounding is a subject for jest. I knew better than to attempt to prove that I had still-hunted my deer, and I joined in the laugh. Ten years ago, when they allowed still-hunting, before the hounding season commenced, I killed a deer when the woods were dry and noisy and the leaves still on the trees preventing one seeing game at any distance. It was taken for granted that dogs were used, and I got no sympathy trying to prove that I had killed it fairly and squarely as the law provides, and there was a tendency to set me down for a combination of Puritan and hypocrite.

I could give other instances of hounding at North Hudson and around Elizabethtown, but let the above suffice. At Meigsville and in parts of Lewis there is systematic hounding at the present time, and the further one gets back in the woods the less the law is observed.

At the Sportsmen's Exposition in New York in March the Saranac guides stated that hounding began in parts of their territory in July and continued until December. It is not quite as bad as this in Essex county, and though some hounding has been done during the summer in the localities mentioned, general hounding did not begin until very recently. Decisive action now would put an end to it. Game Protector Beede is a man whose training and aptitude as a woodsman well fit him to be the instrument. He has been lenient long enough, and public sentiment will back him in carrying out the law he has sworn to enforce; but if he does not enforce it it is high time he was convicted of being a traitor to his trust.

J. B. BURNHAM.

A Camp Hunt in Texas.

NOVEMBER will be a month bright with delightful memories to a party of nine Texas sportsmen as long as "fond recollection" does her office. Yes; there were nine of us, besides the colored contingent—Sam Johnson, a first-class cook, and two chore boys. Sam we knew quite well, having had him with us on three camp hunts before this one. His face was as black as Erebus or ebony, while his teeth and eyes were as white as milk. When Sam wished to express surprise, wonder, joy or almost any deep or sudden feeling, he did so by rolling up those big white eyes. At such times they resembled goose eggs immersed in a bucket of tar. Simp and Joe were about the color of a Texas saddle, or an Irish potato with the peel on. They fed and otherwise attended the horses, brought wood and water, helped Sam about the cooking, and in fact were expected to "be ready for every good word and work," as our minister would say. They were both hungry and lazy from the beginning to the end of the hunt. I have seen both Simp and Joe eat until they could contain no more, but they said it still tasted good, and they ceased only from lack of room. They were very respectful in their bearing toward Sam, never failing to address him as "Mr. Johnsing." This they did for more reasons than one. He had charge of the commissary department as well as the sutler's stores.

Our camp was pitched on the Trinity River—or rather on the shore of a beautiful lake of clear, fresh water "down in the Trinity bottoms." The solitude of this almost ideal camping place was disturbed only by the cry of the laughing owl, the howl of the timber wolf, or angry spitting of lynxes in their quarrels over their quarry—or something else. Yes; I had nearly forgotten the noises (I cannot describe them) made by raccoons, loons and other amphibious and aquatic creatures that helped to make night weird and ghostly to the novice. All our party, however, had grown accustomed to these things, and gave them no more thought than to the cricket on the hearth at home—i. e., all the white folks. Simp and Joe were very nervous for a night or two, and the Doctor had them frightened almost to death the first night in camp, telling them all sorts of unconscionable yarns, about our camp being right on the spot where a whole dozen horse thieves had been lynched years ago by the rangers, and that those strange noises were made by their unhappy spirits. After the duties of the first evening in camp were done, and the three darkies were gathered in the tent set apart for their use, I overheard Sam pacifying their minds and telling them that the Doctor "was jess a-foolin' wid ye all, fur dem noises ain't no speerits, but jess dem laffin' owls and sich varmints as dat. You niggers are de biggest fools I ever hearn on not to see dat de Doctor was jess a kyarin on to see you niggers look scairn."

We reached the lake about 4 o'clock Monday afternoon, and proceeded as soon as possible to spy out the land. Leaving the darkies to erect the tents, get supper and do such other duties as the occasion demanded, we tied up all the dogs but three old ones, which we knew would find their way back to camp after a chase, and with eager and hopeful hearts we laid out the plans for the first drive for a deer. The Doctor was unanimously elected "Captain of the Hunt" for the entire trip, and he decided that the drive north of the lake be made that afternoon. Ed B. and the Doctor were to take their stands at the north end of the lake; Jno. G. and Uncle Peter were to take positions on the slough to the east of the drive; Bob and Conrad were to take their stands on an old tie-cutter's road on the north; Caldwell and Perry were to see to it that no deer escaped on the west, and Uncle Jerry was to take the dogs Hoopie, Blue Buck and Old Belle and make the drive. All this planning was executed while horses were being saddled, shells stowed in pockets, etc., and in twenty minutes after we arrived at the camping place we were making for our respective places on the drive. Uncle Jerry was so impatient to begin driving that he did not give the boys time to reach their stands before he had the dogs into the thickets, where in a few minutes they struck a running trail, and in a short time they had run our first deer into the river, no one being lucky enough to get a shot. Old Belle and Blue Buck quit the chase at the river and came to Uncle Jerry's horn. They were soon in full cry after a doe and two fawns, which, instead of running off straightaway, doubled and tacked and twisted about in the thickets until Uncle Jerry got a shot and killed one of the fawns; and Old Belle brought the doe to the Doctor, who tumbled her over in nice style. As it was now getting dark, horns were blown and responded to by others, until the entire party had gotten together, and all set out for camp, not more than half a mile away.

Sam soon had the fawn dressed and a goodly portion of it cooking for supper. We had shot enough squirrels on our way down to feed twice the number composing our party, and what with venison, squirrel, canned goods and the provisions brought from our homes, we had a supper good enough for kings.

As we sat by our camp-fire telling stories, smoking and joking, recounting experiences of former camp hunts, etc., the Doctor playing upon the superstitious fears of the darkies, we were saluted by the shrill clarion-like notes that came to us from away up the river from the throat of old Hoopie, bringing the deer back that he had followed since the first "jump" that afternoon. We all rose to our feet and listened. Nearer and nearer he came, uttering as regularly as the ticking of a clock that shrill note that seemed to set every laughing owl for miles around to practicing all sorts of fiendish cachinations. When the faithful old hound reached a point opposite our camp, some of us blew horns, some called, and somebody fired a gun. The old fellow understood the signals and was soon whining and fawning about us round the fire, seeming to to say: "I did my best. I stuck to him until you called me off Why didn't you kill him? I am hungry. Where's my supper?" Old Belle and Blue Buck got up from where they were lying near the fire and went up to him and in dog dialect told him, I presume, of the success of the drive after he left us. I say I presume they told him, for after they had gone up to him, rubbed noses, sniffed a little and wagged heads and tails a few seconds, Hoopie walked straight over to where the doe was lying on the ground, smelled it over a moment, walked back to the fire, and looked at us inquiringly as much as to say "Whose shot did it?" then walked over to Sam to receive his supper. It isn't every old hunter even who can go to sleep early the first night in camp. The anticipations of to-morrow, the novelty of the situation and other things combined to make one somewhat wakeful. That first night, or more than half of it at least, was spent in conversation, more or less fragmentary and disjointed, some admonishing the more wakeful and talkative of the lateness of the hour, and the necessity of early rising in the morning; and then themselves becoming interested in some joke or story they would become thoroughly aroused and join in the talk until admonished in their turn of the lateness of the hour and the necessity for an early start in the morning, etc., etc. Well, if you have ever been on a camp-hunt you know how it is yourself. Finally, the last man to "hush up" finished his remarks, and sleep came to "knit up the raveled sleeve" of many a hunter's yarn and refresh us for exciting experiences on the morrow. I suspect that if any dreaming was done by any of our party that night, dogs and guns and deer and horns each played some part in the fabrication of the visions.

At the first peep of day Sam was calling "Breakfast! Breakfast!" and in an incredibly short time nine hungry hunters with tin plates filled with venison steaks, fried squirrels and other substantial appeasements of appetite were eating as voraciously as if they were half-starved. The air was frosty, the sky clear and no wind blowing. Sitting by our camp table busy like the rest with the breakfast before me, I counted five squirrels in sight, while dozens and scores were barking and chattering in the woods around us. I verily believe that one could have killed several hundreds of them within a half mile of our camp. We were in the midst, or rather our lake is in the midst, of a pecan grove of many acres, and the nuts were ripe and very abundant. The squirrels had evidently congregated here because of the abundance of their favorite food.

The meal dispatched, the Doctor sounded the call to horse. Selecting six of our seventeen dogs for the day's use, and rehearsing the Captain's plan for the morning's drive that all might thoroughly understand it, we set forth for the day's sport. How exhilarating the crisp and balmy air! There was just enough of the frosty feel to make the blood tingle and the pulse thrill. My stand that morning was on a knoll at the edge of the bottom something like a mile from camp. This knoll, or ridge, was a favorite runway for deer driven from the thickets of the river bottom, and making for the dense thickets of a creek bottom two miles north of our camp. Seated on a chunk of dead wood, my back against a large oak tree, the woods all around me as still as a tomb save for the chattering of squirrels and the scratching in the leaves of an occasional thrush, no wind blowing, I heard for half an hour the finest chase it has ever been my privilege to en-

joy. Those six dogs, blue bloods all of them, and as musical as dogs' tongues ever get to be, swept round and round, in an almost complete circle of a mile or may be something less in diameter, and repeated it, while it seemed that no one of the pack ever lost place or cry for a minute of the time. Swerving off toward the river at last they were growing less and less distinct to me when I heard the report of a gun in front of them, followed quickly by a second. Straining my ears to catch the mellow notes of Ed B's horn, I was not long kept in suspense, for the three long blasts were soon heard rolling and echoing through "the dim aisles of the grand old woods," telling the other eight of us that he had made a kill. I knew Ed was to have "the wolf-trap stand" that morning, and from my position on the ridge I knew the deer was making for the river by way of "the wolf-trap stand." I kept my position, knowing the plan was to make another drive in the same territory. For an hour I sat and waited for other developments. I suspect I had dropped off into a nap, for all on a sudden the dogs were raising pandemonium about two hundred yards in front of me, and startled and "rattled" I sprang to my feet, slipped the slide of my 12-gauge Parker hammerless, and stood expecting every fractional part of a second to see a deer break cover and furnish me with a target. But imagine my chagrin and disgust with myself when the dogs ran within a hundred feet of me in full cry, and going like mad. After they were gone I walked down to where they had run as they passed me, and there in the soft mould were the biggest tracks of a deer I think I ever saw in Texas. Did I explain why I didn't shoot when Uncle Jerry came up?

Did I ever tell the boys how that deer got past "hog pen ridge" without getting killed that day? Don't ask me. Of course I had more sense than to "own up." Every man in that party would have scouted the idea of my being asleep. They knew the Doctor better than that. He must have passed out before the Doctor got there. Well, I am of a different opinion. I think the late talking the night before, the warm sunshine, the hearty breakfast, and the hour's wait between races are responsible for that nap, and the consequent escape of that old buck. If Ed, Jno. G., Bob, Conrad, Perry Caldwell, Uncle Peter, or Uncle Jerry should ever read these lines I wish them to accept this as my first honest confession of an almost unpardonable sin with deer hunters, that of going to sleep on a stand. The boys had out of respect for my prowess and skill made me "Captain of the Hunt" too. Wasn't it too bad? However, I'll tell you how several other deer didn't get away in my next, provided this does not find its place in the waste basket. THE DOCTOR.

CARROLLTON, Ga

Florida's Game Supply.

ST. AUGUSTINE, Fla., Oct. 19.—*Editor Forest and Stream:* I inclose the leading editorial from the Times-Union and Citizen of yesterday, by which you will see that a general interest is being taken in the matter of the preservation of game and in birds of plumage which is quite encouraging:

The entire collection of Florida wild animals belonging to the late Dr. Needer has been purchased and removed to your Zoological Park, so if you have any old friends among the 'gators or eagles, snakes or bears, etc., you may meet them there some time. I am glad they are to have so good a home with plenty of room.

The collection of stuffed animals which so well represents the natural history of Florida will remain with us in the care of the St. Augustine Institute of Science, and we shall hope to make it of additional interest and attraction. DEWITT WEBB.

From the Jacksonville Times-Union and Citizen, Oct. 17:

Enforce the Law Strictly.

Reports have reached the Times-Union and Citizen that the law in this State for the protection of game, plume and song birds is being violated so openly as to argue indifference or connivance on the part of the officials intrusted with its enforcement or the punishment of its violation. We know that the Governor is entirely in sympathy with the letter as well as the spirit of the statute, while both are thoroughly in accordance with public epinion. There can be no doubt, under these circumstances, that negligent officials would be promptly brought to book, and this paper will not hesitate to call names and put these parties on their defense, if these reports do not cease.

It is in no spirit of fault-finding that we have decided upon this step—it is with deep regret that we acknowledge such steps are necessary. The Floridian has so long been in the habit of killing game wherever found that he believes the indiscriminate use of a gun is one of his inalienable rights—he is apt to conclude that the preservation of the game is "a bait for tourists" only; he votes, and his views are apt to have weight with those who must look to him for office. Nor is it only a good joke when a few good fellows in a neighborhood take a sly hunt "which is nobody's business, you know."

These practices must be stopped. In a majority of our counties game, in both fur and feather, is getting so scarce that immediate steps must be taken, or there will remain no remnant of the plenty that a few years ago was a source of revenue to many, of attraction to strangers, and a pleasure to us all. Let us realize this and govern ourselves accordingly. In Maine the effect of protection is being felt already, and there is more game in her forests and streams than has been found in either for twenty years previously. In other States the sight of a deer is becoming common, and the farmers of Long Island complain that they are a nuisance to crops and fruit orchards.

Florida has such wide stretches of primeval forests that it seems almost impossible to rid them so soon of their old inhabitants, but we, who know by sad experience, fully realize that the movement for the protection of our valuable wild animals, fish and birds did not come too soon. Where is the American who does not regret that the movement did not protect the buffalo? Where is the Floridian who does not know that the flamingo, the pink curlew, the paroquet are almost extinct—that certain varieties of fine fishes are growing exceedingly scarce in the St. Johns, where they once lived in the greatest abundance, that the deer are being driven into remote corners, and that by virtue of all this the State is less attractive to visitors, less pleasant to us, and a valuable food supply will soon be cut off?

Let us work together to enforce the law before it is yet too late. It needs but combined effort for a few years, and we can accomplish all the objects contemplated. We ask, therefore, the aid and sympathy of all good Floridians, while we promise our best efforts shall be used to stop the practices which are both unlawful and hurtful, and the officers whose easy indifference has allowed these evils to exist shall be reported to the Governor and given the opportunity to prove their innocence or confess their guilt. We invite the attention of our correspondents throughout the State; from henceforth there shall be no tolerance of this violation and contempt of the law.

New Brunswick Notes.

THE types wrought fearsome havoc with an honored name last week. There is only one Charles F. Reardon, of Boston, Mass., slayer of record caribou. To spell his name so that it looks like that of some Filipino renegado is a thing that should be frowned down upon with no uncertain sound. Mr. Reardon is a typical Irish sportsman, which is the same as saying that he is *sui generis.* His annual hunt with Arthur Pringle this fall was prolific of results. The Savage rifle, wielded by a scientist, proved fully equal to the task of lowering Mr. Reardon's complement of moose and caribou.

There are still to be found loitering in the amen corner earnest and able exponenets of the .30-30. Here, for example, is the solemn testimony of William G. Reed, of Boston:

"It may please you to know that I had a very successful hunting trip with Alec Ogilvy, Jr., last month. I left Boston Sept. 12, and we got to Island Lake on the 16th. Rain interfered on only one day—we hunted all the others. On the eighth day I killed a fine caribou, not unusual for size, but with a remarkable set of antlers. Two days later a bull moose answered Alec's call, and he died within 50ft. of where the caribou lay. I used my Winchester .30-30, U. M. C. ammunition. I struck each animal but once—saw only the horns of each to guide me in aiming. Fired from the canoe both times. When the caribou was hit he fell into the water, where he kicked around until Alec, holding the gun over him, sent a bullet through his heart. When the moose came all I could see was the tips of his antlers each side of a small spruce. I missed him three times. He then turned, exposing the side of his head, when I struck him under the left ear, smashing his lower jaw, cutting his jugular, with other damage. He started off, went about 30ft., and fell. Alec sprang ashore with my rifle and gave him his quietus. I am more than ever convinced that the .30-30 is all sufficient. Place the little bullet right, and the game is yours."

Mr. Reed brings this question to a focus in his last sentence. What the big-bore apostles claim is that in bush shooting, or firing from a canoe, you can seldom place the bullet in the right place. Secondly, they allege that with a large caliber, liberally supplied with powder and lead, you don't have to put the bullet in the right place in order to stop your game. That most learned of woodsmen, Henry Braithwaite, will tell you that a moose or caribon hit by one of the large calibre arms will come to an immediate standstill, no matter where the bullet collides with his anatomy. Mr. Charles Phair, of Presque Isle, who is an artist with the rifle, as well as with the shotgun, was formerly an ardent advocate of the .30-30. He is interested with his father in a large lumbering business. To supply fresh meat for the men a great many sheep are killed each fall on Mr. Phair's farm. Last season Charlie decided to test his .30-30 on the family sheep. In no case did the bullet pass clear through a sheep, and in no case (though he killed over twenty) was he able to "stop" a sheep with a single shot! This don't prove that the small-bore will not kill a sheep, but it does justify the contention of the big-bore men, who say that it gives uneven results.

That most ardent of sportsmen, Jerome Bradley, of Dobbs Ferry, N. Y., is so pleased with the Nepisiguit that he cannot be persuaded to try any other section. His third annual trip was a most successful one. His party of three brought down three very large moose heads, besides three caribou. Contrary to past experience, they only saw three bears, and were not fortunate enough to secure any of them.

Prof. Woolsey, of Cornell University, who has been hunting up the Tobique, left for home on Friday. He was accompanied by the heads of two moose, one of which he shot and the other found in the woods.

S. F. Weaver, of Philadelphia, who had as guide the genial Boiestown vocalist, Aleck McCoy, came down from Beaver Brook Lake the other day with goodly specimens of moose and caribou. Mr. Weaver is reported to have seen seventeen moose and several bears on this trip.

Mr. McIntyre, of Dayton, O., had a most successful and enjoyable hunting trip with Ed Norred, of Boiestown. Mr. McIntyre brought out one of the largest moose ever seen in that part of the country. The animal was estimated to weigh 200lbs. more than the moose shot by Dr. Bishop, of Boston, in that region last season. The antler spread was 53in. Mr. McIntyre also gathered in a caribou with antlers numbering eighteen branches. He thinks New Brunswick the best big-game country in the world.

Of the many sportsmen who have this season made Fredericton their base of departure, few have been followed by as many good wishes as Messrs. L. G. Loomis and T. W. Hill, of Victor, N. Y., whose cheerful ways entirely captured our people here. Hence there was much satisfaction when it was learned to-day that these gentlemen had arrived from the Crooked Deadwater with two moose and a caribou. Mr. Loomis also bagged an otter. The able Ed Church was their pilot through the placid windings of the Crooked.

Dr. Boynton and party, of Philadelphia, emerged the other day from the Grand John Lake with three fine caribou heads. This region at the head of the Nashwaak has not panned out as well as expected for moose this fall, but seems to be alive with caribou.

Mr. E. N. Graham, of Godalming, Eng., who has been hunting with the veteran Braithwaite since the first of the month, is now marking time, having sect quota of moose and caribou. The former is a 46i the latter has thirty-four points. This makes th moose hunts in which Braithwaite has officiated a There has been no break in his record of succes

Our leading analytical chemist, Alonzo Stap gards the world in general with a bland smile th He went out to Little River partridge shootin dentally taking along a prescription of bucksh possible bruin. When about a mile from the se he encountered a bull moose, which showed a d dispute the right of way. Availing himself of t tection of a friendly tree, Alonzo applied to the double dose of buckshot, and had the satisfa bringing the monster to the ground. The head is the handsomest seen in Fredericton this seaso spread of 52in. and twenty-four points. Alonzo ridge hunt has been indefinitely postponed.

The season thus far has been notable for ideal weather—a long procession of sunny autumn da pered by the most lenient of midday breezes, and by cloudless evening skies.

FRANK H. RIS

FREDERICTON, Oct. 21.

The Maine Hunting Seas

BOSTON, Oct. 21.—Occasionally a sportsman g from Maine or New Hampshire with a deer or as a rule the hardest of hunting has been done. first place the weather has been excessively dry States, with the forests carpeted with leaves as powder, making it almost impossible to approa within shooting distance. One hunter says that he seven deer during two days' hunting in the region, but only caught glimpses of them. One fired two or three snap shots, but calculates that about as near to the deer as though he had turned the other way. Mr. Kimball, of the market, has turned from his annual hunting trip to the Maine Though the law was off on moose but six days ag 15—he got his moose and two deer. His frien written him a long congratulatory letter, hinting, other things, that he bought his game of the right A few deer are already coming into the Boston but not as many as a year ago. A moose has al received in Faneuil Hall Market. It was labeled t 1,320lbs., but a gentleman who has seen moose asked the marketmen what they were talking about asked him if he knew anything about the weight o and on his saying that he had considerable to them, they admitted that the weight was atta prevent people from asking "fool questions." Th doubtless weighed less than 500lbs.

A wave of terror has swept over the sporting fr the result of the terrible shooting of Mr. Dum have heard gunners say that nothing would no them to go into the Maine woods, though they ha planning trips in that direction. Many hunters kept at home, no doubt. In every quarter blame is upon the registered guide who did the shooting suggested that he is to be arrested and doubtle for manslaughter.

Good results on big game are reported from th North of Bingham, Maine. Six or eight sportsm Massachusetts and Rhode Island have secured de within the open season, including C. S. Howar ford; D. E. Riggs, South Essex; B. A. Walker, M S. N. Snow, Providence, and R. A. Thompson bridge. It is also reported that a couple of hunte been treed by a bull moose, a few miles north of E Specials to the newspapers say that over 400 de already passed through Bangor since the open begun.

Oct. 23.—Sportsmen in this section are still m turbed about the enforcement of the Sunday laws shooting and fishing. Under the old form of the parties fishing are being arrested, as well as for s under the new law of 1899. The old statute agai ing reads: "Whoever attempts to take or catch on the Lord's Day, by using any hook, line, net o or any other implement, shall be punished by a exceeding $10." Under this law several boys w rested in Lynn a week ago yesterday, and brough the magistrate. They pleaded that they did not kn they were breaking any special law; had always fi Sunday. At Hingham and other points in that sec smelt fishers are a good deal alarmed. One hotel at Hingham says that it makes a difference to $40 or $50 every Sunday. He has been in the habi tertaining shooting and fishing sportsmen. Thr belonging in Malden were on their way home last from a shooting trip along the shore from E Saugus. They had fair game bags of ducks, etc. den stepped up and asked them what luck they h Not knowing the officer, they said "First rat opened their game bags for the inspection of a hunter, as they supposed. Immediately he arreste for Sunday shooting. They contend that they s birds on Saturday and were merely taking them h Sunday. It will be for the officer to show that th were not shot as the hunters claim. Complaints a bitter against what the hunters and fishers rega spasmodic enforcement of the Sunday laws. N this complaint come from a "hoodlum element," most of the comment I have heard comes from s the most respectable merchants and business me men, of irreproachable integrity, who are unable other time than Sunday for shooting and fishing. new enforcement of Sabbath observance laws st the cheap, hoodlum element only, they would n but that element can fish and shoot every other da week, while tired business men, with only Sun recreation, must be deprived of the privilege alt They promise to fight the Sunday laws in the Leg this winter.

The big-game hunters are going and returning. the successful Boston hunters may be noted E. W gett, from The Forks, Me., with one deer; J. A. from Parlin Pond, Me., one deer; A. S. Aller Moxie Pond, Me., one deer; Walter D. Noyes, N Me., one deer; A. J. Johnson, from Jackman, M deer. The following Massachusetts parties have h home their deer the past week, passing through F

ere they were registered: A. S. Wattles, Miss E. ttles, C. C. S. Stinchfield, O. L. Belcher, John G. L. Foote, J. L. Roberts, F. J. Newell, F. S. E. C. Chesterfield, R. O. Framfore, W. E. Ed- W. H. Thompson, J. F. Mills, J. W. Lutz, W. H. J. W. Penniman, F. W. Pulney, Charles Strout, Loomis, John Foster, John Jinkinson, S. B. J. B. Carpenter, Robert Glover, S. B. Lane, A. W. l, John F. Priest, Harry D. Priest, A. B. Harlow, G. A. Alton, W. A. Alton, L. E. Anderson, Merritt, Lynn; H. D. Brown, I. H. Pomeroy, ter; E. G. Curtis, West Newton; E. R. Saunders, S. B. Miller, Lawrence; G. Brooks, C. K. Falks, gs, H. L. McDonnald, Wm. Harley, Haverhill; utnam, Fitchburg; A. D. Monteith, Dedham; M. ey, E. E. Hawker, Chelsea; C. Howe, Leomin- J. Bigelow, Worcester; G. Williams, Newton; A. ston, Dr. R. Magee, Cambridge; W. D. Noyes, ones, Woburn; T. B. Currier, M. A. Turner, e; E. H. Whitehead, Medford; J. Moore, Ply- R. H. Nickerson, Dorchester.

Mr. D. H. Blanchard yesterday, a gentleman be remembered as having done much for the best nd game legislation. He is much concerned in o the all too frequent shooting of men mistaken game, particularly in Maine. With many others es it to be the duty of the Fish and Game Com- of that State to take the matter in hand and to erybody who shoots carelessly to justice. If the s not law enough already, let the Legislature pecially stringent laws, sufficient to punish those ure or kill others by careless shooting; punish r manslaughter or murder. I have talked with orting gentlemen, and they heartily agree with nchard.

SPECIAL.

If It Is Born in One.

SPRINGS, Kan.—*Editor Forest and Stream:* I have count my success in hunting and fishing not by unt of fish or game secured, but by the associa- d surroundings which attend the taking of the And so I look back upon a hunt, the result of o far as game was concerned, was the securing of muskrat, as one of the pleasantest of many pleas- s in Kansas. Muskrat hunting was, as with most ecticut River boys, one of my old-time pleasures. e very scarce on my old hunting grounds at and I had watched and waited for a bit of the sport in vain.

ne winter morning I awoke to find everything with a soft snow. At noon it stopped coming, air was full of fog and all things were dripping isture. Such a day is common in New England, in Kansas. It was too wet for my work in the so I decided to take a stroll. Of rabbits we had no one cared for squirrels; it was too late in the for quail and too early for ducks. But a tramp the gun would be only hard work, so I shoul- and started down toward the river. Along a hedge that way I found where a couple of coyotes had e the snow had fallen, so I started after them, put- a couple of shells loaded with coarse shot as I followed them down to where they had been rabbits, but soon found where they had left at d and it was useless to follow them.

ed back down the river to where a great cotton- aned out over it, some 30ft. above the water. r was mostly ice-bound, but under and below the s an open place; so I sat down here and waited ever might come, for it is one of my day dreams hall yet secure a beaver or otter in one of these streams. The melting snow kept up its soft spat- e chickadees came and asked me what I was wait- the fox squirrels barked from the timber across r; the crows scolded at the silent form of the and gradually my mind went back to my old New l home, to the sandy plains of New Jersey and ck again to the great trees that grew along the hey had seen the deer and buffalo, the Indian and boy; it may be even Leather Stocking and Hard ad camped in their shade. Surely they had seen cave loaded with rich furs from the hunting- of the upper prairies pass down to the markets of souri, while now they looked only upon the white o-called "improvements." So musing, the mo- rew into hours, until the premonition that game r came over me. I had seen nothing as yet that to shoot; but glancing to the lower end of the ater, there I saw the v-shaped ripple so familiar and soon I saw the head of a muskrat. It was a ot at a small moving target, but the old Reming- e to my shoulder, the sight came in line with the ry head and the silence was broken by the sharp the report. A moment later the little body floated on the water. I had made a long dead shot and ud of it.

he next thing was to get my game. The river bank y high and steep and slippery, or "slick" as the on is here, as only Kansas 'dobe can be, and a misstep would send me down into the deep strong of the river and very possibly to be drawn under the ny death. But my hunter's blood was up and I that specimen. A moment's delay, and it would r the ice and lost; so risking all, down I went, f course or I should not now be writing this; the water and drew ashore my prize, the first ost the last muskrat I have shot in Kansas. To t I had risked as much as many a hunter does for game. It was worth on the market 10 cents, and my friends who do not care for the hunt, if they n me would have called me gentle names, but to o is born with the hunter's blood in him it matters be the great bear of the north, a muskrat in Kan- single red squirrel in Eastern woods, if to obtain ticular game is the object in view. The same risks run and successful pursuit be just as gratifying in ance as the other. Altogether that pleasant after- ill linger in my mind as long as eye can sight a my finger press a trigger.

PINE TREE.

REST AND STREAM is put to press each week on Tuesday. ndence intended for publication should reach us at the Monday and as much earlier as practicable.

CHICAGO AND THE WEST.

The Illinois Test Case.

CHICAGO, Ill., Oct. 19.—I met our State game warden, Harry W. Loveday, yesterday evening, and he tells me that the fight is now on under which the Illinois game law is to be tested by the non-resident shooters who come over from Iowa to shoot ducks in the neighborhood of the preserves of the Carthage Gun Club, the Crystal Lake Gun Club, etc., in Illinois. Mr. Loveday showed me a letter from Mr. J. W. Gordon, State's Attorney of Henderson county, who said that Warden De Hague had just made an arrest which would test the law. Mr. Gordon wrote that the case would be taken at once into the Circuit Court, and that the first phase of the fight would be habeas corpus proceedings. Warden Loveday says the matter will be pushed, and Mr. Gordon will have all the assistance he requires. Collections have not yet been made on the subscription paper which was a couple of months ago passed among Chicago sportsmen for the purpose of raising funds to help prosecute this fight.

Buffalo Jones.

I ran across Buffalo Jones by accident to-day in an office near my own, and learn that the author of "Buffalo Jones' Forty Years of Adventure" is now on his way home from New York, after delivering his consignment of buffalo at that city. Mr. Jones picked up these animals at different places, mainly the Goodnight ranch, of Texas. Mr. Jones is looking very well, and he tells me that his book is proving a great success. It contains the record of what has certainly been a life of more than ordinary activity, restlessness and adventurousness.

The newspaper clipping says that there were four buffalo bulls, two cows and a yearling in the shipment which came from the Goodnight ranch of Texas. Each animal was sold at $500. It appears that Mr. Jones has an interest in the Goodnight herd. The original completed Buffalo Jones herd numbered 120 animals. It is said that the total of semi-domesticated buffalo is now nearly 600, including all the animals in captivity, and not any of the few supposed to be still in wild state. Mr. Jones regretted he would be too late to head the Dewey parade with a team of buffalo.

Death of Robert D. Schultz.

Mr. Robt. D. Schultz, of Zanesville, O., died at that city, Oct. 14, from a sudden attack of neuralgia of the heart. Mr. Schultz was a millionaire, largely interested in business enterprises in that city, and was one of the most prominent sportsmen of his State. He was a large-minded, large-bodied man, the soul of honor and charitableness, and his loss is mourned by hundreds of friends in all parts of the country. Mr. Schultz was just back from a two months' trip to Colorado with his friend, Mr. Seib, of Brooklyn, N. Y., and both men reported a fine time, and Mr. Schultz was looking well. His death was a great shock to his friends. Mr. Schultz was one of the original "Saginaw Crowd," and he had taken a trip with that fine body of amateur sportsmen out into Dakota every year, with one of two exceptions, since 1884. His warm friend, Mr. W. B. Mershon, says that he thinks Mr. Schultz's death will put an end to the Dakota trips. This is the second death within three years in the membership of the Saginaw Crowd, the first one to drop out of the ranks being Mr. Fred A. Ashley, of Saginaw. All business seemed to be stopped in Zanesville on the day of Mr. Schultz's funeral, and the streets were packed with friends. Many came from New York, and other distant cities, and there was apparently no one in town who did not share in the deep sorrow at his loss. As a sportsman Mr. Schultz was liberal, unselfish and justice loving—one of those who really believe in fair play in every walk of life.

Chicago Sportsman Goes Gold Hunting.

Mr. Victor L. Cunnyngham, a young gentleman quite prominent among the sportsmen of this city, left this week via New York on an expedition to South America in search of gold. He goes as the representative of a Chicago syndicate who propose to invest in that country on the strength of stories told by a returned miner. Mr. Cunnyngham will cross Colombia and seek out a distant valley in the Andes, which is reputed to be very rich in the precious metal. His many Chicago friends wish him the best of fortune.

Not Peaceful.

It is understood that the word "calumet" in the Indian language signifies the pipe of peace, but peaceful is the wrong name for the Calumet Lake region along the southern edge of Chicago. As I frequently have occasion to report, this is the scene of more illegal shooting and fishing than almost any district of equal size in the State of Illinois, being infested by all sorts of foreign law-breakers, as well as a few who are not foreign. This week wardens Ratto and Kleinman arrested three prisoners and had them fined. Henry Thomas was charged with shooting before sunrise. He was fined $15. Louis Jackson and Henry Marion were shooting song birds, and it cost the two $15. Hardly a Sunday goes by without a half-dozen arrests in that busy neighborhood.

Movements of Western Sportsmen.

Hon. Carter H. Harrison, Mayor of Chicago; Hon. Hempstead Washburne, ex-Mayor of Chicago, and Hon. Bill Haskell were all down at Maksawba Club last week. They had nothing very startling in the way of luck, but got a few snipe and a few ducks. They tried the fishing, and caught a very decent lot of bass, one weighing 4¾lbs. The same party will go down to Maksawba the latter part of this week.

Mr. R. B. Organ, of Maksawba Club, advises me that friends of his have found unmistakable evidence that the natives have been dynamiting fish in the Kankakee River. Several fish—carp, bass and pickerel—were picked up as they floated down stream dead or stunned.

Mr. R. A. Shaler, of this city, is now at Horicon Club in Wisconsin, duck shooting. This makes his second trip of the fall, and he has had very good luck.

Mr. Joel Kinney, of this city, is back from a three days' trip on the Horicon marsh. He got forty-eight ducks and a lot of snipe and rail.

Mr. L. R. Brown, of Chicago, is absent at Horicon marsh for his second trip of this season. He had very good luck in September.

Dr. H. C. Buechner, of Chicago, is another member of Diana Club, who is this week shooting on the Horicon marsh.

Mr. F. R. Bissell, of this city, who usually shoots at Water Valley, Ind., reports the water low and duck and snipe shooting poor. He says that a great many quail are being killed in that country now.

Mr. William Werner and Mr. W. P. Mussey, of this city, had planned a quail shooting trip to Holland, Mich., this week, but Mr. Mussey was unable to get away, and the enterprise had to be abandoned.

Dr. J. D. Hammond, of this city, is back from a shooting trip on the best of the club marshes of Lake Erie near Toledo. He went as a guest of some of the members. The party met clear, warm weather, and did not have so good sport as they might have had, but made some very decent bags of black mallards and teal.

Mr. A. Roth, of this city, has returned from Neepeenauk Club, of Wisconsin. He met pleasant weather, but not so many ducks as he would have liked.

Messrs. Charles L. Hutchinson, Chauncey Blair and Robert Forsyth, all of this city, returned last week from a bass fishing trip at Pelee Island, of Lake Erie. They report very good luck and a pleasant time.

Mr. J. Dyer, of the U. M. C. Co., and Mr. Charles Sylvester, of the Winchester R. A. Co., met this week in their calls on the trade of this city. As witnessing the *entente cordiale* existing between these two gentlemen, I may say that I saw the U. M. C. man borrow the lead pencil of the Winchester man to write an order with it. This was at Spalding's, and the two were at the time victims of Pop Hirth.

One of the Sights of a Great City.

I am told that one of the sights of the city of Venice is the daily congregation of the pigeons at St. Mark's Square, where the birds are regularly fed and not allowed to be molested. I have never been in Venice, though I expect to go there when I get $5 more saved up; but I have often had occasion to remark that one does not need to go outside of Chicago in order to see the world. The other day I was attracted by a crowd standing at the corner of Clark and Madison streets, in this city, and as I passed by I found that the center of attraction was a busy group of perhaps a score of pigeons, which were picking up the grain spilled from the nose bag of a cab horse. The birds were in the center of a circle formed by the spectators, and were apparently perfectly fearless, though not 2ft. from the edge of the lined-up crowd. It was a pretty sight, and a curious one, and I imagine no one there was the worse for it.

Does It Scream?

Perhaps the best serial story now running in the American magazines is the one entitled "To Have and to Hold," written by Miss Mary Johnston, of Virginia, and now current in the Atlantic Monthly. In the opening chapter of the October issue there is the description of a heavy storm, and the writer says that during the storm matters were made more frightful by a "catamount which screamed and screamed." There is some uncertainty as to the animal mean by the catamount, and of course every one recalls the discussion in the FOREST AND STREAM as to whether the panther every really does scream. It it difficult to change popular belief, however, and I imagine that the "womanlike wail" of the panther has come to stay in our literature. Not but what Miss Johnston may have a hundred screaming catamounts in her story if she likes, for it is too good to deserve criticism from the most captious. It takes one back to the time when old Virginny was young Virginny, and full of wild men and wild beasts.

[There is no denying that the panther screams.]

News from the Gros Ventre.

I have received to-day the wedding cards of Miss Edna Pettigrew, of Jackson, Wyo., and Mr. Wm. Wells, of Wells, P. O., Wyo., announcing the marriage as having taken place Aug. 15. Mr. Wells is very well known to almost all the men who go West after big game, and I am sure all will wish him and his wife a very long and happy life in their mountain home.

News from Minnesota.

Latest reports from Kabekona camp in Minnesota say the weather is fine and duck shooting and bass fishing good. Mr. Frame, of New York, caught twenty-one bass in five hours; total weight, 77lbs. Twelve guests were in at that writting: Messrs. Geo. P. and Wm. H. Miller and Mr. F. Bloodgood, all of Milwaukee; Mr. and Mrs. Hepburn, Chicago; Chas. P. Frame, New York city; Edward B. Ellicott and Chas. S. Reed, of Chicago; C. V. Edmund, Louisville, Ky.; J. M. Kulp, Washington, D. C. No muscallunge reported, as the parties are all having good time enough at bass and birds.

News from the Kankakee.

The Kankakee River is not much good for bass this fall, thouhg a few are being taken. A week ago a few woodcock were seen near Davis. Two weeks ago Mr. C. C. Hess, of this city, made a decent bag of snipe at Lorenzo. There are a few snipe in now, but I cannot say much in encouragement of those who expect very big bags. Try Shelby and Koutts.

Movements of Western Sportsmen.

Oct. 21.—Dr. J. N. Crouse left for Tolleston Club yesterday evening for a try at the ducks to-day. He says that a good many ducks are reported in on the Tolleston Club marsh, and he anticipates some shooting.

Dr. H. C. Beuchner is back from the Horicon marsh. He reports thousands of ducks in on that fine preserve, but the weather too warm and mild to set them working.

Mr. S. E. Young, of this city, says that there are a few ducks along the Grand Calumet River near the Calumet Heights Club.

Mr. A. Van Sant, an attorney of this town, with three

friends, has just returned from a three days' hunt at Koutts, Ind. They killed two prairie chickens and that is all they got in the three days. The once famous Koutts snipe marsh is perfectly dry and no snipes or ducks were to be seen.

Mr. Frederick M. Otis, Harry Littlefield and Myron James, cow punchers from Buffalo, Wyo., arrived in the city this week after a thirty-three days' horseback ride. This is a good performance for their horses, for the distance is about 1,200 miles, and they claim that their traveling time was less than thirty days, an average of over 40 miles a day.

Mr. A. Hirth, of Spalding's gun and tackle department, with his young gfriend, Master Bert Heide, leaves to-day for a day's visit at Calumet Heights Club, just south of this city, where the two will be guests of one of the club members.

Mr. George Thorne, of Montgomery, Ward & Co., whom I mentioned earlier as absent in Wyoming on a big-game hunt, has returned, and I understand he is somewhat disappointed with his trip. He was lucky enough to kill one bear, but no deer or elk, the party being so unforunate as to get in behind a hunting party of Indians who had pretty much cleaned up all the game.

Where Are the Ducks?

Dr. Alfred Hinde, of this city, came into my office today and asked me where he could go to get some duck shooting somewhere near Chicago. I had to tell him that I did not know where he could find what he wanted. Ten years ago it would have been pretty safe to say, at this time of the fall, that the Doctor could have safely risked a trip to any of the better known points on the Illinois or the Kankakee rivers, for though he might not have made a very big bag, he could have counted on seeing a few birds, at least. To-day the Kankakee marshes are nearly dry, and I should not like to send any one there with the idea that he might get much shooting. The best of the Illinois River marshes are preserved. Fox Lake, Illinois, is shot out and has been for years. The best part of Lake Koshkonong is preserved and Dr. Hinde himself told me that on Lake Poygan and the Winneconne marshes of Wisconsin, where he formerly shot, there were very few birds this fall. I told him there were some birds on Horicon marsh, but that is a preserved marsh. I mentioned the Preston Lake country, of South Dakota, where Dr. Hinde formerly shot, but that seemed a good way off, and a bit uncertain at that. So did Dawson and Devil's Lake, of North Dakota, though I hear there is good shooting there this fall. I had to admit to Dr. Hinde that duck shooting in this part of the West seems to be pretty much a minus quantity this fall. I advised him to wait and go to Texas in the winter. It may be that we will get a flight of Northern birds ahead of some storm this fall, but they have no place to stop in this region, and if they drop in for a day or two will probably be gone before a shooter can get down to where they are.

Dr. Hinde and I both concluded that shooting in these days was a matter of non-resident sport, and under a license at that. He does not approve of exacting a license of non-residents, but I can't see that the matter is vital, for the game is going fast enough, not only in Illinois, but in Dakota and Texas, and the harder it is to get the better chance it will have. Men nowadays travel any distance to get shooting, and even these long trips are disappointments, though made to the best grounds of the West. According to Dr. Hinde we are bound to come to the Old World system of game preserves before long, and this I think is no doubt true. The American public will see fences erected around the game, and the greater part of the American public will be outside the fence, and it will be there because it belongs there. The shooters of America have squandered their resources, and it is ancint history that the spendthrift eventually goes broke. If the citizens of this country wanted their game they could always have it, and if we should begin now to enforce our game laws, or to respect our game laws, there is game enough left in this country to give abundance to all sportsmen for all time to come, so that they could alway have an open shooting country and not one of either barrenness or bars. Apparently we do not want an open shooting country, and so we will not have it. What we want is some philosopher who can explain to us how we can both eat our cake and keep it.

Toledo and the Au Sable.

The city of Toledo, O., sends a great many men annually up to the famous Au Sable River, of Michigan, where some of the anglers have established camps for regular occupancy each summer. The Au Sable is an old-time stream to some of the Toledans, as, for instance, Mr. J. W. Oswald, who first went in there twenty-two years ago. Dr. and Mrs. Barber are "regulars" on this grand trout stream, and they take their children in with them. Messrs. John A. Waite, Chas. Reynolds, Joseph Spencer, Clarence Brown, A. L. Mills, A. W. Houston, F. L. Geddes, Harry Astley, T. C. Stevens, Judge Jos. Cummings and Judge John M. Kenyon are others who are well acquainted with the Sable from the grayling days to those of trout. Judge Kenyon is a veteran rod maker, and Oswald has taken a professional photographer's pride in making pictures along this beautiful waterway of the pine woods. The Au Sable has this year been perhaps the best trout stream in Michigan, and if not everrun with inconsiderate fishing should keep up its reputation for many years to come.

Would Go Again.

Hon. Athelston Gaston, Member of Congress from Meadville, Pa., who was one of the Congressional party who made the trip into Minnesota the first of this month, writes me that he notices in the FOREST AND STREAM mention of an organization of those who made the trip, with a view to a later trip into that region next year or later. Mr. Gaston says he wants to be counted in on that proposition, and adds that he hopes to be in better health next time. There is no question that there is plenty of sport to be had in that reservation country if one had time to exploit it fully, and I hope this may be done next year or soon thereafter, and that within the confines of a national park in Minnesota.

E. HOUGH.

430 CAXTON BUILDING, Chicago, Ill.

In the Northwest.

Editor Forest and Stream:

Bacon put it on record that reading maketh a full man, writing an exact man and speaking a ready man. So far so good; but he might have added travel a well-informed man. It is only by moving about that the truth regarding game distribution in North America to-day may be fully grasped. The widespread belief in the East that big game is becoming extinct did not tally at all with my own experience in wild Canada, and I was inclined to doubt it, until I paid a visit some few days ago to northern Washington, where I found, alas! that, so far as parts of the United States are concerned, it is unfortunately but too true.

At the Colville Mission, in northern Washington, they proved to me that within the last ten years great tracts of country have been absolutely cleaned out. Mule deer were once extraordinarily abundant, but to-day are few and far between in the neighborhood of the mission—in fact, all along the S. F. & N. below Marcus, Wash.

Yet in British Columbia there are big stretches of mountain range where the game is but little interfered with, and I think it will be many a long year before our wonderful game resources are seriously depleted. The game laws are sensible, and moreover are actually enforced, which is the vital point.

The new Crow's Nest line through the Rockies opens out a country at present swarming with game, and containing a population so scanty and so very busy with other more engrossing concerns—mining, to wit—that there will be no very heavy toll taken of nature's cattle.

In the Rockies are found moose, caribou, elk, sheep, goat, bear and mule deer. In the Columbia valley mainly deer, and in the Selkirks, goats, bear and caribou. The mallard shooting along the swamps of the Kootenay is as good as anything in the Northwest, and the same may be said of a few scattered lakes in other parts of the Kootenays, but as a rule ducking grounds are rather limited.

Possibly, however, the fishing is even better than the shooting. In most of the streams of southern British Columbia the rainbow (*S. purpuratus*) is to be found, and in his own waters he can give points and a beating to any other fishes, excepting always the sea salmon of the Atlantic and his landlocked relative. I have never played such trout as we get here. Our old friend *fontinalis* is not in it at all. One day last week I kept tabs on a 2lb. rainbow I had on. It took eight minutes to kill him on a powerful 11oz. rod, and he jumped eleven times. They like a small fly, about No. 8 hook is right, and in ordinary fishing you lose at least one out of three fairly hooked.

Then we have lake trout, and a landlocked salmon called, I believe, *Oncorhynchus kamloops* by Jordan, though the men who make a specialty of fin rays and vomerine teeth are yet squabbling over his exact status. Meanwhile fishermen are getting fine sport and can afford to wait patiently the outcome of the struggle.

ST. CROIX.

NELSON, B. C., Oct. 8.

Arkansas and the South.

ST. LOUIS, Mo., Oct. 20.—Judging by the encouraging reports that come from all sections of the State this is going to be one of the very best game seasons we have had in quite a while. Deer and turkey are reported in increased numbers in all sections, while our quail crop should be unusually large, so that there is plenty of sport in store for the shooters of Arkansas and those who contemplate a trip to this State. McCrory, on the Bald Knob branch of the Iron Mountain R. R., should be a very good place for deer, turkey, duck and squirrel. Along Bayou DeView, which is a tributary of the White River, and its branches and a part of this famous river bottom there should be an abundance of mast, and as a natural consequence plenty of game. If any one wishes to try this section they should go to McCrory and from there by team to Bayou DeView, a distance of about five miles. In addition to the Bayou there is a big cypress-brake nearby and here the duck shooting is frequently very good, while up toward the head of the Bayou there is a flat open country that is grown up in switch cane which is always a favorite resort for deer and turkey. Further down this line, on what is known as the valley route, in the vicinity of Walnut Lake, is also a good point for big game. After one gets to the lake he should go up it about three or four miles and this will place him right in the game country. The only shooting to be had at this point consists of deer, turkey, squirrels and a few ducks. If one cares to go even a little further south, Hudspeth, Chico county, would be a good place, along Bayou Mason and the brakes that abound in this section. Deer and turkey are yet quite plentiful, which invariably the duck and squirrel shooting is also good. Another good point is St. Charles on the White River, or DeWitt or Gillette. All of these points are in Arkansas County and to reach them one should go over the Cotton Belt R. R. to Stuttgart and then take a branch road that runs to both of the latter places, while in order to get to St. Charles one should go to DeWitt and from there by team to St. Charles, a distance of about twelve miles. The best place in this county should be along Eses Bayou where it runs into Big Lagrue. This should be one of the best points for big game in the State. The bass fishing should also be good in Big Lagrue. DeWitt and Gillette are located on the edge of Grand Prairie, and while they are within easy access of big kame country they are right in the very midst of the finest quail shooting to be found in any part of Arkansas.

There are still some chickens in this neighborhood, but these are very scarce and have been practically exterminated by this time, so that they can not be considered a factor in making a trip to this country. All the above mentioned points are in what is known as the bottom land. However, there are places among the hills where good shooting can be had. Mena, in Polk county, is a good place and this is right among the hills, and in one of the wildest sections of the State. Here one will find deer and turkey and an occasional bear. Mena is on the Pittsburg & Gulf R. R., in the northwestern part of the State, not very far from the Indian Territory line.

The best season of the year for a trip of this kin about the 10th of November until the middle of Decem at which time we are usually favored with good weat The shooter contemplating a trip of this kind and is also fond of fishing, I would advise to bring his with him, as the bass which are very pletiful in our la and bayous usually bite good during the month of vember. I have heard of some very large catches on Cache and St. Francis rivers. The weather during present month has been very warm, while during Sept ber it was unusually cool, so cold in fact that we had first flight of northern ducks, and I know of a few m ards that were killed in the vicinity of Little Rock, du this period, while several good bags of teal were recor

PAUL R. LITZK

A Letter of Frank Forester's

PROBABLY no man ever did more for true sportsm ship than Henry William Herbert, "Frank Forester." inclose a letter which has been in my possession for s time, which I value very highly, as it is thoroughly c acteristic of the man. Col. Trumbull, to whom the le was written, was the artist who painted so many portr of the officers of the Revolutionary War.

H. N. MUNN

THE letter sent by Mr. Munn has added interest cause Col. Trumbull, to whom it was written, was famous painter of Revolutionary portraits, whose torical pictures are in the Rotunda of the Capito Washington, New York City Hall, Yale College elsewhere. Born in 1750, Trumbull was by fifty-s years the senior of Herbert, who was born in 1807. date is given in the letter; but the reference to Huddart, in whose school Herbert was a tutor, indic that it was written between 1830 and 1835. It reads:

My dear Colonel:

It is with the greatest regret that I am compelle write this apology to you; but the fact is that on Satur while out shooting a pliable bough lashed me with s violence in the eye that I am neither comfortable no to be seen, nor dare I venture to face the weather. have avoided writing this until the very last mom trusting that I should have been well in time to acc pany you; but sorry I am to find myself to-day far little well to venture on the journey. I will, howe exert myself to the utmost to come up to New Ha on Friday week, or (if anything should occur to pre that, which I do not foresee) I will undoubtedly be v you on to-morrow fortnight. I must beg you to al me to postpone the settlement of my little debt to to the same time, as the same cause which hinders from going with you has precluded the possibility of seeing my paymaster, Mr. Huddart. Pray believe

Ever your most sincere and obliged

HENRY WM. HERBER

74 MERCER STREET.

A Birthday.

I HAD a birthday lately. I used to have such thi once a year, when I was younger, but lately they app to come every full of the moon. I started out to celeb with Lou G. for company. Lou is an old buffalo hu —old in experience, but not in years. Given 87 acres in one piece of land in South Dakota, with du and chickens squandered through it, one had a chanc celebrate with freedom.

A word as to the color of the clothing I wore: D green describes it. Did you ever notice that ther no such color in nature as the popular dead grass cl ing sold in gun stores? Grass, even when the s falls on it, is somewhat green; some of it is dead brown, but not all. I have a suit of the dirty gr shade the market-hunter's duck boat is painted.

Dike a man in the "braw new claes" usually s and if he won't show yellow why my eyes deceive But this shade cannot be seen readily, even by the green head, as he goes rubber-necking along in middle of the day.

We had a long spring wagon, in which we had pl of room for our feet, and our five dogs could lie d on hay and not get underfoot. About two miles out old mallard got too familiar, and Lou said, "I knoc the snow out of him." There, boys, a new term is vented. Knocked the tar, stuffing, and all that does go any more. The dead-center shot makes the feathers fly like snow. It's clean, poetical and desc tive.

Along toward noon we put up a bunch of chickens, I sat in the rig with my gun ready. I had the pleas of seeing one drop on each side of me, as they flus wild and split as they passed the team on hurtling wi to sail over the hill out of sight. Lunch behind wheat stack, a whiff, a ten minutes' nap, and Lou sa "Better get your hook in the water if you want to ca anything"—good advice, that, in many things, includ love, business and hunting.

After noon the sky was overcast, and the day bec ideal; the dogs did grand work, and we gathered th in as the man swallowed the thermometer—by degr

An Indian had put up his tepee near the lake, and j about set of sun we struck great luck hard by it. I won if two things will not disappear together—the Indian the game he hunted. To me the somber, prison-l stone castle of the town bears little of the lines of bea that the tepee does when seen from a distance. But men are not alike. I would rather, as did the Doug "hear the lark sing than the mouse squeak.

Take this one day, for instance, and what could h been more enjoyable? A good team, some good d and that fine bird, the chicken—in quantity enough please, but not to satiate—a companion who co instruct even an old-timer like me; and nothing lacki What did I learn? Why, just how to kill a cripp duck on the water the first crack when only his h shows. How many, many shots I have fired at that h and neck, which is larger than a ten-bore shell, and h missed; not missed, but failed to kill; splattered the s all over him too. "Now," says Lou, "see the whole d over the gun. You are not shooting at him, but un him. Shot goes in a streak a yard or so long. If the fr

end does not catch him the middle and the rear end will hit the water, bounce or glance, and catch him certain."

You try it. My word for it, the idea is a good one and new to me.

I asked myself this question at night: What was lacking on this birthday? I could find no flaw. And how many such perfect days of full enjoyment are given a man in a year—say a lifetime even, if you will—when you enjoy every moment, and not a single thing agley? I have seen few enough. PINK EDGE.

In the Deer Woods.

PORTLAND, Ind.—*Editor Forest and Stream:* It is fitting that your columns should be advised of the intents and purposes of a party of nineteen nimrods who left here the morning of the 2d inst. This party went by special car over the Pennsylvania, C., M. & St. P. and N. P. route to Helena, Mont. Their time limit is forty-five days. There are some very good hunters in the party, and if they succeed in reaching a big-game country they will no doubt bring home something to show for the trip. As for me, I feel as I imagine a hunting dog feels when chained to his kennel while neighboring dogs are barking in the nearby woods. All I can do is to live over the past and plan for the future. Dr. Mackey is the only member of my club who went on this trip, and now when I meet the other boys something is said about a trip to the Upper Peninsula of Michigan in November. Of course I am getting the buck fever pertty badly, and may break "the chain" ere the deer season opens.

I never had the buck ague—these shakes that cause a shooter's gun to wobble all over the mark—and when I read of a hunter having one of these nervous chills I think of a day's shooting near Witch Lake, between Floodwood and Republic, on the Chicago, Milwaukee & St. Paul's North Star road. The day was an unusually exciting one, albeit I did not have an unusual amount of game to show for it.

Some of your readers have been over the ground, and know where the spring is at the east side of the railroad, a mile south of Witbec Station. At this point I left the railroad and started east, but ran on to fresh tracks on the first high ground I struck, and spent some time looking from the top of a stump over a burned section that lay to the east. After satisfying myself that the deer were not in the clearing, I went on a few steps, and was letting my nerves down to their normal pitch, when they were set tingling by a large buck breaking cover to my right and going at racehorse speed across my front. He was following an old graded timber road, while I was on a hill some 25ft. above him and about 75yds. distant. He laid his antlers back over his shoulders and gave me the prettiest exhibition of speed I have ever seen in deer. I shot three times, but must have overshot him. Then he was lost in a turn in the road.

I thought of Mark Twain's jack rabbit. Of course I found fault with myself, and said that I should have held lower and further forward; but the next thought was that it was no use to speculate, for I would never have the same opportunity again. So I went down into the old road and followed it to where it turned to the left, then started east across a deep basin that was spanned by fallen timber. I was about midway, and picking my steps among the slick poles some 15ft. from the ground, when a deer broke brush on a hillside in front of me. This was a second surprise. This deer was not more than 200yds. from where I had just fired three shots from my .38-40. The hill was covered with small brush, and I could see the outline of the deer at the summit. I fired at what I thought was its shoulder and saw it go over the hill. I then finished my trip over the dry basin and found plenty of blood where the deer had stood. I trailed that deer by blood drops more than a mile. Finally I came to a ridge that was paralleled on the right by green timber; but the ridge and to the left had been cut over. I trailed up the end of the ridge, and near the top came to a large pine stump. Here the deer had doubled on its trail, and I concluded it had lain down not far away. To get a view I stepped on a spur root, then on top of the stump, bringing up my gun to a "ready." Here was my third surprise of the morning. Lying on top of the ridge and at a spot which proved to be just forty-five steps distant was a large buck, and he was looking at me. There was nothing to screen him but a few small sprouts. His right shoulder was toward me, and his right eye was the most tempting mark I ever drew bead on. I hit his eyeball in the center. I had no time to think how cruel it was. It was a morning of surprises. G. W. CUNNINGHAM.

The New Jersey Snipe Law.

NEW JERSEY, Oct. 20.—*Editor Forest and Stream:* Perhaps you can inform the public of the meaning of the game laws of New Jersey, made by the great minds of the sportsmen and statesmen who hold forth at Trenton.

In the spring when the breeding time is on, and the birds have mated, wild and thin, not being in a condition to eat, the game laws of New Jersey permit the killing of the English snipe, but in the autumn the season closes on Oct. 1. A very few birds were killed during that month on the meadows of the upper Passaic River, Pine Brook (of Frank Forester's fame), Hanover Neck and Whipping meadows. The past few days the above named stretches have been fairly alive with birds. I believe a bag of twenty-five could be easily made in one day by a moderate shot. They are big, fat, lazy fellows, and have to be fairly kicked out of the grass. The game wardens are on the alert, and quite rightly, for it is their place to enforce the law, right or wrong. Are there not enough sportsmen in New Jersey to see this law repealed?—for it is simply an outraging one. H. N. MUNN.

DON'T SHOOT
until you SEE your deer—and see
that it is a deer and not a man.

Greater New York Robin Shooters.

HAD the librettist of "Mikado" been a resident of Fort Hamilton when he wrote the Dicky Bird song, with its chirp, chirp suggestion, his lyric might have touched the highest point of realism.

It is no operatic influence, however, which endears the dicky bird and his fellow chirper, the robin, to the residents of Fort Hamilton. It is guns. On account of the tales of danger which come floating into town no attempt has been made to investigate, but if reports be true, a trip to market is a hazardous experiment and a peep over Knoth's back fence, certain suicide. A pen picture of daily life in Fort Hamilton is vividly portrayed on the page of a houseowner's diary. He writes:

Thursday, Oct. 19.—Had a narrow escape this morning; at 7:30 was awakened by the rattle of musketry on my left, rather heavier than usual; went to the window and raised the shade and just as I did so a double charge of buckshot carried away the sash. I was uninjured, except for a cut on the head and black eye. Neighbor Thompson was in the yard next door with a smoking gun in his hand. "Beg your pardon, old man," he said, laughingly; "did I hit you? Awfully sorry, you know. There was a robin on your window sill." Think I will buy a gun like Thompson's to-day and shoot robins on his window to-morrow at dawn. 6:30 P. M.—Some of the feathers of my wife's theatre hat were clipped off clean by a round of shot on the street at noon. I told her to leave the hat as it was. It would be a good thing. Have bought a gun like Thompson's.

Now it will be seen what a state of affairs exists in Fort Hamilton and all because of the robins. Before consolidation, when New Utrecht and all other places on the road to Coney Island were independent towns, the authorities permitted unlimited bird shooting. Every fall robin potpie was plentiful in the homes of suburbanites who knew how to shoot. When Brooklyn absorbed the outlying towns, the law which forbids discharge of firearms on the city streets, albeit they are cornfields or uplands, went into effect and for a while the birds lived in peace instead of pieces. With this fall a revival has arrived, and the householders who came from the city and who are unused to buckshot have filed objections of a most strenuous character.

It must not be supposed that the people object to robin shooting on general principles. They don't. It is only when the shooters hit other things beside robins that the news residents make trouble, and here is where Knoth's back fence gets into the game. William Knoth keeps the Park Hotel on Fort Hamilton avenue, near Sixty-seventh street. Round about it is a summer garden, where the mounted police of the Fort Hamilton precinct are said to cool their fevered brows on torrid days, while their steeds cool off in the wagon shed. From the fence which encircles the garden it is stated an excellent view may be obtained of several shattered window panes and a variety of clipped twigs, for Knoth's Hotel, according to the accounts of nearby residents, is the rendezvous of a band of bird hunters. Every morning, so the residents declare, a small army of shooters gather near the gas tank close at hand and commence to bang away at robins, sparrows and everything else that flies. As might be supposed, the windows, not being good dodgers, suffer most. If any one happens to be behind a window when a load of buck shot travels that way it is hard luck. Knoth, it is said, is well supplied with shotguns, and every one who visits his hotel is invited to have a whack at the robins. The residents of the neighborhood have notified the Fort Hamilton police, but as yet the authorities have not given the order to "cease firing."

An old veteran of New Utrecht, who is accustomed to shooting robins every year and whose place of business is in the city, out of range, is indignant at the summary action taken by the people.

"What if they do shoot off guns indiscriminately down there, he argued, "it's a good idea. What is it that suburbanites complain of most after six months' existence out of town? It's nothing to do; lack of excitement. Say, what better excitement does a man want for himself and children than dodging shot? It makes a man thoughtful and courteous, too. If he knows there is a strong possibility that he will be shot in a few minutes do you suppose a man will neglect to bid his wife good-by when he leaves her in the morning? No, you can just wager he won't. So that helps. As for the danger, while I admit a man is much more likely to be hit who isn't aimed at than one who is, I don't believe that the proportion of people injured in Fort Hamilton is more than one in ten. Children are not nearly so likely to be shot as their elders, because they are shorter and the bullets fly over their heads. On Sundays I really think, though, some check should be put on the sport when it is carried to excess on the streets. I would not blame any mother for being angry if after she had dressed her children up in their best for Sunday school an ounce of buckshot, striking the road, dashed dirt all over them. There is right on both sides in this as in everything."

Meanwhile the robins flourish. They seem to thrive on bullets and their saucy "chirp, chirp" is heard daily in the woods and fields.—Brooklyn Eagle, Oct. 20, 1899.

Rhode Island Notes.

PROVIDENCE, R. I., Oct. 21.—*Editor Forest and Stream:* S. L. Peck, of East Providence, killed another fox on the 18th in Rehoboth. This makes six foxes that Mr. Peck has killed this season.

Messrs. William E. Viall and W. B. Hazard, of this city, have just returned from a successful week's hunting trip in the Adirondacks, and among other evidences of their good luck and marksmanship have brought back two handsome bucks, weighing about 150lbs. each, shot near Great Moose Lake. W. H. M.

Shooting Resorts.

WE exercise a good deal of care to publish in our advertisements of shooting resorts only such announcements as are responsible. In this way we seek to make our resort column advertisements such as may be depended upon by those who are looking for desirable shooting ground. Of most of the points named we can give additional information and shall be glad to do so upon request.

California Game.

REDLANDS, Cal., Oct. 12.—*Editor Forest and Stream:* The long, hot, dry spell that for months has prevailed in this section has at last been broken by a cold rain in the valley and snow in the adjacent hills.

Notwithstanding the heat, shooters have been out for quail. On Sunday last L. D. and W. C. Whittemore, Will Martin and Bruno Breakhill killed fourteen quail and eighteen rabbits. Six other shooters got twenty-four quail. Two shooters, whose names I refrain from giving because they violated the Riverside county law, killed fifty quail near Moreno. They violated the law which limits the bag of quail to twenty to the gun, and also violated the anti-exportation clause by bringing their game to Redlands.

Two of the Whittemore brothers saw an immense flock of ducks pass over Redlands yesterday. They are reported numerous near the coast. A flock was near Lakeview a few days since. REELFOOT.

Loading Buckshot.

CHARLOTTE, N. C., Oct. 20.—*Editor Forest and Stream:* I send you by even mail a No. 12 shotgun shell loaded with buckshot for deer shooting. The peculiar loading of this shell may interest you. I have never read in your paper of a similar method of holding the shot, nor have I ever before seen it, and it may be a valuable suggestion to many of your readers who contemplate deer hunting this season with a shotgun. The buckshot are first chambered, four to a layer and three layers, then paraffine is melted and when very hot it is poured in the shell over the shot. When it cools it forms a nearly solid mass. A young man who has used this load says it will open at about 30yds. and at a distance of from 45 to 60 will put from 8 to 10 shot in an object the size of a deer.

B. W. SPERRY.

Pheasants for Indiana.

INDIANAPOLIS, Ind., Oct. 7.—Fish and Game Commissioner Z. T. Sweeny is preparing to stock the State with Chinese pheasants. As a beginning he has purchased 100 pairs from a pheasantry near Cincinnati, and these will be distributed in fifty Indiana counties. Domestic hens are to be employed in hatching eggs of these pheasants, for whose protection during the winter particular care is to be taken. Next year the State will make more extensive purchases. Mr. Sweeny says these birds are as hardy as quail, and he expects in a few years to make Indiana a great pheasant State.

A Camp Wood Fire for Broiling.

"A wood fire is not generally suitable for broiling."

So—friend Simpson? Easy to make it so!

Throw a big log across two little logs, a few feet apart. Slant a few stakes against one side of the big log and build your fire on them. Slant your broiler against the other side. The coals fall through the stakes and broil your game, and you likewise if you make too big a fire.

Would that I had right here the trout I thus broiled far up the Tusket River in Nova Scotia! "De breed am small, but de flavor am delicious!" J. P. T.

Fined for Killing a Moose.

BANGOR, Me., Oct. 21.—Alfred Muller, a restaurant keeper of Brooklyn, N. Y., was to-day fined $500 for killing a moose out of season. The game was killed at Shin Pond, on the line of the Bangor & Aroostook R. R. Muller was arrested Tuesday by Warden Neal.

"Jack, the Young Ranchman."

MR. GEO. BIRD GRINNELL, whose books on Indians are well known, recently turned his attention to a new field, and has written for boys a book with the above title, which has been published by Frederick A. Stokes Co., of this city. The volume purports to give the experiences of a New York boy on a ranch in the Rocky Mountains, and to describe certain phases of life in the cattle country as it existed twenty years ago, before the extinction of the buffalo, and before the wild Indians of old times had been brought together and confined on their reservations.

The plan of the book is simple. Jack Danvers, the hero, goes out to the Rocky Mountains with his uncle, who owns a cattle ranch there, and is put in charge of Hugh Johnson, an old Kentuckian, most of whose life has been spent in the further West, trapping, hunting and fighting Indians. With Hugh he rides about over the prairie, learns how to sit on a horse, to throw a rope, to shoot a rifle, to study the habits of game, to hunt, and generally to practice the craft of the old-time men who used to travel the prairie and the mountains. Incidentally he comes to learn something of the cattle business, sees the branding and breaking of horses, and accumulates a small stock of tame wild animals, captured while young, of which the most important and most interesting is a wolf.

Mr. Grinnell's long experience of Western life should enable him to picture that life truthfully, and his knowledge of game and hunting ought to make him a competent instructor of youth in these matters. The story of Jack's adventures is simply and plainly told, and while the boy has no thrilling adventures of the dime novel style, his life as portrayed here is full of interest and excitement. In the course of his summer he succeeds in killing a number of different sorts of game, chief among which is a mountain lion. Wolf coursing with greyhounds is one of the sports in which Jack takes part, and it was by digging out a wolf's den that he obtained the puppy, which he finally tamed and brought back to his Eastern home. Something is told of the Indians, traces of whose former presence are often seen.

In one of Jack's adventures he discovers a mysterious cave, the contents of which we shall not reveal.

Scattered all through the volume is more or less of the natural history of the regions treated, and the ways of the coyote, the antelope and some other mammals and birds are pleasantly touched on.

The tone of the book is wholesome. There is nothing in it that can harm any boy. Its hero is a fine manly little fellow, who develops rapidly under the good influence of the old man Hugh. The volume is good reading for a boy who has a bent for an outdoor life and a fondness for hunting.

One is impressed by the amount of information imparted on every page of the book, and this information is of a kind interesting to the most casual reader. The story is so told that all the way through one feels the reality of the pleasant life. Jack's faithful friend Hugh is a delightful character, with his quaint manner of speech, and his evident pleasure in "Son's" progress in prairie craft. He watches over him, advises and teaches him, and sometimes scolds a bit; as after the adventure with the mountain lion, where Jack's thoughtless rashness had brought him into a position of some danger.

The book is one that old and young alike may enjoy and value as a picture of what ranch life was to a boy a few years ago. It has one point in common with the dime novel; every boy who reads these chapters will immediately have a longing—but in this case a healthy longing—for the free, glorious life of that wonderful Western land.

The book is handsomely illustrated by eight drawings by Mr. E. W. Deming, which picture with singular fidelity the country of the high and dry plateau of the central Rocky Mountain region. H. G. P.

Sea and River Fishing.

ANGLING NOTES.

Water Fleas.

Prof. C. Dwight Marsh writes me from Ripon College, Wisconsin, as follows:

"Newspaper reports are not always to be trusted. Green Lake is in Wisconsin instead of Maine, and Ripon College is in the same States as the lake. I wish the papers had made no worse mistakes than in locating me; but I am sorry to say that they have made me responsible for some very strange statements.

"The work that I have been doing is on the crustacea, which, as you probably know, form the ultimate source of food for our fish. I also have in hand a somewhat extended study of the plankton, which I hope to have in shape for publication before the summer of 1900. I take pleasure in sending you a copy of my last paper on the Green Lake fauna."

So, after all, the mysis was not in Maine; but Green Lake, Wis., or Green Lake, Me., what I said of the opossum shrimp stands in all other respects as I wrote it. The paper Prof. Marsh sends me is exceedingly interesting, although it says very little in detail about the mysis and its life history; but the experiments, as I have read them, have sent my thoughts off in an entirely different direction from what I had anticipated.

The investigations relate to limetic crustacea, which for convenience and to avoid specific names as far as possible I shall group as water fleas. First let me quote a little as to where Prof. Marsh found the crustacea: "In general, we may say that depth rather than extent of surface controls the character of crustacean fauna. This is strikingly shown in a comparison of Green Lake with Lake Winnebago. Lake Winnebago is situated about twenty-five miles from Green Lake, and is about twenty-eight miles long by eight to ten miles broad. Through its whole extent it is very shallow, being for most part from 10 to 30ft. in depth. Its crustacean fauna consists of those species characteristic of shallow lakes, being very different from that of Green Lake. * * * What depth may be considered as characterizing deep lakes it is difficult to state with certainty, and I suppose it is doubtful if an exact limit can be fixed; but I think it is about forty meters."

This would be, approximately, 130ft.; but deep-water crustacea are found in shallow lakes that have "immediate and constant connection with the deeper lakes," as there is migration into them of forms characteristic of deep water. The lake that I previously referred to as the habitat of the opossum shrimp is about 200ft. deep, and as I then said had communication with the Great Lakes. Naturally I have assumed that such investigations as Prof. Marsh reports would be of the utmost value in determining the food supply of our fishes, and be a great aid to those engaged in fishculture; but now it appears to me that the angler is to be benefited directly when in pursuit of fish as a sport, when these investigations are worked out to their ultimate conclusions, by showing him where and at what times to fish to meet with success. Prof. Marsh investigated both the vertical and horizontal distribution of crustacea in Green Lake, but I quote only from his conclusions as to vertical distribution. It seems to be necessary to use the specific names of the water fleas, as they have no common names for each species; but what I wish to show will not be obscured because of this necessity:

"I had supposed that there was a general movement of the whole body of crustacea in such vertical migrations as existed. It is evident that this is not the case, for the different kinds have their individual peculiarities of distribution.

"In the case of *Diaptomus* there is little or no vertical migration from any cause.

"*Epischura* avoids bright light, and has a preference for warm water, and shows both seasonal and diurnal migrations.

"*Limnocalanus* is repelled by bright light and by a high temperature, hence its diurnal migration is more pronounced in cold weather.

"*Cyclops brevispinosus* occurs most abundantly between five and twenty meters in depth. I have no evidence in regard to its diurnal mirgrations.

"*Cyclops fluviatilis* has no diurnal migration, but in its seasonal distribution shows a preference for the warmer water.

"*Leptodora* is a surface form. I have no conclusive evidence in regard to its diurnal migrations.

"*Daphnia kahlbergienses* apparently moves toward the surface at night.

"There is no appreciable difference in the seasonable distribution of *Bosmina*. There is a distinct diurnal migration due to its attraction to light.

"*Daphnella* has a diurnal migration, due to the fact that it is repelled by the light.

"I cannot make out from my collections that the winds have any effect on the vertical distribution of entomostraca. The distribution when the surface is roughened by waves seems to be practically the same as when it is smooth. Neither is there any marked difference between dark and moonlight nights.

"It must be remembered, however, that all my collections were made at five-meter intervals, and that there may be migrations within these limits of which I have no indications. I know, for instance, from surface tows that the immediate surface is almost entirely devoid of entomostraca in the day time, but is populated in enormous numbers in the night.

"There is evidently a very marked diurnal migration of most of the forms at the immediate surface, but it would take a series of collections at very short intervals to determine the limits of the general movement."

Tables are given showing the per cent. of the various forms obtained at the different intervals of depth, but I have quoted enough to show how these investigations may naturally benefit the angler. All sorts of reasons are given why fish bite one day better than another, or at one part of the day better than another part of the same day, and fish are at one time in one depth of water and at another time in another depth. Temperature changes are often quoted to account for good fishing or poor fishing; but it is extremely doubtful if changes of temperature influence the movements of fish as much as food conditions. Here we find daily migrations of food important to all our fresh-water fishes, particularly the so-called game fishes. Some forms of food seek the light at the surface; other forms avoid it, so that fish may feed at or near the surface at dawn or evening, and be obliged to seek the depths at other times to obtain subsistence. The fly-fisher examines the viscera of his fish to find upon which of the winged insects the fish are feeding, for the time; but other forms of food are not so often sought in the same manner, and the lake or pond fisherman trusts more to what some one else has done or his own previous experience without being governed particularly by food conditions, even if he knows or thinks anything about them. The black bass is generally understood to be the most capricious of our game fishes, and those who seek this fish usually carry a greater assortment of baits than for any other fish, and even then the fisherman may return from a day's fishing with basket empty. The possibilities of the future are that instead of providing a long list of baits of various kinds, the angler will be provided with a chart showing the depths of water, and another chart showing the distribution of food in the water, vertically and horizontally, and still another chart showing the migrations daily of the various fish foods in the water. Because I have carried a thermometer and a plumb line on fishing expeditions to take the temperature of the water and find the depth of water and character of the bottom I have caused much amusement to fishing companions, and I wonder what they would say to food charts, migration and distribution, if it comes that they should be added to one's fishing paraphernalia? Stranger things have happened than this, and this is an age of investigation and progress. To be sure, to know just where and when to find one's fish will rob fishing of its speculative charm, and will be too near fishing by rule to please some anglers who like to find out from personal experience and trying, where to fish and when to fish, and which baits to use to meet with success. These possibilities have suggested themselves to me as I have read the careful investigations of Prof. Marsh. Though fishculturists will be the first to avail themselves of the results of his work, the angler may come in later and get information that will insure a full creel and make fishing with hook and line approximately an exact science.

Fly-Fishers' Club Again.

While writing the above note a letter came to me from the post office written by my daughter, now in London, from which I quote: "Last night Mr. Marston called and took us over to the Fly-Fishers' Club to show us the new quarters of the club, at No. 8 Haymarket, so we could tell you about them. Why is it that the fly-fishermen at home have no club similar to this?" Any one can search me, for I do not know why we in this country did not organize a similar fly-fishers' club years ago. There is nothing in the rules of the London Fly-Fishers' Club about the admission of women, and until my daughter wrote that she had been to the club did I know of one visiting it; but the letter suggests to me that if a club should be organized in this country, with an annex for women, relatives of members, and put some women on an organization committee, one would probably have a club before the trout rise to the fly next spring.

Purely Personal.

Another letter from the other side concludes in such a way that I cannot resist quoting its conclusion. It is from Admiral Beardslee, and written from Brussels: "With the idea that while knocking about Europe as I have been doing for a year, I should lose a large proportion of my mail, I stopped nearly all of my papers and periodicals on starting, among them the Forest and Stream; and in regard to it, I feel that I have made a mistake. I miss it very much, and do not find it on sale here. I shall return home in November, when one of the first acts will be to renew my subscription." That is a sportsman's tribute to Forest and Stream, for I had said nothing about this paper to cause the Admiral to refer to it in his letter. Perhaps because I have been writing for the paper twenty-four years next March over my own name or a pen name, and Admiral Beardslee has been writing for it for possibly nearly the same length of time at intervals over the name of Piseco, that in an interchange of letters Forest and Stream would naturally come into the mind of one or both, for he has often mentioned it in letters to me from various portions of the globe. I can understand the feeling he has for the paper, as often, for weeks at a time, I have not opened it; but the time comes always when I do open and look through each number, and I always buy it when away from home and find it on sale, knowing my own copy is waiting to be read on my return.

Tuberculosis in Fishes.

The following letter requires no introduction, as it is a query which clearly explains itself and is addressed to the State Board of Health of New York, from Hamilton, in the same State:

"Will you kindly inform me if tuberculosis is sometimes found in fishes? A certain proportion of pickerel caught in the State reservoir in the town of Madison, near here, have white bunches on their gills, to which the term 'tubercle' seems most applicable. These tubercles vary in size from that of a pin head to that of a small lead pencil, occurring sometimes singly (only one in a fish), sometimes in groups. Would a person be in danger of contracting the disease from handling the fish, even though not touching the gills? What would be the danger of eating the cooked flesh? Of course no one would care to eat them knowing them to be diseased, but might through ignorance. If desirable I can send a specimen of diseased gill if furnished with instructions for mailing. Yours, very truly, Henry Earle Rice."

This letter came to me for a reply, and very promptly I wrote that "tuberculosis" such as described, whatever it might be, could not be communicated by a cold-blooded animal to a warm-blooded animal, and probably it was a parasite not dangerous to the human family. As I read this over to affix my signature, it occurred to me that such a light and airy reply might not be suitable for so serious a query, and I sent the letter off to Prof. Garman for more serious consideration, and he writes me: "The inquiries concerning the diseased fish are not to be answered in a very positive manner. From time to time emaciated fishes, more or less blue from imperfect oxygenation of the blood, with gills partially to almost completely eaten away, have been sent to this museum in attempts to determine the cause of the trouble, and if possible to ascertain what remedies might do away with their causes. Most often it has been the case that stomach and intestines contained nothing to aid in a diagnosis. The lack of flesh was due to the lack of nutrition, which in turn was due to lack of food and impure blood, the latter taking precedence in impure water and the former in case of absence of prey. In impure water the impure blood accounts for the disease; in case of simple starvation the impurity of the blood is secondary. When weakened and diseased the fishes had become the prey of parasitic enemies, *Saprolegnia* or whatever, which decay quickly and rarely reach us in condition for determination.

"These parasites account for the ulcers and sores over the surface, and for the destroyed gills; but they commonly are consequents that would not obtain if the fish were diseased; they are not the causes of the distress. In most cases where the trouble affects more than an occasional individual, when it becomes at all general, it is due to impurity in the water and to lack of food; the latter condition in cases primarily being induced by the former. However they are affected, the dying fishes, and the dead ones, become the food of the parasites.

"In regard to tuberculosis, I know of no evidence of its occurrence in fishes.

"The description given by our friend would apply to fishes preyed upon by certain parasites, whatever the original cause of disability. For myself, I should have no fear that the disease of the fishes was tuberculosis such as affects mankind, or that, whatever it is, it is transmissible to man."

Every man who has anything to do with planting fish should commit to memory: "See that fish when planted have an abundance of suitable food, or do not plant them." Slowly but surely the people are coming to understand that fish require food and an abundance of it to be in good condition for catching or eating, and food is just as necessary for the good health of fish as it is for the good health of man. Many of the ills of fishes are traceable to lack of proper food or to some act of mankind akin to it. One of the best trout streams in New York, with water as nearly pure as any brook water can be, had a reservoir constructed near its source, flowing land cleared for the purpose of forming the pond. It was believed that the reservoir would become a great trout pond, but the dead and decaying vegetation in the overflow destroyed the food, the trout became sickly, infested with parasites and died. The water itself had a stench that would drive a dog out of a tan yard, and though the reservoir was built to furnish a village with drinking water, until it was aerated by flowing over miles of the brook's bed it was the vilest looking stuff that was ever called water; it not only destroyed the trout, but, so far as I could find, killed everything in it. So far as appearances went that pond produced in fishes all the diseases that they are heir to.

Owl Hooked by Angler.

Years ago I wrote a note giving a list of things not fishes hooked by anglers when fishing. I cannot now put my hand on the list, and I cannot remember what it contained, but a friend in England sends me an item which he says may furnish an addition to the list, for it seems that he remembers it. He cut the item from the London Telegraph, and it states that an angler fishing the River Tyne and making a few last casts at dusk hooked a heavy object in midair, which proved to be an immature tawny owl. It does not say whether the owl took the fly or was foul hooked on the back cast. I cannot recall whether I had an owl in the list or not, but I do remember that I had a deer as one of the things hooked by a fly-fisherman. In this case a friend of the late Dr. Up De Graff cast his fly over a deer that was crossing the stream as he was wading it for fly-fishing, and the deer took flies, leader and reel line, and disappeared in the brush.

Red Trout.

The red trout with forked tail, which I mentioned recently as having been caught in a lake of the Triton Club, Canada, by Mr. George Hart, of Waterbury,

onn., and sent to Prof. Garman, of Museum Comparative Zoology, Cambridge, for identification, has been pronounced by Garman as follows: "Your trout agrees best with that described by Sir John Richardson under the name *Salmo* (*Salvelinus*) *nitidus*, from Prince Regent's Inlet of the far North. It is somewhat closely allied to *S. rossii*, but differs in the sinuous outlines of the under margin of the tail, according to the figure given by Richardson, and to some extent in coloration. As you say, the color approaches to that of the imported Sunapee saibling; but these beautiful colors are present in most of the charrs, at or near the breeding season, to some extent at least."

Prof. Garman uses the term "imported Sunapee saibling" because, I presume, he discovered no difference between the saibling from Germany and those found in Sunapee Lake, and certainly the first lot of saibling eggs from Germany were sent to New Hampshire, hatched and planted in the waters of that State. If the same fish had not subsequently been found in Flood's Pond in Maine, with no suspicion that German saibling eggs had ever been taken to that State, the question of have we a native saibling would still be clouded. Dr. Quackenbos, who at first contended that the Sunapee fish was introduced, has become convinced, since the discovery at Flood's Pond, and also of the same species of fish in still another body of water in New Hampshire, that the Sunapee saibling is native to this country. Jordan contends that the saibling found its way from Europe to America through the arctic seas ages ago, and thus accounts for the structural similarity; but I do not propose to open on this subject again.

The trout skin (one-half) sent to me by Mr. Fairchild was given to him by Mr. Ranet, of St. Raymond, Quebec, who says: "The trout was caught by one of our guides in one of the lakes of the North Branch Tourilli Club, North of Quebec." To me it appeared to be the skin of *Salvelinus alpinus stagnalis*, and Prof. Garman, to whom I sent it, says of it practically what he says of Hart's trout, so that they are evidently one and the same. *S. stagnalis* and *S. rossii* are two specific names for the same fish. Jordan and Evermann call the fish *Stagnalis* because it was so described by Fabricius in 1780, while Sir John Richardson did not call it *S. rossii* until 1835. Its common name is Greenland char. Sea run specimens of the fish are plain silvery, like all other trout that go to salt water. The Northern charrs have had more specific names attached to them than would fill a page of my manuscript. One has been described and named twenty times, another seventeen times and *Stagnalis* seven times—one less than our common brook trout. An ordinary explorer would get lost wandering around in the multiplicity of specific names, species, sub-species and varieties, but as I said in a previous note, what is now desired is specimens in good order, not one but several from each locality where forked tail red trout are found in the Canadian lakes and ponds.

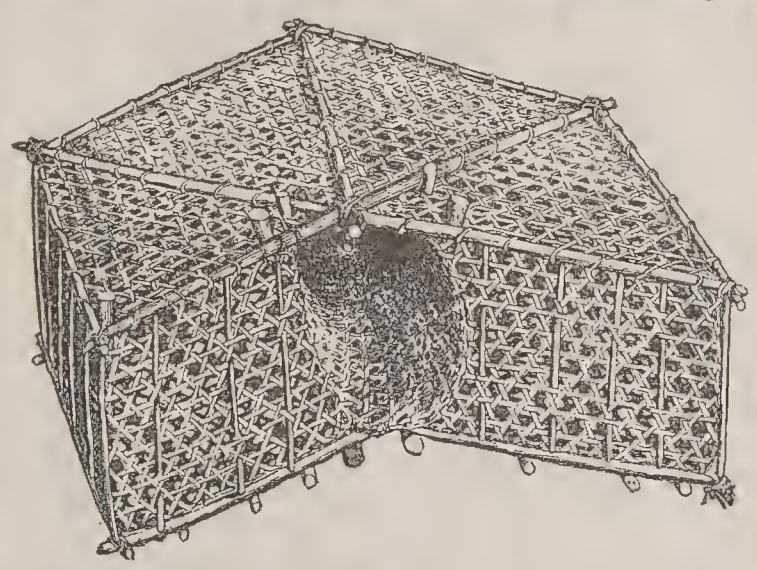
Influence of Food.

Mr. LeGrand C. Cramer, of Troy and Lake George, met me on the train a few days ago and told me that "Min" Wood, of Lake George, had brought him the day before four black bass weighing 7, 5¾, 5½ and 5lbs., and said "That is what food does for fish." If I refer often to Lake George it is because it is under my observation, and I know more about its fish and how it got them and the food they have, etc., than I do of other waters not so closely observed, and this must be my excuse for dragging this lake into FOREST AND STREAM so often. It is not many years ago that the record black bass from this lake stood at 6½lbs., and I say this knowing that larger ones were claimed at that time, but there was nothing to prove that 6½lbs. had been exceeded on the scales. The latest introduced crawfish; shrimps and whitefish were also introduced by the United States. Now the record is 7¼lbs. (this of my own knowledge, though larger fish are claimed), and this season alone I think something like a dozen 7lb. bass have been taken from the lake, and the food did it.

A. N. CHENEY.

The Massachusetts Commission.

BOSTON, Oct. 21.—*Editor Forest and Stream:* At last there are to have a change in the Massachusetts Fish and Game Commission. It is something the sportsmen of the Commonwealth have endeavored to bring about for a long time. The terms of Messrs. E. A. Brackett and Josiah C. Young expired on the first of the present month. Mr. Young was not a candidate for another term, and there were a number of gentlemen who were ready and willing to fill his place, and considerable work was done by their friends in their behalf, and some really excellent material was brought to the attention of the appointing power. This week Governor Wolcott settled the matter by reappointing Mr. Brackett and nominating Captain Joseph W. Collins, of this city, to the other place. The latter appointment appears to be an ideal one, in that Captain Collins has all the justifications for the position. He is a native of Maine, and for many years he was a fishing skipper from Gloucester. Many years ago he attracted the attention of Prof. Baird of the Smithsonian Institution and in 1879 he became a member of the United States Commission, and made a very elaborate inquiry and report of the fisheries of New England for the tenth census, under the direction of Prof. Goode. In 1880 he was on the staff of the United States Fish Commissioner to the international fisheries exposition at Berlin, and later he represented the United States Fish Commission at the World's Exposition at Chicago. His last scientific work was to prepare and represent the exhibit of the United States at the international exhibition in Bergen, Norway, in 1898. In all these positions he showed a knowledge of the subjects intrusted to him and an executive ability of high order, and it seems plain that the people of this Commonwealth are to be congratulated that such a man has been secured for the Commission. That there is a large field open to him, no one who knows how the Commission has been conducted in recent years, can have the least doubt. It is understood that Captain Collins will be made chairman of the Commission, and it is to be hoped that his first official act will be to establish headquarters in the State House, where those who wish may consult him when they desire to do so. The laws relating to the protection of fish and game, as they stand on our statute books, are fairly good, and we trust and believe that under the administration of Captain Collins new life and vigor will be put into their execution.



WILLIAM B. SMART.

Fishing in Porto Rico.

MR. W. A. WILCOX, agent of the United States Fish Commission to investigate the fishes of Porto Rico, has made a report which contains an account of fishing methods and fishery statistics at the several ports. It is issued as an advance report from the Commission's Report for 1899. Fishing for sport, says Mr. Wilcox, may possibly receive more attention in the future than in the past, as a large number of mountain streams and lakes are more or less supplied with fresh-water fish, while numerous species are available in salt water. Many of the species are brightly colored and curiously marked, and make a very attractive appearance when first caught. Many of them have fine edible qualities. The fishing for a livelihood is not carried on to a large extent anywhere in Porto Rico, and scarcely at all for sport. A few fishermen at the several ports make a living by fishing, plantation work, and labor at the docks on vessel cargoes. The professional and semi-professional fishermen number nearly 800, and employ about 350 sail and row boats. The local fisheries yield numerous species of fine edible fishes. In view of the large amount of dry and pickled fish imported, it is at first surprising that so little attention is given to this business. As a rule the local demand is indifferently supplied with fresh fish, usually at high prices. Ice is never used, and only the few fish taken of large size are dressed. None are canned, and the only attention given to curing is when an extra large catch is made, a few being then poorly cured for the home use of the fishermen.

In past years the best of the business was monopolized by the few persons interested who had means to buy the exclusive right to fish at the most favorable localities, such as near the outlets of streams and and at other desirable places along the coast. Rights were advertised and sold at auction by the authorities. At some ports the local authorities imposed a special tax on all fresh fish landed.

Under Spanish rule all fisheries were in charge of an officer known as the captain of the port. Any person wishing to engage in the business was obliged to procure from him a license and be enrolled in the reserve naval force, licenses being granted only to subjects of Spain. Boats were numbered and a record kept of licenses, men, apparatus, and to some extent of the products. Unfortunately for our knowledge of the former extent of the local fishing industry, the records of the captains of the ports were either destroyed or carried away by those officials at nearly every port when the change in government took place.

A PORTO RICO FISH POT.

With the change of government, the granting of exclusive fishing privileges in the waters of Porto Rico and its adjacent lands was abolished by an official order.

The apparatus consists of a limited number of nets, trawls and trolling lines, and many wicker-made pots or traps. It is of the most primitive character, and is made by the fishermen.

Hoop nets are of funnel shape, the large end being oblong, 6 by 4 ft., and 6ft. in depth, of 1in. stretch mesh. The netting is fastened at the large end to a piece of poma rosa wood, such as is used for hoops on hogsheads. These nets are used at holes or indentations in the banks, against which they are placed; the ground in the vicinity is pounded or punched with feet and pole and the fish frightened into the net.

Cast nets, with the local name of nasa de arco, are also used in small streams and along the sea beaches. They are funnel-shaped, the large end being 6 to 10 ft. wide, tapering off through its 6 to 8ft. of depth to a point to which a line is attached; the netting is 1in. stretch mesh, with the bottom leaded. In its use the net is gathered up on the arm of the fisherman, the narrow or pointed end being held in one hand, while the net is partially opened by holding the lead line between the teeth and grasping it with the other hand at a point conveniently distant from that where it is so held, as with a dexterous whirl he casts the net from him over the water. If properly thrown, it spreads wide open before striking the water, and in this position sinks to the bottom, after which it is immediately drawn in and the catch removed. Cast nets have a value of $5, and yield a variety of small fishes and shrimp.

At Palo Seco fish pots are set in the river and bay and outside of the harbor. When used in the river they are attached to the shore by a line; when used outside they are weighted with stones and anchored to a buoy, although when well water-soaked they need no weights. This is one of the few localities in which pots are baited; the fishermen report using in them burned bones, hoofs of cattle, and sour or decayed oranges. These pots are similar to the New England lobster pot, and differ in general construction from those in common use elsewhere around the island. They are 4 to 10ft. long by 1½ to 5ft. in diameter, with funnel entrance at one end only and a trap door on the top, by which the catch is removed. They are made of bamboo splints. Pots are left anchored over night, and the catch is removed in the morning.

Gill nets are about 600 ft. in length by 12 ft. in depth, with mesh of 2in. bar. They are drifted with the tide in the bay. Often the water near the nets is pounded with poles to drive fish into the meshes. Hemp twine from Spain is used. For haul seines No. 8 twine is used in the wings and No. 5 in the bunt. The fishermen pay 75 cents a pound for this twine, buying a few balls at a time.

Trolling hooks are used outside of the harbor of San Juan as far as ten or twelve miles, but fishing with them is not followed with any regularity. In troll fishing large fish are caught, the largest being the arbujo, which is taken in deep water at all seasons and is said to weigh as much as 50 or 100lbs.

Fish weirs or traps are used in the Bayamon River by building a hedge of canes across the stream with a gateway for passing boats. The hedge is made with indentations or pockets at various places on each side. Fish in their movements up or down stream enter these pockets and are taken out with dip nets. In some streams hedges have no pockets, but instead, funnel-shaped cones of bamboo or cane splints are inserted at various places. Fish seeking a passage through the hedge enter these cones and become wedged, few escaping.

Fishing is carried on at all seasons, fish being most plentiful during July. Dynamite has sometimes been illegally used to kill fish in some streams and in the bay.

Turtles are found at all seasons at Arroyo, being most plentiful from September to the last of December, during which time they deposit their eggs in the sand of the beach. The catch is small, and made only when turtles are found on shore. The value of the fishery lies chiefly in the shell of the hawksbill, for which the fishermen receive $3 a pound, Spanish money. The largest shells weigh from 5 to 6lbs.; the meat is sold to the natives at 4 to 6 cents a pound.

In the latter part of November, 1898, this section was fished for turtles by the crews of two small cat-rigged vessels from the English island of Tortugas, who used large-mesh nets, to which wooden decoy turtles were attached, the nets being set near the coral reefs off the harbor of Arroyo. The vessels remained two weeks, and is was reported that a fair catch was made.

Between April and September trolling lines are used, chiefly for kingfish, which are said to weigh from 20 to 30lbs. on the average, some being much heavier. Among the other fish taken in trolling are the capitan and barracuda. Trolling is done between sunrise and 8 or 9 in the morning.

Fish pots are used in from twenty to twenty-five fathoms of water. They are lifted once a day in removing the fish. The pots are of larger size than at most places, being 6ft. long, 3ft. wide and 18in. deep. The frame is of mangrove wood, and the body of split wild cane, woven in 2in., six-sided meshes. The body and frame are fastened togethed with calabash roots that are very strong, and after being water-soaked, pliable. A small door in the back of the pot permits the removal of the catch. No bait is used in the pots, as its presence attracts the numerous sharks, which often destroy pots containing fish. These pots have a wide mouth, the entrance narrowing as it passes with a curve into the pot. Fish entrapped do not often escape, and serve as decoys to other fish. From six to twelve pots are used by each boat.

Eastern Fish in Pacific Waters.

THE following tables give an interesting and instructive exhibit of the success which has rewarded the enterprise of stocking the streams of the Pacific Coast with species transferred from Eastern waters. The stocking was done by the United States Fish Commission.

Statement of the pounds of striped bass and of shad caught in the waters of California and handled by San Francisco dealers, 1890-98:

Striped Bass. Year.	Pounds.	Shad. Year.	Pounds.
1890	*5,000	1893	929,136
1891	*25,000	1894	270,807
1892	*50,000	1895	146,399
1893	80,793	1896	306,245
1894	149,997	1897	*375,000
1895	252,177	1898	435,718
1896	363,747		
1897	*393,000		
1898	421,663		
	1,741,377		1,963,305

*Estimated.

Mr. Cheney, the State Fishculturist, whose contributions for so many years to FOREST AND STREAM are well known, has no equal as an authority on fish and fishing. The annual State reports of the Forest, Game and Fisheries Commission, which are prepared by Mr. Cheney, are the most elaborate and handsomely illustrated works of that character ever attempted.—Town Topics.

If you have the *Game Laws in Brief* you have the authority on fish and game laws of the United States and Canada. It will tell what you want to know; and what it tells you may depend on. Time, money and pains are expended to make the *Brief* an accurate and safe guide.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

BENCH SHOWS.

Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.

Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Oct. 23.—National Beagle Club's tenth annual trials. G. Mifflin Wharton, Sec'y.

Oct. 25.—Hampton, Conn.—Connecticut field trials. John E. Bassett, Sec'y, New Haven.

Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.

Oct. 30.—Oxford, Mass.—New England Beagle Club's trials. A. D. Fiske, Sec'y.

Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.

Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.

Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.

Nov. 13.—Egg Harbor, N. J.—New York State Field Ttrial Association's inaugural trials. F. F. Rick, Sec'y.

Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.

Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.

Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.

Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.

Nov. 28.—Paris, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.

Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Theo. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.

Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

National Beagle Club's Trials.

HEMPSTEAD, L. I., N. Y., Oct. 23.—The first day's trials of the National Beagle Club's field trials were held here to-day. The first event run was the Futurity Stake, in which two dogs started: Dr. Bohannon's Wise and G. D. Tilley's Ichabod. After half an hour's work the judges decided in favor of Ichabod. Charles R. Stevenson's Dorey's Woodman and Geo. R. Post Jr.'s Somerset were the first pair put down in the open class A, which had fourteen entries. Dorey's Woodman was awarded the heat. In the second heat Geo. F. Reed's Prompter won over Geo. A. Clark's Murray. The next pair were to have been Windholm Kennel's Robino II. and John Caswell's Ranter, but no game could be found, and this heat, with the four others scheduled for to-day, had to be called off.

Points and Flushes.

Mr. H. Rieman Duval, of East Islip, L. I., informs us that, in the entries of the Eastern Field Trials Club's All-Aged Stake, in our columns last week the sire of his dogs as given was erroneous. It should have been Rip Rap instead of Rip Saw.

Monk of Zion (A. K. C. S. B. 31,110), whose portrait we publish this week, is a son of the famous Monk of Furness, and is a handsome dog, as also was his sire. He is owned by Mr. F. I. Richards, of Providence, R. I., who purchased him recently from Dr. W. L. Gardiner, of San Antonio, Tex. Monk has had a thorough field experience and is prized highly for his merits.

Mr. C. T. Brownell, of New Bedford, Mass., reports that he has sold twenty-one of his Gordon setters through recent advertisements in FOREST AND STREAM. He has been an advertiser in this journal for many years, and his success is evidence of what good stock and good advertising will accomplish.

Eastern Field Trials Entries.

EAST ISLIP, Oct. 20.—*Editor Forest and Stream:* Mr. Bradley's letter in your issue of the 21st inst. gives Rip Saw as the sire of my entries for the All-Age. Is not this your error?

I very distinctly gave Rip Rap as the sire of my dogs. I have never bred to Rip Saw, which perhaps is my misfortune, but it is my desire to have the entry correct.

H. RIEMAN DUVAL.

[Secretary Bradley gave Rip Rap as the sire. We regret the error.]

Yachting.

IMMEDIATELY after the last race the daily papers made arrangements for a new challenge on the part of a wealthy soap boiler, the head of a large English company, but the gentleman thus selected in spite of himself for yachting honors promptly declined. It seems now that Sir Thomas Lipton has no intention of challenging before 1901; it is, however, very probable that Columbia, if not Defender as well, will visit the Mediterranean next spring and British waters later in the season.

IN spite of his very costly experience in yachting, it can hardly be claimed that Sir Thomas Lipton is as yet a yachtsman, his connection with the sport as a club member and yacht owner dating back hardly a year. At the same time he has shown himself far superior to many old racing men in the rare accomplishment of losing gracefully. However ignorant he may be of the technical side and the usages of yacht racing, it is evident that he possesses the spirit of a true sportsman in accepting his defeat calmly and graciously, with a frank admission of the superiority of his adversaries and their vessel. He has not, when beaten, quarreled with the weather or the course, trumped up imaginary protests, or endeavored in any way to excuse his defeat. The fact that he has had no good cause for complaint is of no consequence, as a bad loser can always find causes which are sufficient, at least for him and his friends. After the high hopes of success which he undoubtedly held, the disappointment of three straight races for Columbia must have been most bitter, but he has shown no signs of it in either word or action.

WITH some few individual exceptions, the daily press has, as a whole, made but a sorry showing in the late races. The races themselves have largely been treated as secondary, the one great point of each journal being to score a "scoop" of some kind over its rivals, to get out more extras in a given time or to collect a larger crowd in front of its bulletin board. In the disreputable strife of big type and "scare heads" the yellow, pink, green and characteristically colored journals have scolded, slandered and abused those connected with the two yachts, especially the owner and the skipper of the American representative. With some skillful and honest work in the reporting of the races and the interviewing of the principals, there has been much that was incorrect or untrue, and more that was unreliable; so the result is only bewildering to one who reads more than one paper. The pictorial reporting of the races has been marked by some very good work in the quick reproduction of photographs of important incidents on the day after they occurred; and by some very bad work in the way of fake drawings, showing the yachts in positions which never existed.

The "expert" business, both in technical description and criticism, has been done to death by writers who have generalized on the slender basis of a few alleged facts, these being in themselves insufficient, if not purely imaginary. The hysterical hue and cry over the poor handling of Columbia and the certainty of the loss of the Cup shows the true value of this expert criticism.

Now that Shamrock has been defeated and it is necessary to "make the punishment fit the crime" in showing how it all happened, the blame is laid to what is called her "bulldog" model. We are familiar with various feline varieties of yachts, but the canine term is unknown to us; we can only conjecture that it is used in some connection with the alleged heavy and blunt lines of Shamrock. Without attempting with the very limited data at hand to assign the reason of Shamrock's defeat, it seems to us that the model or the form of the hull had very little to do with it. So far as the mere speed through the water is concerned, the "bulldog" model in both light and heavy weather moved at so nearly the speed of Columbia as to indicate that there is much less difference than commonly imagined in the relative fineness of form and easy lines. Down the wind there was little difference, and on the wind, in smooth or rough water, Shamrock footed faster than Columbia. The one fatal defect of the challenger was in pointing; she could never be made to look where Columbia was going.

This is less a matter of model or form than of balance; of the proper disposition of the fin, the centers of effort, lateral resistance and buoyancy, and the placing of the mast and mechanical details of the rig. So far as good windward work is dependent on the actual form of the lines, all of the older Fife yachts are remarkable for the way in which this form helps out a very moderate amount of lateral plane; when Minerva defeated the American 40-footers, she did it with less draft and far less flat keel and deadwoods through the perfect form of her bow.

If the form of Shamrock were so radically wrong as some consider it to be, it is hardly likely that she would show the speed on end and through the water which she has under different conditions. It is idle to attempt to discuss the merits and defects of a vessel of which so little is really known; but it seems probable from the failure of Shamrock to windward that her most serious fault is in the balancing. It is also possible that much of this may be due to mechanical defects in her rig through which her beautiful sails were hindered from doing good work. In the last race both boom and gaff buckled so as to spoil the mainsail, seriously handicapping the vessel as a whole. There is no question that the engineering problem, the great one in these huge boats, has been better worked out in Columbia than in Shamrock; and that the greatest difference in the two lies in the spars and the gear that holds them.

As it happened, the special agreement as to breakdowns was called into service in the second race, and it possibly did some good in a way in stopping a lot of outside discussion. At the same time we have been unable to see the necessity for any such agreement. Yacht racing is governed almost as much by its unwritten as by its written laws, and one of the first of the former, based on an accepted principle in all sport, is that each competitor shall abide by his own accidents and that no competitor is under obligations to withdraw because of an accident to another. This has been the everyday practice in yacht racing from the birth of the sport, and to yachtsmen it is as binding as any rule printed in the book. There are occasional cases where a man rightly withdraws because of a mishap to his opponent; but in general, the rule that each stands by his own accidents is accepted without question. Had the principals in the present case been desirous of acting in the opposite way, either withdrawing in the event of an accident to the other, it would have been necessary to make a special agreement to that effect; but as the case stood, it was unnecessary and undesirable. Where precedent and usage are so plain as in the case in point, it weakens rather than strengthens them to make a special agreement. If the rules of yacht racing are to be extended to cover specifically every point on which a popular delusion exists, they will be complicated to such a degree that even experienced yachtsmen will be at a loss to interpret them.

BEING in no way informed at the outset as to the dimensions and the materials and methods of construction of Columbia and Shamrock, and mistrusting much that was published about the former and all the exclusive information about the latter, we have not ventured to predict in advance the winner. Even as a matter of naval architecture alone, it might have been difficult to do so with the complete design of each yacht before one for inspection and comparison; and it would be absurd without such designs or at the least an exact knowledge of dimensions and weights. As we have often pointed out, yacht designing is so much a mixture of naval architecture, practical experience and horse sense, with subsequent good handling and some chance thrown in to influence the result, that predictions made on insufficient data and a long time ahead are most likely to prove false.

Falling back on the inalienable right of hindsight, there are certain considerations which have led us to look, not for three straight races in a series of five, but for the final victory of the American representative. Going back to the season of 1893, the two rival designers, Herreshoff and Fife, were about on an equality in practical experience in the 90-foot class. Each had turned out many fast yachts of all sizes below 50 feet; and Mr. Fife had gone higher; but neither had yet attempted a modern racing 90-footer. In that year Mr. Herreshoff turned out Navahoe and Colonia, both failures in a way, and Vigilant, a very successful yacht, the defender of the Cup against Valkyrie II. Mr. Fife made his entry in the big class with Calluna, a decided failure. Two years later Mr. Herreshoff, working from the known qualities good and bad of his first three boats, and influenced in no small degree by his experience with Vigilant against Britannia in British waters in 1894, produced Defender, for the defense of the Cup against Valkyrie III. Judged by her proven superiority to Vigilant, the latter being in better form than in her first two seasons by virtue of important changes of ballast and sail plan, Defender showed a wonderful advance in speed; and she easily defeated Valkyrie III. At the same time Mr. Fife produced his second large racing cutter, Ailsa, a successful boat as commonly rated. While she has raced a great deal in British and Mediterranean waters, her class has not been kept up to a standard which would test her as Defender has been tested against Vigilant, and it is impossible to say just how she would compare with them in her original cutter rig, she being now a yawl. Being built for the ordinary home racing, of composite construction, she was in no way the radical and instructive experiment in new metals, bronze and aluminum, that Defender was.

When the two designers started in last winter on the great work that has just culminated, Mr. Herreshoff had behind him Defender, a known quality, and back of her Vigilant. In designing Columbia he has worked directly from Defender, both in model and construction, to produce a still more perfect yacht for the same conditions. The dimensions were slightly increased, the outline of midship section and lateral plane slightly altered, and changes made in the construction, but there is no indication that he has departed widely in any detail from the older boat. In designing Shamrock, Mr. Fife was dealing with an entirely new problem, the rule and the conditions being materially different from those under which Ailsa was designed, while a new and very much lighter construction was absolutely necessary to success. The experience of recent years in the 65-foot linear rating class under the girth rule was of little value in the matter of dimensions and construction, however useful as far as form went; and Shamrock is largely a new, original and of course experimental creation.

By the time that Columbia was ready for trial, Defender was also in commission, having been rebuilt and newly rigged, with a steel mast and enlarged sail plan, and manned by a skillful skipper and crew. The two started in July and were regularly raced for three months, many minor changes being made in each. When Shamrock was completed she sailed a farcical trial with Britannia, an old and much smaller yacht in unknown racing form, and then came to New York, where she has been out less than a dozen times under her racing rig for practice trials of a crude sort.

It was just possible that, with his recognized skill as a designer and the aid of Thorneycroft in the mechanical details of light construction, Mr. Fife had fairly outdone Mr. Herreshoff in the important matter of carrying more ballast on a lighter hull; but taking Columbia and Defender together, the chances were against such a conclusion. It is not necessary to discuss the relative skill of two designers who stand at the very head of their profession, but the advantages, in a thorough familiarity with the rule and the conditions of Cup racing, and in the previous construction of two successful Cup defenders, were strongly on the side of the designer of Columbia.

The America Cup.

Columbia and Shamrock.

ON the day when the two yachts were measured, Monday, Oct. 2, New York had its first taste of winter weather, a fresh N.W. breeze sweeping over the East River to the discomfort of all connected with the slow and tedious work of measuring. On Saturday, Oct. 21, when Columbia was towed up from Staten Island to New Rochelle with her flags aloft in token of victory, and Shamrock was towed from Sandy Hook to the Erie Basin to fit out for her homeward voyage, the wind was again to the west of north, and with the sharp chill of winter in it. Between these two dates New York had been treated to all varieties of warm and calm weather, some days being bright and sunny, with a temperature almost fit for July, and others dreary, with a warm, dense fog such as is sometimes met with in June. Except for moderate breezes on some of the off days early in the month, the only windy day was on Oct. 20, when a cool northerly wind of about fifteen knots gave one good race. On four different days the yachts were started over the line but were unable to finish, the wind being at no time strong enough to make a satisfactory race, even with a much longer time limit. On two of the sailing days there was a light but satisfactory breeze, giving a fair test of the yachts in very light weather.

With all the drawbacks of such weather, the contest of 1899 has been the most satisfactory and conclusive ever sailed for the America Cup. Unlike all the earlier contests prior to 1893, the conditions have been absolutely fair, placing the challenger on a perfect equality with the defender, both sides building under the same rule and with the same initial advantages at the start, and the courses being in deep water on the open sea, where local knowledge was of no special importance. With his yacht designed for well known rules and conditions, and on the course several weeks before the first race, the challenger

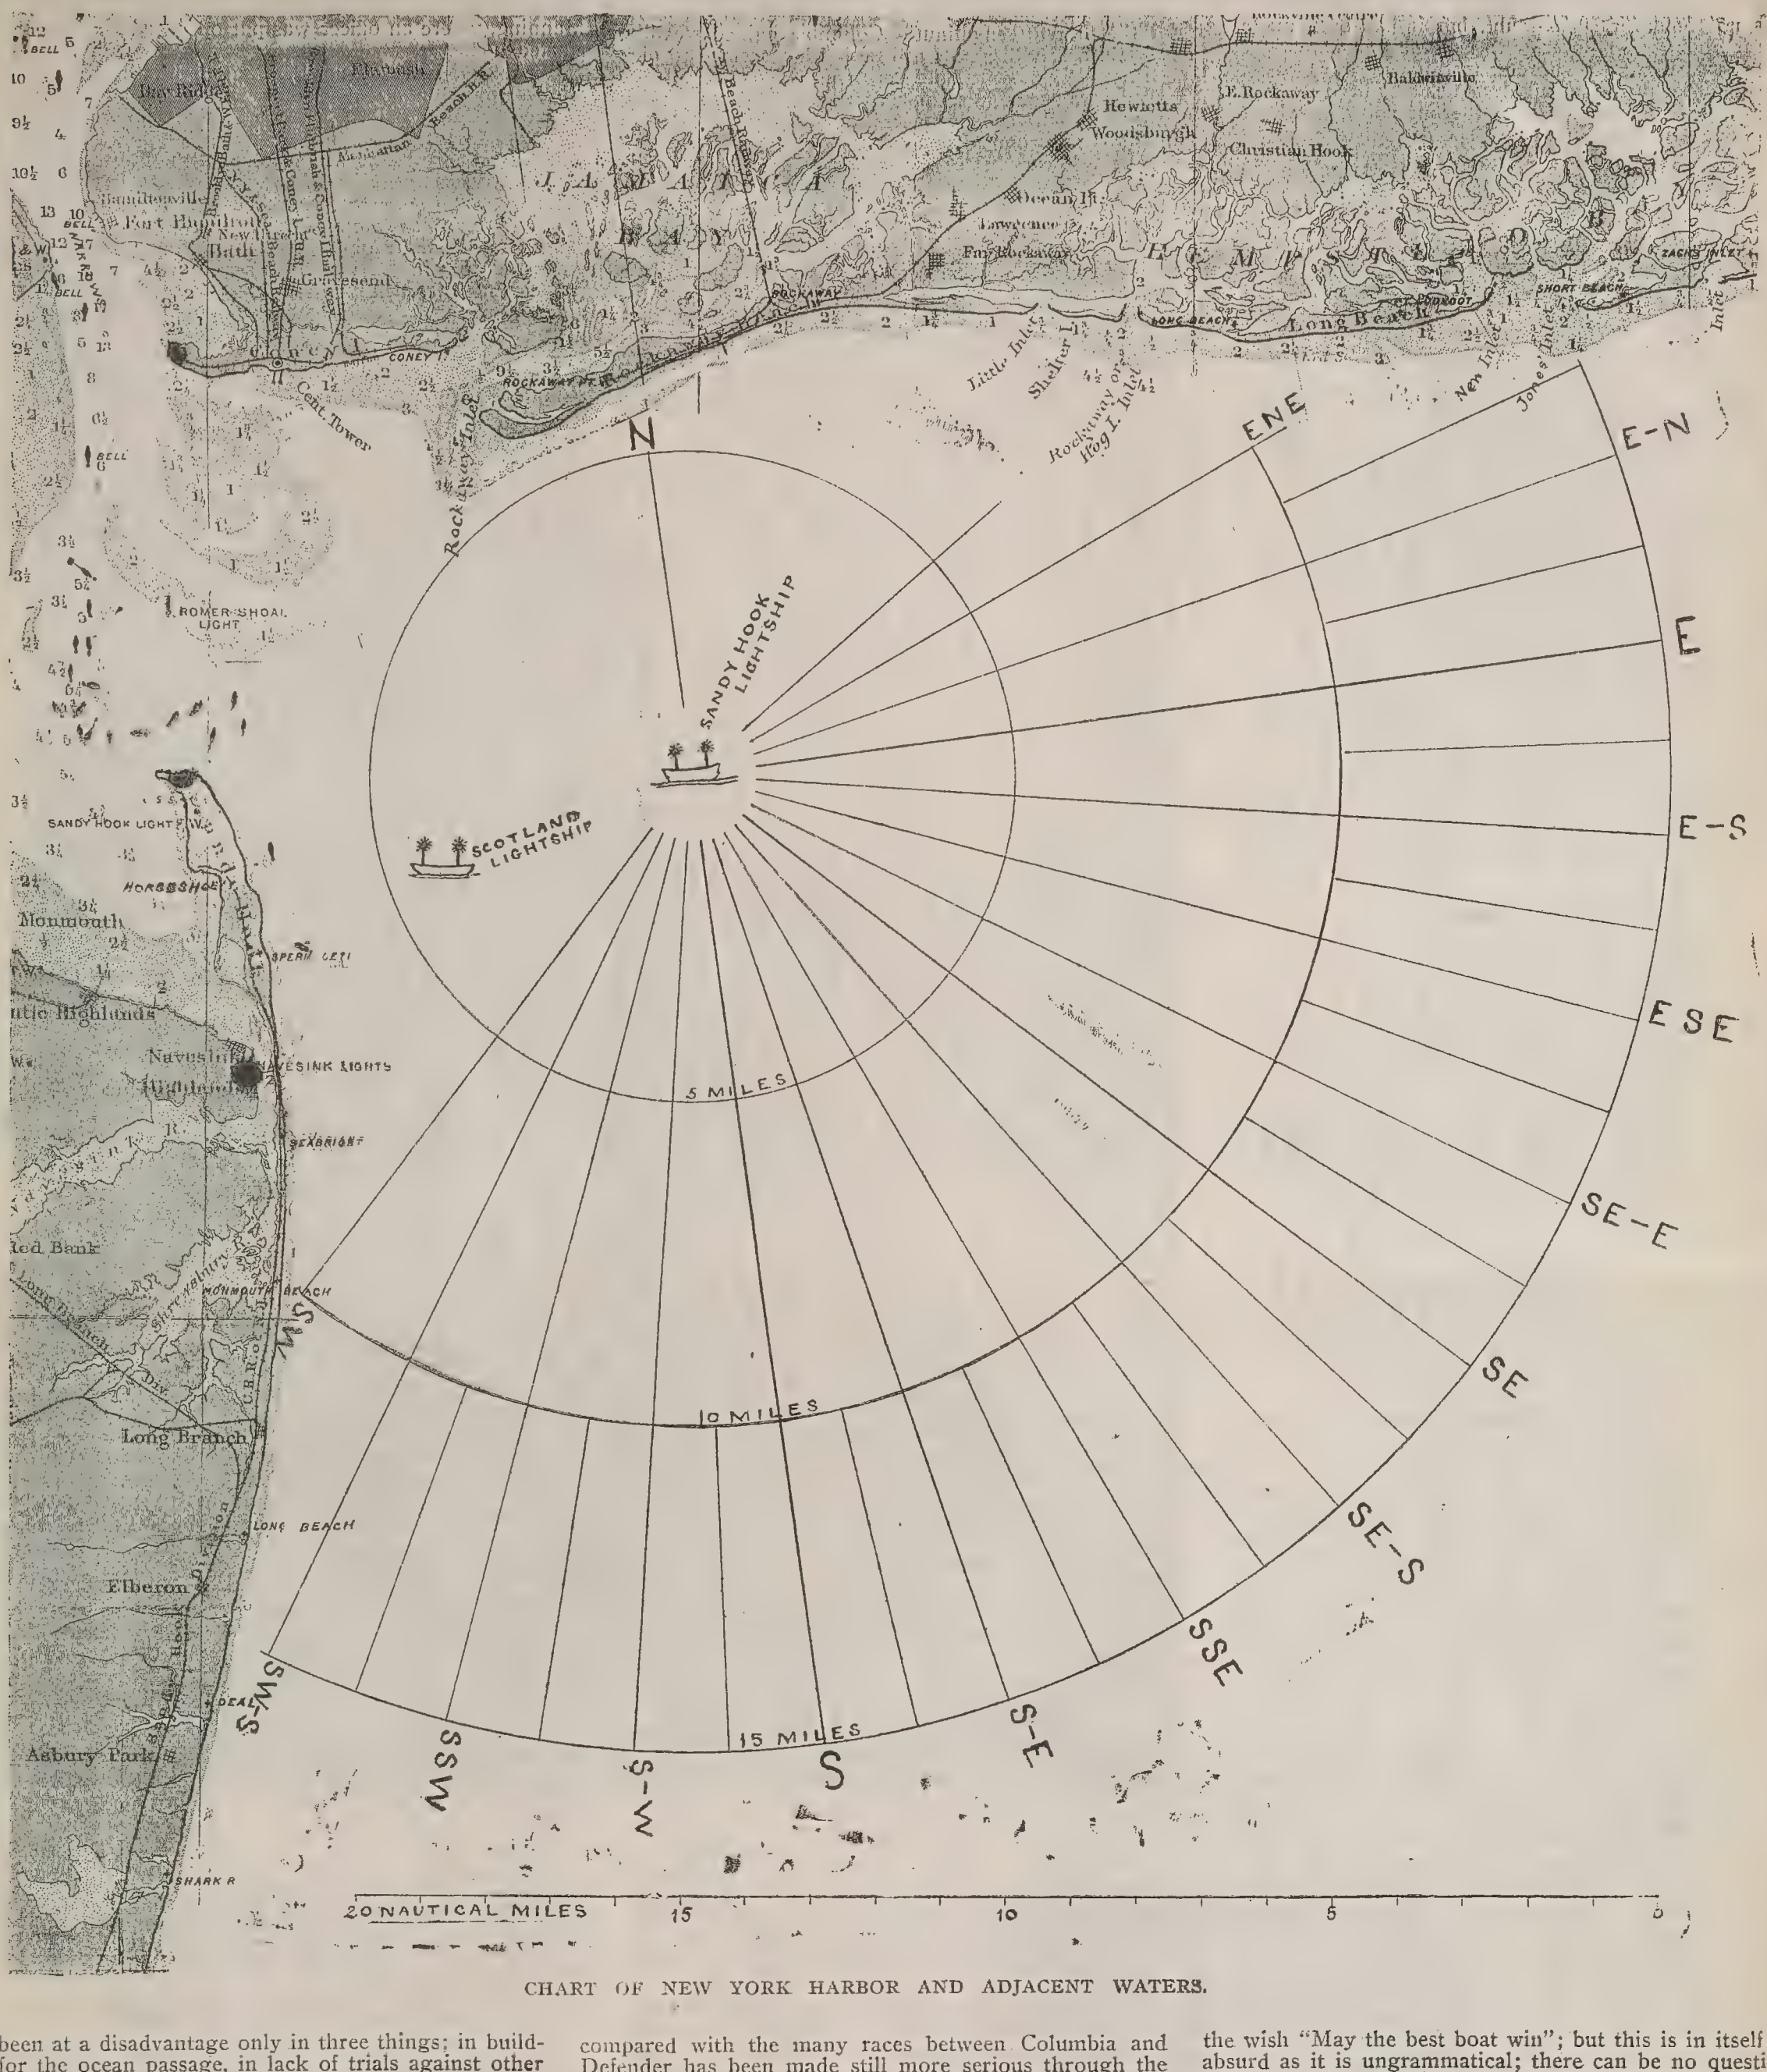

CHART OF NEW YORK HARBOR AND ADJACENT WATERS.

has been at a disadvantage only in three things; in building for the ocean passage, in lack of trials against other yachts, and in the illness and consequent absence of the designer at the important point—the racing.

The first of these amounts to very little, especially as it is more than probable that the defender was also built with a view to an ocean passage and some racing in the Mediterranean next year. It has long since ceased to be a question of matching a sea-going yacht with a harbor racing machine, as in the early defense of the Cup, and with both yachts of the same type and of all metal construction, as in recent years, there is little difficulty in obtaining the necessary strength for the Atlantic passage by a secondary system of bracing, removable for racing. The second point, the lack of thorough trials, has unquestionably been a serious detriment to the challenger, as shown in the marked improvement of both Columbia and Defender in the course of the season; it is, however, a disadvantage inherent to the case and not imposed by the defending club. It is now said by the Shamrock party that Sir Thomas Lipton attempted to purchase Valkyrie III. for the purpose of trying his new yacht against her, but that Lord Dunraven refused to sell her for such a use, although she is rotting at her moorings in the Clyde. With no competitor of her own class and little time prior to her departure for America, Shamrock came to this side an untried boat. Such solitary sails as she has had here, while serving a good purpose in familiarizing her crew with their surroundings, have amounted to little as a means of discovering defects. The loss on this score as compared with the many races between Columbia and Defender has been made still more serious through the illness and absence of Mr. Fife at the very time when his aid was most essential. His connection with Shamrock practically ceased with her docking, as he has since been confined to his room and for a part of the time so ill he could be consulted only on important points. It is difficult to say how much his absence has cost the boat, but in these great craft the question of engineering comes first, and the designer is the one person qualified to deal with the vital details of strain on the gear and the strength of the various wood and metal spars. However extensive the experience of the professional skipper, it is not to be expected that he will possess the same knowledge as the designer in the matter of the various new metals which enter into the construction of these modern racing machines. One serious trouble with Shamrock has been the breaking or buckling of her spars, both gaff and boom failing to hold her mainsail at times. How much of this might have been prevented by the personal presence of her designer muct always remain an open question; but it is certain that on the other hand the presence of her designer on board of Columbia has been of material help in this detail.

Apart from these drawbacks, due to accident rather than design, and regretted by both sides alike, there have been no ifs nor buts about the series of races; they have in spite of the weather been sailed to a point where it is plain that the fastest boat has won, and won fairly on her merits. We have heard often of late from both sides, the wish "May the best boat win"; but this is in itself as absurd as it is ungrammatical; there can be no question of relative excellence between two yachts which are equally bad and useless. Of equally extravagant cost, equally impossible draft, and equally useless type, the only possible point of superiority is in the speed under the conditions of the Cup races; and this simply means that the *faster* yacht is of necessity the *"best."*

There have been times without number in the Cup and other international races when the question of type added greatly to the interest of yachtsmen in the result, and when it was a matter of serious importance whether a yacht which was manifestly of a superior type as concerns seaworthiness, accommodation and other old-fashioned and now obsolete essentials, would also prove the fastest in racing; but at the present time the leading yachts of both nations are so similar in type and so generally unfitted for anything but match racing that the only issue is that of speed.

In the case of Shamrock and Columbia there is a practical identity of both type and dimensions that eliminates all issues but that of speed under the Cup conditions; and in this Columbia has been proven incontestably superior both in light and heavy weather. In many previous races the mere holding of the Cup has left grave doubts, the result being decided in light weather and over unfair courses which were greatly to the advantage of the defending yachts; and there has been a feeling even on the part of some Americans that under more equal conditions the result might have been different. In the present case

there is no room for such doubt, but it has been made plain that Shamrock is inferior to Columbia in both light and heavy weather in the supreme test of windward work. That she is inferior off the wind, as has also been proven, is of much less importance; as is the one point on which the least doubt is possible, that of speed on a reach.

The one plain point of the week's racing is the poor windward work of Shamrock in both light and moderately heavy weather, and this has been shown so plainly that it must be accepted even by those who cannot yet reconcile it with her apparently good showing by the wind in light weather in the first three trials. In each of these, as long as there was a working breeze, she seemed to point high and to fetch where she looked; but in the race of last Monday in very light weather, she did nothing of the kind. After this it was not surprising that she failed to point is stronger breezes.

The management of the races, like the preliminary and final negotiations for the challenge, have been carried out fairly and ably by the holder of the Cup, and no ground of complaint has been given to the challenger; while on his side he has accepted everything in the spirit in which it was offered. Most of all, Sir Thomas Lipton, if new to sport, has proved a good loser; taking the result calmly and philosophically and without the grumbling and kicking which has characterized so many international contests of late years. A great deal has been said on this point in praise of Sir Thomas Lipton and to the detriment of previous challengers; but it must be remembered that with the exception of Lord Dunraven no other has had the same good grounds for satisfaction with the conditions given him and the cordial and courteous treatment. Not only have the conditions one and all been absolutely fair and just, but they have been given freely and as a matter of right, and not doled out grudgingly under the guise of "generous concessions." It is safe to say that if some of the previous challengers had had one-half of the rights now given to the owners of Valkyrie and Shamrock, they would have accepted their defeat quite as graciously as the latter.

First Race—Windward and Leeward.

EIGHTH DAY—MONDAY, OCT. 16.

Columbia Wins, by 10 min. 8 sec.

The story of this race was told in detail last week; we now give the summary for the sake of a complete record of the series. The race was sailed in foggy weather and smooth water, the wind being east and the course 15 miles to windward. The times were:

	Start.	Turn.	Finish.	Elapsed.	Corrected.
Columbia	11 01 06	1 48 19	3 54 59	4 53 53	4 53 53
Shamrock	11 01 03	1 58 08	4 05 10	5 04 07	5 04 01

In this race the two were more nearly on an equality in the matter of canvas than in any of the trials; Columbia had had an extra row of reef points put in, just above the boom and concave to it, so as to take in the slack in the middle of the sail, and these points were tied in. The weather was damp and foggy and the effect on the American canvas seemed to be to shrink it just enough to make it sit well; Shamrock's English canvas, on the contrary, though all right in clear dry weather, was probably harder through the wetting, and in poorer condition.

Second Race—Triangular Course.

NINTH DAY—TUESDAY, OCT. 17.

Columbia Wins—Shamrock Disabled.

There has been a general desire among the patrons of the club and excursion steamers to witness a triangular race, many holding back at the outset for the second race; but Tuesday broke with the same fog that had discouraged so many on the previous trials and had kept so many home on Monday. The wind was still from the eastward and light in the early morning. There was quite a fleet of steam yachts and some of the larger steamers about the line a little after 10:30, by which time the course signals were flying, the first leg being E. by S., or to windward, 10 miles, the second S.W. ½ S., and the third N.N.W. There was more sea than on any previous day, a lively swell rolling in from off shore and jumping the yachts out until the fore ends of the fins were almost visible. Both showed club topsails, Shamrock's, though larger than Columbia's, being her second and not the big one seen once or twice in the previous light days. Columbia had her baby jib topsail up in stops, but Shamrock had none aloft, being afraid to risk the additional strain in the sea.

The two-minute interval with down-wind starts has robbed the starting of all interest, the game usually being to cross the line last, thus saving some seconds of time; but to-day the pair were out for the weather berth and first place, and the maneuvering began nearly ten minutes before the start, the two being to the eastward or on the course side of the line. They stood along on the wind with Columbia to windward, circling about in evolutions too complicated to be clearly described in words, each trying for the weather berth. They separated, one going on each side of the Lightship, then swung off, each in a large circle, coming together again just before the gun to the westward of the Lightship, with Shamrock in the lead and on Columbia's weather. She crossed at 10.00.15, with Columbia two seconds later under her lee quarter. As she neared the line Columbia broke out her baby jib topsail and carrying more way began to forge through Shamrock's lee. Both were on starboard tack as they crossed, but as Columbia quickly worked clear ahead and threw her back wind into Shamrock's sails the green boat came on port tack, just after the two-minute handicap gun. As Columbia swung about a few seconds later she was on Shamrock's weather quarter instead of to leeward, and whatever advantage Shamrock held at the line had already disappeared. There was now a 10-knot breeze or rather better, and the two, heeling to about the same angle, were jumping into the sea. Shamrock was sailed with a good full and romped ahead as on the preceding day, while Columbia was held high; but the white boat was holding on and going right where she looked, while the green one already out ahead, was well to leeward and falling off all the time. Though Shamrock was doing better work than on Monday, it was poor compared with Columbia, and within five minutes it could be seen that she was losing ground. In spite of her footing, she was crabbing off to leeward while her rival was holding on in a wonderful way.

For the first fifteen minutes Columbia gained steadily, then Shamrock with sheets a little harder seemed to pick up a little and almost to hold her own. Her mainsail was not sitting well and it seemed as though the pull of the topsail yard was throwing the head of the sail off; the main sheet was trimmed so hard to hold the gaff and topsail that the lower part of the mainsail was spoiled. The superiority of Columbia was shown within the first twenty minutes, and it was only a question whether Shamrock could be driven faster by any different trim of sheets or combination of sails; if not, she had no chance. With both on the port tack, Shamrock was in a position to come about at any time and try to force Columbia, and it seemed likely that she would do so if she considered that the maneuver would be successful. All eyes in the fleet were watching to see her tack and try it when at 11.24.30 her topmast went at the cap, the port shroud giving way in the splice at the hounds. She at once luffed up and hung in the wind, Columbia immediately luffing and then filling away on the other tack. The Erin and her tug came to her aid and men were sent to the gaff end and down along the wreck to clear it. Though the topsail yards swung against the mainsail for some time, the sail was not torn. Of course there was no chance of continuing and Shamrock passed a line to her tug and started for the Hook. Her topmast was broken at the cap, her metal topsail yard was broken and her best metal gaff sprung. The topsail was torn, but not badly. Fortunately nothing struck the deck and no one was injured.

SHAMROCK.
Copyright, 1899, by J. C. Hemment.

Columbia took in her baby jib topsail and continued on, turning the first mark at 12:39:28. On the second leg a No. 2 jib topsail was set and as the wind fell lighter and the sea smoothed down, she set a balloon foresail when within three miles of the second mark. She was timed here at 1:33:27, or 54 minutes for the 10 nautical miles. After jibing she set her balloon jib topsail and carried it half way home, by which time the wind headed enough to cause her to shift to a second jib topsail. She was timed at the line at 2:37.17, making her elapsed time 3:37.00.

It is impossible to say just how Shamrock stood at the time of the breakdown, but she had already lost all the advantage of the start, and it is probable that if she had tacked she would have gone under Columbia's stern.

After the finish it was announced that the next trial would be on Thursday.

Shamrock was towed into the Bay and up to Erie Basin, where her tender, Plymouth, joined her. All hands set to work to get the broken spars ashore or on to the spar barge, and to ship the new topmast, made at the Basin, while the yacht was in dock, together with a new wooden gaff. The gaff carried in the races was the short steel one, lengthened after the long one broke. It was damaged when the topmast broke, but was used to the end of the races. The topsail was sent aboard the Plymouth, where Mr. Ratsey's men attended to it.

One of the amusing incidents of the day was the chase and capture by the patrol fleet of the steam yacht Vamoose, and the sending of the yacht back to New York with a naval officer in charge. The Vamoose, which was flying at the same time the burgee of the New York Y. C. and the big red flag of a press association, forced her way within the lines and when hailed by one torpedo boat tried to get away, but was chased and brought to by a shot from another. She was sent up to the revenue cutter Manning, where an officer was put on board and she was started home.

By dint of working until late at night, the new spars were shipped on board Shamrock and she also took on board some new ballast. Her crew very obligingly gave the exact weight as 3,380lbs. of lead. This necessitated a new measurement, and Mr. Hyslop, with W. Butler Duncan, representing Columbia, Jesse Connell, representing Shamrock, and Mr. Herreshoff, were at the Basin shortly after 7 A. M. on Wednesday. The new topmast was the same length as the old, 58.06ft., but the waterline now measured 88.95ft., an increase of 1.26ft., or 15in. Without casting discredit on the information so generously given by the crew to the reporters, of the exact number of pounds of lead added, it is a plain fact with an angle of not over 15 degrees between the waterline and the stem and horn timber respectively, as in all the yachts of this size and type, an addition of 15in. to the waterline length infers an added immersion of nearly two inches. To accomplish this, instead of 1½ tons it would require about 7 tons, and it is probable that Shamrock took aboard nearly this latter amount. Why she did so is a mystery, certainly not because she needed any addition to her stability, being quite as stiff as Columbia. To all appearances the result was that she trimmed by the head in the later races, but with no improvement in the pointing.

At 10 A. M. her tug passed a line on board and the challenger was towed down to the Hook, but she did not get under way. As the result of the added length, Shamrock had to give to Columbia 16 seconds time, instead of receiving from her 6 seconds.

Third Race—Windward and Leeward.

TENTH DAY—THURSDAY, OCT. 19.

Thursday brought a most welcome change of weather to the faithful few who started for the tenth time in the hope of seeing a spirited race, something in proportion to the size and cost of the yachts. The sun was shining bright, there was a light breeze from N.W. and withal it was warm and pleasant for the late fall. The only course possible was to leeward, S.E. by S., and the usual signals were given at 10:45, 10:55 and 11, the latter for the start. The wind was blowing six to eight miles per hour, with little sea. This time Shamrock was anxious to work off her time at the start, and there was some lively maneuvering within the last five minutes, but at a long distance from the line. Columbia tired of it first and started for the line at gunfire, crossing at 11.01.33. Shamrock, following astern, was caught by the handicap gun and lost two seconds, her crossing time being 11:02:02. This, however, placed her 27 seconds to the good in a close finish, or 11 seconds more than her allowance to Columbia. Both carried club topsails of good size, with balloon jib topsails in stops, Columbia breaking hers out at the line and Shamrock following at almost the same time. Spinakers were set to starboard in stops, but they were not broken out. Columbia luffed out as she crossed and Shamrock did the same, so that before long the spectators were treated to the long-expected spectacle of a reach. They lowered the working headsails and reached along, heading about South, under balloon jib topsails, mainsails and club topsails. The guide tug, on a straight course to the mark, was well to the eastward of the pair at 11:30,

COLUMBIA.
Copyright, 1899, by J. C. Hemment.

though they should have been square in her wake. They held this course until 11:45, when Shamrock started main sheet and squared her spinaker boom, which had been run forward, breaking out her spinaker at 11:51; Columbia following each maneuver. In all the work thus far, slow as it was, the gain had been on the side of Columbia. They ran along in a lighter breeze and smooth water until 12:45, when Shamrock in answer to a little shift jibed over and reset her spinaker to port, Columbia following three minutes later. Nearly an hour of drifting followed. Columbia now working ahead; at 1.33 they jibed booms to port as the wind shifted to the west. A little later they set spinakers to starboard. Before the mark was reached they took in spinakers and set baby jib topsails. The turn was very slow, Columbia almost drifting up to the mark and luffing round at 2:24:45, while Shamrock though not far away did not turn until 2:31:03; to all appearances the new lead had anchored her most effectually in light weather. When Columbia turned she started home on port tack with the wind still from the west, allowing her to head well up the course. Shamrock, on the contrary, held by the mark on starboard tack for eight minutes, to her serious detriment. The wind was so nearly on Columbia's beam that shortly after 3 o'clock she set her No. 2 jib topsail in place of the baby; at 3:38 she set her balloon foresail and at 3:50 she broke out her balloon jib topsail. With the wind thus easing until Columbia laid her course in on the port tack, all of Shamrock's starboard tack was a loss of distance. At 4 o'clock Columbia was nearly a couple of miles ahead, and when the race was called at 4:24, she being then three miles from the lightship, she still held her lead. The wind was very uneven and fluky all the way in from the turn, and Columbia perhaps had the better of the little flukes, but she had fairly outsailed Shamrock on the way out, and it was plain that with her added ballast the latter had no chance of winning in the weather in which she showed to such good advantage in the first three days.

ELEVENTH DAY—FRIDAY, OCT. 20.

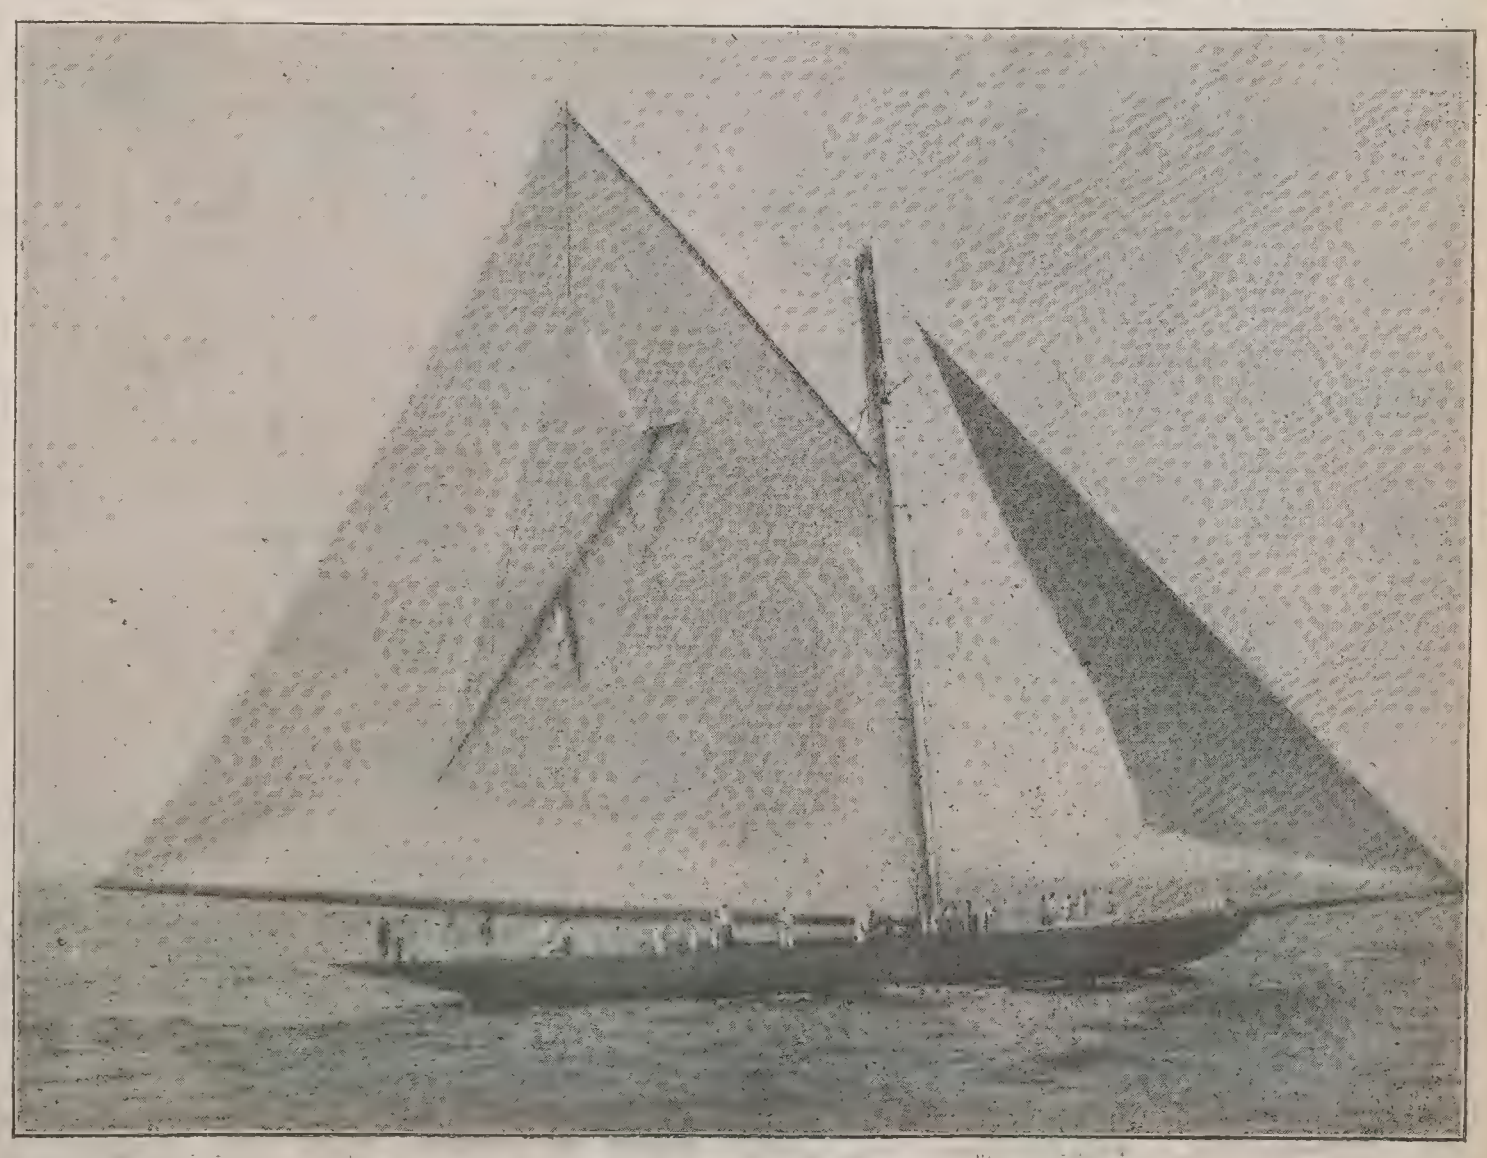
Columbia Wins by 6 Min. 18 Sec.

Friday morning was cloudy, with a moderate northerly breeze that at last promised to hold. When the fleet reached the Lightship the wind, now N. by E., was blowing from 15 to 16 miles an hour, with the sea covered with whitecaps. The only possible course was to leeward, E. by S., and the tug was sent off in that direction. With plenty of wind and sea, the yachts were canvased in curious fashion. Both had poor mainsails, Columbia's being loose on the leach, while that of Shamrock showed a hard ridge just inboard from the leach, making the sail in two parts.

As they worked about in readiness for the first gun they had only whole mainsails and jibs set, but Columbia sent up her working topsail and staysail in stops. Five minutes after the preliminary gun, fired at 10:45, Shamrock set a working topsail that was far too large for the space between topmast and gaff, a sail that could only hurt her on the wind, though it might do no harm before it. At the same time she sent up her staysail. Columbia did not break out her working topsail until well on her way. It seemed that Shamrock's gaff was sprung on the outboard end, where it had been lengthened, and that the boom also buckled, so that the mainsail, whatever its own merits, had no chance in the strong wind. It was again a case of getting off last, and Columbia won; with five minutes to go the pair left the line and sailed to the north, circling about with Columbia always in the weather berth; with three to go they started for the line, Shamrock ahead and crossing 34 seconds after the gun. With her rival once timed, Columbia was in no hurry to cross, but luffed along the line until 11:01:35, or a minute and a second to the good of Shamrock, who was thus compelled to finish more than 1 min. 17 sec. ahead in order to win. With a down wind start the odd minute counted for nothing in a 15-mile run; but it might be very useful at the end of a close bout to windward.

This time there was no luffing, but each steered a straight course with spinakers drawing to starboard, Columbia breaking hers out just after crossing and Shamrock following a moment or so later. Shamrock's spinaker was sheeted and tacked down in the usual way. The upper stops failed to break for 10 minutes, but it made little difference in such a breeze.

Columbia either through accident or design did not get her sail down, but carried it literally as a balloon or a parachute, with tack and clew high up in the air above the line of the jib, making a great bag of the sail. When it was in the proper position it was plainly pulling like a tugboat, but it was constantly lifting and then falling to leeward over the luff of the jib, the boom rearing and fetching up on the headstays. She ran with the spinaker in this position until 11:40, when it was sheeted down in the usual way. It is no rarity to see a sail in such shape for a few minutes as it lifts and then falls, but it is something new to see it carried thus for three-quarters of an hour and doing good work most of the time.



The first of the very many changes of sail throughout the race was made at 11:09, when Shamrock broke out her baby jib topsail, then a minute later Columbia sheeted home her working topsail, set in stops. At 11:19 Shamrock shifted to a balloon staysail, with no apparent advantage, as Columbia was easily holding her own or a little more. There was no attempt at a luffing match to-day, Shamrock steered a straight course for the mark and Columbia kept in her wake at first and then a little to leeward. At 11:25 Shamrock lowered her jib and after twelve minutes broke out a No. 2 jib. They had run very evenly from the start, any slight gain being on the side of Columbia. At 11:40 she hauled in spinaker tack and sheet and in a few minutes she was clearly gaining on Shamrock. Columbia had her staysail down for a time, and when at 11:53 Shamrock set her working staysail again in place of the ballooner, Columbia broke out a No. 2 staysail, a new thing on a Cup defender, considerably smaller than the regular working staysail. She was now almost up with Shamrock to leeward, but the green boat pulled clear for a little time; just after noon, however, Columbia made a new spurt and placed herself fairly on the lee abeam of Shamrock. She stopped here but a few moments, for at 12:10 she had opened clear ahead, with the mark little over a mile away. At 12:17 she took in her spinaker and hauled down her working topsail, while Shamrock took in spinaker and baby jib topsail. They turned the mark slowly, close together and with sheets off, the times being:

	Turn.	Elapsed.	Gain.	Lead.
Columbia	12 19 00	1 17 25	0 01 18	0 00 17
Shamrock	12 19 17	1 18 43	.. .. ..	.. .. ..

The average speed down wind was nearly 12 knots.

There is little to be said for the work of either boat at the turn. They were slow with their sheets and lost way as they passed the mark and came on the wind on starboard tack, Shamrock to leeward. They luffed several times to get in sheets and Columbia was caught by a sea and put in irons, her jib and staysail being hauled to windward before she paid off. This gave Shamrock a chance to get well clear to leeward, and she started off with more of an advantage than her position at the turn entitled her to.

Columbia carried a bare stick aloft, with her three lower sails, while Shamrock's topsail, now a bag, held her back and reminded one of the famous last race of 1885, when Genesta carried a similar sail for twenty miles to windward and was beaten by Puritan. They heeled about equally in the wind, now blowing about 15 miles an hour, but Shamrock was doing the same poor work to windward. She footed out from Columbia and got her wind clear, but while the white boat was pointing high and holding to windward the green one was looking another way. At 12:31 she took in her topsail, but by this time Columbia was well ahead. Shamrock went on port tack at 12:39 and Columbia tacked with her on her weather bow. Columbia was now so far ahead and gaining so fast that it made little difference to her what the other boat did, but she continued to tack with her at intervals. About 1:15 Shamrock started in at the old game of two tacks to the minute and Columbia was willing to play with her, but lost no time by it. At 1:40 Columbia was at least three-quarters of a mile ahead; the wind fell a little and she sent up her working topsail in stops, but the sail was never broken out. Shamrock a few minutes later felt the need of more canvas and sent up a No. 2 club topsail. She

SHAMROCK JUST AFTER THE ACCIDENT, OCT. 17.
Copyright, 1899, by J. C. Hemment.

carried this quite as easily as Columbia did her three lower sails, proving that the added ballast might as well have been left ashore for heavy weather and far better for light. It helped her, however; for one thing it pulled up the end of the gaff, which had sagged down, and made the mainsail sit better, while the extra sail helped to drive her. She also caught a slant of wind from inshore that let her up and gave her quite a lift out on the leader. They worked on for the line, the wind holding fresh and steady; each tacking at short intervals. Columbia came up and crossed at 2:40:00 and Shamrock finished after a couple of extra hitches near the line at 2:45:17. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Columbia	11 01 35	2 40 00	3 38 25	3 38 09
Shamrock	11 00 34	2 45 17	3 44 43	3 44 42

The elapsed times on each leg were:

	Leeward.	Windward.
Columbia	1 17 25	2 21 00
Shamrock	1 18 43	2 26 00

Columbia leads by 1 min. 18 sec. off the wind, 5 min. on the wind, and 6 min. 18 sec. elapsed time over the course. She sailed a safe and easy race and was never pushed from start to finish. Those on board were little afraid of Shamrock, to leeward or windward, after the preceding days, and realized that the only serious danger lay in a breakdown. This they tried to avoid at all costs. On the way down both boats were strung over with backstays of various kinds, in numbers never seen before, like a big cobweb.

When Columbia finished she was greeted in the usual noisy fashion by the steamers around the line; the same hearty welcome meeting the loser. Corsair ran up a big ensign at the fore and main trucks, one on the jack staff on the bows and one at the end of each gaff. The winner was of course heartily cheered by the surrounding craft. When Shamrock finished the Erin was still some distance from the line, but she steamed up to the middle of the fleet and Sir Thomas Lipton led in three cheers for Columbia; while the American ensign was run up at the fore and main trucks. The Corsair drew up alongside of the Erin and Commodore Morgan led in cheers for Sir Thomas Lipton. After the yachts were at their mooring, Sir Thomas Lipton hurried on board the Corsair to congratulate the owner of Columbia, the interview, according to the report of the Times, being as follows:

Arriving at the Sandy Hook anchorage, Sir Thomas at once left the Erin on his launch and, accompanied by Sir Henry Burdette, Arthur Hill, and Charles Russell, visited the Corsair to extend his congratulations to the winner.

The party received a most hearty reception. Commodore Morgan met Sir Thomas at the gangway and embraced him enthusiastically.

"I congratulate you with my whole heart," said the visitor. "You have won the cup and won it fairly."

"Sir Thomas," replied Mr. Morgan, "while we are glad we won the cup we are sorry that it was you who lost it. If you have failed to win the cup, you have won the love and respect of every living man and woman in America."

Mr. Iselin, who was standing by Commodore Morgan, seemed overcome by emotion as he grasped both Sir Thomas' hands and said: "I can't find words to thank you for all you have done for me. Your conduct has wiped out all the bitterness that had arisen through international yacht races. Your personal kindness and consideration toward me have placed me under eternal obligations. I never met a truer sportsman or a fairer man. I will never forget you." The health of the Shamrock and her owner was drunk amid a great burst of enthusiasm.

After returning to the Erin, Sir Thomas, referring again to his plans, said: "I can't say what will happen now. I must take time to consider. While I can supply the means to furnish another boat, I have got to have a designer, and Mr. Fife, poor fellow, is ill. I don't know what his condition may be later.

"I have met the better boat. This was a Shamrock day, but, after all, she was beaten fairly. I am glad we had to-day's race, because it stopped any excuses that might have been made. I say that up to now the better boat has always won. I don't see why innuendoes should have been made in the past.

"I am not leaving the country for some weeks, and I have it in my mind now to come again, but first I have to talk with my club representatives. I would not let my business interfere with it, and am willing to challenge again unless some one else wishes to do so. I must take a few days to consider this before saying anything positive."

Shamrock remained at the point of the Hook over night, towing up to the Erie Basin early on Saturday with her various tenders. Columbia stopped but a short time at her moorings off the Hook, and then continued up to Tompkinsville, where she anchored for the night; Mr. and Mrs. Iselin with their friends coming up to the city. On Saturday morning she was taken by the Corsair and towed up to her New Rochelle moorings, off Mr. Iselin's house.

The New York Times prints the following interview:

Sir Thomas Lipton spent Sunday on board his steam yacht Erin. During the greater portion of the morning he was busy with his secretaries, but in the afternoon he took a rest. He saw few visitors, although hundreds of small boats floated around the big yacht. Some of the most venturesome went up to the gangway and sent cards on board. The owner of the unsuccessful cup hunter talked freely to a reporter, and chatted for more than an hour about his plans for the future.

"I will not challenge for the cup next year," he said in reply to a query. "You see the time is all too short to design a boat, built her and have her tuned up to concert pitch to race next fall. I will, however, issue a challenge for 1901, and will complete the arrangements for it in a day or two. The matter must be discussed fully with the committee of the New York Yacht Club.

"I have accepted Commodore Morgan's invitation to dine to-morrow night at the Metropolitan Club. I expect to meet Mr. Iselin and the members of the committee there, and we will doubtless talk the matter over then.

"Will Fife design the new boat? Most assuredly he will, but in his present state of health I do nor care to approach him on the subject. There will be plenty of time for that, however, after the challenge is issued. My new boat must be between fifteen and twenty minutes faster than Shamrock, and she must be an improvement on Columbia, which means almost a miracle, for she is a marvelous boat.

"If any other yachtsman wants to challenge for the cup I will willingly step aside, but in any event I will stand willing to give every assistance in my power to the man who tries to lift the cup. The Shamrock and my crew will be at his disposal, so that he can have a trial horse whose powers are known. If my challenge is the one accepted, I will have Shamrock in commission, and will use her in tuning up the new boat.

"I have heard that Columbia is going to try her luck on the other side in the spring. Now, if she were my boat I would take her over at once. You can take my word for it that she would sweep everything before her. There is not a boat on the other side that can compare with her in any kind of weather.

"I sincerely hope Mr. Morgan will bring her over and show what a real Yankee racing yacht is like. It will teach many of them a lesson. If Columbia does come over, I can assure her a cordial welcome and plenty of chances to meet our best boats. I will put Shamrock in commission and will race her against Columbia in the English circuit.

"Shamrock and Erin will sail a week from Tuesday. I want to see her safely off and then will leave the following day on the American liner St. Louis. Mr. Fife will also sail on the St. Louis if it is possible. He is anxious to get home, but even if his physician permits him to leave, he will have to be carried down to the steamer.

"Poor fellow; he is in a bad way, and up to the present time I have not mentioned the Shamrock's defeat, although I know that he is cognizant of it. I spoke to him for a moment Saturday night about refitting Shamrock for sea, but said nothing about being beaten.

"The way I have been treated since I have been here has touched me deeply. I came to make an attempt to take away something you prize highly, yet I was treated most generously, and, to cap it all, I am to receive a loving cup. I can't express my feelings, but I shall prize it above all things. It proves that I was right when I said before I sailed that any yachtsman who came over would be treated with every courtesy.

"There have been many wild guesses as to the cost of the Shamrock. I can say now that the boat itself as she floats to-day, without any expense for bringing her over here, racing her, or cost of crew, is between $400,000 and $500,000, but I have not a single regret."

Messrs. Fife and Ratsey will sail on the Majestic on Oct. 25; if Mr. Fife is able to be moved to the steamer.

Society of Naval Architects and Marine Engineers.

THE seventh general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city, beginning at 10 A. M., Thursday, Nov. 16, 1899. Through the courtesy of the president and managers of the American Society of Mechanical Engineers the meetings will be held in the auditorium of No. 12 West Thirty-first street, the sessions continuing through Thursday and Friday, Nov. 16 and 17.

There will be a banquet at Delmonico's at 7 P. M., Friday, Nov. 17, to which members and their guests are cordially invited. Tickets, exclusive of wine, will be $5 each, and they can be obtained at the society's office on Nov. 15, 16 and 17.

The council will meet at No. 12 West Thirty-first street, New York, on Wednesday, Nov. 15, at 3 P. M.

List of papers to be read before the Society of Naval Architects and Marine Engineers at its seventh annual meeting:

Thursday, November 16.

1. Coaling Vessels at Sea.—By Spencer Miller, Esq., associate.
2. Causes for the Adoption of Water Tube Boilers in the U. S. Navy. By Engineer-in-Chief Geo. W. Melville, U. S. N., vice-president.
3. Suggestions as to Improved Appliances for Launching Ships' Boats. By John Hyslop, Esq.
4. The Electric Plants of the Battle Ships Kearsarge and Kentucky. By Naval Constructor J. J. Woodward, U. S. N., member.
5. The Increasing Complications in War Ships, and How Simpler Arrangements Might Be Adopted. By Geo. W. Dickie, Esq., member of council.
6. Beam Formulæ Applied to a Vertically Stiffened Bulkhead, with Some Results. By H. F. Norton, Esq., member.
7. Notes on Sheathing the U. S. S. Chesapeake. By Naval Constructor Lloyd Bankson, U. S. N., member.

Friday, November 17.

8. System of Work in a Great Lake Shipyard. By W. I. Babcock, Esq., member.
9. Overhead Cranes, Staging and Riveter Carrying Appliances in the Shipyard. By James Dickie, Esq., member.
10. Designs for the Denver Class Sheathed Protected Cruisers. By Chief Constructor Philip Hichborn, U. S. N., vice-president.
11. Novelties in Ship Fittings. By Assistant Naval Counstructor R. M. Watt, U. S. N., member.
12. Progressive Speed Trials of the U. S. S. Manning. By Prof. C. H. Peabody, member of council.
13. Tactical Considerations Involved in Torpedo-Boat Design. By Lieut. A. P. Niblack, U. S. N., associate.
14. On the Action of the Rudder, with Special Reference to the Motion of the Ship while the Helm is being put Over. By Prof. Wm. F. Durand, member of council.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week Was there ever in all the world a more abundant weekly store of sportsmen's reading?

Canoeing.

The Executive Committee Meeting.

THE business meeting of the year, the annual meeting of the Executive Committee, will be held on Saturday, Oct. 28, in Toronto, the Northern Division being in charge of affairs for 1900. The main work of the meeting will be the selection of a camp site and date for the next meet. As the result of the meet of 1899, many changes of rules have been proposed, but fortunately few of them can be carried out. The trouble during the past year has been not with the rules of the Association, which are in the main good and comprehensive, but due to the general practice of officers and committees of overlooking or disregarding the rules.

If all officers and members of committees were content to study the rules and live up to them, and also to pay due regard to the experience of former years and the long-established precedents of the Association, there would be little cause for new legislation in either the constitution, by-laws or racing regulations. It would be a great mistake at the present time to load up the book of the Association with special legislation to prevent the recurrence of the mistakes of the past year, as most of them were based on a disregard of the rules and precedents or a failure to enforce existing rules.

The A. C. A. has probably the best machinery of all yachting or canoeing organizations for the attainment and maintenance of a high standard of excellence in its racing rules. The regatta committee of three which has had the arrangement of the year's programme and the management of the meet races is called on at the end of its term of office to make a report, in which it is expected that the committee will embody its own conclusions as to possible changes of programme and amendment of rules. In addition to this, all proposed amendments from members must be sent to the regatta committee and embodied by it in the report. The report must then be published in the official organ of the association at least 14 days before the annual meeting at which the amendments will be passed on. By this plan it is possible for every individual member of the association to know what amendments are proposed; to discuss them in point, and to advise the officers of his division of his opinion.

The one weak point of this plan is that the regatta committee fails to fulfill its duties in making a full and comprehensive report and to have its report published in season. The report of the 1899 regatta committee was received on Oct. 16, so that it could not have been published within the 14 days prior to Oct. 28. As it contains no proposed amendments, either from the committee or from members, it will be impossible to vote on any amendments to the racing regulations at the meeting on Saturday. As the report relates only to routine matters, we have reserved it to appear with the other reports in the record of the meeting.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Oct. 14.—The regular shoot of the above Association was held to-day. Conditions were 200yds., at the standard target, 7-ring, black:

Conlin's Gallery.

JAMES CONLIN has established himself at No. 513 Sixth avenue, New York, on the west side of the avenue, between Thirtieth and Thirty-first streets, where he has an open rifle and pistol range which is the longest in the city. The French revolver match for the Gaston Rennett medal, between twelve amateurs of New York and a like team of Paris, will be shot at an early date.

Commended It to His Physician.

Forest and Stream Pub. Co.:

For the inclosed please enter my name for subscription to Woodcraft and forward immediately the present issue.

I am one of your subscribers and readers who has at last broken the chain, and Thursday I am off. For three years past all my shooting has been done in reading your paper, and for all that pleasure I thank you very much. Many nights I have read myself to sleep with your delightful tales when nothing else would drive out of my mind thoughts and troubles of business.

I don't mean anything uncomplimentary in likening your paper—rather, my paper—to a soporific. Quite the reverse, I assure you.

Let any one try it whose head is on fire with details and torments of business, so that he thinks sleep a thing only for childhood. If he has ever loved to shoot and loved the woods his mind will soon cease to whirl, and peace will soon be followed with quiet sleep. I have done it.

I have commended it to my doctor to add to his list of medicines. He tells me one thing is better, and that is the reality.

GEO. A. HOLDEN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Trapshooting.

Fixtures.

Oct. 25-26.—Rochester, N. Y.—Eighth annual fall tournament of the Rochester Rod and Gun Club.

Oct. 26.—Mt. Kisco, N. Y.—Fall tournament of Mt. Kisco Gun Club. Open to all. Cash and merchandise prizes. R. W. Gorham, Sec'y.

Oct. 27.—Columbus, O.—Sherman Rod and Gun Club's tournament.

Oct. 28-29.—Paisley, Ind.—Cedar Lake Rod and Gun Club's tournament.

Oct. 30-Nov. 2.—Rockford, Ill.—Rockford Gun Club's tournament.

Oct. 30.—Lebohner's Dexter Park, Brooklyn.—Live-bird shoot, open to all. Four events, at 3, 5, 5 and 7 birds. Geo. C. Lebohner, Station E, Brooklyn.

Oct. 31-Nov. 3.—Cincinnati, O.—Tournament of the Cincinnati Gun Club; two days at live birds; two days at targets. George McG. Morris, Sec'y.

Nov. 1-4.—San Antonio, Tex.—San Antonio Gun Club's tournament.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Nov. 22.—Ridgewood, N. J.—All-day shoot at live birds. H. Blauvelt, Manager.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June 5-7.—Columbus, O.—Tournament of Ohio Trapshooters' League. J. C. Porterfield, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

From an exchange we learn that at Charlottesville, Va., on Oct. 19 a meeting of the Gun Club of the University of Virginia was held for the purpose of organization, and resulted in the election of John W. Daniel, Jr., of Lynchburg, as President; A. M. Alston, Vice-President; J. F. Taylor, of Lynchburg, Secretary and Treasurer; Advisory Committee: P. E. Dupont, of Greenville, Del., and W. S. Hoen, of Maryland. The prospects for the club are unusually bright this year. Several interesting contests are being arranged, one with the Hill City Club, of Lynchburg, next week, and another with the University of Pennsylvania's team in November.

Mr. Frank Butler was a visitor in Sportsmen's Row, New York, last week, but his stay was short, as he journeyed westward on Friday. He expressed pleasure after the fatigues of an eight-months' engagement with the Wild West show. He and Mrs. Butler (Annie Oakley) will enjoy several weeks' shooting in the West before returning to their home for the winter, in Nutley, N. J. Mr. and Mrs. Butler hope to take in the Belle Meade shoot this week, and the Cincinnati shoot the week afterward.

Col. J. T. Anthony, of Charlotte, N. C., put in his appearance on Sporting Goods Row on Monday of this week, Oct. 23. The Colonel was just from the tournament of the Baltimore Shooting Association, and being so close to New York, could not help running over to see how things were going on. He found shooting matters a little dull, but still hopes that he may be able to take a fall out of some of the New York cracks before returning to Charlotte and the quail that haunt her suburbs.

One of the very best shots in the City of Rochester, N. Y., was in the city last week. This was Mr. E. C. Meyer, who is a prominent member of the Rochester Rod and Gun Club, and who filled the honorable position of president of that club when the New York State of 1898 was held at Rochester under its auspices. Mr. Meyer is a keen sportsman, and a rattling good shot, and has done much to keep the Rochester Rod and Gun Club in the front rank during the past few years.

The tables of weights and measures, which we are enabled to publish through the courtesy of the Ideal Manufacturing Co., contain information of inestimable value to all sportsmen. It is entirely reliable and authentic, as the certificate affixed to it will show. No shooter need to be groping in the dark as to the proper load, and its strength, if he will take the trouble to study these tables with the care which they deserve.

Drs. Kemble and Creamer, of the Brooklyn Gun Club, are quite formidable competitors when they forsake the inanimate target for the live bird. On Tuesday of last week they participated in the shoot of the Emerald Gun Club, and were well up among the leaders. In a miss-and-out Dr. Kemble and the Jamaica crackerjack, Mr. S. M. Van Allen, raced neck and neck to the 11th round, when the Doctor missed.

The average of .960, made by Mr. J. A. R. Elliott, on the first day of the St. Louis tournament, was remarkable shooting under unfavorable weather conditions. Mr. E. D. Fulford was second with .906. Out of 150 targets they respectively broke 144 and 136 on this day. Mr. Fred Gilbert was high on the second day with .946, making one run of over 70. Messrs. Budd and Elliott were second with .920.

The plans for the Casino, the immense structure which will be erected for the convenience and comfort of the shooters at Interstate Park, are nearly completed; the foundation plans for the mason work are quite so. They show ample room for rifle and pistol galleries, bowling alleys, billiard and pool tables, shuffle board, kitchen, storerooms, etc., all as complete as could well be imagined.

Mr. Wilbur F. Parker, of the firm of Parker Brothers, Meriden, Conn., took a run over to this city on Monday last. He was too busy while in town to see much of the city outside of Chambers street, where his firm's New York business is transacted. If he will call around at lunch time, when desks are usually unoccupied, it is his loss, as well as that of his many city friends.

At Tom Morfey's shoot on Wednesday of last week a remarkably fine lot of birds were trapped. Out of some 350 odd, there was hardly a sitter. Only two balls were thrown, the birds flying promptly and fast. Mr. Harold Money, the scratch man, was first in the 25-live-bird handicap, with a score of 23, which indicates excellent shooting under the circumstances.

Mrs. M. F. Lindsley (Wanda) has returned to Cincinnati after an all too short stay in her real home—the State of New Jersey. Milt Lindsley, however, had to be considered, so she departed for the village on the banks of the Ohio. The big live-bird shoot at Cincinnati will in all likelihood be Wanda's next public appearance.

Mr. O. E. Peters, of the Peters Cartridge Company, was met on Broadway one day last week in company with Tom Keller, who represents Mr. Peters' interests in this city and vicinity. Tom was so busy talking shells and loads that he had barely time to recognize even his warmest friends and admirers *en passant*.

Mr. E. G. Frost, secretary of the New Utrecht Gun Club, was in New York last week. He has been absent in Massachusettts during the past three or four months, attending to business matters. The ruddy glow of good health upon his cheeks would indicate plenty of outdoor exercise, the best of nature's tonics.

Mr. W. Fred Quimby, of the E C & Schultze Co., arrived in New York last week after an absence of several weeks on a business trip to the coast. He expressed himself as being much pleased with results, and reports general revival of business.

Dr. J. W. Smith, the famous St. Louis shooter, won the cup in the 25 live-bird handicap at St. Louis last week, making a straight score from the 30yd. mark. Burnside and Gilbert, the latter at 32yds., also killed straight, but were not eligible to the cup competition, it being restricted to competition by shooters of the State.

Mr. Edward Banks was one of the fortunate few who witnessed the final race between the Columbia and Shamrock, and he solemnly avers that, notwithstanding the color of the hull and flag of the latter, she could not be classed as green goods.

Mr. W. B. Leffingwell was the victor in the contest for the Chicago sportsmen's diamond trophy at Watson's Park, Burnside Crossing, Ill., on Saturday of last week, defeating ten competitors, who were seriously contemplating doing the same thing.

The October cup of the Crescent Athletic Club was won last Saturday afternoon by Mr. Henry Kryn, scoring 23 out of 25, with an allowance of 7. Mr. C. G. Rasmus won the trophy, scoring 24 out of 25, with an allowance of 7.

Mr. R. Phister, with an allowance of 4, scored the limit at the Brooklyn Gun Club's prize handicap shoot last Saturday. He was alone in scoring the limit. Every one but Mr. Phister knows he is an excellent shot.

The next E C inanimate target championship trophy contest is fixed to take place Oct. 30, at 2.30 P. M., at Batavia, N. Y., between Mr. W. R. Crosby and Mr. Fred Gilbert, the challenger.

Mr. H. Blauvelt will arrange for a live-bird shoot Nov. 22, at Ridgewood, N. J. The programme will be announced in ample time for the information of shooters.

In the shoot at the Rusch House grounds on Oct. 18 the well-known shooter, Mr. J. A. Marks, won the valuable meerschaum pipe with a score of 47 out of 50.

Mr. H. C. Brigers, of Tarboro, N. C., who shoots under the nom de fusil of Tar Heel, was among the leaders in the competition at Baltimore last week.

BERNARD WATERS.

St. Louis Tournament.

ST. LOUIS, Mo., Oct. 19.—The tournament given by Manager Corray at Dupont Park was very lightly attended, and the few that were present were mostly out-of-town shooters, as for various reasons the local shooters were unable, or rather failed, to give the shoot any support. There was present but one of the home shooters—Dr. Smith, who shot through the programme. Others shot from time to time, but the aggregate support was very meager. Why such a state of affairs should exist I am not in a position to state, though it may be due to the fact that this shoot was promoted by an individual and not by any of the organizations which are created for a similar purpose. However, meager as the attendance was, Mr. Corray carried out everything which the programme proclaimed, and added every dollar promised, so that those who did participate have nothing to complain of, and from what I could learn every one went away well satisfied.

The visitors present consisted of J. A. R. Elliott, of the Winchester Arms Co.; E. D. Fulford, of the Remington Arms Co. and the U. M. C. Co.; Fred Gilbert, of the Du Pont Power Co.; H. C. Hirschy, of the Hazard Powder Co.; C. W. Budd, of the Parker Gun and U. M. C. Co.; J. S. Fanning, of the Gold Dust Powder Co. Then there were Tom Marshall, of Keithsburg, Ill.; Guy Burnside, Knoxville, Ill.; Chris Heilegenstein, Freeburg, Ill.; Riehl, Howell and Schiess, Alton, Ill.; Mr. Crosby, of O'Fallon, Ill (a brother to the noted William); C. E. De Long, Hot Springs, Ark.; W. A. Vivian and Dr. Lockridge, Columbia, Mo.; C. F. Lambert, Haverhill, Mass.

The general averages run as follows: Elliott .940, Gilbert .920, Budd .906, Fulford .903, Marshall .893, Hirschy .883, Fanning .873, Burnside .853, De Long .840, Howell .813, Dr. Smith .810, Crosby .763, Riehl .733. This represents the showing of each contestant in the two days' target programme, which called for 300 shots.

The average fund was created by taxing the trade representatives $2.50 per day extra, but as there were only six present, this amounted to only $30. However, Mr. Corray made up the difference.

First Day, Monday, Oct. 16.

J. A. R. Elliott was the only shooter who participated in to-day's events who could negotiate the targets with any degree of success. He was largely in the money divisions, and carried off a nice roll for his consistent performance. He has five straight scores to his credit, and also a consecutive run of 69, which was the best in this respect; his average of .960 is a great one under the existing conditions. Fulford finished second with .906, and is the only other contestant who made 90 per cent. Gilbert, Hirschy and Budd are tied for the next position, and these are the average winners of the day. There was $20 set aside for this purpose, and this was divided Rose system on the following ratio: 5, 4, 3. Thus Elliott got $5.55, Fulford $4.45 and Gilbert, Hirschy and Budd $3.30.

Fanning's showing in the regular events was not up to his standard, but when these events had been disposed of two 20-bird extras were shot, and in both of these he ran straight.

The weather was clear in the morning, but after dinner it elouded up, and finally it began to rain very hard, so as to put an end to the shooting at about 4 P. M. All day long the wind blew a howling gale, and this played havoc with the flight of the targets and the scores of the principals.

There was $10 added in all the events but No. 4, and No. 8. There were four moneys, and this was divided Rose system, ratio 5, 3, 2 and 1.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Elliott	13	15	15	15	15	14	14	14	15	14	150	144	.960
Fulford	13	11	12	14	15	14	15	13	15	14	150	136	.906
Gilbert	13	13	14	13	12	15	15	11	14	14	150	134	.893
Hirschy	14	12	14	13	13	13	14	11	15	15	150	134	.893
Budd	11	14	14	15	12	13	13	14	15	13	150	134	.893
Marshall	14	12	12	13	13	15	12	14	12	15	150	132	.880
Fanning	12	12	11	14	14	14	13	13	14	13	150	130	.866
Burnside	14	14	12	11	13	14	15	10	14	10	150	127	.846
De Long	10	12	14	12	14	14	8	12	12	14	150	122	.813
Howell	12	7	13	10	14	13	12	14	11	11	150	117	.780
Dr Smith	10	12	12	12	11	11	11	9	13	15	150	116	.773
Crosby	13	11	11	13	12	11	12	12	10	11	150	116	.773
Lockridge	13	12	13	13	9	14	11	12	10	6	150	113	.753
Kessler	12	7	13	9	15	13	9	9	13	12	150	112	.746
Riehl	8	8	9	11	8	11	12	8	12	13	150	100	.666
Vivian	5	10	8	11	11	14	7	..	..	..	135	66	.492
Schiess	..	..	..	..	9	12	13	9	13	12	90	68	.755
Kling	..	..	..	..	..	11	13	12	13	13	75	62	.826
Spencer	..	..	..	..	..	..	11	13	15	13	60	52	.866
Taylor	..	..	..	..	..	..	..	..	15	11	30	26	.866
Heilegenstein	..	..	..	..	..	..	..	..	..	10	15	10	.667

Second Day, Tuesday, Oct. 17.

The total absence of any wind made the shooting much easier to-day, and there is a marked improvement all along the line. Gilbert is high man with .946. Budd and Elliott are tied for second and third with .920, and Marshall is fourth, .906. The $20 average netted each as follows: Gilbert, $6.25; Budd and Elliott, $5 each, and Marshall $3.75.

Gilbert showed excellent form, and made one run that exceeded 70, for in addition to the regular programme there were two 25-bird extras, in each of which he scored straight.

The programme was identically the same as on the previous day, only that on this occasion there was no added money in events No. 4 and No. 9.

The weather was bright and clear, and perfect in every respect from a shooter's standpoint.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Gilbert	14	13	15	15	14	14	14	14	14	15	150	142	.946
Budd	15	14	15	11	13	14	14	13	14	15	150	138	.920
Elliott	15	13	14	13	14	15	14	14	13	13	150	138	.920
Marshall	12	14	15	14	15	13	14	13	12	14	150	136	.906
Fulford	14	14	14	14	14	14	11	13	14	13	150	135	.900
Spencer	14	11	12	15	13	15	14	13	12	14	150	133	.886
Fanning	13	13	13	13	13	12	14	14	13	14	150	132	.880
Hirschy	15	14	14	14	11	15	12	13	11	12	150	131	.873
De Long	14	13	9	15	12	15	14	11	14	12	150	130	.866
Burnside	14	13	13	15	9	13	14	12	13	13	150	129	.860
Howell	12	10	13	13	15	11	12	12	14	15	150	127	.846
Dr Smith	14	11	12	11	13	13	14	12	13	14	150	127	.846
Riehl	12	14	13	12	11	12	11	12	12	12	150	121	.806

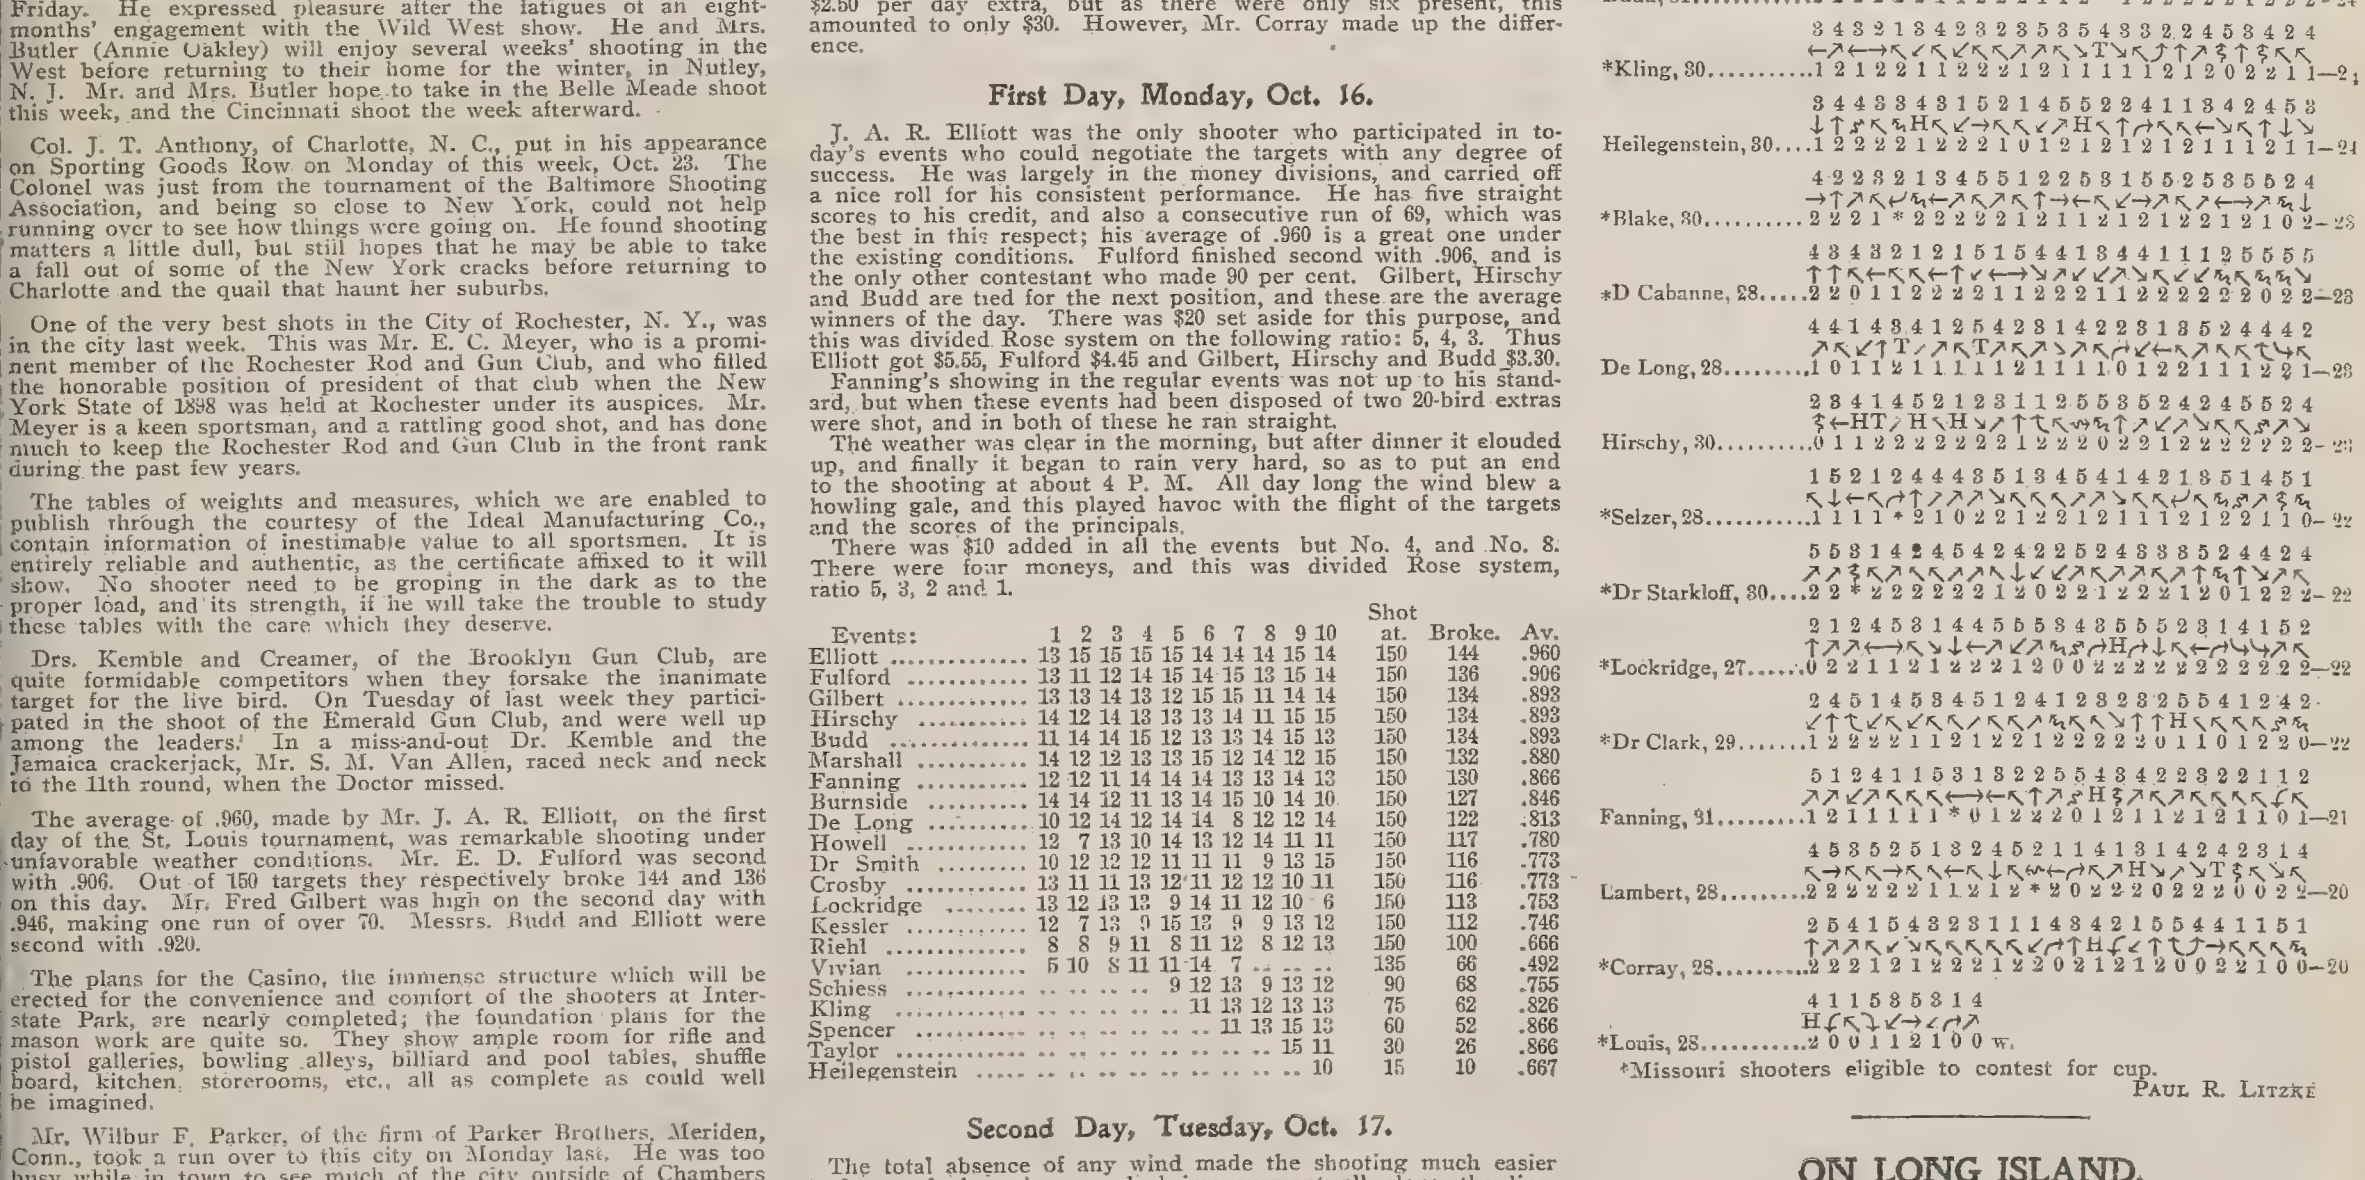
Markle	10	13	7	11	10	9	9	8	10	11	150	98	.653
Lockridge	10	8	12	13	7	12	15				105	77	.733
Starkloff	10	12	7	8	11	13					90	61	.677
Dr Cummings	10	12									30	22	.733
C Cummings	6	7									30	13	.433
Taylor	13										15	13	.866
Beal	11										15	11	.733

Third Day, Wednesday, Oct. 18—Pigeons.

There was but one event to be disposed of to-day, and this was a 25-bird handicap, in which the prize was a very handsome cup donated by Deihl Brothers for the Missouri shooters to contest for. The other principals who resided outside the State shot for the money only. The entrance was $15, birds included, at 25 cents apiece.

There were nineteen entries, and of these ten were residents of the State. Dr. J. W. Smith, a local shot, was the only one of these to put up a perfect score, and thereby he gained possession of the cup, which is subject to a challenge from any Missouri shooter, and which he stands ready to defend at any time. The conditions require the challenger to put up $50 against the cup, and the contest must be at 100 pigeons per man, loser to pay for the birds and winner take money and cup.



Dr. Smith, the winner of the cup, shot a nice steady race, and showed excellent time and judgment throughout, using his first with great precision and was equally as effective with his second when necessity required it. At no time was there any doubt as to his gathering his birds, for not a single one was slobbered. Taking his shooting from all points of view, I have never seen him display such perfect form.

Burnside and Gilbert were the other straight men. The former was favored by a good mark, but, irrespective of this, he also was equal to all occasions, and negotiated slow and fast birds in a very clever manner, so that good shooting is mainly responsible for his good score. Gilbert was scratch man, but this apparently did not worry him to any extent, so that by close attention to business he readily accounted for all of his birds, though this was only possible by some great execution with his second. Marshall, Budd, Kling and Heilegenstein finished with but a single loss, the two former's birds being dead out of bounds. Blake, Cabanna, De Long and Hirschy scored 23. Of these, Hirschy drew by far the hardest birds of any of the contestants, and made many very fine kills. Selzer, Dr. Starkloff, Dr. Lockridge and Dr. Clark scored 22. These are all who shared in a division of the purse, as there were but four moneys, divided on the percentage system, 40, 30, 20 and 10 per cent. After the final division was made, straights paid $22.15; 24s, $12.40; 23s, $8.40, and 22s, $4.15.

The birds were a very ordinary lot, which showed an occasional good one. There was nothing in the elements to improve their quality, as the sun shone bright and warm and there was a total absence of wind.

Several miss-and-outs were shot after the main events, and in these Budd, Gilbert, Marshall, Blake, Prendergast, Burnside and Heilegenstein shared in the divisions.

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

*Missouri shooters eligible to contest for cup.

PAUL R. LITZKE

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, Oct., 21.—Herewith are the scores of the Brooklyn Gun Club's shoot, it being the sixth contest for the Francotte Gun.

The wind was blowing a gale from the northwest, and made the shooting very difficult, as the scores show.

Event 4 is the handicap event. In column 5 are the handicaps and in column 6 are the totals:

Events:	1	2	3	4	5	6	7
Targets:	15	15	15	50			25
Dudley	11	14	..	37	3	40	7
J Hopkins	7	13	..	31	9	40	..
W Hopkins	12	9	..	37	6	43	23

G. B. PATERSON, Sec'y.

Fulton Gun Club.

Brooklyn, L. I., Oct. 21.—There was quite a wind blowing. In the club shoot there were four contestants, as follows: Goldstein 6, Daly 6, Duke 21, Snyder 19. Goldstein and Daly shot a match at 25 targets, with results as follows: Goldstein 12, Duke 8. Several 10-target sweepstakes were shot, the scores of which were:

Duke	6	6	9	8	6	Daly	2	3	5	3	3
Goldstein	3	2	5	5	5		–	–	–		

DUKE.

Handicapping in Sports.

THE difficulty of discovering some way of giving an inferior opponent a reasonable chance of succeeding against a better, and at the same time of giving rise to an interesting competition, has long occupied the minds of those who have had the control of our sports and pastimes. When one competitor has once proved his or its superiority over another, it is simply a farce for the two to any more compete upon equal terms, except under certain conditions, when a change of surroundings may be thought to equalize matters. We last week chronicled with regret the death of Maj. Egerton, the official handicapper, and it was that gentleman's lot, week by week, to frame one or more handicaps, or, in other words, to estimate to the best of his ability the merits of various horses, and to give effect to his ideas by apportioning to each weights which would, in his opinion, bring them together, pounds or stones being the medium of putting a good and bad horse on something of an equality. If we refer to the "Sporting Dictionary and Rural Repository," published by Mr. William Taplin, in 1803, we shall find a curious description of handicapping. Says this old writer, "Matches between horses are made in the following way: A, B and C put an equal sum into a hat, and C, who is the handicapper, makes a match between the horses of A and B, who, having perused it, put their hands into their pockets, and draw them out closed. They then open them, and if both have money in their hands the match is confirmed; if neither has money, it is no match. In either of these cases the handicapper, C, pockets all the money in the hat; but if one has money in his hand and the other none, he that has money is entitled to all the deposit in the hat." Mr. Taplin's directions for handicapping convey very little meaning to racing men of to-day, while matches on the turf have so far fallen out of fashion as to be hardly worth thinking about.

Some years ago the veteran, and still living, trainer, Mr. John Kent, wrote to a daily paper to express his love for matches, and suggested that the resuscitation of match-making might make the Newmarket meetings far more interesting than they are; and we must all admit that handicapping is the essence of match-making. Handicapping, however, in the form of apportioning weights to race horses is but one form of the attempt to bring together competitors of various calibers. In pony racing days it was so many pounds for an inch in height, and weight, in fact, has always been the basis upon which handicaps for racing purposes have been raised. Before quite quitting the subject of racing, it may be mentioned that, in the earlier days of steeple chasing, sundry fruitless attempts were made to bring horses of various capabilities together. The "hunter" was introduced; certificate from a master of hounds was required; the conditions of individual races required that no horse competing should have been in a training stable within a specified time, and so on, or should not have run in open races; but, as most of our readers know full well, every attempt to bring the hunter and steeplechaser together has been attended with failure.

In the old days of yachting, when cutters, schooners and yawls sailed in the same race, a laudable, and on the whole a successful, attempt was made to give the various rigs a fair chance by making schooners and yawls sail at less than their real tonnage under Thames measurement, while in the case of vessels of various sizes, time allowance has for time out of mind been adopted to place the small vessel on an equality with a larger one, and it must be confessed that some of these forms of handicapping have not been unattended with success.

As opposed to horse racing, handicapping in "man racing," as the late Mr. Frederick Swindell was accustomed to designate pedestrianism, has consisted in start, the scratch competitor being made to concede a certain number of yards, or, in some cases, seconds or minutes, to some presumably weaker opponent.

In sculling, too, the system of stars holds sway in some competitions, while at billiards points are given by the reputably stronger player to a weaker one, unless a cramp game be played, which, however, is seldom or never seen in tournaments. Lawn tennis and golf, too, boast their different systems of handicapping; but cricket and football stand out among our amusements as those in which players compete on equal terms, and it is perhaps for that, among other reasons, that they are so popular. It would appear to be a fact, however, that, as a general rule, handicaps do not afford the interest of contests which take place on level terms. It is not easy to discover the reason in all cases, we admit. Of two horses with no weight on their backs, one will, save in the event of a dead heat, be superior to another, just as one man will outrun another on the path; but the apportioning different weight to various horses does not appear to detract so much from the interest in a horse race—take, for instance, the principal handicaps of the season—as it does in some other amusements; nor is yachting interfered with by reason of time allowance. If, on the other hand, a pedestrian with a start wins a race, people say that he was possibly underrated by the handicapper; while, if the receiver of points in a billiard match wins, one of the most common remarks is that the giver of points over-estimated his powers.

It will thus be seen that in our love for contests there are called into play three kinds of handicapping, using the word in its widest sense. In the first place there are the regularly appointed handicappers, such as was Maj. Egerton, and as are now those who frame handicaps for lawn tennis, billiards and other amusements; secondly come those allowances which are fixed by rule—as the time allowances in yachting; while thirdly come those contests in which the parties thereto arrange their own terms, as in the case of so many matches on the turf and games at billiards. The fact remains, however, that competitions fought out upon equal terms are productive of the greatest interest. Capt. Greer, for instance, must feel much more delight in the St. Leger victory of his horse Wildfowler than if he had been let in at a stone too little in some handicap, and this is the secret of the important position occupied by the weight-for-age races. The University boat race would be robbed of more than half its interest if Cambridge, by reason of her numerous defeats, were ceded, say, three lengths' start; while the most unsuccessful county would not care to start next season's cricket with some allowance given in consideration of this season's failure. As a medium for speculation, any contest may be welcomed; but as a sporting event there must be a limit, and in the best form those competitions only which are decided on level terms are regarded in the highest light.—London Field.

"Ideal Table" Comparing the Weight (by Grains) of Bulk Measure of Black Powder with the SAME BULK MEASURE OF Smokeless Powders.

These tables do not compare the relative strength of Black with Smokeless Powders. For such information correspond with the Powder Manufacturers.

The figures in the first column are the graduations on the Ideal Measures, Models 1899, which are for grains weight black powder only. The other columns are comparative weights for same bulk measure.

On the Rules of Sport.

UNDER the above caption the Sun of Oct. 19 published the following excellent editorial on the Columbia-Shamrock second race. It is presented to our readers for the recognition of the universal principle of sport, concerning which it treats. It has a direct bearing on the matter of trapshooting, since the principle that a contestant must abide by his own errors and accidents is universal. The editorial is as follows:

"The manner in which Columbia's sailing over the course after Shamrock's accident has been attributed to the 'special agreement' made prior to the contest, between Mr. Iselin and Sir Thomas Lipton, that each yacht should abide by its own accidents, shows that ideas on sport are hazy. This agreement in itself had no force. The rules covering sport of all kinds, from yachting to mumble-the-peg, make precisely this provision regarding accidents, and sport could't go on without it.

"If a man falls he loses the race; if the knife-pegger's blade breaks he loses his hand. A race once on, every competitor must accept his fortune. The Iselin-Lipton agreement was all well enough, but the fact is that competitors should be compelled to accept, as a matter of course, whatever advantage may arise from a rival's mishap, in order that no one in such a situation shall be weighted with the burden of deciding whether to accept it or not. If a contest is marred by accidents, another one can be arranged; but the contest so marred should be carried to the end without prejudice.

"When Sir Richard Sutton, after the Puritan had disqualified herself by carrying away the Genesta's bowsprit while maneuvering for the start, refused to sail over the course alone, he went to the extreme of a sportsman's privilege in courtesy. That collision happened, though, before the race had really begun. If it had occurred after the line had been crossed, the only thing that would have given Sir Richard the right to withdraw would have been the utter hopelessness that the Genesta, without her headsails, could complete the course within the time allowed.

"If any other rule than this were tolerated sport would inevitably degenerate into trickery, victors would be robbed of laurels rightly won, and bad feeling and undeserved discredit would flow without limit."

Arkansas and the South.

Dr. Smith—Griesedeick.

ST. LOUIS, Mo., Oct. 14.—Dr. Smith and H. C. Griesedeick sh a 100-bird match at Dupont Park to-day for the possession of t Jaccard cup, which was held by the latter, but which he was co pelled to relinquish to the Doctor, as he proved to be his mast in the event of to-day, and won by the very fine score of 95 to This cup must be won three times to become the property of a one, and prior to this contest Griesedeick had two wins to credit, so that had he been able to retain it he would have tired it from competition. Dr. Smith's victory also gives him t wins, and he is now practically in the same position as Grie deick, so that another win will entitle him to permanent poss sion of the cup. Whether he will be able to achieve this future alone will tell, though his chances are very good, as now is in excellent form.

Smith's best run was 28 straight, and Griesedeick's 37. Sm lost 2 dead out of bounds and Griesedeick 4.

The birds were a good average lot. The weather was warm a bright.

Kansas City vs. Omaha.

Mr. James Whitfield, who is acting as secretary for the Kan City sportsmen in arranging the team match between these t cities, tells me that the Omaha sportsmen have practically accep their invitation, and that the contest would very likely take pl on Nov. 23 to 25. He also tells me that in order to make event all the more attractive it has been proposed that they c in the Republic cup, and put it up in open contest, which can done by guaranteeing $1,000 in this event. This, he thinks, likely be consummated and the cup made an object of competiti in a 25-bird event. PAUL R. LITZKE

Mr. Pierce Barnes, a lawyer in New York, had occasion, counsel for a Western railroad, to ask a section foreman for formation regarding the killing of a bull on the line. He receiv the following vivid reply:

Coon's Hole, Minn, 6, 8, '92.—To Mr. Pers Barns, the hon. co sel to —— —— Railroad At St. Paul: Dear Sir.—Your hum servant, Andy Slattary, section foreman at the Falls below, kno but very little with regards to the killen of the bull. But how ever what right had he over here when he lived two miles bay the right of way, but never the less he came in company alo with two of his female sex and in the hight of their jollity they l the fence and they were cavorting the whole of the afternoon and down the right of way, and presently along comes No. 7 a hits the little bull a whelt in the tail and knocks him to the p below and breaks his bones to atoms, and the bull is dead. That all I know in regards to the killen of the bull. Your hum servant at the Falls below. ANDY SLATTARY, Sect. 3

Near Warren, Conn., is posted on a meadow fence the followi "Notis—Know kows is aloud in these medders, enny man womun letten thare kows run the rode wot gits inter my medd afoursed shal have his tale kut orf bi mee. Obadiah Rogers."

Kentucky Gun Club Tournament.

Louisville, Ky.—The three days' tournament of the Kentucky Gun Club took place in Louisville on Oct. 12, 13 and 14, and passed off to the satisfaction of all of the participants. The weather was delightful, the attendance good. Numerous sportsmen from all over the State of Kentucky and many from adjacent States met with a hearty welcome from the genial members of the club.

The presence of many of the fair daughters of Kentucky added to the charm of the occasion. Fine shooting, good cheer, and jolly good-fellowship were the leading features of the meeting; and taken altogether it was a very enjoyable holiday.

Many distinguished visitors added to the interest of the gathering, and some of the leading stars of the shooting firmament participated in the shooting. Among them were Mr. J. A. R. Elliott, of Kansas City, Mo., who shot through the programme, with the exception of the last day. He not being a Kentuckian could not take part in the event of the Kentucky championship.

The score book shows that he occupied his usual position in the result—first in every event he took part in.

Mr. J. D. Gay, of Clark county, Ky., was shooting as well as ever; after five annual attempts he succeeded in capturing (by a straight score of 25 birds, and the only one made) the championship of Kentucky, the trophy of which was a very handsome silver cup and the larger share of the purse.

Mr. H. J. Lyons, the leading light of the club, in the same event, acquitted himself very creditably, as usual, getting 24 out of 25, and divided second money with Mr. R. M. Powell, of Henderson, a very quiet, retiring spirit, who killed his 24 out of 25 birds in a masterly manner.

Mr. Joe Coyle, of Lexington, got 23 out of 25 birds, and being alone at that score, got a proportionally larger share of the purse than in the preceding score. By a score of 22 the fourth and last money was divided between Tom Clay, of Bourbon county; Sam Hutchings, of Louisville; N. T. Harris, of the Hurstbourne Farm, in Jefferson county, Ky.

There were twenty-one entries in the championship event. The efforts of seven of them were rewarded as stated above, and the fourteen remaining got what the "Connaught man shot at"—nothing.

Below find the full score of the two most prominent events—the Kentucky handicap, Oct. 13, and the Kentucky State championship, Oct. 14; also a report of the first day's sport, which was devoted to targets, Oct. 12, showing results and averages:

The club has been filling up its ranks with several new members, many of whom made their first appearance in public, such as Dr. A. M. Cartledge, who shoots with a confidence that assures him a place in the front rank in a very short time.

Dr. F. W. Samuel, an enthusiast with the sport, will soon occupy a similar position.

Mr. G. Rob Hunt also made his first appearance, and gives hopes of rapid promotion in the art of shooting.

There were also present a quiet spectator—Mr. D. S. Brewster, the representative of the great Atlantic Powder Co., owned and controlled by the well-knowkn Du Pont family, of Wilmington, Del.

A few well-known old-timers—almost shades of the past—made their appearance here and there, and I had the pleasure of greeting Mr. Andy Meadors, of Nashville, Tenn.; Capt. G. G. Berry, who some years back was an active leader both at the trap and in the field, was a passive observer.

Another old-timer, whose name always stood very near the top on all the scores of the great clubs, made his appearance in full undress uniform under a new nom de plume, or, as you wish, nom de guerre, viz., Robinson Crusoe, and although classed as an "antique" he is liable to beat anybody any day, any place, for any amount, and is still in the ring where there is any first class shooting.

First Day, Thursday, Oct. 12.

The scores on targets were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot at.	Broke.	Av.
Targets:	10	15	10	15	15	15	10	15	10	15	15	15

Second Day, Friday, Oct. 13.

The Kentucky handicap was at 15 live birds, $10 entrance, birds extra; handicaps 25 to 30yds.; four high guns. Purse divided 40, 30, 20 and 10 per cent. The scores:

Stillman, 26	1220*0210122020— 9
Fallis, 30	222222222222222—15
Hallowell, 30	222222222222222—15
J. D. Gay, 30	022222222211112—14
D. L. Miller, 28	022012211222210—12
W M Tally, 28	212021220222212—13
H Ballard, 30	221122222221222—15
W Fawcette, 28	211112210122220—13
R Grigsby, 27	220222222222202—13
Parker, 27	112222222022222—14
J. A. R. Elliott, 32	112212222222222—15
N T Harris, 29	2222200222222*2—12
H J Lyons, 30	20222220222*221—12
W R Allen, 27	222101222112221—14
Le Compte, 26	202112121212212—14
S Hutchings, 30	222222222202222—14
W C Churchill, 27	221221221221212—15

Third Day, Saturday, Oct. 14.

The Kentucky State championship, open only to residents of Kentucky, was at 25 live birds, $10 entrance, birds extra, for the championship of the State and a solid silver cup, which became the absolute property of the winner. The purse was divided 35, 25, 20 and 10 per cent., and 10 per cent. to the club; class shooting. All stood at 28yds.:

T H Clay, Jr	2222212220222102222222*122—22
H J Lyons	2222222222202222222222222—24

A M Cartledge	0200012222222022022020*202—15

The following guns, shells, and powders were used by the contestants:

T. H. Clay, Jr., used Winchester gun, Leader shells, Hazard powder; H. J. Lyons, Parker, Leader, Du Pont; J. D. Gay, Parker, Leader, Du Pont; R. G. Fallis, Greener, Trap and Smokeless, Schultze and Du Pont; W. A. Fawcette, Parker, Trap, Du Pont; E. Pragoff, Lefever, Leader, Schultze; G. R. Hunt, Scott, Leader, Schultze; R. Grigsby, Parker, Leader, Schultze; Joe Coyle, Parker, Victor, King's Smokeless; Guy Grigsby, Parker, Leader, Schultze; D. L. Miller, Parker, Smokeless, Schultze; W. M. Talley, Greener, Leader, Du Pont; Sam Hutchings, Parker, Smokeless, Du Pont; R. A. Powell, Winchester, Leader, Austin; W. C. Churchill, Greener, Leader, Du Pont; W. B. Allen, Greener, Leader, Schultze; W. P. Woodcock, Parker, Leader, Schultze; N. T. Harris, Parker, Leader, Du Pont; Le Compte, Greener, Leader, Du Pont; A. M. Cartledge, Francotte, Leader, Schultze; F. W. Samuel, Francotte, Leader, Schultze.

Y. K. W. (a visitor.)

Baltimore Shooting Association's Tournament

The sixth annual fall tournament of the Baltimore Shooting Association was held on Oct. 17, 18 and 19. The out-of-town shooters present on the first day were H. L. Smith, of Martinsburg, W. Va.; J. W. Smith, Dr. Baughman and Ausler, of Westminster, Md.; J. L. Pentz, of Harper's Ferry, W. Va.; J. B. Albert, F. Latimer and T. P. Stearnes, of Newport News, Va.; Springer, Coulbourn and Taylor, of Salisbury, Md.; Tar Heel, of Tarboro, N. C., and Dominie, of Newark, N. J.

The attendance was not what the management expected in point of numbers, and was not what it should have been.

First Day, Tuesday, Oct. 17.

There was fair weather in the early part of the day. Later there was a drizzling ran and a bad light. The scores and handicaps follow:

Targets:	10	15	20	15	20	15	15	20	15	20
Lupus, 16	9	14	19	12	17	15	12	20	13	19
Leland, 16	7	8	15	12	15	12	14	20	12	18
J W Smith, 16	8	12	14	13	17	10	11	15	10	15
H C Smith, 16	8	11	18	12	19	14	10	19	13	20
Ausler, 16	7	11	18	11	17	12	13	14	12	15
Hood, 18	9	14	19	14	20	14	15	17	15	18
Fox, 18	9	13	19	13	18	15	15	18	14	17
Malone, 18	10	15	16	13	16	15	12	19	11	17
Tar Heel, 18	10	15	19	14	17	14	13	16	14	20
Collins, 16	8	11	16	13	17	9	12	17	8	17
Coulbourn, 14	8	10	18	12	18	12	12	17	14	16
Stearns, 14	5	13	14	14	13	12	10	16	11	15
Latimer, 14	9	10	16	13	18	14	15	18	11	12
Albert, 14	7	13	18	13	17	13	13	15	9	18
Springer, 16	8	13	19	13	11	12	13	18	14	13
Dominie, 16	9	14	18	14	20	12	15	18	14	16
Dupont, 18	..	..	..	..	16	14	13	17	11	14
Pentz, 14	..	..	..	..	..	12	11	16	9	15
Dixon, 16	..	..	..	..	..	9	9	19	11	17
Taylor, 14	..	..	..	..	..	..	12	14	14	17
Hill, 14	3	7	9	..	..	..	..	..	..	..
Edwards, 14	6	12	14	..	..	..	..	..	..	..
Sampson, 16	..	..	..	..	..	9	11	..	..	..

Hood Waters had high average in the first day's shooting; Fox second and Tar Heel third. The last squad shot in a very bad light, and two events of the programme were unfinished.

Second Day, Wednesday, Oct. 18.

Better weather favored the second day of the tournament, and there was a better attendance. The leaders contested closely, and shot well. Dr. H. E. Lupus was in excellent form, and finished in the lead for the day. He broke 180, Hood 179, Fox 179, Malone 175, Col. Anthony 169, Leland 165, H. L. Smith 165, Coulbourn 159, and J. W. Smith, 159.

The squad composed of Hood, Fox, Malone, Lupus and Tar Heel shot with admirable precision, and smashed targets in a way which is rarely excelled.

Col. J. T. Anthony, of Charlotte, N. C., was among the leaders in the programme up to near the finish.

Following are the scores and handicaps:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	15	20	15	20	15	15	20	15	20	15	10
Hood, 18	8	14	19	14	18	15	15	19	14	19	14	10
Fox, 18	9	15	18	14	17	14	14	20	15	18	15	10
Malone, 18	10	11	19	13	19	14	14	19	15	19	14	8
Leland, 16	8	14	14	13	14	15	13	19	12	18	12	8
Anthony, 16	6	14	18	15	17	12	13	20	15	18	12	8
Lupus, 16 and 18	10	14	18	15	19	13	15	20	14	19	14	9
H L Smith, 16	9	15	16	11	20	11	10	18	15	16	14	10
Coulbourn, 16	9	13	12	12	19	8	8	18	13	19	15	9
J W Smith, 16	8	11	19	14	16	11	12	16	14	15	12	10
Tar Heel, 18	8	10	19	15	19	14	12	18	14	18	..	..
Stearns, 16	10	13	16	12	15	14	14	14	12	14	..	..
Albert, 14	6	8	15	11	19	13	13	16	15	10	..	..
Collins, 16	6	12	13	11	14	13	11	13	11	12	..	..
Pentz, 16	5	12	16	11	17	9	7	10	..	..	..	..
Latimer, 16	10	13	17	14	16	13	9	1*	8	..	..	..
Dominie, 18 and 16	8	13	17	14	15	15	15	19	15	..	..	..
Bond, 16	..	..	..	..	..	..	12	14	12	12	16	5	6

Burnham, 16	..	..	..	..	..	18	14	14	11	9	..	..	..
Willis, 16	..	..	..	..	..	..	..	..	16	11	16	5	6
Dixon, 16	..	..	..	..	..	..	..	..	..	..	13	18	15	7
Andrew, 16	..	10	..	..	12	7	..	..	..	..	..	..	..
Springer, 16	..	..	..	..	..	12	11	13	..	..	..	..	..
Hill, 14	..	..	..	..	12	..	..	..	..	14	17	9	..
Nelson, 14	..	..	..	..	..	..	..	..	15	..	..	..	..
Barrett, 16	..	..	..	..	..	..	..	..	8	..	..	..	..
Darling, 16	..	..	..	7	10	9	..	..	..	..	..	..	.

On the two target days 8,460 targets were thrown.

Third Day, Thursday, Oct. 19.

This was live-bird day, and shooting was kept up till dark. The experts shot well. Mr. Malone killed 79 out of 86 shot at; Mr. Fox killed 73 out of 80; Mr. Wm. Wagner, of Washington, killed 29 out of 30.

The first event was the Baltimore introductory, 7 birds, $7 entrance, three moneys, 50, 30 and 20 per cent.; 30yds.

Malone	2212121—7	Hicks	2222220—6
Dupont	2111122—7	Fox	1100212—5
Anthony	1221011—6	Dixon	2022011—5

The second was the suburban sweepstakes, 10, birds, $10, high guns, 50, 30 and 20 per cent.:

Fox	1222222222—10	Dupont	2211122211—10
Hicks	2222222222—10	Malone	1012111121— 9
Anthony	1222111112—10		

Miss-and-outs, $2 entrance:

Hicks	7	3	6	5	9	Wagner	7	5	3	6	9
Malone	3	5	5	6	9	Greene	4	2	1	5	8
Fox	7	5	6	3	7	Hood	6	4	..	4	1
Coulbourn	0	..	..	2	1	Dupont	..	3	..	..	..
Anthony	4	4	6	1	7	Leland	..	2	..	..	..
Steubener	7	1	2	4	8						

Miss-and-outs, $5 entrance:

Dixon	14	4	3	6	..	Hood	14	..	..	..	..
Malone	13	3	5	8	7	Clarke	2	2	..	8	8
Fox	15	4	1	8	2	Dominie	2	..	..	..	..
Hicks	7	2	..	..	..	Anthony	15	4	4	5	7
Dupont	6	1	..	..	..	Stump	..	..	4	..	..

As the result of the work of three days, Ansley H. Fox won high average for those who shot through the entire programme at both the target days, and yesterday at live birds.

WESTERN TRAPS.

Chicago Sportsmen's Trophy.

Chicago, Ill., Oct. 21.—Nice weather greeted the shooters who met at Watson's yesterday in the contest for the Chicago sportsmen's diamond trophy. The air was bright and clear, with a faint wind blowing from left to right across the score. The birds were fairly good. Only eleven men turned out for the shoot, and matters were concluded very promptly both in the main contest and in the ties. Mr. W. B. Leffingwell and Mr. C. S. Wilcox were the only two tied on 15, Wilcox killing straight and not using either of his 2 allowance birds. In the shoot-off Wilcox missed his third bird, which fell dead out of bounds. Leffingwell killed his 5 and won the badge. Wilcox won the high average medal, and the two were begging everybody to photograph them as the "champions of all champions." Wilcox did really very good shooting, killing 27 out of 28 birds during the afternoon, with the lost bird dead out.

In the ties on 14 Roll and Parker divided at the 9th bird. Levi killed 3 straight and shot out Barto in the tie on 13. Steck killed 3 straight and shot out Young in the tie on 12. The following are the scores:

H Levi, 28, 2	00022121022112211 —13
G W Roll, 31, 0	112221221121011 —14
Dr Shaw, 30, 0	202111212111222 —14
W B Leffingwell, 28, 1	1122222122212202 —15
S E Young, 30, 3	21*12*221001220220—12
F E Adams, 28, 1	2221011022121111 —14
J B Barto, 30, 0	222202202122122 —13
C Parker, 30, 1	2122222122*22220 —14
C S Wilcox, 30, 2	211222122212212 —15
E M Steck, 30, 0	10*122212102222 —12
J L White, 30, 1	122212121*211201 —14
Ties on 15:	
Leffingwell, 28, 0	11212
Wilcox, 30, 0	12*11
Ties on 14:	
Roll, 31	112 211 110
Shaw, 30	w
White, 30	22*
Roll and Parker divided.	
Adams, 28	111 212 01*
Parker, 30	111 212 102
Ties on 13:	
Levi	121
Barto	220
Ties on 12:	
Young	022
Steck	112

There was some practice by those present before the shooting of the trophy race, and after that event a $2 sweep at 5 birds was made up. The same sweep was repeated to settle the ties, and divided at the close of the second set of ties, the 4s shooting in the first event, shooting miss-and-out in the second event, three men dividing the money. Score:

Sweeps, 5 birds:

Parker	11100—3	22122—5	White	02122—4	12111—5
Wilcox	21221—5	12011—4	Young	20111—4	21010—3
Steck	21022—4	11121—5	Leffingwell	12*11—4	10111—4
Roll	11102—4	11112—5	Adams	11221—5	w
Barto	11122—5	12110—4	Levi	10110—3	21*22—4

Audubon Club Day a Blank.

Only one member appeared last Wednesday for the regular Audubon Club live-bird shoot, Mr. J. H. Amberg, who, having no contestant, could not win anything. A good many shooters are now out of town in the field.

Garfield Gun Club.

This is the off-week in the Garfield Gun Club live-bird shoots, and Garfield grounds will be unoccupied to-day. The regular shoot will come off next Saturday.

Chicago Shooting Park.

No meeting of the stockholders of the proposed Chicago shooting park has been called as yet, but it is anticipated at an early day, as all the shares are reported sold. The matter of site will come up at this first meeting. Mention has already been made of the Burnside site, near the Illinois Central station, a very desirable one. Another excellent site, still nearer to town and also on the Illinois Central Railroad, is suggested and will come up for consideration. This is the strip of vacant ground near Parkside and Bryn Mawr, lying south of the old World's Fair grounds. There is quite a strip of commons here, and it is much more readily accessible than even Burnside. It lies a little to the east of the main line of the Illinois Central, and on the South Chicago branch of that line. It would be very difficult to divorce the Chicago shooters from the Illinois Central Railroad, on which they have been so long accustomed to travel.

Mt. Sterling "Hard Times" Shoot.

The Mt. Sterling Gun Club, of Illinois, holds a "hard times" shoot next Wednesday, Oct. 25, this being the fourth annual tournament of the club. The average entrance fee is 50 cents, a few very stiff ones at 6 bits, and targets are sold at "one penny." The club signs itself, "Yours for Better Times."

"Pairs of Doubles."

I wish some one of great wisdom, the grave and reverend Cadi, for instance, would tell me how many birds there are in a "pair of doubles." We often see in programmes events listed as "5 pair of doubles," or "5 pairs of doubles," etc. Is it logically to be supposed there are 2, 4 or more birds in a "pair of doubles"? I just want to know, you known.

E. Hough.

480 Caxton Building, Chicago, Ill.

[As to the "pair of doubles," it probably is a derivation from a still more universal expression which comes in use under certain benign auspices, namely, "a pair of twins." We are always happy in giving information to those who wish to learn.]

Eureka Gun Club.

Chicago, Oct. 21.—Very few members were present at the Eureka Gun Club's shoot this afternoon. The total number was twelve. During the latter part of the day a chilly breeze sprang up, which kept the boys, when not shooting, around a very efficient sheet-iron stove.

The light on the whole was bad, the sky being very thickly covered with clouds, and there being a big smoke bank in the distance. In the early part of the shoot it tried to rain, but did not succeed.

The flight was exceedingly good, notwithstanding all these difficulties.

Mrs. Carson did some very good shooting, as she always does.

In the trophy shoot Chas. Antoine won Class A on a score of 19, Dr. Miller won Class B, also on a score of 19. In Class C Mack tied with Parker, and Mrs. Carson came out on a tied 19 with J. G. Lovell in Class D.

In the shoot for the Mussey cup Dr. Miller and Ed Steck each won it three times. In the final shoot Ed Steck came out ahead. Many regret Dr. Miller's losing, as he had led all summer. One visitor was present, a Mr. Miller, of Urbana, Ill.

There is but one more target shoot this season. The live-bird shooting commences on Dec. 2 and continues every two weeks. The club donates $40 for prizes. No entrance fee is charged. Entrance for sweepstakes, $1, divided by the Rose system, 5, 3, 2 points.

The trophies for the summer shoot are to be on exhibition at the club house on Saturday, Oct. 28, and are to be delivered the same day.

Following are the scores in the trophy shoot:

A W Adams	11100111011111110001111001—17
Mrs Carson	01111011111110100101111111—19

No. 2 was the Mussey cup; No. 3 was the trophy shoot.

F. J. Baum.

Bison Gun Club.

Buffalo, N. Y., Oct. 20.—At the regular shoot of the Bison Gun Club to-day at its park, corner of Babcock and William streets, Stacy defeated C. S. B. for the Clinton Bidwell challenge trophy. The match was at 25 live birds. Stacy killed 22, while C. S. B. killed 20. C. S. B. won one and tied one of the two other miss-and-out events, having a clean score. Following is the score of the day's shooting:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

"I'll bet I know what's one 'White Man's Burden'!" exclaimed the bad boy.

"Willie!" exclaimed his elder sister indignantly, "if you don't stop peeking into the parlor when Mr. Jones calls I'll never give you the money to buy any more marbles."—Chicago Post.

A Trapper's Story.

Mr. George E. Bartlett, who is well known to shooters as a Marlin expert, has shown himself facile with rhyme and rhythym, as the subjoined verse abundantly demonstrates. Mr. Bartlett, by the way, has had a life experience which should give him material for yarn-spinning galore. "I came from the West," he told us the other day, "where I served fourteen years in Dakota as Deputy United States Marshal. I was a scout at Pine Ridge Indian Agency, South Dakota, at the time of the ghost dance war in 1890-1891; and I enjoyed the Indian name of Wounded Knee, having been wounded in the right knee while engaging in a fight with horse thieves. The famous Wounded Knee fight between Big Foot's Band of Sioux and the 7th U. S. Cavalry occurred in front of my trading post, Dec. 29, 1890, when 410 Sioux were killed and forty-three United States soldiers.

"I drifted East with a theatrical company called the Great Train Robbery melodrama, in which I was engaged to give an exhibition of rifle and revolver shooting; also to furnish a band of eight genuine Cheyenne Indians to give color to the plan. We visited New Haven in January, 1898, at which time I engaged with the Marlin company. The recent visit of the Wild West show here has caused me to resurrect some almost forgotten verses which I have written from time to time in memory of old John T. Nelson, whom the Sioux call Fills the Pipe or Cansasa Opagi. Old John was for seven or eight years representing the character of an old-time scout, guide, interpreter and hunter with the Wild West show, and the stories he would tell the unsophisticated tenderfoot who happened by his tent in the show grounds would put to blush the greatest liar that ever cast a line in Long Island Sound."

A Trapper's Story.

'Twas a trapper's camp, in a shady nook,
Near a winding stream you would know at a look;
For skins were scattered over the ground to dry,
And wild game was hanging in the trees near by;
A trapper sat there by a fire so bright,
Watching the shadows of approaching night,
When from around the bend, borne up by the gale,
Came a donkey's bray—a sonorous wail.
And a lone trapper, leadin' an ancient jack,
Stopped before the camp-fire and undid his pack.
"I reckon," said he, "that I'll stay here to-night
If you ain't no objections, I'll make it all right."
"You bet," came the answer, with a pleasant grin,
For it was Nelson's camp, and the host was in.
Thus the tired trapper, wearied by his tramp,
Took up his lodging in Nelson's camp,
And soon his host's welcome he was made to feel
By a pleasant engagement with a wholesome meal.
He talked of the past as all trappers do—
Their future—but another pelt, maybe two—
He talked of hunting buffalo, elk and deer,
And the crude hospitality of the mountaineer;
Of men who desperate danger would dare,
And in mountain jungle killed the grizzly bear.
Of the story-teller—for above the rest,
Stood he who told the biggest yarns, and told them best.
Of all those who were for tales or prowess famed,
Then asked Old John if he knew the ones he named.
Of course he knew them well, each and every one;
You would have thought he had lived since time begun.
And straightening up and throwing back his hair,
Said, "Pardner, ever know John Nelson out there?"
A pleasant gleam shot from the stranger's eye
As he relit his pipe and made this reply:
"Do I know John Nelson? Well, you can jest bet;
And he's the biggest liar I ever met.
It's about his doings you want me to tell.
Well, let me see, I reckon I may as well.
See, I knowed all them old chaps from years ago;
An' he's about the likeliest one I know,
An' he had the jaw-breakinest Injun name,
But we'll call it Fills the Pipe, that means the same.
You'd like it sorter as the story goes on,
But seein' you knowed him I'll jest call him Old John.
An' Old John had sand; he would stand like a pine;
An' I never seen him worsted but this one time.
An' he'd a heart in him bigger'n a wolf;
There wasn't a better hearted man this side of the Gulf.
An' about ordinary things John wouldn't lie,
An' in business matters he was square as a die.
But when the day's hunt was done, an' John was through,
An' his traps all set, an' nothin' else to do,
He'd kinder square hisself like he'd cum to stay.
First he'd light his old pipe; then he'd fire away;
An' of all the big lies that ever you heard,
He could grind them out, and never want for a word.
There was never no fights but he'd been in 'em;
Was allers at the death and helped ter skin 'em.
He had been a ranger, courier and guide,
A hunter, trapper, an' trader beside;
He had been a scout under Buffalo Bill,
Was an old mountaineer with a hand an' a will.
We was camped up in the Dakota Black Hills;
Was all trading that winter, Petes, Jims, Johns and Bills,
With a band of Injuns that was camped near by;
An' they was gettin' bad, acting devilish sly.
An' although we traded with 'em every day,
We didn't know what time they might fire away,
An' clean out our camp, for all along the range
There was talk of war, and it wouldn't a-been strange
If they had turned loose; but us boys up there,
Was allers ready an' wasn't easy to scare.
Well, things stood this way when Old John went below.
We tried ter git him ter stay, but no, he must go.
Didn't care for Injuns; he wasn't afraid;
Goin' after supplies and have suthin' ter trade.
With all our talk we couldn't git him to stay;
So he took his pack horses and started away.
After he'd been gone about three or four days
The devilish Injuns begun to change their ways;
They would come up ter our camp an' hang around,
An' lean up against trees an' set down on the ground.
An' laugh an' joke, for they seemed ter be afraid
That we'd all go away, an' they'd lose all our trade:
So they held a pow-wow in their Injun way,
An' promised us a good winter's trade if we'd stay
So some more of the boys went down after goods,
An' the Injuns moved back from the edge of the woods,
After the Injuns had moved, an' the boys had gone,
We made up our minds to have some fun with Old John
We 'lowed that he orter be on his way back.
Narvous, uneasy, watching every sign and track.
An' the boys he met would say it was all right;
Everything was quiet, wouldn't be any fight.
Fer to allers be on the lookout is hard,
An' we counted on this throwing him off his guard.
So we agreed, us boys, ter take turn about,
Keepin' watch from the mountains—a sort of lookout.
Think 'twas the evening of the third or fourth day
We seen him near a creek 'bout three miles away,
An' stop down there, turn his ponies out ter grass;
We could tell it was him by the aid of our glass—
An' soon we see a fire burn kinder bright,
An' we thought he was fixin' ter camp fer the night,
So's ter let his tired ponies graze around,
'Cause he was allers ter home when the sun went down.
Well, then we all dressed up in our Injun clothes,
With war bonnets an' feathers, paints, arrers an' bows.
See'n' we had sech things as these all ready made;
We had ter take sech things in our Injun trade.
Well, we boys agreed on a plan ter begin,
Then we all started out ter take the old chap in.
An' we soon made a sneak on the old man's fire;
(We liked the old cuss if he was sech a liar.
We only wanted ter sorter let him know
That all gewhollipers he told us didn't go.)
His fire was well started, his packs undone,
An' he'd gone after some water and left his gun.
That's what we wanted—we hadn't come ter fight—
An' was middlin' anxious 'bout his gun that night;
Fer I'll tell you he didn't nuss that old gun,
An' carry it 'round the country jess for fun.
He'd use it, stranger, but we kinder stole 'round,
An' when he come back we started up with a bound.
He didn't jump nor holler, nor stand an' stare,
But he jess reached fer his gun, but it wasn't there.
Stand still, Fills the Pipe, said Pete in regular Sioux;
An' I tell you, stranger, he understood it, too;
We hadn't no trouble in talking, you see,
For he could talk Injun an' so could we.
But we hadn't come ter talk—that wa'n't our plan—
An' what little talk there was, was done by one man.
They called him Pete—I've forgot his other name—
But no matter, the story goes on jess the same;
An' he looked like Settin' Bull, this grizzly Pete,
When he told Old John we wanted suthin' ter eat.
So John begun cooking, in a hurry, too;
An' ter keep from laughin' was all we could do;
For he muttered English, an' cussed every breath,
But we set sour an' grim like a circle of death,
While John got supper—an' it wasn't the best,
But the coffee was good—didn't care fer the rest;
An' as we didn't know what Old John might do,
We made him set down an' eat supper, too.
Well, when we got through we kicked the packs all round,
And scattered his tin dishes all over the ground.
Well, pardner, we jess acted Injun, you see,
An' you know how cussed mean an Injun can be.
So, after we'd done all the meanness we could,
Pete told John to dance a war dance, and do it good.
Yes, of course, this kinder surprised the old chap,
But we picked up some tin plates an' begun ter tap,
An' Pete wet the feather end of his arrer
An' told John ter dance if he would see to-morrer.
I guess he'd 'a' run, but ther' wasn't a chance,
'Less he run ag'in arrers, so he had ter dance.
Wall, we hollored an' sung, an' beat the tin drum,
An' ter see him hoe it down I tell yer 'twas fun—
War dance—Pipe dance—Omaha—he done 'em all,
Wasn't choice 'bout partners; didn't wait fer the call.
Well, sir, we danced Old John till his legs got numb,
Then at a sign from Pete we all went as we come.
In a rush through the brush—a double-quick run—
Not because we was afraid, fer we had his gun—
But we all scooted out an' run a keen race,
Three miles fer camp, an' got everything in place.
We had jess put our Injun trinkets away,
An' got into clothes we wore every day,
When Old John rushed into camp all out of breath.
Course we was glad ter see him; yes, tickled ter death—
We shook his old hand with a terrible grip,
An' asked him all sorts of questions about his trip.
"Oh! I've had war with the Injuns—bet yer life,
I'd explored the flume but fer my gun an' knife.
Wait till I picket an' put away the packs,
An' I'll tell yer all about it—tell yer the facts."
Guess we could have stood it—but John couldn't wait,
So he rattled away at the follerin' rate:
"Lord, but they whooped it up ter me for a while,
But, boys, I fixed a few of 'em so that they'll spile."
Here one of the boys asked, "John, where is your gun?"
"Oh, it's lost, I reckon; I come on the run;
I've been flying, an' my pack wasn't well tied,
So if I've got half my goods I'll be satisfied."
Well, he'd got through, an' we was all in the house,
An' every one was listening as still as a mouse,
While Old John told of his wonderful hard fight
He'd had with the Injuns down on the creek that night.
"Well, I'd been cooking an' had jess got through,
When here come a war party, and the arrers flew.
I'll jess tell you, folks, I thought I was gone.
I sez, 'All's over now, the ghost's callin' you, John.'
But I grabbed the old gun and sez: 'Here she goes!'
An' you bet that one of them turned up his toes.
This kinder stopped 'em for a minute, you see,
So I made a spring, an' got behind a big tree;
An', Lord! how their arrers come whizzin' by!
The tree was filled with feathers till I thought 'twould fly;
But I kept a-poppin' to 'em jess the same;
An' they soon found out I could play at their game,
An' I reckon they thought that it didn't pay,
Fer they soon picked up their dead an' scampered away."
"Dead?" sez old Pete, with a sly wink in his eye,
"Yes, dead," sez Old John. "Do you think I would lie?
I tell you I killed three, an' wounded four,
An' if they hadn't skipped out, I'd 'a' had some more.
It's lucky my hosses was down on the creek,
Fer if they'd 'a' seen 'em, they'd whooped 'em off quick."
Well, sir, he filled us so full of his lies that night,
That we all went ter bed, an' left him in the fight
In a few days all the rest of the boys come,
An' they give the whole darned snap away to Old John.
Lord! but he was hot—but didn't raise no fuss,
But when one of us would laugh, whew! how he would cuss.
Pardner, maybe you knowed Old John—knowed him well:
But this is one of the yarns that he'd never tell."
"Hold on there, stranger, you've gone far enough;
I'm tired of list'nin' ter this cussed stuff.
I'm Old John Nelson—Old John as you say,
An' never seen yer in my life 'till ter day;
An' while you've been gullin' me here to-night,
I've had a mind ter invite yer out ter fight.
Not because you've called me a liar, oh, no!
But 'cause you've beat my best lyin' record so.
To tell the truth I did kinder aspire
Ter be the great chief an' champion liar.
An' I've held the belt for many a day,
But you knock me out in sech a easy way,
That I give it ter you; wear it with pride,
Fer you're the lyinest liar that ever lied."
"All right, pardner; maybe I did get it mixed;
It was some other Nelson—that's easy fixed.
But I guess you're tired an' would go ter bed;
Wrap in this robe—take my saddle fer yer head;
It's a right good piller—I've used it a sight.
My coat an' boots will do me fer to-night."

Geo. E. Bartlett.

IN NEW JERSEY.

Jeannette Gun Club.

Oct. 20.—The club shoot of the Jeannette Gun Club was held at the Guttenburg race track to-day. The birds were a fast lot. Some excellent kills were made by J. Lott, Otten, Brunie and Karstens. Class A medal was won by Otten, Class B by J. Bohling, Jr.

In the team shoot Otten's team won on the score of 22 to 20.

H Otten, 28	1221121121—10	Karstens, 28	2212110110— 8
J Bohling, Jr, 25	2012122222— 9	Ferguson, 25	0200011011— 5
J Mohrmann, 25	2111001120— 7	C Bohling, 28	0220011001— 5

Trap at Lyndhurst.

Oct. 18.—An excellent lot of birds were offered to the shooters at Tom Morfey's grounds to-day, and pleasant weather favored the competition. The main event was at 25 birds, $10, birds extra, three moneys. This was won by Mr. Harold Money by the score of 23, losing his first dead out. Piercy was second with 22.

A number of miss-and-outs were shot:

No. 1, miss-and-out, $2:

Morfey	22222112222—11	Money	22221222220—11
Tierny	120w		

No. 2, 10 birds, $5:

Inanimate Target Championship.

New York, Oct. 21.—*Editor Forest and Stream:* Mr. W. R. Crosby informs me that he accepts Mr. Gilbert's challenge for the E C inanimate target championship trophy, and names Batavia, N. Y., Oct. 30, and 2.30 P. M. as the place, date and time for holding the match.

Kindly make a note of this in your current issue and oblige

Edward Banks, Sec'y,
The American E C & Schultze Gunpowder Co., Ltd.

In a pretty Wisconsin town, not far from Milwaukee, there is a "spite fence," which cuts off a view across a number of beautiful lawns. The man who lives on one side of it evidently feared the fence would bring down on his head the condemnation of his neighbors. Not wishing to be unjustly blamed, he has therefore painted on his side of the fence, in letters that can be read a block away, these words: "He built this fence. I didn't do it." The man on the other side also had no idea of letting a false impression get out. Accordingly he has painted on the other side of the high barrier: "I had to do it."—Kansas City Star.

SAM'S BOY.

THERE could not be a happier theme for loving delineation by the pen of Rowland E. Robinson than the telling of how Uncle Lisha set about teaching Sam Lovel's boy "the art of being a boy," and a Danvis boy, it is to be remembered. Nor could any story be told in FOREST AND STREAM more certainly assured of a sympathetic, appreciative and delighted reading. Mr. Robinson has sent us the opening chapters. They are in his best vein. We shall begin their publication in our issue of Dec. 2.

CORNELIUS W. SMITH.

CORNELIUS W. SMITH passed away at his home in Syracuse, N. Y., on Saturday, Oct. 28, aged fifty-four years. His death was caused by heart disease, and was very sudden. Mr. Smith was a successful patent lawyer, and like so many of his fellow members of the bar, he found his recreation in angling. No angler living in Syracuse, where for many years an irrepressible conflict has been waged between the law-abiding fisherman and the netting pirate, could avoid having a lively and personal interest in the cause of fish protection and the making and enforcing of adequate laws to accomplish protection. For a long period Mr. Smith labored hand in hand with the members of the Anglers' Association of Onondaga county in their effort to protect the local waters from the illegal nets; and when, a few years ago, the New York State Association for the Protection of Fish and Game was reorganized and given new life, he entered into the movement with interest and devotion, which were unremitting in the service to the end. As a member of successive committees on legislation he was one of the few members of the organization who did the actual hard work; and his counsel was valued by his associates because it was based upon a familiarity with the subject gained by careful study and matured consideration. At the last meeting of the League, Mr. Smith was made its president for the current year. His death will be sincerely mourned; but the influence of his life will not abruptly end. What he did as a member of the League he did not for himself, but for others; such example of an exalted sense of the citizen's duty to the community as was afforded in the game and fish protective services of Cornelius W. Smith may well be an incitement to others who are thoughtful for the public good.

THE SIDE-HUNT.

THIS is the season of the side-hunt, the side-hunters and the side-hunted. The side-hunt is a competitive slaughter by a company of shooters divided into rival squads, each of which endeavors to kill more game than the rest. The side-hunters usually comprise all of the male population who can muster arms, from the doddering pensioner for total disability to the callow youth who has never ere this handled a gun afield. The side-hunted include all forms of animal life large enough to be seen through rifle sights or over the rib of a shotgun. The stake is usually a dinner or supper, at which is served such of the day's ingathering as may be fit to eat, the losing side paying expenses. In many districts the annual side-hunt is an established custom, which has been followed from remote times, and holds a place of merited popularity as an occasion of good-natured rivalry in which the victors may crow over the losers and the jovial incidents of the day and night afford material for frequent rehearsal. Side-hunting is essentially an old-fashioned custom, and it is also of those old-fashioned institutions whose reasonableness, justification, excuse for being, has been outgrown in the newly developed conditions of the times. Whatever may have been the merits of the side-hunt as hunted by our fathers, it is to-day in most localities altogether wrong, foolish and indefensible.

The side-hunt is wrong because it is a competition in the slaughter of wild life. All the tendency of the times in growing sentiment, conviction, legislation and practice is in the direction of restricting the destruction of game and limiting the amount which may be taken by an individual in a season. But the spirit of the side-hunt is in direct opposition to this doctrine and practice of moderation. Because it is thus in conflict with the recognized sound principles of wise game conservation it should be abolished.

The side-hunt is wrong because it is foolishly destructive of wild life. The "game" listed in these hunts comprises not only such birds and animals as have a recognized place among the legitimate spoils of sport, but often include as well those species which should be spared and given immunity, either because they are useful to man, or at least because, being absolutely worthless when dead, the killing of them is necessarily useless and wanton. When a sportsman sets out for quail or partridge or duck or deer or prairie chicken or hare, he goes for game and game alone, and does not kill indiscriminately and wantonly other birds and animals which come across his path. The side-hunter on the contrary pots everything. It all counts. The slaughter is indiscriminate. If there exists any reasonable defense of the wholesale and indiscriminate slaughter of the wild creatures of the field and wood, we have never read it in print nor heard it propounded; and until defense shall be produced and made good, the side-hunt, which is only another name for such indefensible slaughter, must be reckoned equally without excuse and subject to reprobation.

The time has come when the side-hunt should be condemned by public opinion and prohibited by statute. The game laws should take cognizance of it and forbid it.

A COUNTRY ROAD.

WHEN the Man with the Hoe, homeward plodding his weary way and trudging along the turnpike, observes in the dust a circular scratched depression, in size and shape like the crown of the hat of the barefooted boy who always catches the trout the city angler can't get; and sees leading to this depression and across it and beyond it interminably over the hills and far away a ribbon track in the earth, he says to himself "dusting pa'tridge," and "one of them wheel fellers." And then, perhaps, he reflects that when the rider who had made the ribbon track come upon the partridge which had made the dusting bed, there were a surprised man and not less an astonished bird.

The wheel has given such an engine for approaching the wild creatures which haunt country roads as man never has enjoyed since Adam went out from his Garden. It moves so silently and glides so swiftly—in steadiness and speed like the wind—and comes so suddenly and unexpectedly that the surprised and dazed bird is for the instant too bewildered to make flight. When one is walking through the woods or wandering along the woods-bordered road, his coming is noted by ear or scent or eye, and the wild thing has abundant time to take its bearings and make deliberate choice of direction of flight. But with the wheelman's approach the case is quite different. The apparition is so sudden and the instantaneousness of it is so overwhelming that even the wary partridge forgets its cunning, and becomes even as the stupid domestic hen, which is wont to scurry every which way in the road before its final desperate whirr to one side—or the other. Nor is the surprise of the encounter always wholly on one side; for the eye of the wheelman, however keen, is apt to be engaged with the scene before him in its larger aspects, so that such a detail as the form of a grouse does not disengage itself from the mass until the bird flushes with startling wing beat. But if the game be seen from a distance and all unalarmed and unsuspecting give the rider opportunity of approach, the experience is likely to be one of the well-remembered pleasures of wheeling.

The average rider does not carry firearms; he is one of those who do their hunting without a gun, and to him come the rewards of that mode of intercourse with the wild beings of field and forest. These may not always be "game;" the denizens of the country road are extremely cosmopolitan, and for the most part, it must be confessed, do not hold an exhalted rank in the social scale which obtains among the folk of feathers and fur. The man awheel may run into partridge or quail, or, if he be traversing Maine roads, an antlered buck; but on the average country road he is much more likely to surprise woodchucks and chipmunks and snakes. Nevertheless if he be the philosopher we count him, intent upon getting out of his ride all that is in it, he will be grateful even for the humblest of these creatures which cross his path.

Partridge and cyclist both may well affect such a charming bit of country road as Mr. Davison has pictured for us. Nor is the scene a fancy picture, nor the incident fictitious. The rider is Mr. J. L. Davison, of Lockport, N. Y., who has for these many years been a well-known contributor to our columns; and his bearing down upon the partridge was an actual experience in one of his wheeling trips. It is here so admirably depicted, he tells us, that a camera could hardly have photographed it more faithfully. It is an enticing scene: the winding road bordered on either side by fragrant shrubs, and with its graceful curves and gentle grades and ever-changing vistas and play of light and shade, affording never-failing interest and piquant pleasure, with the culmination in such meetings with the wild creatures which are wont to haunt the path. All this the picture tells; and it tells us too that in about thirteen seconds the unsuspecting bird in the immediate foreground is to have one of the most exciting moments of its life.

SNAP SHOTS.

Complaints of the inefficiency of the mail service reach us this autumn more frequently than ever before. Such complaints are as annoying to us as the failures of our correspondents or readers to receive their mail are to them. Such complaints indicate carelessness or blundering somewhere, and when they are received we try to ascertain who is responsible, in order that the fault may be corrected. We are no more infallible than other people, but it must be said that the blame for these failures very seldom rests with this office, but must be usually charged to the post office authorities. The officials of the New York Post Office assure us that they do the best they can with the very limited facilities at hand, but that in view of the recent great increase in business they are absolutely swamped by the amount of mail matter that passes through the office. They have no room for the mails, nor a force sufficient to handle them. Appeals to the Post Office Department in Washington have hitherto failed to give them the relief for which they ask. It would seem from this statement that the Department in Washington is responsible for the greater part of the annoyance caused by the failures in the mail service, and that it is to the Department that appeals must be made for relief. The Post Office Department can only be reached through Representatives to Congress, and it is to his Congressman that the man who fails to receive his paper on time must appeal. This certainly seems like going a long way around to correct an abuse, but we can see no other present remedy.

An Indiana party of big-game hunters, who returned the other day from a trip to the Rockies, bringing home little game, are quoted as saying that they were repaid for the journey by the scenery. Of course they were. That is one of the considerations in hunting and fishing trips which make our experiences with rod and gun what they are. It is not all of fishing to catch a string of fish, nor all of shooting to get the game. The man who can go to the Rocky Mountains for the first time, in pursuit of game, and securing none, can return home altogether chagrined and disappointed, must have fixed his gaze wholly upon the earth and failed to lift his eyes to the everlasting hills. In the fond memory of the mountains which goes through life with him who has camped in their sublime solitudes, the actual game secured has not by any measure the first place. No hunter of antlered trophies may seek them in the Rockies and missing them count the expedition an entire failure. To have looked upon the mountains, to have pitched tent amid them, this is to have been rewarded for the trip.

At last it seems as if the English were going to take some steps to protect South African game, though for a number of species this protection will come too late. A project is on foot—to which it is intimated the Foreign Office will lend its countenance—to establish reserves where game shall be absolutely protected and shall have the opportunity to re-establish itself. It is proposed to hold a meeting in London in January next to discuss this subject and to determine if practicable what measures shall be taken to bring about the desired result. Meantime, well-known big-game hunters are actively interesting themselves in the project, and one of these is starting for South Africa, taking with him a naturalist, in order to study the actual conditions on the ground. It is certainly high time that action should be taken in this matter. South African game has too long been regarded solely from the commercial point of view—the money value of hides, horns or ivory when removed from the carcass. It should be protected before, like the American buffalo, it has been exterminated.

The Sportsman Tourist.

Boer Life and Characteristics.

In order to properly understand the peculiarities of Boer life it is necessary that one should bear in mind that for a long time past they have lived an almost entirely pastoral life, depending on their flocks and herds for nearly every article which they might need. Some time previous to 1840, a large number of the original Boer inhabitants of the Cape Colony became weary of British rule and migrated across the Orange River, the northern boundary of the Colony, into a district inhabited by Kaffirs, from whom they conquered a large territory, which they called the Orange Free State, and established a republican form of government. Some years subsequent the Boers went to war with the Griquas, a nation of natives who called themselves allies of the British, and the Queen's sovereignty was established over the Orange Free State. This caused a number of Boers to cross the Vaal River and found the Transvaal Republic. A few years after the government of the Free State was restored to its inhabitants, who again established in a republican form. In arranging their boundaries with the Griquas there was a dispute, and the Griqua chief appealed to the British, but they refused to mix in the business. Subsequently the famous Kimberly diamond mines were discovered in this disputed territory, when the British reopened the question, hoisted their flag over and took possession of it. When the Boers first conquered the region known as the Free State a portion of them fought their way down to the coast and established a port of entry at what is now Durban, Natal. This was opposed by the Cape Colonists, who finally conquered the country and annexed it. Afterward it was made an independent colony under British rule, thus compelling the Boers to pay tribute, as every foreign article which they used had to pass through British custom houses. Nearly every store in both the Orange Free State and Transvaal was either a branch of Cape or Natal establishments, or owned by English colonists, who received their stocks direct from England or the Cape and Natal concerns. The mode of conducting the business was entirely by barter. Once in a twelvemonth the Boer would load his entire product of wool and skins on his wagons and transport them to the nearest store, which was frequently a trip of several days. The merchant would then sample the wool, a price would be fixed for it, and weighed on old-fashioned balance scales, the weights of which were frequently large stones with the pounds marked on them with white paint. After the entire weight was figured up the Boer and his family would pass into the store, where the merchant would open a package of sweets for the especial delectation of the females. I have frequently seen a large jar of preserved ginger placed on the counter, and the women would help themselves by thrusting in their hands and drawing them out besmeared with the syrup, which they would remove by licking. The Boer had to take every article in the original package, as nothing was ever cut or divided. For instance, all articles used for dresses or clothing (such as calicos, etc.) had to be taken by the piece. So one can easily imagine that it did not take long for the Boer to barter away his produce. Of course there were some articles for which there was no demand. For instance, shoes, as the Boers make all they require, and from personal experience I can assert that they are very comfortable and durable articles. A Boer's tan vat is a curiosity and a marvel of simplicity. It consists of two square frames of small poles lashed together by four short pieces at the corners, so that the upper frame stands about 2ft. above the lower one, which rests on the ground. A rawhide is lashed to the upper frame, so that it bags about 18in. in the center for the purpose of holding the tanning liquid, which is largely composed of the juice of a plant which grows wild in every direction over the veldt. All the veldt schoens (grass shoes) are of a russet color and made without a welt, as the uppers project out to the edges of the soles and are sewed to them with very fine strips of antelope hide which have been thoroughly soaked in grease.

Like our Western ranchmen, the Boers are not bothered with fences. Their stock have free range—generally under the care of Kaffir shepherds and herdsmen—but are always driven home at night, where they are confined in kraals, which are generally square inclosures of sod walls, which serve the double purpose of confining the stock and drying fuel, as all the manure is carefully scraped up and placed on top of the walls until it becomes sufficiently dry for combustion. It is almost entirely the sole article of fuel with the Boers, as nearly the entire country is treeless and very similar to our rolling prairies.

The walls of a number of Boer houses are built of sod, and I have frequently seen them lacking window frames and sash, as in some sections timber is so scarce that it is difficult to obtain enough for the rafters to support a thatched roof. A large number of them consist of only two rooms, one for a sleeping apartment, with curtained beds, and the other for a general living room and kitchen. The gardens are inclosed by a sod wall, in the base of which, in the immediate vicinity of the house, square openings are left to serve as hens' nests. A Boer considers it beneath his dignity to walk, and generally several horses are fastened in front of their houses, to be used on every occasion. If they have a journey to make two horses are used. One is ridden for two hours, while the other is led; then both are knee-haltered and allowed to browse for a short time, when the saddle is shifted to the led horse and the trip resumed. They always ride at a canter, and calculate to make about six miles per hour. Their mode of computing distances is by the hour. If a Boer is asked the distance between two points he will always answer, "It is so many hours," and by allowing six miles for each hour one can easily figure the distance. Once in my wanderings in the Orange Free State I knew that I was in the vicinity of a village called Boshof, and happening to meet a Boer in the road asked him the distance. His answer was, "One hour for me and two for you." He was on horseback and I afoot, and I instantly figured it to be six miles. In riding at full speed across the veldt, a Boer invariably throws his feet out of the stirrups and leans back in his saddle. Then, should his horse fall from getting his front feet into a hole made by the numerous burrowers, his rider will slide off feet foremost instead of pitching headlong, as is usually the case. It frequently happens that a Boer wishes to lay off a portion of his farm for one of his children, when he makes a large pile of stone to serve as a beacon mark for a corner. From thence he canters off for a short time, stops and erects a second beacon, and again canters off at right angles, and so until he reaches his starting point, thus establishing the boundary lines. Their wagons are huge affairs, drawn by fourteen oxen, which are called "a span," and the greatest laggard is sure to be named England, and catches more than his share of flagellation. The leaders have a piece of rawhide tied to their horns, by which a Kaffir boy (called a "forelooper") leads the team in whatever direction they wish to travel. There are generally two drivers, seated on the front of the wagon, one furnished with a heavy, short, rawhide whip for the purpose of castigating the wheelers, while the other handles another of sufficient length to reach the rumps of the leaders. I often attempted to crack one, but invariably became entangled in the lengthy thong. Several times I have seen the drivers kill doves alongside the road with them. As a greater portion of the territory occupied by the Boers is subject to disastrous droughts they are forced to build large dams, which fill during the rainy season and serve for watering the stock during the dry one. But some seasons the rains fail, and then the Boer is forced to load all his movables into his wagons, abandon his home, and trek to the banks of the nearest river, where he lives in and under his wagons, with his cattle and sheep herded roundabout, until the rains release him.

Their diet is very simple, and all of their bread is made from unsifted flour, as their mills are rough, homemade stones, driven by horse power, and one frequently serves for several families, being moved from one homestead to another as needed. Wherever it is possible to irrigate they have excellent gardens, growing a profusion of vegetables and semi-tropical fruits. Instead of salting their meat, it is made into what they call biltong, which is simply strips of fresh meat hung up in the bright sunlight until it is thoroughly cured and dried. Of course they have an abundance of milk, and it is a universal custom that whenever a guest enters one of their homes hot coffee is immediately served. I have had it offered when I was sure that it was not used daily, but purposely kept for such occasions. One item in my stores for my up-country trips was a good supply of Holland gin, which was always produced whenever I happened to meet a Boer. I usually passed a coffee cup with the bottle, so that it was difficult to gauge the amount imbibed. The Boers have adopted the Kaffir custom of inventing nicknames, and always spoke of this incident as "taking a pull out of the square-rigger." My Boer title was the "Hyaena man," as they thought it queer that I should pay them for the greatest nuisance and pest with which they were afflicted. They are superior rifle shots, and I have frequently seen them kill antelopes while riding at full speed across the veldt. A common feat is to cripple several head of game with a single shot, which is accomplished whenever a herd dashes across a Boer's path. The muzzle of the rifle is lowered so that the ball will strike the ground a short distance from the herd and in its ricochet break the legs of several of them.

Their religion is the Dutch Reformed Church, and their annual sacrament is the cause of huge gatherings. As the churches are usually situated in their far-apart villages, the merchants calculate to do a thriving barter business, but the landlords fail in filling their hotels, as a Boer, when away from home, generally uses his wagon as he would his house. I was surprised to find many Highlanders officiating as Boer clergymen. One particularly never failed to call on me whenever I passed through his village, and if I failed to produce the "square-rigger," he was not backward to ask the why and wherefore. One of the last acts performed each night by the head of every Boer family is to assemble all the members, including the help, and read a chapter or two from the Bible. In connection with this proceeding, I once had a queer experience. I had accompanied one of the up-country merchants, who acted as my agent, to a Boer's house one night. For supper we had lamb stew served in an enormous pewter dish, of very singular form and ornamentation. At bed time, when all were assembled for the usual service, a Kaffir girl entered the room bearing the same easily recognized piece of tableware and proceeded to wash the feet of the entire family in it. A Boer seldom or never wears stockings; therefore footbaths are nightly occurrences. My friend seized my arm with such force that the marks of his fingers could be seen for several days subsequently, and I thought he would have swooned.

FRANK J. THOMPSON.

I had another queer experience in connection with the coffee-serving custom. I was visiting a Boer in company with another, when the two daughters of our host left the room to prepare the beverage. When they returned they were followed by two Kaffir girls bearing the coffee pot and cups. They were about twelve and fourteen years respectively, and the sole articles of wearing apparel they wore were: One had a red and the other a blue woollen string tied around their waists. I felt as if I had been suddenly seated on a paper of pins, but on glancing around I saw that no one seemed astonished, and instantly concluding that it was one of the customs of the country, managed to present a composed front and gulped down the beverage.

F. J. T.

Mr. Cheney's suggestion of a fly-fishers' club for America, with headquarters in New York City, is one which should receive cordial indorsement. There is abundant material for such an institution. We have urged Mr. Cheney to take the initiative and put his project into practical realization.

The Saginaw Crowd.

Usually when a fellow comes back from a hunting trip and has been unsuccessful, he keeps still about it. It is the exception to see in print an account of a shooting or fishing expedition wherein the handsome maiden does not marry the brave and of poor but honest parents handsome young man with the curly mustache; but to vary the monotony I am going to tell how thoroughly the Saginaw Crowd got skunked this year on the pilgrimage to North Dakota.

It was the fourteenth annual pilgrimage at that. Of course, we had a good time and lots of fun; we always have that. We came back feeling hale and hearty, and with appetites sufficient to devour anything from a terrapin to an United States Army ration. But the comparison in shooting between the days of the early '80s made us wonder if it would be very long before everything was killed off excepting the Mongolian pheasant and the English sparrow.

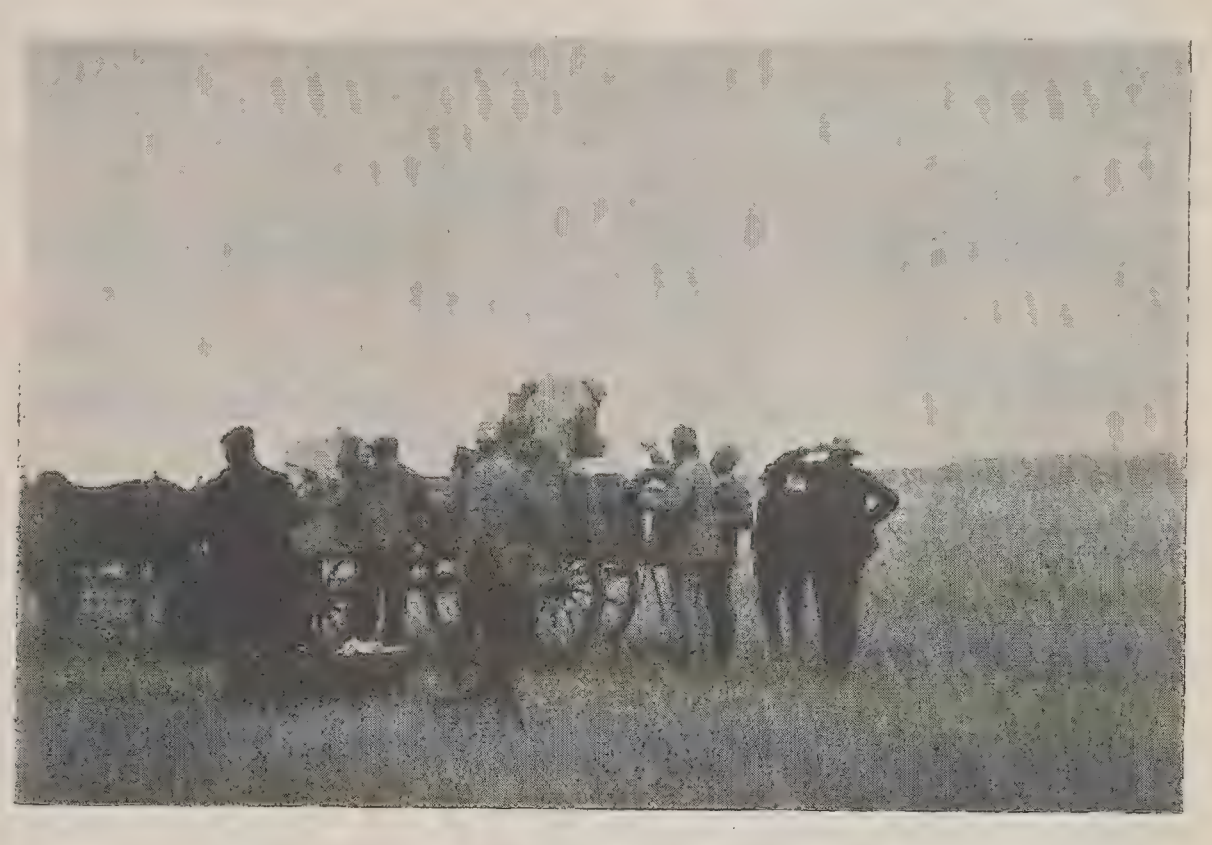
Our car pulled out of Saginaw over the M. C. R. R. on the evening of Oct. 7. I was the only home representative of the Saginaw Crowd with it. Avery, of Detroit, and I had the car to ourselves. No, by no means by ourselves, for our better halves were with us, taking the opportunity to go to Chicago to do shopping, a job that is generally considered most attractive for woman and most damnable for man.

Bright and early the next morning our transfer was duly made, and we were joined by the remainder of our party, our old friend Bob Schultz, one of the original Saginaw Crowd, from Zanesville, O., with two friends, strangers to the rest of us, and supposed to be "tenderfeet," both from Columbus, O. One was the Hon. James Meek, very appropriately named as to appetite, but decidedly improperly named whenever his partner made a misplay or he caught an adversary cheating at that innocent game of Old Maid. The other was Judge Stevens. At first we called him plain Sam, but later on his judicial qualities developed so that we could not refrain from giving him his proper title, that of Judge. He was a judge of good chewing tobacco and of a properly concocted cocktail. A few moments later our friends from New York, Dan and Joe, put in an appearance, and our party was made up. Their trunks were quickly unpacked and the contents stowed away in the two chiffoniers that are most conveniently arranged in the drawing room of our car, and the trunks were left at the depot for the return. We had the whole day in the city, and in the afternoon, just before train time, had a very pleasant call from Mr. and Mrs. Hough.

Long before daylight Monday morning our car was safely sidetracked at Dawson, our old stamping ground. We were up bright and early. Jake had a good breakfast for us, and Harry got out the decoys and truck from the lockers underneath the car. Devore and Gokey put in an appearance. We plumped down our little $25 apiece for North Dakota licenses. We were told that there were plenty of hunters, scarcely any geese, the sharp-tailed grouse has been pounded to death, but there were a good many ducks, and not nearly as much water in the lakes as the year before. I knew at once what this meant—that duck shooting was going to be tedious and uncertain.

Nevertheless, we sallied forth—or fifth, whatever you have a mind to call it—Avery, Joe and myself in one wagon behind Sam's team of farm horses. After looking over the ground we concluded that the Green Pond Hole in the sloughs back of Sam Devore's house was about the best place. We see lots of ducks, and as we drive along the banks hundreds of mallards get up. We have a Bond sectional boat with us, and put it together. It is dragged to the edge of the water. Joe is a little leary about crossing with us, so we fix up a blind for him in the rushes on the edge of the water. The mud is awfully sticky, but as he is provided with a tin cartridge box—one of the kind of which the lid springs up like a "jack in the box"—it makes a revolving seat of just the right height; it is water tight, too, so the cartridges keep dry. This is one that I had had some time and loaned it to Joe. I did not know the catch was out of order; Joe found it out in about a minute. He was new at duck shooting, likewise was his dogskin coat. Good dinners at Delmonico's and late hours at the office in the morning had rendered him a little corpulent. The joints of his legs neatly incased in creased hunting pants were not as supple as they became after he had been in our company a week or ten days.

With rushes well stuck up in front of him, he seated himself on the revolving box cover. I had scarcely turned my back before I heard a splash, an exclamation and a cry for help. The box had shut up and dumped Joe, and his pants were so tight he could not budge without help. I jerked him up and adjusted the box. The new hunting coat was plastered with mud, and Joe had no confidence in his ability to master the art of duck shooting; but he was chuck full of sand, intended to stick it out; and he did stick it out, and did up some old fast-flying singles later on with the precision of an expert and an old-timer.



We landed our boat in what appeared to be water, but lo and behold! there was but a skim of water overlying 3or 4ft. of sticky mud. It was useless, we found, to stay in the boat, and to reach the other shore we must get out and tow it. Fortunately we had our mackintosh wading pants, and we made the trip across to the other side safely, but about bushed.

You have all been through this sort of thing. There is no use telling you what we did. You know we put out the decoys, hauled the boat in the rushes and went to work. As we had not fired a shot up to this time, the ducks were not disturbed. They began flying by in ones and twos and little bunches; they were mostly mallards, and we had a bully good time. In fact, the shooting was too good and the mud too sticky to quit at noon time and go to the wagon for lunch. We made several good shots, but made many mighty poor ones. I shot a 16-gauge Scott ejector that weighs 7lbs., with full choked barrels, and was swinging 1oz. chilled No. 6 back of 3drs. of E. C powder. I had no cripples. Avery was shooting his load with the same kind of stuff in his 12-guage, and whenever it did get on to an old mallard he simply folded up and came down and stuck fast in the mud. But what a job it was gathering up the birds! We drove them out pretty well, and about half-past three we

concluded we had enough of it, and packed up and waded ashore. Joe had shifted his position two or three times, and was worrying a good deal about our ability to get back. I knew pretty well how to do it this time, though we were mighty tired when we reached the haystacks, behind which the wagon was stationed with the lunch box; but the lunch tasted good. We had a nice lot of birds, nearly all mallards, and we concluded to wait and see if there was not a little night shooting, and were on the point of giving it up, when just at dusk on the brow of the hill the birds began coming over, and for a few moments how they did pitch in! In almost the time I am writing this I had knocked down thirteen ducks that I picked up, quite a number of them canvasbacks. The

PULL UP THE SLIPPERY HILL.

THE HAND-OUT AND QUICK-LUNCH HOUSE.

other boys seemed to have gotten out of the line of flight a little, and I could see by the flash in the darkness they were not shooting as fast as I was; but it was a mighty nice ending of a day's duck shooting. We had forty-five nice birds between us; several of them were canvasbacks, and most of the rest were mallards.

Before starting out in the morning I had made a wager with Bob that our wagon would have more birds than theirs when we came in that night. Dan was very anxious to share this bet; it was only $5; he was avaricious, and was certain four of them could do up three, and Bob reluctantly said he could be counted in on it. We counted up; we had forty-five and they had just four birds, and I immediately made a demand for the payment of the bet. Bob was willing to pay his $2.50, but Dan demurred; in fact, went completely back on it, and we concluded to try him then and there.

Here is where the Judge's good qualities came in play. While he rendered a decision against us and in favor of Dan we forgave him on our way back from the Bad Lands. He showed so much forethought and good judgment, and saved our lives two or three times in the cold

AN OCCASIONAL BITE OUT OF THE LUNCH BOX.

ride home on account of having purloined the only bottle of whisky there was in the party, taking it in the dead of night out of Jim Meek's satchel, not allowing a soul to taste of it until it was needed as a medicine toward the end of that mighty cold seventy-five-mile drive we had later. I say for this kind and humane act we apologized for all the unkind things we have said about his decision.

We all went to bed feeling happy, for we had enough canvasbacks for a good dinner the next day, and expected some shooting anyhow. There were a few geese, but they were mostly the white ones, and not enough to pay to bother with.

The second day at Dawson was a disappointment. We started out to find some sharp-tailed grouse, and drove miles; it ended up after ducks, and our total bag that day was but eight grouse and one duck.

We came to the conclusion that the ducks were shot out. Every one knows the place; dozens came there to shoot, and with the decreased water supply the birds were simply pounded to death, and had gotten out of there, so we concluded to shorten our stay and get into the Bad Lands, so as to be ready for the deer when the season opened, Oct. 15. We had one more day at Dawson, with mighty poor success. It was the morning of our third day there. Getting up early to write a letter home, I overheard Dan's soliloquy. Dan and Bob had had six weeks together the year before in the mountains of Colorado. The stories they told showed they had had a mighty fine time. At any rate, they were old cronies of years standing, and had been sitting up until 12 and 1 o'clock at night relating their Colorado experiences: How Capt. Myrick did this, and what a wonder Joe Crandall was, what a climb it was to the Rim Rock—in fact, we had Rim Rock and Joe Crandall, Joe Crandall and Rim Rock until it was beginning to be a little bit tiresome, and when along about midnight, with tears in their eyes and their arms around each other's neck, they would make new vows of eternal friendship, I thought it was time to have the lights put out, for they had gone through this same performance the night before—not that they drank much of anything, for we had a very moderate crowd in that respect; but old friends will once in a while overstep the bounds of prudence, and Dan had had a little beer with Bob and then had taken a nightcap out of the medicine chest bottle, and thus did he soliloquize the next morning as he appeared in the bath room in his long night robe and his hands pressing his temples:

"D—d—d whisky. No, whisky is all right in moderation, but d— the fool that drinks it." Then another squeezing of temples and a buzzing between his teeth like a buzz saw striking a knot, and then a souse into cold water.

He did not know I heard this, but I related it at breakfast table, and the boys concluded that we would hear less of the Rim Rock in the future.

The Judge asked if the grapes were out of my back yard, for I had stocked the car with fruit, vegetables, watermelons, green corn and everything under the sun, and informed them on every occasion that I knew the vegetables were fresh and nice, for I had grown them in my own garden, and it got so the Judge rather rubbed it into me, for he thought my back yard must be a "wonder," and the grapes were the last to be mentioned, Assuring him that I had grown them in my back yard, he seemed relieved and no more was said on the subject at that time.

On the morning of the 13th we were in Dickinson, and our old friend Paddock, the best of guides, met us with horses and teams all ready for an early start. The wagons were soon loaded with our camp equipment; in the rear end of one was placed our mess chest, which is a creation of my own, and I think a dandy, notwithstanding it was made just a little too large to go in the car door, and Bob had put in a good half day the day before in getting it out on the car platform. It is made something like the letter L, and just fits crossways in the wagon box. The upper part of it consists of sixteen drawers; they are dust-tight and all covered by a thick lid on hinges, which, when it lets down, makes a good table. The under part consists of two bins: one to be filled with loaves of bread, etc., the other will hold your butter crock, bushel of apples and lots of other truck. The drawers are designed to hold your sugar, tea, coffee, pepper, salt and a thousand and one things that are so necessary to the cuisine in camping out, and also enables you to get a lunch while on the road without bothering to unpack or unload anything; you simply step to the tail of the wagon, unlock the front of this chest, and there you have right before you all of your canned stuff, bread, butter, tea, coffee, sugar, etc. The chest is made of three-ply veneer, thoroughly shellacked on the inside and well painted on the outside; so it neither swells nor shrinks, stands both water and dust. No patent has been applied for; the whole thing cost about $15, will last a lifetime and is a great success.

Jake, the cook, got in one of the baggage wagons, and everything is so well arranged that the two wagons were loaded with all the camping equipment, provisions, bedding, tents, etc., not forgetting three cot beds, and started on its long journey into the Bad Lands promptly at 8:30 A. M.—not bad, was it?

We then had time to look around, for we could overtake the baggage wagons if we did not start for two or three hours yet. We made a visit to our old friend Dodd, the taxidermist; saw the many fine specimens he had in his little shop. The town was full of Indians in their great blankets and squaws with their papooses on their backs—a regular old-time spectacle. The Judge never had been West before, and all this was new and interested him. Harry, our porter, had to stay and take care of the car, and we at last started ahead. I rode in the buckboard with Paddock; Bob thumped a fractious pair of bronchos hitched to a double seat, with James and the Judge as riding companions. Young Wallace Paddock engineered the third outfit, with Joe, Dan and Avery as partners. Two saddle horses were hitched alongside, and gaily did we leave the little town, beginning our seventy-five mile drive. The day was fairly pleasant, but the roads very muddy. Oct. 2 a snowstorm covered the ground 6in. deep; it no sooner melted than it set in to rain, and it had poured for forty-eight hours just previous to our getting there. We knew this meant slow driving, and perhaps would delay us on the road. I kept looking for the baggage wagons. Hour after hour went by, and it dawned on us that the horses attached to those two wagons were mighty good ones, and the drivers were thumping them through, for it was nearly 3 o'clock before we overtook them, and then at Indian Springs, twenty-eight miles on the road—a mighty good drive.

Every one was feeling first rate. We concluded to shove on about five miles further and camp on Knife River; and our first night in camp was a novelty to Joe and the Judge. There was no wood in sight; a little bend of what was usually a dry river bed, but was now well filled with water, was our camping spot. We had only a bundle of wood with us, just enough to fry the bacon and boil the coffee, but not enough for a camp-fire. It was already dusk; the horses were picketed out and Jake was busy with supper, when Avery asked if we were not going to put up the tents. I replied, "No; what is the use of putting up tents? Is not the starry heavens above us sufficient covering? Joe shuddered, and Avery remarked he thought it would rain before morning. I said, "Let it rain. It does not pay to unpack those wagons and put up the tents." "All right; we can stand it if you can." Joe did not like it a bit, but the sleeping bags were gotten

JOE ACTIVE AND AT HIS BEST.

out, also the cot beds, and in no time the chamber work was done. A nice, comfortable double cot was turned over to Avery and Joe, and they snuggled in together spoon fashion in great shape. I went and tucked them in with a rubber blanket over them, and Joe admitted next morning that he had slept better than he had ever slept before in his life, and it was the first night he had ever slept without a covering over him. I heard a few drops of rain splatter on the outside of my bed toward morning, and I could almost feel Avery grin, for I knew he was just hoping it would pour to pay me for not having the tents put up; but it was only a few splatters and gone, and we were busy packing up and loading the wagons, and had breakfast just at daylight, and got a good early start for the forty miles remaining of our drive.

The drive was not disagreeable. With frequent stops to try one another's cigars and an occasional bite out of the lunch box, we made the day pass pretty decently; but the roads were very slippery still, and at about 2:30 we reached the drop-off to the Bottom Lands of the Little Missouri. Far below us the winding stream could

be traced, and as I stood on the brink I pointed out to the new comers where we had first camped in 1884, and where we had camped last year, and the year before; and we concluded that the last camping place was the best of all and we would go there again.

Paddock rather shook his head, and said things did not look right to him. The hillsides were one mass of mud, and he was afraid we would find water on the Bottom Lands. The wheels were lashed, some of the tender ones getting out and following in the rear, and others assisting in getting the cavalcade down the mountain side, for it is a veritable mountain here. Lashing the wheels in place did very little good, for the slippery mud made an excellent toboggan slide, and it took good steering to prevent going over the edges around sharp turns; but at last we were all down, and the head wagon came back to meet us in the sage brush plain, with the unwelcome news that our old camping ground was one mass of slippery slime, with pools of water standing around it, and also with the information that there were no deer tracks worth mentioning in the mud. This of course would be true, for if the bottom lands were wet the deer had moved higher up into the draws. However, it was then 3 o'clock, and we must find some drp spot to camp.

Going further down the river near the place where we had camped years ago, we found it dry, and all right, but it was without the protection of the cottonwood grove and quite exposed to the wind; besides, we must clear away some of the sage brush. The gale was howling by this time, and the little fire that Avery unthinkingly started pretty nearly proved serious. In an instant our canvas coats and slickers were in use by all the party beating out the flames. How they roared! The sage brush seemed to be like tinder, and the flames mounted 20ft. in the air. Fortunately, however, the wind was right away from our tents. toward the bluff of the river, and on one side was a little run or gully, so that after all it only burned a small three-cornored piece, for we had it well threshed out and prevented it from spreading. After the cinders had blown away—and it took but a puff of the sharp wind to accomplish that task—it really made us a very good, clean frontage for our camping ground. The tents were pitched in the usual semi-circle toward the fire, with the army cook stove in front. From the ridge poles of one to another and to a tree that was over the dining table a clothes line was tightly stretched, on which we hung gasoline torches or lamps. Those make the finest outdoors light for camp of anything, and with a little care are very easily and safely transported and taken care of.

The river was muddy, and how to provide drinking water was going to be a conundrum. We brought along a barrel and sunk it in the edge of the muddy water, which before long filtered through and settled, and that portion of the programme was not one to worry us.

"We went to bed early; rain again to-night," my pocket diary says.

On Saturday, Oct. 15, the deer hunting season opened in North Dakota in 1898, and my memorandum states that we saw three or four deer that day. Avery and I each had a snap shot at one in the brush, but it was only a snap shot. Cold and blowing a gale, rain, mud and water everywhere. By night flurries of snow were in the air, and we were certainly in a very disagreeable situation, and had seen enough to know that the deer had moved out of that country; they could not stand the flood.

The next day, the 16th, my memorandum says, "Cold, very windy." Avery and I hunted three bottoms, started two deer, only a snap shot in the distance. Avery also had a snap at one, and saw another. We waded the river twice, were cold and wet. The Judge had taken a long trip in the other direction, going down the river, whereas we went up stream. He had not appeared when we got back to camp. The guide reported he had left him some miles below, apparently all right and headed for the camp. We began to worry about him, but along about an hour after dark he came in, seemingly happy and all right. He had seen one deer, and that was all; had not even had a shot at a grouse.

On the 17th my pocket memorandum book contains the following brief history of the day: "Skunked; out of meat; no grouse; looks like snow; break camp, and have a desperate time getting up the hill; the H A H Ranch at dark; Avery and I hunted the draws on our way out; we got a shot at a bunch of three deer running about 300yds. away, and missed." Indeed this is a regular bad luck trip all the way through. As Jake puts it, "It is bootiful skenery, dis country, must be more den a dousand years old," and we agree with him.

There is lots of "skenery," but no deer standing for us to take a pot shot at them, and when it comes to a 200 or 300yds. snap shot we do not seem to be in it this time. Yet we have all been out when things went luckily and many of these hard shots have proved lucky ones after all.

We all went to bed at the H A H Ranch and had a jolly time of it. The floor was hard, but we made the best of it. Mr. Converse, one of the owners of the ranch, came in some time during the night, but we did not see him, for we got away in the morning before he was up. The cowboys were good to us. We used their cook stove, lamps and cooking utensils. The nightly concert of "snorers" did not keep the rest of us awake very long.

On the 18th my memorandum says we started at 7; would have gotten away at 6 if the horses had been found. We lunched under a cut bank near Indian Springs, but there the Judge saved our lives by producing the last bottle; he had stolen it from honest Jim Meek and put water in Jim's bottle instead, and even a little of it was left until we reached Green River. It was snowing by that time, had been very cold all along the way, and we were stiff and sore and numb when we arrived at the car at 7:30 that night. How good the car looked! The train was late; we do not know how much, and do not care how much. The music box was started up, Paddock and our friends came in to say good-by to us, and as we had by this time all had a chance at the bath tub and had a shave we were feeling quite respectable and at peace with the world.

The Last Day's Shoot.

We pulled into Dawson at noon; we should have been there at 3 o'clock in the morning. It had been snowing and blowing as hard as could be all forenoon, and I should say on a level the snow was fully 4in. deep. Of course, we thought this would be a good goose day, but Devore came in with his fur cap on as our car was left on the side track, and his face had such a hopeless expression that we knew the shooting was pretty slim. He said he did not know what had become of the geese. Some of the white ones were flying in all directions, but had no regular feeding place, and in fact there were not many of them anyhow, but that the boys had been having big canvasback shooting the last day or two on Isabelle. We hustled him around for a team and a load of decoys, and Avery and I donned our wading pants, put on our heaviest sweaters, dogskin jackets and leather mittens, and asked for volunteers willing to go with us. First one and then the other backed out; but our old standby Joe, allowed that it was no worse a blizzard than they had in New York a year ago, and he stood that until 2 or 3 o'clock in the morning, and he thought it would be no more of a hardship, and he would enjoy it more than he did the late dinner at Delmonico's that night of the New York blizzard. He did not look as much like Klondikers as we did, but he certainly was donned becomingly, and we had not been out of the car many minutes before he shivered as audibly as a pointer dog. Harry's team slashed through the snow at a good rate, and we were soon at the pass, but the slough seemed to be empty. A flock of Canadian geese occupied the middle of it, but there were no ducks in sight, so we pulled across the prairie to Isabelle, only a short distance. The snow cut your face if you turned toward it. The report of a gun could not be heard very far, but we did hear them plugging away, and could count several teams and could see the shooters' blinds; in fact, we estimated before the afternoon was over there must have been at least forty guns around the shores of Lake Isabelle.

The canvsbacks were stirring, and as we drove along the bluff past where Leo and Patterson had out a big bunch of decoys we saw them neatly turn over three from a flock that swirled by them. We went on to the northwest corner of the lake, as it seemed the only vacant spot that looked at all promising. In attempting to get down the bank we struck snowdrifts 10ft. deep. Think of that for Oct. 19! We found an old blind, and straightened up the brush and fixed it up the best we could, and got our bunch of decoys bobbing and turning on the water in front of us. The shore of the lake was piled with windrows of slush, snow and ice, so that when a duck struck he sometimes completely disappeared in the mush. We spread out a blanket and then a mackintosh to kneel on, and a tin box with a revolving top gave us a pretty decent position.

Joe had looked at these preparations, and we could see that his courage was beginning to ooze a little bit. He finally asked whether we would stay long enough for Harry to drive him to the car and come back after us, and as we told him we were going to see it out and stay until dark he concluded the car was good enough for him, and we did not blame him a bit, for it was colder than the mischief. I told Harry to bring back a couple of boxes of 4s, for I did not think the 6s would make much of an impression on the canvasbacks; but the little 16-gauge did curl them over. We had mighty nice shooting for a time, sitting back to back with our feet in the ice and water. They would come up and then swirl past in ones, twos, threes, and sometimes a bunch of half a dozen or more. Most of it was long shooting and hard shooting, as canvasback shooting is always hard; but we had great fun, and we would take the numbness out of our toes by running along the shore to pick up a duck that the wind would drive in. After missing one or two, one fellow was seen coming into the decoys, and I told A. to watch me mash him. I would show him how to do it, for, said I, "with this stiff wind the shot will drift, and you have got to make allowances for the bird as well." The old drake was plowing the air, and as he came up within nice shooting distance I gave him both barrels and never touched a feather. Neither of us said a word; but I turned round to my companion and said, "If there is anything in my flask that will warm your spirits take it, but don't tell the boys at the car." Another bunch came up and we each got our right and left. A pair came up and we got them both; in fact, we did some mighty good shooting. We got our mittens full of water, but our spirits still kept up, for we were having big fun. At 5 o'clock we pulled out and went back home and we had thirty-five ducks, twenty of them great big nice canvasbacks, as heavy, plump, well-feathered birds as you ever saw. Passing round the lake, there on the bluff stood the rest of our party. They had come out expecting an evening flight, but as there were nothing but canvasbacks, and they had been flying all day, there was no evening flight, and the boys were all disappointed.

Either the mixture of Avery's Canada whisky with my rye or the wind and snow cutting me in the face made me see double, for as I passed round the hillside I swore that Bob Schultz was there twice; and there must have been something in it, for when I got home a letter was returned to me from Dawson, wherein my little boy had said, "Father, there is a screw loose somewhere, for we received two postal cards from you to-day, each saying exactly the same thing." Now the proposition is, if there were two postal cards, I believe there must have two Bobs.

The boys were disgusted with the outlook; Dawson was simply shot to death. The only water on which there were ducks was Isabelle, and all the hunters had congregated there. Now, what was the prospect for the future? If it still stormed we might get a little shooting by hard work and sitting in the cold, as two of us had that day; if it came off warm and pleasant and no wind there were no ducks and there would be no shooting. Let's go home. It was put to a vote and carried unanimously, so we sent for the train order, and long before daylight the old car was rumbling eastward.

W. B. MERSHON.

If you have the *Game Laws in Brief* you have the authority on fish and game laws of the United States and Canada. It will tell what you want to know; and what it tells you may depend on. Time, money and pains are expended to make the *Brief* an accurate and safe guide.

Natural History.

A Wild Garden.

THE Proceedings of the Indiana Academy of Science for 1898 have just been received from the State printer, and present interesting evidence of the growing importance of Indianapolis as a scientific center and of the excellence of the work done there.

The volume in hand is one of 300 pages, containing ninety articles, which cover a great variety of subjects. Some of these are on mathematical, physical and chemical subjects, but quite a number have to do with other matters which have more or less bearing on natural history. One of these is a brief but very interesting description of a Garden of Birds and Botany which has been instituted by Mr. W. W. Woollen. This is a tract of forty-four acres northeast of the city of Indianapolis on the south bank of Fall Creek. Twenty-nine acres of the garden are woodland and the remaining fifteen are under cultivation. In the forest the native wild plants have never been disturbed, but everything grows in a state of nature. Mr. Woollen's idea is to preserve these natural growths and he hopes also that there may be brought to this garden, and there planted and preserved, every tree, shrub, vine and plant not now represented there, which grows or has heretofore grown in Indiana. In other words, that the garden shall represent the botany of Indiana. It is intended also that the birds and wild animals in general shall be protected and shall here find a safe home for all time. The idea is a delightful one, and might well be imitated near other American cities.

An interesting paper treats of the blind rat of Mammoth Cave. Mr. Carl H. Eigenmann, who has studied this *Neotoma* in its home, and possessed one in captivity, found that during the daylight hours it was disposed to be quiet, remaining in its nest, but that at night it frequently moved about its cage. This cave rat has been supposed to be blind, though it possesses lustrous eyes of large size. Mr. Eigenmann found, however, that turning on electric light near its face caused a twitching of the eyelids, so there is no doubt that the light was perceived; but how clear its vision is has not been determined. Its hearing is acute.

Mr. J. R. Slonaker has studied the eyes of this rat and compared it with that of the gray rat. The lens is found to be enormously large in proportion to the eye, and the pupil capable of very wide dilation, as with most nocturnal animals. So far as the histological structure of the eye goes, Mr. Slonaker infers that the cave rat can see as distinctly as the common gray rat.

Seaboard Air Line.—III.

Full Report to Oct. 26.

THERE has been the usual heavy travel this autumn. The few localities that still remain untouched by the march of improvement—nature's waiting rooms, one might call them at this season—have fairly swarmed with feathered tourists, fluttering about with much jumble and twitter of small voices in the underbrush for days before departure.

At this writing these sunny spots, so full of bird life but a few weeks ago, are mostly untenanted save by a few darting juncos.

Our redhead woodpeckers have put by large store of nut and acorn rations for their winter campaign. All the old knot holes are filled, and judging by the ceaseless work of these birds, every crack and crevice in bark or tree trunk in the woods must be packed also. They have a graceful way of taking a chesnut. Hovering over a cluster of grinning burrs, they select one, and with a quick motion pick the nut from its satin-lined pocket, often without disturbing its fellows, though at times a trifle too much energy sends the two remaining nuts rattling down. I saw an English sparrow try the trick several times. He always secured a nut, but goodness, he upset four or five for every one he secured. Even after he had taken one he did not know what to do with it, sometimes carrying it to the ground and jabbing it in an aimless sort of way, or dropping it in flight. He followed the redheads on their rounds as though trying to fathom the mystery, but never seemed to get beyond the initial act. Our mocking birds left early in September, though numbers of brown thrush, swamp robins, veery and their immediate relations remained among the low bushes to rustle the dry leaves till well on in October. The flight of hawks—Sept. 25 to 28—was much below its average numbers. We had an unusual visitant all through September in the shape of a large gray parrot, evidently an escaped cage bird. It was odd to hear him mumbling to himself in the tree tops, and there was something quite uncanny in his loud "Hello! hello! hello!" as he sailed about the woods, in lumbering flight. I imagine he was nipped by the hard frost we had about two weeks ago, for I have not heard of him since. I have no doubt he must have been surprised, and can fancy him expressing his feelings by a reversal of his favorite exclamation. Bluejays plentiful; have just left. One gorgeous chap took a fancy to the heavy-leaved top of a sassafras and day after day his rich notes welled out from his tower of rich orange colored leaves in strange contrast to his ordinary performance.

Let me tell those who have never heard a bluejay sing—aye, sing—that there is a great treat in store for them. Bluebirds in fair numbers came late and are still with us. But why enumerate? All my friends were in evidence from the tiny midget to the big gray goose. Heavy gangs of the latter have swung swiftly along, far overhead, traveling by special, as it were.

Oct. 19, while at sea, some ten miles outside Sandy Hook lightship, our craft was boarded by a dainty white-throated sparrow, who accompanied us to the stake boat, and from his perch on the bow fender saw Columbia turn. He voyaged back with us as far as Navesink Highlands. Dusk was settling over the waters, and as the Highland light flashed out, our little guest took his departure, rising high in air and heading for the land—a fitting incident to close a superb autumn day. There were but eight in our party, and as several had already

ccumbed to the ocean swell—that deadly heave which ten reveals the otherwise well-kept secrets of humanity I was almost alone with my little friend. He was not the least tired, and as he flitted about the forward deck, parently finding things, he took time to confess to me hat the northwest breeze had carried him too far to lee-ard"; but I suspect that he was too good an American forego the opportunity offered him to see the yacht ce. I noted at odd times during the day other land rds fluttering about the excursion fleet, but was unable identify them.

The migrants have mostly passed, and a great part of e bright sunshine of autumn has gone with them. eadow lark, starling, highhole and robin are doing all their power to liven things up, but the woods and the ier tangles are dreary. One hears only the faint tap of ling leaves as they alight in showers upon the crinkled mains of their dead companions.

At night a shroud of silent fog wraps all nature; the ht air is from the southeast; I can hear the faint far-ay wail of the siren at Sandy Hook—it must be thick there. I wonder how fares my little white-throated low voyager?

WILMOT TOWNSEND.

AY RIDGE, N. Y.

Beneath Salt Sea Waves.

EAST WAREHAM, Mass., Oct. 16.—*Editor Forest and ream:* In your issue of Oct. 7 I read the very in-esting communication from Mr. Samuels, entitled, "In Seaside Pool." Having handled oysters and clams for re than thirty years, I can say that his observations on rfish, conches and borers are borne out by my own perience. By "conch" I suppose he means what we stermen call a winkle. He might have added that these ellfish are provided with a rasp with which they can tter away the edges of such shells as may be too strong them to break; the valves of a bull-nosed quahaug, instance, capable of sustaining 150lbs. pressure. The nkle will saw off the shell for three-quarters of an h in length, making an aperture through which the tim's flesh is slowly drawn, decomposition setting in fore the meal is finished. Often the quahaug in its ort to close the shells against intrusion will break them, pecially if any piece of grit is lodged between the ves. When the winkle is through, the empty shells nain attached by the hinges, and quite widely opened. examination where quahaugs grow in any abundance ll show that a large percentage are killed by winkles, o species of which, with long spirals, inhabit Buzzard's y. One of these has a row of points or spurs following ones can stand considerable drilling, but persistence makes them poor, and finally causes their death.

The caulker snail is always looking for seams in any armor; throw down a bucket of oysters or quahaugs in the water, or near it at low tide, and these little black fellows are all over them in a few minutes. If any unfortunate has a puncture or crack in its shell the caulkers set to work, and slowly, but surely, suck all the juice out, and eventually the flesh. Make ever so slight a break in the shell of any species, and unless it can close it against leakage it is gone. Oysters escape better on quite soft bottoms where they can sink down till only their bills show, then they are not disturbed by borers or caulkers. Occasionally they settle unevenly, and have to build out on one side, their shells assuming a try-square shape. In very soft mud they may not be able to build up as fast as they settle; in this case they die. Sometimes our oysters take in lodgers, a little crab making its home in their mantles, living altogether inside their shells. This crab also lives with other tenants, of which more later on. Again the oyster begins life as a wanderer; affixed to the back of a spider crab, with several of his kind, he leads a romantic existence, until the spider sheds his shell; at this time the oysters may be as big over as half-dollars, and the crab must experience great relief on being rid of these unwelcome guests. A worse misfortune overtakes poor spider when he unwittingly thrusts one of his sharp toes between the valves of an unsuspecting quahaug. These close like a vise, and the clam must be pulled out of the sand before he can proceed, and the uncomfortable clog hangs on till the toe breaks off; before this happens he may pick up one or two more, it being no uncommon thing to see a spider with three. Angler fish and quahaugs are two of nature's steel traps. The first is so by nature, with malice aforethought; with the last it is a matter of accident confined to the various species of crabs, the spider and horseshoe mostly, and occasionally to birds; I have myself seen a loon killed with a large quahaug impaled on his bill. This bird was shot from the deck of a schooner as it was swimming along by. It could hardly hold its head up enough for breath, and was quite spent.

The oyster crab before mentioned also lives in the big horse clam of the Pacific Coast; a thick bed of these shellfish grew in the flats along the shore of North Bay, Puget Sound, east of Heron Island. Half of these clams had crabs in them, sometimes two crabs to a clam. It would seem that they must be born in the oyster or clam, and do not go and come at will, for once out of an oyster they would never get back. However militant crabs may be, some of them are chivalrous and will defend a companion who is unarmored, and run for safety carrying the soft-shelled one too. Still, I am much inclined to

A SUCCESSFUL DEER PHOTOGRAPH.
Photo by Mr. C. A. Taff.

e convolutions, the other a smooth shell. Some people nsider them one variety, the first mentioned males, the t females. My observations point to a different conclu-on. During the latter part of summer the females awn; they produce a tough, leathery string, about 2ft. ng, on one edge of which are thickly grafted little uches, about the size of a silver quarter, and three-teenths of an inch deep. These are filled with a trans-rent jelly, in which may be seen the germs of future nkles. On the outer edge of each pocket is a semi-oval t of thinner material, through which the young eventu-y make their escape. One end of the string is an-ored in the bottom to a depth of 6in. or more; on this rtion the pouches are wider apart and not fully de-loped. The spawn is usually placed where the tide will t leave it dry, and is white at first, changing to yel-vish and brown.

The oystermen pull up all they find to prevent their owing. When boys, we used to pinch the pockets with r fingers till the outlet burst and their contents escaped. All of this string of pouches is produced inside the nkle's body, and can be withdrawn by a pull; then it ll be found completed up to the end, with no unfinished ckets on the string. When this is done I do not think e can pick up the work again, but probably could make new one.

The borer makes a cluster of little pockets like melon eds placed in the shells of oysters and clams, or under elving stones, with toadfishes for neighbors. The rer destroys innumerable small oysters. The large think that this service is only rendered by the male crabs to those of the gentler sex, in the performance of certain offices of nature which an armored condition would preclude.

Mr. Samuels' anemones remind me of some flowers I once saw protruding from their serpentine shells attached to a partially sunken log. I was shooting wild ducks on a tiny lagoon that made in from Puget Sound, and was using this log for a blind, having piled up some boughs, behind which my gunning boat was hauled. This little lagoon, or "squim," was shaped like a triangle, the apex of which ran back into the high timber; the front was shut off from the Sound by a beach over which the birds came. I was up in the apex where it was shaded by the giant firs; the water was 3 or 4ft. deep, and the log was propped off the bottom by its broken limbs.

The shooting was slow, and during an interval my attention was caught by what appeared to be several pink and white flowers growing below the surface. On examination I could see that they grew out of a shell about as large as a lead pencil, which was plastered on to the bark of the tree. On thrusting my wiping stick down they quickly withdrew, being alarmed at the least agitation. After a bit they would come out again. They were very bright colored and pretty; among them were a number of jelly-like masses fastened to the log by one end; they were about 1in. in diameter and 2in. long, very diaphanous, and while evidently alive, were more like fungoids than animals. They had a perceptible organism, however.

Although I watched these curiosities so intently that several widgeon and bluebills came to my decoys and got off without harm, I did not see them catch any food.

A similar misleading appearance is presented by the foliage-like cilia on the end of a goduck's snout, which looks like a bunch of leaves growing on the bottom; a slight disturbance will cause these to disappear. The body of this clam is out of proportion to its shells, which are fluted like a pecten's, but not so decided; the wonder of it lies in its rubber neck, which is sometimes 2ft. long. Specimens of this shellfish weighing 16lbs. have been dug, but they affect hard clay banks, where one has to use a pick and bar to mine for them; again, they will be found in water sand and can only be come at by sinking a pipe around them and exhausting its contents. However caught, they are very good eating.

WALTER B. SAVARY.

The Horn Snake.

Editor Forest and Stream:

Now comes Mr. Eliot Norton and stirs up the stinging snake myth again, affording another opportunity to the "snake editor" to lay a ghost that hath oft been laid before. This necessitates a repetition of the exorcism that was set forth by the writer several years ago in FOREST AND STREAM.

Mr. Norton has found a number of intelligent and honest people who firmly believe in stinging snakes—having seen them with their own eyes, etc. I have had exactly the same experience. When investigating the subject of stinging snakes—their existence or non-existence—I found that several highly intelligent and highly educated gentlemen of my acquaintance treated the question as not debatable, as they themselves had seen numerous specimens of the stinging snake—had seen them perform their peculiar antics, and, especially, all had seen the sting itself repeatedly thrust out at the end of the tail. All of which leads to the conclusion that the human mind has an instinctive proneness to overcredulity regarding snakes, their functions and attributes. The word "instinctive" is used advisedly.

Throughout the whole domain of animated nature the snake is regarded as par excellence the enemy of man. This feeling is doubtless an inherited instinct, that survives from a very remote period in the mutual relations of man and snake, when the former was comparatively defenseless against the latter, and when the serpent probably constituted man's most formidable enemy. Hence arose the prevailing disposition on the part of humanity in general, and especially the more ignorant, to destroy all snakes indiscriminately, large and small, venomous and non-venomous, with a superstitious vindictiveness. This instinctive aversion to the serpent tribe is a strong argument for the theory that the human race originated in a warm climate, where snakes do most abound. The common attitude of the human family toward the snake tribe is one of aloofness—to avoid any sort of contact—to keep at a safe distance—with the natural result of what may be called "willful ignorance," and an indiscriminate condemnation of the whole tribe. The usual source of information about snakes is therefore "hearsay evidence" embellished by luxuriant imaginations.

But to return to the particular subject in hand. The writer, after much diligent effort, secured two specimens of the much-dreaded "stinging snake," one nearly dead but still able to wriggle his tail in a lively manner, while the other was very much alive. These specimens were recognized without hesitation by all the experts as being the genuine article.

Upon the first hasty examination of the wriggling tail of the half-dead specimen, I could almost have sworn that I saw the sting, quickly thrust out and withdrawn, thus showing the influence of mental predisposition or credulity.

It is perhaps needless to add that the snake had no sting, no semblance of a sting, and no place in his anatomy to accommodate such a weapon.

The live specimen was kept as a pet, and a subject of study, for about six weeks and then released. He was found to be exceptionally passive and absolutely inoffensive. When carrying this snake on my arm through the village to set him at liberty at the river's margin, I encountered a man who was a stranger to me, who showed a great deal of excitement at sight of the snake. He danced about and exclaimed, "Why, man, that's a stinging snake! If it pops its sting in you it will kill you!" etc., etc. He told me in a very animated manner that he had seen one of those snakes thrust its tail through a cypress board. Now here was very direct evidence of a most concrete sort of the peculiar endowments of the "stinging snake," and from an "eye witness." When I had succeeded in convincing him by ocular demonstration, and much against his will, that the snake had no sting, and was otherwise harmless, he admitted that the snake he had seen with its tail thrust through a board was dead when he saw it and that the board was split; but he was told that it had thrust its tail through the board, etc.

An investigation of the habits of the so-called stinging snake indicated that its food consisted (probably wholly consisted) of animals whose habitat is soft mud and ooze, such as mud eels, newts, etc. The specimen under my observation showed a marked disposition to burrow its head down into mud and to conceal its head in any situation when disturbed, at the same time showing considerable agility in the movements of its tail. When released in the edge of the water, instead of swimming away, it burrowed through the soft mud and so went out of sight. An acquaintance informed me that he had discovered one of these snakes with a large eel in its mouth.

It is possible that in seizing its prey and withdrawing its victims from the mud its tail is used to "get a purchase" on root or snag to aid in the operation. At all events, the disposition to burrow downward, accompanied by adroitness in the tail movements, is probably the sole foundation of the stinging snake myth.

COAHOMA.

MISSISSIPPI.

HOLYOKE, Mass., Oct. 21.—*Editor Forest and Stream:* Your correspondent's inquiry in current issue of FOREST AND STREAM concerning a snake that stings with its tail is worthy of more than passing notice, considering

the fact that so much ignorance prevails, not only concerning the actual structure and habits of serpents in general, but of the distinctive characteristics of our native ophidians. It is the writer's intention to prepare a few notes for early publication in your columns setting forth fundamental facts concerning this branch of zoological science which will serve as a base of reasoning when dealing with these creatures, and thus aid even superficial observers of animal life in arriving at the facts concerning their structure and habits, their uses and their dangers.

But the question asked by Mr. Norton may be answered in a few words, since practically all our native serpents have been carefully observed and studied by persons eminently qualifid for this work. There are no snakes, native to the United States at least—nor probably elsewhere in the world—that, scorpion-like, sting with their tails. All recognized venomous serpents inject their poison through fangs located in the mouth, and directly connected with specialized glands which secrete the poisonous fluid. Most of the fangs of venomous serpents are located in the anterior portion of the mouth, and are either movable or permanently erect; but a few species are known to science in which the poison is ejected through or along a posterior fang or posterior grooved tooth or teeth. These latter snakes are called opistoglyphs, and the species already studied are not particularly dangerous to man or the larger animals, though frogs, toads and lizards bitten by them readily die. Four species of opistoglyph snakes have been found within the United States—one common to our entire southern border, two found only in the extrtme southern corner of Texas, and one species from southern Arizona.

But to return to the snake with the armored tail. Although many serpents have a somewhat pointed horny tail cap, this is no more offensive than one's finger nail—no more capable of "stinging" than a snake's tongue. Some herpetologists have tried to show that this horny extremity—when occurring on the *Crotalidæ* (rattlesnakes, moccasins, etc.)—is really a rudimentary rattle, but there is much evidence to the contrary. We find a pointed horny tail cap on two common native snakes, which, at a superficial glance, much resemble each other, but which in reality are widely different. These are the venomous copeprhead and the harmless "flathead" or "puff adder." On the copperhead the tail tip is deflected to one side, while on the "puff adder" it is in line with the body. Doubtless the "horn snake" or "stinging adder" mentioned by your correspondent is none other than *Heterodon platyrhinus*—our friend the "puff adder," the "hog nose," the "blowing viper," etc.—to whom we paid a slight tribue in FOREST AND STREAM for July 15, but which will doubtless continue to be maligned and stoned as long as ignorance of things herpetological continues—which promises to be for centuries to come. DR. J. HOBART EGBERT.

A Successful Deer Photograph.

WHITINSVILLE, Mass., Oct. 28.—*Editor Forest and Stream:* I send you by even mail a half-tone plate of a photograph of a buck that I obtained in August last. The plate was made from an enlargement, and shows the fact to some extent.

It was necessary to use the bromide enlargement for this purpose, as the negative was reported "lost," together with another of a smaller buck which I had given to a photo goods dealer to have enlargements made. I do not think I shall see either negative again. I now consider myself fortunate to have the enlarged prints, as I have no contact prints from either.

I have tried for several seasons to get a good photograph of a deer—one wherein the deer would show plainly and not require to be pointed out. I have obtained a number first and last, but this one is far ahead of any of them and I would like to see it shown in the pages of FOREST AND STREAM.

The subject, position and background are unusually good. The camera was a 4 by 5in., 11½in. focus, with diaphragm shutter set for one-fifth second, distance 60 to 75ft., about 4 o'clock in the afternoon. I had a rest in the bow of the canoe to set the camera on so there would be no movement other than the motion of the boat. It turned out that I gauged the stability of the buck to a nicety, as immediately after the exposure was made he turned and walked out of the water into the woods. There was hardly a half-second to spare.

I find a good many things combine to prevent a good photo of deer in the summer—the chief thing is the red orange coat of the animal, which turns out to be dark in the picture, though it is bright enough in the original. In the present case the bright afternoon sun shone full on the deer, and the result is far better than usual; besides, the background being very dark helps to bring the deer out prominently. C. A. TAFT.

Loading Buckshot.

RICHMOND, Va., Oct. 28.—*Editor Forest and Stream:* The method of loading buckshot mentioned in your issue of the 28th by Mr. B. W. Sperry is one that I tried myself some years ago, but did not find very satisfactory.

If, as I understand him, he suggests loading them in the shell he intends to use, he will find that the wax will be shattered by the explosion, breaking it from the side of the cartridge, and the shot will scatter as bad as ever.

Another method, which I used with more success, was to take an empty cartridge and ram a wad down to the bottom of it; then load it up with buckshot in the manner he describes and pour in the melted wax. After it has cooled and solidified thoroughly, cut the cartridge away from around it. Then the shot and wax can be put into the shell to be used, as you would a bullet. This method, however, has the disadvantage of being very uncertain, in some cases the load not breaking up at all, but going like a bullet, and in others not showing on a target any appreciable difference from a loose load. I can recall two instances in which the whole load only made one large hole, the first at a target at 40yds., and the other at a bear cub in a large live oak. In neither case had the shot separated at all. R. F. BANKS.

Game Bag and Gun.

Mr. Mulate's Big Moose.

"MR. EAMES J. MULATE returned to Mommenttown Monday, after a three weeks' hunting expedition to Canada. Hudson's Bay was the northern terminus of the trip, in which region Mr. Mulate encountered three snowstorms and a temperature of 12 degrees above zero. Mr. Mulate killed a moose weighing about 1,300lbs., whose horns measured from 53 to 55in. from tip to tip. Five shots were required to bring it to bay. Smaller game was shot and trapped, but of this no account was taken. About 325 miles of the journey was made in canoes and on foot. Mr. Greeley Bate was with Mr. Mulate, but was not so fortunate. Mr. Bate did not return with Mr. Mulate."

The above silly story is copied from a recent issue of a prominent Baltimore newspaper, with the names only changed.

Mr. Mulate, if one is to believe his statement, made a trip from Maryland to Hudson's Bay (325 miles of the journey by canoe and on foot) and got back in three weeks, with a moose weighing about 1,300lbs., with elastic "horns" measuring all the way from 53 to 55in.

Such a journey as Mr. Mulate says he made could not be accomplished by an ordinary mortal (but then, to be sure, Mr. Mulate is no ordinary mortal) under four or five months, and instead of the journey being 325 miles by canoe and on foot, more than 1,325 miles would have to be made in that way, and at an expenditure probably ten times greater than Mr. Mulate's. Only one moose to show for such a remarkable journey, made in such record-breaking time, would seem but poor recompense. The Province of Quebec permits of two moose for each person composing a hunting party, and as Mr. Mulate and his companion probably had a guide apiece, they were consequently entitled to eight moose, instead of only one.

The above remarkable newspaper yarn is of a piece with a similar one printed in the Sun, of this city, three or four years ago, extolling the prowess of a certain silversmith's clerk, who had just returned from a hunting trip with a moose weighing 1,500lbs., and "said to be the largest moose ever shot in the State of Maine." Four men fired thirteen shots at this fabled monster, and yet did not stop it. The moose was found dead the next morning a few rods away. The carcass was shipped to New York, so the story ran, and distributed among admiring friends. An inviting morsel, truly, after lying all night with its entrals unremoved. This alleged sportsman boasted of killing six deer himself—two at one shot—regardless of the fact that he was entitled to shoot but two.

Had this imitation sportsman been satisfied with simply printing his remarkable yarn without photographic embellishment, it would have been absurd enough to sportsmen, but he actually had the nerve to print a picture of the 1,500lb. moose on a raft, with the hero beside it, of course. The carcass did not come as high as the fellow's knee, and was of a four or five year old bull, weighing probably 600lbs.

Your correspondent knows of a resident of New York City who has just returned from Canada with the heads of three large bull moose. None of them, however, weighed 1,500 or even 1,300lbs., and he was not compelled to shoot them thirteen times each, or to go to Hudson's Bay after them either. 303.

Eastern Massachusetts.

Editor Forest and Stream:

About now look out for game. It don't last very long in this part of the country, and the early bird catches the worm. By Dec. 1 it is rather cold to be out with a rig on that's fit to shoot in, unless it be foxes. We ought to have close season on birds about Dec. 1, as there is chance to pot-hunt with the snow on. Ruffed grouse, or partridges, as we call them here, seem to be as plenty as usual. The markets quote them as very scarce and pay $1.75 per pair, which is the highest price, I think, on record. I don't know how it is, unless snaring has been suppressed to quite an extent by the State game association. They are doing effective work by having wardens out all the fall. If we could stop the sale of game we would strike the nail on the head. Birds at such a price makes too much of an inducement for the market hunter.

We have a case in the district court at present for snaring partridges, and it is reported that another arrest was made yesterday of an old professional Boxford snarer that has the reputation of sending off "two bags of birds a week to the market."

Quail were badly winter killed and are very scarce. I started one covey of about a dozen good-sized birds and shot five of them. Four of the five were male birds. I then left them alone. I am satisfied if I don't shoot another one this fall. I hear of some very small birds being seen—hardly large enough to fly. I think in such cases the old birds' nest was destroyed by the mowing machines in July, and they made another nest and hatched a late brood. I have heard of only one other quail being killed in town this fall. Two good men with good dogs hunted all day yesterday and didn't find a bird.

Woodcock have been scarce. I shot a few native birds, but there seems to be no flight of the Northern bird along yet, and there ought to have been in this moon. Hunters get $1 per pair in Boston for the birds, which is high.

Rabbits seem to be more plentiful than for years, but the hills seem to be full of old burrows made by skunks and woodchucks, into which they scurry pretty lively after being started. If we can keep the ferret fiends away there will be plenty of this game left over.

Gray squirrels are fairly plentiful, this being a bearing year for nuts. Have heard of a raccoon being killed in Middleton. I think a man with a good dog could find good hunting in the Andover woods. The fox hunters have had very good luck so far, as I suppose, but I am not much of an authority on this sport. It seems to me about like going buffalo hunting on Cape Cod, but I admire the pluck and perseverance that goes to make up a sucessful hunter. We have three up at this end of t town that can hold their own in any crowd—Dr. E. H. Niles, E. H. Langdon and Arthur Beckford. Mr. Langdon hung another large fine red to his belt a few days since. Then there is Capt. Martin and D. S. Brown, o Tapleyville, who think the sport about to their liking an get their share.

The leaves are well off the trees and owing to the dr weather the swamps are quite free from water, so tha the hunting conditions are unusually good.

On the coast they are having good coot shooting, bu it is poor sport to shoot the old fool fowl. They don' seem to know anything. They will decoy to anythin that floats, from a chip to a barrel with a boat hitched t it. Shoot half the flock and they will then go 100yds and bite again at the same bait. They are hardly fit t eat unless you know just how to cook them, and so toug you have to skin them to get the feathers off. I didn' hear of many snipe on the flight here, neither have I see any geese going south yet. JOHN N. BABBITT.

CHICAGO AND THE WEST

CHICAGO, Oct. 28.—The majority of the ducks workin on the Calumet Marsh now are mallards, and in th gamble of shooting chances in so much shot a country, on might on almost any day of the week pick up a half-doze or more mallards along that marsh. The dam at the rail road crossing is backing up the water, and while it ha ruined our little snipe corner, it is slowly improving th ducking ground.

Near the End.

It is likely that we are near the end of our snipe seaso now, as we have had very heavy cold rains for the las three days, which has probably sent the birds on South I think they came down during the late moonlight night and fine weather. Most of the birds killed this week hav been very poor of flesh.

The Quail Season.

However disappointing may have been the duck an snipe season this fall, the quail season will more tha make up for it. Quail have never been more abundan in the West than they are this year, and it is pleasing t feel that there may be abundance of sport for the nex few months in one part or the other of the South o West with these birds, which offer what I have alway thought to be the finest sport of America. If you g grouse hunting you get rough walking and a few bird If you go snipe shooting you get wet and muddy. If yo go duck shooting you get up early in the morning. Bu when you go quail shooting, provided that you have plen of birds, and provided also that you have good dogs, yo have abundance of good, clean shooting of a natur difficult enough to offer sport. Moreover, if you kill good bag of say a couple of dozen quail, you have not got great pile of meat to reproach you.

It will be easy to direct shooters to good quail countr this fall, for the birds are abundant from this latitud south, all the way from Ohio to Kansas, and as far sout as the Gulf. I would say take the Illinois Central roa south, for instance, or say the Monon in Indiana. Any where a hundred and fifty miles south of Chicago ought t bring one into good quail country around the smalle villages. I have reports from lower Michigan which stat that the quail crop is in some places very good, though i others the birds seemed to have winter-killed a little b last year.

To-day I have met in town friends just up fro Tennessee and Mississippi, and these tell me that th quail crop, or the "bird" crop, as it is called in th South, is something extraordinary. At Woodstock, Luc and Millington, all points not far from Memphis, th birds are very numerous indeed. Mr. Wilbur A. Jones, c Port Gibson, Miss., tells me that in his neighborhood th birds are very abundant.

Speaking of the South, I am reminded that Memphi shooters have within the last week or so been having ver good duck shooting, also at Beaver Dam and Bear Lak south of Memphis.

In the West.

A party made up of Messrs. T. P. Hicks and Sila Palmer, with Lieutenant of the Warren Avenue Polic Station, this city, left some time ago for Tracy, Min They have apparently had very good success, for the have sent home a great many ducks to friends in the city Returning from Minnesota, these gentlemen came as fa toward home as Milwaukee, but then started back, an are now in northern Wisconsin somewhere after big gam This makes the matter of their license foot up a very pret figure. It is getting so these days in the West that it cost something to own and operate a shotgun.

Mr. Fredric W. Jenkins and his friend, Mr. C. H Hotchkiss, both of Binghamton, N. Y., reached Chicag this week and called at the FOREST AND STREAM office t ask where they were going. They had had all their plan made for a trip in Routt county, Colo., where they ha been invited to join a rancher who was to take the out. At the last minute, however, these plans fell through and the gentlemen when they reached Chicago were u decided as to whither they should head. I told them to g out to Mr. William Wells' hunting lodge, at Wells' Pos Office, in Uinta county, Wyo. They were headed that wa when last seen, and I trust will have a pleasant trip. I they do not on such short notice catch Mr. Wells himsel they should certainly be able to find a guide in that terr tory, where they would be near to very good game cou try, and unless the cats have got all of Mr. Wells' dog they ought to have some fun with lions and lynx. presume they may get some snow before they get out, bu they both looked as if they could stand it. They hav both hunted in Canada and New Brunswick, and eac has killed caribou and moose, so that the sight of th Rocky Mountain big game ought not to jar them.

I was talking with George Thorne, of Montgomer Ward & Co., this city, the other day, and he tells me tha on his Western trip he went in at Libby, Mont., an hunted in the Kootenai country. He says he is fairly we pleased with his trip, in spite of the fact that he did no kill very much game. The bear he got was a black bea but a very fine one. They ran across the bear in a thicke

d Mr. Thorne jumping up on a log got a running ot, catching the bear squarely through the heart. He ys it made quite a fuss in the thicket for a while, but nt only a few steps from where it was shot. He used 30-30, and in this case that weapon proved good enough a bear. I have been talking with a good many hunters ely who have been out after big game with the small- re rifles, and I think the general agreement among them that the .30-40 is a better weapon for very large game in the .30-30. For instance, Mr. Jenkins, of Bingham- n, tells me that he killed two moose in two shots with .30-40. Indeed, I am not sure but it was three moose three shots. Nearly all agree that the .30-40 is a terrible apon. I have never shot the .30-40 myself, and have ly to say regarding the .30-30 that it is the sweetest ooting weapon I ever put to my face.

Speaking of bears naturally reminds one of our old end Capt. Bobo, of Mississippi, the man who out of all nerica is best entitled to wear the name of the Big Bear lief. I wish I might give only the best reports of pt. Bobo's health and happiness, but I am told to-day t he is having very bad trouble with his right eye, which s become involved with inflammation from a little nor. It is sad to think of Bobo not hunting bear, but I nk he is not hunting this fall. There never was a ger-hearted man than this same Bobo, and his like in canebrake never crossed a saddle.

Gen. Nelson A. Miles, Commander-in-Chief of the U. S. my, was in Chicago this week on his way West for a le hunting trip near the ranch of Buffalo Bill. It ght be supposed by some that during these days of war n, Miles would be chained to business at Washington, t he knows very well that the boys can take care of this o-for-a-nickel war, and meantime he can take a little cation on his own hook. Our war does not seem to be very big one compared to the one in South Africa, at y rate.

Speaking of wars and rumors of wars reminds one that ne awfully good fellows turn up in the Army in the hting times. Here was Johnny Roberts, who used to the Roberts Resort up at Neenah, on Lake Winne- go. Johnny had all kinds of money, and he devoted nself seriously to having a good time. He was over Cuba last year knocking around, and he spent some time Florida in one place or another since then. Then he ms to have suddenly concluded that times were dull this country, and I have just heard that he has enlisted d gone to Manila.

The Gaylord Club.

The Gaylord Club, of Wisconsin, is one of the pros- ous sporting institutions of the Western country. In president, Mr. Fred M. Stephenson, of Menominee, ch., it has a typical Western sportsman, though I might d that the type sets a rather hard pace to follow. Mr. ephenson is a splendid shot with rifle or gun, a skilled ster with bait-reel or fly-rod, a fiend to walk, and a se student of the things of the outdoor air. He has veled pretty much everywhere, owns pine lands in chigan, Wisconsin, Louisiana and Texas, is a coffee nter and vanila grower in Mexico, and for all I know s a cucumber garden in the Arctic Circle. Moreover, he an epicure as may classify under the definition of our end Bill Werner, the chef, "An epicure is a man who n eat anything without getting sick." But what I rted out to say was that the Gaylord Club is carrying t its plans in very sane and generous fashion. Situated ar some very good trout streams, it has established a ut hatchery of its own, which is rapidly developing into e of the best in the State. Deer and trout bid fair to be undant for a long time around the Gaylord Club.

E. HOUGH.

80 CAXTON BUILDING, Chicago, Ill.

The Coon Season is On.

BOSTON, Oct. 28.—A. W. Hayford is another success- l Boston gunner. He has been on a trip after big game Millinocket and the lakes and waters above. He saw great many deer, and could have obtained a number of es, but waited till the day before his departing for me, when he killed two handsome bucks. Partridge ooting was excellent. He met another hunter, who had en still further up the line of the railroad after moose. e had seen a very large number—eighteen or twenty— t all cows. Another hunter, who has been into the me section after moose, was rewarded by his guide get- g an answer to a call, after the fourth night at that st thrilling amusement. The bull came down bellowing d grouting, and the hunter was ready. The water lashed and the bushes opened on the bank. The hunter d his rifle at his shoulder, with trigger-finger strained most to pulling, as a big animal hove in dim sight. Don't fire!" whispered the guide. "It is a cow!" That e hunter was disgusted goes without saying. But after he was grateful to the guide, who had saved him from e heavy fine attached to the killing of a cow moose at y time in Maine. Mr. Walker, of Boston, has suc- eded in getting a fine moose in the neighborhood of shland. He saw others, including a great many cows. is idea is that moose have increased; cow moose pecially. Messrs. A. L. Belcher, C. C. Stanchfield and T. Prescott, of Boston, are out of the woods with six ndsome buck deer, taken in the vicinity of Lobster ke. They speak in the highest terms of the hunting in at vicinity. They met a moose hunter who was very dignant at what he considers the height of hunting im- dence and unfairness. His guide had industriously lled and called for moose till at last a bull came down, d the hunter was about to fire, when bang went the rifle another hunter, not far away. He did not hit the oose but scared him away. With his guide paddling as st as possible, the first hunter pursued the other canoe, ith the intention of giving the second hunter a piece of s mind. But the pair disappeared in the darkness.

Coon hunting is good in Maine this fall. A peculiar ature is that one does not have to go back into the big me regions to hunt coon. They are more abundant in e farming regions in Androscoggin and lower Oxford unties. A Boston drummer, on a business trip, stopped Lewiston the other day, and had an invitation to join a coon hunt that night. The temptation was too great. hey went down to a farming section near Sabatis, where the coons had been feeding on sweet corn all the fall. They had a dog with them noted for finding and treeing coons. They wandered over stubble fields and through patches of wood for an hour or so, when at last the dog barked and went for a big oak not far away. The hunters made for the same tree, and it was plain, from the antics of the dog, that the game was in it. The tree was too big to fell, and there was nothing to do but to wait till daylight, to see to shoot. A big fire was built, and the hunters disposed of their tired limbs around it as best they could. Somewhere near morning the Boston drummer says that he had fallen partly asleep, when thud went something to the ground. It was the coon, tired of waiting for the hunters to depart. The dog was after him and soon had him up another tree, where, with one of the hunters, he stood guard till morning. At daylight the coon was shot. But the first tree had not been deserted, and three other coons were shot from it. The drummer did his part, bringing down one of the coons with a shotgun. He says that waiting all night at the foot of a big oak tree in an open pasture is cool and dewy—no pun on the Admiral intended—work, but somewhat exciting when it gets light enough to see the little, bright eyes through the branches. Boston markets are receiving an unusual number of raccoons this fall.

BOSTON, Oct. 30.—Again the newspaper reports are noting more sportsmen than ever before in Maine, and the amount of game secured is greater than last year. Every year the same story is told, and it may be true and it may not. It certainly comes from sources that take little pains to be accurate, and have no interest except to boom the regions about which they write. It is claimed, however, that statistics compiled by the railroads show that the month of October, up to and including last Friday, included shipments of deer into and through Bangor to the number of 1,034, with 53 moose. This number is considerably greater than for the same period last year. The deer are reported to have generally been of medium size, and largely does, though a few fine bucks have been seen among the number. This is not unusual, the big bucks coming after the snow falls, when it is easier to find them. The moose are running about up to the average, none being booked above 800lbs. SPECIAL.

Slaughter vs. Sport.

From the Pittsburg Daily News, Oct. 21.

Now that the hunting season in this State has been opened with so much vigor and enthusiasm, the prospects for "big bags" never having been better in late years, a country editor who is in a position to judge calls attention to a perversion of the sport, which, if persisted in, can have but one effect: the depopulation of our woods and forests of almost all kinds of game. Hunting matches, in which the participants take sides to see which can slaughter the greater quantity of game in a given time, are now "all the rage." To add zest to the sport, after the butchery is finished the contesting teams sit down to a supper paid for by the losers. These matches have become very common, especially up in the northwestern region of the State, and reports of the wholesale killings of game are frequently chronicled in the country press.

The idea of setting out as one of a party of hunters whose avowed object is to slaughter more game than another party for the purpose of avoiding payment for a supper is abhorrent to the instincts of every true sportsman. The man whose object in hunting is simply to kill every wild thing in sight is a butcher, not a sportsman. Wise laws for the preservation of game in Pennsylvania have been passed by the Legislature, but they will be of little effect if these disgraceful hunting matches are to continue. Go into a piece of woodland where one of these hunting matches has recently been conducted, and you find yourself in a silent region from which birds and animals have fled. Those not laid low by the bullets of the wholesale hunters have been frightened away by the shouts and bombarding, and may never return. Thoughtlessness is responsible in great measure for this deplorable condition of affairs, but the carelessness of some hunters is no less than criminal. Any gentleman whose attention is called to the mischief he is working would doubtless be considerate enough to give up this kind of sport, but sterner measures may be necessary with some of the others. For it is apparent that among these wholesale hunters there can be very few real gentlemen and genuine sportsmen.

An Indiana Party in the Rockies.

PORTLAND, Ind., Oct. 28.—*Editor Forest and Stream:* The party of nineteen that went from here the first of the month to hunt near the Yellowstone National Park returned on the 24th inst. They made a tour of the Park by stage coach, then undertook to reach the elk in the mountains. They got near enough to see a very large herd moving about in the timber some miles above them, but a snowstorm caught them and they were compelled to retrace their steps. Dr. Mackey says they shoveled snow 2ft. deep to pitch their tent, and at times were in snow to their shoulders. An old scout undertook to break a trail for some of the boys, but his pack mule got into snow to his neck and refused to go further. They got two antelope and some small game, and say that the sight-seeing paid them well for the trip. G. W. CUNNINGHAM.

A Tame Deer Chase in New Jersey.

THE village school at Holmdel, near Matawan, was disturbed and broken up Thursday morning by the sudden appearance of a deer. The deer jumped through a side window of the schoolhouse and landed in front of the teacher's desk. All the pupils ran for the doors and windows, making a hasty exit. The deer stood in wonderment and waited for an opening through which to leap. Outside could be heard the baying of a pack of hounds, and as the deer listened he darted about the room. Several hunters in scarlet coats came into the room and drove the deer out. This animal was the property of P. F. Collier, who had loosed it for a chase.—New York World.

The Mind and the Trigger Finger.

One hears, or has heard, a great deal about the physical side of shooting; the other side, the psychological, is far less frequently touched upon, either in print or in the conversation of shooting men, for the average shooting man is not much given to introspection with regard to the mental and instructive forces which are called into action during an ordinary day's sport with the gun. In dealing with a purely subjective matter, such as that embraced by the title, one must perforce assume a certain position of dogmatism, and thus leave one's self open to the criticism of those who chance to take different views.

Shooting, to be dogmatic from the first, makes a far greater call upon the collective faculties than any ordinary occupation, and, more than this, a greater call than that which is necessary successfully to pursue any other kind of sport. Any one who masters the manipulation of a fly rod and has made himself familiar, by hearsay or reading merely, with the tactics essential to success, can go to the water and not only hook his fish, but land them as well. When doing this he exercises the senses of sight and touch, the mechanical function of casting the fly, and the judgment which prompts him to play and land his captives. Again, any one who masters the physical art of sticking in the saddle, both on the flat and over his fences, and has sufficient nerve to ride across country, possesses all the acquirements necessary to ride to hounds. The hunting man exercises the senses of sight, hearing, and touch, the quality of pluck, and, if if he is to be anywhere near at the kill, judgment. Though he needs pluck or nerve, which the fisherman does without, the tax upon his senses and his judgment is inferior to that which is imposed upon the judgment and the senses of the angler. The latter's whole mind is centered upon fly or float. He holds himself, by continuous sense-concentration, ever ready for instant action—on a decision to be made in a fraction of a second may depend the hooking or the loss of a fish. The hunting man when exercising his judgment has time to deliberate; the fisherman seldom has.

Shooting, unless it be of the tamest kind, exercises the senses in a high degree. Hearing is a sense dispensed with by the angler—that is to say, he puts no tax upon it. On the other hand, the shooting man's sense of hearing is continuously strained to catch the slightest sound which may tell of a coming or a rising bird. That instant, instinctive jump of the gun—it seems almost as though the volition which causes it is in the gun itself—which greets a sudden sound tells of the high state of tension to which this particular sense is subjected. No less a strain is placed upon the sense of sight. Taking sight and hearing together, then, the tax made upon the senses of the shooter is far greater, as well as more continuous, than that made upon the senses of the hunting man or the angler. In the matter of touch the gunner requires "hands" quite as much as the rider or the fisherman; in the matter of judgment he makes fully as large a draft upon his calculating faculties as does either of his fellow sportsmen—probably larger. And beyond this he exercises yet a further faculty, as, dogmatically, we shall see.

A novice capable of sticking on can ride to hounds; the same novice, having made himself conversant with the ordinary procedure of the angler, can go to the stream or the river and catch fish, though he may never before have caught one in his life; the same novice may make himself at home with the handling of a gun, and may read every word that has ever been written on the subject of shooting, yet let him go into the field for the first time, and he probably will not be able to stop one driven partridge in fifty, or perhaps one rocketing pheasant in a hundred. And this brings us at last to the purely psychological side of shooting. At first glance it would seem as though the only things necessary to make a man a good shot are practice and simple judgment; but this is not the case. One sees a large number of men who have shot for many years, and yet are rank bad shots at the best. Their faculties are fully developed; they may excel perhaps in things other than shooting; they may even have shot all their lives; and yet they have never been able to acquire the power of stopping their birds.

The shooting tyro begins by missing bird after bird. Before very long he can, we will say, kill one bird in three flying straight away from him. But though he can do this, he may not be able to stop one crossing bird in a score. Shooting at the bird going away from him he exercises a simple mechanical function; he raises the gun, covers the bird with the sight, pulls the trigger, and the bird drops. Shooting at a crossing bird he must use judgment, and straightway he endeavors by the use of judgment to find out what particular allowances are necessary to meet that ever-varying quantity, the sum of the speed, distance, and angle presented by the different individual birds which come within range. Judgment, or rather conscious calculation, of the sum of distance, velocity, and angle is, however, only exercised in the early stages of the gunner's career, if he has in him the making of a good shot. Before long he begins to feel, to appreciate instinctively as it were, the point at which his charge must be placed in order to stop the bird, just as he can feel that he has shot behind a bird, or over it, or under it, as the case may be. In short, he crosses the line which divides conscious from unconscious calculation. This unconscious calculation is, to all intents and purposes, a latent instinct roused into being and quickly developed by a special call imposed upon the mental faculties to make extremely rapid calculations in order to bring about a special result. Though the result one aims to achieve is constant in itself, the means necessary to bring it about vary with each particular bird shot at, and the variation is wellnigh infinite. In a day's partridge driving seldom do two birds present the same combination of speed, angle and range before the sportsman's aim.

We hear it said of a good shot that he has "got the knack of stopping his birds." But what gives him the power of stopping them is something more than mere knack. It is knack that enables him to bring his gun to bear like lightning when taking a snap shot. Any one can acquire the knack of rapidly handling a gun. With the physical act of instantaneous sighting knack ends. In the moment of time which is allowed for a snap shot the gunner's mind unconsciously calculates distance and ve-

locity, and his muscles obey his mind. Ask him what calculating process he goes through when he stops a rabbit flashing across a 10ft. ride 30yds. away. He cannot tell you. He shoots by instinct, by unconscious calculation—and kills.

I belive I am right in saying that every first-class shot is also a very quick shot. If this is not strictly accurate, at all events the rule holds good in most cases. The necessarily limited experience or observation of a single individual is never of much worth as a basis for forming general conclusions; but I may say that never yet have I met with an instance of a good shot being otherwise than a quick shot, or of a slow shot being a good shot. The slow shot uses conscious calculation; so long as he remains on the wrong side of the line dividing conscious from unconscious calculation he will never shoot anything but badly. If he has been shooting for some seasons and has failed to develop the power of unconscious calculation, nothing can ever transform him into a good shot, any more than a man born without an ear for music can ever be transformed into a good musician. In both cases Nature withholds a certain faculty without which the attainment of efficiency is impossible. When once one has come to shoot instinctively, which means also quickly—killing one's birds almost at the moment they rise, and making every shot practically a snap shot—a return to deliberation and conscious calculation—shooting slowly, that is—would mean a large falling off in the proportion of kills to misses if systematically pursued. In the case of a good shot the first, the instinctive aim, is the aim most likely to kill. Every foot he follows a bird will decrease his chances of killing it; the longer he pauses the less instinctively will his mind act, for conscious calculation must, to a certain extent, make itself felt with delay. Who has not, let us say, kicked up a rabbit, raised the gun deliberately, followed the rabbit for 20yds. or 25yds., felt dead sure of the shot, pulled the trigger, and, to his astonishment, missed? The easy shots, the shots one takes one's time about and feels certain of, are often the shots one misses most easily. And let me say in a concluding sentence that I am fully aware both of the controversial nature of what I have written, and also of its weak points when put to the test of argument. It is merely the opinion of an individual.—London Field.

Jersey Ways Just Like Some Others.

PATERSON, N. J., Oct. 26.—*Editor Forest and Stream:* Kindly permit me to take exception to the statement made in your last issue by Mr. H. N. Munn that the sportsmen of New Jersey have anything whatever to do with the framing of the fish and game laws of the State. It is true that sportsmen anuually go to Trenton and submit their views, to which the committee listens with more or less patience. After this useless formula has been gone through with, Mr. Hayseed from Wayback county goes to the committee and delivers himself as follows: "There is a whole lot of game and fish and a whole lot of different seasons. I have a blacksmith, a good friend of mine, who wants to shoot snipe in September and only in that month, and if you will conform to his views I will vote for your bill. That is all I ask, and because it is so little I think I ought to have it." Mr. Hayseed is followed by a dozen or more others each demanding something particular, and the result is the kaleidoscopic variety of fish and game laws to which people point when they argue that New Jersey is not in the Union. The Senate of New Jersey some years ago passed a bill permitting the use of nets at all times of the year in all the fresh waters of the State for the taking of pike, the reason therefor being that a nephew of one of the Senators had a small pond from which he wanted to take pike for breakfast once in a while. CHARLES A. SHRINER.

Tricks.

ST. JAMES, Minn.—There is a column in FOREST AND STREAM called "That Reminds Me." I have often thought a good one could be started on "Tricks." So many little things are known by certain readers that are not known by others, that an exchange might be made with profit to all. I have learned one lately I consider good. If not new to all, at least it was to me and may be useful. Skunk odor is hard to get off, but it can be done almost instantly with the common carbolic acid sold in the drug stores. Also two teaspoonfuls in half a pail of water will kill the fleas on a dog instantly and without harm to the dog. I have been frozen out in Assinaboia and have run down here to catch a few ducks before winter sets in. PINK EDGE.

Remembrance and Appreciation.

IRONTON, Ohio, Oct. 24.—We are having glorious autumn weather, and report comes of a fair game crop. The law is fairly enforced here, and a sooner is very sly. Giving the right to kill rabbits at all times causes the untimely death of some quail.

I was sick and confined to my home. A brother sportsman rang the bell and asked to see me at the door. He handed me a small package, saying, "Jim, put that where it will do you the most good." "That" had a beautifully mixed plumage, white and brown and gold; and on a slice of toast was fine. The gift pleased the eye and afterward the palate. JAMES DUPUY.

Southwest Florida.

FORT MYERS, Fla., Oct. 23.—A bear and two cubs passed within a mile of Fort Myers to-day. One cub was captured by a school teacher—Sellers, by name.

Quail are more plentiful than for years. Turkey are being killed within three miles of town, although the closed season is not yet off. Deer very plentiful.

The prospect is that this will be the best season for shooting that Lee county has known for many years.

English snipe coming in thick. Duck shooting good at Lake Flirt. W. F. M.

What He Cannot Understand.

A SHOOTING friend says he can't understand why it is that he can stand on the shore and pump lead into a block of wood floating 200yds. away until his arm gets tired, but can't hit a bunch of geese at the same distance. X.

Game in Pennsylvania.

THE gunning season this year in Pennsylvania opened with good prospects for Nimrod's disciples, especially in Monroe and Pike counties. Pheasants are numerous, and a number of deer and a few bear have been kicked up by sportsmen in their tramp over the barrens and swails in pursuit of game.

Good reports come from Spruce Cabin, located on the well-known "Broadwater" Canadensis, reached via Cresco on D., L. & W. Ry., and a number of sportsmen, some with their families, have already arrived to enjoy the fine facilities of this mountain resort.

Among recent arrivals who bagged considerable game were Eugene Smith, Hoboken; Prof. T. H. McCoal, Philadelphia, and T. F. Rose, Camden, N. J.

READER OF FOREST AND STREAM.

Long Island Duck Shooting.

DUCK shooting is reported at its height on the Great South Bay of Long Island. Almost all the varieties found in these waters are now there—black ducks, redheads and woodbills.

Sea and River Fishing.

Bermuda Fish in the Aquarium.

IN the New York Aquarium the fish that are admired most and excite most interest on the part of the public are the brilliantly hued and curiously shaped denizens of the tropical waters of Bermuda. Here are pictures and descriptions of the most characteristic of these species now to be seen in the Aquarium tanks.

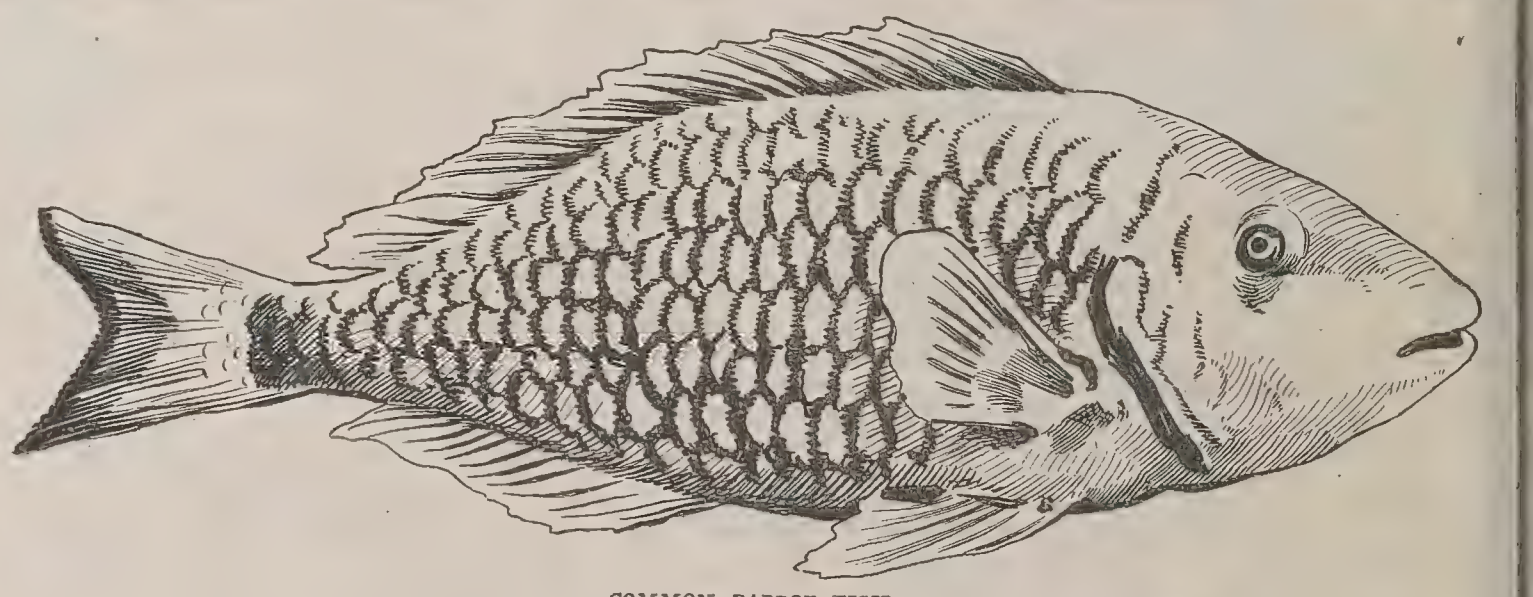
First in point of attractiveness of color and in general interest is the angel fish. It is of a flattish shape. The back and the ventral fins are each prolonged into a graceful winglike appendage; hence, of course, the name. Any attempt to give a definite description of the colors of the gaudy angel fish would be futile, as its constant movements, together with the peculiar effects of the downward falling light, give rapid changes in hue, making an exact delineation of its colors difficult. However, the predominating colors are a bright green and a cobalt blue, the green on the body running off into blue patches around the head and gills, and the blue on the tail and wings blending in places to a delicate purple and pink. The tips of the wings and the fringe of the tail are a bright yellow. The angel fish is considered fine eating. Its name certainly would look well on a menu.

The first thing that strikes one on seeing a school of four-eyed fish is that a lot of animated peacock feathers are passing before our vision. This fish has the usual, although small, pair of normal eyes. The so-called third and fourth eyes are merely two large spots of shiny black and are on that part of the body just back of and opposite to where the real eyes are placed. The eye-spot, or ocellus, as it is technically called, of the four-eyed fish resembles the eye-spot of a peacock's feather, and the markings of the fish consist of lines of color branching from a central shaft and running gracefully backward like the barbs of a feather.

The squirrel fish is of a uniform bright pink, with a metallic sheen. The eyes are large and red and surrounded with blood-red rings—deep blood red; the eyes seem to be suffused and ever on the point of shedding tears of blood. This fish has long, stiffly set, erect and pointed fins and a two-forked tail.

The trigger fish is of a dull brown color, but is of interest on account of a sharp spine on the top of the head just above the eyes. This spine is capable of an u and down trigger movement and is used for defensive ar offensive purposes.

The surgeon fish is similar in color and general a pearance to the trigger fish, but it has two spines, lanc like in form, and placed one on each side of the bo near the root of the tail. These spines are folded sheaths when the fish is in a peaceful mood, but in contest are raised at right angles to the body and us



FOUR-EYED FISH.

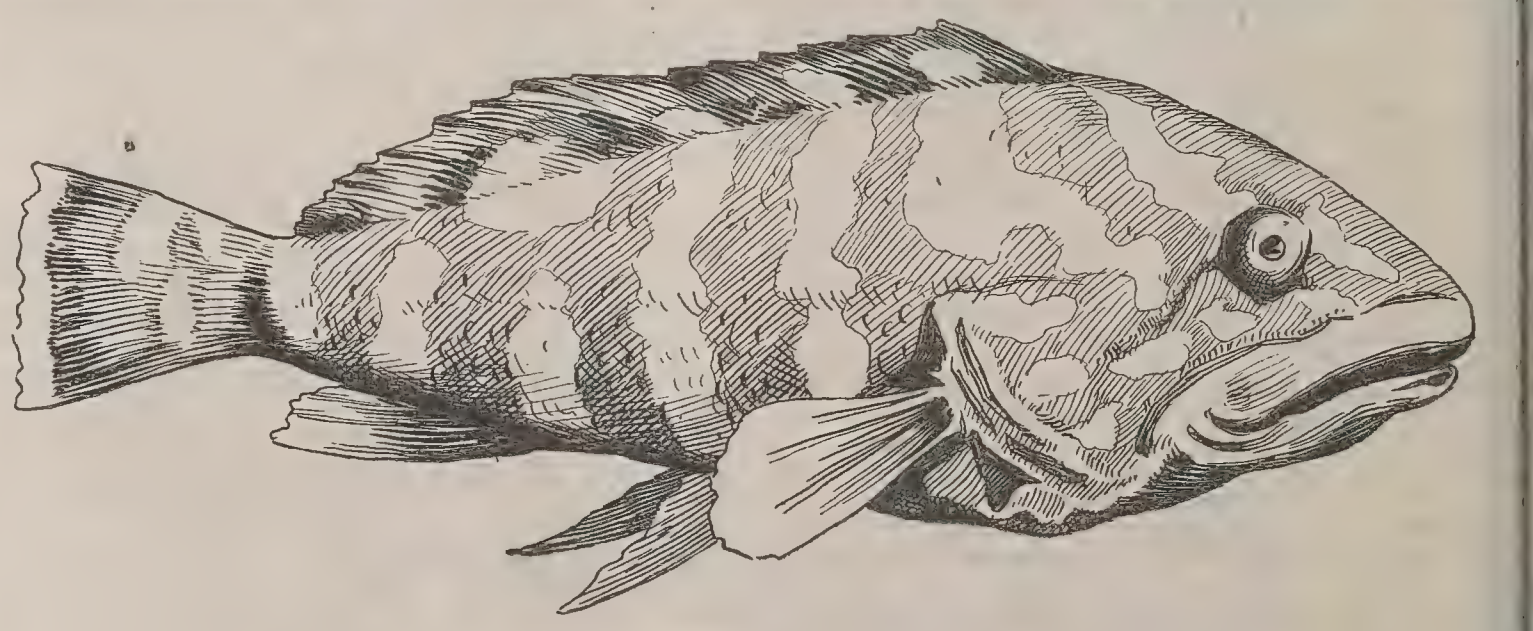
to slash about and cut the opponent. The erect spine also preclude any possibility of their owner going dow the throat of a bigger fish, as they will catch in the mout or the throat of the eater.

The grouper is a sad looking fish, with its large dow ward sloping mouth. They have a fondness for groupin themselves in rows, military fashion, heads all facing th same way. The grouper has the power of suddenl changing color; but the usual markings are brown an dull white in irregular broad vertical bands. It is a excellent food fish.

The trunk fish has an angular body, with quick-movin paddlelike fins and a rudderlike tail. This fish, with it odd shape, its unfishlike outer covering, and wit

COMMON PARROT FISH.

the mechanical movements of the fins and tail, look like a miniature submarine boat.



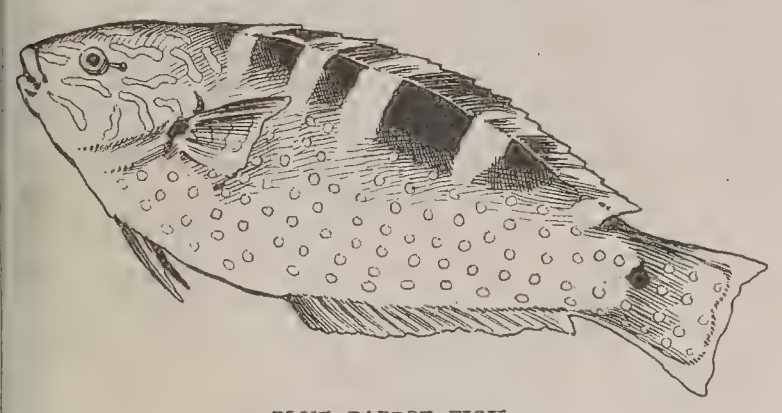
The cow fish gets its name from the possession of tw horns, projecting forward, at the top of the head. Wit the exception of these horns, it resembles in appearance as it does somewhat in habits and manners, the trunk fish

The blue parrot fish is a small fish beautifully marked On the back are four bars of pure white alternating wit bars of intense black. The ground color of the rest o the body is orange, which is besprinkled and marked wit dots and wavy lines of a bright blue.

The common parrot fish has scales of the tints o mother-of-pearl. Each scale is bordered with black. Th tail and fins are of a brilliant orange. The edge of the tai is fringed with black. Similar in shape, but very much larger, is the green parrot fish, of which kind there ar two fine specimens on view. The color of these is o a uniform green, with a suggestion of cobalt blue, a colo that sometimes goes under the name of Nile green.

The silver bream's charm is in its sober tone of silver gray, with a few delicate stripes of a darker color. A dark spot near the root of the tail is a characteristic and distinguishing mark.

While the artist was sketching the sergeant-major among the people passing by two made similar observations regarding fish. One called it a prison fish, the other

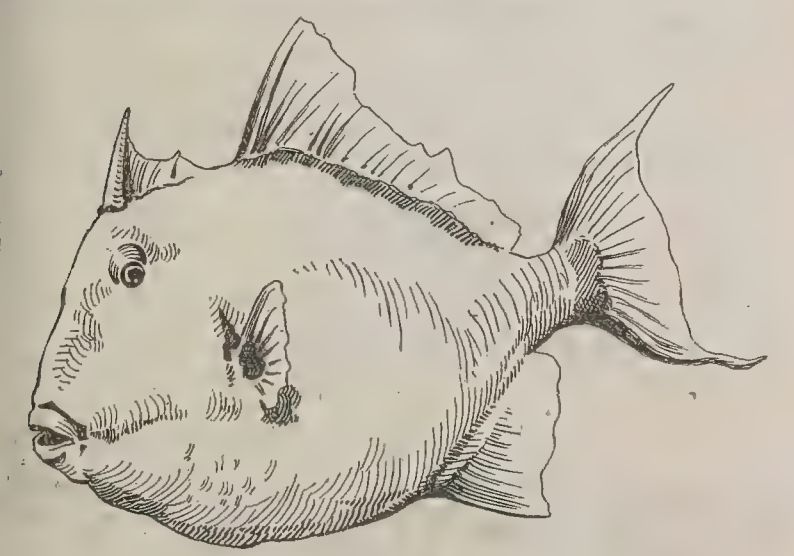


GROUPER.

said it looked like a convict. The fish is certainly easily identified by the five up-and-down bars of black on each side of the broad flat body. The color not covered by the bars is of a metallic green.

E. LUTZ.

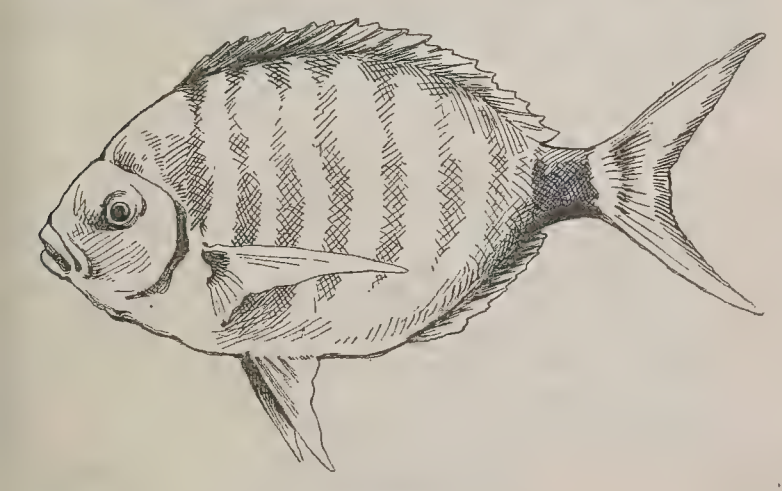
CONCERNING the food qualities of some of the species described by Mr. Lutz, James Macdonald Rogers writes in the Popular Science Monthly:



Considering the number of unwholesome fish abounding in these waters, and the numerous cases of illness caused by them, I was surprised on investigation to find that so little appeared to be known or written on the subject. During my three years' cruise in the West Indies

BLUE PARROT FISH.

the study of those fishes reputed to be poisonous was forced upon me by reason of the numerous cases of illness among the sailors of my own ship. When it is asserted that there are no less than sixty varieties of noxious fishes to be found in Cuban waters alone, it seems desirable that those who are about to settle in these parts should have some general idea as to what fish to choose and what to avoid.

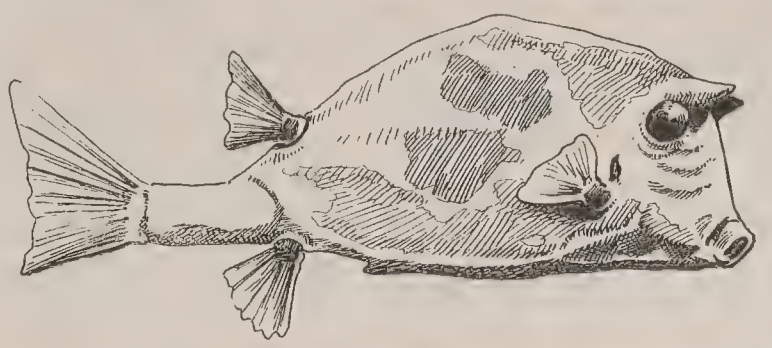


One of the commonest fish in these seas is the barracuda (*Sphyræna barracuda*), which can be easily recognized by its elongated body, covered with cycloid scales. The color is dark olive green on the back, fading to a lighter green on the sides, while its under surface is silvery white.

TRIGGER FISH.

The mouth is wide and curved with long and sharp teeth. These fishes are large and voracious, often attaining the length of 6ft.; and as they are usually found close inshore, amid the heaviest surf, they are as much feared by fishermen and bathers as the shark. The poisonous symptoms caused by this fish are peculiar, and were strongly marked in the case of a friend of mine, who was a solicitor, living in Barbados. His face swelled up and became tubercular like a leper; afterward, general muscular tremblings and acute pain about the body, particularly in the joints of his hands and arms, came on. The nails of his feet and hands became black and fell off without any pain, and his hair also fell out.

The "yellow-tailed sprat" (*Clupea thrissa*) is common

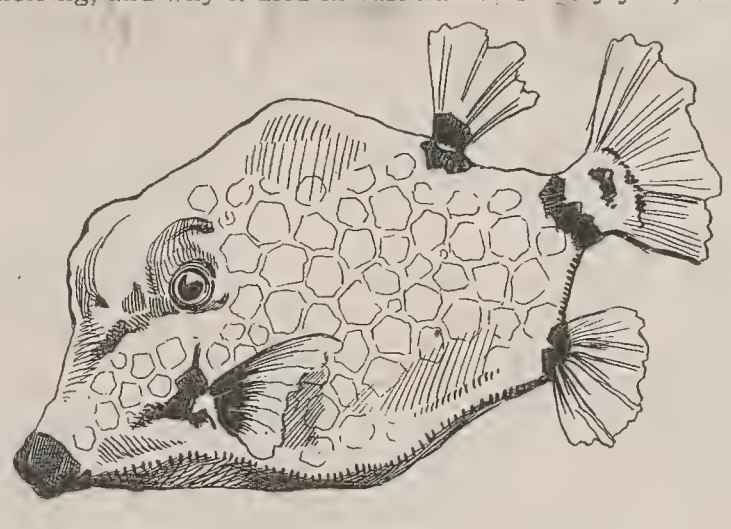


SILVER BREAM.

in the West Indies, and may be recognized by having its last dorsal ray prolonged into a filament. A black spot behind the gill cover is said to distinguish it from a somewhat similar fish, the "red-eared pilchard," which has a yellow spot behind its gill cover. The eating of this poisonous "sprat" is said to be followed by most violent symptoms and rapid death. The common saying in the West Indies, that if you begin at the head you never have time to finish the tail, is almost literally true. Most of the cases of fish poisoning which I have met with in the West Indies have been due to eating various kinds of "snappers," especially the "gray snapper." The tropical species are very numerous and difficult to differentiate, owing to their frequent change of color, according to age and surroundings. In 1897 at St. Georges, Grenada, twelve persons who partook of a large gray snapper were attacked with severe symptoms of fish poisoning. A few hours after the meal all these were suffering from pain and fullness in the stomach, followed by persistent vomiting, severe cramps, watery evacuations, weak, thready pulse and labored respirations.

The horse mackerel, green cavalla and the jack are often found most unwholesome when caught in West Indian waters. The "jack" (*Caran plumieri*) is found to be poisonous in some seasons of the year, and it is said that at such times two small red lumps appear in its gills. Toadfish, or *Tetrodons*, are occasionally met with, and are to be avoided as being extremely poisonous, especially if the roe or liver be eaten. The *Diodonts*, "trunkfishes," are not nearly so poisonous as the *Tetrodonts*, but they are found to be very noxious at certain times, or in certain localities, more especially if the gall bladder, liver and intestines are not removed before cooking. It is reported that those persons who had eaten them suffered from loss of sensibility, cold sweat over the whole body and stiffened limbs. Death followed in some cases.

The "prickly bottle fish" (*Diodon orbicularis*), met with in the Gulf of Mexico, is said to be injurious when eaten. The *Ostracion triqueter*, called in the West Indies "fair maid," "platefish," "trunkfish," is often eaten with no ill effects by the negroes, who, after cleaning it, bake it in its hard shell-like covering. There is, however, a gelatinous matter near the tail which is called "the jelly," and a similar substance is found near the head. When only part of this jelly has been eaten its effects are a peculiar vertigo, nausea, vomiting, pains all over the body, more especially in the limbs. The "filefishes," or "trigger fishes," when found in the tropics where they feed on coral polypi, have the reputation of being most unwhole-



COW FISH.

some. Dr. Gordon, of Montego Bay, Jamaica, records a case of death from eating the flesh and liver of a species of coast conger (*Gymnothorax restratus*). In spite of treatment, the man died after a lingering illness. Space will not permit me to dwell, in this article, on the remaining noxious fishes, but it is to be hoped that enough has been written to teach people to be cautious in their selection of fish when in the West Indies.

ANGLING NOTES.

The "Sawbelly."

IT is unfortunate that one should write upon a certain subject for publication and afterward forget entirely where the story was printed, but this evening I find myself in that situation. To the best of my recollection some one asked me about the fish locally known in Lake Ontario as the "sawbelly," its other names being alewife or French herring, and why it died in vast numbers every year, both

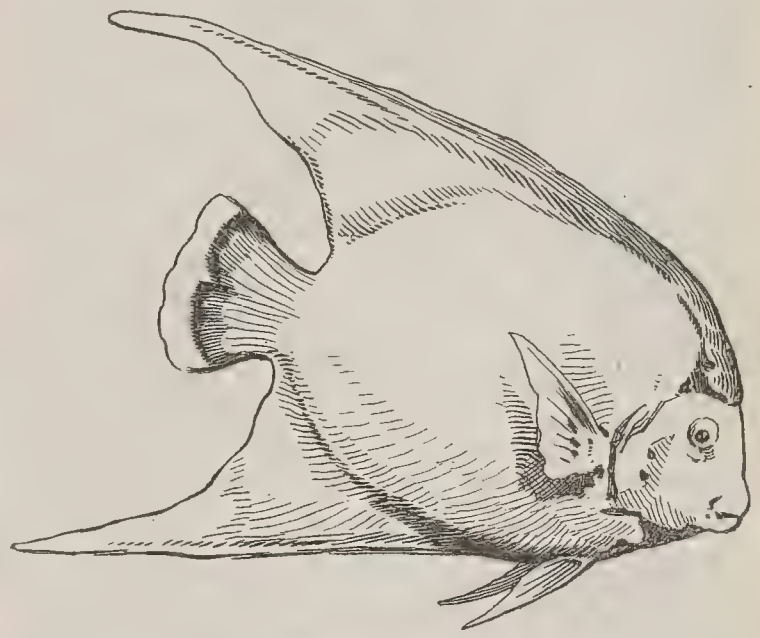
TRUNK FISH.

in Lake Ontario and in the St. Lawrence River. My reply was that in all probability the fish died because of change in temperature of the water, and I presume this reply was given in FOREST AND STREAM, as I am not in the habit of replying to queries in any other journal; but I cannot at this moment find the note. I have watched the herrings as they came to the surface in the St. Lawrence and died without a mark to indicate disease of any kind, and they acted as other species of fish do when they come out of the cold depths into warm surface water. Recently I visited Cayuga Lake to see Mr. H. A. Surface, who has been investigating the fish fauna of the Cay-

SQUIRREL FISH.

uga Lake basin, and he told me that lake trout had been taken in the lake at a depth of 350ft. filled with the "sawbelly," proving that they resort at least to this depth, and very likely they may yet be found still deeper in the lake when the traps are placed deeper to discover the fishes which inhabit 400 to 500ft. of water. The "sawbelly"

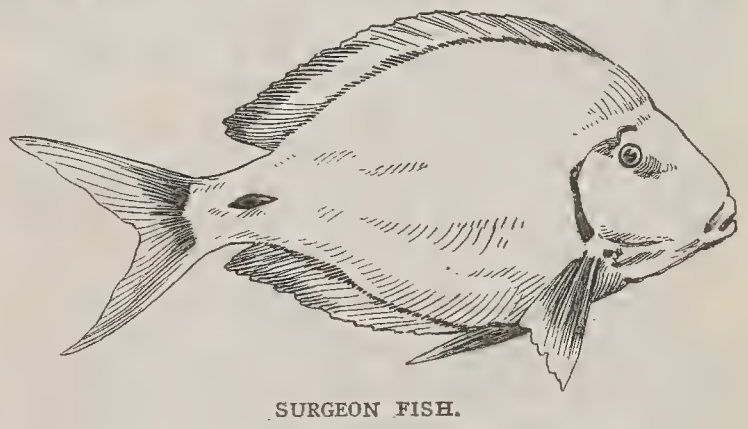
coming out of the deep, cold water in the spring into the warm surface water perish in such quantities that the dead fish line the shores, and fears have been entertained that such masses of dead fish would endanger the public health.



At this point I was reminded that last summer I cut an item from a newspaper in regard to this very fish, and upon searching for it I have found it. It has the headlines: "Dead Fish in Lake Ontario. Tons of a Variety

SERGEANT MAJOR.

Resembling the Sea Herring Found on the Shore," and the clipping reads as follows:



"Charlotte, N. Y., July 11.—The cottagers along Lake Ontario between here and Sodus have, it is estimated, buried 100 tons of dead fish cast up by the waves already this season. The fish resemble very closely the salt water herring. As a result of this resemblance some persons have advanced the theory that the fish are herrings that have ascended the St. Lawrence River and have been unable to live in the fresh waters. Others think that

ANGEL FISH.

the fish are fresh water herrings, and that they have been killed by the rigors of winter or by some parasite. A third theory is that the authorities in stocking Lake Ontario with whitefish made a mistake and instead put in some spawn of a salt water fish, either alewives or herring, and that these fish lived and bred, but are soon killed off by the fresh water."

The fish very closely resemble the salt water herring, because that is exactly what it is—a landlocked form of the French herring or alewife—and they probably did ascend the St. Lawrence River at some period; but it was so long ago that no living man knows when. The authorities did not make any mistake and plant this fish for whitefish, for the authorities (which means the Fisheries Commission of the State or the United States Fish Commission) had nothing whatever to do with it. Nature did the planting several hundred years, possibly, before a

SURGEON FISH.

fisheries commission was ever dreamed of. Mitchell described the fish in his report of the fishes of New York in 1814, fifty years before the State had a fish commission and forty years before a fish was hatched artificially in this country. Cuvier and Valenciennes described it in 1847, and Jordan described it from Cayuga Lake in 1876.

Fish commissions are a convenient vehicle on which to unload all the sins of omission and commission which exist or are imagined in the fish world. The report of the whitefish-sawbelly mistake of the authorities in Lake Ontario now appears in a cycle of three years, whereas it used to be annual and charged direct to Seth Green, and there seems to be a chance that it will die out, as a friend of mine says, "eventually, if it ever does."

Mitchell described the brook trout the same year that he described the "sawbelly," and his name, *fontinalis*, sticks to the trout yet; but his name for the "sawbelly," *Clupea vernalis*, was not long enough for those who came after him, and it is now *Pomolobus pseudoharengus var. lucustris* (lake variety of false herring), and that is probably the reason why so little is known of the fish, as the length of the name rather discourages investigation of the fish itself. It has been charged that the "sawbelly"

served no good purpose whatever in the St. Lawrence, as it was not particularly a food for other fishes. This may be true in part so far as it relates to black bass, but the "sawbelly" does serve as food for lake trout, as the experiments made by Mr. Surface go to prove, and the salt water form of the branch herring is classed as a food fish, and, by the way, fresh water fishes do not keep as well salted as do fishes from salt water, although perhaps I have not used exactly the right terms when I say keep as well, and it would be better to say that fresh water fishes are not so well constituted for salting as fishes from the sea.

Lake Lampreys.

The State of New York made a small appropriation to destroy the lake lampreys in Cayuga Lake, and at the same time to study the habits and migrations of some of our food fish. The lampreys were caught in a weir as they ascended the inlet streams to spawn, and unmolested their spawning beds are made so closely one to another as almost to cover the bottom of the stream between rapids. I think I never have seen spawning beds of any fish so closely grouped as those of the lamprey, and this fact alone shows how abundant they become when war is not waged against them. There is one thing the lamprey (young ones) is good for, and only one, so far as I know, and that is to serve as black bass bait. The biological department of Cornell University has made some valuable discoveries through Mr. Surface in this work of destroying lampreys, and one thing that has been found is that the lamprey attacks fish in water 350ft. deep in the lake. When the result of this work at Cayuga Lake is made known in a report, as it will be in the annual report of the Fisheries, Game and Forest Commission, I believe it will be patent to all readers that there is great need in this State of a systematic scientific inquiry into the habits and migrations of sea fishes, and into the food supply of the food fishes, and it may result in the establishment of a biological station under State auspices.

Fly-Fishers' Club.

The suggestion to organize a fly-fishers' club in this country—and the only place is New York city—is not a new one. I know that I urged it in this column a few years ago, and FOREST AND STREAM advocated it editorially, and I think that other fly-fishers wrote supporting the proposition to promote such an organization. Letters were received at the time by the writer from prominent fly-fishers in Canada and in this country, and all were of the opinion that New York was the proper place for such a club, and that it would be supported by fly-fishers in the United States and Canada. However much the fly-fishers of the country may be interested in forming a club, the initiative must be taken by anglers in New York city, for without their active support the plan must fail, no matter how warmly it may be supported by would-be country members. A week or two ago I mentioned that the London Fly-Fshers have outgrown their club rooms and had moved to new and larger quarters—in fact, they have been growing and moving ever since the club started in 1884, and the last issue of Land and Water has something to say about the last move: "May good fortune attend the Fly-Fishers' Club in their new premises in the Haymarket. In the old club rooms on the Embankment they grew to maturity, and it is as a highly successful concern that they move westward. Very handsome accommodation is now provided, and I am particularly pleased to see that a room has been specially set apart for fly-dressing, where the amateur fly-tyer will have every opportunity for practicing the art. I am also pleased to see that the list of members includes most of the well-known salmon and trout anglers throughout the country. * * * The annual dinners of the club since its establishment in 1884 have attracted fishermen and naturalists from English, Irish and Scotch districts, as well as from Canada, America and the Continent, and there is a long list of honored names among the presidents of these feasts—such names as the late Marquis of Exeter, the Marquis of Granby, the late Sir James Gibson Maitland, Sir Ford Worth, Sir Samuel Montague, Sir Herbert Maxwell, Mr. George Rooper, Mr. William Senior, Mr. H. M. Halford, Mr. R. B. Marston, Mr. A. N. Gilby, Mr. Orchardson, R. A., and Dr. Hamilton. Lord North, an enthusiastic fisherman, is to preside at the house warming."

The London club was organized largely at the instance of Mr. Marston, editor of the Fishing Gazette, who was most ably supported in his endeavors by Mr. Senior, of the London Field, and it has grown to its present proportions largely through the instrumentality of these two men, without, apparently, interfering with their other duties, and it must be that we have in the city of New York ten times that number of men who would give enough of their time for the preliminary steps to insure a club of the same character in this country.

Ouananiche in Triton Club.

Nowadays I am rarely surprised at anything I may hear about fish or fishing that at first blush seems to be unusual or impossible; but I must confess to surprise when Mr. William F. Rathbone informed me last week that there were ouananiche in the waters of the Triton Club in Canada, and for once I reserved to myself the right to doubt it. His information on this subject was not at first hand, and that is why I doubted that ouananiche were in the waters of a lake near the club house, as we have caught ouananiche together in Lake St. John waters. His information came from a gentleman who was so positive that he was right about it that he offered to bet five to one that he was right. Mr. Rathbone had just returned from the club when I met him in Albany, and I think he was as much surprised at the information as I was. The same day that I met Mr. Rathbone I went to Syracuse and saw Mr. G. F. Gregory, president of the Triton Club, and he was another surprised man when I told him, for he knew nothing of the presence of the salmon in club waters. This I do know: That three or four years ago I had some correspondence with Mr. Seaton, the sercetary and superintendent, about introducing the ouananiche into club waters, and I advised against it, and subsequently in conversation with Mr. Seaton at the club, he told me it had been decided not to attempt to introduce the fish. Now there are a number of surprised men waiting to hear of proof that the ouananiche has invaded the club waters on its own account, and I presume the columns of FOREST AND STREAM will be open for such explanation as may be given by those who know. The information came to Mr. Rathbone from a gentleman connected with the Winchester Repeating Arms Company. My own idea at this writing is that some one has in some way confused the new trout caught by Mr. George Hart in a lake near the club house with the ouananiche, but certainly Mr. Hart is not responsible for the error.

Eels.

When I wrote of eels and their habits in FOREST AND STREAM last summer a friend read the article and said to me jokingly, "Your story is chiefly about eels in Europe and little about eels in this country. Is it possible that our Yankee eels have never done any of these strange things you tell about?" What I now have to say relates to Yankee eels, and I learned of it at the Rockland hatchery of the Fisheries, Game and Forest Commission in Sullivan county last week. The water supply for the hatchery comes to the building through a 4in. iron pipe under ground. Near the foundation there is a T in the pipe by which the water is lifted through a pipe of same size to the proper height to feed the troughs, and a valve in the T to flush the pipe. When the valve is opened to flush the feed pipe it discharges under the hatchery building, which is merely a gravel bed so that the water sinks out of sight as fast as it is discharged. Just before my visit the foreman, Mr. Charles B. Laraway, had opened the valve to flush the pipe, and the water had discharged as usual into the gravel bed under the building. The next morning he discovered two big eels on the lawn in front of the hatchery building and about midway between it and the stream, and the eels were headed for the water.

It was hard sleddin' for the eels, for they have had a drought there, as elsewhere, and the ground was dry and dusty, but they were making fairly good time for the water. The eels had come through the pipe (they were each nearly 3ft. long, Laraway tells me), and had been discharged with the water under the building on the gravel, and when the water disappeared they were left high and fairly dry, and it was a groundhog case to get to water. There is no pond accommodation at the hatchery for eels or any other fish, and they had to light out for the stream, perhaps a thousand feet away. That they knew where they wanted to go, and also knew the direction to reach it by the nearest route, their positions when found gave proof, and if the going had not been so dry and dusty they might have made the trip before Laraway caught them.

While on the subject of Yankee eels, let me say that I have called the attention of the chief game and fish protector of the State to some eel weirs illegally maintained in the southern part of the State. I saw two from the cars as the train passed, and learned by a little questioning that there are others of the same kind that cannot be seen from the cars in passing, and one of the game protectors will examine them to see wherein they fail to comply with the law. In fact, before this is in type the examination will have been made in all probability. Not that I desire to have any one punished for catching eels, but as there is a law on the subject of eel weirs, it should be enforced, and if the law does not serve the purpose of catching eels, amend it so that it will. The first weir that I noticed was in the West Branch of the Delaware River, near Walton Station of the New York, Ontario & Western Railway, and the next near East Branch Station of the same road, in the East Branch of the Delaware. The eel weir law is found in Section 143 of the Fisheries, Game and Forest Law of New York, and reads as follows:

Section 143. Eel Weirs.—Eel weirs of which the laths are not less than 1in. apart, may be maintained at any time in any of the waters of this State not inhabited by trout, lake trout, salmon trout, or landlocked salmon, except in the Chemung River and its tributaries in the counties of Steuben and Chemung, and except in waters in Cayuga county, and except in the Susquehanna River; provided, that there be a clear passage at low water mark at some point in said weir of not less than 10ft. in width for the passage of boats and fish. Eel pots of a form and character such as may be prescribed by the rules of the Commissioners of Fisheries, Game and Forest may be used in any waters not inhabited by trout, lake trout, salmon trout, or landlocked salmon. Except as herein provided the use of eel weirs and eel pots in any waters of the State is prohibited. Whoever shall violate or attempt to violate the provisions of this section shall be deemed guilty of misdemeanor, and in addition thereto shall be liable to a penalty of $60 for each and every eel weir or eel pot built or maintained in violation of this section, and $10 for each fish caught therein in violation of this section. The provisions of this section shall not apply to Long Island. (As am'd by Chap. 405 of Laws of 1898.)

The weirs that I noticed failed to comply with the law, in that they did not have an opening 10ft. wide for the passage of boats and fish. The weirs were V-shaped, projecting down stream and without a break from shore to shore, except at the basket at the apex of the V. It was my good fortune to meet on the train a man who has had experience with eel weirs in that region, and he told me that ordinarily the 10ft. opening was left as the law directed, but so arranged that a plank could be inserted at night and the opening closed. He also said that in all his experience with eel weirs it was the rarest of exceptions to take black bass or other game fish in the weirs. There is no sort of question about the destructiveness of the eel, as it gorges itself on trout eggs when it has the opportunity; and its habits are such that it should be taken by all legitimate means at all times when the means adopted do not cause the destruction of other fish, but the eel weir law seems to be a liberal one, as it stands, and to fence in a river from bank to bank is clearly illegal. Salmon have been planted in the West Branch to my knowledge, for I went there with a carload of fingerling fish, and large trout have been reported to have been caught in the East Branch, but I am not prepared to say that either branch is inhabited by the fish mentioned in the statutes that would make the erection of any eel weirs illegal. If I made the laws, I would make one that permitted the use of eel pots in any waters, particularly waters "inhabited by trout, lake trout, salmon trout or landlocked salmon," for it is in such waters that the eels do the greatest harm as spawn-eaters, but the eel pots would have to be of such "form and character" as to take nothing but eels, and pots are so constructed that they will take nothing but eels. As eels never spawn in fresh water, they have no period of fasting, and consequently prey upon fish eggs throughout the spawning season of all of the salmon family. As the mature eels go down to the sea to spawn, the elvers run up into fresh water to grow to maturity, and a constant war should be waged on eels in trout waters, but the great trouble is to find men into whose hands it is safe to place devices to take eels, for it seems to be a failing of the human family, or members of it, that when they are permitted to take eels or other deleterious fish they at once enlarge the field of operations and take every blessed thing that swims with fins and is good to eat, or that can be sold at a profit. A man who is trustworthy in every other respect has to be watched when he has a license to take eels to see that he recognizes the difference between an eel and a black bass, or a trout of some sort.

Whitefish on Worm Bait.

Once in a while I find myself in Syracuse, but never, if I can help it, without previously preparing to sit up until most any time in the morning. Last week I was not prepared, and I tried to sneak into the Gates about 11 o'clock P. M., and get to my room unobserved, but my friend Gregory had his eye on the entrance door as though he were watching a runway, and nailed me before I got to the desk. "What are you doing in the city at this hour of the night? I supposed you were out at your farm."

"I would have been, except that I heard that you had wired for a room, and so I wanted to visit with you." I threw up both hands, and then I took them down and lighted a cigar. We talked fish and we ate something, for Gregory always keeps his friends who talk fish in condition, so far as the inner man is concerned, but he never sleeps himself at night, and so it never occurs to him that any one else has the sleep habit. The trouble is that when I sit down and talk of fishing with Gregory, I forget about sleeping, and he never forgets about eating, so we get on famously. We had talked about Triton Club affairs, of which club he is the president, and we had talked of the past season's fishing, when he said, "You cannot guess where I went fishing last week, nor what I caught."

"Oneida Lake; black bass."

"No; reservoir; whitefish, with worm bait."

"Don't you mean aquarium goldfish with three tails?"

"No. I am not joking. I was actually fishing for whitefish with worm bait."

"No need to go to a reservoir to do that; there is water in the canal, and you can fish there for whitefish, salmon, tarpon, jewfish or anything else you previously indicate, or if it sounds better, you can say you are fishing for all of the fishes in Jordan & Evermann's Synopsis."

"But I not only fished for whitefish with a hook and line and rod and worm bait, but I caught twenty-eight whitefish and brought the whitefish home, and I, with my friends, ate the whitefish, and they were as good whitefish as that big whitefish you brought here last fall that you got out of a net."

By this time my cigar had gone out, and I slowly relighted it and looked Gregory squarely in the eye, but he met my steady gaze fairly and appeared to be perfectly balanced as usual, so I said, "You mean it: tell me about it."

A friend of his in charge of the reservoir in question had told him that while fishing in the reservoir for black bass, he had caught a whitefish, and invited Gregory to visit him and try the fishing. It seems that the reservoir is fed from a lake about twenty-five miles away, which lake contains whitefish, and it is supposed that young whitefish from the lake had found their way through the feed pipe into the reservoir, as there is no other way of accounting for the presence of whitefish in the reservoir. Gregory armed himself with tackle and bait—earth worms—and fished near the place where the feed pipe enters the reservoir, for it was there that the whitefish seemed to congregate. When the baited hook was lowered into the water the angler could feel that something was working at the bait. It was scarcely a nibble, as a nibble is generally understood, but as though something were mouthing the bait without jerking. When this had gone on for a time, the angler would strike at a venture, and usually a whitefish would be hooked, and when once hooked the fish furnished fair sport, as the mouth of the whitefish is so tender that a hook is easily torn out. At times there would be a bite from a black bass that left the angler in not the least doubt as to the kind of fish at the other end of the line, and then there would be a bite from a yellow perch, and all three species of fish seemed to be in about the same locality.

It is unusual for whitefish to take a hook, still they do it on occasion in some waters, though they cannot be considered a hook-and-line fish any more than the shad, which take the fly on occasions. Once I printed a letter from Dr. Elisha Sterling, of Cleveland, O., in which he described whitefish fishing in the Soo Rapids. The tackle was two small hooks whipped to gut one above the other, and the bait was flour paste mixed with cotton wool to hold it on the hooks. As I now remember, whitefish were taken in considerable numbers in this manner in Sault Ste. Marie.

Then, again, they were taken at one time, and for all I know, they are yet taken, with hook and line in Lake Superior. The whitefish came into shallow water to feed on thin, white worms found in the yellow clay of the bottom, and by gathering a quantity of these worms and putting them on hooks which were allowed to rest on the bottom the fish were caught, and caught, too, in quantities to warrant pretty general fishing where the worms were found. In Chazy Lake, in the Adirondacks, of New York, whitefish are caught through the ice in winter by fishing with a baited hook at the bottom, and occasionally one is taken with hook and line in Lake Champlain, where the fish are known as lake shad, but as a rule when whitefish are taken on a hook it is more by accident than by design on the part of the fisherman. But Mr. Gregory's experience may act as an incentive for anglers who live near whitefish waters to fish for them with hook and line and worm-baited hook. In waters inhabited by whitefish—and it is now conceded by our ichthyologists that the fish of the interior lakes of New York are the Great Lakes whitefish, as the Labrador whitefish is identical with it—the fish are found in vast schools in the autumn and winter, and there will be no lack of material on which to practice. Fine tackle should be used, and by fine tackle I mean delicate, not elegant, with small hooks and thin gut, and if this style of fishing should prove successful, and in the light of Mr. Gregory's

experience I cannot see why it should not, the fishing will furnish sport of a new character, and the fish will furnish a table luxury not to be excelled by any fresh-water fish that swims, and in the autumn the whitefish is at its best when cooked directly after it leaves the water, as it is one fish which loses its delicate flavor when transported any considerable distance from the water where it is caught.

A. N. CHENEY.

Pacific Salmon and the Fly.

PORTLAND, Ore., Oct. 21.—*Editor Forest and Stream:* Having noticed several articles on Rudyard Kipling's salmon story and your comment "that it was up to some other angler" as to catching salmon with a fly, I will endeavor to explain what I know about it.

In the year that Mr. Kipling caught the salmon in the Clackamas River, which he says was with a spoon, the conditions at that time were such as might not happen again for some time.

In the first place the Government has a hatchery at the point where the fish were caught and had built a rack across the river to stop the chinook salmon from ascending the stream, as they do every fall, seeking the headwaters to deposit their spawn on the shallow rapids or riffles, where the female fish digs a hole with her nose, and turning on her side, with a vigorous movement of the tail, endeavors to deposit the eggs in the hole, and is followed by the male, which does likewise with the milt. This is nothing new to anglers who have fished on the streams of the Pacific Coast, and is simply an explanation for those who have never been out here. The rack stops all fish ascending or descending the stream. The fish naturally become very plentiful below the rack, and the employes of the hatchery go out with a net and catch what salmon they need, strip them of their eggs, and remove them to the hatchery and proceed with the hatching.

Now as to the fish which Kipling caught with a spoon, and which the writer of this article and Dr. F. Cauthorn, ex-president of the Multnomah Rod and Gun Club; Mr. Harry Eldridge, C. F. Sliter and numerous others have caught with a fly, I will explain that they were not chinook salmon, but were spent steelheads (*Salmo gairdneri*). They had been up the stream, had evidently deposited their spawn and were on their way back to the ocean, where they are supposed to seek salt water to recuperate. Getting back as far as this rack, they were held there, and naturally became actually starved and would take anything; and I believe that a red rag on the end of a hook would have answered the purpose as well as anything else.

The conditions were very fine for a man landing them for there is an island just above the rack and the stream runs very swiftly on each side, the island terminating about 200ft. above the rack. A person hooking a fish could run up and down the island, the fish only going up against the swift water any distance when he was desperate, and could only go down as far as the rack; and a man with a good long line would have a chance to rest when they would go down that far and balk.

But I do not mean to belittle the sport, for sport indeed it was. The fish were from 2 to 3½ft. in length and weighed from 15 to 40lbs., and it took a person from twenty to forty minutes to land one if he was lucky enough to do so. I landed six and lost eight the same day, and, it is needless to say, was completely tired out after it was all through, although not at the time being conscious of fatigue. Cauthorn landed four, and how many he lost is not definitely known, because fishermen are apt to exaggerate some. Another one of the party hooked eleven and failed to land any, once having his line snapped off at the reel. He got disgusted and went up stream and fished for trout a while, but could not resist the temptation and came back and tried it again, this time hooking a large one, and after playing it for about thirty minutes lost it. He threw down his rod, vowing that he would not fish another minute, and he kept his word.

The fish that were caught were in my opinion not fit to eat, being too poor, but a person not used to fishing might think they were all right.

I trust that this may answer your query and fully explain the conditions as they existed that year and have not since, as regards full grown salmon, although a great many have caught young salmon at the falls at Oregon City with a fly.

THURSTON L. JOHNSON.

SAN FRANCISCO, Oct. 18.—*Editor Forest and Stream:* In reading FOREST AND STREAM of Oct. 7 I noticed an article on "Pacific Salmon and Fly" over the signature of Steelhead, in which the writer refers to my previous communication to the FOREST AND STREAM giving my experiences in fishing for salmon in the Navarro River, and suggesting that what I called salmon were steelheads. After reading his experience in fishing for salmon in the waters of California, I think it is quite possible that his conclusion is correct. The distinction, he explains, is not generally noticed, as we are so much in the habit of calling the fish salmon without investigating the points of difference in the variety. To the non-scientfic fisherman this nice point of difference does not detract from the sport of catching them, for they are fully as gamy and afford as much sport as would result from capturing the bona fide salmon.

But when it comes to a question of Pacific coast salmon taking the fly, I am willing to admit that Steelhead has apparently the best of the argument, and that is the question under discussion. Steelhead's experience is certainly greater than mine, as I have fished for salmon only in the Navarro and the St. Cloud rivers. In the latter I only used salmon roe for bait, never having tried the fly there except for trout. Whether the so-called salmon I caught in the St. Cloud were real salmon or steelheads I am not sure, since reading Steelhead's article. Whether it is the salmon proper that I have been catching can be easily settled by acting on his suggestion and submitting a specimen to Dr. Jordan the next time I visit the Navarro, if I be successful. I am curious now myself to learn what variety I have been catching. Not that it will detract from the sport if I find that my salmon are proven to be steelheads, for I shall enjoy the fishing just as much, and it is only the question under discussion whether the Pacific salmon do or do not take the fly. From Steelhead's experience I am beginning to waver in my belief that they do—at least only in exceptional instances.

We hear often of the hook-nosed salmon. Are they steelheads or salmon proper? I have caught them with the spoon, but I do not remember to have caught them with the fly. A prejudice seems to exist against the hook-nose, but why I have never discovered. I noticed that when the seine had been hauled on the Navarro, and the wives of the saw mill hands came down to the beach to purchase their Friday dinner, they universally spurned the "hook bill," and one day when I landed with my catch a lot of little hoodlums guyed me, and exclaimed, "Come here, Jimmy, and see the city feller; he's got an old hook bill." It occurred to me that I would try the experiment of having him cooked for dinner. He proved to be as sweet and nice a fish as I ever ate, and I made up my mind that the prejudice was all nonsense, and unjust to the fish.

By the way, it rather takes the starch out of a fellow after fishing all day, and coming in with half a dozen 10 or 15 pounders, to see a seine hauled and a wagon load landed, and see the laborers' wives come down and each select one of the finest and pay 10 cents for it. At least such was the case last time I fished in the Navarro. But recently they have found a market by sending them down to San Francisco; at that time there were no facilities of doing so.

As a matter of curiosity, I would like to ask Steelhead whether the fish caught with spoon and trolling off Santa Cruz are steelhead or salmon; everybody calls them salmon, but since reading Steelhead's article I begin to doubt there being the real salmon.

In all my fishing I have given little heed to the scientific question of variety or the differences between tweedledee and tweedledum—as great a shock as the confession must be to the scientific sportsman. I don't mean to admit that I don't know the difference between a chub and a trout; but when I hook a 10lb. steelhead and he is giving me lots of fun I do not lose my interest in him by stopping to consider whether he is a real salmon or only first cousin of the aristocrat. He has all the habits. He fights as well, eats as well, and I stand up for him, even if he may be considered a little off color by the scientific fisherman, who scorns to fish with anything but a Leonard rod and a $12 reel, and babbles of the Ristigouche as the fisherman's Mecca. There is a good deal of good fishing outside of the Ristigouche, and good rods that Leonard did not make, and good flies that have not high-sounding names; and here, too, is where I am going to shock the scientific fisherman by declaring that I never want a better fly nor any other variety than a red hackle with a peacock body, and a miller, for all-round work. I have tried all the fancy varieties, and settled down to these, and I never get left.

I remember reading in the FOREST AND STREAM an article anent salmon fishing, and suggesting that a larger fly would perhaps be an inducement to them. I tried that dodge. I had Conroy make me up a lot of large flies, assorted, and with as great an assortment of colors as you see in a woman's bonnet, but although I tried them all I never had a rise. All the salmon (I beg Steelhead's pardon for so calling them) were caught with the old reliable brown and red hackle, and I bless the man that invented them and the chanticleer that grew the hackle. The time was when I spent money on a gorgeous array of flies, and expensive fly-books, but I have discarded the lot and left them to the moths. In all books of flies there is one or more of the red-ibis. I have heard fishermen say they have caught fish with them, but in thirty years' fishing I have never caught a fish with one, and likewise with many of the other fancy flies, the like of which are never seen in nature, and which trout look upon with wonder and omit the experiment of trying them. All of those beliefs will of course shock scientific fishermen, who will set me down as unworthy to be called a true sportsman. Nevertheless, I manage to bring home a basket pretty well filled without a financial transaction with the small boy with the proverbial tow string and pin hook, or without calling at the market on my way home.

PODGERS.

For the Single Hook.

DR. JOHNSON'S plea for the single hook in FOREST AND STREAM under date of Oct. 21 strikes a responding note in the hearts of all true lovers of the angle. I use the words "true lovers" advisedly, referring, of course, to sportsmen who fish *con amore*, and not to the fish hog or pot-hunter. The man who uses the barbarous devices one sees advertised, and that are to be found on the shelves of all fishing tackle dealers, when three or four gangs of hooks, like grappling irons, hang from the end and each side of the bait, is not in our opinion a sportsman.

Our idea of piscatorial sport is killing fish when all the skill and good judgment on the part of the man holding the rod is called into action. We have heard of men dumping a half-barrel of handsome trout on the manure heap behind the barn, and on reaching home have boasted of their great achievement, as if quantity was the factor by which the prowess of the angler was measured. Would that men who handle rod or gun could be educated to feel that there is something grander, and that will contribute more to the pleasure of their angling and hunting hours, than the mere "slaughter of the innocents." When they become imbued with this sentiment there will be less need for legislative enactments for the protection of our fish and game, as every man will become a law unto himself. There is little pleasure in the easy achievement of any purpose, and to kill a bird or a fish with all the odds in our favor, and when no skill or good judgment is called into play, is certainly not a very praiseworthy achievement. If "meat" is all we are after, why not procure it at the market and save the expense of a trip to the woods? No man is worthy the name of sportsman who will kill a deer with a handful of buckshot, or a trout with a dozen hooks attached to a single line, the opinion of others to the contrary notwithstanding. The lordly salmon, plucky trout, gamy black bass, wary grouse and swift-flying little Bob White are all, with fair play, capable of taking care of themselves, and to kill any one of these in a sportsmanlike manner will produce sensations that will linger with us long after we have returned from our vacation and to the routine of every-day business life.

The rod and gun hanging on the wall of our "den" in close season, when the game is safe from honorable pursuit, awakens many fond reminiscences of pleasant hours, provided they recall no mercenary or shameful recollections.

Our vacation this season was spent in the Moosehead Lake region, Maine. My friend and I killed fifty-seven trout that weighed from 1 to 3 6-16lbs. These were square tails, and were all taken on the fly, except five, and those on a single hook. One day when the fish would not rise to the fly I put on to my leader a single-hook trolling device, and let it spin on the swift-running water below the dam. In about a minute I saw a large trout dart out from under the foamy water that tumbled over the dam. I struck, and away he went down stream to the merry music of the reel. When I commenced to reel him in I saw to my surprise that the fish was coming up against the current broadside, indicating that when he struck he had missed the bait, but in turning the hook had hit him amidships, half-way between the head and tail. This was a case where the fish had the advantage, and to land him called for very careful manipulation and skill on the part of the angler. He was an elegantly shaped male fish and weighed 3 3-16lbs. I know there are men who go into the country with rod and gun who see nothing beyond the game they are in pursuit of. To us it is not all of fishing to fish, or of hunting to kill. The green fields, bright sunshine, autumn foliage, mountain, lake and river—all contribute to the pleasure of the hours we spend by stream and afield, and we rejoice in a love for the beautiful.

GEO. H. BURTIS.

WORCESTER, Mass.

Trouting in Nova Scotia.

IT was August—a good time to be out of the city; moreover, it was vacation time—we could go. Where? Momentous question! Everything depends on the answer. It is soon decided, and Nova Scotia is the objective point. We go to Portland and thence along the Maine coast in steamers that permit a "stop-over" at different places. Eastport is the home of the herring-sardine industry. The canning factories are a revelation—to over-sensitive stomachs they are more—an abomination. But city epicures like the product with a French label.

In landing at St. John, N. B., we went down 8 or 10ft. from the steamer to the dock. Next morning we went down about the same distance from the dock to the steamer. The tides are phenomenal.. The harbor is mud at low tide. At Cape Blomidon the tide has been known to reach 8ft., and a tide of 40 to 60ft. is frequent.

We have passed the bold, rocky and picturesque isle of Grand Manan, so attractive to artists and all lovers of nature, and in crossing over from St. John to Annapolis Basin, N. S., we find more attractions of the same sort. We go through Digby Gut for two miles, and on either side the cliffs rise from 400 to 610ft. in height. The current is fierce and the passage full of interest. Thus, as so often in the voyage of life, we enter a smooth and beautiful haven—in this case Annapolis Basin. All the way now we are on historic ground. The Basin witnessed a naval engagement between British and French as far back as 1707; the surroundings of the harbor bristle with military interest, and the railway from Annapolis Royal to Halifax passes through Evangeline Land. Here two things specially rouse the traveler's interest—the towering crops, attesting the enormous fertility of the soil, and the many dykes to protect those crops from ocean tides. It is a beautiful, attractive scene, but over all like an autumn haze rests a tone of melancholy from the fact underlying the poet's immortal work. At Middleton a stop was made, and inquiry for trout revealed a local sportsman ready to close his store for a day to show the Yankee stranger the best sport the adjacent streams afforded—that might not be much, however, as the season was really over. The courtesy was appreciated, but the opportunity was not taken.

Reaching Kentville, we found a place remarkable for two things: Natural and picturesque beauty of location for almost every home, and an almost universal neglect of these natural advantages, giving the whole place an unkempt appearance. The people were very cordial; indeed, with their simple habits of life, we found all Nova Scotians ready to bestow time and courtesy upon the stranger. Nor was it for gain, as the question of remuneration did not often come up, and when it did the charge was as modest as the maker. After the manner of the Eastern form of request, the people seemed to "delight themselves" by serving us.

But this writing was to describe a trouting experience. That must be given or readers will accuse us of plagiarizing the joke of the American humorist who lectured on "The Babes in the Wood" and only stated his subject occasionally, that his hearers might know what it was.

Kentville is the best place from which to reach Gasperaux Lakes. They afford fine fishing in season, and sometimes late in the season. We found it so. The best guide of the region was engaged, a quiet, gentle man, as became a true disciple of Walton. The guide was honestly doubtful, but would do his best. That was satisfactory, for this region was the best accessible from the railway, and time did not permit extensive wanderings. A long row of a dozen miles in a heavy logging boat, and then we fished, not like the Galilean fishermen, "all night and caught nothing," but till night with the same result. The next morning other places were tried, and still no trout. The guide said "We'll try one more place, and if that fails we'll give it up, for we can't get them anywhere." For a long time we tried this place with no response. Finally, when we were just about to start for home in despair, a brook trout weighing ¾lb. surprised us all by coming aboard at the end of my line. "I guess we'll stay here a while longer!" An hour's more of fishing gave us several pounds of beautiful trout, and we were satisfied.

"Herewith I enter the lists as the champion of Nova Scotia," wrote Charles Hallock in 1873, and in humble following such illustrious example so now subscribes himself

INTERVALE.

CHICAGO AND THE WEST.

Work of the Illinois Fish Commission.

The annual report of the Illinois State Fish Commission, or rather the report from Oct. 1, 1896, to Sept. 30, 1898, which was printed this year, has been sent to me by President N. H. Cohen, of Urbana, Ill. It is a work of considerable interest. It would appear that the Commission feels itself rather put upon the defensive, more especially in the matter of the grand, noble, delightful and overwhelmingly beautiful and useful work of animate nature known as the German carp. President Cohen goes on to write on these two points:

"We have been very severely criticised by a great many, in that they claim we are neglecting proper protection for the game fish and are to a great extent overlooking the interests of the angler, some going far enough to undertake to maintain the position that the use of the seine should be prohibited entirely in all the waters of the State, that it was the cause of great destruction and would in time wholly deplete the river. This position is true in part, but only when applied to the smaller streams and inland lakes of the State, and in that matter is fully covered by the laws upon our statute books now, but when applied to greater rivers is entirely at fault.

"We have frequently received severe criticism as to the practicability of the introduction of the German carp. Perhaps we do not need to go to any greater length in the discussion of the subject than to give here letters from the largest fish dealers on the Illinois River. Carp are accused of driving out all of the game fish and destroying the young of all other fish. The best argument to refute that theory will be a plain statement of the conditions that exist.

"On the Illinois River carp are more plentiful than ever, growing to immense size and the increase in numbers wonderful, while there are more black bass and croppie on the Illinois River this season than for many years before, and we cite many instances in lakes along the Illinois River where very large hauls of carp have been made, one in particular aggregating 30,000lbs., and yet that lake has furnished the best bass fishing on the Illinois River. This instance is not an exception, but repeated many hundreds of times in greater or less degree along the whole length of the river. Here it may be well to note one very particular and unusual phase of the fish business this season to show the relative supply: Carp at some times has brought a better price on the fish boats than the best table fish we have, viz.: the black croppie or strawberry bass. Croppie were so plentiful that the local demand would not take them up, while carp, equally plentiful, found a quick market at 1 cent per pound higher price; most of the carp being bought, however, for Eastern markets."

I beg to call attention to the fact that these carp are sent to the Eastern market. We do not eat them in the West. And I beg also to say that the carp situation in other streams is not what is on the Illinois River.

I am disposed to think that the Fish Commission of Illinois has done the most expensive and the most practical work in distributing and multiplying native fish that has been done anywhere in the West, if not in the entire United States. For Dr. Bartlett and Mr. Cohen no one can have anything but the warmest personal regard, but as I have often told them both, the sportsmen of Illinois have never appreciated their labors in the carp proposition. Both these gentlemen say that they find it necessary in their work to be on good terms with the market fishermen, and this brings up again the old talk about short fish found in the hands of Chicago wholesale dealers. This is what the Commission has to say on the short fish question, which is really a very important one from the standpoint of the angler:

"We have had a great deal of trouble in Chicago, and at times both the wardens and ourselves have been placed in a very peculiar position, with positive evidence of violation of the law, and yet fully convinced that no intent of such violation existed. For instance, a fisherman at some of the rivers or lakes makes a catch or purchases fish, packs them in a box or barrel and ships them to the Chicago market. Of this shipment some of the fish will probably be under the prescribed size, and can not lawfully be sold or offered for sale. The commission merchant or wholesale dealer takes off the top of box or barrel and exposes them for sale, the retail dealer buys them in bulk, and removing them from their shipping case at his own place of business openly offers them for sale, regardless of size. Now if a warden comes along and inspects the fish, he finds the small fish, and the dealer is arrested and probably fined for offering undersized fish for sale, when so far as knowledge and intention is concerned he may be innocent.

"Your Commissioners, with their attorney, have had several meetings with the wholesale dealers of Chicago, and have canvassed the matter with them very thoroughly, and while a large proportion of them seem to be perfectly willing, not only to obey the law but to assist us in enforcing it, there have been quite a number who have objected and given us a great deal of trouble, by getting the retail dealers into offering undersized fish for sale.

"This would seem easy to overcome by reaching the wholesale dealers directly, but unfortunately we have found that in the majority of cases the retail dealer would rather fight a case against himself than to risk the enmity of the wholesale dealers and the possibility of cutting off the supply by appearing against them."

Naturally the report of the Fish Commission includes the yearly statement of the deputy wardens all over the State. I am pleased to observe that our friend, George Kleinman, of South Chicago, Cook county, seems to have as good a record as any warden. He has a record of thirty-three arrests, thirty-three convictions, eight discharges and two jail sentences. Close in the same class is J. R. Ratto, also of Cook county, who made thirty-five arrests, had thirty-one convictions and four jail sentences.

The Age of Small-Mouth Black Bass.

Col. James A. B. Van Cleave, of Springfield, Ill., in a letter to the Illinois Fish Commission, has given some rather interesting data in regard to the age of small-mouth black bass. Col. Van Cleave is one of the most ardent anglers we have in the West, and his favorite fishing grounds were long at Miltona, Douglas county, Minn. Here for some time Col. Van Cleave made a practice of tagging and returning to water numbers of the bass which he had taken, and from his experience in these matters he adds the following:

"During nine years I placed my German silver badge on nineteen hundred and thirty-five bass, sixteen hundred and seventy-six of which are of the small-mouth, the rest being the large-mouth variety. Of the whole number captured and recorded, one hundred and nine have been retaken and re-recorded, a great many of them having been through my hands twice, many of them three times, while one was five times captured, three times in one season, being caught twice in one day by a guest who shared the boat with me.

"I prepared German silver oblong plates ½in. long with a hole in one end. Upon one side my name was stamped and upon the other the serial number of the plate. Each plate was numbered consecutively, as were the pages of the book in which the record was kept. Immediately after catching and carefully weighing the bass it was placed in the large live-box of my boat, and when convenient a small hole was made in the point of the heavy cheek piece or gill covering of the bass and the plate attached with a short copper wire, the ends of which were carefully clipped off and the fish returned to the water."

Col. Van Cleave concludes that bass are quite migratory in their habits, especially after the spawning season is over. He has retaken the same bass 3¾ miles away from the place where it was first taken. Once he captured a 2¼lb. bass in Lake Miltona which he had taken the season before in Lake Ida. This lake is six miles distant, the two bodies of water being connected by a river about two miles in length.

Col. Van Cleave does not agree with Dr. Henshall in his conclusions on the weights and ages of the black bass, and thinks that Dr. Henshall overestimates the rapidity of growth of that fish at least under environment like that of the Northern waters. He states:

"I conclude that when a bass gets to weigh 2lbs. he does not gain to exceed 3oz. a year, and that after he gets to weigh 3lbs. he does not gain more than an ounce a year, and almost ceases to gain in weight. A 4lb. bass in Lake Miltona does not gain perceptibly in weight, and consumes years of time to gain each additional ounce, having reached absolute maturity. I believe that a 4½lb. bass in Lake Miltona and its contiguous waters to be not less than twenty-five years old, and I believe that if I had sufficient time to properly digest the records I have made I could conclusively prove that it is nearer fifty years old.

"While fishing with Governor Tanner, of Illinois, in Vermont Lake, two miles north of Lake Miltona, in the summer of 1897, I caught with hook and line a small-mouth bass that weighed 4¼lbs. When baked and on the table it proved to be so old that the flesh, though fat, was absolutely strong, sinuous and unpalatable, and all its bones, especially the rib bones, instead of being round with square sides, were flat, heavy and strong, and resembled a sheep's ribs in shape and condition. I believe that bass was forty or fifty years of age."

480 CAXTON BUILDING, Chicago, Ill.

Bass for the Potomac.

WEDNESDAY of this week was a great day for anglers at Occoquan Creek, as a result of the diligent labors of the United States Fish Commission in stocking the Potomac River with big-mouthed black bass. Not only the main stream, it is said, but all of its tributaries, from the falls to lower tide water, are swarming with these magnificent game fish. The weather was typical of an Indian summer day, and the bass were biting well and running from ½ to 3¾lbs. in weight.

Within the distance of half a mile no less than thirty anglers, male and female, chiefly from Alexandria and the District, were out in boats and upon the gray rocks which margin that romantic stream, and every one had a string.

As many as 200 fine fish were basketed, it being the accepted code of the craft to return to the water all captures under 10in. long. Messrs. Henry Talbott, Kent, Middleton, Murphy, Grimes, Hamill and other known experts were participants, Mr. Talbott having a representative of the New York FOREST AND STREAM as his guest. Mr. Talbott has devoted a good deal of time to promoting the work of stocking the streams, and it was an occasion of pride to him to be able to point to such gratifying results. No such sight was ever witnessed at Occoquan on any week day before.—Washington Star, Oct. 27.

A Big Muscalonge.

APPLETON, Wis.—On Sept. 30 at Big Lake, Wis., in the Manitowish waters, Will Stoppenbach, of Appleton, Wis., hooked a 11lb. mascalonge in the back, and after a deal of struggling landed the fish. The fish struck a fellow angler's spoon, leaped, struggled free, only to be impaled on Stoppenbach's hook. The motions of the fish in the water, hooked midway between head and tail, were, as may be imagined, very curious.

John Parmalee, of Chicago, on Sept. 23 hooked and landed a Big Lake, Wis., mascalonge, which weighed 41lbs., length 54in. I saw and lifted the fish—a beautiful speciman. S. J. R.

The passengers on the steamer Mohican, on Lake George, witnessed an interesting spectacle on the trip up to Caldwell yesterday morning. Near Black Mountain a moving object was seen some distance ahead crossing the lake. As the boat drew nearer it was found to be a splendid specimen of the deer family. The deer did not appear to be frightened in the least, and passed within a few feet of the bow of the boat. Had Capt. Finkle been so disposed he might have captured the deer without much difficulty.—Glens Falls Star.

DON'T SHOOT
until you SEE your deer—and see
that it is a deer and not a man.

Fixtures.

BENCH SHOWS.

Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 13.—Egg Harbor, N. J.—New York State Field Ttrial Association's inaugural trials. F. F. Rick, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.—Paris, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Theo. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Philadelphia Dog Show Association.

THE Philadelphia Dog Show Association has received the following special prizes since their prize list went to press: Mr. J. A. Caldwell, Jr., offers a silver cup for the best brace of smooth-coated American-bred fox terriers owned by a member of the American Fox Terrier Club, and also a mug for the best brace of fox terriers, smooth or wire, owned within a radius of twenty miles of Philadelphia. Mr. George S. Mott offers a silver cup for the best kennel of four pointers owned by a member of the Pointer Club. Mr. L. A. Klein offers a silver medal to the breeder of the best Dachshund in the show, and also a silver medal for the best Dachshund, dog or bitch, under eighteen months of age. These medals are open to all.

A selling class has been added to the prize list, open to dogs of any breed. The prizes are $15, $10, and $5, the price of the dog not to be over $75. This class is known as 203 A. A Pomeranian puppy class has also been added. This class is 192 A, and has prizes of $10 and $5.

MONK OF ZION.

A very large number of prize lists were mailed, but the demand for copies still continues, and there is every indication that the number of entries will be decidedly large.

The judge of French bull dogs was not announced in the prize lists, owing to the uncertainty of Mr. Foxhall Keene's presence in this country at the date of the show, and he having sailed for Europe, the breed will be judged by Mr. Chas. H. Mason.

Exhibitors who desire classes added or divided by sex should communicate with the committee at once, as it is quite likely a number of new classes will be added. The committee are desirous of doing all they can in the way of adding classes, and if exhibitors will avail themselves of the provision of the rule on page 4 of the prize list, the committee will be glad to open any number of additional classes.

This is the only show in America, barring the Westminster Kennel Club, where prizes of $15, $10 and $5 have been offered in limit and open classes, and $10 and $5 in puppy and novice classes.

The club medal is an exquisite piece of workmanship, very unique and artistic in design, and entirely different from any medal that has ever been offered before. These medals will be offered for the best four dogs of every breed, and no additional fee will be charged for competing for kennel prizes.

The hall in which the show is to be held is one of the handsomest in America, and has been used exclusively for private balls, dinners and lectures, and it is a decided concession to have secured it for a dog show. It is, without question, the most magnificent hall in which a dog show has ever been held. It is centrally located, and is as well known locally as any building in Philadelphia; which facts, together with the large amount of local advertising

the show is receiving, guarantees a very large attendance.

Exhibitors should recollect that the entries close upon Wednesday, Nov. 8.

All inquiries should be addressed to the office of the Association, Room 320 Witherspoon Building, Philadelphia.

The Connecticut Field Trial Club.

THE trials were run at Hampton, Conn., Oct. 24 and 25. The competitors in the All-Age Class ran as follows:

Wm. G. Comstock's black, white and tan English setter Doll Gladstone, with Hiram Dawson's black, white and tan English setter Conqueror.

F. M. Chapin's blue belton setter American Boy, with Dr. James E. Hair's black, white and tan English setter Albert Daisy Queen.

F. H. Burke's orange and white English setter Jack, with The Chaplain Kennels' blue belton setter Princess.

Wm. G. Comstock's black, white and tan English setter Ruby's Dan, with Bassett & Reeves' black, white and tan English setter Rowdy Roy.

F. G. Goodrich's black, white and tan English setter Tilda, with Dr. James E. Hair's blue belton setter Hyland Flee.

W. H. Stoehr's orange and white English setter Joe, a bye.

In the All-Age Class Doll Gladstone was awarded first prize, $44.25; Rowdy Roy was awarded second prize, $26.55; Ruby's Dan was awarded third prize, $17.16.

DERBY CLASS.

F. M. Chapin's black, white and tan Blade's Ruby, with O. D. Redfield's black, white and tan English setter Bess.

Bess won first; Blade's Ruby won second.

The Connecticut Field Trial Club held its annual field trial Oct. 24 and 25. The judges were N. Wallace, of Farmington, Conn., and Arthur Sharpe, of Taunton, Mass.

There was a very pleasant gathering at Whittaker's Hotel, and the judges announced that the field was superior to anything they had seen. Plenty of birds and a very pleasant, enjoyable time was had by all.

The club organized with the following officers. E. K. Sperry, President; John E. Bassett, Secretary and Treasurer; Dr. James E. Hair, First Vice-President; F. M. Chapin, Second Vice-President. For Board of Governors, Wm. G. Comstock, E. S. Gordon, W. S. Hawley.

The club received seventeen charter members, and is open to entries of all dogs from the New England States for future trials.

B.

Judge Cornell's Lost Pointer.

Editor Forest and Stream:

I have had the bad luck to lose from my city house one of my best pointer dogs, and I will be greatly obliged if you will publish this notice in your paper. The dog ran away from my house on Thursday, and a reward offered in the New York papers has failed to produce the dog. I would pay liberally for his return. He is a large, white pointer dog, with evenly marked lemon and white head and ears, is well broken on quail, and answers to the name of Dick.

ROBERT C. CORNELL.

33 Irving Place, New York.

The Western Massachusetts Fox Club.

THE twelfth annual hunt will be held at Westfield Wednesday and Thursday, Nov. 15 and 16, 1899. The hunters' horn will sound at 5 o'clock on Wednesday morning for breakfast. At 6 o'clock carriages will be ready at the Park Square Hotel to carry the hunters to the grounds.

The annual club dinner will be served to members and guests at 6:30 on the evening of the first day's hunt.

C. M. GOODNOW, Sec'y.

WESTFIELD, Mass.

Points and Flushes.

Monk of Zion (A. K. C. S. B., 31,110), whose portrait we publish this week, is a son of the famous Monk of Furness, and is a handsome dog, as also was his sire. He is owned by Mr. F. I. Richards, of Providence, R. I., who purchased him recently from Dr. W. L. Gardiner, of San Antonio, Tex. Monk has had a thorough field experience and is prized highly for his merits.

Mr. E. Knight Sperry, of New Haven, Conn., deserves a great deal of praise for the able manner in which he has persistently built up the Connecticut Field Trial Club from a small beginning.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Yachting.

THE past year has witnessed a very great change in the American steam yacht fleet, many of the older yachts having been purchased by the Government for use during the late war and new ones having been built to take their places. The Cup races at New York brought out the steam fleet in large numbers, both old and new yachts being present, and the many days of enforced idleness waiting for the wind to move the two racing yachts afforded excellent opportunities for studying the steam fleet. The races came so late in the season, after the usual time for laying up, that many of the steam yachts were present for only one or two days at the start, when they were partly lost in the big fleet of steamboats, while attention was riveted on the racing yachts. The new Idalia, Alberta and Eugenia II. were thus hardly seen at all. During the second and third weeks quite a large fleet of steam yachts was still in attendance, with few steamboats, and there was ample opportunity to study them both at rest and under way.

The handsomest yacht in the fleet, in our opinion, is the May, the flagship of the Corinthian Y. C., of Philadelphia, a comparatively old boat, built in 1891, but thoroughly artistic and graceful both in her general outline of hull and rig and in all details. While small according to modern ideas (but 766 tons), and less imposing than the new ones of 1,500 to 1,800 tons, she looks the ideal of a pleasure yacht where such craft as Mayflower and Nahma are suggestive rather of a magnificent sort of ocean steamer. Larger and newer than the May (of 1,023 tons and built in 1893) is the Rona, now Sapphire IIII., a very handsome craft. Still larger and newer is the Varuna, of 1,564 tons and built in 1896, the first, if we remember, of the new type, with an upper deck, the cabins being on the main deck. This type, as seen in Varuna, Margarita, Nahma and Mayflower, from its size and the extent of the upper works, is suggestive of the passenger steamer or royal yacht, and not in accord with the conventional idea of a steam yacht; but in all of these boats the design is worked out so skillfully that the light and graceful characteristics of the steam yacht as distinguished from commercial vessels are retained.

These three yachts, all, by the way, designed by Watson and built on the Clyde, are in our opinion the handsomest of the fleet. There will be some who disagree with this opinion, which is largely a matter of taste; but when the other extreme is considered, of the ugliest, it is not difficult to pick a trio which will be accepted by most impartial judges. These three are new, launched within a year, and, we are sorry to say, of American origin. Their names are Niagara, Josephine II. and American. They have been planned deliberately to suit their respective owners, they have been built at great expense, and they are supposed to represent the progress of naval architecture in one of its important branches in America; to rival the best work of foreign nations. Whatever may be said of their speed, accommodation or the elegance of their furnishings, judged by all yachting standards they are complete failures so far as appearance goes. They are lacking not only in that artistic finish of design which is associated with the word yacht, but judged merely as vessels they are clumsy, heavy and unshipshape to the eye. The Niagara is particularly heavy and clumsy in appearance, devoid of the life and grace seen in the largest sailing ships. The Josephine II. looks like a deliberate caricature of the Mayflower type, with the upper deck and the break aft, but with a lack of harmony of parts and finish of detail. Words fail us in describing the American. She must be seen to be appreciated. The only modern floating thing to which both she and Niagara can fairly be compared is the type of auxiliary produced of late years by the Navy Department of the United States—the Annapolis, Newport and others of their class—something unique in ugliness and absence of shipshape appearance.

It is most unfortunate that just at this time, when so successful in the engineering side of naval architecture through the achievements of the Oregon and other steam fighting machines, the United States should present as its latest achievement in sailing craft, both in the yacht and navy fleet, vessels whose appearance would make any of the old-time shipwrights turn in their graves.

The new Corsair III., the flagship of the New York Y. C., naturally attracted much attention at the races from her prominent position and the manner in which she is kept up; but in addition she has much to recommend her in appearance, being shipshape and handsome. With her were two older and smaller sisters, also designed by Mr. J. Beaver Webb, the auxiliaries Intrepid and Sultana, both fine looking ships. The essentials being all right, it is much a matter of taste between the work of one skilled designer and another, and whether a man prefers a Watson boat to a Webb boat, or the reverse, the latter show up well in any company they meet.

The new Aphrodite, the latest and largest of the Bath steam yachts, was present every day and showed to good advantage. So far as the avowed object of surpassing the later Watson boats in appearance, her builders have not succeeded, nor are they likely to very soon; but they have done much for which they are to be congratulated. From all accounts the yacht is a success, so far as performance goes, both in speed and accommodation, being specially well arranged and fitted up. In looks she is not only a great improvement on the older Bath boats, but she is in many respects a handsome vessel. The general outline of hull and rig is good, and she presents a very pleasing appearance under way. Her worst defect is the hideous bath-tub stern, to which her builders fondly cling. Besides this some of the smaller details are faulty. The best thing about her is the indication that her builders have at last realized that such vessels as Sagamore, Eleanor, Illawarra and Peregrine do not represent the highest possible point of steam yacht design, and that they have evidently set out to improve. With what they can now do in hull construction, engines and internal arrangements, if they will get some one to teach them how to design and build a yacht counter and will study the best foreign designs for details, there will remain no reasons why they cannot turn out really first-class steam yachts.

The new Seabury boat, Kanawha II., the largest yet built by the firm, does credit to her builders in the matter of appearance. She is an improvement on their older boats, devoid of the rank crudities of design which afflict so many American steam yachts, and without pretending to rival the Watson boats she shows up very well in proportions.

Among the smaller boats, the new Aileen II., designed by Gardner & Cox and launched this season, is a very handsome little craft, both in general features and in detail, the best boat of her kind that her designers have yet turned out.

The present tendency of all departments of naval architecture seems to be to develop the material and mechanical ends, the structure of the hull, the engines and boilers, the battery in a war vessel and the cabins in a yacht, at the expense of that shipshape appearance which was once esteemed by all shipwrights. This is well enough in the case of a battleship or cruiser, where spars and sails are abolished and steam reigns supreme; but we hold that in any vessel which carries sails the appearance of hull and rig as a whole may and should be considered as a prime essential. There is no valid excuse for a man who terms himself a naval architect turning out a steel box, however fast, tight and roomy, with misfit ends, broken sheer and spars stuck in at random.

We live in a utilitarian age, it is true, and there are in every vessel certain essentials which must have the first places; but there is no excuse for neglecting or slighting those conventionalities and traditions of the shipwright's art which once made every vessel with spars a thing of life and beauty as well as of mere utility.

THE whole trend of events in yachting at the present time points to the retention of the 90ft. class and possibly its continued life next season. If, as he now says, Sir Thomas Lipton will be back in 1900 with a new challenger, he will probably do all that he can to race Shamrock next season in order to discover her defects as a guide in designing the new boat, and also to have her as a trial yacht when the new one is launched. Already several new yachts of the same nominal size are proposed in England, and some of them will be built, but no yacht thus built for the home racing is likely to be as costly and consequently as fast as one for the Cup races. If Columbia should cross next spring she will be in still better shape, almost as a matter of course, than in her first season, and she will probably outclass everything new or old on the other side—in fact, the old boats Ailsa and Meteor II. are now yawls.

It is a self-evident proposition that if the 90ft. class is to be retained at all it should be kept alive year by year and not allowed to die entirely betwen the Cup challenges. We have little faith in the permanent success of the class as an establishing institution in yachting, either in England or on this side; but just now the outlook is rather promising for several years of continued racing.

THE proposed new yacht club is something of a novelty and may if really started fill an actual want about New York. There are at the present time but two clubs with houses open all winter in New York city, and most of the suburban clubs close their houses on the water in September, their members being dispersed until the yachting season reopens. With the heavy expenses incidental to racing clubs, the dues of the New York and the Seawanhaka Corinthian yacht clubs are necessarily too high to attract yachtsmen merely for the winter privileges, valuable as they are in each club. The proposed club will be under no expenses for waterside stations or for racing, but will be run on the same basis as the purely social clubs, to give a meeting place for men of similar tastes. It need not conflict with any existing yacht clubs and it should offer certain advantages which would attract members of all clubs, both within and about the city, and those from a distance who are in New York at intervals and wish to meet with fellow yachtsmen.

Interlake Yachting Association.

THE communication from Com. Bliss, of the Interlake Y. A., which appeared in the FOREST AND STREAM of Sept. 30, calling attention to the disorderly accompaniments of the Association's meets, has naturally attracted much attention and provoked some very hostile criticism. We have read a number of extracts from local papers, and even those which condemn Com. Bliss admit that the charges are practically true. The two points made in answer to the statement are that the guilty parties, though owning and sailing yachts and members of local clubs, are not "true yachtsmen," whatever this may mean, and do not properly represent the Association; and that the whole matter should been kept from the public and only mentioned at the Association meeting. The first plea amounts to nothing, as every yacht club is morally responsible for acts committed under its flag. The second has been answered by Com. Bliss, who shows that the evil has become too firmly rooted and the clubs too apathetic in quietly accepting it for any less radical remedy than publicity to be effective.

Following the first letter, Com. Bliss has just sent out a second, which we give in full. Though the issue is mainly a local one, of immediate interest only to Lake Erie, the subjects treated are common to all sporting organizations. Wherever large public meets are held, even where the disorderly element is in a very small minority in point of numbers, there is always the question of discouraging and controlling drunkenness and rowdyism. With this matter disposed of, there still remains the question of arousing a strong interest such as will lead men to do their best for the sport, to pay their dues, enter and race their yachts, and take part in the general social life of the meeting. There is a good deal in Com. Bliss' last letter which applies to most gatherings of yachtsmen, whatever the locality:

To the Members of the Interlake Yachting Association:

Gentlemen—This second report is in no way an apology for the first, but a second chapter held back until the first had done some work, not of reform, but purification.

For several years three questions have been growing graver and more threatening, and on their solution depends the success and long life of the I. L. Y. A., or its speedy disintegration. They are as follows:

What can be done to shake off, not reform, our rowdies; get rid of our amateur degenerates, and so bring the I. L. Y. A. up to a level it should reach and hold?

To do this the writer endeavored to bring the actions of our rowdy element at all of our meets before their respective townspeople, who in turn would be justly indignant at their respective clubs for allowing such an element to represent them abroad. The different clubs would see what their duty was in order to preserve their standing with their townspeople. The result would be that our clubs would spot their undesirables, and what is more to the point, the undesirables would know it, and realize the fact they could not dodge it. They would then hold a very disagreeable position in the estimation of their clubs and the public. Such is the answer to the first question, and the reason for the first report and its broadcast publicity.

The second question is what can be done to make our meets more popular with our yachtsmen and yacht owners?

The third: What can be done to put the I. L. Y. A. before the people in its high and proper place, as encouraging the finest sport to be enjoyed, and being championed by our best citizens?

These two can be condensed to one, viz.: What is the object of the Interlake Yachting Association?

Its prime object is yachting, its encouragment of racing and cruising, and raising the standard of our clubs, and consequently the standard of our yachtsmen. This would place the I. L. Y. A. ahead of every yachting organization on Lake Erie in our own and the public's estimation. Just how to do this is a matter we must solve, or disband the I. L. Y. A. Let the question rest for a few moments and hastily consider our meets from 1894 or 1895 up to and including the last in 1899.

Our meets up to that of, and perhaps including, 1897, were well attended. Unfortunately our undesirable element was very prominent and succeeded in giving yachtsmen such an unsavory reputation that our attendance began to decrease. It was only a few years ago that our anchorage would be crowded with yachts of all descriptions, and prominent among these were several fine sailing and steam yachts, which were on hand, with parties of ladies and gentlemen who had come to enjoy the races and other pleasant features of the meet. The stay of these latter craft was made unendurable by the actions of a lot of yachtsmen about the village of Put-in-Bay and the anchorage Nothing was done to look after the pleasure or comfort of these yacht owners and their guests. There were no possibilities at that time of social features. The natural consequence was that these yachts left the bay after a few visits, their owners vowing never to return during a meet of the I. L. Y. A.

Many yacht owners were at those meets to race. They brought their friends to help sail their yachts. They were those who wanted the outing. They were looking for sport, fresh air, invigorating breezes. They were not out for a week's drunk. They had their races, but also had to come in contact with a few most undesirable, so-called yachtsmen. For these there were no social pleasures, so they began to disappear, not rapidly, but their attendance has been growing less. Happily, our rowdy element also decreased to a great extent. From the year 1896 the attendance at our meets has grown alarmingly less. At the last our number of yachts had gradually dwindled to about thirty.

The absence of visiting cruising yachts was most noticeable, showing a great lack of interest among the owners of our finest yachts.

The absence of racing yachts was another hard blow to the I. L. Y. A., and those who had worked to have the meet of 1899 well attended.

With the non-attendance of yachts, however, our number of undesirables had decreased.

We must not overlook a great point to the credit of the I. L. Y. A. While during our meet the undesirables were making nuisances of themselves, our great majority of yachtsmen were enjoying greater social pleasures than ever before. The improvements of hotels at Put-in-Bay now make it possible for the friends and townspeople of our yachtsmen to attend our meets, and this year there were more ladies and gentlemen at Put-in-Bay (friends of yachtsmen) than ever before. The party we gave at the Hotel Victory was beyond compare. It was well attended and beautifully managed. The yachtsmen were most generous in introducing the visiting ladies to their friends. It was a most glorious success, and like our preceding parties at the Victory, added wonderfully to the general benefit and contentment of our yachtsmen.

Let us return to the question how to make the sport and our meets more popular with our racing and cruising yachtsmen, and so put the I. L. Y. A. at the head of all yachting organizations on Lake Erie? We should all endeavor to answer this question, but before doing so observe the following:

In planning our meets we want a locality which the majority of yachts, large and small, from Buffalo to Detroit, can reach. We should not have a series of races or cruises which will exhaust our yachtsmen, take too much time or cause them to return to their homes worn out. Our measurements should be fair to all, for just classification. There should be social features, and our respective townspeople promised an enjoyable time.

The fine fleet of cruising yachts, both sail and power, on Lake Erie, and the wishes of their owners, as we want them to have their yachts at our meets, deserve great attention. They will cruise most any place, but don't care to be "on the go" all the time. After seeing a race in the morning and returning to their anchorage, time hangs heavily on their hands, and at this point the conditions of our racing and cruising yachtsmen at our meets become identical, and it is just at this point where something is and always has been needed to entertain our yachtsmen and put restraint on the actions of many.

The writer suggests one more trial at the Bay, and the following idealized meet, with our rowdies absolutely minus. Remember, this is only a suggestion, intended to invite criticism from the members of every club making up the I. L. Y. A. Let us have our next meet at Put-in-Bay. Some months before you start see that your dues to your clubs are paid up. This will help put your clubs on such a sound financial footing that there will be no temptation to elect doubtful members for the sake of their dues. Then see that your club dues to the I. L. Y. A. have been paid. Discourage any tendency, should it appear, of your members using their different expeditions as opportunities for getting full. Encourage social life about your clubs. If you don't like it, don't keep it from those that do. Those who enjoy it are the ones that pay for it. They bring a good class of people to your clubs, and do all they can to give their guests a good time. They make enthusiastic friends, and do a great deal to keep the sport we champion before the public in an agreeable light. Work up on yachting etiquette, attend the meet, and if you are a boat owner or captain of a hired crew at least call on or leave a card for the commodore, giving official notice of the arrival of your yacht.

Now, to our meet. Don't come to it or bring friends under the impression that this will be the last opportunity that season for a week's spree. If you cannot keep your hired crews in line, discharge them. You will find plenty of good fellows to help sail your yacht home. Do everything to get the splendid fleet of sailing, racing, cruising and power yachts of a few years ago to attend this meet. Assure them that the days of stealing, drunkenness and rowdyism about the anchorage and among the yachtsmen are at an end. Urge your townspeople to be on hand. Make strenuous efforts to get your young friends of both sexes there with the certain promise of a royal good time. Take them sailing and then visit on your friends' yachts. See that they attend the parties given by and for the yachtsmen. Do all you can to show them that yachting under the management of the I. L. Y. A. is the only sport worth following, and that our yachtsmen are gentlemen. Give careful attention to our programme. Endeavor to follow out every item presented by the different committees. Have your yachts measured before leaving home. Enter them early. Do all possible to have everything pass off smoothly.

Such a meet as this would put the I. L. Y. A. and its members a long way up the ladder, and we can do it. We are not so dreadfully far from it now. The opening night of our last meet our smoker was held. It was well attended, and we had a jolly good time. Our party at the Victory was all that could be desired. Our regatta programme was well arranged and everything pertaining directly to it well carried out. Our several committees worked splendidly, and the meet, though sparsely attended, was a success, just as all others have been. Its good effects, however, were killed, just as those of all others have been, by those who want no etiquette, no restraint, no social features, and have no respect for law, decency or order.

Our annual meeting takes place in December, and our new regatta committee will want to know what kind of a meet our members want in 1900. Whether racing or cruising, where they want it held, and what features, outside of racing events, their programme will include. It is suggested that each of our individual members plan the meet that to their mind will do yachting and the I. L. Y. A.—or we might call it the Lake Erie Yachting Association—the most good. Send these plans to the writer. They will be carefully filed and handed over to the new regatta committee for a foundation with which to strengthen the I. L. Y. A., and give us a splendid meet in 1900. We will make it a glorious entry, of yachting on Lake Erie, into the next century, and a cheerful farewell to our mistakes of the few last years of the past.

Very sincerely,

GEO. T. BLISS,
Commodore I. L. Y. A., 1900.

The International Races.

DEFENDER has already been laidup at Hawkins' yard, City Island. It will be remembered that after her victory over Valkyrie III. in 1895 Defender was moored afloat at New Rochelle, just inside of Glen Island, and left there until last winter, suffering more or less deterioration meanwhile. This year for the first time these big boats will be hauled out for the winter, high and dry, the marine railway at City Island now being capable of handling them. The work of dismantling Shamrock was begun at the Erie Basin early last week, her mast being removed and replaced by a smaller one of wood, with a mizen.

On Oct. 23 Com. Morgan entertained Sir Thomas Lipton at the Metropolitan Club, some fifty guests being present, including Sir Henry Burdette, the Hon. Charles Russell, Hugh C. Kelly, H. MacGilldowney, Col. Sharman-Crawford, William Gibson and John Young, of Sir Thomas Lipton's party, and S. Nicholson Kane, Chester Griswold, Irving Grinnell, Lewis Cass Ledyard, August Belmont, H. F. Lippitt, Edward M. Brown, C. O'D. Iselin, Herman B. Duryea, F. W. J. Hurst, William Butler Duncan, Jr., Herbert C. Leeds, Woodbury Kane, Newberry Thorne and J. V. S. Oddie, of the New York Y. C.

On Tuesday luncheon was tendered to Sir Thomas Lipton and his party by the Transportation Club. On Tuesday evening the crews of the two yachts were the guests of the Yacht Masters and Engineers' Association in South Brooklyn at an entertainment arranged in their honor. The Yacht Masters and Engineers' Association, organized in 1894, now numbers among its members the leading yacht captains and engineers in the parent organization at New York and the Boston branch. In 1895 the Association entertained the crews of Defender and Valkyrie, and this year a similar entertainment was aranged. The large autditorium of Prospect Hall, in South Brooklyn, was decorated with yacht flags, that of Shamrock having a prominent place. The two crews marched into the hall together at about 8:30, Columbia's crew coming down from New Rochelle on the St. Michaels. The early part of the night up to 11 o'clock was devoted to a smoking concert, a very good vaudeville entertainment, including biographh views of the Dewey parade and of the yacht races. The dinner was served in a lower hall, some 300 being seated. At the head of the room were Captains Hogarth, Wringe and Barr, with President Pruette and other officers of the Association, and Mr. David Barrie, representing Sir Thomas Lipton. Mr. Iselin sent the following telegram:

New Rochelle, Oct. 24.—Yacht Masters and Engineers' Association, Prospect Hall, Prospect Avenue, Brooklyn:

Although unable to be with you to-night, I join in your good cheer and wish all my men who served me so faithfully and their plucky opponents the best of luck.

ISELIN.

Capt. David A. Kerr, steam yacht Intrepid, was toast master. In the party were fifteen of the Boston captains, who had come on purpose for the occasion. The dinner was enlivened by songs and recitations and afterward by toasts and speeches from the captains of the two yachts and others. It was nearly 3 A. M. when the party broke up, after a very pleasant night.

On Wednesday quite a party sailed on the Majestic for Liverpool, among them being Mr. Fife. As he was very anxious to return home he was taken in a coach to the pier and carried aboard in a litter, being intrusted to the care of the ship's surgeon, Dr. Donie. He is recovering slowly but is still very weak, having been unable to take any food during his illness. Mr. Ratsey sailed with him; also Mr. Jesse Connell, Vice-Com. Sharman-Crawford, Secretary Hugh Kelly and Mr. McGildowney.

Columbia is still at New Rochelle, most of her crew having returned home. Shamrock and Erin were to sail in company on Oct. 31.

A Social Club for Yachtsmen.

THE membership of the majority of the yacht clubs about the west end of the Sound and the waters of the Hudson and New York Bay is made up largely of yachtsmen living in New York city through the winter, the club houses being closed and the club life virtually suspended from October to May except for an occasional business meeting. The project of a winter club house in New York as a home and rendezvous for yachtsmen has been under discussion for several years, with the result that the following circular has just been sent out to yacht clubs throughout the country. It is purposed, if the scheme proves practicable, to secure a suitable house in New York, to run after the manner of a social club, with no conection with yacht racing, but bringing together the followers of the sport. The house will be fitted up with special meeting rooms for the use of the different suburban clubs whose business meetings are now held at hotels in New York.

Dear Sir: A proposition to establish in New York city a social club, the membership of which shall be restricted to persons who are members of recognized yacht clubs, has been discussed informally during the past season. It was brought before the Yacht Racing Association of Long Island Sound at its annual meeting, and the Association gave its approval, to the extent of requesting its executive committee, acting as a special committee, to take the matter in hand, investigate questions of cost, possible membership, etc..

It is the intention, if such a club be organized, to promote social intercourse among yachtsmen in general, to give its members the facilities of a first-class city club, and incidentally to afford accommodations for the meetings of members, board of governors, trustees, etc., of yacht clubs, that are commonly held in New York city.

The committee has ascertained that the present house of the New York Y. C., which is to be vacated in the near future, can be secured if it is desired. It has also ascertained that a house suitable for the purposes of such club, convenient of access from the Grand Central Railroad station, can be leased at a reasonable rental.

It is also estimated that with membership fees of $25 per year for resident members and of $15 a year for members residing beyond a radius of fifty miles from New York, such a club should have a membership of at least five hundred.

The committee desires to know if the proposition as thus briefly outlined meets with your approval and if you will join such a club, provided that at least five hundred members can be secured.

An early reply will promote the convenience of the committee.

Executive committee Yacht Racing Association of Long Island Sound: Chas. T. Pierce, chairman, Riverside Y. C.; Frank Bowne Jones, Indian Harbor Y. C.; Stuyvesant Wainwright, American Y. C.; Frederick M. Hoyt, Stamford Y. C.; C. H. Crane, Seawanhaka-Corinthian Y. C.; E. M. Maclellan, Manhasset Bay Y. C.; Chas. P. Tower, secretary, New Rochelle Y. C.

The Yacht Racing Association of Massachusetts.

THE October meeting of the Y. R. A. of Massachusetts was held on Oct. 19 at the Parker House, Boston, with President A. H. Higginson in the chair and the following delegates present: Columbia Y. C., Edward Dillehant; Lynn Y. C., Lincoln S. Coffin; Manchester Y. C., A. H. Higginson; Mosquito Fleet Y. C., S. C. Higginson; Old Colony Y. C., W. F. Scott; Quincy Y. C., H. M. Faxon; Savin Hill Y. C., J. E. Robinson; South Boston Y. C., J. T. Hurley; Squantum Y. C., A. T. Hill; Winthrop Y. C., A. T. Bliss.

A number of proposals for amendment were presented and discussed, the result being that the following amendments were adopted:

Rule 3, entries—To amend Section 1 by inserting in the fifth line, "and must be accompanied by certificate of official measurement."

To strike out Section 5.

Rule 15, prizes—To amend Section 1 to read: "Prizes and places shall be awarded to boats regularly entered and not defeating competitors."

Rule 26, protests—To amend by adding a new section, to read: "No appeal from the decision of the judges shall be made later than fifteen days thereafter."

To amend cabin-yacht limitations by adding: "If the required headroom is obtainable under this rule, additional height of cabin trunk is allowed."

To amend sail area by inserting: "Sailmaker's certificate of area of sails aft of the forward mast shall be required, subject to remeasurement by the official measurer under protest, and the actual number of square feet shall be marked on such sails over the maker's name."

The following proposed amendments were rejected:

Rule 11, sails—To amend by adding a new section to read: "In the 21ft. cabin class only working sails shall be allowed."

Also to strike out, "In no case shall the area of the mainsail and maintopsail exceed 80 per cent. of the entire area allowed."

To amend by adding to exceptions, "21ft. knockabouts, conforming to the limitations of the Knockabout Association, may race in the 21ft. cabin class."

The official record of the year's racing has just been issued in a neat pamphlet by Sec'y Bliss. The Association fleet now numbers eighty-five yachts of 30ft. down to 15ft., divided as follows: 30ft. cabin class, 4; 25ft. open class, 4; 25ft. cabin class, 17; 21ft. open class, 10; 21ft. cabin class, 12; knockabout class, 10; 18ft. open class, 17; 15ft. open class, 11. The Association ended its season with the usual rendezvous at review, at Hull, two hundred yachts being present. During the season twenty-five races have been sailed under its rules.

The executive committee awards a bronze medal and pennant to the yachts winning the highest percentage in their respective classes, as follows:

Class B, 30ft. Cabin Yachts.—Meemer, Com. Roland C. Nickerson.

Class D, 25ft. Cabin Yachts.—Hermes, Com. A. W. Chesterton.

Class S, 21ft. Cabin Yachts.—Arab IV., Willard F. Scott.

Class L, 21ft. Open Yachts.—Heiress, Charles Hayden and Arthur H. Parker.

Class T, 18ft. Yachts.—Dauntless, R. M. Benner and Patten. Perhaps, J. E. Robinson.

Knockabout Class.—Pirate, B. B. Crowninshield.

The book contains the official decisions of the Association in different cases of protest referred to it.

The present year has been rather a trying one in the Association, as the changes of rule during the winter aroused some opposition; and apart from all question of good or bad legislation the Boston fleet has been for a couple of years in a transition period which has of itself hurt the racing. All things considered, the racing has been quite as good as was to be expected, and the rules are now in such shape that there is plenty of inducement to build to the racing classes.

Clearing the Yacht Course.

WASHINGTON, Oct. 27.—The following query is made by a reader of the Evening Post:

"Now that the yacht races are over, and Columbia has successfully defended our cup, is not the question pertinent as to the legal right of the Treasury and the Navy Departments to order the arrest and cancellation of certificates or licenses of pilots and masters of vessels who, by crossing certain prescribed lines of water, might interfere with the racing yachts? Is it not something quite new to detail naval men to act ac stewards of races, and send gunboats to clear a race track? And would the Government be sustained in an action brought against the Departments for damages resulting from losses accruing to such cancellation and interference? Of course, Government has jurisdiction over all vessels under its flag wherever they may be found, but it seems somewhat doubtful if such an authority extends to infractions of the rules of a yacht club. Every sportsman and every one possessing a particle of pride in our success in the international contest would readily condone almost any action in this regard, but in the legal point of view the case might be quite different if the issue were presented. Indeed, it does seem to the writer, a very old sailor and yachtsman, that Teddy Roosevelt might with equal propriety appear with his Rough Riders on a Long Island race course as Fighting Bob appeared with his torpedo boats on a yacht course on the high seas outside of national jurisdiction."

The Navy Department was not concerned in any way in the preliminaries or details of the recent yacht races. All arrangements for keeping the course clear were made under the jurisdiction of the Secretary of the Treasury, who may be said to have borrowed Capt. Evans and his craft from the Navy Department, for the time being, to execute the Treasury regulations. There is nothing more out of the way in this act than in the loan of the revenue cutters in certain emergencies by the Secretary of the Treasury to the Secretary of the Navy, to perform what is technically naval service. The regulations which Capt. Evans was designated to enforce have been adopted, not for the purpose of interfering with any one's private rights or in the interest of any form of sport or coterie of sportsmen, but for the protection of the public who go to witness the sports and who are practically helpless in the hands of the masters and pilots of the vessels on which they go. Congress, therefore, some years ago enacted a law "to provide for the safety of passengers on excursion steamers," which may be found in the twenty-ninth volume of the statutes at large, page 122. It declares:

"That in order to provide for the safety of passengers on excursion steamers, yachts, oarsmen and all craft, whether as observers or participants, taking part in regattas, amateur or professional, that may hereafter be held on navigable waters, the Secretary of the Treasury be, and is hereby, authorized and empowered in his discretion to detail revenue cutters to enforce such rules and regulations as may be adopted to insure the safety of passengers on said excursion steamers, yachts, oarsmen and all craft, whether as observers or participants, taking part in such regatta."

This discretion is about as broad as words can make it, and, in view of the purpose Congress had in mind in investing the Secretary of the Treasury with it, the courts would probably give the statute a very liberal construction. It is impossible on such occasions as an international yacht race, in which so many thousands of people are interested, to keep good order and insure the safety of everybody without doing some things that appear more or less harsh. Where human life is at stake, and great multitudes of people are massed together, the importance of the regulations for safety will often excuse, in the eyes of the courts the infliction of penalties upon persons wilfully disobedient which would not be tolerated under conditions ordinary and normal.—New York Evening Post.

Canoeing.

American Canoe Association.

The Executive Committee Meeting.

Toronto, Saturday, Oct. 28.

THROUGH the kindness of Mr. Charles Hallock we are able to print an old picture, taken in 1874, which is of especial interest just now, at the close of the twentieth year of the American Canoe Association. Some few of the older members may recognize it, but to most of the thousand members it will be necessary to introduce it as the portrait of the founder of the Association, N. H. Bishop. Throughout the year 1879, and on to the summer of 1880, Mr. Bishop labored unceasingly for the formation of the American Canoe Association, all the work being done personally in the third story of his home at Lake George. Aided by a small printing press which he

N. H. BISHOP.

operated himself, Mr. Bishop sent out the first call to the canoeists of America, in answer to which a little party of thirteen gathered in August, 1880, at Crosbyside, Lake George, and adopted the first constitution of the Association. Nearly all of Mr. Bishop's time for two years was given to this work, hundreds of letters being written by him to canoeists in the States, in Canada and in Europe, while all of the plans for the first meet were made by him.

At that time Mr. Bishop was greatly interested in two subjects—canoe cruising and the study and charting of American waters; and it was always his intention that the one should be auxiliary to the other. In his own long cruises he occupied himself with the collection of facts and statistics concerning the waters and the adjoining country, and he was in close communication with the Coast Survey. As planned by him, the Association, in addition to cruising and racing in canoes, was to enlist the services of each member in securing information about the waters of his locality and in correcting and improving maps and charts. Though no longer an active canoeist, Mr. Bishop is still alive and well at his home on Lake George.

The annual meeting was called to order at 11:30 A. M. on Oct. 28 by Com. W. G. MacKendrick in the Toronto C. C. house, Toronto. There has been a general reluctance on the part of members to accept the office of Secretary-Treasurer of the Association this year, as it is pretty well understood how much work has been done by Mr. Forbush in the past year, both in the way of routine work throughout the season and special work of all kinds while in camp. Com. MacKendrick has been unable to find any one willing to accept the position. Mr. Herbert Begg, of Toronto, who was present at the meeting, was chosen secretary pro tem. The roll call showed the following officers and members of the executive committee present:

Com. W. G. MacKendrick, Librarian W. P. Stephens. Atlantic Division—Vice-Com. H. C. Allen per R. J. Wilkin, Ex. Com. C. V. Schuyler, H. H. Smythe proxy. Central Division—Vice-Com. John S. Wright, Purser C. F. Wolters, Ex. Com. F. G. Mather, C. P. Forbush. Eastern Division—Rear-Com. L. A. Hall. Northern Division—Vice-Com. J. McD. Mowatt, Rear-Com. E. C. Woolsey, W. J. English proxy, Purser J. E. Cunningham, Ex. Com. D. J. Howell. Western Division—Vice-Com. Wm. C. Japp. Board of Governors—R. J. Wilkin, J. N. MacKendrick. Mr. Hugh Neilson, one of the old A. C. A. men, was also present during the meeting, with ex-Com. Thorn.

The minutes of the previous meeting at camp on Aug. 15 were read and approved, with a correction to the effect that Mr. Smythe should not be recorded as voting for the resolution favoring a meet in the Western Division in 1901. The report of the Secretary-Treasurer was then read, and the following paragraph was referred to Messrs. Forbush, Hall and Mather as a special committee: "I understand that Com. Thorn and Vice-Com. Morse have an agreement with the Western Division to refund to it $100 from the receipts of this year."

The report of the regatta committee was read and received, also the report of the Board of Governors.

No report was received from the transportation committee. The division reports were then called for, that of the Atlantic Division being read and accepted. The reports of the Central and Northern Divisions were read and ordered returned for correction, as the statements of members did not agree with the list of the Secretary-Treasurer. The Eastern Division sent no report, and a motion was carried to the effect that the Purser of the Eastern Division be ordered to forward his report immediately, and that the other officers of the Eastern Division be requested to make sure that this is done. The new Western Division sent no report. Mr. J. N. MacKendrick made a verbal report as chairman of the committee on the ladies' camp. Messrs. Hall, MacKendrick and Mather were apopinted a committee to revise the associate membership list.

The following ladies were elected associate members: Miss Florence Presbrey, Miss Clara Presbrey, Taunton, Mass; Mrs. S. G. Raymond, Mrs. Wm. H. Samson, Mrs. Bernhard Liesching, Rochester N. Y.; Mrs. F. B. Huntington, Mrs. A. W. Friese, Detroit; Mrs. W. G. MacKendrick, Toronto.

A short recess was taken, during which luncheon was served in the club house. When the meeting reconvened the report of the special committee on the subject of the official organ of the Association, Messrs. Dunnell, Forbush and MacKendrick, appointed in October, 1898, was called for. Mr. Forbush reported that the committee had done nothing. A discussion followed, the members expressing themselves as greatly dissatisfied with the work of the two publications which in 1898 and 1899 had agreed to perform certain things in return for the exclusive title of official organ. The following motion, made by Mr. Wilkin and seconded by Mr. Smythe, was adopted unanimously:

"Resolved, That as there is at present no contract with any other journal as official organ, the FOREST AND STREAM be considered an official organ of the Association."

Ex-Com. Thorn then spoke on the subject of the new Western Division and its prospects of success. Mr. Wilkin, seconded by Mr. Smythe, moved a vote of thanks to ex-Com. Thorn for his personal efforts through which the new division was organized. The report of the camp site committee was then read and accepted, and bills ordered paid from balance now in hand.

The following motion, by Mr. Stephens, seconded by Mr. Hall, was carried unanimously: "Resolved, That it is the sense of the executive committee that the basis of representation for the division executive committees, as referred to in Article VI., Section 1, of the Constitution, shall be the annual reports of the division pursers for the preceding year, as published in the Year Book." The special committee on the arrangements between the Western and Central Division as to transfer of money with members from the Central to the Western Division, reported that this was a matter concerning only the two divisions, and the paragraph alluding to it was ordered stricken from the report of the Secretary-Treasurer.

The subject of the place and date of the next meet was then taken up, and it was decided to hold the meet on the Muskoka Lakes, the exact site not yet being selected. On motion of Mr. Stephens, seconded by Mr. Hall, it was decided to hold the meet from the first to the third Friday in August.

The following amendments to the constitution were then adopted:

Article VI., Section 4.—Change in line four the word "four" to "three," and at the end add "but in case of tie he shall not vote."

Article VI., Section 5.—In line eight strike out "regatta or."

Article VII.—In twenty-first line before the word "accounts," insert "and Board of Governors."

The proposed amendments, as published in the FOREST AND STREAM of Sept. 30, 1899, were then taken up. That relating to a racing board was not adopted. Mr. English asked for a definition of a war canoe to prohibit canoes with square ends. It was decided that the definition of a canoe in Rule 1 covered the case. On motion of Mr. Wilkin it was resolved to insert the word "may" in the minute book to conform to the wording of Rule V., line 12, in 1899 book, the omission being a clerical error.

After much discussion of the final clause of Rule V., relating to the trophy and trial races, the following, proposed by Mr. Stephens and seconded by Mr. Wilkin, was carried unanimously, to substitute as a final clause the following: There shall be a race for the paddling trophy, a race for the sailing trophy, and if more than nine entries

for the sailing trophy are present, there shall be a trial race, from which the competitors shall be selected as prescribed. In the paddling trophy race the number of the contestants shall be unlimited. The conditions of the sailing trophy race shall be: Sailing canoe by A. C. A. rules, no limit to ballast, course nine miles, time limit three and one-half hours. Accredited representatives of foreign clubs, not exceeding five in number, shall be eligible to start. The total number of starters shall not exceed fifteen, and the ten or more entries (after deducting the foreign entries) shall be selected from competitions in the trial race as follows; the regatta committee shall nominate two, and the balance (after deducting foreign entries) shall be taken from the leading men at the finish in their order.

An amendment by Mr. Smythe, to the effect that the trial race be made mandatory in all cases, was lost.

After discussion the following words were dropped from Rule IX.: "And the decision if unanimous shall be final, but in case it is not unanimous." Rule X. was amended, the pistol being substituted for the word "Go" in starting the paddling races and the combined race.

Mr. Smythe made a motion that all prizes not awarded be destroyed, which was carried. It appeared in the discussion that at times prize flags and other prizes not won in the races have been distributed as souvenirs to members.

Mr. Smythe also made a motion that the dates of expiration of terms of officers be published in the book. Carried.

Mr. J. N. MacKendrick spoke of the expense and uselessness of the present headquarters tents, etc., and after discussion it was decided that a simpler arrangement was desirable.

Mr. Herbert Begg was nominated by Mr. Stephens as Secretary-Treasurer and was unanimously elected, after which the meeting adjourned.

Secretary-Treasurer's Report.

Buffalo, Oct. 26, 1899.

To the Executive Committee of the American Canoe Association:

Gentlemen—I herewith present my report of receipts and disbursements for 1898 and 1899:

Receipts.		Expenditures.	
Board of governors	92.65	Office expenses	$126.13
Atlantic Division	84.60	General expenses	42.00
Central Division	410.00	Camp expenses	79.80
Eastern Division	93.90	Camp site committee	321.82
Northern Division	120.90	Regatta committee	107.76
Western Division	10.00	Board of governors	142.65
Camp fees	266.00	Transportation	22.70
Visé of certificates	14.50	Entertainment	25.00
Launch	1.75	Signal officer	8.00
Entertainment	20.50	Loan	20.00
Code books	2.00	Balance in cash	240.94
Loan	20.00		
	$1136.80		$1136.80

Up to date I have not received the report of the Eastern Division. From the report of the Atlantic Division I find that the Association is entitled to 60 cents additional. From the Central Division I claim that, according to the report as presented, the Association is entitled to $10, being the amount sent by the Western Division for purpose of taking vote; also $21.96, amount of interest accrued, making $32.56 still due, making a total with cash on hand of $273.50.

The following bills are still unpaid:

From camp site committe:	Bickford Bros	$132.37
	Rathbun Co. balance	28.64
From regatta committee:	Flags and supplies	129.70
		$290.71

The camp site committee is entitled to credit on its report for about $50, this being the amount allowed by Mr. Devlin for mess tent floor; and a like amount should be charged to camp expenses, as through an arrangement made by Com. Thorn the price of tent floor was offset by board of bugler, barber, crew of launch, camp help, etc.

During the year I have enrolled 400 new members in divisions as follows: Atlantic, 41; Central, 70; Western, 84; Eastern, 29; Northern, 176. This shows a discrepancy from reports of divsion pursers, and I would recommend that my successor take up this matter and investigate for the purpose of correcting his list or lists of divisions.

I would also recommend that members in good standing be given an annual membership card similar to that formerly issued by the L. A. W.

The arrangement with Land and Water as the official organ was very unsatisfactory, as this company failed to mail regularly the magazine, and the work on year book was not good. I believe that it would prove far more satisfactory for the commodore and secretary-treasurer to manage and print their own year book. Respectfully submitted,

(Signed) C. P. FORBUSH, Sec'y-Treas.

Report of Board of Governors.

Brooklyn, Oct. 28, 1899.

The board of governors, since the last report of the executive committee, has held two meetings, one at Buffalo, Oct. 17, 1898, and the other at Hay Island, in Canada, Aug. 16, 1899.

At the meeting in Buffalo the report showed a balance in the treasury of $1,172.49, being an increase from the year before of $147.36.

At the meeting held at Buffalo the board of governors made a careful estimate of the probable receipts and reached the conclusion that they would be for 1898-99 as follows:

Central Division	$200.00
Eastern Division	85.00
Northern Division	30.00
Atlantic Division	60.00
Camp dues	125.00
Total	$500.00

And as there had been a balance left by the administration of 1898 of $92.65, the following resolution was passed:

Resolved, That the commodore must limit his excess of expenditures to receipts to 90 per cent. of the above amount; and in case an exigency arises in his judgment for a further expenditure he must obtain the consent of the board of governors.

In addition to this resolution, another was passed extending the balance left over from the administration of 1898 of $92.65 to the administration of 1899, as a loan to meet the current expenses of the year 1899, pending the receipt of money from the several divisions. This was given with the understanding that the same should be refunded as soon as practicable, or not later than Sept. 15, 1899.

It is pleasant for your board to report that as early as July 14, 1899, did the general officers return the loan of $92.65, but within six days after they paid over their percentage from the receipts of $50.

The amounts were deposited in the Brooklyn Savings Bank in the name of the Association, and 10 cents collection charges were made by the bank in the taking of amounts.

From the annexed statement it will be seen that the interest for the year has amounted to $40.65, which leaves a balance to the credit of the Association on Oct. 1, 1899, of $1,355.50.

The board of governors congratulate the Association upon so healthy a condition of its reserve funds, but again sounds the note of warning against any action being taken to reduce the same. The reserve fund, as its name indicates, is to be held only as a reserve for some great emergency or for some extraordinary expenditure that might be necessary to save the Association in years to come.

There is no disposition to increase this reserve over the present amount, but during the past several years, as heretofore stated, the increase has not been uniform or continuous, and consequently because we have had three good years let us not be careless with this fund, which is our sheet anchor to windward, to hold us steady in the advanced position the Association has reached.

At the meeting held at Hay Island in accordance with the constitution, the officers were elected as follows: Pres., R. J. Wilkin; Recorder, C. V. Winne.

This is the fourth time they have been re-elected. The board of governors wish to acknowledge the uniform courtesy they have received at the hands of the several officers of the Association during the past year. All of which is respectfully submitted

(Signed) ROBERT J. WILKIN, Pres.

The board of governors in account with the American Canoe Association:

1898.

Oct. 1, balance Brooklyn Savings Bank	$1172.49

Receipts.

Sixteen per cent. of net receipts as provided in resolution of Oct. 17, 1898, less 10 cents collection charges	49.90
From secretary-treasurer, advance repaid	92.55
1899.	
July 1, interest accrued	40.56
Oct. 1, balance in bank	$1355.50

Respectfully submitted, ROBERT J. WILKIN, Pres.

Regatta Committee Report.

ROCHESTER, N. Y., Oct. 12.—Com. F. S. Thorn, Buffalo, N. Y.: Dear Sir—Your regatta committee for 1899 respectfully report as follows:

Schedule of events was published in FOREST AND STREAM the first week of April, and also in the May issue of Land and Water. Several changes were made on the suggestions of members, and the official programme is presented herewith:

Record.	Combined.	Sailing.	Paddling.	Total.
J. R. Stewart, Wasp	3	2	2	7
L. H. May, Aziz	2	3	1	6
J. W. Sparrow, Eel	1	1	3	5

Event No. 1.—Record Combined—Thursday, Aug. 10; start, 10:07. Wind west, light:

	First Round.	Finish.	Points.
Wasp	10 29 29	10 53 45	3
Aziz	10 34 50	10 59 13	2
Eel	10 35 05	11 00 47	1

Event No. 2.—Record Sailing—Thursday, Aug. 10; start, 2:25:30. Wind west, light:

	1st Round.	2d Round.	Finish.	Elapsed.	Points.
Aziz	2 57 30	3 15 51	3 37 22	1 01 52	3
Wasp	2 57 53	3 17 32	3 40 26	1 04 56	2
Eel	3 02 12	3 28 18	3 56 05	1 20 35	1

Event No. 3.—Record Paddling—Friday, Aug. 11; start, 10:27:32. Calm:

	Finish.	Elapsed.	Points.
Eel	10 32 20	0 04 48	3
Wasp	10 32 21	0 04 49	2
Aziz	10 33 00	0 05 28	1

Event No. 4.—Novice Sailing—Friday, Aug. 11; start, 2:45. Wind west, moderate:

	1st Round.	Finish.	Elapsed.
Hoonyali, F. G. Palmer	3 01 05	3 18 18	0 33 18
Toreador, A. E. Pawla	3 03 30	3 23 40	0 38 40
No. 12, A. G. Behn	3 12 00	3 43 00	0 58 00

Event No. 5.—Trophy Sailing.—Saturday, Aug. 12; start, 10:22. Wind fresh, with sea:

	1st Round.	2d Round.	3d Round.	4th Round.	5th Round.	Finish.	Elapsed.
Mab	10 38 26	10 51 20	11 04 53	11 14 51	11 32 27	11 48 34	1 26 34
Marie	10 43 43	Withdrew.					

Event No. 6—Dolphin Trophy— Tuesday, Aug. 15, 10 A. M. No starters.

Event No. 7.—Man Overboard Race—Friday, Aug. 11:

F. C. Moore	1
J. R. Stewart	2
F. G. Palmer	3
G. W. McTaggart	4
H. L. Quick	5
J. W. Sparrow	6

Event No. 8.—War Canoes—A. C. A. Championship—Monday, Aug. 14:

Ah-Yaw-Dwa-Wah, Bohemian A. A. A.	1
Britannia, Britannia Club	2
——, Dorval Junior	3
Hi-Yah, Toronto C. C.	4
Fag-A-Bealath, Ottawa	5
Cataraqui, Kingston Y. C.	6
——, Brockville Rowing Club	Disqualified.

Bohemian A. A. A. crew: Capt. Frank Black, Fredk. Timleck, Wm. Daniels, J. Monahan, Wm. Timleck, Frank Nicol, A. Doran, J. Hilliard, N. Abbott, G. Guilboard, A. Champagne, Q. Wadham, F. Robinson, H. Winifred.

Event No. 9.—Open Canoe Sailing—Saturday, Aug. 12; start, 2:46. Wind west, fresh, with sea:

	Finish.	Elapsed.
Mab II., C. E. Archbald	3 09 46	0 23 46
Triumph, R. W. Pierce	3 13 53	0 27 53
Isis, J. R. Stewart	3 17 51	1 31 51

Event No. 10.—Combined race—Open canoes; Saturday, Aug. 12; start, 4:05. Wind fresh, west, with sea:

	Finish.	Elapsed.
Mab II, C. E. Archbald	4 35 18	0 30 18
Isis, J. R. Stewart	4 40 12	0 35 12

Event No. 11.—Atlantic Division Cup—Wednesday, Aug. 16; start, 3:38. Wind moderate, southwest:

	Finish.
Aziz, L. H. May	4 50 45
Hoonyali, F. G. Palmer	4 52 30
Pioneer, F. C. Moore	4 54 00
Torment, L. B. Palmer	4 59 40
Question, H. H. Smythe	5 02 55
Foggy Dew, H. L. Quick	5 05 35

Event No. 12.—Central Division Cup:

Charles P. Forbush	First.
John S. Wright	Second.

Event No. 13.—Western Division Cup—Wednesday, Aug. 16; start, 3:53:

	Finish.	Elapsed.
Norma, F. B. Huntington	0 04 17	0 24 00
——, W. M. Clark	Withdrew.	

Event No. 14.—Northern Division, Orillia Cup.—No entries.

Event No. 15.—Gardner Cup, Paddling, Western Division—Saturday, Aug. 12:

——, W. M. Clark	First.
Jack, F. B. Huntington	Second.

Event No. 16.—Northern Division War Canoes—Monday, Aug. 14:

Ah-Yaw-Dow-Wah, Bohemian A. A. A.	1
Britannia, Britannia Club	2
Hi-Yah, Toronto	3
Fag-A-Bealath, Ottawa C. C.	4
——, Brockville Rowing Club	5
——, Dorval Junior	6
Cataraqui, Kingston Y. C.	7

Event No. 17.—Trophy, Paddling—Tuesday, Aug. 15; start, 4:42:

——, J. Smith	1
Lady Ruby, W. T. Lawless	2
Minawas, E. B. Nellis	3
——, J. McD. Mowat	4
Alligator, Chas. Eastmond	5
——E. McNichol	6
Red Dragon, M. D. Wilt	7

Event No. 18.—Half-Mile Double—Wednesday, Aug. 16:

J. Smith	1
E. B. Nellis	2
E. McNichol	3
Frank Taylor	4

Event No. 19.—Half-Mile, Single—Tandem:

Frank Taylor and J. Smith	1
C. Cooch and R. Craig	2
J. McD. Mowat and A. D. Cotter	3
E. McNichol and H. Blatchley	4

Event No. 20.—Relay Race—No entries.

Event No. 21.—Half-Mile Single—Wednesday, Aug. 16:

J. Smith	1
Frank Taylor	2
E. H. Richards	3
E. McNichol	4

Event No. 22.—Novice—Tuesday, Aug. 15:

R. H. Parmenter	1
Herbert Blatchley	2

Event No. 23.—Fours—Monday, Aug. 14:

Britannia—Percival, Lynch, McNeil, Stott	1
Toronto—Begg, Blatchley, Gay, Richards	2
Ottawa—Clayton, Patterson, Stewart, Woolsey	3
Kingston—Mowat, Cotter, Britton, Bayley	4

Event No. 24.—Tandem Overboard—Tuesday, Aug. 15:

Toronto—Nichol and Begg	1
Kingston, Britton and Parmenter	2

Event No. 25.—Tilting Tournament—Tuesday, Aug. 15:

H. L. Quick and M. D. Wilt	Winners.
W. T. Lawless and H. C. Allen	Second.

Event No. 26.—Upset—Tuesday, Aug. 15:

W. T. Lawless	1
R. H. Parmenter	2
L. B. Palmer	3
L. Furnier	4

Event No. 27.—Hurry-Scurry—Wednesday, Aug. 26:

R. H. Britton	1
R. H. Parmenter	2
E. McNichol	3

Event No. 28.—Ladies' Paddling—No starters.

Event No. 29.—Ladies' Tandem—No starters.

Event No. 30.—Swimming—Tuesday, Aug. 15:

W. T. Lawless	1
Chas Eastmond	2

Event No. 31.—Extra Race, Gananoque Banner—Monday, Aug. 14; start, 11:27; course, 4½ miles. Wind northwest, fresh:

	1st Round.	2d Round.	Finish.	Elapsed.
Mab	11 49 15	12 02 43	12 16 40	0 39 40
Aziz	11 50 25	12 03 05	12 19 09	0 42 09
Wasp	11 51 32	12 05 40	12 19 45	0 42 45
Foggy Dew	11 51 05	12 06 08	12 20 05	0 43 05
Ellen L.	11 52 35	12 08 10	12 21 48	0 44 48

Pioneer	11 52 10	12 07 00	12 21 54	0 44 54
Hoonyali	11 52 40	12 08 11	12 22 30	0 45 30
Question	11 53 50	12 08 50	12 23 50	0 46 50
Toreador	11 52 52	Withdrew.		

Event No. 32.—Tail-End Race—Wednesday, Aug. 16:

R. H. Parmenter	1
E. McNichol	2
G. W. McTaggart	3
R. W. Pierce	4

Thanks of the committee are extended to C. F. Wolters, clerk of the course; Commodore-elect W. G. MacKendrick, starter of the paddling races; Messrs. R. J. Wilkin, J. N. MacKendrick, R. Easton Burns, H. C. Morse and W. J. English as judges at the finish and turns, and all other members who lent their assistance and advice.

Aug. 12 Mr. E. A. Burns, of Toronto, was appointed to take the place of John W. Ely, of Rochester, the absent member.

One red, one green, one yellow and one A. C. A. burgee are in the possession of Signal Officer Walter Mack Clark.

All the cups were left in the possession of Com. Thorn and Sec.-Treas. Forbush.

The patent log was left with Sec.-Treas. Forbush.

The official launch, under command of Wm. Robinson, of Kingston, Ont., was entirely satisfactory.

Some thief "lifted" the first prize for the trophy sailing, won by Charles E. Archbald, and the committee secured a new one and forwarded it to Mr. Archbald.

Accounts to the amount of $129.70 for prizes, etc., remain unpaid to date.

Recommendations.

That all record races be abolished. The number of entries is always small, and the events prove dull and uninteresting. The conditions under which they were inaugurated no longer exist.

Establish a record sailing and also a record paddling prize, to be awarded the sailor and paddler winning the highest averages during the meet.

That all events for the ladies be abolished.

Respectfully submitted,

F. B. Huntington,
E. A. Burns,
Al. T. Brown,
} Committee.

The Sportsmen's Show of 1900.

General Manager J. A. H. Dressel sends out the following prospectus of the Sportsmen's Show, to be held under the auspices of the National Sportsmen's Association in Madison Square Garden, New York, March 1 to 17, 1900:

Preparations are being made to make this, the sixth annual Sportsmen's Show, the grandest of any yet presented to the public. New and attractive features are now being arranged for, and exhibitors are taking space months ahead of the opening of the show. This year the boat exhibit will be made a feature, and some new and handsome designs in canoes, yachts, launches and motors will greet the sportsmen.

Special attractive features are being arranged for the aquatic sports, which will take place in an immense tank about the same dimensions as was built for the Sportsmen's Show last year. There will be contests in swimming, canoeing, tub races and water polo, which proved so interesting and attractive.

A big game park, containing deer, elk, buffalo, caribou and moose, will form a most complete exhibit of live game animals, besides which there will be exhibited in large cages, made especially for them, mountain lions, cougars, bears and a larger variety of these wild game animals than has ever before been exhibited. There will be a most complete exhibit of live game birds, including quail, ducks of every variety, pheasants, swans, geese and other rare specimens. The fish exhibit will be made the most attractive of any yet given, and will be under the direct supervision of our State Fish Commissioners.

The Indian village will occupy a very large portion of the Garden near the lake. The camp will be a faithful representation of an aboriginal village, with birch bark tepees inhabited by Indians and their families, clothed in picturesque habiliments of savage life, and engaged in canoe building, trap making, etc. The squaws will make basket and bead work.

The Association championship and other events at inanimate targets will be held on the roof of the Madison Square Garden, same as last year, and under the same management. Revolver and rifle ranges will be under expert supervision, and new inventions in powder, revolvers and rifles will be there for inspection. The decorations will be something entirely new and artistic. There will be log cabins, spruce and pine trees, which will add to the forest effect.

The Wild Lands of the United States.

We read about the continual inroads made by the settlers upon the Government lands, and indeed we generally consider that there is really no very great part of unsettled country left in the West. Yet I notice that the Commissioner of the General Land Office reports that we have still left in the United States 929,308,068 acres of unappropriated public lands. There were fewer homestead entries this year than there were last. It would seem as though Uncle Sam had still a front door yard big enough for a social game of croquet.

The Commissioner of the Land Office recommends the enlargement of the Yellowstone National Park and the Mt. Rainier National Park in Washington. He especially recommends greater protection against forest fires. It ought to give one a certain respect for the forest fire danger when he reads that the average annual loss from this source amounts to $20,000,000, or as much as we gave for the Philippine Islands, and more than people once thought all Alaska was worth.

In the matter of forests, I see that Gen. Andrews, State Fire Warden of Minnesota, is still writing of the proposed National Park of Minnesota, and I observe him quoted to the following effect:

"If this region were made a park the mature trees would be cut from time to time on forestry principles, yielding an important revenue, and the forest would remain unimpaired. The pine has been estimated and a fair value of the land could easily be determined. Under the existing treaty the Indians have a right to allotments of eighty acres to each Indian without regard to age or sex, but not on 'pine lands,' and, as I have recently learned, as much as 151,346 acres have been allotted of the land proposed for a park to 1,579 Indians. It is thought by many that this would not be objectionable, as many of the Indians, in case a park was created, would be wanted for boatmen and guides. A thousand guides find employment in the Adirondacks. Moreover, the Indians, though they cannot sell, have a right to lease their allotments.

"It is believed that soon after the meeting of Congress a joint resolution will be passed, stopping the sale of pine on the land in question and appointing a committee to investigate and report on the park matter."

E. Hough.

480 Caxton Building, Chicago, Ill.

Rifle Range and Gallery.

Rifle at Shell Mound.

San Francisco, Cal., Oct. 23.—A good shooting day greeted the numerous marksmen at Shell Mound range yesterday, and some good scoring was done. The Golden Gate Rifle and Pistol Club did especially fine work in their six-men team shoot for a trophy offered by Outdoor Life, of Denver, Colo., which carries with it the championship of the West. The original conditions were: Eight scores, only one per month; standard American target, 200yds., off-hand; teams of six men from any bona fide rifle club. As the Golden Gate Club received notice too late to begin at specified time, it was agreed to allow them to shoot two scores each month for the last four months of the year. It will be observed that the team made a total of 515 rings in the second score, or an average of nearly 86, which is certainly good work.

Scores: June competition—Capt. Dr. L. O. Rodgers 87, D. W. McLaughlin 86, F. P. Schuster 86, F. E. Mason 79, C. N. Henderson 71, J. E. Gorman 85; total 496. October competition—D. W. McLaughlin 83, F. P. Schuster 85, Dr. L. O. Rodgers 84, F. E. Mason 89, C. N. Henderson 88, J. E. Gorman 81; total 515.

Regular club scores: Rifle, class medal, one or two 10-shot scores, German 25-ring target—Dr. L. O. Rodgers 222, F. C. Mason 217, J. E. Gorman 204, C. N. Henderson 202-185, F. W. Belknap 204-194, E. N. Moore 198, J. F. Bridges 199.

Pistol, 50yds., 10-shot scores, standard American target—Dr. L. O. Rodgers 94, J. E. Gorman 87, D. W. McLaughlin 89, J. F. Bridges 84-74, F. E. Mason 89, C. N. Henderson 81, F. W. Belknap 73, E. W. Moore 71.

Germania club scores:

Competition for cash prizes, three shots, German 25-ring target, re-entry: F. P. Schuster 73, Dr. L. O. Rodgers 72, John Utschig 71, L. Bendel 72, W. Goetz 68, L. Haake 68.

Bushnell championship medal, single entry, 10 shots, German 25-ring target: D. W. McLaughlin 223 rings, J. Utschig 223, F. P. Schuster 220, Dr. L. O. Rodgers 217.

San Francisco Schuetzen Verein monthly bullseye shoot: First, H. Huber, 336 points; second, William Garms, 350; third, J. Gefkin, 428; fourth, R. Stettin, 452; fifth, A. Lemaire, 533; sixth, O. Bertelsen, 540; seventh, F. P. Schuster, 589; eighth, D. Salfield, 599; ninth, J. Utschig, 619; tenth, L. Haake, 646; eleventh, J. Woebke, 715; twelfth, H. Stelling, 737; thirteenth, F. Rust, 840; fourteenth, J. Peters, 856; fifteenth, H. Hellberg, 906; sixteenth, H. Zecher, 925; seventeenth, F. Pape, 1108; eighteenth, J. Lankenau, 1122; nineteenth, H. F. Lilkindea, 1138; twentieth, F. Brandt, 1189.

Norddeutscher Schuetzen Club monthly contest for class medals, 20 shots, German 25-ring target: First champion class, F. P. Schuster, 448 rings; second champion class, not filled; first class, C. F. Rust, 414; second class, D. Salfield, 381; third class, not filled; fourth class, John Woebke, 346; best first shot, J. Lankenau, 24; best last shot, F. P. Schuster, 25.

Roeel.

Cincinnati Rifle Association.

The regular shoot was held Oct. 29 at 200yds. off-hand at the German ring target. Following are the scores:

Ring target:

Gindele	21	21	24	20	21	21	21	21	19	23	212

Mr. James S. Conlin, whose fame in connection with gallery rifle and pistol shooting is a part of its history in New York, has issued a card informing his patrons that his new gallery at 513 Sixth avenue is now ready for their accommodation. Mr. Conlin claims that his new gallery surpasses any public gallery in the city in length of range, good light and ventilation, with perfect firearms and great variety of targets.

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 1-4.—San Antonio, Tex.—San Antonio Gun Club's tournament.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Nov. 22.—Ridgewood, N. J.—All-day shoot at live birds. H. Blauvelt, Manager.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June 5-7.—Columbus, O.—Tournament of Ohio Trapshooters' League. J. C. Porterfield, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

In an exchange a communication from Princeton, N. J., relates that, "the University Gun Club will enter a team this year in the intercollegiate gun shoot for the intercollegiate championship, which will be held on Nov. 18, at Wellington, Mass., under the auspices of the Harvard Gun Club. The prizes will be a silver loving cup to the winning team and small individual cup to each member of the team. A cup will also be given to the person making the highest individual score. Under the present association three shoots have been held, of which Harvard, Yale and Pennsylvania each won one. The University Gun Club will hold two matches this fall against the University of Pennsylvania, one to be held in Philadelphia, the other on the home grounds. Several members of the last year's team have returned to college, and the team is practicing daily on Stockton Field."

On Oct. 24, in a contest between teams of the Hill City Gun Club, of Lynchburg, Va., and the University of Virginia, Charlottesville, the former team won, the scores being as follows: University—John W. Daniel, Jr., 37, P. F. Dupont 27, W. S. Hoen 30, E. M. Daniel 31, J. F. Taylor 30, W. McH. Alston 26; total 181. Lynchburg—Thomas F. Nelson 42, W. P. Clark 36, C. W. Scott 43, W. W. Dornin 47, W. L. Mooreman 41, T. H. Fox 39; total 248. The University of Virginia contemplates arranging for medal contests. The officers elected for the present session are: President, John W. Daniel, Jr., of Lynchburg, Va.; Vice-President, W. M. Alston, of Allegheny, Pa.; Secretary and Treasurer, J. F. Taylor, of Lynchburg, Va.; Advisory Committee, P. J. Du Pont, of Greenville, Del., and W. S. Hoen, of Richmond, Va.

Mr. H. L. Born, the secretary of the Greenfield Gun Club, of Pittsburg, under date of Oct. 28 writes us as follows: "An interesting team race between the Greenfield Gun Club, of Pittsburg, and the North Side Gun Club, of Allegheny, was shot Thursday, Oct. 26, at the grounds of the latter club, resulting in a decided victory for the Greenfield shooters. The teams were composed of six shooters, each man shooting at 50 targets, a total of 300 per team. The Greenfield team broke 279, which gave them the excellent average of 93 per cent. Fleming and Rahm made the highest scores, each breaking 49 out of 50. Born and Clark 47, Holmes 45 and Parker 42. A return match will be shot Thursday, Nov. 2, at the Greenfield grounds."

In the Banner-Leader, of Ballinger, Tex., there recently was an account of a team shoot between a team of the home club and teams from San Angelo and Coleman. In the matter of vanished hopes, the historian of the occasion graciously touches upon them as follows: "The day and the occasion are long to be remembered as cementing the ties of friendship and fellow feeling. True, we lost, but we lost to a worthy antagonist, and there is no cause for shame in the defeat. We just didn't shoot good enough." There is a manly frankness in that which is worthy of careful study and remembrance.

The Westchester Gun Club, of Westchester, Pa., and the Phœnix Gun Club, of Reading, Pa., in their contest for the championship of Chester county, on Oct. 27, were in the third and final competition for the honors had things gone right, each having previously won one contest of the series. But the score book of each club showed each respectively to be a winner, so there will be another contest. To a man who would deeply ponder over this point for sixty days it might occur to his think tank that an official scorer in such matters would be a good thing.

The Belle Meade handicap at 25 live birds was a closely contested event at the Bell Meade tournament on Saturday of last week. It was won by Mr. R. S. Pierce, of Wytheville, Va., who had to kill 60 straight to win, the special prize being a loving cup. Mr. F. C. Rich was but 1 behind the victor. Mr. Pierce is a friend of Mr. Chas. Macalester, of Baltimore, Md., who spends a great part of the hunting season at Wytheville, and it was under Mr. Macalester's able chaperonage that Mr. Pierce ventured down into Tennessee and carried off first honors.

Mr. H. H. Blauvelt, Ridgewood, N. J., has issued invitations to his live-bird shoot, fixed to be held on Nov. 22, on the grounds near the Rouclere House, commencing at 10 o'clock. There are three events on the programme, namely: No. 1, 5 birds, $3, birds extra; all at 28 yds.; three moneys. No. 2, 7 birds, $5, birds included; 28 to 31yds.; three moneys. No. 3, 10 birds, $10, birds included; 26 to 31yds. Miss-and-outs will be shot if there is time to spare for them. Birds 25 cents. The main line of the Erie R. R. is the best route.

We learn that Mr. Charles E. Willard, of the International Smokeless Powder and Dynamite Co., is this week in the vicinity of Chesapeake Bay with Mr. J. J. Summerville, of Woodbury, N. J.; Capt. Robley D. Evans, who is ex-President Cleveland's favorite shooting companion, and Lieut. Comley, who was navigator on the Indiana during the late ocean tournament, and now on the receiving ship Richmond. Birds are reported plentiful in that region, and we learn that the party expects a thoroughly enjoyable time.

In the club contest of the East Side Gun Club, of Newark, N. J., on Oct. 26, Mr. C. W. Feigenspan, standing at 29yds., was first in Class A with 10 straight kills. Mr. W. J. Ferguson, Jr., was first in Class B with 10 straight, and in Class C Dr. Davis killed 9 and was the leader in his class. Mr. F. A. Sinnock, a guest, killed 10 straight in this event, standing at 29yds., and 10 more straight in other events. The birds were a good lot, but the summer weather which prevailed put them out of their usual good form.

The Schmelzer trophy contest at the Belle Meade tournament on Oct. 24 had good competition. Mr. Rollo O. Heikes was the victor in a well-contested race. The conditions were 100 targets, reverse angles, and the great war horse smashed 90, with the redoubtable Mayor of Keithsburg, Ill., Hon. Thos. Marshall, only 1 target less. Gay was 87, Young 85, Hallowell and Fanning 83 each, Elliott 82, Gilbert, Hirschy, Shepardson, Allen and Fulton 81 each.

The Nashville American of Oct. 24, in an otherwise very good report of the Belle Meade shoot, says: "The last event of the day was the live-pigeon shooting. In the first match Gen. Jackson defeated Col. Work, of Cincinnati, breaking 10 out of a possible 10, while Col. Work broke 9." We have heard of targets being broke and shooters being broke, but a pigeon—that's another story.

J. S. S. Remsen, the president of the Brooklyn Gun Club, spent the greater part of last week gunning for broadbills and coots in the Great South Bay off Bayshore, L. I. The weather was too fine for good bags to be made, but Mr. Remsen returned to the city on Friday afternoon well pleased with his outing. He reported lots of ducks and lots of hunters after them.

Mr. John C. Hicks won the gold medal at the Monumental Shooting Park, Baltimore, emblematic of the live-bird championship of Maryland and the District of Columbia. He stood at 30yds. and killed 14 out of 15. Then in the shoot-off he killed 25 straight before he could shake off his closest competitor, Dixon.

One hundred targets, $100 a side, were the conditions of the race between Messrs. W. G. Harris and W. R. Elliston on Oct. 25, at the Belle Meade tournament, Louisville, Tenn. The former won on a shoot-off at 25 targets by the score of 24 to 23. In the main race they tied on 89.

As will be seen in Mr. Paul R. Litzke's very full report of the Belle Meade tournament, Mr. Fred Gilbert won high average in the total of the target events. He made a fine run of 108 straight on the first day. Heikes made a run of 96 on the second day. On the third day Jack Parker ran 112 straight, while Mr. J. D. Gay on the same day ran 99 straight.

Birds must be scarce in New Jersey when Justus von Lengerke and his dog can occupy two whole days in pursuit of them and return to New York with only five ruffed grouse and two woodcock. It is a fact that the results of the present hunting season to date have been a disappointment, at least so far as northern New Jersey is concerned.

"Hunting and Fishing in the South" is the title of an illustrated book of 64 pages issued by the Southern Railway Co., sent free to those who apply for it. As its name implies, it is devoted to information of all kinds valuable to men who hunt and fish.

Gun below the elbow is the condition governing the manner of holding it at the shoots of the Phœnix Gun Club, and all stand at 25yds., yet President David Freleigh accounted for all but one of 15 at the club shoot at Dexter Park last week.

In this department will be found the official notification from Mr. Edward Banks that the championship contest between Messrs. W. R. Crosby and Fred Gilbert, the challenger, has been postponed to Saturday of this week.

In the contest for the Cast Iron medal at Belle Meade, Oct. 26, Mr. J. A. R. Elliott defeated Mr. J. D. B. De Bow, the challenger, by a score of 99 to 93. The birds were a poor lot, the weather was warm and there was no wind.

Mr. Paul R. Litzke informs us that a big tournament will be given at Memphis, Tenn., next February on entirely new lines, and that Hot Springs, Ark., contemplates a big midwinter shoot.

Mr. W. L. Colville, of the Du Pont Powder Co., was in New York early this week after some lively and successful travel in his business territory, which comprises a very large district.

We are informed that the morning of Nov. 18 is fixed for the team contest of the Princeton, Yale, Harvard and University of Pennsylvania gun clubs at Wellington, Mass.

The Jacksonville, Fla., Gun Club, recently formed, held its first merchandise shoot with great success on Oct. 24. Fifteen new members joined the club on that day.

The Mount Vernon (O.) Gun Club will hold a live-bird shoot on Thanksgiving Day. On Nov. 24 it will have a game supper, preceded by a three days' hunt.

Mr. R. W. Gorham, secretary of the Mt. Kisco, N. Y., Gun Club, informs us that his club hopes to invite its friends to a live-bird shoot this month.

Dr. Wm. Wynn, of Brooklyn, A. Eddy and T. Blankley killed 9 out of 10 live birds in the club event of the Fountain Gun Club last week.

Evansville, Ind., is to have a gun club, if recent press reports are true, and a tournament will be one of its first serious efforts next year.

Mr. Paul R. Litzke gives a very complete report of the Belle Meade tournament in our trap department this week.

The Kansas City Schuetzen Verein is the title of a gun club recently organized in Kansas City, Mo.

BERNARD WATERS.

A Canadian Match.

MONTREAL, Oct. 26.—An old-fashioned out of date everywhere excepting among the Canadian habitants pigeon shoot took place yesterday afternoon, the 25th, on the Bout de l'Isle grounds near this city, between W. L. Cameron, ex-champion of the Canadas, and Mr. Laurin, of this city. Conditions, $50 a side, 35 live birds, at about 24yds. rise, 80yds. boundary, and the birds to be thrown from two plunge traps. The birds for the most part were a miserable lot of duffers, which would hover in the air in a dazed condition when thrown from the traps. Occasionally one would have life enough to make a break for liberty, and would generally escape scott free. The shooters, puller and umpires were surrounded by the crowd, who were either standing or sitting on the grass and filling the air with vile tobacco smoke and exclamations of "Mon Dieu!" "Sacre a la mort!" "Bon! Bon!" etc. The most amusing incident was Laurin's No. 12 bird, a young white innocent, which, evidently taking the shooter for a friend, quietly and confidently flew directly for him, unharmed by the two shots fired in his direction, and settling down by Laurin's feet, allowed itself to be caught. Then a grand pow-wow took place, caused by Laurin's friends trying to find a shot mark on it. At last it was declared a lost bird, and the sport went on.

Below are the scores. After the 31st bird Laurin's friends threw up the sponge:

STANSTEAD.

Mount Kisco Gun Club.

MOUNT KISCO, N. Y., Oct. 26.—The scores made in the tournament of the Mount Kisco Gun Club are appended. The weather signs looked very much like rain in the morning, which kept a number of our shooting friends away, but later it brightened up and we had a good day. Van Allen secured the cash prize in event No. 5, Gorham not shooting for the money; he also won the gun case in event No. 7 in the shoot-off with Gorham. Dr. Egbert, of Holyoke, Mass., tied Apgar for the coat which was the prize in event 13. The latter withdrew, leaving the Doctor winner.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

R. W. GORHAM, Sec'y.

Jacksonville Gun Club.

JACKSONVILLE, Fla.—On Tuesday, Oct. 24, the newly organized gun club held their first merchandise shoot, and a fine attendance was noted. Handicaps ranged from scratch to 15 in the 25-bird event. Scores were as follows:

	Hdcp.	Total.		Hdcp.	Total.
Gato 8	8	16	Lorraine 19	4	23
Green, ... 7	15	22	Ingram 15	10	25
Frazer 17	12	25	Bauskett 21	4	25
Muller 11	10	21	Long 17	10	25
Haney 6	12	18	Anderson 7	12	19
Sammons 22	7	25	Walters 10	12	22
Ivers 17	7	24	Marvin 15	8	23
Hyde 10	10	20	Gould 20	7	25
Bours 15	5	20	Liell 6	15	21
Pons 19	8	25	Goldsberry ...12	10	22
Vincent 24	0	24	Stripling 14	10	24

Handicap, high guns, to win, twelve prizes. In the shoot-off Sammons won first, Ingram second, Long third, Frazer fourth, Gould fifth, Bauskett sixth, Pons seventh, Ivers eighth, Stripling ninth, Vincent tenth, Marvin eleventh, Lorraine twelfth.

During the early part of the shoot Dr. Vincent was so unfortunate as to have his gun burst in his hands, but luckily escaped without injury. He used Mr. Sammons' gun through the rest of the match, and finished well. The club booked fifteen new members on this occasion, and is in a fine condition.

Belle Meade Tournament.

NASHVILLE, Tenn., Oct. 28.—The second annual tournament of the Belle Meade Gun Club cannot be termed a success, as the attendance was very light, and the division of the money in the target events—five equal moneys—has created no end of dissatisfaction, for in adopting this system this part of the tournament was shorn of its competitive features and resolved itself into a haphazard lucky-chance business, so that the scrupulous shooter of marked ability had but little chance to win his entrance money, to say nothing of his other expenses.

Gilbert, the winner of high average, scarcely won enough to pay his transportation to and from the grounds, to say nothing of his hotel bill, shells and other incidentals. Not even the lucky shooter won enough to pay expenses, and of course a shoot of this kind failed to give satisfaction. With the classes of shooters as were present here, about 85 per cent. were constantly shooting into the money, so there was little but the added money to shoot for, and 3-cent. targets made big inroads into this.

The pigeon events were all high guns, and generally only six or seven of these, so that on the quality of birds furnished here and the weather conditions prevailing it required straight scores to get a part of this. The programme catered directly to the crackerjack element, and while a majority of them were present, there were not enough to make a successful tournament in point of attendance.

In order to make a shoot a success, you must cater to the rank and file, and if you would draw this element you must make it possible for some of them at least to win some money. In the first place, never run your shoot over four days, and then do not have more than 170 shots on your programme. Furthermore, do not have all 20-target events. One day pigeons as a rule should suffice. There is but one system which should be in vogue for dividing money in target events, and this is the Rose, which can readily be adjusted to suit any case. High guns is the proper method to employ in pigeons, but the scope of these should be broadened to suit the caliber of your contestants. Two moneys for over five entries or three for ten would be a good ratio for the average shoot.

Last year the tournament was run on similar lines, and on that occasion I called attention to the fact that it is impossible to draw out the amateur shooter to compete on equal footing with the paid shooters, especially when your programme is so long and you endeavor to hold a six-day shoot. It is well to remember that you can only get so much shooting out of a crowd. If your attendance is large it will take a little longer, but with an attendance no larger than the one here it soon resolves itself into a drag. It was hard work to get entries after the fourth day, and in order to prevent the shoot from fizzling out entirely the management changed the Belle Meade handicap from high guns to class shooting.

The method of running this tournament was very bad. True, there were plenty of traps, but there was not sufficient force to run them, so that with even a light attendance the shoot dragged continually, and had it been much larger it would have been hard to complete the programme. In this respect the tournament was in marked contrast to that of a year ago, when there was plenty of competent help everywhere.

Among the shooters present were J. S. Fanning, of the Gold Dust Powder Co.; J. A. R. Elliott and Irby Bennett, of the Winchester Arms Co.; Col. A. G. Courtney, Remington Arms Co.; Charley Budd, of Parker Gun Co.; E. D. Fulford, Remington Arms Co. and U. M. C. Co.; H. C. Hirschy, of the Hazard Powder Co.; Fred Gilbert and E. du Pont, Jr., of the Du Pont Powder Co.; Chas. Porter, of the Marlin Arms Co.; R. O. Heikes and John J. Hallowell, of the U. M. C. Co.; Jack Parker and J. H. Mackie, of the Peters Cartridge and King Powder Co.

Other than trade representatives were Kit Shepardson, La Grange, Ind.; W. G. Harris, Gallatin, Tenn.; R. S. Pierce, Wytheville, Va.; A. S. McDonald, Bristol, Tenn.; J. E. Bradshaw, New York; Dr. R. G. Fallis, Louisville, Ky.; J. D. Gay, Pine Grove, Ky.; Chas. McL. Clark, St. Louis; W. A. Fawcett, Bardstown, Ky.; O. E. Porter and Chas. Reif, Chattanooga, Tenn.; Chas. Young, Springfield, O.; Tom Marshall, Keithsburg, Ill.; Mrs. and Mrs. Shattuck, Minneapolis, Minn.; Mr. and Mrs. Butler (Miss Annie Oakley), W. S. Allen, Raymore, Mo.; F. N. Cockrell, Kansas City, Mo.; Chas. McAlister (Haywood), Philadelphia, Pa.; Emil Werk, Cincinnati, O.; M. M. Wall, Auburn, Ky.

It is not necessary to go into a description of the grounds, as this was thoroughly covered a year ago, and virtually the same arrangement prevails. The ride to and from the shooting grounds, which is always one of the features of these shoots, was marred in its pleasure, owing to the dusty condition of the road.

Jack Parker managed the shoot, and found it anything but an enviable task, with the assistance he received.

First Day, Monday, Oct. 23.

THE race between Fanning and Gilbert for premiership to-day was the most interesting feature of the shoot, and notwithstanding that Sharkey got a running start and was 4 birds to the good after the first event the Iowa shooting machine succeeded in evening up matters, and thereby shared the honors with Fanning. To accomplish this it required a percentage of 965. This feat was only brought about by Gilbert's great run of 108 straight. He lost the second target in event No. 4, and then scored consecutively until the 11th round in event No. 9. This is by far the best run of the day.

Fanning and Gilbert each have six straights to their credit, though Fanning did not bunch his as successfully as his rival, and consequently made no long runs.

Budd is third with an even 950 per cent., after which comes Quaker Gay, the tall and nervy shooter from Pine Grove, Ky. While he is one of the simon-pure shooters, he has over and again demonstrated that he is capable of setting the pace in any class. Like Gilbert, he got off on the wrong foot, but thence afterward his misses were few and far between.

Fulford and Marshall are tied for fifth position with 935. Some idea of what kind of a proposition the principals had to contend with is evidenced by the fact that nearly half of those who shot through made an average of 90 or better.

The five equal divisions brought about some queer results, while as a rule first and fifth moneys proved the most remunerative. Hallowell was not strong in general average, but when it comes to raking in the shekles he is easily high man, as his 17th in event No. 6 won the best pot of the day, $12.40. While he was fortunate in this instance, he also won a nice piece of money by good shooting. This occurred in an extra after the conclusion of the programme; in this he ran 15 straight on reversed angles and scooped first, $10.80, without a divide.

The weather was ideal, and the atmospheric conditions balmy and warm. During the forenoon there was some wind, though this gradually died out, and consequently cut but little figure in the result. Only thirty-two shooters participated, but of these twenty-four shot through the programme. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Fanning	20	20	18	20	17	20	20	19	19	20	200	193	.965

Second Day, Tuesday, Oct. 24.

To-day's results are practically the same as those of yesterday—a bunching of the crackerjack element at the top of the list, among whom a little shifting of positions took place; but aside from this there is little of interest in the shoot, which has been virtually deprived of competition by the five equal money division under which it frequently remunerates the participant most to get into fourth or fifth place. Only for the contest among the leaders for the possession of the medal, which goes to the one making the best general average, the shoot would resolve itself into a scramble for the places that pay best.

Gilbert and Young are high to-day with .960. Heikes is third with .955; Elliot fourth, .935; and Budd and Hirschy are tied for fifth and sixth places. Heikes made one run of 96, which was the best of the day; he was also fortunate, as his straight in event No. 8 was the only one, and netted him $11.55. Jack Parker had similar good fortune in event No. 4.

The weather conditions are still ideal, and such under which big scores are common.

The Schmelzer cup race was started to-day, but was not half finished.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Young	20	17	18	19	20	19	20	19	20	20	200	192	.960

Third Day, Wednesday, Oct. 25.

The inequity of the five-equal-money division was never more thoroughly demonstrated than to-day. The scrupulous shooters of marked ability received but little reward for consistent performance. Some idea of this may be formed by giving the winnings of the five high men: Gilbert lost 5 targets, put in $20 and drew down $21.60. Fanning got out $20.30. Parker $21.15, Heikes $20.35 and Young $24.20. Then, on the other hand, Shepardson, who lost 24 more targets than did Gilbert, drew out $35.65. This shooter played the 16 hole most of the time, and once landed there alone, which netted him $12.10. Jack Parker struck a remarkable streak, and ran 112 straight, which he might have increased to 132, as he did the following morning by killing straight in his last event. This he was unable to do, as he did not get to shoot his final event. Gay, too, had a streak, as he ran his last 99 straight.

The programme events were not begun until nearly noon, for while the Schmelzer cup event was in progress there were no springs for the other set of traps, and these had to remain idle. Then when everything got to running along smoothly, the shooting on one set of traps had to be stopped to enable Elliston to shoot his match with Harris. This prevented the completion of the programme, so that Parker, Fanning, Mrs. Shattuck, Riehl and Allen finished on the next day, while a number of others withdrew.

Bright, warm sunshine and no wind were the conditions. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Gilbert	19	20	20	20	19	18	20	19	20	20	200	195	.975
Fanning	19	20	19	20	19	20	19	19	20	19	200	194	.970
Parker	19	19	18	18	20	20	20	20	20	20	200	194	.970

Fourth Day, Thursday, Oct. 26.

The City Hall and Court House handicap, a 25-bird event, was the feature of the shoot to-day. The entrance in this was $15, including birds, and high-gun system of divisions prevailed.

There were six moneys, but as there were eleven straight scores of 25 these shooters divided this money equally, namely, Chase, Allen, Pierce, Gilbert, Hallowell, Heikes, Fanning, Cockrell, Fallis, Gay and Green. This netted them $26.25 apiece.

The weather was decidedly against the birds, and this in a large measure accounts for the high scores. There was not a breath of air, and in addition the sun shone warm and bright—just such weather as prevailed all during the shoot. There were some good birds, but they were the exception, and were few and far between.

Chase, 28	1212212222222221222222222—25

Fifth Day, Friday, Oct. 27—Gerst Handicap.

The Gerst handicap was identically like the one of the previous day, in so far as conditions and entrance were concerned. The result, too, was practically the same, for only straight scores got a part of the purse.

Haywood, Gilbert, Fanning, Dupont, De Bow and Hirschy are the ones that carried off the money, each being remunerated to the extent of $36.45.

The birds were somewhat of an improvement, as there was a good breeze, which had a tendency to make them a trifle more active; but the sun was just as warm and bright as heretofore.

This event had twenty-six entries that contested for the money. Aside from this, there were several miss-and-out events, but all of these were long drawn out affairs, and when a division was declared rarely paid entrance money.

Haywood, 29.....2111122121221121222212222—25
Gilbert, 31.....2122221221112212121212122—25

Sixth Day, Saturday, Oct. 28—Belle Meade Handicap.

This was the final event of the tournament, and the one in which the most interest centered: for, in addition to the purse, there was a very fine silver loving cup to contest for, which naturally added zest to the competition.

Twenty-five shooters materialized for this race, which called for an entrance of $25, birds included. But it was changed from a high-gun event to class shooting, three moneys, 50, 30 and 20.

The weather was very unpropitious, as during nearly the entire contest a drenching rain fell, which had a very depressing effect on the pigeons, and made sitters of a great many, naturally adding nothing to their quality.

When the race commenced there was a stiff wind blowing, and for a time it looked as though the birds were going to be fast, but the wind soon abated and then it rained all the harder.

As two sets of traps were used, the contest proper was soon disposed of; but as eight of the principals finished with straight scores, a lengthy and stubborn shoot-off followed. The straight men were Pierce, Riehl, Budd, Allen, Gilbert, De Bow, Elliston and Fulford, while Heikes just failed to be one of these by losing his last bird.

Those interested in the cup agreed to shoot it off, miss-and-out. When this began it was perfectly calm and raining hard, so that the birds flew in most slovenly fashion.

Fulford was the first to fall out. He drew a bird that flew a few yards and lit, and in order to make a no bird of it, attempted to kill it on the ground, but overshot it a trifle, and when it fluttered in toward the dead line he failed to touch it with his second barrel, so that it got out of bounds.

Elliston was the next victim, and went out on a rather slow-flying circling incomer from No. 5 trap.

De Bow lasted until the 14th round, when he drew a very swift right-quartering outgoer from No. 5 trap. It carried both loads out of bounds.

The next unfortunate was Gilbert, who was put out of the race by a very fast twisting, towering outgoer.

Allen added another 25 straight to his score, but missed his 26th, a slow circling incomer that towered rapidly.

At the 31st round Charley Budd came to grief on a bird very similar to Gilbert's.

This left only two inexperienced shooters, Pierce and Riehl, to dispute for the cup, and the suspense lasted only a few rounds longer, as Riehl failed to negotiate a low-flying incomer that deceived him into the belief that it would alight before it got to him. He held his second too long, so that when he finally did shoot, the bird was right at him and a most difficult shot to make.

Thus it devolved on Pierce to kill his bird to win, which he did in the most unconcerned manner, and thereby won the cup. Pierce claims to be a mere novice in the pigeon-shooting game, but has all the prerequisites of the successful trap shot, being very cool and collected at all stages of the game. He was very fortunate in the draw, but also killed the good birds he got about as easy and clean as the duffers. He shot a Purdy gun, Schultze powder and Trap shells.

Straights paid $29.25; 24s paid $20.05; 23s paid $31.25. Although it required a score of 23, eighteen of the principals got a part of the purse.

Chas. Budd won this event a year ago, and Fulford on that occasion was also in the tie.

When the winner had been decided Gen. Jackson filled the cup with sparkling champagne, and it was passed around. The scores:

Pierce, 28.....2122222111112111111121121—25

Elliott-De Bow—Cast-Iron Medal.

The match for this trophy took place on Thursday afternoon, Oct. 26, commencing at 2:06, Elliott winning the toss and going first to the score. The race was soon devoid of all interest, as Elliott assumed the lead at the 22d round and continued to increase it as the race progressed, winning handily by the score of 99 to 93. The birds were very poor, and Elliott's score of 99 is therefore nothing remarkable for a shooter of his ability. He lost his 10th bird dead out of bounds, and then ran the remaining 90 straight. The gathering of his 22d was the rankest kind of luck. This bird was the poorest kind of a duffer and floated in toward the shooter with the speed of an ice wagon, and to the surprise of every one he missed it clean. There is a set of target traps located inside the boundary, and this fool of a bird actually flew into this screen, and here the shooter was able to catch it, so that what would have proved a lost bird under ordinary circumstances had to go as a kill. When you hear any hard-luck story about that dead out of bounds spoiling a 100 straight just remember this bird.

Elliott's best kills were his 13th, 47th and 70th. The latter was the best bird trapped, and an exceptionally good shot. His lost bird was a good one, and died out of bounds.

De Bow shot a very good race for a man of his experience, and handled himself very well, though he was a trifle slow and methodical in going to the score. However, he was simply outclassed, and especially on this sort of birds, as Elliott in his present form will miss but few of this class.

To De Bow's credit it must be stated that all of his lost birds with the exception of one were very good. His 46th, a slow-flying incomer, was badly slobbered and died out of bounds. His best run was 30 straight; his best kills were his 12th, 30th, 41st and 53d.

The birds were poor, and it was very warm, without any wind, so that big scores were to be expected. Elliott had 8 sitters in his lot, and De Bow 4. Elliott shot a Winchester gun, Hazard powder and Leader shells. De Bow shot a Parker gun, Hazard powder and Winchester Pigeon shells. Mr. R. O. Heikes was referee, and the writer scorer.

Match between J. A. R. Elliott, of Kansas City, and J. D. B. De Bow, of Nashville; 100 pigeons per man, $100 a side and the cast iron medal; loser to pay for the birds.

Schmelzer Cup.

The Schmelzer cup is subject to a challenge, but only one individual contest has ever taken place for it. This occurred at Leavenworth in August, 1895, and J. W. Sexton, the holder, successfully defended it against Lou Erhardt, winning by a score of 92 to 88. The conditions prescribe that the cup must be won three times in open competition before it can become the property of any one.

The conditions of this race called for 100 targets, reverse angles, entrance $7, targets included. Three dollars of this entrance went to the holder of the cup, and $2 for birds, while the remaining $2 was divided 50, 30 and 20 per cent. Thus Heikes wins the cup, Marshall first money, $17.50; Gay second money, $10.20, and Young third, $6.80.

The conditions on the first day were perfect, but on the second day there was a sharp wind that affected the flight of the targets somewhat. Heikes shot a single-trigger Parker gun, Schultze powder and Smokeless shells.

This contest was started on Tuesday, Oct. 24, immediately after the conclusion of the regular programme. But owing to the bad working of the traps, and an even worse set of trifling negro trappers, only the first two squads succeeded in shooting half of their race, while the remaining squad of five, composed of Shepardson, Courtney, Parker, Allen and Riehl, shot but their first string of 25. At this juncture Marshall was in the lead, with 45 out of 50, and Heikes was second, with 44. Marshall showed great form at the start, as he ran his first 34 straight, but the bad light when he shot his second string made it hard to see the targets, and therefore he lost 5.

The first thing the next morning the contest was resumed and, resulted in Heikes winning the cup by a score of 90, Marshall getting first money on 89, Gay second on 87 and Young third on 85. Roll Heikes shot in slashing style, especially after the first string of 25, or rather after the 14th round, for prior to this he lost 5, and from thence on only a like number.

By his win of this trophy Heikes becomes a new champion, and gains a title he has never held before, that of reverse-angle champion. He has taken part in the four contests for this cup, but this is the first time he has ever won it.

This cup was first put into competition at the Schmelzer tournament in July, 1895. On that occasion J. W. Sexton, of Leavenworth, won it by a score of 90. In September of the same year the second open contest for it took place at Detroit, and here Capt. Bartlett and Jack Parker tied on 92. This tie was later on shot off at the Rochester tournament, with the result that Parker won by 85 to 80. In September, 1896, J. W. Sexton won it for the second time in open competition at Kansas City, on 87. Then at the midwinter shoot at San Antonio, Tex., in January, 1897, R. O. Heikes, Charley Young and the late F. V. Van Dyke tied for it on 83. This tie was never decided, and no other contest took place for it until May, 1898, when Charley Budd won it at Des Moines, Ia., on the extraordinary score of 96. In September of that year the cup was again shot for at Kansas City, and here Budd scored his second win, with 87. No contest has since taken place until the present one.

Harris-Elliston.

Considerable rivalry exists between the two Tennessee shooters, Messrs. W. G. Harris and W. R. Elliston, and for some time there has been a match pending between them. It was shot on Wednesday, Oct. 25. The conditions of this were somewhat of a revelation, in so far as target matches are concerned, as they prescribed 100 targets per man and for $100 a side, and to the writer's knowledge this was bona fide, as the money was actually put up, and as soon as the referee's decision was announced it was turned over to the winner. My reason for mentioning this is that one frequently hears of such matches, but rarely sees them, and invariably these turn out to be for about $10 a side, or more frequently for the price of targets only.

This proved a most decidedly interesting contest, and the closeness and the big stake made it very exciting. The first string of 25 resulted in each scoring 22, and the next string brought about a similar result. In the third string Elliston gained a little advantage, as he broke 24 to his opponent's 23. However, he did not retain this lead long, as he lost his 77th and then his 80th, which gave the lead to Harris; but the latter lost his 83d, 86th and 88th in rapid succession, so with only 12 more to shoot Elliston had a lead of 2, but he in turn missed his 89th and 94th, and as Harris broke out the race resulted in a tie, with a total for each of 89. This was immediately shot off at 25 targets, and here Harris won by 24 to 23. Harris lost his 4th and Elliston his 14th and 22d.

The match was shot in the most rapid manner, as each of the principals shot their 100 targets without any intermission, and it only required twenty minutes for this. Each showed plenty of nerve and pluck, and if either was unduly concerned over the result it was not betrayed by any exterior emotion.

Harris had one weak bird, which was a very slow straightaway or one that quartered slightly to the left, for of the 11 he lost 5 were of this kind, and many similar birds were only broken into one or two pieces. No. 1 trap threw an extremely low bird, in fact too low, and had this been rectified, as it should, Harris would have beaten his opponent at least 2 birds in the original contest. Had he been defeated it would have been solely due to lack of experience and the fact that he had no one to advise him. It was evident, too, that his friends were ignorant as to the shooting game, or else some one would have been there to supply his wants and not compel him to carry about his shells, etc.

Elliston was not hampered in this manner and was fairly beaten. He had no particularly weak bird, but slipped one here and there irrespective of their flight. The weather conditions were favorable, as there was little wind and a good light. The targets were thrown about 50yds., but nevertheless the score must be classed a very good one, as it is entirely different when there are 200 shekels of the realm between one and every target from what it is if one is only engaged in an ordinary sweepstake scramble.

The Hon. Tom A. Marshall was chosen referee and Mr. Jno. J. Hallowell scorer.

Harris shot a Lefever gun, Leader shells and Schultze powder. Elliston shot a Parker gun, Du Pont powder and Winchester Pigeon shells.

Match between W. G. Harris, Gallatin, Tenn., and W. R. Elliston, Nashville, Tenn., 100 targets per man, for $100 a side; stake $200; loser to pay for targets:

W G Harris.....11 11 11 10 11 01 11 01 11 11 11 11 10—22

Elliston .....11111111111101111111110111—23

General Averages.

Aside from the glory that one gets from being high in such a field of shooters, there was also a medal to strive for. This was won by Gilbert, who lost but 20 targets out of 600, and thereby has the great percentage for so many of .966; Heikes is next with .950; Young, third, 946; Fanning, fourth, .945, and Budd, fifth, .940. The standing of the others who shot through is shown in the table below.

In contemplating these big averages, it must be born in mind that the conditions throughout were ideal and in every respect similar to those that prevailed at Peoria and Sioux City, where similar big scores were recorded. Then, too, the targets were not thrown very hard, but at a nice uniform speed of about 50yds.

Gilbert, the winner, also won the medal here a year ago for a like performance. On this occasion he shot a Parker gun, Du Pont powder and Leader shells. The averages were as follows:

	First Day.	Second Day.	Third Day.	Shot at.	Broke.	Av.
Gilbert	193	192	195	600	580	.966
Heikes	185	191	194	600	570	.650
Young	184	192	192	600	558	.946
Fanning	193	180	194	600	567	.945
Budd	190	185	189	600	564	.940
Gay	189	183	191	600	563	.938
Hirschy	185	185	191	600	561	.935
Elliott	184	187	189	600	560	.933
Marshall	187	182	182	600	551	.918
Fulford	187	181	174	600	542	.906
Parker	163	172	194	600	529	.881
Campbell	175	168	177	600	520	.866
Shepardson	180	168	170	600	518	.863
Hallowell	174	172	172	600	518	.863
Haywood	177	170	169	600	516	.860
Chase	159	171	161	600	491	.818
Courtney	165	150	171	600	486	.810
Pierce	132	156	164	600	452	.753

Target Championship Postponed.

NEW YORK, Oct. 30.—I have just received notice from Mr. W. R. Crosby that his match with Mr. Fred Gilbert for the E. C cup, originally fixed for this date, has been postponed until Saturday next, Nov. 4, at 2 P. M. The change has been made to accommodate Mr. Gilbert, as he found it impossible for him to arrive at Batavia in time for him to shoot the match on an earlier date.

EDWARD BANKS,
Sec'y The American E C & Schultze Gunpowder Co., Ltd.

The natives of Kottiar are in the habit of digging every year in the summer-dry banks of the Vergel River for fish, which they dig out by hundreds, just as they would potatoes. The mud lumps are broken open, and the fish, perhaps 8in. or 10in. long, will always be found alive and often frisky, as if just removed from its supposedly native element—water. In the dry bed of several African rivers a similar practice is often pursued. A kind of mud fish buries itself while the bottom is still moist and remains there all the summer, waking up when the rains commence again.—Fishing Gazette.

Philadelphia Trapshooters' League.

THE sixth regular team shoot and tournament of the Philadelphia Trapshooters' League was held Oct. 21, on the grounds of the Florists' Gun Club, at Wissinoming, Pa. The seventh and final shoot of this series will be shot later in November.

In the team match the conditions were 25 targets per man, handicaps added to the score. The Silver Lake Gun Club's score of 82 was limited to the possible 75, thus tieing with the Florists' Gun Club. The scores:

Silver Lake G. C. Team No. 1.	Broke.	Hdcp.	Total.
O'Brien	23	2	25
Winchester	23	7	30
Edwards	22	5	27
	68	14	82
Florists' G. C. Team No. 1.			
Harris	19	10	29
Westcott	17	6	23
Dorp	18	5	23
	54	21	75
Southwark G. C. Team No. 2.			
Fisher	17	4	21
Ford	21	5	26
Burt	18	9	27
	56	18	74
Florists' G. C. Team No. 2.			
Smith	14	8	22
Bell	19	9	28
Webster	14	10	24
	47	27	74
Clearview Gun Club.			
Fisher	17	3	20
Urian	19	5	24
	53	11	64

Glenwillow G. C. Team No. 1.	Broke.	Hdcp.	Total.
Pepper	20	6	26
Morison	8	11	19
Kirk	19	8	27
	47	25	72
Silver Lake G. C. Team No. 2.			
Reed	18	5	23
Peden	18	6	24
McAfee	20	3	23
	56	14	70
Glenwillow G. C. Team No. 2.			
Cowan	16	4	20
McFalls	18	4	22
Free	19	7	26
	53	15	68
Independent G. C.			
Longnecker	17	5	22
Franklin	22	3	25
Ridge	16	3	19
	55	11	66
Clearview Gun Club.			
Miller	17	3	20
	53	11	64

The six contests of the series result in the standing of the teams as follows:

Silver Lake No. 1	9	5	10	6	10	10	50
Glenwillow No. 1	9	5	10	8	8	8	48
Independent	10	6	10	8	8	5	47
Florists' No. 1	6	5	9	9	7	10	46
Southwark No. 2	3	10	6	8	10	9	46
Silver Lake No. 2	6	3	10	10	9	7	46
Florists' No. 2	5	5	10	4	..	9	36
Glenwillow No. 2	5	7	10	..	6	6	34
Clearview	2	10	10	3	..	4	29

In the individual match the conditions were 30 targets per man, 15 known and 15 unknown angles, handicap added to the score:

	K. A.	U. A.	Hdcp.	Total.
Edwards	12	12	6	30
Ridge	10	12	8	30
H Fisher	13	13	4	30
Burt	13	5	12	30
Ford	13	7	10	30
Felix	11	12	7	30
Winchester	12	15	3	30
Franklin	12	15	7	30
Puff	9	11	9	29
McFalls	10	10	9	29
O'Brien	15	11	2	28
Smith	10	10	7	27
Landis	13	12	2	27
J Fisher	10	9	8	27
Redifer	12	11	3	26
Miller	8	5	12	25
Morison	9	4	9	22
Longnecker	11	7	3	21

In the six individual matches of the series of seven the standing of the contestants follows:

	1st.	2d.	3d.	4th.	5th.	6th.	Total.
H Fisher	30	30	25	30	30	30	175
O'Brien	30	27	30	27	30	30	174
Ridge	30	30	30	30	21	30	171
Edwards	28	30	30	25	27	30	170
Felix	30	29	22	30	29	30	170
Winchester	30	22	30	28	28	30	168
Franklin	29	30	26	23	29	30	167
Longnecker	30	30	28	28	30	21	167
McFalls	30	28	28	22	29	29	166
Redifer	28	27	24	30	30	26	165
Ford	27	29	28	30	18	30	162
Puff	27	26	26	24	30	30	162
J Fisher	25	30	24	27	28	27	161
Burt	30	23	26	29	21	30	159
Smith	22	30	22	30	26	27	157
Morison	17	30	30	19	30	22	148
Landis	30	30	29	..	30	27	146

Trap Around Reading.

PHŒNIXVILLE, Pa., Oct. 27.—The West Chester Gun Club, of West Chester, Pa., and the Phœnix Gun Club, of this city, met to-day over the traps of the Phœnix Gun Club in the third and final shoot of a series of interclub shoots for the championship of Chester county. Fully 250 people were present when the match began, and were treated to a fine, exciting contest, as the match was not fully decided until the last shot was fired, and then it was not satisfactory to either side, as Phœnix claim they won according to their score book by the score of 229 to 227, while West Chester's score book shows a victory for West Chester by 1 bird over Phœnix. After a short talk among the shooters the majority favored calling the match a darw and shooting another match, to decide the championship at West Chester, as each club has won a match. The conditions were twelve men per team, each man shooting at 25 targets over the magautrap. Pehlert, of Phœnix, and Green, of West Chester, were high scores with 24 broke out of 25.

West Chester, Pa., Oct. 28.—Ford is the winner of the challenge cup of the West Chester Gun Club. But five men were out to shoot to-day. Gill won to-day's match, and tied Peters for second place for the challenge cup. Ford won the cup the greatest number of times. Scores:

Challenge cup event, 25 targets: Gill 23, P. Brinton 18, Ford 18, Morton 14, C. Brinton 22. DUSTER.

Portsmouth Gun Club.

PORTSMOUTH, Va., Oct. 26.—The weekly shoot of the Portsmouth Gun Club resulted as follows:

Events.	1	2	3	4	Shot at.	Broke.
Targets:	10	15	10	15		
Bilisoly	8	14	7	10	50	39

Pierce	4	..	..	..	10	4

WESTERN TRAPS.

Live-Bird Season.

CHICAGO, Ill., Oct. 28.—We are now well launched on the winter live-bird season, Eureka Gun Club holding its last target shoot to-day. Eureka will shoot live birds at Watson's, splitting dates with Garfield, which shoots on its home grounds, but claiming each Saturday following the Sportsmen's trophy shoots, which fall at Watson's on alternate Fridays. With these two strong clubs shooting, with Garden City and Audubon also in the field, and the big Sportsmen's trophy contests, we will be pretty fairly busy here this winter in live-bird affairs. I regret to state that we have lost a good deal of ginger in this town of late in live-bird matters, and have not seen a good stiff live-bird race for so long that we forget what it would look like. Nor is anything very important in this line on the tapis at present, so it looks as though most of our sport in this regard for a while would be in the form of sweeps, where the shooter expects to go out and pay about so much for his afternoon's fun.

Garfield Gun Club.

Garfield Gun Club held its regular live-bird shoot to-day in spite of weather, which bid fair to be very unpleasant, and had a very good turnout of members. It rained all day to-day up to 12 o'clock, but the weather then grew colder and the rain stopped. The prairies were none too pleasant, but of course the club grounds were comfortable and the shooting really offered no discomforts. The wind was stiffish, from left to right, and the birds were very good, with very few dwellers. The prevailing flights were right quarterers or right quartering incomers. The day being very cloudy, the light grew poor toward evening, and the last events were shot practically in the dark. Messrs. Royce, Stuchlick, Fanning and Splan shot a 5-bird sweep together practically in the dark. Mr. Royce got 4, Mr. Stuchlick 3 and Mr. Splan only 1 bird, but Mr. Fanning surprised everybody by killing 5 straight in the dark and promptly declared himself ready to meet all comers in pigeon races to be shot after 9 o'clock at night. Messrs. Stuchlick, Fanning and Splan were not content to give it up even yet, and they went on shooting till it got so dark that no one could tell whether a bird went out or not. They shot at 15 birds in all and only killed 2 between them, and finally agreed to give it up. In the trophy shoot Dr. Meek and Mr. M. H. Shaw were the only ones to kill 10 straight. Workman and Eaton killed 9, and then came a strong following of 8s. This is the second trophy contest of the season. The following are the scores:

Trophy contest:

Workman	1121101111— 9	Dr Royce	1210121*22— 8
Dr Meek	1111112211—10	W A Jones	1201212120— 8

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

CHICAGO, Oct. 28.—This was not a perfect day for shooting The sky was thickly overcast with clouds, and a strong, cold breeze kept the targets down. Notwithstanding this, the scores were very good.

The prizes for the summer trophy were on exhibition at the club house, and also the Mussey cup.

The club allowed the winners of the trophy shoot to choose their own rewards. They chose as follows:

Mr. F. P. Stannard, who won Class A on 23, 24, 24, 24, 24, 23, 23, 24, 22, 23, or 234 out of 250, an average of .904, chose a set of Rogers Bros. silver tableware.

Mr. R. B. Miller, who won Class B on 22, 23, 22, 20, 22, 20, 22, 25, 24, 20, or 220 out of 250, an average of .880, chose a pair of field glasses and a set of gold cuff buttons.

Mr. R. B. Carson, with 20, 21, 18, 19, 19, 22, 20, 19, 17, 18, or 193 out of 250, an average of .772, in Class C, chose a diamond set locket.

Mrs. Carson, who won Class D, with 18, 21, 19, 20, 18, 21, 19, 22, 18, 19, or 195 out of 250, an average of .800, also chose a jeweled locket.

There were only twelve members present to-day, the majority of this flourishing club being out of the city in the field.

Mrs. Carson was rather disappointed at the scores she made to-day, thinking it did not do her credit, as having won in the trophy shoot. Following are the scores:

Team shoot:

Antoine	00110111111110111111011111—20

FRANK J. BAUM.

Trap at Baltimore.

AT Prospect Park, Baltimore, Md., on Oct. 23, the annual tournament of the Prospect Park Shooting Association was held, the attendance being light. The day's programme called for 195 targets, to which there was added $10. Mr. Hood Waters was high average for the day with 184, Mr. James Malone second with 179, and Mr. A. H. Fox and Dominie tied on 178, for which the high average money, $10, was divided into $5 to first, $3 to second and $2 to third. In the following scores the figures after the names denote the handicaps:

Targets:	15	20	25	15	20	25	15	20	25	15
Fox, 18	15	19	24	12	16	23	15	18	22	14

"You referred to your friend as a dead game sportsman?"

"Yes; he always buys his birds in the market house. Dead game is his specialty."—Washington Star.

IN NEW JERSEY.

East Side Gun Club

Newark, N. J., Oct. 26.—The East Side Gun Club's regular club shoot was held on the grounds of Smith Brothers, Newark, to-day. The weather was more like that of August, being warm, clear and still, the absence of wind and warmth favoring the shooters. The birds were fairly good, the conditions considered.

C. W. Feigenspan in Class A and W. J. Ferguson, Jr., in Class B were first in their respective classes with 10 straight, while Dr. Davis was first in Class C with 9, losing one dead out of bounds:

Walsrode Gun Club.

Trenton, N. J., Oct. 25.—In a 10-target event, magautrap throwing the targets, the following scores were made to-day. Practice event:

Thomas 6, Norton 9, J. Taylor 4, Mickel 7, De Forest 7, Petitt 6, Barwis 3, Grant 2, J. Taylor 8, Norton 7, Britton 2, Smith 7, Grant 6, Petitt 2, Mickel 7, Woolverton 8, Thomas 8, Petitt 3, Norton 9, Harrison 8, Mickel 5, Wilson 5, J. Taylor 5, Barwis 7, De Forrest 8, Grant 9.

Team race:

Norton	1000100100—3	Harrison	1110101111—8
De Forrest	1011011110—7	Thomas	1101011011—7
Mickel	1001011111—7	Woolverton	1100101111—7
Barwis	0101001111—6	J Taylor	1010111100—6
Wilson	0110001011—5	Petitt	1010000101—4
Britton	0101001110—5—33	Grant	1010011001—5—37

Twenty-five-bird race:

Norton	1111101111111111111110111—23
Thomas	1010111011111101110111111—20
Harrison	1011110101011011111011111—19

Twenty singles:

De Forrest	0111101010111010010—11
J Taylor	1011010111111011110—15
Petitt	1000111001110101011—11
Wilson	1100101001100110010—10

Race against score; 12 doubles:

Norton	11211 11 11 11 11 01 11 11 11 01 11—22

Trap at Lakewood.

Lakewood, N. J., Oct. 25.—On the Lakewood shooting grounds to-day, in a sweepstake at 25 targets, the following scores were made:

E Murphy	1011111111111110111011111—22
W L Bull	1111111110111011011111011—21
R Parker	1111111100001111111111110—20

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Oct. 28.—As the field shooting is in full blast the attendance at to-day's shoot of the Brooklyn Gun Club was not so large as usual. However, we can hold our own with any club in this section of the country.

The main contest of to-day was the fourth monthly shoot for the Grand American Handicap free entry, and there were seven competitors. Hopkins and Lane scored the limit, 10 points. The light was excellent when the first 25 targets of the 50 were shot. As the second 25 were started the sky became suddenly darkly overcast, and the light then was very bad.

Two team shoots were shot between Dr. Gardiner and B. Waters on the one side and Dr. Webber and G. Remsen on the other. Each man shot at 50 targets.

First contest—Gardiner and Waters 45, Webber and Remsen 34.

Second contest—Gardiner and Waters 41, Webber and Remsen 37.

A team match was then shot between Dr. Webber and Waters on one side against Dr. Gardiner and Remsen, the latter winning by a score of 39 to 37.

The G. A. H. contest resulted as follows:

*Waters	1111111011111111111111110—23
	1110001111111011010101101—17—40

BLACK BASS STOCK.—Fayetteville, N. C.—I wish to secure some small-mouth black bass and rainbow trout for my fish pond, and write to ask if you will kindly give me names of a few persons having them for sale, as I know of none. Ans.—We do not know who can supply the bass. This note may draw out the information. The following breeders of brook trout may possibly supply the rainbow trout: Brookdale Trout Co., Kingston, Mass.; Plymouth Rock Trout Co., Plymouth, Mass., or the Crystal Spring Trout Farm, South Wareham, Mass.

"SAM'S BOY."

IN our issue of Dec. 2 will be begun the publication of a new series of "Danvis" chapters by Rowland E. Robinson, telling how Sam Lovel's boy acquired the "art of being a boy."

BRITISH FOX HUNTING.

A REVIEW of the fox hunting situation in England, with a list of hunts, towns convenient to the hunting grounds, the number of couples of hounds kept by each hunt, their masters, huntsmen, whips, kennels, hunting days, etc., published in a recent number of the London *Field*, shows that the so-called "sport of kings" is in a gratifyingly sound and flourishing condition. Few American sportsmen have any adequate conception of the magnitude of the fox hunting interests in England, of the vast sums of money expended in maintaining them, and of the general agreement everywhere there as to what constitutes the ethics of the sport. Old family packs, which have been kept up to a high standard of efficiency through many generations, are still preserved intact, and a number of new packs have been established. In the readjustments for the present year, such vacancies as have occurred in the masterships have been promptly filled, there always being others ready and competent to take the place of those who retired.

Some of the fox hunting statistics will give a partial idea of the magnitude of the sport in Great Britain at the present day. Of stag hounds, there are in England 487 couples, and of these the Devon and Somerset Hunt have fifty couples, the greatest number used by one hunt. The master of them is the Earl of Coventry. To Ireland 111 are credited; while Scotland has none.

In foxhounds the greatest numerical strength appears, there being 6,215 couples owned by the different hunts in England, and of these the Blackmore Vale Hunt leads in the number owned, ninety couples being credited to it. Scotland has relatively the insignificant number of 365 couples, fifty-seven of which belong to the hunt of the Duke of Buccleugh. Ireland has 895 couples, the Meath Hunt owning the greatest number of couples—sixty-four.

Harriers are also strong in numbers, but they vary a great deal in size and "sortiness," as a general resemblance in type and breed characteristics is termed. They are classified as Stud Book, cross-bred, pure, modern, Welsh, mixed and old English harriers, and dwarf fox hounds and Southern cross, harriers with fox hound cross, harriers and beagle cross, black and tan and Old Southern, harriers and small fox hounds, the extreme variation in height of the packs enumerated being from sixteen to twenty-eight inches. Of this very variable lot, classed as harriers, England has 2,025 couples; Scotland, the small number of sixty-seven couples; and Ireland has 391 couples.

As to beagles, they seemingly are out of favor in Ireland and Scotland, no packs being credited to those countries, though England has of them 746 couples.

Thus the list gives the large total of 11,302 couples of all kinds of hounds used in packs, and affords data from which to gain an idea of the magnitude of the fox hunting interests which are maintained by the sportsmen of Great Britain. These packs are hunted from two to four days a week in proper season, as a general rule, and this in turn necessitates the maintenance of large stables of horses to properly mount the master, huntsmen and whips of the various packs. Frequently, when hunting, one or two horses are held in reserve for them. Many such stables have from fifty to one hundred horses.

A notable feature of the sport is the sustained and enthusiastic interest and active participation in it by its devotees from youth to advanced age. The passing of the years neither lessens their hunting ardor nor impairs their stamina and dash in the difficult cross country riding after the swift hounds. A case in point, one of many, is that of Mr. John Crozier, Master of the Blencathra Hunt at present, as he has been for the last sixty years, he succeeding his father as Master in 1839; at his age, men are more prone to the telling of what they have done than to be up and doing with the best in the activities of sport.

Wire fencing in a number of sections of Great Britain offers a serious modern problem for the hunters, for it interferes to a serious extent with the riding and best enjoyment of the sport. A long purse, however, is a great aid in such matters, and it is suggested that the hunts pay for the taking down of the wire fences in the fall and the putting up of them in the spring. There is less of friction between farmer and hunter in England than there is between the same classes in America, though when crops are ridden over in the former country, which is not a common incident, there is likely to be dissatisfaction at the act. Still no class is more opposed to unnecessary damage to the farmers' interests than are the hunters themselves.

The foregoing will give the American fox hunter a general idea of the high degree to which fox hunting is organized and specialized in Great Britain, and the distinct manner in which it is conducted as compared with fox hunting in America. From the breeding and weeding out of the packs with a view to secure good voice, uniform speed and "sortiness," to the breeding of hunters which are weight carriers, jumpers and good runners, every detail of it has strict attention; but while England may surpass America in the matter of equipment as it pertains to fox hunting, it cannot surpass us in the matter of enjoyment.

A TYPE THAT HAS PASSED.

THE rhyming story concerning old John Nelson, printed in our issue of Oct. 28, recalls a picturesque figure of old times who may have been familiar to many of our Western readers. Whether the story told is actually true or not makes little difference. It might have been, and it is certain that John Nelson bore the reputation, which he deserved, of taking great delight in imposing on people. Even now it is difficult to restrain a smile when we recall one of his methods for astonishing those who did not know him well. He would appear to be seized with a violent fit of coughing, which would end by his blowing from one of his nostrils a bullet, and as he picked this up from the grond and held it in his fingers, looking at it, he would gravely tell the bystander that this ball had been in his head since 1856. Those who had much association with him have seen him produce that bullet in just that way a dozen times.

John Nelson was an old-timer and probably was on the plains nearly twenty years before the coming of the railroad. His wife was an Ogallala Sioux woman, and his children probably now live on the Pine Ridge reservation. He was a fairly good example of the old-time mountain man, slightly modified, of course, from the types of which we have examples in those delightful books on the old West written by Ruxton, Garrard, Kendall, Gregg, and later by Parkman.

Most of these old-time mountaineers were mighty men of their hands, reckless, daring, and withal so trained in the outdoor life of mountain and plain that they were as crafty as the panther and as astute as the savage. In their dealings among themselves and with their employers they were usually honest and honorable, but they possessed a keen sense of humor and delighted in "fooling" the pilgrim, whose newness to the West made him incredulous concerning many strange matters which to them were commonplace, and whose thirst for information led him to ask what they termed "fool" questions.

Old Jim Bridger was typical of this class, and perhaps the best known; another was Kit Carson, who received so much newspaper notoriety; but neither of these was any better equipped for living his life than hundreds of others whose names have seldom or never been heard of. Another contemporary of Bridger, who recently died, and was as good if not a better man, was old Jim Baker, who passed his last days on Snake River, in northwestarn Colorado.

Many of the mountaineers devoted the earlier years of their life in the far West to trapping the beaver. Later, when the beaver became scarce and its fur ceased to be fashionable, they developed an adaptability in other directions. Some became guides and scouts at army posts, leading through unknown regions small bodies of troops engaged in mapping new territory, or guiding and scouting for other commands of troops in the Indian wars of the times. Others still took service with the different traders, who had already pushed their stores far out into the Indian country, and collected furs for their employers. Loading with trade goods his wagon hauled by bulls, and taking with him his Indian wife and children, the solitary trader journeyed over the country in search of the camps of friendly Indians. When he entered such a camp, he took up his residence with some chief or principal man, and from his lodge traded his goods for robes and furs or dried meat. The lives of these wandering traders were full of incident, yet very little concerning them has a place in literature. Even the fact that they once existed as a considerable class has been forgotten, if it was ever known. Yet their doings are truly a part of the history of the old West, and for that reason deserve to be recorded, though indeed it is now almost too late to gather from original sources the material for such a volume. Perhaps some of this history may find a place in the promised volume of Mr. Ripley Hitchcock's "Story of the West," which is to be devoted to the trapper.

Of the men who took part in that old life, which to commonplace dwellers in the East, and in the present West, for that matter, would now seem so marvelous if the half of it could be told, a few of those still living may be recalled by name. Old Bill Hamilton was recently living on the Stillwater, in Montana; John Baker, a brother of Jim, lives, or did very recently, on Snake River, in northern Colorado; Wm. Rowland, who was with Gen. Stansbury when he surveyed the Great Salt Lake about 1850, lives on the Muddy, in Montana; Henry Choquette, employed by the American Fur Company on the upper Missouri River in 1844, and John Monroe, who was reared in the Piegan camp, live in northwestern Montana. A few others of more recent date occur to us, but they are very few.

When it is remembered that the old-time West disappeared forever twenty years ago, it is not strange that but few of its heroes are left alive to-day. Their lives were full of danger and hardship, yet though frequently engaged in fights with the Indians, and even sometimes quarreling among themselves, these dangers did less to thin their ranks than hardship and exposure, which oftentimes shortened their lives and caused their death at a comparatively early age. The period at which they chiefly flourished was from 1835 to 1860, and to-day one may count almost on the fingers of one hand the men of his acquaintance who yet survive from that period. Even these are growing old and in the natural course of events must soon pass away. When the last of them shall be gone, the sole living links which bind the present to that heroic past will have been broken, and the prowess of the men of those ancient days will be but a memory indeed.

SNAP SHOTS.

A fact of exceeding interest in its bearing on fishculture and the restocking of exhausted rivers is the appearance of salmon in considerable numbers in rivers running into Lake Ontario from the south. Persons whose memories go back forty or fifty years recollect distinctly when salmon were more or less abundant in the Salmon, the Oswego and other rivers which they ascended to spawn. The building of dams destroyed the salmon fisheries. At very rare intervals within the past twenty-five years an occasional salmon has been taken by the net fishermen in Lake Ontario, but within that time such a thing as a run of salmon in any of these streams has been absolutely unknown. Nevertheless, for some days past large numbers of salmon have been seen jumping and playing in Salmon River, in Oswego county, N. Y. The fish are seen below the dam at the Box desk works, and are stopped by this dam, which they constantly try to ascend. A number have been caught and are said to weigh from eight to ten pounds. An effort will be made to make some changes in the dam, which it is hoped will permit the fish to ascend. The appearance of these fish should afford great encouragement to those interested in restocking our old salmon streams. It will be very interesting to know from what plant these came.

Charles F. Imbrie, of the firm of Abbey & Imbrie, died at his home in this city, last Friday, Nov. 3, aged fifty-one years. Mr. Imbrie had an acquaintance with anglers the country over, and the announcement of his death will be received with widespread regret. In business life he was known as an energetic and successful man, with varied interests; and his many-sidedness is well illustrated by the fact that he found recreation in such diverse fields as the practice of angling and the study of political economy.

The Sportsman Tourist.

The Palolo Anniversary.

JUST about this time the ardent sportsman will be reckoning up the days and the stars and the blossoms of the trees according to a legendary schedule in order to determine the coming of the Palolo—that is, if he is a South Pacific sportsman. There is a close season on palolo. The open season lasts less than three hours in the year, and no one ever took palolo out of season. It is not that the primitive islanders of the South Sea have any game laws, nor if they had any would they be at all likely to observe them. Nature herself regulates the preservation of this game. When the close season is on the palolo is shut up in a box as tight as a drum, and the very keenest search fails to disclose a single specimen in the reef pools, which at the appointed time will writhe with them. Something like a game law, that is, for it is automatic and self-administering, with no need of game wardens and penalties.

Worms are intimately associated with fishing; in many cases a necessary preliminary. But to go fishing for worms is a novelty in the line of sport, and one for which it is absolutely necessary to go to the uttermost parts of the earth and to be there promptly on time. That is all that the palolo is—a wriggling worm of the sea. But the South Sea people know no greater delicacy. Its coming marks for them the beginning of the year. They travel long distances to reach the reefs where the palolo is known to come, and more than one savage battle has arisen because access to a favorite reef has been forbidden by earlier comers.

The habitat of the palolo is restricted to the South Pacific and to a circumscribed area within the torrid zone. It is unknown outside of certain coral reefs in the three central archipelagoes of Samoa, Fiji and Tonga. Even within its area the worm is by no means widely distributed, for it is only certain narrow strips of coral reef which afford a home for the animal. Thus on the whole of the north coast of Upolu there is only one strip of the fringing reef, less than half a mile in length, where the worm is ever found. The line of separation is drawn as sharply as though by a wall; but the most careful examination of the reef corals reveals no apparent distinctive difference which might account for this phenomenon on the score of difference of surroundings. Furthermore, the coral beds in which palolo are known to thrive present the most wide differences among themselves in the matter of the genera of corallines and corals that form the reef. It is a mystery, but where all connected with the life history of the animal is so mysterious one additional puzzle makes little difference.

This South Sea worm has taken its place in systematic zoology, and may be found in the larger cabinets, with its double Latin name attached. Gray, the English zoologist, identified the worm from preserved specimens, placed it among the annelids, and erected for it a special class, *Corallicolæ*, in which it is represented by the unique genus and species *Palolo viridis*. That does all very well for systematic purposes of science. When it comes to the life history of the worm the primitive savages of the islands may be in dense ignorance of its scientific name and place in the scale of nature, but they know the really essential point of when and where and how to get the worm, and biology as yet knows no more, if so much. This account of the palolo is derived from personal observation and from careful talk with the oldest Samoans, who yet retain the knowledge that belonged to their race before the white people came upsetting things in general.

The most striking of the mysteries of the palolo is its period. Other animals know no calendar; the palolo keeps account of time, and makes its appearance with strict attention to schedule. For a small part of just one day in the whole year it comes within sight of men and then goes into retirement for another year. There is a mystery that will call for much study how a marine worm can reckon the days and months and never fail to appear at its appointed season.

White people with their calendars compute that the palolo is due at dead low water in the night of the third quarter of the moon nearest the first of November. But as that reckoning involves both the solar and the lunar months it is apparent that it will be bringing the palolo earlier and earlier each year. But the palolo does not do any such a thing; it follows its own schedule and adjusts lunations to the sun and to the sidereal year with the utmost precision. The white men have never yet been able to predict when the palolo will apply the correction for the difference between the lunar calendar and the sun's year, and for that reason the calendar computation finds itself sometimes a full lunation ahead of the worm.

The Pacific islanders are wiser. They are very wise indeed in regard to anything to eat, and their computation of the palolo is never known to fail. A very wise old Samoan gives this method of forecasting the single day of this strange fishing: When the aloalo comes into flower with its gorgeous cardinal spikes of bloom on bare branches overhanging the sea; when three other shrubs which it would be hard to identify for any foreigners but the botanists are covered with blossoms; when the trees are putting forth their new shoots, then you may know that the palolo moon is near. Then you scan the heavens for further signs. When the "carrying pole," which is the Belt of Orion, has set; when you can no longer see the constellations known to native astronomy as the Man and the Duck—then you may be sure that the palolo fishing is close at hand. Now you watch for the moon. When you have had the right signs on the trees and in the sky, the moon enables you to fix the exact day of the fishing; the new moon, which follows these signs, is the one on which to reckon, and its third quarter is the time for the mysterious worms to come to the surface.

It is only the very sage Samoans who can forecast from these elements. It is an art now rapidly passing away. The modern islanders, who have lost much of the wisdom of the sky and the forest, keep a careful count of the days since the last palolo. That is a duty of the principal talking man of each village. For his fishing calendar he has a small basket, which is hung out of the way on one of the rafters of his house. For his further provision he has nine black pebbles, nine red and green feathers of the island parrakeet, and three leaves. Each day after the palolo he drops into the basket one of the black pebbles. On the ninth day the last pebble goes into the basket, and on the tenth day all the pebbles are turned out and a feather put in their place. Thus a feather is put into the basket every tenth day, as reckoned in the interval by the pebbles. On the hundredth day he turns out nine feathers and nine black pebbles and puts a leaf in their place to denote a hundred. When the basket holds three leaves, five feathers and four pebbles the palolo is due next morning. This interval of 354 days is good for two years. On the third it is necessary to reckon 384 since the last palolo fishing.

These are the methods by which white and savage men keep the reckoning. How the worm itself down deep in the coral knows when its one day has come around, what force of nature brings it up to spawn on that day, and no other, is a mystery all unsolved.

The worm is of about the girth of a thick twine. Its length is much dependent on circumstances, for it is very fragile, and drops asunder at the joints when caught, so that it is difficult to estimate what the original length was. Specimens which have been carefully floated out have measured more than 30in. Whether long or short, the girth of the animal seems constant. Museum specimens are invariably in fragments, and therefore are of no assistance in determining this point.

The head of the palolo is involved in considerable doubt. Gray, who established the place of the animal in zoology, pictures its head as marked with three spines, of which the central one is a little the longest, the three being arranged like a trident projecting forward from the top of the head; eyes are represented at the base of the spines; behind the spines is an oval depression, into which projects backward a short spine. This seems to be a mistake of some sort, for careful observation has failed to show a living palolo with a head corresponding with that description. Really the head of the worm is a blunt termination and distinguished from the other segments only by its greater length and the absence of the lateral bristles. The rings of the body are flattened out into a slight keel at each side, and on these keels each segment has a bunch of bristles at each side, apparently for use in swimming. There is a breathing hole in the middle of each segment, the series showing as a line of dark dots along the worm from tip to tail. The last six segments taper down to the tail, which is ornamented with two long and two short spines. The males are white or reddish; the females range from dark green to black.

If this were all there is to the palolo it would amount to no more than a curiosity of zoology. The South Sea Islanders, however, have neither knowledge nor care for these details and problems. To them the sea worm is the raw material for such a gorge as is dear to the savage nature.

When the white men's calendar and the count of leaves and red feathers and black pebbles and the wisdom of the stars and the blossoms all agree that palolo day is at hand, the Samoans who live on beaches where the worm does not rise paddle off to visit more highly favored communities. Very few come to Apia, for its fishery is but small, and there is not room for a hundred canoes in the pools of its scanty half-mile of productive reef. In Savaii there is an abundance of the delicacy, and on the south coast of Upolu there are famous fisheries.

The night before Palolo it is just as well to go to bed early, for it is going to be an early start in the morning. The Samoans go promptly to sleep, with the exception of one detailed to keep the watch. At 3 o'clock his shout rings out as he calls the rapidly falling tide and the rising into view of the coral patches, for the moon at its last quarter has little power to illuminate, and does no more than make ghosts and phantoms of things seen. The signal is passed from house to house, until the village is fairly ringing with glad acclamation. Each Samoan brings his paddle from the house with him, the canoes are drawn up in line beneath the cocoanuts at the edge of the beach and the launching is simple. Little time is lost in getting under way, and the fleet heads out directly for the well-known fishing ground. Samoan canoes draw little, and if only there is as much as 6in. of water it will serve as a channel. Thus the fishers edge themselves into pools within the reef, where they hope to find a bounteous supply. And still the tide goes out as if it were never to come back, and more and more of the reef appears on every side. Some have made a miscalculation. Instead of being in a pool they find themselves high and dry on the coral, with the tide still falling. Then they must carry the canoe from pool to pool in search of water to float it, and all the while their friends are jeering them. It is a noisy gathering. If they are not poking fun at the unfortunate or scolding those who trespass on some favored pool they are at least singing. And still the tide goes out.

Only a few feet away are the seaward breakers. Steadily the great waves sweep in relentlessly from the sea. They comb over and beat in thunder and tumult on the coral wall. The air is filled with their salt spume; yet not a ripple passes the barrier to disturb the fishing fleet under the protection of the great wall of the barrier reef. The thin edge of the moon is riding higher, but the pallid light, which makes even the brown faces seem green, is not from the moon; it is the blanching eastern sky that goes before the dawn. The pools grow smaller and smaller, and the struggle grows greater to get within some pool and not be left behind on the coral as the tide goes out. But now the older men shout for silence, and the command of the aged has weight with these skylarking savages. The old men are scanning the surface of the pools, and now and then they sweep with their nets. The tide goes out no more—no more of the reef darkens the surface; it is slack water. It is now but a question of moments until the worms come forth.

There is only one sort of net that is any good for palolo—a piece of mosquito netting drawn over a forked twig or a looped bamboo and of about the size of a pocket handkerchief. With this the surface is skimmed, and the water can flow off sufficiently rapidly to preserve the worm in large pieces if not entire.

It is dead low water. The tide must surely turn this very minute. There is no wind at that time of day. The dawn calm broods over the sea. Not a ripple shimmers the water. There is not a sign anywhere of living thing in that water. You can feel the tension of the scene, and though it is your first palolo fishing, there is a contagion in the enthusiasm of those about you. You strain your eyes at the surface of your pool and sweep it with your net. Lucky if you are not cheated by some dark twig of coral, to the destruction of your net. There is not a living thing in that water, and you feel the chill of the summer morning and wish that you had not come. All at once, and at once from every side of you, you hear the shout, "Ta palolo! U-U-U! Ta palolo!" ("Struck palolo! Oh, ho! Struck palolo!")

You feel like paddling to see the find, forgetful that the tide has locked you in your own pool and that you have not Samoan feet to run unhurt over the jagged coral. All of a sudden you bethink yourself to look at your own pool, bare as you knew it to be. Bare? did you say? Why, it's fairly alive with masses floating up from the coral grove over which you are poised. You sweep your net and find that you have a bunch of wrigglers in it. Details are impossible in the obscurity, but you are moved to raise the Samoan cry, and on your own account you shout, "Ta, palolo!" Better rest content at that, for it is only long years in the South Sea can teach the way to give the rest of the call. Now, never mind the shouting—scoop! Palolo comes but once a year—scoop! Don't discourse to anybody about the zoological mysteries, but scoop. Fill your bucket with the worms and let them writhe and wriggle while you scoop more to bear them company. Scoop as fast as you may, the same spot yields just as many worms, no matter how quickly you can get your net cleared. This lasts for about half an hour; certainly not longer. That is, it takes the worms that length of time to get clear of their coral nests. After that time you can scoop your pool quite clear and no more will come into view. If left to themselves in the pool the worms remain on the surface between one and two hours in a living scum. Then they sink to the bottom and are lost to sight in the tangle of the coral before the sun rises, all the islanders being convinced that the first ray of sunlight kills any belated worm.

While you are scooping you will make your first essay at tasting the savage delicacy. It may well be said that the eating of worms is an acquired taste, and it is just as well to make the first experiments under the cover of darkness. At any rate, you have carefully picked out one of the least of these worms, my brethren, and have inserted it gingerly over the lips. To your surprise—and most likely to your disappointment—everything seems just as it was before. You taste nothing beside a little salt water, and there is no fierce lashing about of the worm in your mouth and midst, as you have foreboding-ly imagined. But that's not the way to eat palolo. It should be served raw, of course. Sunlight is fatal to palolo, and for that reason the islanders cook only so much of the catch as they find themselves unable to consume before the sun rises. But cooked in leaves, it is coarse, and not at all to be considered. It is like the oyster, and cannot bide the fire. Take a handful of the worms freshly caught, and let the sea drain off; now "scoop" them up and leave the rest to nature. After they have passed the palate, the tongue begins to smack of the flavor that in our knowledge is associated with the sweet scallop, and that's what the palolo tastes of.

Any one can acquire the taste for palolo. But it is not to be recommended, for it's a long and weary way to the South Sea, and it is hardly worth while cultivating a taste that can be appeased only once a year, and that in the gray of the dawn 10,000 miles away.

LLEWELLA PIERCE CHURCHILL.

The Side-Saddle.

Editor Forest and Stream:

"Although for feats of horsemanship unfit,
Some things about the saddle I do remember yet."

Therefore please let me suggest that you make the proportionate danger to a woman from a broken saddle girth, as compared with the danger to a man, more than it really is. In either case the rider is mighty apt to get a fall, and how serious the results of that fall will be depends pretty much on how one alights. The only serious accident to any of my family from riding was the breaking of an arm of my son by a fall resulting from a broken girth.

Again, the danger of a woman's skirts being caught by the pommel can be greatly lessened by a strip of elastic from horn to horn, thus making a slide to carry her skirts free, and the open "safety" stirrup often acts well in case of being thrown and prevents her being dragged.

This, however, is all I can think of in mitigation of your condemnation of the side-saddle, and every other consideration is against it. With the best men's saddles (all of English make, I must confess) with the detachable stirrup leathers, I believe it is impossible for a rider to be dragged by a foot, no matter which way he is thrown or which foot is caught in the stirrup iron. At least I have known several cases of a rider being thrown, or his horse falling with him, and in every instance the stirrup leather came off, with the stirrup on the foot. A young girl known to me often rides a small horse of mine, to which she is much attached, and always riding astride; and while she prefers her own western saddle, I have persuaded her to use my English one, just to set my mind at rest about a dragging accident.

But is not riding astride by ladies much more common than your editorial would indicate? I know three young ladies and girls, very well bred, raised in the far West, who always ride thus, and this summer in Northampton, Mass., I several times saw a lady astride of her horse, and I am told that this is not uncommon in Boston. Most certainly there is nothing in the remotest degree immodest about it. The divided skirt is a mystery to me, but I know that in her ordinary skirts a lady can ride astride gracefully and well, with no appearance of either immodesty or ungracefulness; for only a few weeks since I saw a young lady who was driving one of several teams

a driving party, come down from her seat and take the ace of the mounted aide-de-camp who was riding, and me, she looked just as she did when regularly got up r riding. Let any sensible woman once try riding tride, and the vastly superior comfort and convenience that position over hanging on by a side will brace her to a height much above any considerations of "looks," d she will have the safety consideration as a make-ight.

W. WADE.

AKMONT, Pa.

A Boston correspondent, C. H. A., writes:

Your editorial on "The Side-Saddle" is admirable. The le-saddle is a humbug and a senseless thing. In the and Cañon and the mountains of southern California t summer women always rode astride, and no one ever ught of it, except a few novices among the ladies mselves, and presently they had things far more im-rtant and interesting to think of.

The guides won't take them any other way, and are rfectly right. If it be said that to ride astride is very ing to a stout woman, it should be replied that so is rseback riding to such a person anyway. It should be nply the question of whether they want to ride at all not. If we can only ever get womankind to have sense d sand enough to do a few of these obviously sensible ngs! All sensible men just want them to, but they are re afraid of women than of the very evil one.

saw a young lady the other night riding astride on boulevard in Newton, and she had a firm seat and ked more than all right.

The gratifying announcement comes from Cleveland t the Health Protection Association of that city pro-ses a crusade against the side-saddle.

Cruising on the Gulf Coast.

ORT MYERS, Fla., Oct. 30.—*Editor Forest and Stream:* e Maud and Kingfisher, cruising yawls, arrived here day at 9:30 A. M. We have been out fourteen days, l nearly every hour has been jib and dandy weather, l so we have made short runs and have left the birds ne. We go from here up the Caloosahatchee and shall to get to Okeechobee; but the insects may head us off. case that happens we will hunt salt water again, and ll events you shall hear from

TARPON.

Natural History.

Careless Ornithology.

SOME one has said that it is better to know a few ngs which are so, than a good many which are not so. would seem as if many who wrote about birds preferred tell us things which are not so, instead of taking the uble to find out whether the things they write are so or . Here are some examples noticed within a few weeks:

From the Phillips Phonograph: "Mr. Holt's camp many mounted specimens of game. In one corner of camp is a very large American eagle which was cap-ed by an old hunter in the upper part of the lake ion. His wings have a spread of 12 feet. He is a e bird."

From the Bangor Commercial: "There is a possible uel to this story in the reported fact that a certain rchant at Manchester Corners caught a young loon or ke driver."

The Outlook of Sept. 30 has this about chimney swifts: n't this a beautiful nest? There are four little speckly, ckly eggs under me."

n a recent number of FOREST AND STREAM one of your tributors, in speaking of the recollections of his boy-od, tells of seeing the fishhawks carrying food to their ing in their beaks.

Now it would have been a very easy matter for these iters to have found out that the eagle very rarely ains the spread of 8 feet; that a loon and a "stake ver" are not only not the same bird, but about as ferent from each other as two birds well can be; that eggs of the chimney swift are always pure white, and t a fishhawk never carries food in its beak, but always its claws.

ohn Burroughs, in the August Century, in one of his rming articles on "Wild Life," in speaking of the ckadee says: "Branch-builders and ground-builders easily accommodated, but the chickadee must find a ity, and a small one at that. The woodpeckers make a ity when a suitable trunk or branch is found, but the ckadee with its small, sharp beak can only smooth and pen one already made." Now any oölogist will tell you t the chickadees can and do make their own holes, just woodpeckers do. While it is possible that in some cases y may avail themselves of some natural cavity to help ttle, still in the many holes I have seen made by them I 've never known one to do this; while I have several es seen woodpeckers pick through to get at a natural low. The fact which Mr. Burroughs states, that their ks are sharp and strong enough to "smooth and pen" a natural cavity, proves that it is fitted to make hole without having any natural hollow to help them. e fact is that they can, and do, make their own holes t as the nuthatches do, and not only do they do this, but the fall they dig the holes to serve for their winter re-at, in quite solid wood, instead of availing themselves woodpeckers' holes and natural cavities.

n the September number of Self Culture, Mr. Oliver vie, in an article entitled "Songs, Habits and Haunts American Birds," in speaking of the bittern, says: ew naturalists indeed have actually seen the bittern gaged in its serenades. I have heard them many a ie, but never saw the bird performing them. A natural-friend of mine, a civil engineer, recently had the good tune to see one of these birds engaged in 'pumping,' having come in easy range of his telescope. I will scribe it as nearly as possible in his own words. After nding in an apparently meditative position for some ie, it would slowly raise its head and stretch out its k until its bill pointed nearly straght upward, when it mmenced by several times opening and shutting its big beak with a snap that was plainly heard, though 500 or 600 feet distant. It then uttered the characteristic notes, and truly it sounds much like pumping."

Having had opportunity to look at one in a trap, as long as I wished, and to see it go through the whole performance within a few feet, I can confidently affirm that the bittern does not make any noise at all with its beak. It does not snap it. If it did any one can see that it would not be possible to snap it so loud as to be heard for 500 or 600 feet. Neither does it stretch its neck straight up when it makes its noise. It crooks the lower part of the neck outward, and points the bill upward as this engineer states. It then makes a kind of hiccoughing noise, like hic, hic, hic, opening its bill each time, but not snapping it. The noise it makes very nearly resembles that made by a person commencing to vomit. After making this noise five or six times it begins its regular booming. When it is making its first noise one can see the feathers of the throat puff slightly, every time it makes the noise; but when it booms its throat seems to be inflated to twice its natural size. While I have never but on this occasion had a fair chance to see the whole performance, I have a great many times, in the evening and night, been so close to them as plainly to hear them hiccoughing, but I do not think it can be often heard over 100 to 200 feet away.

The instances cited above are only a part of those I have noticed in various publications since Aug. 1. It seems quite important that when so much attention is being given to ornithology those who write on such subjects should be sure of their facts before they give them to the public.

H.

New York Zoological Park.

ON Wednesday, Nov. 8, there was opened at Bronx Park, in New York city, the largest zoological gardens in the world. This is the culmination, long delayed, of something like twenty-five years of work by persons in New York who were interested in this subject, and who believed that in New York, if anywhere in the world, a large and complete zoological park should be established. A reference to the files of the FOREST AND STREAM will show as far back as the later '70s editorial articles advocating and urging action such as has been only recently taken.

The new park belongs to the New York Zoological Society, which was incorporated by special act of the Legislature April 26, 1895, with purposes to establish and maintain a zoological garden in the city of New York, to encourage the study of zoology and to furnish instruction and recreation to the people. The act authorized the Commissioners of the Sinking Fund to allot and appropriate for the uses of the society, under certain expressed conditions, any of the lands belonging to the city north of 155th street. As a condition of the grant of land and the maintenance of the collections and the park by the city, the Zoological Society was required to raise $250,000, of which amount $100,000 was to be in hand before the society entered into occupation of the park. This fund was to be expended in the erection of the necessary buildings and inclosures, and in the purchase of collections, as well as for the general purposes of the society, but as stated, the city was to prepare the ground of the park, to maintain it in good order and to bear the expense of caring for the collections.

The society having been incorporated, it was necessary before anything more than its business organization could take place, to determine where its park should be located. In only two or three of the larger parks on the outskirts of the city was there spare room enough for such a collection as was desired, and it was felt that the society must start its gardens in the right way with plenty of room, for when a grant had once been accepted there would be small prospect of its ever being increased.

For the most part the zoological gardens of the world are small. The well-known Zoo of London has an area of 30½ acres; that at Amsterdam of only 25; that of the Société d'Acclimitation at Paris of 50 acres; that at Berlin of 60. In our own country, the Philadelphia Zoo occupies 33 acres, the Cincinnati Zoo 36, while the National Zoological Park at Washington, maintained by the Government, and with an area of 168 acres, has until now been the largest zoological garden in the world. The New York society's park, however, is more than one-half larger, covering 261 acres.

Experts from other cities were invited to come to New York and look over and report on the different parks, and when this had been done, after long consideration and careful study Bronx Park was selected for the location of the gardens. The situation has many advantages. It is adjacent to the Botanical Garden, in North Bronx Park; its topography is diversified, yet it has no steep hills; it is already well wooded with large forest trees; it has passing through it more than one natural water course.

After the ground for the park had been selected, or rather while its process of selection was going on, the board of directors were engaged in the work of raising the money for the fund of $100,000 which was needed before the park could be turned over to them. This was accomplished, the city authorities signified their approval and in due time the land was handed over to them. In July, 1898, ground was broken, and for a time little else was to be seen in the park besides buildings in course of construction. By this autumn, however, order began to be evolved out of what had been chaos, and within the past few weeks the work has gone forward with especially rapid strides. The water and sewerage system, long in process of construction, was at last completed, tested and buried out of sight. Recently the last touches were put on the more important buildings that have been erected. The animals began to arrive a few weeks ago, and the number already received is very large, although of course as yet only a beginning has been made.

As has often been announced, it is the purpose of the society to begin its collections by paying especial attention to North American forms of life, and this has been done up to this time. Thus we find at the park a considerable number of our larger and more striking mammals, and among them those especially interesting to sportsmen. Western game animals are prominent in the collection so far as made.

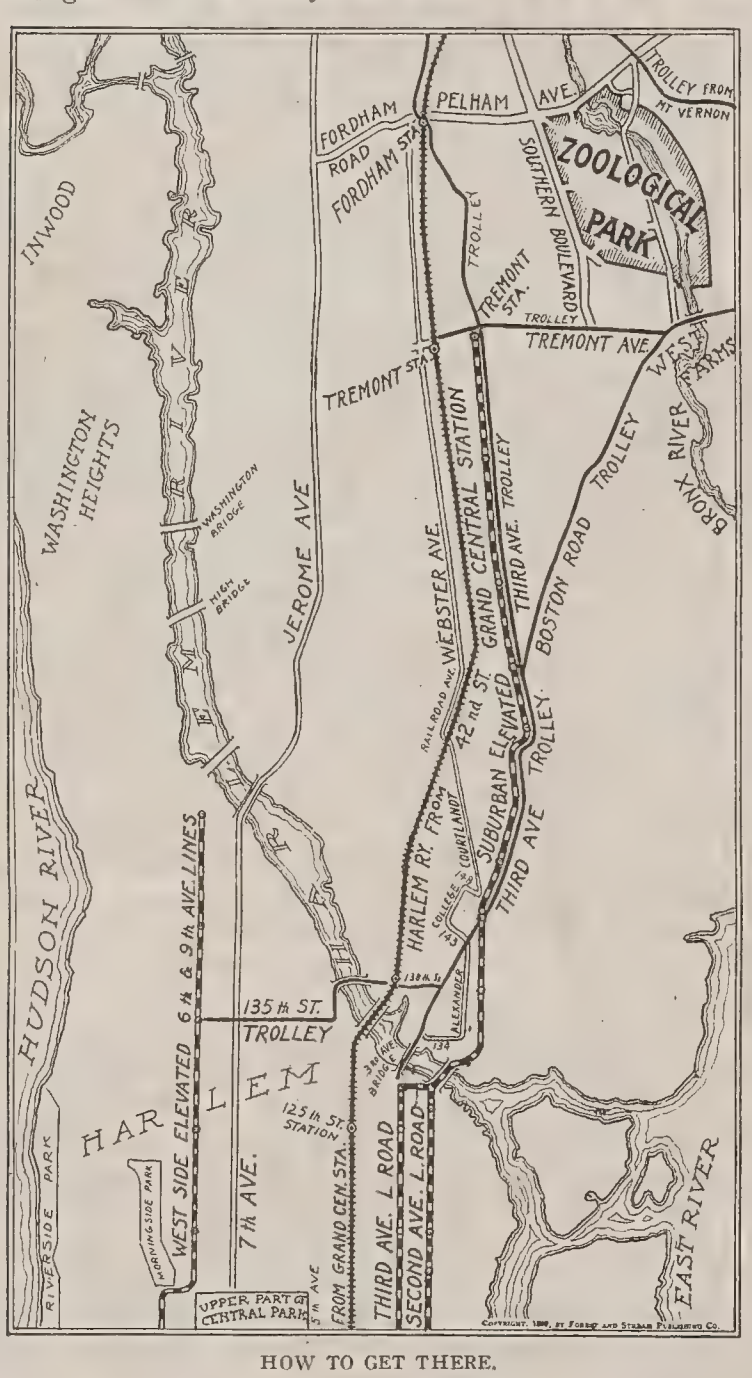
As is well understood, the two principal entrances to the park are on the east and west sides, the former being approached from the village of Fordham and the latter from West Farms. West Farms is reached, as is explained in the map, by the elevated railroad and trolley road, while the Harlem Railroad brings the visitor from the Grand Central station to Fordham, from which point a ten minutes' walk or a shorter drive takes him to the Fordham entrance. At this entrance a pavilion is erected, and after passing through this, if one keeps to the right the path cuts the deer range in two. To the left is a very pretty group of axis deer from India—a buck, two does and a fawn, all of them spotted with white like the fawn of the Virginia deer, or like a calf elk. To the right is a paddock in which a mule deer buck feeds alone.

If one keeps to the left he passes the large range of the waterfowl, where ducks and geese of various species are to be confined. Within this range are many little islands surrounded by streams, and on the islands are shelters in which the birds may be protected from the weather and where they may breed. South of this is the tremendous flying cage, not yet completed, in which, when the time comes, many large birds such as herons, ibises, flamingoes, snake birds, etc., will be confined. This cage is so large that it completely incloses three considerable forest trees. Just beyond this cage, and to the right, is the bird house, fitted up with cages inside and out. Within the smaller and more delicate birds will be housed, and also in winter many of the species which in summer will occupy the flying cage. The exterior cages will be devoted to the hardy raptorial birds, such as eagles, hawks and owls. The walls of the interior of the bird house are attractively painted with representations of outdoor scenes.

Further along the path, still to the right, comes the moose range, in which are confined a young moose and a young caribou. They are odd, ungainly little creatures. It is hoped that before long their numbers may be added to. South of this range is that devoted to the elk, which contains ten or more fine specimens. There are two magnificent bulls, two young bulls, a calf and five cows. All of them are in fine condition and form a beautiful picture as they feed or rest in their large pasture. East of the elk range are the wolf and fox dens, occupied by a pair of gray wolves, a pair of Russian wolves and others of the smaller *Canidæ*. The Russian wolves are interesting for the differences from the American wolves which they show. This is seen chiefly in the shape of the head, which seems to be much broader and more massive in the European than in our species. East of the southern end of the elk range is the pond for ornamental wildfowl and for certain aquatic carnivores, such as the mink and the otter. Some of the aquatic rodents will perhaps be put here later. South of this pond and extending to the eastward is the antelope range, where are seen five beautiful young animals. A small colony of prairie dogs unconfined is living in the antelope range, and across the path north are the quarters where the prairie dogs are under fence. Further east, and bounded on the east by the Boston Road, is the buffalo range, containing seven fine animals—two old and large bulls, two younger bulls and of cows an old one, a two-year-old and a yearling. They seem in good condition and have their winter coats on. Northwest of the buffalo range and beyond the rocking stone are the bear dens, which seem to be a center of interest for all visitors. Here there are two or three black bears, a grizzly cub, and two supposed grizzly cubs from Alaska. These are all in one den, in which there is abundant room. The next one is occupied by a group of California sea lions, and the next by two fine polar bears, said to be the largest existing in captivity. Although young ones, they are very much larger than any of the other bears here. The sleeping rooms for the bears have the appearance of being hollowed out of the rock. Each inclosure is fitted up with one or more standing trees, and in each there is abundant room for the animals to exercise. North of the bear dens is the large beaver pond, as yet unoccupied. It should form an admirable range for these animals.

Among the other animals to be mentioned are a tiger cub about as large as a half-grown panther, a South American anteater, some monkeys, a peccary and coons, wildcats, badgers, foxes, skunks, woodchucks and many other animals. There are besides not a few birds, many of them of species that the average man never sees very close at hand.

Of all the exhibits in the park, perhaps none will be of such general interest as the reptile house. This is true, not only because snakes and reptiles have an absorbing interest for the average human being, but also for the reason that they are less known and their modes of life less understood than those of mammalian quadrupeds. In the alligator tank, among a lot of good-sized comrades, lies the monster of the house, an alligator more than 12 feet long. Not far away from him in one of the upright wall cases is a python 22 feet long. Ranging down from these giants are lizards, snakes, turtles and batrachians of all sorts and sizes, the total number of specimens here being more than 500 and representing more than fifteen species of turtles, thirty-seven of snakes, eleven of lizards, and fourteen of batrachian. The smaller snakes are shown in small clear glass cases, which are fitted up with earth, rocks, small trees and plants, in close representation of the homes which they naturally inhabit, while the large snakes are in the permanent wall cases, which are very much larger, but are fitted up in the same way. The effect is very beautiful and attractive, and the visitor is greatly impressed by the good judgment that has been shown in the arrangement of the collection.



The tank for the turtles is not less interesting. A long tank, perhaps a foot deep and 3 feet wide, bordered on either side by 4 or 5 feet of clean sand, is divided in ten or twelve compartments by gratings in the water, and plate glass divisions above. Old logs lying in the water give the turtles an opportunity to come up on to the sand; plants grow in the sand and in the gravel at the bottom of the tank—in fact, all the surroundings are those of the home of a water turtle. Among the species here represented are two which are very interesting; one is Blanding's tortoise, a form intermediate between the box tortoises and the water turtles, and equally at home on the land or in the water. Another is Muhlenberg's turtle, a small water tortoise with a very limited range, found only in a small area in New Jersey and Pennsylvania. Besides

these there are mud turtles, snappers, leatherbacks and other turtles in goodly numbers.

The batrachians are not represented by frogs and toads alone, but there are mud puppies with their bright red gills, an axolotl (*Amblystoma*) of the white form from Mexico, and at least one specimen of *Amphiuma*, or two-toed Congo snake, a curious creature which is of especial interest for its snakelike form with its rudimentary limbs. Adjoining the main hall of the reptile house is a greenhouse fitted up with tropical plants, brought from Florida for this purpose, in which certain heat loving species will be confined. We believe that the reptile house for many visitors will be the prime center of attraction.

The visitors to the opening went to the park on trains leaving the Grand Central station over the Harlem Railroad at 1:35 and 2:15 P. M., and reached the ground half an hour later.

The energy with which the labor of raising the necessary money and of pushing the construction work in the park has been carried on gives a guarantee of the earnestness of the managers of the Zoological Society, and especially of their executive committee. This is no mere temporary effort, but is a serious and well considered plan to give to the first city in America the greatest zoological garden in the world. In this attempt the society is entitled to the support of public opinion, for the garden is for the benefit of the whole public and is not for gain. For five days in each week and on all holi-

HOW TO GET THERE.

days it will be open to all who may care to visit it, and it is not too much to say that as its existence becomes more generally known it will be visited by millions of people, to many of whom it will reveal glimpses of a new and hitherto unimagined world. Since it is for the benefit of the whole people and is free alike to the well-to-do, to those in moderate circumstances, and to the very poor, whose pleasures are few, it should appeal especially to the wealthy and to those whose circumstances place them above the need of such a pleasure ground. The society has collected, as stated, a large amount of money, but it has spent all this in the work already done in the park, the results of which to-day are visible to all beholders. It greatly needs more money, and it appeals to the wealthy to give this money, pointing to its purposes—as expressed in its charter and its by-laws—and to what it has already done as guarantees that this money will be wisely expended—that is to say, for the general good and not for any selfish end.

Besides this, the society needs active annual members. The fee for such membership being but $10, and carrying with it certain privileges, it should appeal to many citizens and the roll of active membership of the society ought to be greatly increased.

Furthermore the society desires to obtain additional specimens of quadrupeds, birds or reptiles for its collection. The numbers of wild animals secured from time to time by persons who should be sufficiently interested in the New York Zoological Park to be willing to contribute to its success must be each year considerable, and such specimens confined in the park would lead a more natural and healthful existence than they ever could in private hands, and besides, would give pleasure to a great number of people.

The opportunity thus presented to citizens of New York and others to help on the good work which has been so splendidly inaugurated by the New York Zoological Society is a great one, and we may fairly hope that among these there are many who, by gifts—whether of money or of specimens—and by interest actively expressed in the work, will strive to push forward an undertaking which cannot fail to do good in a thousand ways.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The California Mountain Quail.

Editor Forest and Stream:

As far as my reading reaches, it seems to me that in California we have a bird that has received much less notice than it deserves. I refer to what is known as the California mountain quail. I do not know that the bird is found elsewhere than upon the Pacific coast, and here it is only found well up in the foothills and mountains.

The mountain quail of California is about as large again as our more common bird, the valley quail, and is, in my opinion, the most beautiful of American birds. Its plumage is made up of the richest combinations of browns imaginable, with ribbed or checkered dashes upon its breast nearly crimson. From the very top of its head a cluster of minute and glossy black feathers spring into a graceful crest about 3 inches high, drooping at the top forward, like the smaller crest of the valley quail. It is of trimmer figure and better plumage than the latter, though the valley quail is itself a beautiful bird. Its flesh is as white as that of the domestic chicken, in this respect differing from any other bird with which I am familiar.

The mountain quail is much more musical in its notes than any game bird known to me, its regular call being a round mellow whistle, that varies so greatly in scope and tone that the bird is a rare ventriloquist, and one not easily located in its native haunts. Besides the regular call, the bird has a great variety of trills, chirps and clucks that it makes use of upon occasion. It is naturally much tamer than the valley quail, but when disturbed a few times it becomes much more difficult to approach, as it is a rapid runner, and takes to brush ravines and the roughest ground. In the same cover it would, I believe, be a better bird to shoot over dogs than the valley quail, or the Eastern Bob White.

Probably efforts have been made to propagate the California mountain quail in other parts of the country, and it would be interesting to hear from him in other places. Merely as "a thing of beauty and a joy forever," aside from his game qualities, he is worthy of great attention anywhere.

NOTICE.

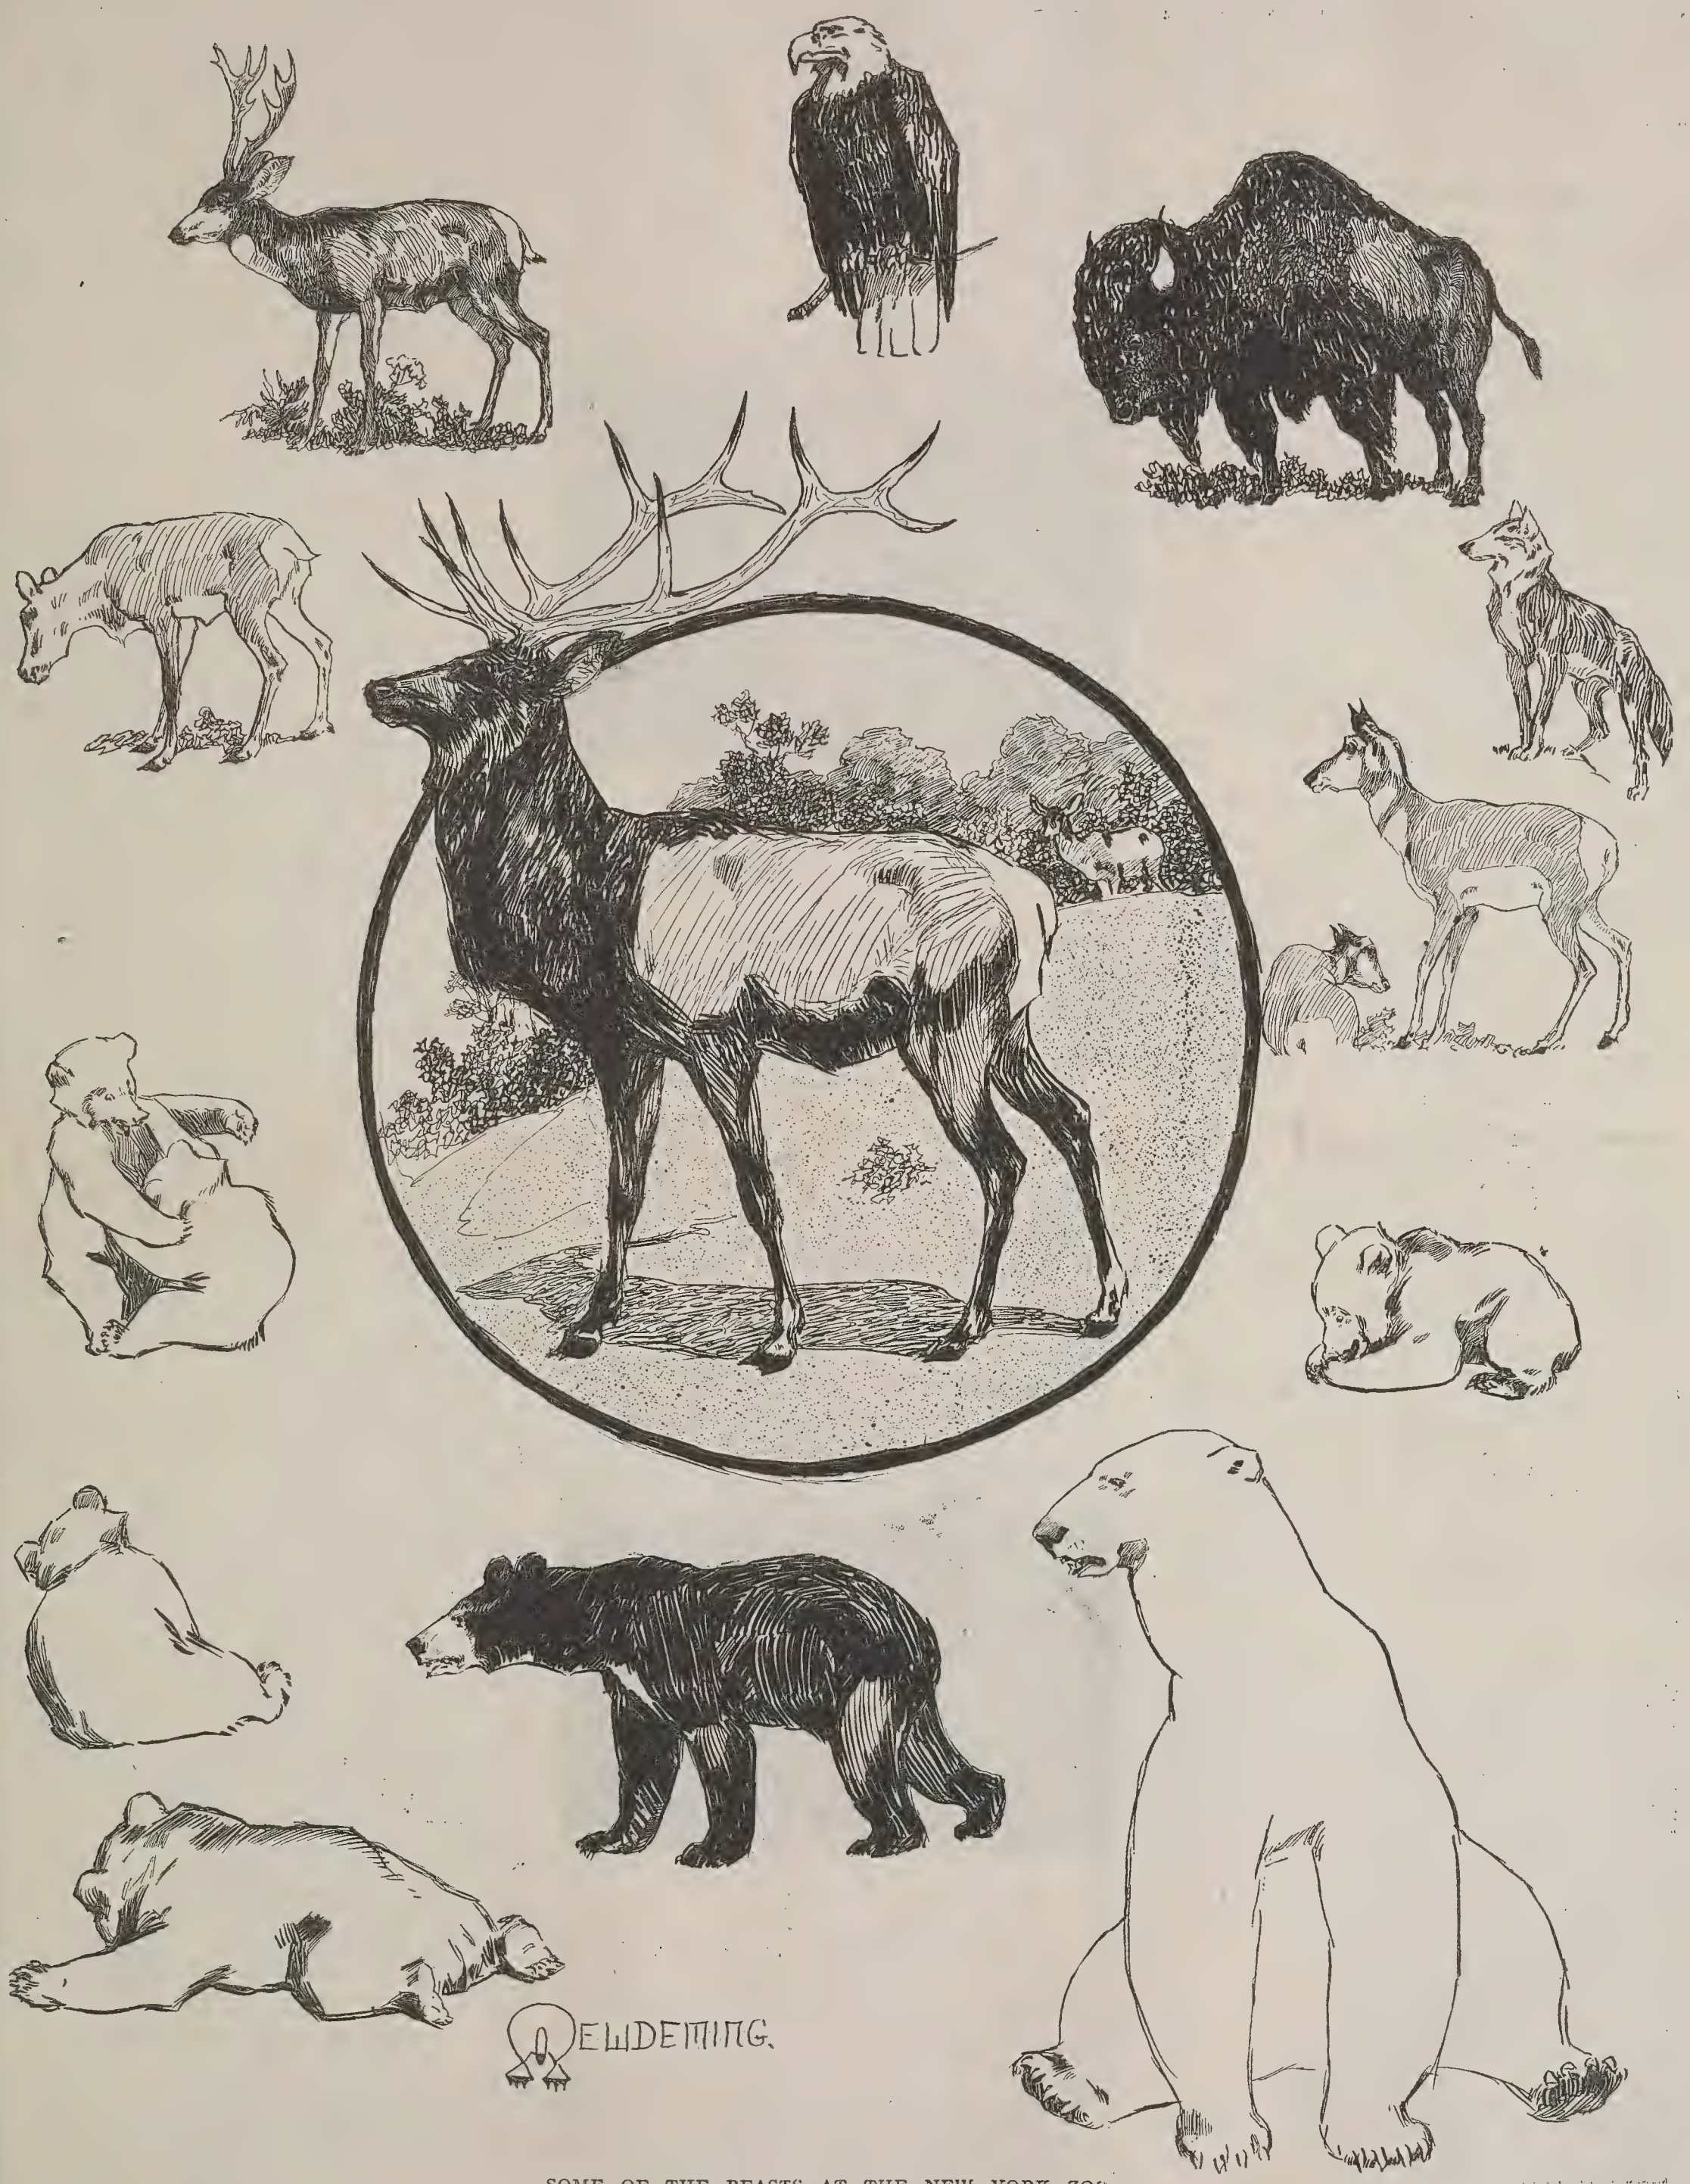
THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Game Bag and Gun.

The Adirondack Deer Law.

COL. WM. F. FOX, Superintendent of Forests, has at times mentioned as the author of the present York law which forbids the use of dogs in hunting

Col. Fox was seen at his office in Albany by a re sentative of FOREST AND STREAM last week and rema that he was not the author of the law, and, furthern he thought it was not framed so as to produce the results.



"The thing that needed correction in the deer law my opinion," said the Colonel, "was the time of o ing the season rather than the method of hunting. early deer shooting should have been stopped.

"No man who has the interest of the deer at heart advance any tenable argument for having the seasor gin in August. The venison is not in fit condtion t eaten, the meat is sure to become fly-blown and sp before all of it can be used, and the old evils of the ing system still apply. The deer are shot around lakes and ponds just as they were when jacking wa vogue, and the same undue proportion of does are k

"The does have their fawns with them, and the mot death too often involves that of the young, who have yet learned to care for themselves. This is a violatic all the principles of game protection and sportsman The State might as well pass a law permitting the rob of spawning beds as to permit the shooting of nur does in August. Through the escape of wounded and starvation of fawns, it is not unreasonable to esti that for every animal killed at this time of the year or more perish of which no record is known."

Col. Fox cited the fact that no other State or C dian Province opens the deer season as early as York, and intimated that the law as it stands was fra in the interests of the summer people instead of for protection of the deer. He stated that Oct. 1 was enough, in his opinion, for the season to commence, that six weeks—reaching into the first tracking sno instead of twelve, as at present, was long enough. Fox's father and grandfather before him lived and hu in the Adirondacks. He is a good sportsman himself, there are few men living who know the region bette fact, taking the entire Adirondack forest, no one kr it so well. In concluding he said:

"Personally, I should like to see deer shooting sto altogether for five years; since that is not likely to want to see a more intelligent law as to the opening duration of the hunting season. But if the deer a be killed, I see no great objection to the use of ho under certain restrictions, provided the season is

SOME OF THE BEASTS AT THE NEW YORK ZOO.

later and shorter. Hounding is a time-honored method of hunting. The stag and the hound have been prominent in literature and art from the days of the earliest civilization. The important thing to determine now is when the deer shall be killed rather than how they shall be killed. It is difficult to enforce a law where local opinion is strongly against it. As a compromise in settlement of the vexatious differences which exist, I would suggest a short season, a late season, and let every one hunt as he pleases.

"You will understand, however, this is one man's opinion only, and that I am not authorized to speak officially for the Commission." B.

In a Goose Pit.

GRANBY, P. Q., Oct. 30.—I have had a new experience in shooting, and think that perhaps it might interest some of your readers.

On Oct. 10, 1899, H. E. Hibbard, Pete Largie and I arrived at Isle au Reaux, which is situated some twenty-six miles below the city of Quebec. We were called the next morning at 3:30, had breakfast, and embarking on a one-horse "charette," with decoys, bushes and straw, we drove down the island about a mile and a half to where a pit had been dug the day previous. While the guide tied the live geese decoys, we placed branches over the pit and straw on top of this, so that when completed it resembled the rest of the field of oat stubble.

The four of us got into the pit, which was barely large enough to give proper elbow room to three. We were settled down and all ready just as day was breaking. We could hear the wild geese calling on both sides of the island, our decoys answering occasionally. We had been there about half an hour when a flock of about a dozen appeared over the woods, heading for us, honking in great style. You should have heard our decoys answer them. The flock was a little high, so they circled twice and then came in right toward us, setting their wings and dropping in quite gracefully for so large a bird. Our instructions were that after they had alighted each should pick a bird and then shoot together, then as they arose give them the other barrel on the wing.

They had no sooner dropped than I had two in line, one about 20 feet away, the other about 60 feet. Pete said he was ready, Hen nodded and the guide appearing prepared, I said "Pull," although I then had a bead on the furthest one only. We were sitting down when we fired first barrel, but jumped up and fired at the others as they were going away. Hen feathered his nicely, and we saw it dropping slowly out toward the water, but did not recover it, although later the guide went in search. I got a bead on one as it was going away, but unfortunately pulled the wrong trigger, and although I quickly pulled the right one, I did not get a feather.

We got out of the pit quickly, picked up Hen's bird, which was shot well—or badly—through the body, also my bird through the head and neck.

The guide had got nothing, and on inquiry of Pete, we found he had not fired at all. He was ready all right, but we shot quickly and on the quick jump up for second barrel he was too much crowded, he said. Subsequently, after all was settled down again and he had looked over the decoys, he said it was lucky he had not fired, as he had had one of the decoys covered.

I picked up the two birds and was looking them over when the guide said some more were coming, and asked who would run with the two and hide them in the woods a couple of acres away.

In place of sending him, I foolishly volunteered; and while I was running to cover a band of seven came over, but as they no doubt saw me running and the others scrambling into the pit, they did not decoy.

The guide uses an old muzzle-loader, and was standing up in the pit when another flock of about thirty came over the woods. Hen told him to sit down, but he went on ramming down the load, saying he was not yet loaded and wanted a shot himself. The result was that we got no geese out of those two gangs, whereas we should have had a half-dozen at least. I duly returned to the pit, where we four sat cramped up for a time, but no more geese coming over, the guide said he would go down and search for the one Hen had feathered.

He was not gone more than ten minutes when we heard our decoys making a great racket. A lone gray goose came sailing in and dropped down about 20 yards away. As Hen and I each had one goose, I suggested in a whisper that Pete shoot it, while we would cover her in case Pete missed. Pete thought this a good proposition and immediately bowled her over. We brought her into the pit and waited for more. She was a very pretty goose, but weighed only 4 pounds, while Hen's weighed 8½ and mine 10½ pounds.

At about 9 o'clock Mr. Roberge came up with the team and took me for a ride around the island. We saw several bands on the rocks and on the water, some of them flying up, out of which the boys in the pit secured two more. One band of about seventy-five came over the pit. The guide had not been satisfied with the pit, and was digging another about a hundred yards further back. When they appeared he jumped into his partly dug pit, but, of course, was not hidden. They circled twice, coming very close to Hen and Pete; but as their instructions were not to shoot until the birds lit, they let them go over. When they were leaving the guide foolishly fired at them, but got nothing. Had he been in the blind instead of digging another pit, there would have been less talk and more dead geese.

I returned from my trip around the island about 11 o'clock. We then went to dinner, leaving the guide alone. On our return we found he had three more and had wounded another, which he secured later in the day.

In the afternoon a single goose twice came over, but would not decoy, and although she offered an easy wing shot, we foolishly did not accept it, much to our regret, as no more came that day. That afternoon I went with Mr. Roberge to visit his eel pots, and helped him secure fifteen nice big ones of from 3 to 5 pounds each.

The day had been bright and mild, with hardly any wind after 10 o'clock. The geese could be seen on the rocks near the water sunning themselves, while other bands were out on the water some distance. There was no way of approaching them. There were probably 100 on the south side and seventy-five on the north side of the island.

The next day we were up at 4 and got into the pit at daybreak. We waited patiently for a couple of hours, but none showing up, we sent the guide down on shore to see if he could not start some of them flying, but they simply swam further out on his approach. At 9 o'clock we returned to the house, as we were going to spend the rest of the day on Isle a la Madame for ducks.

The guide discovered that he had left his bag of shot at the pit, and a boy was sent after it, who reported that eighteen wild geese got up from among the four decoys

IN THE PIT.

we had left there. In the evening when the guide went after his decoys he claimed there were about twenty-five wild ones with them.

In going to Isle a la Madame there was a fair breeze on that made our small sail boat rock somewhat, enough to make Hen say he preferred to be on land. As a proof that he was scared, he sang a couple of hymns, something I never heard him do before. Pete kept very quiet, but when a whitecap dashed some spray on him he commenced baling, looking quite anxious the while. He said he was not making as much noise as Hen, but that he was doing a powerful lot of thinking.

We put out our decoys at high tide, but could not get into a satisfactory blind, and although some 300 to 400 ducks got up in a cloud some distance off, and several flocks came over us, they would not decoy. I gave my bushes to the others and started off to explore the island, thinking perhaps I could find some snipe or plover. On the further side I got two plover and lost one in the water. I then returned to the blind, which the tide had

THE DECOYS.

left about a quarter of a mile from the water. As Mr. Roberge was to meet us with the boat at low-water mark we moved over there with the decoys. On our way a small flock of plover got up, and Hen went after them. At the report of his gun another flock got up not far from Pete. I told him to leave his share of the dunnage on the rocks and go after them. He seemed anxious enough to try the shooting, but his load being all Nos. 2 and 3, he said, "Pshaw, I'll tear them all to pieces." As he had never done any trap or wing shooting, I said, "You will, eh! We'll see?" He fired only once and claimed that he had shot at a big rock, simply to scare the flock up so they would go over to Hen. We asked him if he had "torn the rock all to pieces," and thereafter worked this "roast" on him on all possible occasions. I joined Hen after the plover. At the wind up he had fifteen and I had seven.

The next day we spent in the pit, but as it was an ideal Indian summer day the geese would not fly, so we got nothing, the result of our hunting being nine geese and twenty-two plover for four guns, a great difference from the three days spent there last year, when three guns got eighty-one geese.

The island is something over two miles long, and contains over 500 acres above high-water mark, of which 275 are cultivated. Two hundred and fifty years ago it belonged to the Jesuits. It has been cultivated for probably a hundred years. There are barns, a large factory, granary, root house, workshop and place for salting eels and fish. There is a telegraph station, where the Government cable lands, thence wire over the island, thence cable to Gros Isle quarantine station. There is a ridge running almost the whole length of the island, rising abruptly some 40 feet on both sides, being from one to four acres in width. It was up on this ridge that we had the pit. Mr. Roberge has owned it now twelve years, during which time he has allowed only three days' shooting each year the past three years. Every year the fields are gleaned by the geese. He has been offered $25 for two guns to shoot on it for one day, but refused, so we were very fortunate in getting an invitation. The island is for sale, and can be bought for $5,500. I believe that a club can be formed of say twenty or twenty-five members, and make an ideal shooting box, where three guns could shoot for two days a week from Sept. 15 till the ice takes, say Nov. 15 to Dec. 1, and have good shooting year after year.

Mr. Roberge makes from $700 to $800 per annum out of his dairy, sheep and eel pots, hence there would not need to be any annual dues; in fact, I believe it could be worked so as to return interest on the investment to any club taking hold of it.

I will be pleased to give further information to any one desirous of forming a club, in which event I must be counted in as one of the charter members.

J. BRUCE PAYNE.

He Was Cute, but I Got Him.

HARTFORD, Mich.—Several years ago a farmer named Charles Andrews, who lived north of Hartford, Mich., came to me and told me there was an old turkey gobbler living on a corn field near the woods west of his house; but the old fellow was so cute he couldn't get a shot at him.

Early in November the first good "tracking snow" fell and early morning found me on my way to Andrews' corn field, determined to bag the old gobbler. I arrived soon after sunrise. Looking around, I saw plainly where the game had been scratching and eating corn. Looking toward the heavy timber west of the field I saw a turkey fly directly west and light in a large burned swamp. It was one of our Michigan swamps, where tamarack, oak and elm had been burned out by the roots and fallen together, making the swamp nearly impenetrable.

I knew at once that the wise bird had learned that the swamp was a safe retreat for him. Filled with burned logs and pools of water, it would have stopped most hunters, as the old fellow knew, but he did not know me. Marking well the spot where he had lit, I made a start for it, knowing he would have to fly when he went out, for turkeys dislike wading. I tried to get as close to the spot as I could, for I knew he would not fly unless he saw I was coming directly upon him. After creeping through tree tops and climbing over and crawling under logs until I thought I was near the place, I climbed up on a large elm log and looked around for the bird. I had stood on the log but a moment when I heard a rustling in the fallen timber about 50 yards to the left. Turning quickly I caught a glimpse of the turkey running among the brush, and a moment later I heard the swish of his wings as he started toward the corn field I had just left. I fired both barrels, but he was safe, as the shot fell harmless. I went back, keeping the line of his flight until I neared the clearing where the corn field was located. I saw the marks of his wings on the snow and the tracks where he had lit and run toward the field. At the edge of the clearing I saw where he had lit upon a large red oak log, and from that he had flown. I felt sure that he was too wise to take the chances of going near the farm house, and carefully noting the tracks upon the log, I saw that he had turned around and flown back into the wood toward me.

I knew he could not have gone past me in the heavy timber without my hearing him. I scanned every tree top within sight, thinking he might have lit in some giant oak or elm, but I could not see him. Although I was greatly astonished, I knew that he had not vanished into air, but was trying to outwit me.

Within about 50 feet of where he had stood on the log were two large buckwheat pines, very tall and thick-limbed from the ground to the top. I looked the nearer one over carefully, but failed to see anything resembling a turkey, though it was quite impossible to see through the dense foliage. However, a careful survey of the other pine disclosed a pair of red legs up some height, but not a feather was to be seen. Bringing the Parker to my shoulder I aimed well above the visible legs. The report of the gun had scarcely ceased when with great pounding of wings and crashing of boughs the turkey came down.

When I returned home with my bird I found that he weighed 21 pounds. My friend Andrews thought I ought to divide with him, since he had furnished the corn to fatten the turkey, but we compromised and he took a pan of rainbows and pitcher of cider.

We had a great feast and I never was more proud of any game taken than of that same old gobbler.

SULLIVAN COOK.

The Vermont Game Season.

MILTON, Vt., Oct. 30.—Shooting in this part of the State has been fairly good this fall, much better, in fact, than last season. The dry weather of the past summer was unusually favorable for grouse, and they are with us in good numbers. The new law will be without question a great thing for the grouse crop, as it prohibits their sale, and also limits the number to be taken in one day to five birds. In spite of the scarcity of nuts this fall, the squirrels are plentiful, and some good bags have been made. As to ducks, but little shooting has been done, as the flight has not arrived yet, owing to the mildness of the weather thus far. The deer season is now on in full swing, and the State is being pretty well covered by both the residents and out-of-the-State visitors. At this writing but few deer have been brought in. The open season for deer is regarded with little favor in the State, and the next Legislature may see its repal.

KENEWAH.

In the Quebec Moose Country.

Oh, my! we were glad to get that letter. Hop and I were endeavoring to decide where to hunt big game in the autumn, and this letter from Mr. F. inviting us to spend September upon the preserve of the T. Fish and Game Club of Canada was a most welcome surprise and gratification. From June till September seemed a very long time to wait; but then there was much to do and think about during unemployed moments of the interim; for instance, a new rifle, with its various debatable points, was to be considered and decided upon, some new tackle purchased and all the possibilities of an invasion of the wilderness to be provided for. So our pleasure began with the arrival of the kind letter, increased with our preparations and was probably at full tide when we and guides arrived at the first camp, completely equipped with all of our vacation yet before us. The memory of it all is as the shadow of a friendly tree.

A ride of thirty-six miles north from Quebec by train brought us to Sam R.'s, where we procured provisions and conveyances, then fifteen miles over roads and lanes through an interesting country, which became less and less populous though more and more rugged and beautiful, until we arrived by sunset at Camp Grose, on the Little Saguenay. This was a picturesque spot, which an artist, now well known, purchased from the Canadian Government, and here he resorted to sketch and inhale the inspiriting atmosphere of the beautiful encircling hills. We had picked up our four guides on the way, three of them being French to the backbone and one Irish, with a French accent—withal a fine lot of sturdy men. We were up and off in the early morning long before the sun overtopped the hills, and although the guides were heavily laden with our full larder, etc. (each one carrying about 200 pounds suspended from his forehead and resting upon his back), they drove us ahead of them at a good pace. We were fresh from our desks and our new moccasin boots were evidently a blamed poor fit, for they wobbled as they would and as we would that they would not; therefore, toward the end of the eight miles of carry we were weary. It was this portage that Mr. Frederic Remington described in December, 1898, Harpers' as a "lung buster." We were diverted, however, by the collection of some partridges and by seeing the fresh tracks of a caribou; but as Hop said, "The world would revolve with less effort if we only had our boots full of feet." I suggested that he keep an eye on the importunate guides, who seemed disposed to walk over our dead bodies, and if they stopped for breath we would likewise throw our machinery out of gear and oil up. Presently a tremendous crash in my immediate rear indicated that my suggestion had been conscientiously carried out; what a confused mass of rifle barrel, fishing rods, boots and things he was when we found him; but he was whole, and asked, "Won't the hills on the golf links be easy when we finish this training? We won't need a caddy, will we?" Within a few days we were equal to any portage; but in the evening of this first day Camp Crapaud was a most welcome haven, and the supper, promptly prepared, was an appropriate concomitant which aroused our enthusiasm for the Canadian guides, whose versatility, activity, good nature and, later on, unflagging interest in the chase won our warmest commendation. The fact that they carry no weapon helps to concentrate their interest in the hunter's shooting and provides against the guide taking a shot before his employer, as happened to my knowledge in Maine.

This camp and the subsequent ones (excepting the more pretentious upper and main club houses) which are distributed through the tract of 2,000 square miles, were log houses 16 x 18 feet, furnished with four bunks (bedded with balsam), stoves, cooking utensils, etc. In each were found tents for the guides, who sleep in the open air. From camp to camp requires from five to eight hours, the time depending upon the division of land and navigable water found on the way, so that with our early start we reached the succeeding camp in time to catch trout for supper and the morrow's breakfast. One of the guides, Livette, who, by the way, guided Mr. Remington, had trapped the fur-bearing animals of this country for thirty years and knew the size and habits of the trout in every lake and river we traversed. A long route of probably 200 miles, requiring about twenty days of steady work, had been planned for us in order that we might acquire a knowledge of the greater part of the reservation, and in consequence we moved from camp to camp, sometimes making two in a day, without much delay; therefore we took no pains to lure the larger fish from their retreat; but it was a rare occurrence when our flies, cast in any water, did not find a cordial and interesting welcome, although the fishing season was over. No other fish than trout are found and fishing is from canoes entirely, owing to the dense wood on the shores.

Ducks were spasmodic and usually came along when we were armed with rifles and not ready for them; but we managed to sample both the black and wood varieties.

Partridges frequently arose from the trail, and by permitting themselves to be decapitated by rifle balls formed a delightful addition to our bills of fare.

On the second day out Hop, while fishing, heard the cracking of timber near by and presently a large bull caribou, accompanied by a smaller one, passed an opening some 75 yards away. A hasty shot failed to interest them and they passed from view.

When five days out we entered a neighborhood which was popular with these animals and had been hunted over by club members for only three seasons. Unfortunately, the equinoctial storm now arrived and asserted itself vigorously. Nevertheless, Livette and I visited an obscure lake some miles away after a most arduous effort, for these woods have never been cut or burnt, and when trees fall they so remain till decay consumes them. Beautiful moss soon covers them, as it does everything, and this, when wet, offers a treacherous footing. There was no trail in this instance, and I had the satisfaction of seeing a primeval forest, even though under unfavorable circumstances. Approaching the lake were caribou paths and tracks so numerous as to suggest a cow pasture, and as we reached the shore we saw, some 400 yards away, a spike bull in the act of swimming across. As a result of shooting in the Maine woods my rifle and expectations were gauged at 100 yards, and I hesitated long enough to decide that our wet and bedraggled condition forbade a long wait for another shot, and then, guessing the distance, banged away at the protruding head. The youngster ascended the bank on the other side and waved his white flag as a sign of his perfect health!

On the following day we traveled, mostly by water, seventeen miles. After midday luncheon we sent two guides ahead with the cumbersome baggage, while Hop and I with the other guides remained behind to draw some trout from a lake of good reputation. We had fair success and toward evening pursued our way toward the next camp, with a sharp lookout for ducks, which Livette expected to find for us. I had sent my rifle (now properly adjusted to 300 yards) on before us and had my shotgun cleared for action, when, while traversing and admiring a most beautiful lake, I saw two bull moose emerge from the timber and walk along the shore in the shallow water. They were about 300 yards away, and my shotgun was about as much use as a canoe paddle, so Hop loaded his rifle and when ready opened fire and bagged the leader, a five-year-old animal with a good head and delicious steaks.

Rain now fell by night and by day, and though we visited a number of caribou lakes, always returning wet through, and saw many tracks and signs around them, the animals were absent and evidently seeking shelter in the bush. We continued to get trout and partridges throughout our travels, and through mist and rain saw much impressive scenery; but our movements were hampered by the floods, and at times the guides had to fell trees in order that we could cross some of the torrential streams. At one camp we met friends who had slain two bears, and by dovetailing our larders we got up a dinner that successfully distracted our attention from the raging storm without. These friends will forgive me, I am sure, for claiming that the meat of the moose was superior to that of the bear.

Now, as to the .30-30 rifle, which is often discussed in the Forest and Stream, Accuracy is not an issue, I know, but I take pleasure in saying—since I feel an attachment for this weapon—that we frequently shot the heads off partridges at 30 and 40 paces, and in one instance I decapitated a duck (which was slowly swimming straight away) from a canoe at 75 yards. Hop broke the hind leg bone of his moose square off at 300 yards, and after approaching to short range put two balls straight through its body. What more than this is a rifle expected to do? S. W. L.

Baltimore, Oct. 20.

Metalluc Pond.

The summer sun dropped behind the mountain, apparently received into the very depths of the forest, and left behind a fading wake of gold and crimson. Metalluc Pond, even with its carpet of lilypads and its muddy, slimy shores, never looked so wild and beautiful. The mountain tops to the east were brightly tinted by the last rays of the dying day, and the deep forests to the west looked black against the ruddy sky.

As we three pushed out from the mouth of the creek Metalluc Pond, in all its glory, burst upon our view. From far into the forest came the weird, solemn hoot of the barred owl, with now and then the chattering of the moosebirds among the spruces. Occasionally a solitary black duck, "darkly seen against the crimson sky," whistled down and joined his comrades, splashing and quacking at the lower end of the pond. Silently we watched and listened. The wildness and beauty of the Maine woods, especially at this secluded pond, seemed singularly impressive. We were gazing at and listening to nature in her wildest form, undisturbed and rarely visited by man.

Suddenly the guide perceived on the left hand shore two deer feeding on the lilypads and grasses. With the skill of an Indian our faithful guide paddled us silently toward the unconscious deer. As we approached, one proved to be a large buck with enormous antlers and the other a timid doe of a peculiar reddish color. Not until we were within 50 yards did the beautiful creatures with troubled aspect walk nervously up and down the shore and finally bound off into the dark, mossy forest.

Until far into the night we sat around the camp-fire, and gazing into its dreamy depths listened to the wild tales of the guide. The occasional hoot of the owl constantly reminded us that we were at Metalluc Pond, where once dwelt the old Indian chief whose name the pond still bears. After his tribe had scattered, as the legend goes, he lived alone with his wife and daughter by this lonely pond. Long before game laws and game wardens were ever thought of Metalluc roamed the forests, hunting and trapping at will. Many a noble moose, the "king of the forest," and graceful deer fell in its tracks before the famous hunter. It was here that Metalluc fought with and overcame a moose, but in the battle he lost his right eye. Some years after he was stalking in the woods not far from his hut, a twig chanced to snap in his left eye and put it out. By his wonderful knowledge of the region he managed to crawl to camp. Thus the mighty hunter spent his later days in total blindness.

As the first gray streaks of dawn appeared in the east we arose from our beds of fir boughs, and after a hearty breakfast and a few necessary preparations and a farewell look at old Metalluc, we penetrated the forests to the west of the pond. For ten miles we tramped, and with the aid of compass, logging roads and deer runways, we struck, soon after noon, the Lake road, which connects Andover with Lower Richardson Lake. About 2 o'clock we arrived at our log camp, a mile from the Arm of the Lake.

Some time after this memorable visit to Metalluc in the open season we again penetrated the forests; this time with rifles and equipments for deer hunting, and again, as before, we pushed out of the slimy creek at sunset and beheld again the majestic mountains tinted by the sinking autumn sun. The owl still hooted in the forest; the ducks still quacked at the lower end of the pond, and to make the scene complete, two deer were leisurely feeding in the water on the left-hand shore. This time we paddled on to the deer with a deadly purpose, and I took aim with the rifle, not with the field glass, and we paddled away with one of the noble creatures lying in the canoe.

My one ambition was realized! I had shot a deer! And what is more, it occurred at Metalluc Pond, the most ideal, the most fitting spot for such sport.

Several weeks have elapsed since those memorable visits to Metalluc Pond, but the memory of those deep primeval forests, the autumnal sunsets, the tinted mountain peaks, the sounds of bird and beast at twilight, the little hut of logs and bark, the cracking camp-fire, and finally the gentle deer on the margin of the pond—all these, together with the feeling within of freedom and happiness, will always abide with me.

J. S. Seabury.

The Essex County Protector.

In our issue of Oct. 28 we printed a communication from Mr. J. B. Burnham respecting the official record of District Game and Fish Protector Fletcher Beede, of Esseex county, in the Adirondacks; and in our comments on the statements therein made we said that Protector Beede was inefficient and deserved to be removed.

In reply to this we have received a communication from a correspondent, who tells us that he is assured that the criticisms upon Mr. Beede are not sustained by the facts, inasmuch as the protector is honestly and faithfully and successfully doing his duty. Our correspondent writes, after an interview with the protector:

"He doubts Burnham's information about the Sharpe place being correct, but says if Burnham will catch one-quarter of the men he thinks a protector with sand ought to catch in one day, and will do it in two months, he will donate him his year's salary. He says he has been there himself, and has had a man whom he has hired and paid out of his own pocket on the branch for nearly two weeks. Moreover, that Cogswell, a special State protector, has been at Dan Lehman's camp on Black Brook, not an hour's drive from the Sharpe place, and has been there since August, watching the neighborhood. Cogswell has now, and has had for some time, twenty-eight specials in the district, but they haven't convicted any one. Beede says Pond told him to be sure of his cases before acting, and he has lost only one case this year, and that a deer case, although in some he had to have a second trial, because of the jury's disagreeing.

"He has arrested and convicted seven men for illegal fishing, and has had several deer cases. One man, Kelly, being fined, paid $133.45 for a deer killed out of season; another, O'Neil, he arrested for same cause, but was beaten in by the jury. Fred Smith, of North Elba, he arrested, but the case has not come to trial yet; this also is a deer case. Last Tuesday he arrested Barney Fields for hounding; trial comes off to-morrow. He came from Mud Pond to-day from serving papers on H. B. Jones and party, who were hounding there. He lay out in the woods four nights before getting evidence against them all sufficiently strong to convict. I asked him about Sunday, the 8th, and he says he was at Boreas River, where he lay out three nights in the woods watching a party there before he was convinced that they were not using muzzled hounds, but were driving the deer with men. He claims he has lain out night after night this summer and fall, and has averaged three nights a week since June, driving from one suspected locality to another. He has a lot of cases that he is still working on, but in which his evidence is not strong enough to suit him to bring to trial. Pond told him some time since that he had had more cases and fewer defeats than any protector in the State, except one. This speaks pretty well, seems to me, for his vigilance.

"He bewailed the fact that he was getting to be the most cordially hated man in the county by the hunters and their friends; but try as he would he couldn't entirely stop hounding; nor could any one man cover the 1,800 square miles with eighteen towns, each town having deer and hunters in them, and stop illegal killing.

"He says he has done his best and checked it to a great extent, and that the rumors of hounds being used are greatly exaggerated. When asked about the deputy at Keene who wanted to hound for an outsider, as reported by Mr. Burnham, he says he has no deputy there, that he has hired and paid himself a man who runs a meat market there to assist him sometimes, but he is quite positive that that man not only wouldn't hound, but also that, until the past week, he hasn't been away from his business a day. Beede says he will take great pleasure the first chance he has in serving a subpœna on Mr. Burnham and find out under oath just what information he has, and he may get some cases out of it, although he doubts his having anything more than rumors and hearsay.

"After listening to Beede I am convinced that the reports about hounding are greatly exaggerated, and I know there is less dynamiting and illegal fishing and bird shooting and selling than for years."

Tricks.

Wet rubber boots are a hard thing to dry out unless you know how.

Suspend the boot upside down by a string stretched from two points, clothesline fashion, hanging the boot on it by another string about the foot and heel. Make a frame of stiff paper big enough to fill the leg and keep it open. Open the frame wide at the bottom, which will reach up well in the boot leg. Set a lamp under the boot and the hot air will go up into the boot and dry it as dry as a cork leg in about thirty minutes. Set two lamps if you want to. You will not burn the boot, and you cannot beat the plan. Pink Edge.

Quail by the Clothes Line.

A ham curing establishment in Trenton, N. J., issues as an advertisement a card showing 489 quail strung on a clothes-line, the result of ten days' shooting in North Carolina. The correspondent who sends us the placard says: "By this mail goes a picture of slaughter which might be used for educational purposes. Doesn't it seem appropriate that the donors are in the pork business?"

New Brunswick Notes.

On Monday last Billy Chestnut and Harry Atherton invaded the Upper Keswick hunting grounds in company with Rainsford Allen and the reformed Maine guide Ed Church, who went along to help consume the provisions. At early candle light Friday evening the burghers of this place were aroused by the rumbling of a ponderous farm wagon that trekked slowly up the front street and then outspanned in front of the drug store of Prof. Mack. Seated on a high pile of straw were the returning hunters, while the interior of the wagon was decorated by a huge bull moose and a medium-sized caribou. Both moose and caribou had been shot on the morning of that day.

Messrs. B. D. and D. H. Longenecker, of Brooklyn, arrived from the Cains River solitudes yesterday afternoon, where they had been hunting with Frank Bartlett. They brought out a moose and two caribou.

The question of the weight of a large black bear was approximately adjusted by the city hay scales this week. James Parks, of the Narrows, brought in the carcass of a bear that had formerly displayed a fondness for mutton. The dressed meat of the animal weighed 240 pounds.

William Crawford, of New York, went home the other day from a successful hunt on the Nor'-West. Mr. Crawford obtained a large moose. While in the woods he saw nine moose, fifteen caribou, three deer and a bear.

Mr. A. P. Allison, of Chicago, if he has the ordinary American fondness for records, ought to be well pleased. In one day's hunting in the northern part of this province he secured a bull moose, a bull caribou and a very large black bear.

The Bangor Commercial records that a party of sportsmen which arrived there on Saturday from Newfoundland brought twenty-three caribou heads and hides as trophies of a trip in that region.

Ed Church is strictly impartial on the subject of ammunition. Last week he lowered a moose with seven shots from a .45-90 rifle. When Billy Chestnut picked up the empty shells they were found to include a .45-70, .40-85, .40-82 (smokeless) and .40-65! Church claims that all these things are good for moose in his rifle.

It was a mistake on the part of your correspondent to say that having shot his complement of moose and caribou, Mr. P. N. Graham was "marking time" in Braithwaite's land. On the contrary, the guide took Mr. Graham up the North Pole Branch after bears and they gathered in a specimen of that kind of game measuring nearly 7 feet in length. Henry's next party, which goes in to-day, is composed of Dr. S. T. Davis and Mr. A. G. Kepler, of Lancaster, Pa. By addressing W. T. Chestnut, of this city, either Braithwaite or Church can be secured for a snow hunt in December.

Mr. A. H. Jackson and friend, of New York, recently came down the Nepisiguit with two caribou and three bears.

George Armstrong's patrons seem to be specially favored this season. Dr. C. B. Tiley, of New Haven, Conn., took out about the best moose head of the lot, the spread being 58 inches, blades 13 inches and points 26. Mr. Orren Scotten, of Detroit, also secured a 58-inch head under Armstrong's guidance, as well as a good specimen of caribou. Mr. W. E. Halsey, of Brooklyn, scored a 57-inch head. Other fine specimens were taken out by E. Childs and C. M. Camp, of New York.

Mr. E. L. Ellithrop, of Pittston, Pa., appears to be endowed with that mysterious quality known as hunter's luck. The first day he was at Adam Moore's camp he shot the biggest moose that has been taken on the Nictor this season.

Among successful moose and caribou hunters not heretofore referred to may be mentioned Prof. Chas. E. Wait, of Knoxville, Tenn.; C. J. McIlvain, Jr., of Philadelphia; F. W. Ball, Newark, N. J.; Dr. John Bryant, Boston; John Caswell, Prides Crossing, Mass.; A. W. Hooper, of Winchester R. A. Co., and his friend Dr. J. E. Stetson; Dr. Ward Brinton, New York; John Roberts, Bar Harbor; C. A. Eaton, Lawrence, Mass.; D. S. Burley, Newburyport, Mass.; Dr. H. M. Neale, Upper Lehigh, Pa.; Benj. Curtis, New York; R. L. Pierrepont, Brooklyn; W. G. Peckham, New York; Dr. J. Madison Taylor, Philadelphia; C. M. Hapgood, Easton, Pa.; John E. Toulinin, Boston; D. E. Skinner, Detroit, Mich.

Mr. S. L. Crosby writes me that he has received from J. G. Prouty, Spencer, Mass., two very fine heads of caribou shot in Newfoundland, and that up to date he has received about fifty caribou heads from that island. Mr. Crosby adds: "Moose heads are coming in rapidly from New Brunswick. We are also getting a good many from Nova Scotia and Quebec, but no extra fine ones. Maine, too, is showing up nobly. More moose have been killed than for the same period last season, and some of the heads are really fine."

Mr. A. Lichtenein, of New York, has returned from a four days' trip in the Keswick country, with Rainsford Allen as guide. Despite the liquid nature of the weather, a large caribou was secured by Mr. Lichtenein.

Information from apparently reliable authority has been received that a moose with a horn spread of 72 inches has been killed by Messrs. Holman and Hiram Good, two noted hunters of Maple Ridge, near Milville. As a rule these mammoth moose exhibit a shrinking modesty in the presence of the tapeline. Further particulars are awaited.

Henry Braithwaite tells a good caribou story with regard to his recent trip: "I went over to a small clump of spruces in the middle of Squaw Barren to call caribou. At the first squawk I saw a big pair of horns walk out of the bushes about 300 yards away. It was a bull caribou and he came straight for us, followed by a cow. Mr. Graham wanted to shoot, but I told him to wait, there was no hurry. When the caribou got up about 70 yards away Mr. Graham opened the ball. He didn't hit the caribou just right, so I threw down my horn, jerked the case off my rifle and took a hand in. The caribou sheered off and we had a running fight of it till he reached the woods. The ground was all tracked up and I was afraid of losing him, so followed him up real sharp and at last found him lying dead in the bushes. I then went back to the clump of spruces where I had left the horn and rifle cover, and I'll be hanged if there wasn't another big bull caribou in possessioin of the premises. He was smelling over the horn trying to figure out which end to blow to bring back the cow we had scared away!"

Willie and Mosey Chase, aged fifteen and twelve years respectively, were out partridge shooting on the bush end of their father's farm in the parish of Sheffield. A bull moose appeared and scared Mosey up a tree. Willie stood his ground, rammed down the family bullet on top of the load of shot and brought the moose to the ground by breaking his shoulder. With a second shot he killed the moose entirely. Then Mosey came down the tree and ran for a horse, wherewith the carcass was dragged home in triumph. Some folks talked of prosecuting Willie for shooting a moose without a license, but these were soon snuffed out. It was agreed that when a moose had a little boy up a tree his big brother had a right to shoot.

F. H. Risteen.

Fredericton, Nov. 1.

Long Range Shooting with the Shotgun.

The hitting of an object at long ranges has ever appealed more forcibly to the imagination than has shooting at closer quarters. From time immemorial an indescribable charm has attached to the practice, and whether with sling, long bow, cannon, rifled firearm or shotgun there has through all ages existed a desire to send a missile to the furthest possible limit. But this has not been a mere aimless wish, for men have ever striven to hit the mark in such long range practice. Toward the successful accomplishment of the endeavor science has lent invaluable aid; arms of all kinds, great and small, have been so perfected that the shooting at distancees unthought of in former days has now been rendered remarkably precise. Such remark, however, is applicable only to arms throwing a single projectile, for in the matter of range the shotgun has for long remained practically at a standstill. This appears all the more singular if we compare such inaction with the progress made in the mechanical construction of the weapon. So far as mechanism is concerned, the history of the shotgun during the past few years reveals one continued process of evolution. The breechloader, hammerless action (which term by the way is somewhat of a misnomer), cartridge ejecting mechanism and single triggers are striking testimonies to the inventive genius of our gun makers in the last half of the nineteenth century. But this is not all; remarkable strides have been made in the matter of the propulsive agent as well as in all the other components of the charge. The ignition and combustion of the powder is now perhaps more regularly effected and controlled than ever before, while the method of wadding the charge is so exact that far less variation in driving power is exhibited now than was the case when old hats, gloves and newspapers were commonly requisitioned as gun wadding.

Whenever the question of increasing the range of the shotgun is mooted we are certain to be reminded that limitations exist in the matter of driving a charge of loose shot, the conditions governing its flight being so totally different from those connected with the flight of a single projectile. Thus we find that in the march of progress not alone has the rifling of firearms been improved, but the form of the bullet has been considerably altered so that it may lend itself more and more to long range shooting and accuracy of flight. Accuracy of flight and lowness of trajectory are inseparably connected, and thus, *pari passu*, with each increase in the range of a rifle we see a corresponding flattening of the trajectory.

The method of boring shotgun barrels known as choking is certainly a great advance, and when just now it was remarked that the shotgun had remained practically at a standstill in the matter of range, due cognizance was taken of the choke. Indisputably, the choke is an advance on the cylinder, but with proper accessories, shot concentrators in one form or another, our forefathers accomplished with their cylinders just about as much as we with our chokes can do now. Moreover, it is certain that the choking of guns in some form or other was practiced early in the present century. All praise, notwithstanding, to the enterprise of certain of our gun makers, notably Meesrs. Greener and Pape, for re-introducing and perfecting the choke-bore. I, in common with many wildfowlers, owe much to their enterprise in this respect. Still, I hold the opinion that there is yet room for improvement in the boring of shotguns designed for long range shooting. By reason of the severe treatment received in passing the choke, a considerable percentage of the shot pellets so lose shape as to be robbed of at least half their effectiveness. The length of range of small shot increases or falls in exact proportion to the time it can be kept together on leaving the muzzle of the gun. The longer the charge travels as a compact body, so much the longer will the velocity of individual pellets be maintained when disintegration of the mass takes place. At best, however, the extreme choke effects its object in clumsy fashion, for by crushing so many of the pellets out of shape the general efficiency of the charge is appreciably lowered. Ideal shooting would be that in which every shot pellet placed in a cartridge case could be recorded within a certain clearly defined space on a target. The alterations of shape or defacement of the pellets from friction or other cause would be so slight that all would travel at practically the same velocity. Consequently, stringing of the shot would be reduced to the minimum and more satisfactory shooting result at long ranges. It may be urged that, as duck guns will kill fowl at, say, 120 yards, this surely might be considered a sufficient distance at which to shoot. But, in admitting that duck guns will stop birds at that or even greater ranges, I must say it is only occasionally they do so, even when aimed at large gatherings of fowl, and assuredly there is room for increasing their effectiveness and reliability at distances much shorter than the above. If this cannot be secured by barrel boring pure and simple, we must then look to its accomplishment by means of some accessory.

In some respects the wire shot cartridge and similar devices are much superior to the choke, inasmuch as they minimize that friction and pressure exerted on the shot which so reduces its effectiveness. In fairness to the choke it must, however, be remarked that to some extent friction and pressure is observable in the cylinder; it, indeed, would appear to be inseparable from the discharge of shot in loose form. The wire cartridge undoubtedly tends to preserve the rotundity of the pellets, for, in addition to the protection afforded by the wire casing, the pellets are largely relieved from indentation, one by another, by the packing of fine dust, which fills every interstice of the cartridge. This same remark applies also to the packing of solid grease which fills the tallow cartridges described in the "Instructions to Young Sportsmen," by Col. Hawker.

Apart from the foregoing considerations, there can, I think, be no reason for doubting that if gunners more earnestly considered the question of the flight of shot, long range shooting would be more often successful. In taking a long shot, how many, for instance, give a thought to the question of trajectory? Aim well ahead they may, but the necessity for aiming high is often enough forgotten altogether.—Henry Sharp in London Field.

In Rhode Island.

Providence, R. I., Oct. 28.—*Editor Forest and Stream:* The poultry raisers in the south county are experiencing considerable trouble from the depredations of foxes. One raiser of turkeys has but nine left out of a flock of seventy-six young ones. It was only a very few years ago that a limited number of these canny animals were to be found in the wooded places of Rhode Island, but now they are exceedingly numerous and cause much perplexity to farmers. The animals came over first from Massachusetts, where numbers of them had been let loose by sportsmen in order to propagate the species and thus make good hunting. It was not known that the increase in numbers would be so astounding, and that the boundaries of the Old Bay State could not inclose them. Of course, the bushy-tailed, sharp-nosed little animals, that are traditionally cunning and keen, knew a good thing when they saw it, and thus left Massachusetts to come over into the promised land of all good things, Rhode Island, so that now "the woods are full of them."

Although it is somewhat early in the season for wild ducks to come near the shore, there is considerable fun among the large numbers to be found in Mount Hope Bay and in the upper part of Narragansett Bay.

Dr. Nelson R. Hall and Chauncey Driscoll, of Warren, returned from a three weeks' hunting tour in the Maine woods Friday, bringing with them two deer and the heads of two moose. The moose shot by Mr. Driscoll is one of the largest killed in Maine this year, the antlers measuring 44in. across, with webs of the horns 8in. wide and seven and eight tips respectively. The party employed the veteran guide, Maurice York, and hunted in the vicinity of Little Millinocket Lake.

The big moose was tracked all day, and after the hunt was practically abandoned the guide gave the moose call, which brought the big fellow from a neighboring thicket but a hundred feet distant. Driscoll lodged a bullet in the animal's spine, which laid him low. Driscoll saw sixteen moose during the trip, and Dr. Hall but one. There were 111 deer sighted by the party during the trip, four of which were killed.

The first cases brought to prosecution by Game Commissioners under the new law were those on which Albert Buffington and Albert H. Smith were arraigned last Thursday in the District Court at Harrisville, before Judge Remington, in which they were charged with snaring. They were arrested in Gloucester. Both pleaded guilty and fines of $20 and costs were imposed.

The Commissioners are working on a new line this season. Heretofore offenders have been pursued and prosecuted by constables deputized for the purpose and known as such. This year the Commissioners have adopted a policy of having the work done by deputies who are unknown, and having everybody interested keep as quiet as possible about what is being done. The deputies have been following illegal shooters so closely that there has been scarcely any shooting in the closed period this year. The snaring has been about as it has been in preceding years.

The Commissioners meet with an obstacle to successful work in dealing with snaring because of the law, which is now peculiar to Rhode Island, that allows a man to set snares on his own land. Such laws have now been abolished in every other State, Connecticut being the last to discard it. The Deputy Commissioners engaged in obtaining evidence are likely to make a number of other arrests within a few days. W. H. M.

The Old Farmer's Almanac is Abreast of the Times.

Boston, Nov. 3.—*Editor Forest and Stream:* I send you by this mail a copy of "The Old Farmer's Almanac" for 1900, with a marked reference to an article on game, and also inclose herewith a proof coy of the same:

INCREASE OF DEER IN NEW ENGLAND.

The increase of deer in the New England States in recent years has presented a point of great interest to persons fond of forest life. In Maine the increase has been remarkable, and within that State there is now an immensely greater number of deer than there was say thirty years ago.

The chief cause of this increase is undoubtedly the enforcement of proper laws regulating hunting. Having been for some years protected from indiscriminate slaughter, deer have multiplied to an extent beyond the most sanguine expectations. By the laws referred to it is sought to protect them from being hunted after the snow has become too deep and heavy for their escape, and to continue this protection through the breeding season and until the fawns are grown large enough to take care of themselves. The open seasons vary somewhat in the several New England States and adjacent British Provinces, which have open seasons, but generally they may all the said to be included within the period from Sept. 1 to Jan. 1. Even in the open season one person may kill but a very limited number. These laws are not only on the statute books; they are enforced and meet public approval. The enforcement of the various game laws, supported by a hearty public sentiment, will early result in there being still greater numbers of deer and of the many other kinds of game, for the support of which in luxuriant abundance the beautiful country of New England is so well adapted.

It seems to me that it would be worth while for you to reprint it with credit to the Almanac, as showing that the farmers now appreciate the work we are all engaged in. James Russell Reed.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

CHICAGO AND THE WEST

Where the Snipe Were.

HICAGO, Ill., Oct. 28.—I have for some time been men- ng the fact that this is a very poor fall for shooting nd Chicago, the water being very low all over the natural snipe country in this vicinity. I had no rior purpose in this, and was not trying to steer any ers away from Chicago, but was sincere in my ques- as to where the snipe were. This week, as it hap- , however, and by reason of the good old FOREST AND AM luck, I suppose, I rather unexpectedly found the ver to the above question myself, and made a bag nipe which, though not extraordinary of itself, is the est I have heard of being made here for the past few ks. This was on the Grand Calumet River, on the ting grounds at the Calumet Heights Club, about y miles from Chicago.

his lucky little shoot came about, like most things, in ther unexpected manner. To begin with, I was taking old friend, Mr. Hirth, down to the club to give him ok at the premises, and we fell in with a very nice pany of the members, among others Messrs. Marshall, de, Head, Lamphere, Norcum, Harris, Knowles, tle, Greely, Gillespie, Haskell, Carlisle, Dr. Harlan, as well as the wives of several of the members. We been having a beautiful fall in Chicago up to this , and the weather was delightful, so that everything he club appeared at its best. We all took the 4:20 n on the B. & O. from Brookdale, Chicago, this g the best way to get to the club in the evening. We hed the club station just before dark, and Mr. Hirth the Other who accompanied our party expressed r curiosity and delight at finding so wild a region lose to Chicago, this being the "Chicago Wilderness" which I at one time wrote at some length in the FOREST STREAM. It is indeed a weird looking country to be lose to civilization, and in less than five minutes' walk n the station one would think he was in the middle of ountain region and not within a few rifle shots of one he biggest cities in the West.

fter dinner was over the shooting members met and owed the club custom of drawing for blinds, this being fairest way to allot the shooters where the territory omewhat limited and the better points somewhat well wn. First choice was drawn by Messrs. Wilde and lan, who chose a blind known as Sardine Point, where Wilde had made a very good bag of ducks the day re. The "Second Bend" blind, where Mr. Gillespie seen a good many mallards, was the second choice, was taken by Messrs. Turtle and Lamphere. I drew third choice, and took what was known as Lloyd's nt, Mr. Gillespie saying he would join me at this t later in the morning. Others scattered up and down river for three or four miles, and bets were freely red that a couple of dozen of ducks would be brought the club house next morning. This club does not ally show very large bags, but one can nearly always a little sport of some sort or another, as you shall rtly see.

Ve were to hunt ducks, and duck shooting if it be e after the orthodox fashion, as every one knows, ans that one must get up at an unholy hour in the rning. I have always firmly held to the belief that any n who would get up at 3 or 4 o'clock in the morning go duck shooting was largely devoid of what we call d horse sense. Yet in spite of this firm belief on my t, I usually find myself among those who start out on gray dawn on the shivery business of sitting in a d and waiting for the morning flight. It was so on occasion. We all went to bed, at all sorts of hours, my last mental decision was that I pitied the man o was foolish enough to go duck shooting before sun None the less, at about 3 o'clock in the morning, while rything was dark and beastly cold, I turned over in as though awakened by an alarm clock, and on listen- , heard certain whisperings and shufflings of feet which icated that some of the other boys were turning out. is was too much, and forgetting all my resolves to be sible, I rolled out and joined the other imbeciles for -o'clock breakfast. Then came a mile walk by star- nt across the sand hills, in a nipping morning air.

t was not yet dawn when I reached my stand, and be- n to look around to arrange my blind and make my- f comfortable. This point is at times a very good one, ng situated at an elbow of the river which sometimes ches a part of the flight from the Tolleston Club rshes when the shooters of that club set the birds ng. The first flock I saw came from over toward lleston, and I could see them passing wide, and out of shot, looking dim and ghostly in the morning twilight. arried down some pieces of bark and made myself a t in the rushes, not building any blind, and then began patient wait for the birds to come in. This morning ght was like most morning flights. Nothing more came m Tolleston way. Presently from up the river I saw ee little teal coming, which, however, swung far to t and gave me no chance. Then a solitary mallard me from the same direction, and dropped into open ter about 200yds. to my left. Nothing happened after s, and presently the great red disk of the rising sun peared across the marsh, and I knew that I ought to seeing some birds if I was to do so at all. An hour ssed, and then another, but still I was waiting, and still gun barrels were as clean as when I bought them. ie sun shone directly on the water in front of me and ade a very blinding reflection, and I lay down to escape s. Perhaps I had been in this position for five minutes en I heard a soft whisper of wings, I could not tell st where. Then I heard a startled quack as I sat up, d as I got the sun out of my eyes, saw a nice pair of allards just out of range. They had come over the bluff rectly behind me, and thus I had lost the only shot ich offered at my blind during the morning. I stayed ere until half-past nine in the morning, and then passed set of resolutions confirming my original position, that y man who would get up to go duck shooting in the rning was a crass idiot, and that so long as I lived I ver would again, etc. (But I will!)

It being rather cool, I thought I would go back to the ib house and eat another breakfast just for luck, but as I wandered over in that direction I met one of the members, Mr. Macmichael, who told me that he had seen a few jacksnipe on the marsh, and he thought we might kill three or four if we went down in that direction. We sat down to talk it over, and as we did so I looked back and saw a flock of about fifty mallards swinging round and round over the very point which I had just left. Had I stayed in my blind five minutes longer I would surely have got a couple of mallards, for they came directly across the blind. But such is luck, and when I heard of the jacksnipe I did not begrudge the mallards. Mr. Macmichael and I went down to the territory he had located, and found some very soft wading in a country too boggy to cross. We killed three or four snipe here, but had bad luck at getting them, and as the morning had now grown warmer, we compromised matters by sitting down on the railroad embankment and thinking it over. Just at this moment we were met by old Blocki, a quaint character who keeps the boats and dogs for the club members, and whose little domicile lies close under the bluffs on the edge of the crooked Calumet.

Blocki is a little bit old, and a little bit broken of speech, and a little deaf, but he has the hunting instinct of all these marsh people. "Oh, you shentlemens vas hunting snipe?" said Blocki. "Vell, chust across yonder I see more as a dozen snipes dis mornin'."

He pointed across the little pond formed by the dam at the railway bridge, and showed a partially submerged bit of marsh which was accessible only by boat. Mr. Macmichael was nearly beaten out by his hard morning's work, and he urged me to go and exploit this with Blocki. I had about a dozen duck shells in my pocket, so I stepped into the boat and Blocki carried me over. "Vell, dere vas two, alretty," Blocki said, as we drew near the island on the other side of the pond, and as he pointed I could indeed see two jacksnipe feeding along on the mud bank. We went in close, and as I stood up six or eight snipe sprang and began to twist around in the air, and I had killed one and missed two in about two seconds.

This was the answer to the question as to where the snipe were. I had not gone 50yds. from the boat before I found that there was a fine body of birds in on this measly, unsuspected little corner of marsh. The shooting ground was hardly 300yds. wide and a quarter of a mile long, a part of it being too deep and soft to wade, but I believe there were two or three hundred birds in that little corner. The wind came in such a direction that one could not walk with the wind, on account of the deepness of the marsh. I had to hunt across the wind, and as the birds were lean and wild and just in from the North, the long side shots which I got were not the easiest thing in the world for No. 6 shot, which was the best I had in the shop at that time. I only picked up six jacks, and lost a couple or more, when I discovered that I was out of shells, so I crossed the pond again with Blocki, and learned that Mr. Macmichael had gone back to the club house, and that my shooting coat had gone back with him in the wagon. This meant a two-mile walk, and I begrudged the time under the circumstances, but there was nothing else for it, so I hustled up to the club house and got some more ammunition. I told Mr. Hirth to bring himself and the Other with a good lunch down to the Blocki boat house at about 1 o'clock, and then I pulled my freight at double-quick across the sand hills to get back into my warm corner. Blocki was gone, so I got a boat and went over alone. I had plenty of ammunition now, albeit only about half a dozen fine shot shells. Not another soul could be seen far or near. I had found out where the snipe were, and it only remained to open up negotiations with them.

I made two trips up and down the mud beach and saw enough to convince me that if any one had been there with the proper shells and the wish to see how many birds he could kill, he could probably have bagged sixty to one hundred snipe there that day, had he wanted to work that hard. It was hard walking and hard shooting, and about an hour and a half more of it got me all the birds I thought I wanted. I usually stop when I kill twenty-five birds of any one kind, law or no law, and I intended to stop when I had killed twenty-five of these jacks on this day, but I lost several birds on marsh where I could not get them, and lost my count, so when I rounded myself up at the boat I found that I had twenty-nine birds. I quit then and there, and started back toward the boat house.

For the last quarter of an hour of this shooting I was within shooting distance of Dick Turtle and his friend Lamphere, who were just coming home from their duck hunt, but neither of whom had any rubber boots along, and so could not join me, although it must have been very trying to stand in the boat and watch another follow knocking down snipe almost within gunshot of them. I offered them my rubber boots, but the latter were in pretty bad shape, for I had been in up to my waist, and my hip boots were full of mud and water. It was a hardish snipe hunt, but that was where the snipe were—more snipe, I think, than there have been on any marsh around Chicago this fall. As bearing out this assertion, I may state that Mr. Turtle went down on the same marsh that afternoon and killed twenty-five birds, and on the second day after that he and Mr. Lamphere went down again and shot there all day. This time, however, the birds were beginning to move out, and they only got forty between them in the whole day's shooting. Since then a cold rain has set in, and I presume the birds have all left that part of the country. It was just one of those little bits of jacksnipe luck which come now and then, often enough to keep a fellow hoping. As I have said, so far as I know the two days' bags made on this marsh are the best that have been made by any Chicago shooters near town this fall.

From Marsh to Hills.

CHICAGO, Ill., Nov. 3.—The first snow of the season fell here yesterday—not very much of a snow; indeed only a few weary and disconnected flakes which drifted down for a few hours in a half-hearted way, as though not trying very hard to make much of an impression on the course of human events. Still it was our first snow, and has the usual signficance of the first snow in sportsmandom. We are now to move from the marshes to the hills. The duck is dead, live the grouse.

I presume that the first of the week saw pretty much the end of the snipe season, and the best of it came just at the close, after the unexpected fashion of this erratic bird. I have already spoken of a brief flight which came in on the marshes just south of Chicago, and am now inclined to think that quite a body of birds were scattered over whatever wet marsh there was below and to the west of town. I heard of some birds killed out near Wheaton, and on Oct. 28 there was a nice flight in around Blue Island. I am advised by Mr. Gustav Eberwein, of that suburb, that he knew of bags made as high as 34 and 42 last week near Blue Island, and some of the local shooters also got a mallard or so now and then while after jacks, among these Mr. Eberwein himself. By this time, however, I think the cold rain, followed by snow this week, must have sent about the last of the snipe on their twistful way to the southward. Of duck shooting we have had nothing worthy of the name hereabouts this fall

Deer Country.

Indications all point to a heavy traffic this fall bound for the deer country of upper Wisconsin, Michigan and Minnesota. Our deer territory is now all sewed up in the non-resident license bag; not that the sanctity of the bag will prevent its being ripped this year as last, in divers and sundry places, by those who think a license law is wrong, or at best ought to apply to the other fellows and not to them. There was probably never a law on the books of any State which was violated more generously than the Wisconsin deer law last year and the year before that. Yet I believe that all this talk about the game laws, even the abuse of them, has given the subject a much needed advertising, so that lawbreakers need to be more secret than formerly. The dates of the season are better known and better observed than ever before, and perhaps even the local hunters who have been accustomed to kill meat when they wanted it will be found a trifle more reticent than before and not quite so frequent with their secret, dark and midnight interviews. There will be deer enough to give sport to a great many this fall. Parties will not bring back so very many deer as was once the case, perhaps, but everybody who goes will be pleased except those who have been to the same place before and made bigger killings. Everything is relative, and the man who knows no better than what he has wants no better. I can remember that when I was a boy I lived in a country where it was as much of a distinction to kill a wild goose as it was to be elected to the State Senate, and where I thought I was really a great man when I killed my first goose. Yet since then I have killed a score or so of geese in one morning and experienced not half the pleasure in the feat afforded by the solitary gander of a scarcer day. It would appear that this must be the history of our Western game; we will value it when it is nearly gone, and not before. It surely rises steadily in popular appreciation every year.

In regard to the favorite deer regions, they are this year, as last, such points as Philips, Rhinelander, Fifield, Iron Mountain, and others in that latitude, and all very readily reached from this city. I got on to a very nice bit of deer country last spring while out trout fishing. Take the Milwaukee road to Merrill, or the Northwestern to Parrish, Wis., and then take wagon to Dudley P. O., about eighteen miles from Merrill; thence take the woods road up the Prairie River, some six or eight miles above Dudley's place, and turn out to the left among the hard wood hills which rise up boldly at that point. In there you will find some grand country for still hunting, and it is not quite so much hunted as some of the better known localities. I stumbled upon this while hunting trailing arbutus, and saw so much sign that I made inquiry. Farmers near there told me they had no trouble in getting all the deer they wanted there each fall. I had the runways all located along a big cranberry marsh, in the hope that I might get up there this fall myself, but I am not sure that I care enough for a deer to pay $25 for a license. I know very well I could get a deer in there without trouble, always provided some enthusiastic deer hunter didn't get me first. There has this fall, as for the last few years, been great danger in going deer hunting in Wisconsin or Michigan.

During the Congressional trip into Minnesota I became convinced that there is a grand game region in about Walker and Cass Lake, especially the latter point. It is Indian country, and I presume is proof to the public except under permit from the agent. Even with such permit there might to some timid souls seem something of a spice of danger in going out into the woods there, where the Indians last year killed several soldiers and have never since then been absolutely brought to book for it. These Chippewas and Pillagers are none too friendly just now to the whites, and of course do not understand what all this sudden interest in their country means. In many ways they have been smoothed up the wrong way the last year or so, and I presume may feel a trifle ugly. There is plenty of room up in there for a fellow to lie undiscovered for a few years if anything did happen to him. Not that this should be seriously considered a bar to a trip there if all else were in line. I should dearly love to get into that Chippewa reservation about twenty miles from Cass Lake settlements, and have a moose hunt this fall. That is a moose country not yet much advertised except in a general way, though I presume it a safe wager that one could get his moose there if allowed a decent preliminary tour by his guide to locate the game before the law opened. The Minnesota moose season is so very short that it works its own destruction. Of course, it gives no chance for what I have always thought would be the best and most sportsmanlike way to kill a moose—to start him and follow him on foot, camping in the snow on his trail till you get him. This is the Indian fashion, and I should like to have a go at that some day in the Cass Lake country, though it may be a long time before it snows enough the first week in November up there to make this sort of a hunt possible. If the moose law were observed by whites and Indians both as it now stands, the moose would have a good chance to live forever, for the brief season comes, of course, too late to find the moose along the streams in the water and too soon to track them in the snow. What one's chance is to get a moose in a week of still hunting over dry woods, one may easily determine for himself by mixing up numbers in a hat, or trying to draw the capital prize in a lottery. Of course he may get his shot, but then he may not, and the may not is the more likely.

The South.

Within the next thirty days some of our shooters will be making plans to go South for trips, and as times are very good now in this part of the country since the revival of business interests we may look for more than the usual rush to Southern shooting grounds. The turkey country of Missouri is a tempting thing this fall, and the ducks of Arkansas are very fair to look upon. I infer that in the neighborhood of Little Rock the duck shooting has been very fair this fall, as witness the following notes from my friend Joe Irwin, of that city, who is still able to be about with his little Smith gun. If he and Mr. McMurchy do get together down there for one of their seances with the mallards, the only thing that will save the mallards is a cold wave to send them out further to the South. Mr. Irwin describes the country something like that where I once shot with him—an old cypress swamp in the middle of a strip of woods. He says:

"While the weather has been very warm down here so far this fall, yet the mallards are here in goodly numbers. On Friday last with a friend I drove ten miles up the river to a little lake in the woods, where we arrived about 8 A. M. My friend put on his wading pants and went to the lower end, while I took the boat and two dozen Acme decoys and my Chesapeake dog and pushed across into a pocket in the bear brass, where I put out my decoys. With gun and caller I got into a good blind. My friend soon had a flock up and a few calls headed them for the decoys, and then the sport began. Every few minutes a flock would come over the trees and in gunshot, and some fifteen or twenty mallards lay in my boat before 11 o'clock. My Chesapeake did some of the most difficult retrieving I have ever seen done. This bear grass has a saw edge that cuts like a knife above the water, but he retrieved these ducks from that mass of reeds and rushes without a scratch apparently. My friend was meanwhile pounding away in the lower end. After a time the ducks gave my blind the go-by. Although I tried my most persuasive notes on them with the caller, they would settle half way between us; but by 4 P. M. we had a fine bag and hitched up and drove home to supper that evening.

"The bass fishing with live bait and spoon is very fine just now. Two members took thirty yesterday at the Old River Club, twelve miles out, and a number of fine strings were taken at Cache River Bridge, forty-five miles east, last week.

"I am expecting Harvey McMurchy, of the Hunter Arms Co., down here soon, and we will have a great time if present conditions continue."

If any Chicago shooters have a fancy for a Florida trip this winter they might with profit look up the proposition which comes from Mr. C. B. Davids, of Winter Park, Fla. Mr. Davids wants to get up a party to be guided by himself and brother, starting out from either Tampa or St. Petersburg and working north through the best game and fish country. He figures on deer, alligators, quail and oysters—a very decent layout of game, one would say—and is confident that the party could have a splendid time. He wants to enlist enough capital to build the needful boat—about $150—and wishes to charge but a couple of dollars a day for himself as guide, dogs included for deer or birds. I have no doubt this would give a party of winter tourists a very fine outing, and those purposing a Florida visit this winter might very well write Mr. Davids.

Illinois Test Case.

There was some talk a while ago about the testing of the non-resident clause of the Illinois game law, and as was earlier mentioned in these columns a fund was raised for the purpose of making an arrest and pushing the case in the courts. This arrest, as also mentioned, was made in Henderson county, and the defendant, a non-resident by the name of Eberle, was sent to jail to see how he liked the martyr business. Habeas corpus proceedings were inaugurated and change of venue taken. The case comes up for trial here in Chicago, before Judge Kohlsaat, on Nov. 6. The legal battle will be carried to the upper courts, and we shall at last see what we shall see.

War Along the Des Plaines.

There is a merry little war just now in progress along the Des Plaines River Valley, below Chicago, where the drainage ditch crosses Will county. This county holds some pretty fair shooting ground, and this has been eagerly taken up, chiefly by two rival shooting clubs—the Lockport Gun Club and the Will County Fish and Game Protective Association. The former is made up mostly of townsfolk and the latter of farmers, the admission fee to the latter body being but nominal. The race for shooting territory between these two organizations has resulted in the leasing of pretty much all the farming country thereabout, sometimes one body getting a farm under its lease, sometimes the other, so that often the shooting grounds are not consecutive, but intermingled, and consequently difficult to keep in mind. It seems that the two clubs differ as to the shooting rights on the farm of one Williams, and the matter has gone so far that each club has hired wardens who patrol the grounds and glare at each other when their employers are around. The drainage board of the big ditch has something to say also about the disposition of some good shooting ground along its right of way, and both clubs are trying all their blandishments to get the board into line with promises to lease its marsh regions to the good and glory of the shooting club interests. Such is one of the forms of the preserve idea in good old Illinois, long the home of about as stubborn free shooting propaganda as could be scared up of a summer day. It would appear that the non-resident license idea and the preserve idea have hit us to stay. It has taken a town meeting to satisfy the Lockport boys about their position in this question, and I imagine a great deal of local bitterness will ensue for a time.

Duck Island Club.

Duck-Island Club, whose preserves are near the Illinois River, south of Peoria, continues to show about as good a record as any of our ducking clubs, some very decent bags having been made there this fall. It is now about mallard time down in that neck of woods, and Uuncle Abner Price has just packed his old gun and started for the club marshes. He will bring back ducks if anybody does.

Quail.

The vicinity of Bloomington, Ill., is one of the best quail districts of this State, and was at one time about as good chicken country as any of this part of the country. A great many quail are bagged each fall at and near this town, and it is a point well known to Chicago shooters. Mr. W. P. Mussey left for Bloomington last Wednesday for a quail shoot of several days, and has not yet returned. He should have good success.

Dr. Morris, of Dixon, Ill., has just returned from a quail hunt of a week and reports very good luck. He shot at a point about forty miles north of Jackson, and averaged forty birds a day during the hunt. I tip Alma, Mich., as a good point, also.

Deer.

As I write I just receive word from a friend in Wausau, Wis., that a great many deer are being killed around that point. One deer driver put four deer into water for his watchers, but not one of them was able to kill his meat. Thinking of the dog clause in the law, perhaps.

Low Trajectory.

Mr. D. H. Armstrong, of Grand Rapids, Mich., passed through Chicago this week at very high velocity and making a very low trajectory. He belongs to the National Projectile Works, of Grand Rapids, and I presume that is why he was going through so fast that no one got to see him very well.

Mallards.

Fox Lake, Wis., seems to have had a few mallards in during the last week, and I am advised that a local hunter, Van Meigs, was lucky enough to kill eighteen of these handsome birds one day, besides a couple of smaller ducks. He apparently got a good shot into the brown on his first flock, for it is stated that he killed seven as they rose and one with his second barrel. I used to kill them "as they rose" that way myself, sometimees, when I was younger, and I always tried to catch them on the rise just before they got off the water. Anyhow, he got the mallards, and ducks are ducks these days.

At Water Valley, on the Kankakee River, Dr. Hinkins, of Chicago, one day this week killed five mallards and a teal or so, which likewise is considered a good bag in these days.

Successful Photographer.

Mr. George Shiras, 3d, of Pittsburg, Pa., passed through Chicago this week on his way to Wisconsin, deer hunting. Mr. Shiras is the author of some of the finest big-game pictures ever made. He works by night and with flash light, saying that a daylight picture shows not half so shapely as a flashlight at night. Mr. Shiras has heretofore photographed mostly deer, but he now wants to make some pictures of ducks on their feeding ground at night, thinking that this would be a unique and interesting subject. He, however, does not know just where to go to find the ducks. I have no doubt that he will eventually get them and succeed in his purpose. Few gentlemen have done more with the camera in sport than he.

E. HOUGH.

180 CAXTON BUILDING, Chicago, Ill.

Maine Big Game Season.

BOSTON, Nov. 5.—Newspaper men are sometimes fortunate as big-game hunters. Mr. W. C. Harding, foreman of the Boston Herald composing room, is one of that class. He is just out of the Maine woods, with all the game the law allows—a bull moose weighing 620 pounds and two buck deer. Going into the woods from Patten, Aroostook county, he struck Sawtelle Brook, Sabois Farm. Here he had the good luck to see a big cow moose feeding on the marshy borders of the stream when he had a well-loaded camera in hand. He says that he was more excited than if he had seen a moose that he intended to shoot. He jumped out of the canoe into the soft mud and came near going under, camera and all. He managed to wallow, however, till he got near enough to her ladyship for a couple of good snap shots. Just then a big bull appeared, and Mr. Harding got a couple of good snap shots at him. Then he signaled to his guide to bring his rifle. All the time neither of the moose seemed to be alarmed. He thinks that he was so covered with mud they did not see him. Rifle in hand the hunter had time for careful aim, giving the bull a bullet from which he was soon down. Mr. Harding shipped this moose home to Boston, being the first hunter in that section to take out the special license for shipping game out of Maine, provided for last winter. The films containing the exposures on the moose were not developed at this writing, but Mr. Harding feels confident of some good, live moose pictures. He shot his moose in the same section last year.

Mr. George. H. McIntosh, of Boston, has killed a fine moose on the East Branch of the Penobscot. The day before Mr. W. J. Marsh killed a mate to it, the heads being especially fine and much alike. Mr. W. C. Wigg has also taken a big moose at Roach Pond. Mr. I. H. Young, of Quincy Market, has just returned from a hunting trip on the Machias River, Me. He secured a buck deer that dressed 210 pounds and a doe that dressed 176 pounds. These deer he brought home to Allston, Mass. He thinks the buck the largest brought out of Maine this year, weighing about 300 pounds as it ran.

BOSTON, Nov. 6.—That there has been a rapid increase in cow moose is testified to by about every hunter who goes into the moose regions this fall. They all complain that they see many cows, within reasonable shooting distance, but few bulls. This is true of New Brunswick as well as Maine, though those who write to draw hunters may not care to have the statement published. Mr. Geo. H. Lanphier, who has carried the FOREST AND STREAM to Boston readers for a number of years, has returned from his annual moose hunt. He saw seven cows, but not a bull; hence he returned empty handed. He says some of the cows were monsters. They allowed him to approach pretty near to them without becoming alarmed.

Now it is stated that the average size of the moose shot in Maine this season is 800 to 900 pounds. This is hardly true, for not a moose has yet been in the Boston markets this fall that actually weighed over 600 or 700 pounds. There is more solid lying about the weight of moose than almost any other fish or game subject. Reports from Bangor say that there is a great increase in the number of women who come into Maine to shoot deer this fall. So far, 150 deer have passed through that city that have been shot by women. Contrary to the usual impression, the guides say that generally these deer have been actually shot by the women to whom they are accredited. I know of one plucky lady who stayed out all night on the shores of a pond, watching for deer to come down. About 11 o'clock she was rewarded by seeing a good buck appear. But it was night, and the accuracy of her aim was doubtful. The deer escaped, but not the courage of the lady, who was determined to shoot one. At 3 o'clock in the morning it began to rain, rendering the watching exceedingly uncomfortable, and the camp was sought, about a mile away. Still the lady persevered, and the third night was successful. There is certainly a chance for women to shoot deer in Maine, if they have the pluck and endurance, but it is no child's play, and means great patience, with a deal of hard tramping.

From every hunting section comes the same report the deer taken are small and generally does. But this will change. The season of snow is near at hand. Many Boston hunters are waiting anxiously for the telegram from their guides saying that snow has come. The next train will take them. Tracking will be good, and the big bucks can be selected by their tracks. Over fifty deer have been landed by Boston sportsmen the past week; some that would scarcely dress 40 pounds. Another fifty has passed through Boston for the week, to the credit of Massachusetts hunters. Mr. F. C. Clark of Plymouth, who has just returned from the Schoodic region has an exciting experience to tell about the shooting of a female bear, with his .30-30 rifle. The ball passed completely through the animal, evidently in a vital spot, but still she went some distance into a thicket.

Richard Knight, a young man of nineteen, steward at Poland Springs, went into the woods at Bemis, Me., two weeks ago, hunting with two other men. The men soon became separated. Since that time nothing has been seen of young Knight, though every possible step has been taken to find him. Parties have been organized, including men from Portland, Mechanic Falls, Poland Springs, Auburn, Lewiston and Rumford Falls, some days to the number of 200 to 300, and the woods have been scoured for miles around. But, up to the date of this writing, no traces have been found. The Rickers, of Poland Springs, have offered a reward of $300 for his recovery, dead or alive. Capt. F. C. Barker, of Bemis, has offered a reward of $100. The Portland & Rumford Falls Railroad has forwarded the searching parties free, besides offering a reward.

SPECIAL.

A Firm Stand on the Plank.

DRACUT, Mass., Oct. 24.—*Editor Forest and Stream:* As a constant reader, very fond of the rod and gun and something of a natural history man, I would like to answer one of the perplexing questions of how better to protect our fish and game. There are all kinds of theories advanced and I will give one that is original with me, and shall use plain talk in explaining. My idea has been founded and proved by constant watching and work. I find that thousands of dollars are yearly spent following illegal fishing and hunting, while the real game hog, the exterminator of our game and fish, is allowed to pursue his wanton destruction of our true sport, protected by our law. That man is the market-hunter. Who is the man? He is not by any means the tradesman, or the merchant, or the laborer, but the man on whom we spend a great deal of money watching during the closed season and the rich man, or retired gentleman, so called. While the tradesman at his bench, the merchant in his store, and the employees love to fish and hunt, they are handicapped by the market-hunter.

Now I contend that there is only one way to stop this business; that is to pass and enforce a law to prohibit the sale or exposing for sale of certain kinds of game. Of course that will make a howl with some people, who are living on game from the market at the expense of others who cannot have it, except by going out and enjoying the best of all recreation, hunting and fishing for their own table. When we have such a law we can all eat game with the satisfaction of knowing that we are not being robbed by the game hogs.

The market-hunter is almost invariably of a class of men who live through the closed season doing just enough work to keep body and soul together, and spend their time marking places and breeding grounds for a general round up as soon as the law is off, and not always waiting for that. The rich man market-hunter is the worst of all. As a gentleman of leisure, he spends all his time in the covers, killing everything that gets up before him; and when the season will not permit him to find any more, he will pack off to the Southern States to resume his slaughter for market. Why protect such men and destroy the sport of true sportsmen?

Some may ask, "Must I go without game; I can't shoot." Answer—Learn how, or do as your neighbor does who can't shoot—eat pork. Others should not be denied the pleasures of the ballroom because you can't dance. We will all be able to shoot if we take the game hog out of the field, and to do that we must stop the market-hunter.

C. FRANK SCOTT,
Deputy Fish and Game Commissioner.

[Deputy Commissioner Scott's suggestions are all the more interesting and significant because manifestly he is an observing and reflective student of the game problem who has formulated for himself, independently, the FOREST AND STREAM'S Platform Plank.]

"Not All of Hunting."

MY "fowling piece" is but an old model Remington breechloader. The barrels are getting pitted with rust. In one of them is a slight dent, made by some former owner hitting some substance harder than the game he struck at. The stock was cracked in the same way, so I have had it replaced by a homemade one. It is 10-bore, and so gets decidedly heavy before the end of a day's tramp. It has hammers, for I like to see them work. I use black powder, for I like to see the smoke. But when the old gun and I go a-hunting we have lots of fun. Sometimes we find the game scarce, wild and hard to get; sometimes we find it plenty and easy to secure. Sometimes I hit and sometimes I miss; but this is never the old gun's fault, for it shoots where I point it. But game or gameless we always have a good time together, my old gun and I.

PINE TREE.

Birds in Virginia and North Carolina.

SOUTH BOSTON, Va., Oct. 29.—A few days ago I had occasion to go over into Granville county, North Carolina, a distance of about twenty miles, and while on the trip I flushed not less than thirty large coveys of birds. In some places they were so bold as to rise and fly only ten or fifteen steps; in fact, one covey in particular had to be flushed three times before we could get a chance to shoot at them. At another place in the near vicinity of this spot, known to the writer, there are ten or fifteen large coveys that have ample protection and are large and well fed birds. Virginia and North Carolina will be the banner quail States this fall. H. P. W.

A Runway Incident.

SOUTH BOSTON, Va.—*Editor Forest and Stream:* I have noticed so often in your columns comments on carelessness of irresponsible persons with guns, that it brings to my mind an incident which happened to a party from this place not long since. The hunters had been on the stands since daybreak, and one of them being very thirsty, started out in quest of a spring. In doing so he walked out of the timber very close to another hunter, only to find a gun leveled directly at his head. Both men tell me that they feel nervous to this day when they see each other; one to think how nearly he came to being shot, and the other how nearly he came to shooting his friend. H. G. W.

Deer Mortality in North Carolina.

COUNCIL'S STATION, N. C., Oct. 30.—Deer, turkeys and quail are plentiful this season in this section, though a good many deer have died during the summer and fall of some disease. I can count about twenty skeletons in the woods near me; they are yet plentiful, and I have heard of no recent carcasses; have heard of some dead ones near Fayetteville, N. C., sixty or seventy miles away. I would like to hear from sportsmen in other sections where this game abound. J. P. C.

Sea and River Fishing.

A Trip to Honey Brook.

Of course every New York man who is fond of fishing and hunting has some good friend living near his favorite grounds who along about May 20 every year writes something like this: "Trout are biting fine; bring a dozen brown midges and a box of lalycapop." The city man's mind sees visions of former days full of sport with a tried companion, whose name, aim and character are always True, and he writes: "Will come on the Owl Saturday morning. Meet me at T. at 3 A. M. and will start for the Boreas. I have some ball cartridges for your shotgun and I'll bring my Savage for the 15th, so that we may try for a deer."

It is not necessary to tell any sportsman how business is rushed or put off when one is thinking about his happy hunting grounds in the Adirondacks. Preparations for a long summer outing are quickly made and the New York Central coaches, full of happy anglers with their rods, creels and nets, contained at least one man who had shaken the dust of the town from his feet until October. The suffocating tunnel, reminiscent of what he has suffered for days, perhaps, is quickly passed, and the journey up the Hudson is begun. The brothers of the rod and reel fraternize comfortably and the approximate location of each man's destination is divulged with customary caution. At Poughkeepsie the usual cold chicken, coffee, milk and sandwiches are eaten. The stout, jolly conductor with his inseparable lantern is seated in his accustomed place at the north counter, and the gaudily uniformed genius of the "palace" car is telling him the latest railroad joke. Your genial friend, who punched your ticket so many times, and finally, at loss what else to do, lately decorated your hat with a long brown slip, seems in no hurry, and orders a second coffee. You glance at your watch, and thus doubly encouraged, try a second cup yourself. You determine to eat and drink more slowly in future, and gaze with undisguised contempt upon your fellow passengers, who in their efforts to secure a meal are making anacondas of themselves. But, see! The great man has set his cup down to stay with an emphatic crash. He glances slyly at his big silver watch and shuts it with a snap which makes you jump as he shouts "All aboard!"

You halt a few minutes in East Albany to give the engine a drink and slowly steam into the old depot at Troy. "All out here. Lake Champlain train on right." It is about 12:30 and you feel rather sleepy. As the crowd begins to gather, many familiar faces appear, and you know that you are approaching your native county. Bustling Assemblymen and politicians are getting home from the Legislature and a number of wealthy merchants and farmers whom you know nod kindly and enter into a pleasant conversation about crops, weather and local politics.

Along about 1 A. M. a train backs into the station and you see the very Pullman car that came from New York surrounded by a bunch of yellow Delaware & Hudson coaches, all drawn by a giant engine.

We are off for the North now in earnest, and Whitehall is the next station of consequence. Lake Champlain new appears beneath the stars of the cool spring night glistening in the moonlight. The long tunnel is passed, and after a short nap a voice shouting "Addison Junction!" brings you to your feet. A kind traveler takes your grip and you follow with your rods, guns and other duffle. Out in the gloom near the platform a dark object is trying to quiet a fiery little broncho mare from Nebraska who doesn't like locomotives. I make a break for the silent man, grasp his hand and throw in my traps, and we are off before the smart stage can even look at us. Trixie keeps her steady gait for a few minutes or so, and we can now plainly see the ruins of old Ft. Ticonderoga, with frowning Mr. Defiance on the left

At about 4 A. M. we pull up before a neat cottage on the outskirts of T. village, and while I am made comfortable with a nice breakfast Tim piles in my traps, and with a triumphant flourish over the last buckle joins me for a cup of coffee. Few of the residents will be up for an hour yet. We must be off, and those great mountains off north must be penetrated by nightfall. There is good trout fishing all around T., both in Lake George and in the creeks flowing from the mountains, but we will have none of it. We are off to a fabulous land teeming with fish and game and about thirty miles distant.

True knows every yard of the country where he lives, but this new ground is familiar but to few. A city man happened to go there seventeen years ago when a college student. He had always wanted to revisit the locality where he used to catch a ten-quart pan full of large trout daily for the party of eight or ten on his hands, and True had been informed by local authorities that the city chap would know "where they were if any one did."

As we pass through the foothills of the Adirondacks the steep pitches of the rough roads often compel us to walk and rest our horse, which follows us with deliberation. Pretty soon the rain begins to fall softly, and it is strange how little both care for it. Root's hotel is where we stop and feed our little mare and take a trout dinner in this famous old inn. In the winter the country people used to drive twenty-five or thirty miles after chore time to the dances that were held in "the hall," where Laffy Spaulding, a well-known "caller" (still living in Crown Point), used to hold forth with his band, leading with his old violin.

The rain continues, but nothing daunted we press on until about 4 o'clock, when a little rivulet is forded and the city man says: "True, put on a snell and try for our supper here, while I let the horse blow and pull an umbrella over myself."

Finally the horse attendant awakes from his reverie and asks, "How many have you got?" "Thirty-five," is the terse response, and the angler, who had been a graceful object in his black velveteen shooting coat, came out showing a string of nice fish.

The little mare now starts in for the finish and her masters are happy at the prospect of a trout supper. A large pond is passed, and a mile further on the city man grows thoughtful over a certain pair of bars leading down into a hollow.

"The road used to be here," he says; "but where is it now?"

The rig is drawn carefully through a potato patch, and finally an unused trail comes into view. After a few turns True commands "Pile in and ride." This is very delightful to the wet and weary angler. It doesn't last long, however, as a rough corduroy bridge full of dangerous holes appears. The mare is an interesting sight as she goes over the treacherous timbers feeling her way from log to log like a cat. The rough road full of miry holes and rough stony places is finally mastered as we emerge into a large clearing of about 150 acres. This was once the well-tilled farm of a famous lumberman, now sleeping with his fathers in a little New England hamlet. Here are the charred ruins of several fine barns and a large dwelling house. A single thunderbolt one summer's night reduced this fine establishment to ashes and Mr. D. could never be persuaded to rebuild. He had made money and decided to pass the rest of his days in civilization where lightning rods exist. With a few loose boards and a stake or two we improvise a shelter on the sharp slope of a hill overlooking a fine creek which contains in its dark, cool waters our principal food supply, and will serve to keep our meat fresh indefinitely. Two poles rest on the slope, and down below about 15 feet two strong forked stakes are driven and a pole 12 feet long placed in the crotches. Boards are laid on and the whole covered with two large overlapping rubber blankets, making as dry a tent as one could devise. Under a big pine log there are plenty of needles for the fire, and by peeling off the wet outside plenty of splinters are readily cut. The fire is soon blazing, the fish in the big pan with the slices of fat pork are sizzling and a delicious odor arises from the blackened coffee pot left by some kind-hearted hunter or trapper. A shout comes from the old broken-down dam which lies at the head of a deep pool. True is wild, and the city man runs with a strong net and lifts out a big 3-pound speckled trout and carries it to the camp, which, being in charge of a supper, he cannot leave for long. The fish is put into a bag of "skeeter" netting and placed in a cold spring. More shouting from the fisherman, but the cook is obdurate and tells him to net his own game.

Trixie stands at the end of a new clothesline as near camp as she can get and lifts her graceful head from the grass in astonishment at the noise from the pool.

No veteran camper need be told about the delights of a trout supper after a day's work in the high altitudes of Boreas River. Preparations for sleeping are hastily made and a lot of green spruce boughs effectually close in the open sides of our shack. The blazing fire forms our front protection, and we throw lots of water between it and our house to prevent accident. Some deer hunters, alas! last fall were not so thoughtful, and one snapping cold night in September our house was burned to the ground.

Breakfast is over by 5 o'clock, things are stored away and the mare fed. We decide to go up stream afoot as far as possible and fish down. We walk through the dense, moss-carpeted forest, full of the deeply worn trails of deer. An occasional splash in a deep bend of the creek indicates the position of a buck fighting the tormenting flies, standing in the cool water, and a sharp whistle is his challenge to the intruders upon his privacy.

Both anglers have crossed the brook a few minutes later, when right from under a bush at their feet a fine young buck springs and is off like a flash. We find quantities of trout, but owing to the coldness of the water the large ones would not rise. So we return to the camp, determined to try our luck below the dam, where the fish are more presentable.

A scene of desolation awaits our return. In spite of Trixie's best wishes, a stray red cow of the usual mountain breed has taken a fancy to investigate our little camp, and there is nothing left. The pork, butter, potatoes and corn meal are of course gone. The coffee had been strewn about, the pickles wasted, and True always insists that the ravenous beast deliberately ate up a cut glass salt bottle in cold blood. There is nothing to do but take our weary way to civilization, as represented by "The Branch." So we arrive at the residence of Mr. Covill, where we are hospitably entertained and sleep in the new barn on the hay loft.

Next morning a hasty glance at our stores revealed two boiled eggs, two small cucumbers, a little salt and three crackers. This we divide and eat as we sit on the tongue of an old mowing machine under the farmyard shed. It is 4 o'clock, but Covell, who retired at 8 P. M., has already arisen and is off to his work on some one's farm. Of course we couldn't wait to have a regular breakfast, and as our time is limited we take to the Branch like a couple of deer. There are a few large trout in the holes, and we soon have a good basketful.

True is a fast fisher and his companion cannot keep up with him, unused to the rough country and weak from lack of food. A long, shallow pool is reached and a few trout are taken at the eastern end. True then crawls around the boulders and makes a cast in the swift water. The tip suddenly drops from a strike, and an instant later the head of a monster trout appears above the sparkling rapids. The old "cornstalk" has been for three days soaked by the rains and it yields at the tip from the enormous and sudden strain. There is a mighty splash and the city man sees a broad tail strike the surface almost a yard behind the angle of the line and water.

"Did you see that?" asks True.

"I should say so," is the reply. "Three-pounder if an ounce. You were rattled, old man; be calm, like me."

"Well, I'll tell you," says True; "I thought at first that he was one of those little fellows until I saw him above water, and then it was too late to do anything. Well, let him go. Some good fellow will get him some other day."

Not caring to fish after the bad luck, the city man suggests the trial of a little stream that meets the large creek just above the scene of the recent struggle, saying that many years ago it had given him a mess about every day for a week. True rather demurs at the size of the brook, which is only a rivulet, with a dreadfully rooty and rocky bed, but finally agrees to walk up the trail along its banks for about a quarter of a mile, when he condescends to drop in a hook, which is immediately seized by a good-sized trout. He pockets the prize, nods approvingly and says: "Let's go up about half a mile further; then we'll fish her clean down to the creek." The word clean doesn't mean that we were after fingerlings.

Pretty soon a bear trail is discovered, and bits of raspberry leaves, slightly chewed, show where the animal has been feeding. Whenever a log lay across the path bruin would invariably crawl over it, never going around, and although the log might be supported by large stones or rocks 2 feet above the ground, he would never pass under. Trapping has given these animals almost an additional sense—reason. Pretty soon we come to the large timber near a cedar swamp—the source of the stream—and while busy catching the fine 8-inch fish (for they average very evenly), a great splashing and floundering is heard in the stream between the men. True calls: "Did you fall in?"

"No; did you?" is the reply.

"That was our bear, then," says True.

Both approach, and there, sure enough, bruin had been wallowing in the cool water under a birch sapling, while huge tracks on the sand showed his hasty exit. Some berry bushes on the left bank had been badly flattened where he had just dined. The two anglers continue down stream, with various adventures of the ordinary piscatorial character, until nightfall. Four fish are often caught at a cast from the two rods, and the baskets groaned.

The little mare is glad to get her grain. A hasty supper is taken at a good Scotchman's house, and we start forth on our twenty-five-mile trip for the Vineyard Farm, where the city man is to spend his vacation.

Through the dark night, over rough roads, our sure-footed Trixie picks her way. Each man takes turns sleeping on the other's shoulders, and by 3 A. M. the old log farmhouse is reached. Don, the country-bred "bird dog," comes rushing forth in wonder at the strange arrival, but is soon quieted, and the men are busy with their catch, which is soon safely packed in the ice house in milk pans hastily snatched from the drying rack. As the household awakes a large pan of dressed trout is found by the cook on the kitchen table, with the message, "True and I arrived at 3 o'clock. Cook these for the guests and let us alone until we want to get up. More fish in the ice house if wanted." PETER FLINT.

Pike vs. Muscalonge.

THERESA, N. Y.—I was much interested in Mr. Talbott's article, "The Damnation of the Carp," in the Sept. 16 number. I wish that he could as easily convince me that the lake pike (commonly called pickerel) that was introduced in Indian River here fifteen years ago has not nearly exterminated muscalonge, which was plenty before "the pickerel's" introduction. While now there is an occasional large muscalonge, there are still fewer small ones taken, and I attribute the cause to the "pickerel."

I had poor luck on my trip. I saw only two ducks—water is too low and weather too warm. I did not wear a coat on the water or in the woods during the three days. There are plenty of grouse and gray squirrels. I know a young farmer who got sixteen grouse and eight squirrels last week without a dog, and he does not hunt all the time. While on the river to-day two pickerel (*Esox lucius*) tried to jump into my boat. I would not "take in" the largest in the river to have it, but would row a week to get the largest muskalonge (*Esox nobilior*) that I still think is in the river or lake, although not one has been caught this season. J. L. DAVISON.

Clarence Goes Fishing.

LITTLE Clarence (with rising inflection)—"Pa?" Mr. Clippers—"Uh?" Little Clarence—"Pa, if a man fifty years old marries a girl of seventeen, and his son, aged twenty-five, marries the girl's mother, don't that make the old man the son-in-law of his own son, and the father-in-law of himself; and—and, pa, can I go fishin' all this afternoon with Johnny Jumpup if I won't ask you any more questions?" Mr. Clippers (hastily)—"Great guns! Yes!"—Puck.

ANGLING NOTES.

Scientific Information.

A FRIEND that I have never seen in my life, a newspaper writer himself, acquired the habit a few years ago of sending me newspapers and newspaper clippings containing matter relating to fish and fishing. This little attention was continued for more than a year before there was even an exchange of letters, but with considerable regularity there came to me the bundle of newspapers and clippings with the blue penciled "F. M. W." or "Frank M. Wooley" on the margin. His own contributions to the press would be indicated, but anything that had a fish flavor he considered might be of interest to me, and I have received all sorts and kinds of fish stories. In some instances I have recognized my own work, dressed over to suit the publication in which it appeared, or to conceal the source from which it was borrowed without credit. One evening last week I received a package in the familiar handwriting on the wrapper in blue pencil, and glanced over the contents, but found nothing of interest to me, and put them in the waste basket. The next morning the maid happened to single out one of the sheets, because, perhaps, it bore more pencil marks than the others, and asked if I meant to throw it away. It related to exchanging fish with Europe, and the item had been copied from the Scientific American, and I read it more carefully and preserved it simply because it came from a paper of the standing of the Scientific American and contained such gross misinformation. The statements seem to have passed unchallenged, as the article is copied apparently in its entirety, without comment, but if FOREST AND STREAM should go so wide of the truth in an article on shooting, fishing, yachting or any other subject in its particular field it would be commented upon without gloves. Of course, FOREST AND STREAM could not make such a stupendous blunder, and give absolutely false information, and one naturally looks to the Scientific American for facts, not fables.

American Fish in France.

The article opens in this wise:

"Many tourists who will attend the Paris Exposition next summer need not be surprised to find on the bills of fare of the leading European hotels such items as 'American black bass,' 'American salmon,' or 'American mascalonge.' It should not be hastily concluded that these items are put there for deceptive purposes, or that they refer to canned or dressed American fish. They are in reality true statements of facts, and indicate the growth of our fishing interests under the wise and progressive supervision of the United States Fish Commission. During the past summer American fish fresh from the water appeared on the tables of European hotels devoted specially to catering to American tourists. In order to appreciate the full meaning of this, it is necessary to glance at a feature of the work planned years ago by the Fish Commission."

Reduced to fewer words, this feature of the work of the Commission consisted of scientific study and experiment and investigation of food plants of inland waters, causes of famine and years of plenty in the fish supply, the transplanting of young fish fry to waters far removed from their natural habitat. "This experiment proved of great commercial value to the country. Inland waters that were almost destitute of fish are now teeming with millions of artificially propagated fry. In some of the new waters they have been transplanted to, the food fishes have been found to thrive better than in the streams where they were found. The extension of this work to foreign waters was anticipated by the Fish Commission years ago purely as a scientific test. Consequently, when they received intimations from leading ichthyologists abroad that an exchange of native fry would be agreeable, preparations were immediately made to send out fish to European countries."

Ichthyologists and fish breeders, fry and food fish are a little mixed in that paragraph, and it would seem that the only fish transplanted were stream fish. Ichthyologists as a rule are not interested in the transplanting of fish fry, and exchanges with foreign Governments, fish breeders and acclimatization societies are made in the form of impregnated ova, but that is a minor matter. To continue:

Landlocked Salmon in Scotland.

"The first experiment was made in Scotland with our landlocked salmon. The inland waters of Scotland presented conditions somewhat similar to those in which our salmon loved to disport, and besides, there was a species of Scotch salmon native to the streams and lakes of that land. Young fry of our landlocked salmon were shipped to Scotland some ten years ago, and in that time they have multiplied rapidly, much to the detriment of the Scotch salmon. The American salmon proved larger and stronger than their native cousins, and the Scotch salmon is almost threatened with extinction by the growing rapacity and multiplication of the American landlocked salmon. On the whole, however, this is not to be regretted, for the American species furnish more and better food than the Scotch salmon."

I have a friend who has the habit of relating jokes in his letters, and at the end of them he writes, "Ha! ha!" to indicate that the reader must laugh, but that last paragraph requires no "Ha! ha!"

If the Scientific American pays good money for such rot as I have quoted, it pays for a gold brick of huge dimensions. Any boy who has read FOREST AND STREAM for a year will probably know that Scotch salmon, Irish salmon, Welsh salmon, English salmon, Canadian salmon and American salmon (if the quoted writer means the United States), the few that there are, are one and the same species, and that the landlocked salmon is also the same fish that resides in fresh water instead of going down to the sea on occasions. Scotch anglers will receive a shock if they should find out what the quotation charges. As the "Scotch salmon" grow to over 70lbs., and the largest landlocked salmon on record weighed under 30lbs., the scientific writer is a little bit off in his comparison of size of the two fish, and as one fish holds to the fresh water and the other is anadromous, the war of extinction must have been carried on in the columns of some scientific paper led astray for the moment. It is barely possible that at some time a few landlocked salmon eggs were sent to Scotland, but there is no record of the exchange that I can find in the Government reports, and certainly there is no mention in foreign exchanges of the presence of the fish in any European waters except where they are native—in Sweden.

But the best of this remarkable article is yet to come—best in that it is more outrageously incorrect than what I have referred to:

Black Bass in France.

"A shipment of American black bass fry was made to France for stocking the rivers and streams, and, like the American salmon in Scotch waters, they have flourished so marvelously that to-day they are quite common articles of diet at the French hotels and restaurants. The French streams, since the introduction of the American bass, have doubled in their productive value, and there is every reason for the French anglers to be grateful to our American Fish Commission for stocking their waters with a new species of food fish. The French streams were practically deserted when the fry were introduced, and they had little difficulty in taking quick and complete possession of the waters."

Had they been introduced there is no question, if their health had remained good, about their taking quick and complete possession if they had wanted it.

The most determined efforts to introduce the black bass abroad were made in England and Germany. The Marquis of Exeter and Mr. R. B. Marston took over several shipments of adult black bass to England, and Count von dem Borne did the same for Germany, but I can find no record of black bass going to France. Count von dem Borne wrote me that he sent black bass to France, but to-day one hears nothing of the fish in England or Germany, and Mr. Marston admits that his experiment was a failure, and they do not want the bass over there, even if each fish is delivered with a muzzle over its mouth, for they are afraid of it.

But to resume the extracts from this most remarkable article with surprises in every paragraph:

Mascalonge in Germany.

"Other varieties of fish have been shipped to France and other countries as scientific experiments. The American rock bass has been introduced in several English streams, and the American brook trout is to-day in flourishing condition in the clear, cold streams of Russia and other northern countries of Europe." (As a real fact, not an imaginary one such as our friend has been treating us to, the American brook trout can be found in Europe, if it is planted in a pond with a fence around it, but when planted in a stream it disappears, never to return, so I have my doubts as to those cold, clear streams of Russia being able to hold the fish when the bars are down.) "The waters of Switzerland abound with many of our common river and brook fish, which make the angling there superior to anything in the past. It is even reported" (he is getting cautious at the end of his article) "that the fine American mascalonge has found a satisfactory home in the Rhine and the Danube."

That is a fitting climax to his American fishes introduced into European waters. The Fisheries, Game and Forest Commission of New York is the only commission that has practiced the cultivation of the mascalonge, and I happen to know that the eggs of this fish have never been sent to Germany from that Commission.

Of the various fishes I procured to send to Count von dem Borne at his request, I was satisfied that he had exhausted the list when he asked me to send him some dogfish (*Amia*), but never in his wildest flights of fancy over the introduction of American fishes into the waters of Germany did he even remotely refer to taking the mascalonge across the sea.

Fish from South America.

One more extract and I will have finished with this remarkable production. Referring to an exchange of fishes with foreign countries and the fishes that have been brought to this country, it says: "The Scotch salmon has been tried here, but holds out little promise of success in waters where the American salmon lives. There is reason to believe that we will be more benefited by introducing the young fry of South American fish in our Northern waters than any that can be brought from Europe. The condition of ichthyology in the countries south of us, however, is such that it is difficult to secure the fry without sending an expedition after them."

Can any one tell what ichthyology in the countries south of us has got to do with the introduction of fish, and the kinds of fish it is proposed to introduce from South America? At the first meeting of the Fishcultural Association Governor Horatio Seymour thought we might introduce fish from China, but the Scientific American man could have given Governor Seymour cards and spades and a beating when it came to introducing foreign fish and sending them abroad.

Never in my life have I seen what purported to be a serious article upon the subject of fish or fishing that was so crammed full of ignorance and misinformation as this scientific article. If it had been signed A. Ward, I could have understood that it was meant for humor.

In a recent book review I read: "There can surely be no lover of good literature who does not take delight in a well written book on angling; a treatise on that exquisite art that is at once a school of philosophy and a whole system of education, and the closer recreation of the contemplative man."

The reviewer possibly did not know that some articles, akin to the subject of angling, that are intended to be educational, are more laughable than any comic opera ever placed on the stage in any land. If I possessed complete knowledge of the subject of "exchanging fish with Europe" and had set about writing an article to show how inaccurate I could make it, I doubt if I would succeed as completely as the writer in the Scientific American has succeeded in an article supposed to give facts. There is one peculiarity about his article, or several, that shows his unfamiliarity with his subject. All the fish planted, exchanged or with which the waters teem, are fry, and never eggs or fish older than fry. The exchanges seem to have been made with ichthyologists, and his fish are always stream fish, from brooks or rivers—never from lakes or ponds.

Pond-Reared Salmon in France.

After all is said, visitors to Paris may eat salmon the parent stock of which came from the United States, but they will not be landlocked salmon caught in wild waters in Scotland, but Pacific salmon reared in ponds in France. Dr. Jousset de Bellesone, Director of Fishculture of Paris, has reared at the Trocadéro Aquarium quinnat salmon, rainbow trout and our native brook trout. The Pacific salmon have been reared for five generations in fresh water by a system of pond culture not practiced in this country. I have used considerable space to dissect the misleading article, chiefly because of the source from which it was given to a confiding public, and also because the fishcultural work of to-day does not need to be bolstered up by misstatements of what it has accomplished to show that it is of vast benefit to mankind in increasing and preserving the food supply.

Our writer says: "The Commission may some day add to our fish diet some new species that will prove of enduring value." This is said as if the Commission manufactured new species out of sawdust and leather, as dolls are made, and deserves to be set alongside of the statement that the Commission is making a boneless shad by crossing the shad with the jellyfish. This latter statement was accepted as gospel by the public prints a few years ago, and was no more ridiculous than the assertions I have quoted.

Commercial.

To-day for luncheon I ate fresh salmon that came from the Pacific coast in a refrigerator car, and was retailed within fifty miles of Albany at 20 cents per pound when cut into steaks, and the whole fish could have been bought at a less price. The fish was not equal to Atlantic salmon from Canada in season, but it was in good condition, and of good flavor, and well worth 20 cents per pound. This information, which is reliable and can be verified in many Eastern fish markets, is worth more than all the alleged information in the article from which I quoted in the previous note, and shows the strides made in this country in fish propagation and fish transportation to furnish fish food at a reasonable price.

Sport.

On a recent journey over the N. Y., O. and W. Ry. I met the auditor of the road, and he asked me about constructing rearing ponds for trout fry, as the road proposes to construct such ponds in which to rear the fry obtained from the State until they are fingerlings, eight months old, or yearlings, before planting them in the public waters of the region through which the road runs. This road has always assisted the State authorities in distributing fish by hauling the State fish car and men free, and has taken a lively interest in planting fish in the waters of Sullivan and Delaware counties. The officers realize that the State cannot rear all their fry to the age of yearlings, and also that yearlings produce better results when planted. Instead of finding fault with the State because the State hatcheries do not furnish water for rearing fish, the officers will apply for fry and rear them at their own expense, and thus turn them into public waters to furnish sport for the general public, and therefore I consider this railway a public benefactor, and mention the fact here that other railroads may follow the good example.

Making a Trout Pond.

Scarcely a year passes that I do not have half a dozen letters, more or less, in regard to making a trout pond by damming a stream, and if I had made a collection of such letters received, say during the past ten years, I doubt if any two of them would be alike. As a rule the first thing is to find out what the inquirer really has to start with, for the letters tell me nothing to base an opinion upon that is good for anything, and at best my reply is only an opinion about something I have never seen. After an exchange of letters, wherein I become the questioner, I offer such suggestions as appear to me to cover the case.

This month I received a letter on this subject which was quite out of the usual, for it related the existing conditions so that one could frame an intelligent reply, and I give it here, premising that it is written by one of the officers of the Review of Reviews:

"The editor of FOREST AND STREAM has told me that you might possibly give me some information concerning the stocking of a particular stream with trout. This stream is the old Horseneck Brook, running by Greenwich, Conn. I have built a house on a hill overlooking it, and put a dam at the mouth of a deep, wooded glen, almost a ravine, which will back the water up 800 or 1,000ft., making the water 5 or 6ft. deep, and a pond not over 75 or 100ft. wide anywhere. The brook flows over a very stony bottom, and is very much shaded at the bottom of the glen.

"It never runs dry, as there are two large lakes at its source. I would own about 1,500 to 2,000ft. of the stream, and would want to screen it at the dam and my upper boundary. The fall is rather rapid, and the bed of the stream is full of big boulders. I am told that the brook used to be a celebrated trout stream. I am undecided about going to the expense of putting in five or ten thousand yearling trout in the pond made by the dam, and would like to ask if you could, from these meager details, give me any advice on that score, and what time of the year you would advise as the best to put trout in. I think the temperature of the brook never goes above 65 degrees; probably not above 60 degrees."

Instead of being meager, the details are quite complete, judging from queries that usually come to me. The correct temperature for trout; a shaded stream where the fish can hide; sufficient depth of cool water; vigorous water that is well aerated from flowing over boulders in a rapidly descending stream; flow of water sufficient to renew the volume in the pond before it becomes dead—in fact about everything necessary to know, except that important item, food for the trout. Having once been a trout stream, it is fair to suppose that the water contains a certain amount of fish food, but to make sure, fresh-water shrimp should be planted in the fall, and if the pond contains no cover for the fish, build "hides" for them of rough boards, i. e., a table with short legs anchored to

the bottom by placing stones on the top of them, and put the yearling trout, not over 2,000, in in the spring. It may be necessary to plant water grasses along the border of the pond to harbor the crustacean food, but this should be undertaken with great care that the grasses do not spread and choke the pond. Water starwort, water thyme, crawfoot, great water moss, are some of the water plants, but there are dozens of others that might be planted if they are under control, but unless they are the owner of the pond may rue the planting.

I think it was Francis Francis who said trout should be entomologists, but whoever said it declared a truth, for insect food not only improves the condition of the fish, but causes them to more certainly rise to the artificial fly, and insect food should be provided artificially if it is not already in the water, and this can be done by securing the larvæ form of some insects, and if more convenient the winged form of others. Trout must have water to live in, and they must have food in abundance if they are to thrive and be in the best condition.

Fish Matters in New Zealand.

When Mr. L. F. Ayson, Fish Commissioner of New Zealand, was in this country, he told me, among other things, that he would take home with him 2,000,000 impregnated eggs of our common whitefish, and he has just sent me his report, made to the General Assembly after his return home, and from it I find that about 65 per cent. of the eggs were hatched and liberated as fry. He says that what he considers a serious mistake was made, in the light of more recent development, in the early days of fish acclimatization in New Zealand, by planting trout of the same species (he refers to the fish we call the brown trout) in nearly all the New Zealand waters. That now the waters are swarming with the European brown trout, while it would have been wiser to have confined them to certain waters and planted in others the American brook trout, the Loch Leven trout and the common whitefish of this country. So far as the whitefish are concerned, it is not too late to plant them, for the trout will not interfere with them, but I am satisfied that the brown trout and the *fontinalis* will not thrive together in the same water. Only last week in Sullivan county, N. Y., I heard bitter complaints that the brown trout was driving the native trout to the wall in some of the streams in that region.

Commissioner Ayson alleges further that it is his belief that the early importations of brown trout ova were crossed with the bull trout (*S. eriox*), resulting in a strain of coarser fish, in many waters over which he has jurisdiction. While we in this country may not have suffered in like manner, there is to me a mystery about our importations of Loch Leven trout. Certainly all that I have seen of Loch Leven eggs have, when hatched here, turned out to be brown trout. Dr. Quackenbos, who procured Loch Leven eggs from Sir James Maitland at Howietown, while he was on a visit to that establishment, and brought them to this country and planted the fry after they were hatched in New Hampshire, is sure that he secured the real thing, a fish quite unlike the brown trout. I fear the people of this country are too prone to try experiments with new species of fish by planting them in waters already inhabited by native species, when it would be wiser to adhere to the old species, and by introducing new blood improve the race and add to the numbers.

The State of New York is exercising considerable care in planting species of foreign trout in new waters, for it is difficult to get fish out of a stream or lake after they are found to be undesirable or unfitted to the water.

Of the steelhead trout, Mr. Ayson says: "The steelhead (*Salmo gairdneri*) is a very fair variety of sea trout, inhabiting a wide range of the Pacific Ocean. There is a controversy going on in America as to whether this fish is not a rainbow trout with sea-going proclivities, and as rainbow trout have been successfully introduced into some of our rivers I think we should try to solve this problem with the fish we already have in this country before attempting to import ova of the sea-run fish of America. If we can solve this problem here, where there are no steelhead, it will be of great interest to the scientific world."

The problem has already been solved, and the steelhead is not a sea-run variety of the rainbow. It is true that at one time the rainbow was said to be the young of the steelhead, but that belief no longer exists, and both fish are put down as distinct species. The steelhead since Mr. Ayson's visit to this country has been found to breed in fresh-water ponds, in confinement, and the rainbow is caught in salt water, where it probably finds its way through the river, so both fish resort to salt water on occasions.

Whatever young salmon may do in the smolt stage in New Zealand, Europe or elsewhere, I know beyond question that in the State of New York when young salmon go down to sea as smolts they are two years old, and I know for the reason that Mr. Ayson refers to determine the species of steelhead and their relation to rainbow trout by planting the salmon fry where they were previously unknown, and observing that they did not go down to sea until they were two years old, although in November of the second year I saw some putting on the smolt livery of silver.

In his report Mr. Ayson refers to the whitefish work of the Fisheries, Game and Forest Commission of New York in Canandaigua and Hemlock lakes, but for the moment I did not recognize the lakes as Canadaque and Herman.

A. N. CHENEY.

"Fishing" in Hell Gate.

CHARLES FLANAGAN and Felix Talbot, of Astoria, were out fishing last night in Hell Gate, and anchored their rowboat about a mile off Bowery Bay beach. At a little after 7 o'clock the men got up their anchor and were about to seek another location when the boat was upset and the men thrown into the water. They managed to get hold of the upturned keel of the boat and clung there as they were driven along by the wind and tide. They passed several boats in their enforced trip up into the Sound and while they called loudly, no one seemed to hear them. When the tide turned they had drifted to College Point, and then they began to drift back, getting to Hell Gate again at about midnight.

Just at that time the tug Olympia was passing down the river, and when off Ward's Island, near 112th street, the captain, Charles McLaren, heard faint cries. He turned in the direction of the sound, and finally reached the upturned boat. Ropes were thrown to the two men on the keel, but their arms were so stiff they could not help themselves. Then the tug drew nearer, and the men were lifted off, with their arms nearly frozen stiff. They were taken into the cabin of the tug and landed at East Twenty-ninth street, whence they were taken to Bellevue Hospital, where Talbot is sick with pneumonia.—New York Evening Post, Nov. 3.

Cornelius W. Smith.

Editor Forest and Stream:

The announcement of the sudden death of Cornelius W. Smith, of Syracuse, President of the New York State Fish, Game and Forest League, which occurred on Oct. 28, was read with profound regret by his many friends throughout the State. Mr. Smith was born in Trumansburg, N. Y., May 19, 1845. He was a son of N. B. Smith, a noted patent attorney in the early days of Syracuse. Personally, Mr. Smith was genial and whole-souled, and his kindly manner won for him a host of friends. He possessed a most evenly balanced temperament, and the petty worries and cares of professional life did not appear to disturb in the least the harmonious makeup of his nature. He was rarely, if ever, known to lose patience, no matter what the provocation was. He stood well to the fore in his profession. He was well posted in legal matters, and carefully prepared his cases before arguing them. His judgment and opinions on contract law especially were frequently sought. Since the new bankruptcy law was placed on the statute books he had devised, after careful study, a system of blanks which greatly facilitate work in bankruptcy cases.

Mr. Smith was an enthusiastic sportsman. He was active in the New York Fish, Game and Forest League, and for a long time served efficiently as chairman of its Legislative and Law Committee. This position is one of the most important in the gift of the League, as it devolves upon this committee to present to the Legislature the recommendations of the organization for new protective legislation and to secure the enactment of desired game laws. It is largely owing to Mr. Smith's efficient work in this position that the fish and game laws of the State are so satisfactory to sportsmen to-day. At the last meeting of the League in December, 1898, Mr. Smith was elected President of the organization, an office which he was admirably qualified to fill. He was President of the Carpenter Brook Fishing Club and a member of the Onondaga County Anglers' Association.

His genial presence, keen perception, sound judgment and warm friendship will be greatly missed in the councils of the New York State sportsmen.

W. E. WOLCOTT.

UTICA, N. Y., Oct. 30.

Fishing in Minnesota.

FEW if any waters have I visited with greater pleasure when looking for excellent fishing, grandness of scenery and everything combined, than Prior and Spring lakes, Minnesota, lying in a belt of timber land about thirty-five miles southwest of St. Paul. It is only a few steps from one lake to the other, so if the angler does not find the fish biting well in one he may try the other, sometimes with surprising results, as I have found many times. Some days a good catch is made in one lake, while scarcely a fish is taken from the other, and so it is in this way changed around.

It is claimed by some fishermen that the bass, which are the principal fish angled for in these waters, run larger and more gamy in Spring than in Prior Lake, but having taken big fish from both waters, I don't see why one should deserve the title as the better of the two. If a strike is made by a big bass in Prior Lake I think it will be found equally as interesting to land as if hooked in the former one, and of course the angler can't tell just where the big ones are wating to grab the lure.

I visited the above waters in August, 1899, in company with an old angler companion, and for a week we shared the pleasure of camp life there. Besides the grand sport of fishing, we occasionally went frogging, and on the still evenings took long moonlight paddles across the glass-like water, Indian-fashion, in a little canoe, and it was surprising the swiftness that we could put the little skiff to.

We fished only on the proper days, when bass were biting, which were "dark and cloudy," and were never disappointed, always returning with two or three nice ones not less than 3 pounds apiece. We didn't make a business of pulling all the fish out of the water we could get hold of, or fishing from sunrise till the close of day, but when we wanted two or three we went and got them and didn't have any to let rot or throw away.

Frequently, while casting off the shore, we hooked small pounders, which were returned to the water as soon as possible, as my companion said, "to let grow a little," and only those that knew how to shake their heads, pull hard and make the water foam about them were saved.

About these lakes is one of those beautiful woodlands that have no attraction for gay summer people, the kind who like to hear a brass band or orchestra play in the evening, and wear gay clothes in the day, and the angler going to camp about them may wear clothes as ragged as they make them and no one will criticise him or think that he ought to do otherwise for their sake or his own.

Henry McKennett, or Mr. McKennett, as I may more respectfully refer to him, owner of a large, neatly kept farmhouse, situated between the two waters, accommodates hunters and fishermen, furnishing them with boats, rods and tackle. Besides the hotel, as folks call it, the proprietor has erected near the shore of each lake several cozy little cottages, each containing two rather spacious rooms, the windows and porches of which are properly screened to keep away the mosquitoes and other insects which are most always quite numerous in summer time. The proprietor is one of those Izaak Walton sort of fellows who like to have a rod in hand and be a-fishing most all the time, and he takes special pleasure in showing visiting anglers where to cast for the big bass, and he knows where to find them, too.

Most all the big fish taken out of these waters are with a frog as a lure, which is used in preference to artificial flies. Croppies, sunfish, pickerel, bullheads, etc., are numerous about both lakes, but few people, unless it be women, care to angle for them after becoming acquainted with the gameness of the black bass. Henry and I never care to fish for anything less gamy, and both think, as he put it one day, "I would sooner fish a week and at the end of that time only catch one big bass than a day and get all the smaller fish ever seen."

Croppies are excellent eating, and although I'm not fond of their capture, I don't despise them for a morning or even a noontime or evening meal. Occasionally when the sun had either disappeared or was setting, throwing a mild heavenly light over earth and sky, my companion used to get me to paddle him out on the water, while he handled the trolling line. We never went very far before hearing a floppering a few feet behind the canoe, and would in this way pull in another and another until we had reached the number we had gone out to secure. They always seemer to bite quite freely on such evenings, and those were the only times we cared to go after them. Martin, as my companion is called, knows how to turn them loose from the frying pan, and when a couple of nicely cooked croppies were set before us at the breakfast table, together with some cream potatoes, a few slices of buttered toast and a good cup of Mocha and Java coffee, what more could a fisherman ask for, or a king either, as an angler once said?

Spring Lake is two and one-half miles from the Chicago, Milwaukee & St. Paul station of Prior Lake, to Mr. McKennett's, the ride through the meadows and fields being a most welcome one after leaving the train. He meets his parties at the above station upon short notice.

A few years ago quail used to be quite numerous about this neighborhood, but now it is very seldom that a covey is found. Ducks, snipe, partridge, etc., are still quite plentiful in season, but the main thing is the fishing, and as before stated some big ones are taken there.

SHEE-ROO-KEE.

Farewell to the Rod.

Editor Forest and Stream:

On and after Oct. 15 the rainbow trout of British Columbia are supposed to be protected from the fisher, yet I fear the close season is more honored in the breech than in the observance, and no doubt many a spawning fish is filched from the beds by hungry prospectors and vagrant Indians. This, however, would be no excuse for decent sportsmen to ignore the law, and so the man who, preferring quality of sport to quantity of fish, casts his fly on the face of the waters, shelves his rod by mid-October, no more to take it down, except for an occasional loving overhaul, until next spring. Happily, spring comes earlier with us than with our fellow-fishermen of eastern Canada; on Vancouver Island trout fishing is in full swing by March, and even up here in the mountains it begins early in April, so that for more than half the year the rod may wave over the clear, green streams of British Columbia, as good waters as any trout fisher need desire.

But all this is merely introductory. The fact is, I am about to do a very unusual thing, perhaps even a very unwise thing, and confess to a blank day—and may a kind and considerate providence grant me many another. Last Saturday afternoon was one of those still, mellow, glorious opportunities a man cannot afford to miss. It was neither Indian summer nor brown October—for in British Columbia we have neither the one nor the other—but just simply a fine autumn day in the mountains, something you may hardly equal and certainly not excel anywhere.

So I took my rod and went for a stroll down the Kettle River, a fair stream with an abominably unpoetic name. The big cottonwoods were liveried in gold and russet, contrasting most effectively with the deep blue-green of the bull pines; leaves drifted down as each wind from the hills passed across the valley, but in the rank matted undergrowth of the river bottom the purple asters nodded as yet untouched by the frost. On such a day it is not necessary to catch fish to enjoy fishing. The mere wandering through scenes of amazing beauty should be sufficient enjoyment; in fact, an artist or a poet would no doubt extract far more enjoyment from such a day than would the best fisherman of us all, provided such a one thought only of flies and fish. At this point the Kettle River is less than two miles from the international boundary line, which follows its never-varying course up the side of a steep range southward to the river, climbing to the line of almost perpeutal snow, on the summit of the divide between the Kettle and Columbia rivers. This hillside on Saturday was green and gray with pine and granite; to-day it is white from crest to foot with the first of the winter's snows, and ere long the dun mule deer will be forced into the bottoms, and we shall get a few.

Putting my rod together and looping on a cast of flies, Palmer, Seth Green and Montreal in the first instance, I followed the river, casting over all the likely looking pools and runs, but it was useless; not a fin stirred, and a stranger would have pronounced the stream an empty one. But I knew better. Fish are there by the thousand, and next spring they will leap at the fly as gallantly as ever, though for the present their appetites have failed, and other things seem more important than chasing moths and ephemera.

Of fish I got none, not even a rise rewarding a four-mile tramp, yet I am glad I went fishing on that last day of the season. I found coverts well stocked with ruffed grouse, and on the way back a short cut over a spur discovered a draw in which a pack of Columbian sharptails are living, so that the chances are that before long the breechloader will afford as much delight as has the fly-rod. I was almost going to write "more," but that would be impossible.

In a couple of weeks the rifle will be in greater demand

than the shotgun, but as yet the deer are scarce along the river bottoms. On the high divide to the eastward of the Kettle Valley caribou and bear are fairly abundant, and each of its kind is good. The caribou bulls are as large as those of Newfoundland, and the bears, according to the bar-room hunters, never make more than a single bite of a man. Well, perhaps time will reveal much, and some day I hope to tell FOREST AND STREAM all about a successful bear hunt up among the peaks of the divide. ST. CROIX.

Dogs That Go Into Society.

"EVERYTHING is perfect that comes from the hand of the Creator," wrote Jean Jacques Rousseau, cynic and skeptic though he was; but a certain class of his fin-de-siècle countrymen, and particularly of his countrywomen, are doing all they can to belittle the famous writer by the peculiar efforts they are making to beautify and bedeck God's handiwork, and by imposing upon certain of the four-footed beasts quasi-human habits which ill-become them and, in the end, simply tend to make them look ridiculous. I refer to the craze just now raging in Paris for creating a class of so-called "fashionable dogs"—an aristocratic canine society made up of chiens du monde as distinguished, not only from the common curs of the street, but from the well-fed, well-kept, naturally clothed companions of the bourgeoisie and professional and business people. It is not enough to possess an animal of pure breed and faultless manners; he must be of blue-blooded canine stock, perfumed and pampered with luxuries and dressed à la dernière mode de Paris, in costumes to suit the weather, the particular season of the year, and even in accordance with the etiquette of certain social functions which he may be called upon to attend. To meet the requirements of this new state of society which has arisen in the fashionable world of dogs the "Canine Costumier"—or, in plain English, the dogs' tailor and dressmaker—has become an absolute necessity, and one of the leading ladies of the "movement" assures me that very shortly these aristocratic pets are also to have their Directory—giving their names and addresses, their pedigrees, distinguished qualities and reception days!

Any visitor to Paris wishing to convince himself of the absolute correctness of these statements and to verify the details which follow has but to step into the Galerie d'Orleans, at the Palais Royal. There he will find displayed in two windows of the "Tailleurs pour chiens" an extraordinary collection of ornaments and costumes, which go to form the outfit of the up-to-date society dog of "la Ville lumière"! For some years past the ancient glories of the magnificent Palais Royal have been gradually passing away. In the earlier days of the republic it was the home of almost all the fashionable jewelers of Paris, the arcades literally blazed with diamonds and precious gems, and the person in search of a handsome present invariably turned his steps that way. Now the place is dreary and deserted, almost all the jewelers have moved to the boulevards and the Rue de la Paix, a few dealers in mock diamonds remain, and the most striking feature of the once famous Galerie d'Orleans is the tailor for dogs! Sic transit gloria mundi, and the indulgence of fads and fancies takes the place of deeds of charity and chivalry in these days, when gold is a god and the love of luxury a prevailing passion.

Probably no city in the world possesses so many dogs as Paris. Walk the Champs Elysées or the Bois de Boulogne in a morning and you will find such a crowd of canine pets as you could meet nowhere else. Every lady who pretends to any position at all owns one or more, and upon them she spends as much money as would keep a family of poor people. Philanthropists and moral philosophers complain that toy dogs are taking up attentions which should be bestowed upon children, and those who have the future of the country at heart sigh at the spectacle and tremble when they think of the decreasing population. It is useless to preach to these people. They simply reply that they might do worse with their wealth, and that they ought to be rather complimented than otherwise for putting so much money into circulation.

Leaving these social and economic considerations aside, let me detail for you some of the features of this extraordinary craze for dressing up society dogs. A few years ago the classic wrap in blue or brown cloth, hemmed and braided and bearing the arms of the initials of the owner, was regarded as a piece of extravagance; but this is looked upon as a very commonplace covering in aristocratic canine society to-day. Now, in the shops of the Galerie d'Orleans you will find complete trousseaus for dogs of all sizes and all classes—toilettes de reception, mantles for cold days, and waterproofs for rainy days; dust coats for excursions, plaids for railway journeys, and gray linen suits for the seaside. And the imagination of these people who are so anxious to make the life of dear little doggie a really happy one does not stop here. This year they have gone one step further in rendering the sublime handiwork of the Creator ridiculous by providing their pets with sets of fine linen. No society dog which really respects itself would think of possessing less than a dozen undergarments of lawn if it be in good health, or silk or surah if it should be subject to colds or nervous complaints! Then if the "poor darling" should be troubled with watery eyes, a dozen embroidered cambric handkerchiefs become an absolute necessity. And this is not all. His delicate little feet must be kept dry by boots, made to measure, of leather, or India rubber, to suit his particular temperament.

But, says my reader, surely these are exaggerated cases, and such foolishness cannot have taken any great extension. I made particular inquiries upon this point and found that the dogs' tailors in Paris can now count upon something like 5,000 or 6,000 regular customers from whom they receive orders for "garments" of one sort or another several times a year. One of the tailors took me into his confidence so far as to say: "For the most part our clients belong to the higher classes of society—people who can afford to pay high prices and who pay ready cash. The business is, therefore, a very profitable one, because the materials used do not cost very much and we sell them at a large profit. For instance, I recently had a very remunerative order from the daughter of a diplomat in Paris. She was about to be married, and I made a set of gala clothes for her dogs to match the liveries of the lackeys in her father's household. As the bride entered the residence after the ceremony, her three dogs were awaiting her at the top of the grand staircase dressed in these costumes with bouquets of orange blossoms attached to their collars and held in a silken leash by one of the footmen. The effect was marvelous! Then again, the daughter of a rich banker, recently married, had another idea. I made to measure for each of her dogs—she had half a dozen—regular bridesmaids' costumes of white faille embroidered with lace and garlanded with orange blossoms, while on their feet they wore small slippers of white satin, also specially made to measure!"

These details naturally exicted one's curiosity to the utmost, and I was led to ask for a complete description of the trousseau of a really select society dog. First of all, I was informed, the collar has been changed from a mere steel or leather circle of servitude into a purely decorative article. That most in vogue just now is the shape of a man's collar made of white celluloid with a bow in red celluloid fixed in front, while a little silver or gold Swiss bell is attached to take the place of a pin. Then on the left "ankle," in the case of a really fashionable lady dog, a gold bracelet, ornamented with colored stones (in some cases real emeralds and rubies are used) must be worn. This also may have a gold or a silver bell attached to it.

Now comes the trousseau proper. This is composed of undergarments for night and day in lawn or silk for summer and fine flannel for winter. Then there are the pocket handkerchiefs, in linen embroidered with lace, which are placed in a pocket on the left side of the overmantle and bearing the arms or initials of the owner. The boots and shoes are of various patterns and materials—kid, calfskin, patent leather, or India rubber. The latter find most favor, and they are laced or buttoned au choix. Bow-wow has his boots put on when he goes out and they are taken off for him at the door as he comes in, so that he does not dirty the carpets or the staircase after his promenade in the Bois.

As to costumes, your well-bred lady of the canine aristocracy is furnished with a morning gown for the house made of muslin or surah for the hot summer months and of flannel for the winter. The costume de ville is made of all sorts of materials to suit the weather and the occasion, and just now it is adorned with a fashionable collet and Medici collar. The robe may be trimmed in colors to match those of the dress of the dog's mistress. Then we have the seaside costume made of white piqué or of other light stuffs, and completed with a small sailor's hat to shield the delicate eyes of "tou-tou" from the glare of the sun. One fanciful Parisienne has determined to complete the costume during her visit to Trouville this summer by having a small parasol made of red silk which will be held upright in a ferrule fixed in position upon the dog's back. This will also serve as an en-tout-cas in case of showery weather, to keep the glossy hair of the "precious beauty" dry.

Could the ingenuity of woman with nothing better to occupy herself find anything more to ameliorate the condition of the canine race? Scarcely, you say. But we have not yet quite completed our survey of the creature comforts of the Parisian society dog. Let us not forget the toilet requisites, for these include quite a collection of combs, fine and coarse, of brushes, of fancy soaps and of perfume bottles. Then there is doggie's cot, upon the arrangement of which just as much care and luxury are bestowed. The most favored form at this moment is the Chinese pavilion upholstered in silk and covered in its exterior with white skin. Little windows are fixed in the walls for the double purpose of affording amusement for the spoiled inhabitant as well as giving him the fresh air necessary for his well being. The price of these luxurious little habitations for the "mashers" of modern dog society ranges from $25 to $100. As to the complete trousseau—upon what the tailor called a "modest scale"—the following figures were quoted:

Collar with imitation stones	$2.50
Bracelet with imitation stones	1.75
Half dozen undergarments	12.50
Half dozen pocket handkerchiefs	1.25
Two double pairs of boots (four feet)	5.00
One morning costume	3.50
One walking costume	7.50
One traveling costume	5.00
One seaside costume	5.00
One costume de ceremonie	12.50
One winter coat with fur collar	8.50
	$65.00

Add to this $35 or $40 for a cot, and you have at once a bill of $100. And this the tailor assured me was a very ordinary sum to spend upon a dog's outfit in Paris. Many ladies will pay as much as this for the collar and bracelet alone, ordering gold to be used and inlaying it with real stones. These luxuries in the way of jewelry have naturally greatly increased the number of dog stealers, who now and then make a splendid "haul" when they take a guardian unawares and run off with a fashionably dressed society pet. One's sympathies in this case are almost irresistibly on the side of the thief.—New York Times.

Massachusetts Fox Hunters.

THE greatest military event in the annals of Blandford since the good old "training days" transpired to-day. It was the first day of the first annual hunt of the Blandford Fox Club. The armed forces of the town were mobilized to the north of the Center at early dawn. All day the whole north end of the town bristled with firearms like a buckwheat field with stubble, and the whole horizon was filled with the banging of shotguns, the hoarse, red-bearded, warlike admonitions to the hounds, and the continuous music of the dogs' voices. One accomplished fox was shot at a dozen times, and carried his tail with him at night. In the evening the forces again mobilized at the Mountain House—the hard-legged hunters who had borne the labor of the day, and with them about thirty associate eating members—to enjoy an excellent dinner. On the floor by the hearth of the main room of the hotel were thrown three fluffy, red pelts, the product of the day's campaigning. It was a very pleasant occasion—a day of healthful sport and tramping in the cool, crisp, blue-skied fall day, and an evening of wholesome social intercourse for men who have far too little of it in their lives. The first Blandford hunt was a success, and the club which instigated it has proved its right to existence.

The shooting began with the first light of the day, and within the first hour two of the foxes had been killed. They were slain together by the veteran hunter, L. C. Nye, who got the second by making just one step from his tracks after getting the first. Mr. Nye and his family undoubtedly hold the long-distance fox hunting record which has been established since that veteran fox hunter and all-round athlete, Mr. Samson, of the Old Testament. He shot his first fox at the tender age of nine, and has let but one year go by since then without having at least one to his credit. That was last year, when the grip kept him indoors. He is now just past his seventeth birthday, and is still looking for fox. So far he has recorded 300 dead animals, and has done away with fifteen in one season. The third fox was taken at just nightfall by George Lloyd. The wind was a little high to-day, interfering with hearing the dogs, and with the shooting, and to-morrow, when the hunting will be in the south part of the town, is expected to bring better results. There must have been some eight or ten animals run by the twenty hounds to-day, and in addition there were several mysterious scents taken, which were supposed by the wise to be wildcats.—Springfield Republican.

The members of the Blandford Fox Club got two foxes on their second day's hunt. About twenty-five men and twenty dogs started on the hunt at 6:30 o'clock. The day was not quite so good as the one before, on account of the rain, which set in about 4 o'clock. The two foxes were shot by C. N. Lewis and T. J. Cooley, of Westfield, and there is a possibility that there was another shot by a small party which did not report last night. An exciting incident of the day was the holing of a fox on Merritt Hill. A party started to dig him out, when an excited hound burrowed down the hole and got stuck there, and at last accounts the hunters were working to uncover their dog.

A Solomon Come to Judgment.

SQUIRE HENRY GRELLE, of Beltzhoover, Pa., does not like lawyers. He believes that they stir up too much trouble by dragging musty old books into his office and insisting that he follow the precedents they dig from them. He has the full approval of his constituents. His justice is the sort that is equitable between man and man, and not that misnamed stuff that depends on the technicalities of law books for a standing.

One of Squire Grelle's early cases was brought against a friend of his, who was accused of cruelty to animals. The man had been bothered by a vicious dog, and he shot at it. The bullet cut a piece off its tail, but did no other harm. The trial attracted a large crowd. There was conflicting evidence as to the dog. Some of the witnesses said it was a gentle animal, and others declared that it ought to be killed.

"I will reserf my decision until next weeg," said the squire, after he had heard the testimony.

He was not satisfied as to the dog, and while he had the case under consideration he made some inquiries in the neighborhood. He learned that the dog was bad. But the maiming of it by depriving it of part of its tail was undoubtedly a cruel act, and he did not see how he could get over that, even to favor his friend.

When the day came for him to give his decision it was evident to the crowd that had gathered in his office that he had made up his mind. He called the defendant up.

"You admid shooting this dog?" he asked.

"Yes, I do, squire; but the dog is—"

"Dot will do. Sid down!" And he called the owner of the dog forward.

"Your dog is a bad dog," he said to him.

"No, he isn't squire," said the man; "he's as gentle as—"

"Dot will do. Sid down. I haf my mind made up. I fine the defendant $1 and gosts for shooting dot dog."

There was applause from the side of the room on which the friends of the dog were gathered.

"Order! Order!" commanded the squire. "I haf not vinished. I will fine the defendant $1 and gosts for shooting dot dog, but I will gif him one more shot at the dog."—Pittsburg Times.

Points and Flushes.

Judge Cornell writes of the recovery of the pointer dog Dick, noted in our last issue as missing: "I am glad to announce his return. He had been brought to my house from the kennels at Mount Vernon, and not knowing the house, the moment he got a chance to run out he made for the Grand Central Depot, with the intention, no doubt, of going back to the kennels. As he had no ticket he was nabbed by an official at the depot, who took him to his home in Morrisania, and there he was found."

Dr. F. J. Tompkins, of Lansingburgh, N. Y., writes us concerning the weight of the heaviest dog recorded. We regret that we cannot furnish the information. Perhaps some of our readers might give pertinent information on this subject. The Doctor concludes his letter as what you think of a dog that weighs 265 pounds, honest measure."

Canoeing.

THE annual meeting of the American Canoe Association, the full report of which was published last week, disclosed a fairly prosperous state of affairs. Within the year the Association has enrolled a new division, composed of canoeists of the Middle West, formerly the Western Canoe Association; the membership is good, about 1,300; and the Association has a balance of over $1,300 in bank, with no outstanding obligations. With so much in its favor at the present time, there is, however, still plenty of room for advance and improvement in various details of the organization.

That the Association is not only out of debt, but in possession of a substantial sinking fund in case of need, is due mainly if not entirely to the board of governors, a body created in 1893 to control the general finances of the Association, with a view to the avoidance of such deficits as had occurred at times. Not only was the general plan of this board ably conceived, but the personnel has always been high, including some of the oldest and most devoted members, and its work has been in every respect beneficial. It has restrained some executives and aided all; and it is to-day an indispensable part of the A. C. A. machinery. Under it the policy of the Association has been to limit the yearly expenditures to something less than the estimated receipts, not for the sake of accumulating a surplus, but to avoid the other extreme, which at times has threatened serious disaster and imposed a great amount of labor on a few faithful officers in clearing off the debts of their predecessors. That there is a surplus is a matter for congratulation, though merely incidental.

WHILE there is no fear at present for the future of the Association, there are some details disclosed by the reports which are far from satisfactory. The office of secretary-treasurer involves a good deal of work at best, and when the incumbent is of the right sort, as was decidedly the case this year, he will find plenty to do, both in office work and while in camp. A great deal of the work done by the retiring secretary-treasurer was thrown on him by the neglect of other officers and members of committees. To mention only one detail, the reports of division officers and committes, on which the secretary-treasurer must base his report, were nearly all delayed to the last few days preceding the meeting, one division failing to put in any report at all. The business year of the Association closed on Oct. 1, four weeks prior to the meeting, and as a matter of fact the actual business of the year ends with the meet in August, so that there are two months in which to close accounts and make up reports. There are some small accounts, especially those of the camp site committee, which it is difficult to close; but most of the reports, especially those of the division pursers, might easily be in the hands of the secretary-treasurer by the first week in October. If this were done the secretary-treasurer would not only be saved much unnecessary work, but he would be in a position to put in a much more complete report than at present.

It would be interesting and of value to the Association to compare the reports of 1899 with those of previous years, but this is not easily possible. The reports are not made out in the same manner by all officers, and in some years they are incomplete or involved. We find the following in the Year Book of 1895, made by Secretary-Treasurer George P. Douglass, and appended to his full report:

Gross cost of 1894 meet	$1,052.00
Net cost of 1894 meet	285.67
Gross cost of regatta	71.54
Net cost of regatta	16.54
Net profit on Year Book	178.92

This statement is remarkable not only for its favorable showing as to finances, the surplus being increased by over $300, but it tells to the members just what they should know—how much the Association is paying for its fun.

It would be impossible for any one but an expert in A. C. A. finances to compile such a statement for the present year, and those intervening back to 1894; but this is just what is wanted to show how well the business is managed from year to year. All that can be said as to the year just closed is that the expenses seem to have been very heavy, and the surplus for the year very small, being only the $50 demanded by the board of governors. Just why this is so we are unable to say after a study of the reports. There was no Year Book to count this year, either as profit or loss; the receipts from camp fees were larger than usual. The largest expenditure was on account of the camp site committee, and the items for both labor and material are heavy, especially as prices range in Canada; but it is a fact that the committee experienced great difficulty in obtaining labor, and had to pay high wages. It must be said that never in the history of the Association has the work been as satisfactorily done as by Mr. Wright, who practically was the camp site committee, a fact to which all present at the meet bore willing testimony. The arrangements were such as to provide both tents and cots for rental at a moderate expense, and all reasonable expectations were more than fulfilled.

There is no question that the Association expends a great deal of money in the arrangements for a camp of two weeks at which the members pay for their transportation, lodging, board and all expenses. Why the meets cost so much, especially when there is no special steamer needed, is a hard question to solve, but it is an important one. Theoretically the Association merely provides a meeting place or camp site, the members pay to get there, pay for their tent floors and labor, pay for their meals and pay the camp fee of $1 as well. Practically it costs the Association from $1 to $5 or more for each member in camp.

FOR some years past up to 1898 the Association has published the Year Book itself, with advertisements in the front and back. This has entailed some extra work on the secretary-treasurer, but has when properly managed netted an average of $150 profit to the Association. Two years ago the officers entered into a contract with a certain sporting publication, by which, in consideration of it being endowed with the sole right to the title of "official organ," it was to print and mail the Year Book free of expense to the Association, and also to publish a certain amount of canoeing news each month, and to send a copy of the journal free to every member of the Association. As a plain business proposition it was evident from the start that no established paper could, as a matter of business, afford to give away at least a thousand copies per year with no compensation save a possible small profit on the Year Book; and such proved to be the case. The canoeing news which served to leaven a large mass of advertisements consisted of the ordinary official announcements and such personal and club items as canoeists chose to contribute, finally dwindling down to a department title and some comic almanac jokes. The Year Book, though it cost the Association nothing, was the worst ever published—in small type and of such a size that it cannot be filed or bound with the uniform series extending back to 1888. Before the year was out the concern begged off from its contract.

Last year, in spite of this experience, a similar contract was made with another monthly journal, which immediately proceeded to array itself in large type with all the dignity of "the official organ of the American Canoe Association." The experiment resulted much as before—the Year Book was not mailed to any members prior to the meet, and the complaint is generally made that members have received neither their books nor the monthly copies of the journal. A motion was made at the meeting in camp, after hearing the complaints of members, to terminate all business relations with this concern, but it was withdrawn for the time, as the Year Book had not been delivered. At the recent meeting the officers announced that their dealings with the concern had been must unsatisfactory, and recommended that the agreement be terminated.

In 1895, when it was desirable to have some direct and speedy means of communication between the officers and members, the FOREST AND STREAM was chosen by the executive committee for this purpose, both as being a weekly journal and as the leading supporter and exponent of canoeing in America. The title was purely an honorary one, conferred for the purpose of giving due authority to the official notices, and it was of no pecuniary advantage to the FOREST AND STREAM. During these many years the FOREST AND STREAM has published promptly all the official notices of the Association, including the names of applicants for membership, the proposed amendments to the rules, and similar matter which it has been necessary to present promptly and publicly to members. It has also published a long and detailed account of every meet and every business meeting of the Association, reporting them at its own expense. Acting solely on their individual responsibility, the A. C. A. officers of 1898, without authority from the executive committee, pretended to withdraw the title of official organ from the FOREST AND STREAM and to confer it exclusively upon one other journal, omitting the name of the FOREST AND STREAM from the Year Book of 1898. While doing this they modestly suggested that for the good of the Association the FOREST AND STREAM should still continue to publish the official notices, which otherwise could only appear irregularly and at long intervals. As a part of this policy, continued through the past year, the officers of the A. C. A. have used their influence to divert all canoeing news from the FOREST AND STREAM except at times when they specially desired to give publicity to some announcement.

After the complete failure of the two monthly papers to live up to their contracts, the whole scheme has been abandoned, and the Association will resume the publication of the Year Book itself. Without in any way making amends for the illegal and discourteous action of its officers, it has now passed a resolution that the FOREST AND STREAM is still an official organ. This in itself is superfluous, as the action of the executive committee in 1885 has never been rescinded and still stands.

The question of a canoeing journal is an important one, both here and in England. Both countries have at times had admirable monthly papers or magazines devoted exclusively to canoeing; and both have failed to support them. For some years past the canoeing department of the Field, under Mr. Baden Powell, has been the best representative of British canoeing, and for nearly twenty years the FOREST AND STREAM has represented the sport in the United States and Canada. While on the one hand few will subscribe to large weekly papers solely for the sake of the canoeing news, on the other it has been repeatedly proven that the sport cannot sustain a paper, even a small monthly, devoted to it alone.

If canoeing news is to be published at all in the present condition of the sport, it must be in some large paper with many other and more profitable departments. The FOREST AND STREAM still proposes to continue its canoeing department and to publish such canoeing news as can be obtained at a reasonable outlay compared with the return. How much this may be depends largely on the Association and on canoeists themselves in lending their aid. It must be recognized that there is not at the present time one-tenth of the amount of interesting canoeing news that there was a dozen or more years ago, and also that it is much more difficult to obtain the little that there is. When the master minds of canoeing—Butler, Barney, Gibson, Vaux, Ford Jones and Oliver—were working to improve the canoe and its fittings, they took a delight in making known to all canoedom the lines of their new canoes and the details of their new rigs. In contrast to this spirit is that of some later canoeists who, happening to own fast canoes, have guarded them as though their values would depart if their lines were once known to others. The practical improvement of canoes, rigs and camp equipment has almost ceased, and it is now difficult to obtain for publication the details of such small improvements as are still made.

There is a portion of the canoeing fraternity, by no means a minority, which would like the Association to furnish it free of cost a weekly paper containing lines of canoes, plans of rigs, detailed descriptions of cruising waters, and interesting logs of cruises, while at the same time it is unwilling to part with any of its own knowledge for the benefit of others or to take the trouble to write of what it knows. It will probably be a long time before this demand is gratified, and those canoeists who wish to read canoeing news will find it necessary to lend a hand in contributing a part of it themselves. We are always ready to publish news of the right kind; we do not care for photos of convivial camp groups, each member armed with a bottle; for cruises which are interesting only to the participants and not to the canoeing reader; nor for mere formal lists of persons present at canoe meetings and dinners; but we always have space for live news, for details of practical building and canoeing, and especially for the discussion of the rules, actions and general welfare of the American Canoe Association. If the canoeists of America—and especially the members of the A. C. A.—are willing each to do his own small share toward the cause of a canoeing journal which shall fairly represent the sport, we are willing to do ours.

THE most important matter before the late meeting, the amendment of the racing rules, resulted quite as well as could be expected—that is, in but a few changes. The representation at the meeting was not as large as it should have been, but fourteen being present out of some twenty-five or twenty-six members of the executive committee, some of these being proxies. As some of the members were more or less new to the meetings, and reluctant to speak, most of the motions and discussions fell to half a dozen of the older members. At the same time out of a large number of matters brought out in the course of the day's session, most were very fully discussed before a vote was taken or they were abandoned without being seconded.

The proposals for the amendment of the racing rules, though published four weeks prior to the meeting, and involving some important changes, brought out no discussion in print prior to the meeting. Those who were so very active over the faults of the existing rules and the necessity for their amendment in camp seem to have quited down before the time came for the proposal and discussion of amendments. None of the proposers of the amendments were present to explain and advocate them, and it was left for Mr. Smythe to explain them as best he could.

The proposal for a "racing board," as published, seems to have been understood in different ways by different readers. As we understood it, the idea was to create a body with the same duties and functions as the present regatta committee, but elective instead of appointive, and with one member retiring each year. Some of those at the meeting had an entirely different view, that the races at the meet were to be managed by the division regatta committee, and that the proposed racing board was to be purely advisory, to suggest changes of rules, programme, etc. Owing in part to these two different views and to the inability of any one present to explain exactly what was intended by the amendment no action was taken on it; as an additional reason the regatta committee recently named by Com. MacKendrick promises to be satisfactory as far as the immediate future is concerned.

The amendments as published were appended to the report of the regatta committee, though not embodied in it, and it was decided that they could legally be acted on. As was to be expected, after the disturbance of last August, a number of amendments were proposed designed to place the regatta committee directly under the control of the executive committee, or to specify minutely the racing programme. These were opposed by several, on the ground that with a competent regatta committee they were unnecessary and with a poor committee they would still fail of their end, as they would probably be disregarded. The trouble in the present case was largely a personal one between the regatta committee and the so-called Sailors' Union, neither party paying overmuch attention to the rules of the Association. None of these amendments were passed.

The much-disputed point of the trial race was settled by a rewording of the present rule, making the trial race compulsory in the event of nine entries for the trophy. This was a compromise with those who demanded that there should be a trial race, though only one man was entered for the trophy. In itself it is an absurdity, as there is no need of a trial race to select fifteen starters from a field of ten entries. As far as the incidental point of more sailing races on the programme is concerned, a committee which knows its business will probably give them without being compelled to do so by the constitution, and on the other hand will omit them when but two or three sailing men are present to race.

The programme of the meet races must necessarily change from year to year to meet the altered conditions of canoeing, one class of canoe going out and another coming in; so that it is impossible to embody the racing programme as part of the constitution, by-laws and racing rules, as some would like at the present time. The racing programme is prepared early in the season and published in the FOREST AND STREAM; all who do not like it have the opportunity to file public and timely objections; and it is reasonable to presume that such objections will be considered by the regatta committee. By this means it is possible to vary the programme as circumstances may require, and yet to comply with the expressed wishes of the racing men. If the racing men decline to make known their opinions of the programme, or the regatta committee refuses to act upon such suggestions and criticisms as are thus presented to it, no amount of legislation will make the matter right.

THE statement was made at the meeting that such prizes as were prepared but not won and awarded at different meets had been given away as trophies, and that members were in possession of prizes which they had never won. It was ordered that in future all prizes not

won and awarded to the winners should be destroyed.

The discussion as to the camp arrangements, led by Mr. J. N. MacKendrick, brought out a general expression of opinion in favor of simpler and less expensive and elaborate arrangements in the way of numerous headquarters tents and similar accessories of the camp. and will probably result in a saving of money in the future.

Atlantic Division A. C. A.

The following committees have been appointed to serve the Atlantic Division for the season of 1900. A meeting of the executive committee and a conference of the committee chairmen will be held some time this month:

Regatta—M. D. Wilt, chairman, Philadelphia, Pa.; W. A. Furnam, Trenton, N. J., and Chas. Eastmont, Brooklyn, N. Y.

Transportation—Jos. O. Rickey, chairman, Trenton, N. J.; Henry M. Dater, Brooklyn, N. Y., and A. S. Fennimore, Philadelphia, Pa.

Entertainment—H. D. Hewitt, chairman, Burlington, N. J.; Walter F. Smith, Trenton, N. J., and H. W. Fleischman, Philadelphia, Pa.

Camp Site—Jos. A. Fritz, chairman, Trenton, N. J.; J. Hal. Lukens, Burlington, N. J., and T. W. Cook, Philadelphia, Pa.

Signal Officer—A. L. Hattersley, Trenton, N. J.

Yachting.

The success of Columbia has settled most satisfactorily the nasty comments which have been current since the first of the season upon the selection of Captain Barr as her skipper, and the more recent attacks upon Mr. Iselin and his amateur associates. The "three-skipper" theory that was so warmly advocated a few weeks since by various American papers has received a quietus, and is likely to be heard from no more. The American plan of sailing these great yachts by the aid of a commission composed of owner, designer, sailing master and several expert amateurs, as tried so successfully in Puritan, Mayflower, Volunteer, Vigilant and Defender, has again succeeded in Columbia. The true value of the expert criticism which has backed up the three-skipper plan is shown by the fact that one of its earnest supporters wrote of "Haff, Terry and Grayling," assuming that the latter was a yacht skipper instead of one of the most noted of the older racing schooners.

Apart from the widespread and almost universal interest in the recent races as a mere matter of sport, there is a large and growing interest throughout the country in the technical issues involved in the construction of such yachts as Columbia, Shamrock, Genesee and Beaver. The number of yachtsmen (and especially of intelligent young amateurs, who aspire at least to a full knowledge of their own craft, if not to the ability to design and construct them) who are interested more in the technical points of design than in the mere sentimental and political side of the races, is greater by a hundred-fold than in the days of Puritan and Genesta. The stuff that has been printed this year, in greater volume than ever before, in answer to this demand for information, is calculated to do very much more harm than good through the errors and misstatements which are its chief characteristics. The magazine articles on yachting, of which the number is legion, are all pretty much of one type, beginning with the musty fable of "Your Majesty, there is no second," and following this up with the useful information that the schooner America was modeled after a duck and the "sloop" Columbia after an American clipper ship, the secondary statements being just as reliable and important as these primary ones.

The technical and scientific journals as a rule are no more accurate than the popular magazines. The terms "fin-keel," "bulb-fin," "semi-fin," "centerboard type," etc., are handled glibly enough, but with no regard to accuracy. Among the many articles of this type which have come under our notice is an editorial in a recent issue of the American Field, in which the old America is described as a centerboard yacht, and a representative of the American centerboard type. After this it is not surprising to find that the writer of the article in question is of the opinion that had Columbia "been relieved of the dead weight of her keel" and had she been a centerboard boat she would have attained a speed of thirty miles per hour.

The current issue of the Scientific American has an article on yachting on the Great Lakes which is misleading in the extreme in its statement that certain of the Lake yachts are modeled after such famous craft as Gloriana, Vigilant, Volunteer and Puritan. The cutter Neva, now of Chicago, mentioned as modeled after Gloriana, is utterly unlike that noted craft; the Detroit yachts City of the Straits and Alice Enright, described as similar to Volunteer, are no more like her than are dozens of other centerboard sloops and cutters of thirty to forty feet; the Commodore Gardner, said to be like Vigilant, is a small fin-keel yacht, of a totally different type from the big Cup defender, and Vencedor, which is classed with Gloriana and Wasp, is a counterfeit of the bulb-fin Niagara, with nothing about her in proportions or type to suggest a relationship to the two keel cutters.

Presented in pleasing form, with some good photographic reproductions of noted yachts to give "an air of verisimilitude," and embellished with picturesque incidents of an imaginary sort, these technical fables pass as truth with many who are honestly seeking for information, and who are thus misled and deceived by authorities which pose as trustworthy.

There is at the present day no lack of accurate and reliable information on the leading technical topics presented in popular form by the current periodicals, but the subject of yachting is a notable exception. The same journals which present to their readers the views of recognized experts in such subjects as electricity, railroad and civil engineering, when yachting is in fashion, as it has been this year, are satisfied with any sort of crude rehashing of ancient fables and modern fiction. There has never been a time when reliable information on the leading technical topics of the day was so easily accessible to the general reader in the reviews, the monthly magazines and the semi-technical periodicals, but one may look for a long time before finding anything trustworthy on the subject of yachting.

In default af any official announcement from Com. Morgan and Mr. Iselin, it is impossible to say whether Columbia will be sent to the Mediterranean next spring and later to British waters, and the positive reports now current that she will and will not are equally unreliable. It is probable, however, that the trip will be made, with Capt. Barr, of course, in command. What she will race with on the other side is another matter. If Shamrock were improved and Valkyrie III. fitted out, the three would make some good racing; but the other yachts, Meteor II., Ailsa, Satanita and Britannia, the first three yawls, would have no chance against either of the three even under the girth rule by which the excessive draft of Columbia, Shamrock and Valkyrie would be taxed.

The international series of 1895 and 1899 have involved an expenditure of at leas. a milliion dollars and have, outside of the trial races of Vigilant, Defender and Columbia, resulted in five international races in all, in two of which the result was effected by accidents. This is at the rate of at least $200,000 per race, making it an expensive sort of sport. In return for this outlay, while the relative improvement of Defender over Vigilant and of Columbia over Defender has been pretty accurately gauged, but little is really known of the possibilities of either Valkyrie III. or Shamrock. Before any more money is wasted in building new 90-footers, it would be well worth while to give the designer of each of these boats a chance to alter her and to try her again if the owners of Columbia are willing to meet them. We have no idea that either can be made equal to Columbia, but they could probably be so much improved as to give good sport and to win some races in a continued series. The owner of Defender is well able to send her abroad to accompany Columbia, and in the hands of Mr. Duncan and Capt. Rhodes, with her old crew, she would be quite able to take care of herself in the quartette.

The continued racing of these four great yachts through next season would be of inestimable value to their designers and to the yachting world as well, and unless the present owners of Valkyrie III. stand in the way it should be quite practicable. It seems certain that the few races of a Cup series are not enough to give a thorough test of any yacht's merits. It is through the local trial races rather than through the international Cup races that the true merits of Vigilant, Defender and Columbia are known. In view of the enormous cost of these vessels, it is most desirable, in the interests of scientific designing, that they should be raced until the true merits of each are established.

The Eastern Challenge Cup.

Boston, Oct. 30.—*Editor Forest and Stream:* I inclose herewith a copy of the announcement sent by the Eastern Y. C. to members of the New York, Larchmont, Seawanhaka Corinthian, and Atlantic yacht clubs relating to the Eastern challenge cup, which may be of interest to you. The conditions governing challenges and racing were presented by the regatta committee at the fall meeting of the Eastern Y. C., and were adopted.

Although at present I am not in a position to say anything definite about yachts to be built, such information as I have leads me to believe that the prospect for the building of challengers and defenders is very good.

Edw. B. Roberts, Sec'y.

Eastern Y. C., Oct. 25.—To the Officers and Members of the New York, Seawanhaka Corinthian, Larchmont and Atlantic Yacht Clubs: Gentlemen—At the fourth regular meeting of the Eastern Y. C., held last evening, the regatta committee, under instructions from the Council, presented the following schedule of conditions to govern races for the Eastern challenge cup; this schedule was adopted by the club, and the secretary instructed to give notice of it to all concerned.

It is the hope of our regatta committee, and the club generally, that competition for this cup will promote the building of a popular class of yachts which will be seaworthy, strong, fast and easily managed, and will be comfortable cruisers, which after a few seasons' use will still be good serviceable yachts, even if no longer at the top of the class.

The Eastern Y. C. cordinally invites you to challenge for the cup, and hopes that you will approve its plan, and show such approval by building challengers.

William S. Eaton, Jr., Sec'y.

Conditions to Govern Races.

1. The Eastern challenge cup is presented by the Eastern Y. C. as a perpetual challenge cup for competition by the New York, Seawanhaka Corinthian, Larchmont, Atlantic and Eastern yacht clubs, and such other American yacht clubs having stations on salt water as may from time to time be added to this list by consent of a majority of the clubs already upon it.

2. The yachts in competition shall always be single-masted vessels, with or without centerboards, with a waterline length of not less than 39 or more than 46ft., in racing trim without crews aboard; the half sum of this waterline length plus the square root of the sail area shall not exceed 51ft., taking as the sail area the space included within straight lines running from the mast at top of boom, thence successively to the outer edges of the outermost sheaves at boom end, gaff end, topmast head, bowsprit end, and thence to the point of beginning, when the mainsail is dry and fully hoisted. The outhaul of the spinaker boom when swung forward from the mast shall not extend beyond the outer point of measurement on the bowsprit. No sail except the main topsail shall be permitted to extend beyond these lines of measurement.

3. The ballast shall not exceed 55 per cent. of the actual displacement in racing trim without crew aboard, and shall not be less than 22,000lbs., including inside and outside ballast, with its bolts or other special fastenings, and metal in fins or centerboards.

The load waterline plane shall not exceed 80 per cent. of its circumscribing parallelogram.

4. The frames, beams and planking or plating shall not be constructed of any materials other than wood, iron or steel.

5. A builder's and designer's certificate of compliance with the conditions of clauses 3 and 4 by all intended competing yachts shall be furnished to the club holding the cup before July 15 of the year in which the yachts are to race.

6. All challenges shall be in writing and received before Jan. 1 of the year of the proposed race by the club holding the cup. Before April 1 of that year the club holding the cup shall determine and announce the particular conditions to govern the races, which shall be held between Aug. 1 and September 30.

7. Before July 15 each challenging club shall notify the challenged club, in writing, of the name and ownership of the yacht they have selected to represent them; and before Aug. 1 the challenged club shall notify each challenging club, in writing, of the name and ownership of the yacht they have selected to defend the cup.

8. In case there shall be more than one challenge for one year, the challenging yachts shall sail a series of races, under the management of the club holding the cup, and the winner of the series, or of a sail-off in case of a tie, shall be accepted as the challenger for the year. Such selected challenger, or the sole challenger, shall contest for the cup in a series of races—best three out of five.

9. The races between the challenging yachts and between the final challenger and the defender shall be alternately to windward or leeward and return, and an equilateral triangular course, the total length of a course to be not less than 24 nautical miles. These races shall be sailed without time allowance, in waters to be determined by the club holding the cup, and under their management and rules, so far as they are not in conflict with these terms.

10. Before the final races for the cup are sailed between the challenging and defending yachts the clubs represented by them shall exchange models of the said yachts, such models to be not smaller than a scale of ½in. to the foot.

11. The clubs which are parties to a challenge may agree upon any terms not inconsistent with clauses 2, 3 and 4; and, excepting this clause, and clauses 2, 3 and 4, these terms may be amended in any year between Oct. 1 and Dec. 1, by vote of a majority of the clubs then named herein. By unanimous vote, at any time, of all clubs, all these conditions, or any part thereof, may be changed.

12. If for any reason the club holding the cup at any time should be dissolved, the cup shall revert to the club which last previously held it.

Approved Oct. 24, 1899.

New York Y. C.

The fifth general meeting of the New York Y. C. was held on Oct. 26 at the club house, with Com. J. P. Morgan in the chair. Sir Thomas Lipton was proposed for honorary membership by Com. Morgan, seconded by Vice-Com. Ledyard, and unanimously elected. Secretary of War Root and Capt. R. D. Evans were also elected to membership, subject to a vote at the next meeting. Votes of thanks were passed to the Dock Commissioners and to private parties for courtesies extended during the Cup races. The Cup committee made a very brief report, to the effect that "Columbia having won three out of five races of the international series, the trophy remains with the New York Y. C." A committee including Vice-Com. Ledyard, Rear-Com. Belmont, Messrs. Lloyd Phœnix, Philip Schuyler and Geo. L. Rives, was appointed to draft resolutions thanking Com. Morgan, Messrs. C. Oliver Iselin, W. Butler Duncan and others connected with the successful defense of the Cup. The following nominating committee was appointed:

Messrs. C. Oliver Iselin, Seymour L. Husted, Jr.; Henry F. Lippitt, Oswald Sanderson, Harrison B. Moore, Philip Schuyler, Edward M. Brown, Arthur Ingraham, Francis H. Davies and J. Searle Barclay.

A letter was read from Sir Thomas Lipton thanking the club for the privileges of its stations and club house. Sec'y James Craig, of the Royal Ulster Y. C., presented to the club a set of framed photos of the new R. U. Y. C. house, and a vote of thanks was passed. The following applicants were elected to membership:

J. Willis Martin, Charles F. Stoppani, Joseph Stoppani, Charles R. Porterfield, Benjamin Blossom, John E. Knapp, Clarence L. Collins, Commander Charles T. Hutchins, U. S. N.; Lieut. William J. Maxwell, U. S. N.; Alphonse H. Alker, J. Arthur Hinckley, E. N. Sells, Commander L. C. Logan, U. S. N.; Lieut. Chester Wells, U. S. N.; Lieut. J. R. Brady, U. S. N.; Lieut. Edward Simpson, U. S. N.; Frank J. Gould, Naval Constructor Thomas F. Ruhm, U. S. N.; Surgeon W. S. Elliot, U. S. N.; Ensign F. E. Rigely, U. S. N.; Paymaster R. T. M. Ball, U. S. N.; Capt. George C. Reiter, U. S. N.; Henry J. Robert, Pay Inspector I. G. Hobbs, U. S. N.; Mortimer L. Schiff, and Eugene Lentilhon.

On Tuesday evening, Oct. 31, a reception was tendered by the club to Sir Thomas Lipton at the club house, a number of members, including Mr. Iselin and his associates on board Columbia, being present.

Sir Thomas Lipton.

On Nov. 1 Sir Thomas Lipton sailed from New York on the American Line steamer St. Louis, being escorted to the pier by a brass band and a delegation of distinguished citizens. Before leaving he was presented with a loving cup by some of those who had been his guests on the Erin; and another loving cup, to be paid for by popular subscription, will be made and forwarded to him. Shamrock, in her ketch rig, was towed from the Erie Basin Dry Docks to the anchorage grounds near Bedloe's Island, where the Erin laid, on Monday night, the two being ready to sail on Tuesday, but an easterly storm kept them in harbor. On Wednesday they got under way, but the storm was not yet over, and they anchored off Staten Island. On Thursday they started at 8 A. M., and passed out to sea, Shamrock in tow of Erin being reported off Fire Island at 1:10 P. M.

William H. Webb.

THE last and one of the greatest of the old-time shipwrights who made the United States famous in all the waters of the world died in New York on Oct. 30. We are indebted to the New York Times for the following:

William H. Webb, in his day one of the best known steamship builders in the United States, and up to the time of his death one of the foremost figures among the authorities on marine architecture, died suddenly yesterday at his home, 415 Fifth avenue. He retired from shipbuilding years ago, but continued to interest himself in large financial enterprises. His father, Isaac Webb, had been a shipbuilder before the days of steam navigation, and the son was a pioneer in the construction of steam vessels of large burthen for freight and passenger service.

He was born in this city June 19, 1816. He was educated privately and in Columbia College Grammar School, learned the shipbuilding trade in his father's yard, and as early as 1840 had established a shipyard of his own on the East River, between Sixth and Seventh streets. From this yard a large number of steamships were turned out under contract and sent to all parts of the world. The United States, a vessel of 2,500 tons, was one of these, which made an international reputation. She was bought by the Russian Government and converted into a sloop of war just prior to the Schleswig-Holstein war. This steamer was launched at the Webb yard in 1845. In 1865 Mr. Webb built the Great Admiral under contract with the Russian Government.

During the Rebellion no shipbuilder in the North was more active in assisting the Union cause. He gave the advantage of all of his experience to the Secretary of the Navy, and designed several of the first men-of-war built after Fort Sumter was fired upon. A number of the Webb ships were bought and used in maintaining the blockade of Southern ports.

What was looked upon as the biggest achievement of the Webb yard, however, was the building and equipment of the ironclad ram Dunderberg for the French Government two or three years prior to the Franco-Prussian war. The experience of the Civil War here had entirely revolutionized the prevalent ideas of war ships, and old captains say that at the time she was set afloat the Dunderberg represented the very highest type of offensive and defensive naval architecture.

The last big steamship built by Mr. Webb was for his old personal friend Charles H. Marshall, and bore the latter's name. She was launched in 1869. After that, having accumulated a large fortune and being already an old man, Mr. Webb retired from the business. Four or five years lated he erected the Hotel Bristol, at Forty-second street and Fifth avenue, partly on the site of his former private residence.

After his retirement from the shipbuilding business Mr. Webb became interested in a number of other commercial ventures. He helped to organize a guano company, which was very successful, and was active in the Central American Transit Company, which ran a line of ships to Nicaragua.

At the time of his death he was a director in the Atlantic Mutual Insurance Company and was heavily interested in real estate. He founded the new Ship Builders' Home in Fordham and devoted a liberal share of his fortune to endowing it. He hoped by this means to revive the industry of shipbuilding in this country, and in the language of the charter "furnish gratuitous education in the art, science and profession of shipbuilding."

The capacity of the home is 400, including the young men students and the aged, decrepit or invalid men who have devoted their lives to the profession. Mr. Webb was a member of the Union League, Republican Club, the National Academy of Design, the Metropolitan Museum of Art, American Museum of Natural History, American Geographical Society, the New England Society and the Society of Naval Architects and Marine Engineers.

He leaves one son, William E. Webb. Another, Marshall Webb, died about a year ago.

Long Island Sound Y. R. A.

A GENERAL meeting of the Y. R. A. of Long Island Sound was held on Nov. 3 at the Manhattan Hotel, with Mr. C. T. Pierce in the chair. The following report of the executive committee, adopted at a meeting on Oct. 27, was read:

A year ago your executive committee recommended the adoption of the so-called "girth rule" of measurement for yachts of over 30ft. racing measurement, that rule having already been adopted by the Yacht Racing Union of North America. In making this recommendation the committee acted in harmony with what appeared to the members to be the prevailing sentiment among yachtsmen, and the Association took action with the recommendation. Unfortunately for the successful appreciation of this girth rule in racing on Long Island Sound, two important clubs, one of them represented in this Association, refused to adopt it, and conducted their races under the local waterline and sail area rule. As a consequence, there was great confusion and embarrassment during the summer of 1899.

The committee believes that it is of paramount importance that there be absolute uniformity in the methods of ascertaining racing measurements, and therefore, while reserving opinion as to the merits of the girth rule of measurement, it recommends that this rule be rescinded, and that the Association readopt the load waterline and sail area rule for all classes.

For the same reason, a desire to bring about uniformity of measurement and classification, the committee recommends that yachts of over 30ft. racing measurement be made with crews aboard; also that classifications above 43ft. be re-established on these lines: Schooners, first class, 95ft. class, 85ft. class, 75ft. class, 65ft. class; sloops, etc., 70ft. class, 60ft. class, 51ft. class.

The yawl rig is evidently growing in favor. A number of yawls have been built during the year, and others have been purchased and brought into the fleets of clubs affiliated with this Association. During the last summer there were several very interesting races for the yawl class. In view thereof this committee recommends the creation of separate and distinct classes for yawls, namely, 43ft. class, 36ft. and 30ft. classes.

The committee recommends making distinct enumerations of the separate classes of cabin and open yachts. This will be merely making a distinct statement of a condition already existing.

The committee recommends that the 25ft. load waterline class of the knockabout yachts be abolished, as the class does not appear to have gained the support that was expected of it, and it is unadvisable to maintain classes which exist practically on paper only.

The committee recommends that the racing division provided for in Rule 3 of the Rules of 1899 be abolished, as the division has only a fictitious existence.

The committee recommends that in all regular races in regular classes time allowance be abolished. At present there is no time allowance for new yachts. We have been gradually working toward the abolition of time allowance for several years, and the committee believes that nothing will be gained by waiting longer. As a matter of fact, shown by the records, the races won on time allowance are very few, as compared to the whole number of races sailed.

The committee recommends that all starts be "one gun" starts, so-called, as such is already the practice in nearly all the clubs affiliated with the Association.

Finally, the committee recommends that those restrictions governing the construction of the 21ft. load waterline knockabout yachts be made uniform with those of the Knockabout Association of Massachusetts. This is desirable in that many more yachts of that class have been built under the Massachusetts restrictions, and in that many Long Island Sound yachtsmen apparently desire liberty to purchase Eastern-built yachts, without prejudicing their chances of winning races in our waters.

The following amendments were adopted:

Rule 2, relating to the measurement of yachts of the 36ft. class and all larger classes, was amended by striking out Classes 1, 3, 4, 6 and 8, and amending Clause 7 so as to read:

Yachts of all classes shall be rated for classification and time allowance by racing measurement, which shall be determined by adding to the load waterline the square root of the sail area and dividing the sum by two.

Clause 9 was amended so as to read:

If a yacht, after having been officially measured, be increased in any dimensions that are a factor in determining her racing measurement, the yacht must be remeasured before starting in a race.

The other proposals of the executive committee were adopted.

The Canada Cup.

ACCORDING to the Chicago papers a challenge for the Canada cup from the Royal Canadian Y. C. is a certainty for next year, Mr. Will Fife, Jr., being engaged to design the challenging yacht, while Mr. C. C. Hanley has been retained by the Chicago Y. C. to furnish a defender. This news is rather premature, as no steps toward formulating a challenge, much less building a yacht, have as yet been taken by the Canadians. While they are anxious to challenge, there is no one but Mr. Jarvis to take the lead in providing and working up a challenger, and as the task is likely to demand undivided attention for several months, to the exclusion of all business, he is reluctant to undertake it. Thus far nothing has been done toward retaining a designer, and the probabilities are that after his success with Beaver the choice would fall on Mr. Arthur E. Payne. Those who know Beaver best are fully satisfied with her provided certain alterations are made.

Apropos of the late races, the Canada cup is still in Toronto, owing to a dispute between the Chicago and the Rochester yacht clubs. After being formally presented to Com. Morgan, of the Chicago Y. C., on the evening after Genesee's third victory, the cup was intrusted by him to the care of Com. Plummer, of the R. C. Y. C., to have a suitable inscription engraved on it. The Rochester Y. C. and the owners of Genesee wished this inscription to state that the cup was won by the yacht Genesee, of the Rochester Y. C., for the Chicago Y. C., while, as the report goes, the Chicago Y. C. wished to omit all mention of the Rochester Y. C. The Rochester men also desired that the cup might be exhibited in Rochester before being forwarded to Chicago. As a result the cup is still in the possession of a Toronto jeweler.

Capt. James Crandall.

AFTER spending a long life at sea Capt. James Crandall was drowned on Oct. 30 off Eastern Point, only a short distance from his home. Capt. Crandall was a Seventh Day Baptist, and after resting from his labors Sunday started out as usual Monday morning in his small sloop to look after his lobster pots.

While he was sailing near Black Ledge the three-masted schooner Wandrian, with coal, from New York for Nova Scotia, came into collision with the sloop and sank her almost instantly. Capt. Crandall could not swim and kept up for only a few seconds. A boat was lowered from the schooner, but no trace of the Captain was found.

The Wandrian put back into the harbor and reported the accident. The Wandrian's captain says that he was on the wind, close hauled and headed for the Race. The sloop was seen sailing close by, and the Captain supposed the schooner would clear her, but suddenly the sloop appeared to swerve from her course and the collision followed.

Capt. Crandall was born at Magouk, Conn., seventy years ago, and was one of the best known skippers on the Atlantic Coast. He had commanded some of the fastest sailing craft afloat. His first charge was the sloop yacht Gertrude. He then changed to the Widgeon, in which yacht he made two trips to Europe. He was sailing master on the schooner Magic previous to her defending the America Cup. For nearly eighteen years Capt. Crandall was on the Fleetwing.

Capt. Crandall, Capt. Thomas Beebe, of this city, and Capts. Wood and Hazleton, of New York, were sailing masters of the Fleetwing in the race with the Henrietta and Vesta, from Sandy Hook to the Needles of Cowes, for a purse of $30,000. During the trip the Fleetwing encountered a gale that swept Wood and Hazleton and several of the crew overboard. The Henrietta managed to escape the gale and won the race.

Capt. Crandall's latter days were spent on fishing vessels, and during the last few weeks he had confined his fishing to local waters. Capt. Crandall leaves two daughters, who reside in the Pequot Colony, and a son, George, who is captain of the Thames River steamer Gypsy.—New York Herald.

YACHTING NEWS NOTES.

Wanda, steam yacht, Stanley Tweedy, of New York, was docked on Oct. 24 in Crane's sectional dock, Erie Basin, for painting, preparatory to laying up. In launching the yacht next day, after painting, she fell and stove in her starboard side, breaking off her masts and smokestack and injuring her deck houses against the side of the dock. She was raised by the Chapman-Merritt derrick Reliance. The damage is estimated at $10,000 to $12,000.

Eugenia II., steam yacht, has been sold by J. G. Cassatt to Mrs. A. S. Van Winkle, of Bristol, R. I.

The annual meeting of the Inland Lakes Yachting Association was held at the Hotel Pfister, Milwaukee, on Oct. 28. Lake Geneva was selected for the next annual regatta, to be held during the last two weeks in August. It was also decided to hold future annual meetings after the wind-up of the annual regatta. A motion to allow each club to enter two boats in each class of regatta events was lost.

The Old Mill Y. C. held its annual meeting at its home, No. 165 Clymer street, Brooklyn, on Nov. 1, and elected the following officers: Com., G. A. Cooper; Vice-Com., Adam Bliethick; Rear-Com., Augustus Eberhardt; Sec'y, Henry Teare, Jr.; Rec. Sec'y, Joseph Buehler; Treas., H. W. Walker; Steward, George Rowbotham; Sergeant-at-Arms, William Myers, and Measurer, Andrew Portavecchia. The new Trustees chosen were D. S. Van Wicklen, Thomas Bird, Charles Terry, Otto Krisch and E. Boyle.

The Knickerbocker Y. C. has just purchased of the Stovier estate, at College Point, L. I., the grounds which it has leased for several years. The property is about 200 by 300ft. and cost $6,200, which sum will be raised by subscription, two members having already subscribed a large portion of it. This gives the club a permanent home in a location which experience has proved is a very desirable one.

The annual meeting of the Jamaica Bay Y. C. was held at the headquarters, corner of Broadway and Kent avenue, Brooklyn, on Oct. 28. The annual report stated that the club had acquired thirteen new members in the past year and had paid off $3,500 of the bonds. The following officers were elected: Com., H. F. Hewlett; Vice-Com., Benjamin F. Daley; Rear-Com., Oscar M. Lipton, all re-elected; Fleet Capt., L. R. Jaeger; Treas., M. H. Christopher; Chairman House Committee, George A. McDermott; Chairman Regatta Committee, John C. Lefferts; Chairman Membership Committee, C. V. Dykman; Chairman Entertainment Committee, Cornelius W. Hay; Board of Directors, John J. Jones, Theodore B. Englehardt, and John B. Sabin; Rec. Sec'y, Charles P. Daley; Fin. Sec'y, A. C. Christopher.

The Lakeside Yacht and Boat Club, of Syracuse, opened its new club house at Lakeside on Oct. 30.

The Royal St. Lawrence Y. C. held a metting on Oct. 26 at the Windsor Hoetl, Montreal. The questions of a new measurement rule and of scantling restrictions were discussed at length, but both were left to the coming sailing committee. The agreement made with the White Bear Y. C. settles these points so far as the international races are concerned, but the club is desirous of amending the rule for the benefit of the local fleet. The following resolutions were adopted:

Resolved, To make an arrangement with a company to build and repair yachts, rent storage shed from the club, and provide a steamer for towing yachts to races to be held at various points on Lake St. Louis and taking out members wishing to watch the races.

The report from the committee on upper lake station read:

Resolved, That for the present no definite action be taken until the arrangements re the steamer be further advanced;

That new measurement rule be left to incoming sailing committee;

That the action of the special committee on White Bear agreement be confirmed.

Rifle Range and Gallery.

Iroquois Rifle Club.

THE Iroquois Rifle Club commences its four-day tournament—its twelfth annual—on Nov. 7, in the indoor rifle range, 1717 Jane street, Pittsburg, Pa.

The programme is arranged as follows:

Tuesday, Nov. 7.—Members' Match.—Open to members only Commences at 3 P. M. Each contestant to fire 50 shots off-hand in 10 targets of 5 shots each, with .22cal. rifles, on the reduced standard American targets. The member having the highest total score to receive a gold medal; all other contestants will receive consolation prizes, awarded according to scores made. Contest to be governed by the club's rules for indoor rifle shooting. Wednesday evening, Nov. 8, 1899, commencing at 7 P. M.; Thursday, Nov. 9, from 2 P. M. to 10:30 P. M.; Friday, Nov. 10, from 2 P. M. to 10:30 P. M.

All Comers' Matches.

Continuous Prize Match.—Open to all. Entrance per target of 3 shots each, 35 cents, or 3 targets for $1. Re-entries unlimited. The best three targets of each shooter, made during the three days' shooting, will count for prizes, of which only one is obtainable by any one competitor. In case of ties the next best single target will count for place. To be shot on the reduced standard American target, having a 1in. bull, with the 7-ring in the black; $120 in 25 prizes.

Bullseye Match.—Open to all. A bullseye target, consisting of a 3in. cartoon, will be used in this match. Entrance, $1. No re-entries. Each contestant is entitled to three shots, the best single shot by machine measurement to count. Two prizes will be awarded in this match: a fine silver plated .38cal. Smith & Wesson

revolver, donated by W. S. Brown, and $25 in gold, donated by the members of the Iroquois Rifle Club; the man making the best score to have choice of either prize, second best score to take remaining prize.

Rifle.—Any .22cal. rifle having any sights, except telescopic, will be allowed. In the bullseye match, however, to place all shooters on an equal footing, the size of aperture in front sight must not be larger than that generally used for ordinary target work. A front aperture having a diameter larger than ⅛in. will not be permitted on this target. All shooting is off-hand at 18yds. distance, and all shots must cut through the ring to count in the next. Shooters are not permitted to place butt of rifle under coat, vest or suspender. Targets can be shot on any of the open matches at any time during that prescribed for these matches.

Under date of Nov. 6 Mr. James S. Conlin, writes as follows: "The first week of the opening of my new gallery, 513 Sixth avenue, it was visited by quite a number of friends and expert marksmen of New York and vicinity, and some fine scores were made. Thursday evening a number of the crack revolver shots will commence to practice for the French match, which will be shot about the first of the year."

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Nov. 22.—Ridgewood, N. J.—All-day shoot at live birds. H. Blauvelt, Manager.

Nov. 23-24.—Chatsworth, Ill.—Chatsworth Gun Club tournament.

Nov. 28-29.—Chicago.—Deer Lick Gun Club's live-bird tournament.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Dec. 16.—Batavia, N. Y.—E C cup contest for championship at targets, between Messrs. W. R. Crosby, holder, and Mr. Fred Gilbert, challenger.

Dec. 31-Jan. 1.—Milwaukee, Wis.—Amateur tournament of the Wisconsin Gun Club. P. Himmelstein, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trapshooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Association's Grand American Handicap target tournament. Edward Banks, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Mr. Edward Banks and a friend of his'n went quail shooting at Jamesport, L. I., on Wednesday and Thursday of last week, at the invitation of Mr. W. D. Vandenhove, of New York, who owns a large farm in that section and also all the affection of the residents. Mr. Banks killed quail with the same neatness and dispatch that a shoemaker exhibits in driving pegs in shoes. Mr. Vandenhove has a dropper which will find and point birds with a precision which would discourage the best dog "bred in the purple," that ever happened. By the way, the term "bred in the purple," as applied to dogs seems to have fallen into a languorous desuetude, and the dog which can work well, purple or no purple, is gazed upon with a kindly eye. 'Nette is not strong on purple, but she is very able in finding and pointing birds and working with exquisite judgment to the gun.

From the Menosha Breeze, published in Wisconsin, we learn the following interesting information concerning the shooting of targets from the magautrap: "What are known as clay pigeons are disks of clay about 3 inches in diameter, and an inch thick, hollowed out on the under side. They are thrown out by what is known as a magau trap, manipulated by a man who sits in a small half-underground building constructed by solid timber and rendered proof against shot. * * * The manner in which the disk sails resembles the flight of a pigeon, hence its name. * * * The shooters stand on a semi-circular platform about 40 feet back of the little house, and getting ready to fire call 'pull,' and away sails the pigeon." And there you are.

Mrs. L. Schortemeier, wife of the expert trap shot, is doing some great work at the rifle range these days. In October, at the range of the Hudson Rifle Club, she won the diamond pin on a score of 231, in off-hand shooting, the possible being 250. On Nov. 1 she scored 232, but Miss T. Brown on that day scored 239, and she is now considered a formidable competitor for the trophy, the pin aforementioned, which is worn from month to month by the one who can win it in the previous month's contests.

From an exchange we clip the following: The Gun Club of the University of Pennsylvania has broken ground for a new club house on the west abnk of the Schuylkill, south of the South street bridge, and expects to have the building through in time for the contest with Princeton on Nov. 8. It may be that in the future a rifle range will be added to the club's properties.

The high average of Mr. Rolla O. Heikes, .958—163 targets out of 170 shot at—at the Cincinnati tournament last week was a performance of extraordinary merit. Fulford was then in seventh place with .888, but on the second day he made the extraordinary average of .982, missing but 3 targets out of 175, tieing Heikes for the high average of the two days.

The daily press has taken up the matter of shooting pigeons in matches with repeating shotguns. If two men agree to shoot a match, gun below the elbow, or above the elbow, or with single-barreled gun or double-barrel, or repeater, whose business is it? It then is a private affair and not a public custom.

The Lincoln, Neb., Gun Club will vacate its grounds, used recently, and the old grounds west of the viaduct will be again leased. The club contemplates making extensive and permanent improvements upon them, and for this reason preferred the grounds which it could lease for the longest time.

As will be seen by the official notice published in our trap columns this week, the match for the E C trophy and the target championship, which was arranged to take place on Saturday of last week between Messrs. W. R. Crosby and Fred Gilbert, is again postponed. It is now fixed to take place on Dec. 16.

In the first contest of the Crescent Athletic Club for the November cup, last Saturday, Mr. C. G. Rasmus, having 8 extra targets to shoot at, scored 23 out of a possible 25. Mr. Edward Banks, scratch, was second with 21. There was a high wind, which made difficult shooting.

The Quincy, Ill., Gun Club is endeavoring to arrange team contests with other clubs in its vicinity. There was a possibility that the Mt. Sterling Club might send a team to contest with the Quincy team some day this week.

Mr. J. J. Hallowell's run of 70 straight on live birds at Cincinnati in the tournament there last week, is not to be classed as a matter which is as easy to accomplish as stabbing oysters with a fork.

In the Spring Hill Gun Club's shoot on Friday of last week Mr. Geo. Mayer killed 10 straight in the main event at 10 birds, thereby winning the club trophy.

Mr. J. A. R. Elliott, arrived in New York early this week from the Cincinnati tournament, and will remain in this vicinity several weeks.

Owing to Tuesday being Election Day in this neck of the woods, Forest and Stream goes to press a day earlier than usual.

The sportsmen in the vicinity of Walton, N. Y., are agitating the matter of forming a gun club.

Bernard Waters.

WESTERN TRAPS.

Chicago Sportsmen's Trophy.

Chicago, Ill., Nov. 4.—The fourth contest in the series for the Chicago sportsmen's trophy was shot off to-day, having been postponed from Friday on account of bad weather. As it was, the event brought out but a small attendance, although the weather to-day was perfect, clear and cool, with just enough wind to make good birds very lively. Under these conditions there were only ten entries, and out of the ten only one, Dr. Shaw, managed to land in the 15 hole, though needing his handicap bird to do so. This was a lucky place to-day, and the tall and bewhiskered Garfield Club man, who had distanced his competitors also by a run of 12 straight kills, won not only the trophy and first money alone, but also took the high average medal, on which latter he has a very good string for the series. In the ties on 14 Amberg and Parker divided money and shells after shooting 3 birds. In the ties on 13 Hollister killed 9 straight and took the money, Young and Barto dividing the shells. A 5-bird sweep at $3 followed the capital event of the day, Roll winning first, Hollister and Palmer dividing second after shooting 3 birds. The following are the scores:

Dr Shaw, 30, 1	122121222111*111	—15	
S Palmer, 30, 1	22012220210222222	—13	
C S Wilcox, 30, 2	111012111220*0w		
F H Hollister, 30, 1	22212*1*11202121	—13	
S E Young, 30, 3	12121020202222002	—13	
H Levi, 28, 2	1*2121120012112221	—14	
J B Barto, 30, 1	22222*22*2222220	—13	
J H Amberg, 30, 1	2211121120122102	—14	
C C Parker, 30, 1	22012212222222201	—14	
Geo Roll, 30, 0	222222202211121	—14	

Ties on 14:

Amberg	111—3	Roll	102—2
Parker	212—3	Levi	101—2

Ties on 13:

Palmer	222 0	Young	122 212 02
Hollister	111 212 111	Barto	121 121 *1

Five-bird sweep, $3, two moneys:

Palmer	0222*—3	Parker	12012—4
Hollister	1*122—4	Roll	21222—5
Barto	21120—4		

Ties on 4:

Barto	20	Parker	212
Hollister	112		

Garfield Gun Club.

Garfield Gun Club held its semi-annual business meeting on last Wednesday night to close up the affairs of the season, which has been a very successful one. The list of seventy-five still remains full, one or two applicants being admitted to take the place of one or two withdrawals from the membership.

A review of the season totals shows Dr. S. Shaw winner of Class A medal, W. Northcott of Class B and J. C. Fanning of Class C. It was thought at first that W. A. Brabrook had won in Class C, but revision of the totals gives the medal to Mr. Fanning.

During the season just past Garfield Club threw 36,976 targets, out of which 22,543 were broken, the club average being .6096. In the trophy shoots there were thrown 11,710, out of which were broken 7,309, a club average of .6241.

A review of the club averages of Garfield Club for six years back shows that in 1893 the club average was .7183, in 1894 it was .7129, in 1895 it was .7131, in 1896 it was .6696, in 1897 it was .7205, in 1898 it was .7144. The following is a list of individual averages for the past season:

	No. of Shoots Attended.	Targets Shot at.	Targets Broken.	Per Centage.	Per Cent. Ten Best Shoots.

Garfield Gun Club is invited to send a team of six men to go as guests of the Illinois Gun Club, of Springfield, Ill., to the tournament of the latter club, Nov. 29 and 30, and to shoot a friendly race at live birds on Nov. 29. Garfield Club will accept this invitation, and the personnel of the team will probably be Dr. S. Shaw, Dr. J. W. Meek, Messrs. S. Palmer, T. P. Hicks, R. Kuss and E. S. Graham. This should make a very enjoyable little race indeed, and is shot purely as a sociable affair and for the sport and pleasure of it.

Eureka Gun Club.

Eureka Gun Club, of Chicago, begin their regular winter live-bird shoots at Watson's, Dec. 2. The secretary has not yet gotten together the announcements of winners, averages, etc., for the season, as Eureka did not close its target season until the last week in October.

E. Hough.

480 Caxton Building, Chicago, Ill.

Rochester Tournament.

The fall tournament of the Rochester Rod and Gun Club, held on Oct. 25 and 26, brought out some of the best shooting talent. Mr. W. R. Crosby carried off the honors the first day, missing only 4 targets out of 140. The average prizes were won as follows: Byer first, Glover second, Mosher third, and McCord fourth. Thursday, Glover won first average money, with Byer and Wride tied for second. McCord third and Mosher fourth. In the general averages for the two days Glover stood first, Byer second and McCord third.

Among the visiting shooters were Messrs. Willey, of Dansville; Crosby, of Batavia; Morris, of Baldwinsville; Rickman, of Greece; Austin, of Charlotte; Wadsworth, of Wolcott; Killick and Burnett, of Lyons; Wride, of Sodus, and Porter, of Meriden, Conn. The weather could hardly have been improved upon for shooting Wednesday, but on Thursday there was a strong wind, and the scores were not so good. The record of the two days follows:

First Day, Wednesday, Oct. 25.

Events:	1	2	3	4	5	6	7	8	9	10		Shot
Targets:	10	15	10	20	10	15	10	15	20	15	Broke.	at.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Nov. 4.—A few of John Wright's shotgun chorus were present at the shoot to-day, and a stiff 9 o'clock wind made things interesting for those who attempted to make a blending of target and shot. It was an off day in the Brooklyn Gun Club contests, and might be considered a practice shoot. Mr. C. M. Lincoln, who has been absent many weeks at the Omaha Exposition in the interest of the U. M. C. Co., was present and shot in a few events. The high wind blew a lot of goose eggs into the scores, as the following will show:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	15	10	15	25	25	25	25	25	25	25	25
Dr Gardiner	9	13	..	11	16	21	22	21	22	21	22	..
Meeker	4	3	2	6	..	10	..	18	..	..	21	..
Waters	9	10	..	12	..	20	22	..	18	18	..	..
Harrison	13	..	6	10	13	21	21	23	23	21	22	..
Dr Webber	13	11	..	14	..	21	..	24	23	..	23	20
Lane	..	5	..	..	..	..	..	..	..	8	..	..
Amend	..	6	6	..	..	20	20	20	..	23	21	16
Wright	..	..	2	..	..	..	..	..	..	..	..	..
Hopkins	..	..	8	..	20	24	..	22	..	..	..	23
Brigham	..	..	..	..	12	..	..	14	14	..	..	9
David	..	..	..	..	..	18	18	..	..	..	..	..
Lincoln	..	..	..	..	..	..	..	14	..	..	..	16

Event 6 was a team race between Dr. Webber and Hopkins, who scored 45; Harrison and Amend, who scored 41, and Dr. Gardiner and Waters, who scored 41. The ties shot off and tied again on 41. Again the tie was shot off, Hopkins taking Amend's place, the latter having an accident happen to his gun. Waters' score of 18 then lost the race.

IN NEW JERSEY.

Shooting at Dexter Park.

Oct. 30.—The invitation shoot under the new management of Dexter Park, Brooklyn, was slimly attended. No doubt the game season had much to do with this. Following are the scores:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.

The Target Championship.

New York, Nov. 6.—*Editor Forest and Stream:* I have received notice from Mr. W. R. Crosby that Mr. Fred Gilbert had notified him late last week that he could not be on hand to shoot the match for the E C championship trophy set for Saturday, Nov. 4. Mr. Gilbert's inability to be present was, I understand, due to the large number of entries in live-bird events at the Cincinnati tournament last week. Mr. Crosby notified Mr. Gilbert that he was willing to postpone the contest until Dec. 16. Mr. Gilbert accepted the postponement by wire. The match is therefore finally set for Dec. 16, 2 P. M., at Batavia, N. Y.

Mr. Crosby has now gone out West to his home in O'Fallon, Ill., where he will devote the next few weeks to taking a well-earned rest and incidentaliy pointing his gun at other than inanimate targets. Kindly note change of date in your paper and oblige.

Edward Banks, Sec'y,
The American E C & Schultze Gunpowder Co., Ltd.

Audubon Gun Club.

Buffalo, Nov. 4.—In the shoot of the Audubon Gun Club, held to-day, Mr. E. C. Burkhardt won Class A badge, scoring 23 out of 25. Classes B and C were not represented. This event was No. 3. On Tuesday next, Election Day, there will be an open shoot at the club grounds. Both targets and live-bird sweepstakes will make up the programme. Shooting will begin at 10 A. M. The scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	15	15	25	15	Targets:	15	15	15	25	15

Cincinnati Gun Club Tournament.

THE second effort of this progressive organization, the Cincinnati un Club, in conducting a tournament was a most satisfactory ie, and but for the adverse nature of the elements on its final urnament days the club would have made quite a record for self. Therefore it should not be held responsible for the little mplications that arose on the last day of the shoot. They can ly be charged to prevailing conditions.

Every precaution had been taken to avoid just such a state of airs. Had the club been favored with anything like a fair day r its concluding events, they would have been disposed of on hedule time, notwithstanding that the entries exceeded then the ost sanguine expectations. Of course it was disappointing to any that this event had to be carried over until the next day for conclusion, but considering the fact that it is out of the estion to expect active, vigorous birds to be trapped in a blind-g snowstorm, and that the club possessed no facilities for pro-nging the light of the day, the delay was unavoidable. The day, o, was much shorter owing to these conditions.

There is no better equipped shooting organization anywhere, nor ill you find a more active, energetic or obliging set of officials, an those who had this affair in charge, and these ad very wisely secured a most adequate and competent rps of assistants. The chief workers and the most active ones conducting the club's affairs were Messrs. J. B. Mosby, Max leischmann, G. W. Schuler, A. C. Dick, R. S. Waddell and rthur Gambell. These are entitled to the lion's share of the edit for the success of this shoot. Furthermore, all of them ok an active part in the tournament, regardless of the fact that eir duties necessarily handicapped them to a great extent.

The club is superbly equipped, and on its elegant grounds are be found two arrangements for target shooting. At one place e magautrap is used, while at the other the Sergeant system. his makes a capital arrangement, and also gives diversity to is kind of shooting. Both of these arrangements are under round, and when one is at the score the targets apparently rise om the bowels of the earth, with no screen or anything else to terfere with one's view. All target shooters readily appreciate is capital style of shooting.

Their methods of trapping pigeons is also a most approved one—set of Fulford's traps, embodying all the features shown in Mr. Fulford's sketch for this purpose, so that it is simply im-ossible to improve on the equipments of this club.

The pigeon retrieving is done by dogs, and among the half ozen used for this purpose, and which belong to different mem-ers of the club, there are some very good performers. The most ctive one is a young puppy, the property of Mr. Gambell, and is apable of most sensational work. Being a lank, lean, clean-cut ungster and full of ambition and vigor, he made many marvel-us catches of flying birds by great leaps in the air, thereby en-bling shooters to get credit for a kill which otherwise would ave had to be recorded as lost; for no man and few dogs would ave gathered these birds.

The office was in charge of Mr. R. C. McConaughy, a gentle-an well known for his ability in this particular capacity. There none more capable. Mr. F. D. Prich assisted in this capacity, nd was also compiler of scores, so it will readily be seen that the ub had spared no expense in arranging for this event.

Non-Resident Contestants.

Among the non-resident visitors were the following: Messrs. . D. Fulford, Utica, N. Y., Remington Arms and U. M. C. com-anies; J. A. R. Elliott, Kansas City, Mo., Winchester Arms Co.; . O. Heikes, Dayton, O., and John J. Hallowell, Bridgeport, onn., U. M. C. Co.; Fred Gilbert, Spirit Lake, Ia., Du Pont owder Co.; H. C. Hirschy, St. Paul, Minn., Hazard Powder Co.; ack Parker, Detroit, Mich., Peters Cartridge and King Powder o.; C. W. Budd, Des Moines, Ia., Parker Gun Co.; Col. A. G. ourtney, Syracuse, N. Y., Remington Arms Co.; E. S. Rice and d Bingham, Chicago, Ill., Du Pont Powder Co.; J. S. Fanning, an Francisco, Cal., Gold Dust Powder Co.; R. L. Trimble, ovington, Ky., Winchester Arms Co.; Paul North, Cleveland, ., Cleveland Target Co.; Will K. Park, Philadelphia, Pa., Sporting ife. There was also Messrs. R. S. Waddell, Fred J. Waddell and uther Squires, of the Hazard Powder Co., who represent this ompany and reside here; the King Powder and Peters Cartridge o. representatives who belong to the home contingent are: Milt indsley, Harry King, J. H. Mackie, Frank See, W. L. Richmond, red Tuttle and R. L. Myers.

The so-called lambs consisted of the following: Messrs. Tom . Marshall, Keithsburg, Ill.; F. C. Riehl, Alton, Ill.; Guy Burn-de, Knoxville, Ill.; E. E. Neal, Bloomfield, Ind.; D. A. Myers nd C. D. Tillson, Greenfield, Ind.; Lou Fisher, Lakeview, O.; . B. Stipp and C. E. Raridon, Bedford, Ind.; Ed Voris and Mac tillwell, Crawfordsville, Ind.; D. W. Willey, Miami, O.; S. T. allory, Parkersburg, W. Va.; E. H. Tripp and T. H. Parry, In-ianapolis, Ind.; Chas. Young, Ben Downs and L. S. Job, Spring-eld, O.; A. Livenguth, Lafayette, Ind.; C. W. Brooks, Lancaster, .; J. I. Vanse, Schooleys, O.; Ed Martin, Muncie, Ind.; R. S. hoades, Columbus, O.; T. S. Bibbee, Elba, O.; Chas. Dugan, ichmond, Ind.; H. W. Cadwallader, Danville, Ill.; Ben Eick, terling, Ill.; Harry W. Smith, Springfield, Ill.; De Long Miller, ouisville, Ky.; J. L. Alabaster (White), W. Bruce Leffingwell, Uncle John Watson, Chicago; F. D. Alkire, Woodlyn, O.; T. H. lay, Austerlitz, Ky.; Andy Meaders, Nashville, Tenn.; Ben eipel, Covington, Ky.; Mr. and Mrs. W. P. Shattuck, Minneap-lis; Harvey Hill, Aurora, Ind.; E. M. Fish (Kabo), Eau Claire. Vis.; Dr. J. S. Williamson, Milwaukee, Wis.; Joe Coyle (Nye), exington, Ky.; Tom Donely, St. Thomas, Can.; F. M. McKay, linneapolis; F. E. De Wuse, Chillicothe, O., and D. D. Gross, ondon, O.

First Day, Tuesday, Oct. 31.

The conditions of competition were extremely hard, as the targets ere thrown very swift and low. In addition to this, the light was ery deceptive, it being cloudy; so it was difficult to locate the rgets properly against the board fence background. Then, too, e shooters had to combat with two styles of shooting, as both the agautrap and expert Sergeant system are in vogue on these rounds. This adds to the complication, for every one knows at the flight of the two styles differ very materially. The former ever attains that great burst of speed, and though the targets ay be thrown as far they do not traverse the distance so rapidly, d this difference all too frequently misleads the shooter, who be-eves that the target is a slow one, and it will take him some time discover that his lead is not sufficient, especially when the ents vary as they do here.

The odd events were shot over the "maggie," and the even over e expert traps. What effect this complication had on the work of e shooters is evidenced by the score, and this shows that only e of the participants, Heikes, could negotiate them with any eat degree of success. With most of the crack experts on hand, d many of the acme of the Simon-pure class competing, only ur reached 90 per cent. It is thus evident that the shooting was ry hard.

Heikes to-day simply outclassed the other contestants, and is sily the chief factor in the shoot. There is nothing like getting good start, and this is what he did, as he ran his first 66 raight, and thereafter skipped one now and then, so that at the ish his aggregate losses amounted to seven for the day, which ves him the capital percentage of .958.

Elliott is second, 7 birds behind Heikes, which is also very good. Gilbert and Neal are tied with .905. These are all that reached per cent. Neal is an amateur, and showed the best form of is class.

A rather singular thing occurred in the sixth event. Heikes ade the only straight, and Young the only 19, thus they took rst and second money without a tie, $27.20 apiece. That each ceived the same amount is due to the four equal divisions. Per-aps some may surmise that these shooters combined, or that oung dropped for place, but for the benefit of these I will state at Young missed his first bird, and also shot in the first squad. eal made the only straight in event 7, which paid $15.95, and sher the only one in No. 10, which remunerated him to the ex-nt of $16.45.

Sixty-two shooters participated, and 7,770 targets were thrown.

Second Day, Wednesday, Nov. 1.

Fulford's shooting was of a high degree of excellence, and surpasses anything that has been accomplished on the circuit lately. As an evidence of this one has but to glance at the average table, and there he will perceive that his nearest competitor, Trimble, is 10 birds short of his magnificent total. This piece of shooting simply overshadows the performance of the rest of the principals, and engrossed the attention of every one present. To break all but 3 targets out of 175, thrown as they were here, is a feat worthy of special mention, and the performer well merits all the glory and honor that he may derive from such an accomplishment. It is true that this total has been exceeded on several occasions, but I question if this ever occurred where the targets were thrown so hard.

Fulford's consistent execution to-day enabled him to tie Heikes for general average. This percentage of .982 I predict will stand as high-water mark for some time. This also embodies a run of 84 straight; he lost his 2d, 70th and 155th targets. Fifty-one participated, of which thirty-one shot through the programme.

Trimble is second with .925, a marked improvement over his work of yesterday, and more like his old-time form. Tripp is third with .920, and as he is one of the Simon-pure class, considerable credit may be derived from this, as he has outshot most of the good ones at a game in which they should be particularly strong.

Heikes, Young and Gilbert are all bunched together, and have an average of .914. Hirschy comes next, and then Fanning and Elliott. These are all who reached 90 per cent. This number, though, is far in excess of yesterday, and can be attributed to better shooting, as well as to a familiarizing of the ground and traps.

The fortunate ones to-day were Heikes, Young and Fulford, and these struck several remunerative places, though I am pleased to add only by good shooting. Heikes made the only straight in event No. 4, and this netted him $18.45. In event No. 6, the 25-bird race, Young and Fulford were the only straights, and got $13.40 apiece. As a final, Fulford landed the only straight in event No. 10, and drew down $14.15.

Hard, swift targets; bright, balmy sunshine, and only now and then a gentle breeze, were the conditions to-day.

Third Day, Friday, Nov. 3—Pigeons.

Live birds were medium, and two events were run off to-day. The first was a 7-bird race, entrance $7, two moneys, equal moneys, class shooting. This, as is frequently the case where this system is in vogue, resulted in paying better to those who missed a bird than those who finished with a perfect score, as the 7s got $4.30 and the 6s $8.30. The next was a 10-bird race, entrance $10, with three moneys, 40, 30 and 30 per cent. This brought about a similar result, as the straight men only received $5.85, and 9s got $12.05 and 8s $10.70. Thus those who took part in both of these events and scored all their birds were out just $6.85. Nothing could more strongly condemn such a system. There was also a miss-and-out at $5. Though it had but thirteen entries, it was divided after the seventh round, at which time only four had dropped out. Schuler, Neal, Tripp, Voris, Young, Dr. Williams, Donely, Robertson and Hill went the route and drew down $7.20. Neal, Tripp, Young, Dr. Williamson and Robertson shot in every event and scored all their birds, 24 all told. There are a number of others who shot in the two sweeps and scored straight in both—to their loss.

CINCINNATI GUN CLUB'S HOUSE.

The birds trapped during the day were very ordinary, which is evidenced by the scores; but the elements are in some measure responsible for this. The weather was dark and threatening, while occasional showers fell. Add to this a raw atmosphere and one can readily conceive that the birds would not be very active.

The sensational feature of the day and the tournament was the barring of Kit Shepardson, of La Grange, Ind., for deliberately dropping for place. This party has been doing this trick some time, and at Belle Meade practiced it very successfully. As soon as the opportunity presented itself here he resorted to it again, though on this occasion he reckoned without his host, and the rebuke he received will most likely lead to his perpetual disbarment, as it should. He had been repeatedly cautioned in this matter by people who had only his best interest at heart, but he heeded not their advice, so he only got what he deserved.

The dropping occurred in the 10-bird event, and he and Lou Fisher were keeping tab, and naturally they were aware that the 9 hole was the most remunerative, so when he came to shoot his final bird he deliberately missed it; but previous to this he had told several parties of his intention. Nevertheless, his efforts at deception were so crude that all who saw the shot made realized at once his object. On all his other birds he shot in slashing style, while in this instance he was unusually slow, but finally managed to shoot several feet behind it with his first and away over it with his second. Complaint was immediately lodged with the board of directors, and these at once met and decided that hereafter he would not be permitted on the Cincinnati Gun Club grounds. His entrance fee was refunded, less the price of the birds, and he was requested to depart.

It has since developed that Fisher was virtually as guilty as Shepardson, as he too dropped his last bird, and to the close observers it looked very much as though this was intentional, as he too changed his style of shooting and his time. Furthermore, he was barred out at Circleville several weeks ago for this very same offense. This will doubtless prove a wholesome lesson, and will do much to purge the sport of the unscrupulous shooters.

True, the system is at fault; but nevertheless there is a principle involved, and the scrupulous shooter must be protected against the blackleg. To my mind there is nothing more contemptible, and the pickpocket ranks higher than the dropper, for the former can be reached by the strong arm of the law, while no criminal case can be docketed against the latter, and therefore he does not run as much risk.

The scores:

	7 Birds.	10 Birds.
Neal	2222222—7	2212222222—10
Tripp	2122221—7	2111121111—10

Final—Handicap.

One popular feature at most tournaments is to make the closing event on live birds, a 25-bird handicap, and such also was the case here. This race was well patronized, considering the good entrance fee—$25, birds extra—and doubtless this would have been an affair of much significance, and some classic competition would have resulted but for the adverse weather which was the club's portion on the day of this event. An abundance of good birds had been provided for this race, but the nasty weather that prevailed simply robbed the birds of all activity, and what would have been a high test of competitive skill resolved itself into a very ordinary affair, as the birds, with the exception of one or two rounds, were very poor. Through this the competitive feature of the shoot was largely marred, and the element of luck was a big factor in it. For the shooter who was fortunate in drawing the standard bird it was an easy matter to kill, while on the other hand those who drew the occasional good ones were those who suffered the most losses. Of course, some of the dubs were missed, but as a rule the fast bird stands by far the best chance of escaping.

The best evidence of the quality of the birds is the uniform high scores, and there is no one familiar with pigeon shooting but what realizes such scores would have been an impossibility on birds of superior quality. Fifteen of fifty-five entries, or more than 35 per cent. of those engaged, finished with a straight score of 25. This, as has frequently been the case where the equal-money divisions prevail, was the least remunerative hole, and the straight men actually lost money, for they drew out but $22.40 for an investment of $31.25. The seven 24s got $48, the fourteen 23s $24, and the 22s got exactly what the 24s received, as there was a like number of these. Thus it will be observed that, though it required a score of 22 out of 25, only ten of the principals fell by the wayside, and one of these only because he failed to complete his score. Robertson was unable to return on the final day to complete his score and thereby forfeited his entrance and his interest in the race. Some of the shooters claimed that it was impossible for them to remain over another day, and these were finally permitted to shoot out their scores so as to enable them to leave.

This was obviously unjust, for when these shot their last birds the weather was such that it was a difficult matter to induce the birds to fly, and their quality is best indicated by the fact that of the fifty-four birds shot at, not one was scored lost. When this shooting was done it was snowing very hard, and the birds were naturally in a bewildered state. The following are those who shot out: Elliott, Tripp, Voris, Mrs. Shattuck, Clay and Stillwell. The first four finished straight. Clay got 24 and Stillwell 23. The same significance cannot be attached to these scores as to the others who remained and finished the next day, when it was clear and bright and a good wind prevailed. Sixteen birds were shot on the first day and the remaining 9 on the next day.

It was the writer's intention to keep the flights and the number of the trap in this event, but this was abandoned after the 5th round, as sitters, hoverers and incomers predominated to a great extent.

In addition to the fifty-three entries there were two forfeits of $10 by Messrs. John Watson and Alf Clay.

General Averages.

In order to maintain the interest in the shoot, as well as induce more shooters to shoot through the programme, the club very wisely put up average money to the amount of $75, which was to go to the eight high guns in the following ratio: $15, $13, $10, $9, $8, $7, $7 and $6. The competition for this was spirited and interesting.

Roll Heikes secured a lead of 7 birds on the first day, and it was generally conceded that he would finish first, barring accidents, though it was possible for Elliott, Neal or Gilbert to overhaul him. However, no one for a minute surmised that Fulford, who was 12 birds behind, would accomplish this feat; but nevertheless this is just what he accomplished by virtue of his superb finish, and thereby he and Heikes took first and second high-gun money, which amounted to $14 each. Gilbert and Elliott tied for next place, and collected third and fourth high-gun amounts, $19, thus giving each $9.50. Young wins fifth, $8; Neal sixth, $7; Fanning and Trimble are tied for seventh and eighth, and they divide $13 between them. Trimble also finished with a rush, for at the close of the first day he apparently was hopelessly out it:

	First Day.	Second Day.	Shot at.	Broke.	Av.
Fulford	151	172	345	323	.936
Heikes	163	160	345	323	.936
Gilbert	154	160	345	314	.910
Elliott	156	158	345	314	.910
Young	152	160	345	312	.904
Neal	154	157	345	311	.901
Fanning	152	158	345	310	.898
Trimble	148	162	345	310	.898
Hirschy	150	159	345	309	.895
Tripp	147	161	345	308	.892
Alkire	148	157	345	305	.884

Hallowell	125	133	345	258	.747
North	121	130	345	251	.727

Gossip.

Mr. E. D. Fulford and Roll Heikes, who tied for general average in the target events, each shot Remington guns, Schultze powder and Smokeless shells. Heikes also used his Remington when he won the Schmelzer cup, and not his Parker, as I erroneously stated in the account of this race. The truth of the matter is he uses two guns, but he shoots targets with the Remington and pigeons with the Parker.

Mr. Fred Gilbert, after killing straight in the four previous handicaps—one at St. Louis and three at Belle Meade—failed to do the trick here, and finished with but 23. Nevertheless, it is quite a feat to do it so often.

As a final, Pop Heikes and Mr. Emile Werk shot a team race with Messrs. Hallowell and Schuler. The former pair got 46 and the other 47. Heikes scored 22, Werk 24; Hallowell 25 and Schuler 22. Hallowell lost the first bird he shot at here, and then ran 70 straight.

Mrs. Shattuck's target shooting on the first day was of a high character of excellence, as the conditions were very trying. True, her percentage is not very high, but it will be seen by consulting the score that it exceeds many of the percentages of the male competitors. Her scores on pigeons were much higher, but I do not look upon this as a performance of superior merit.

Mr. E. H. Tripp was the only participant who shot in all live-bird events and killed straight. This aggregates forty-nine. Fanning also accomplished this, though he shot at 7 less birds.

Uncle John Watson came down from Chicago to shoot in the handicap, but very wisely stayed out of the contest, as the weather was very conducive to pneumonia. Uncle John contemplates holding a shoot at his park next month, and was about feeling the pulse of the shooters in respect to it.

Mrs. Milt Lindsley (Wanda) was on the grounds each day, but only shot in a few target events. Mrs. Lindsley looks much improved by her sojourn in the East.

Mr. and Mrs. Frank Butler (Annie Oakley) were present, but as Mrs. Butler was indisposed she did not participate, though it was her intention to shoot in the handicap. Her past season was an unusually trying one, and she is completely fagged out from excessive hard work.

Quaker Gay materialized for the handicap, and gave his usual good account of himself, as he went down the line without a skip, but this was a rather commonplace performance in this particular instance.

PAUL R. LITZKE.

The Interstate.

At the close of the ninth season of unbroken triumph, and with an ever expanding horizon, it is gratifying to be able to state to the lovers of manly and clean sport that the frontier limiting the usefulness of the Interstate Association is nowhere yet visible, and we are assured from a retrospective view of its history that our horoscope shows no mirage for the future. As usual, we are compelled to reiterate that the season just closed has not only been successful, but the most successful in our career, and we will be pardoned for a modest amount of elation.

Our tournaments are neither staled by repetition nor withered by custom, and each and all feel that our work will grow indefinitely. It is not now a question of how many tournaments we can handle successfully, but one as to where they shall be given. The interest the Association has fostered shows no signs of abatement in growth. We have many applicants for the right kind of clubs who want us to hold tournaments under their auspices, and the only question is: How shall we farm our opportunities so as to accomplish the most good for the greatest number? We are glad to receive these applications, of course, but they entail on us a burden gratifying to be borne, but nevertheless one that threatens to severely tax our strength, and were the organization less perfect would challenge our ability to perform. As the Interstate Association has never crossed a river until it came to it, there need be no fear that ways and means will be devised to meet any emergency. It is gratifying to be able to state that correspondence shows the field to be practically illimitable and patrons of the Interstate Association hold all the trump cards.

It is unnecessary to repeat arguments in favor of adhering to our tried and proven methods of conducting our business. They have not been found wanting, and though the organization will always give an attentive ear to suggestions, and even invites honest criticism, it must be said, in justice to ourselves, that nothing has yet been suggested that offers any improvement on our tried methods, which so far have afforded "the greatest good to the greatest number." The growth of interest can be noted, but not measured, and this growth is not only to be perceived yearly, but from week to week.

The work accomplished during 1899 is so fully detailed elsewhere that to descant on it here at length would be superfluous.

The Grand American Handicap.

The inaugural tournament for 1899 was the seventh annual Grand American Handicap at live birds, which was decided at Elkwood Park, near Long Branch, N. J., April 11, 12 and 13. The Interstate Association guaranteed $1,500 (and all surplus added) in the main event, which was shot under the following conditions, viz.: 25 live birds, $25 entrance, 50yds. boundary, with a dead line at the 33yd. mark, handicaps ranging from 25 to 33yds., high guns to win, and moneys to be divided in accordance with the number of entries received.

In addition to guaranteeing $1,500, the Interstate Association presented to the winner of first place a sterling silver trophy commemorative of the win.

The system of dividing the moneys which prevailed in 1896, 1897 and 1898 was adopted again for 1899, the divisions being graduated up to 260 entries for this year's event. A slight change, however, was made in the division of the surplus, which was, of course, as usual, added to the purse. Instead of two moneys for each additional ten entries over and above sixty, the number necessary to fill the guarantee, there were three additional moneys for each ten entries over sixty. The entries numbered 278, of which number 251 were regular entries at $25 each, eleven were penalty or post entries at $35 each, and sixteen were forfeits at $10 each, making the total purse amount to $6,820. The purse, under the system of division of moneys adopted by the Interstate Association, provided for sixty-three moneys. There were six straight scores of 25 made, which took the first six moneys—$2,430.30—a total of $405.05 each. Twenty-five tied on 24 out of 25 and divide the next twenty-five moneys—$2,626.25—each shooter receivin $105.05. Forty-nine tied on 23 out of 25 and divided the next thirty two moneys—$1,763.45—each shooter receiving $36. The six me with straight scores of 25 shot off the tie, miss-and-out, for th silver trophy. This was won by the Hon. T. A. Marshall, on th 33d round.

Two hundred and eighty-five shooters took part in the tourna ment, and $11,470.10 was divided in different purses. The tota number of live birds trapped was 8,467.

In the Oil Country.

The second tournament was given at Oil City Pa., May 17 an 18, under the auspices of the Oil City Gun Club.

Best averages first day: F. H. Snow, first, .939; L. B. Fleming second, .903; C. A. Smith, third, .884.

Best averages second day: F. H. Snow, first, .866; L. B. Flem ing, second, .830; W. L. Colville, third, .666.

General averages both days: F. H. Snow, first, .903; L. B. Flem ing, second, .866; B. H. Norton, third, .678.

The total number of shooters taking part in the tournament wa thirty-three. Average entry first day, 19.2; average entry secon day, 17.7. The total amount of money divided in purses was $5,35.40 6,560 targets were trapped during the tournament.

The Green Mountain State.

The third tournament was given at Bellows Falls, Vt., June 1 and 15, under the auspices of the Bellows Falls Gun Club.

Best averages first day: B. Leroy Woodard, first, .947; E. C. Griffith, second, .923; M. F. Roberts, third, .876.

Best averages second day: B. Leroy Woodard, first, .923; E. C. Griffith, second, .911; C. O. Barrett, third, .900.

General averages both days: B. Leroy Woodard, first, .935; E. C. Griffith, second, .917; C. O. Barrett, third, .867.

The total number of shooters taking part in the tournament was fifty-six. Average entry first day, 28.5; average entry second day, 18.4. The total amount of money divided in purses was $582.70. 8,665 targets were trapped during the tournament.

In "Little Rhody."

The fourth tournament was given at Providence, R. I., July 19 and 20, under the auspices of the Providence Gun Club.

Best averages first day: B. Leroy Woodard, first, .935; O. R. Dickey, second, .917; W. F. Parker, third, .911.

Best averages second day: W. F. Parker, first, .941; B. Leroy Woodard, second, .935; J. S. Fanning and L. H. Schortemeier, third, .929.

General averages both days: B. Leroy Woodard, first, .935; W. F. Parker, second, .926; J. S. Fanning and L. H. Schortemeier, third, .900.

The total number of shooters taking part in the tournament was ninety-one. Average entry first day, 57.8; average entry second day, 45.5. The total amount of money divided in purses wa $1,090.50. 17,305 targets were trapped during the tournament.

Among the Pines.

The fifth tournament was given at Portland, Me., Aug. 9 and 10 under the auspices of the Portland Gun Club.

Best averages first day: J. S. Fanning and L. H. Schortemeier first, .931; H. B. Money, second, .914; B. Leroy Woodard and E. C. Griffith, third, .908.

Best averages second day: B. Leroy Woodard, first, .965; L. H. Schortemeier and E. A. Randall, second, .931; O. R. Dickey J. S. Fanning and G. R. Hunnewell, third, .920.

General averages both days: B. Leroy Woodard, first, .937; L. H. Schortemeier, second, .931; J. S. Fanning, third, .925.

The total number of shooters taking part in the tournament was sixty-two. Average entry first day, 46.2; average second day, 36.4 The total amount of money divided in purses was $902.60. 14,430 targets were trapped during the tournament.

The Old Dominion.

The sixth tournament was given at Portsmouth, Va., Sept. 6 and 7, under the auspices of the Portsmouth Gun Club.

Best averages first day: H. C. Bridgers, first, .940; H. B. Money, second, .920; Col. J. T. Anthony, third, .913.

Best averages second day: Hood Waters, first, .940; Jas. R. Malone, second, .913; B. Leroy Woodard, third, .906.

General averages both days: Hood Waters, first, .913; Col. J. T. Anthony, second, .906; B. Leroy Woodard, third, .900.

The total number of shooters taking part in the tournament was fifty-two. Average entry first day, 30.2; average entry second day, day, 17.7. The total amount of money divided in purses was $535.40. 9,730 targets were trapped during the tournament.

Recapitulation.

In the table as outlined below will be found a summary of the work accomplished during the season of 1899:

Shooters taking part	579
Live birds trapped	8,467
Targets trapped	56,690
Money divided in purses	$15,102.80

The schedule for 1899 called for fewer tournaments than any preceding year, yet the totals as above given show that it was the most successful season in the history of the Association. At the end of nine years interest has not only not flagged, but has grown to such an extent that the results attained are phenomenal.

It has been an arduous undertaking, but it has succeeded—won by honest hard work.

Season 1900 Tournaments.

Clubs contemplating holding tournaments, and desiring the assitance of the Interstate Association, should have their applications in the hands of the manager by Dec. 15, 1899, in order that they may be presented to the tournament committee for action thereon at the annual meeting of the Association, Dec. 21, 1899.

Communications relating to inanimate target tournaments should be sent to the manager's home address, Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa.

THE INTERSTATE ASSSOCIATION.

Answers to Correspondents

No notice taken of anonymous communications.

A. K., Detroit.—The cup raced for by Shamrock and Columbia is known as the America Cup. Its name will not be changed in the event of it being won by a foreign yacht.

G. W. R., El Paso, Tex.—1. What is a Chihuahua dog? Is i only a common cur dog, starved and stunted with poor whisky; or is there a real Chihuahua dog? 2. To what family does the prairie dog belong? 3. To what family does the Gila monster belong? 4. Where can I obtain the number of pellets per ounce of Tatham Bros'. shot, from size 1 to 10? If I had better address them, what is their address? Ans. 1. The Chihuahua dog is a recognized breed. 2. To the squirrel family, *Sciuridæ*. 3. To the family *Helodermatidæ*, which takes its name from the genus; the name of the Gila monster being *Heloderma suspectum*. 4. You will find the information in the *Woodcraft Magazine and Game Laws in Brief*; price 25 cents, which is published by Forest and Stream Pub. Co., or you can obtain it by address the manufacturers at New York.

N. E. S., Ossa, Mass., Nov. 1.—I live in the country where it i rather wild, and where we have some foxes and skunks, a few minks and plenty of muskrats. Last year an otter was seen in the river near here. I should like to do some trapping during the winter, and think that I could earn a little money in that way Will you please tell me what is the best book, telling about how to trap small animals and how to prepare their skins for market I have skinned muskrats, but the man at the store here said the besides the steel traps commonly used, various forms of dead skins were badly made, and would give me hardly anything fo them. Ans. The best book for your use is the "Trapper's Guide," price $1. This tells something about the animals you mention, and about how to prepare their skins for market. It also describes falls employed by trappers where it is not convenient to use steel traps. Of course, you will require some practice before you can become a successful trapper. The best trappers are those who have had the most experience.

SAM'S BOY.

ONE of the best things ever written by Rowland E. Robinson is the new serial "Sam's Boy," which will be begun in our issue of Dec. 2. It will take the readers of "Uncle Lisha's Shop" and "Sam Lovel's Camps" back among the Danvis folk.

THE NATIONAL HORSE SHOW.

THE meeting of the National Horse Show of America, which opened in this city on Monday last, and is in progress while we write, promises to be one of the most successful ever given. For a number of years this show was obliged to depened for its financial success largely on the caprice of fashionable people and their followers, and to attract such people it was thought necessary to resort to more or less catchy devices, which partook in some degree of the character of the circus.

Horse shows are given for the purpose of showing horses, not in order to show how speedily the firemen can hitch up a team nor to give exhibitions of polo rough riding or cavalry drills. It would seem as if this country were by this time large enough to furnish a sufficient number of spectators actually interested in horses to pay the expenses of such a show without the managers going into the circus business.

This year such side shows are not needed to attract the public. In other words, there is a very large attendance of people who are anxious to see good horses, and who go there for that purpose, and no other.

The increasing popularity of the horse—notwithstanding the various mechanical means of traction which are taking his place—means a better understanding of him and an increasing appreciation of his good qualities. The time is coming when—at least in cities and thickly populated districts—the horse will be used purely as a luxury. He will be the property only of the well to do, and when this is the case, all horse owners will be more or less horse judges.

It is in this direction that the tide is tending now. A greater number of people than ever before attend the horse show because they are interested in horses and anxious to see good ones, both for their pleasure and to cultivate their tastes. A still greater number no doubt go there because it is regarded as the proper thing to know more or less about a horse, and they are anxious to do or to appear to do the proper thing. Nevertheless an intelligent knowledge of the horse is growing.

SPARE THE PASSENGER PIGEON.

AMONG the many notices of the occurrence of the passenger pigeon which appear in the columns of FOREST AND STREAM, a considerable number are no doubt based on misinformation, and so are valueless. Individuals unfamiliar with the wild pigeon imagine all the pigeons that they see to be the bird about whose rarity so much has been written, and perhaps a few report having seen the bird purely as a matter of vivid imagination. They are seized with a flight of fancy, and report a flight of pigeons.

Yet there is no doubt that passenger pigeons are occasionally seen, and unfortunately there is no doubt also that the average man who carries a gun if he sees one of these birds will kill it. It may be hoped that to-day there are fewer who would do this than there were a year ago, and that to-morrow there will be fewer than there are to-day; in other words, that consideration for the rights of others is increasing and that selfishness is growing less. The change is slow, to be sure, but there is a change.

It is greatly to be desired that sportsmen who see what they take to be wild pigeons will promptly report the occurrence to the FOREST AND STREAM, at the same time giving as full details as possible, so that, if practicable, the bird may be identified. It is but a few weeks since one of our most valued correspondents forwarded to us the supposed wing of a passenger pigeon, which on examination proved to be only the wing of a domestic pigeon somewhat resembling that of the wild bird in color.

The passenger pigeon is one of those birds which is very close to the border line of extinction. It ought to be protected by law in all States, and, what would be much more effective, a public sentiment ought to be created against killing it or indeed any of its kind.

A SOUTHERN NATIONAL PARK.

THE latest national park project, following upon the Minnesota reserve scheme, is a timber and game preserve for the South. The territory suggested lies in western North Carolina, where there are vast stretches of unbroken wilderness along the line of the Great Smoky Mountains, on the Tennessee border. Much of the region remains to-day in its primitive condition, but the inroads of the lumberman promise rapidly to denude the forest areas and to destroy both its beauty and the rare advantages it now offers health and rest seekers. The movement to establish a national park here is well under way. The Asheville Board of Trade is agitating the plan, and its special committee on parks and forestry has called a convention to be held in Asheville on Nov. 22. Petitions are circulating, which will be presented to Congress, asking that a committee representing that body may be provided to investigate the subject of a Southern National Park and to determine the feasibility of establishing such a preserve in the southern Alleghanies.

All that has been said in behalf of setting aside the national parks we now possess, and all that has been urged in support of the Minnesota forest reserve, applies with force to this new proposition. The region is one which should be preserved in its virgin wildness. The establishment of such a reserve would mean the possession of a priceless legacy for the generation of to-day to bequeath to those which are to follow.

The wide-reaching benefits of such a mountain reserve may not be overestimated. The immediate district surrounding the park would be benefited in a degree much less than the advantage secured for the entire Southern country; for this North Carolina region is easily and quickly accessible from the entire Atlantic seaboard, and from the South and Southwest to New Orleans. The support of the park project should be equally widespread.

SNAP SHOTS.

Ambitious deer hunters who, a week or two since, visited this office in search of advice as to where to go on Long Island to kill deer, were warned that hunters were more numerous there than deer, and that, as at present carried on, deer hunting on Long Island is a sport rather more dangerous than grizzly bear hunting in the Rockies. This dismal warning was confirmed on the first day of the season, when a hunter had his head blown to pieces by a charge of buckshot at short range from a gun in the hands of his hunting companion and friend. As the story is told, the two men were concealed near one another when a deer came by, at which one of them fired, and then sprang into view to watch the deer. His companion seeing the movement and taking it for a deer, fired and killed his friend. So long as people continue to fire at moving objects which they imagine to be game, these accidents will continue to occur, and it is difficult to write about them in a strain of justice, because the remorse of the unintentional homicide is likely to be so great as in some degree to claim our sympathy. It may be assumed that in the course of time laws will be enacted which shall make such carelessness a felony and provide a proper punishment for it. In the meantime, persons of good sense will be likely to avoid those places where such accidents may be expected to occur, which means, of course, places crowded with hunters—so miscalled. Measured by the annually exacted price of human lives Long Island deer hunting is a costly institution which ought speedily to be abolished. Stop the deer hunting for good and all; make a State deer park of the territory available for that purpose and use the permanent Long Island deer supply thus assured for stocking the Adirondacks, the Catskills and other districts, where there is still room to hunt game without killing human beings.

A lot of prize fighters have got themselves incorporated as the "Sportsman's Fund of America," the purpose of the organization being to "provide for the destitute, the sick and the dead of the sporting fraternity throughout the United States," and ultimately "to provide a home for retired and destitute sportsmen." The term sportsman is a broad one, and there is no law to prevent the bruisers and rib-smashers from appropriating it if they choose to do so; but what is wanted in New York to-day is not a home for the destitute "sports," but a law and its execution to drive them out of business. Meanwhile if these gentry would undertake to build a "home" in which to immure their whole tribe beyond peradventure of ever being heard from again we would all of us contribute with alacrity and generosity.

The opinions of those who are most directly concerned with the preservation of our game supply are coming more and more to acceptance of the principle that the marketing of birds is a chief factor in the problem. The New Hampshire Fish and Game Commissioners recognize in the open market of Boston a grave hindrance to protection in their own State.

Our St. Augustine contributor, Didymus, who recently discussed so effectively the exterminatory peregrinations of a bird butcher in his State, may now profitably give his attention and enlist the attention of others to head off another Florida bird-destroying enterprise, of which we have report from Long Island, N. Y. The party consists of O. H. Tuthill, Robert Willmouth, Benjamin Molliter and Coles Powell. They sailed last week in the sloop Inner Beach bound for Florida by the inland passage. Their mission is to kill birds; it is to be a bird skinning and stuffing expedition. The Brooklyn Eagle says that "the men go to shoot all kinds of water birds, for which there is an unprecedented demand this season by millinery manufacturers. After being killed most of the birds will be skinned and stuffed roughly with cotton, and every week shipments will be made to New York." As this is contrary to the Florida law which is intended to preserve the birds, the Long Islanders should be summarily turned back.

The agitation as to the preservation of deer in the Adirondacks is certainly worth keeping up. Last week we printed the report of an interview with Col. Wm. F. Fox, Superintendent of the Forests, on this subject. Col. Fox's intimate familiarity with the North Woods and the game conditions there prevailing entitles his views to great weight. We gave also in this connection a statement on the part of Protector Beede in reply to criticisms we recently published on his way of conducting his office. It has been represented to us that hounding is practiced in all districts of the Adirondacks; that it cannot be effectually suppressed with the force of protectors and specials now available; and that the Essex county district is therefore no worse than some others. In the face of all this, however, Protector Pond is reported as repeating this season the optimistic statement made by him last year under like conditions, that as a rule the hounding law has been well observed in the North Woods.

The progress of the case made to test the constitutionality of the Illinois non-resident shooting license law is reported in our game columns to-day; and as will be seen the result of the case bids fair to establish anew the complete control of its game by a State. The power to exercise such control lies in the State's ownership of the soil and the resulting exclusive right to the game on the soil. The contention of those who uphold the constitutionality of non-resident hunting laws is that just as a farmer by virtue of owning his farm may exclude others from entering upon it for shooting, so a State by virtue of owning the entire territory within its boundaries may exclude non-residents from shooting or fishing within its domain.

We print elsewhere a note from the New York Fish and Game League, inviting into its membership all who are interested in the attainment of its special purposes. The League offers an opportunity for practical work, under the guidance of those who have had long experience in this field; and it deserves the support and co-operation of all protective clubs and societies throughout the State.

The Minnesota Supreme Court has decided that it is legal for the Indians to hunt on their own reservations regardless of the game laws, provided they do not store their game to be sold to traders contrary to the law. This ruling appears to be in direct conflict with the findings in similar cases brought in other States.

The Sportsman Tourist.

The Equipment of Old Times.

Editor Forest and Stream:

Sitting here in my den, smoking my first after-dinner pipe, I am led into a train of reflection on the changes, improvements and cheapness of sporting articles, compared to their cost when some of us were younger and game was more plentiful. These thoughts are suggested by the advent of a young gentleman—a grandson of ten years—who just rushed into my snuggery in high glee to show me his new gun, a reward for proficiency in his school studies. He is too young to own a gun by half a dozen years, but he had fairly earned it by hard study.

To gratify him I looked over his gun; a double-barreled 16-caliber, and was surprised to find it possible that such a finely finished gun could be sold for the price ($20). It was fully equal in finish to guns that I own for which I paid five times that price. In fact, my collection embraces some famous old Tom Moore and Westley Richards muzzleloaders that were once my pride and glory, the cost of which would now purchase a whole armory of guns that look as well and no doubt shoot as well. There they rest on their racks, relegated to the past as "has-beens," to be scorned by the farmer's boy, and would not bring $10; and yet what famous old shooters they were in their day. Even yet I have an affection for them, and I carry it so far as to take one of them out occasionally as a reserve gun for a long shot at ducks when the breechloader has failed to do its duty.

In my collection I have an old flintlock Joe Manton that was my father's. It was the apple of his eye, and many is the back-load of wild pigeons that as an urchin I have toted home that he shot from the great flocks of thousands that used to fly over. Then I have one of the early day Colts army pistols that I carried on many long marches in Arizona when it was necessary to be ever on the alert for the wily Apache. Nothing serves better to show the stride of improvement than a comparison with the neat, light Smith and Wesson of the present day, with its handy cartridge in lieu of the loading with flask and bullet.

Who does not remember, among the early-day repeaters, the "Cochran patent," a flat disk perforated with six chambers, with a percussion nipple opposite each chamber? The disk was moved by hand at each shot. These arms had a short run, as they had a habit of communicating the fire to the adjoining chambers, and in consequence would all go off in succession, shooting a complete circle, as illustrated on one occasion when an officer friend, having taken a great fancy to one I owned, stumped me for a trade for one of a small-sized Colt. The exchange being made, he went down by the mule corral at the lower end of the camp to try it. It took that occasion to show its quality by every charge going off at once, barely missing some brother officers and killing a mule. I was not much more fortunate in my trade, for the first time I fired my little Colt the cylinder and barrel departed, leaving only the stock in my hand. The odds were about even, the only difference being that my brother officer had to pay Uncle Sam for one mule expended in target practice. Such were the idiosyncrasies of the early-day repeaters—quite a contrast to the perfection of the present-day weapons. And the improvement in all sporting paraphernalia have been as great.

Take fishing rods, for instance, and reels. My father's best fishing rod was an unjointed bamboo, which stuck out behind the wagon when we went fishing. There were no reels in those days—at least they had never reached us in the country—and we made our own lines of twisted horse (tails) hair, and right good ones they were, elastic and never tangled. We made our own flies also, laying the old red chicken cock under contribution for his long neck feathers, and the plumage of birds; and the trout, less fastidious than at the present day, did not object to them.

It has always been a source of great regret that my father could not have lived until the present day, so that I might have had the satisfaction of presenting him with a full fisherman's outfit of these times—a split bamboo, silk lines, reel and creel—and also that my dear old mother could not have lived to be the recipient from me of a box of tea from China. Their happiness would have been complete.

Speaking of split bamboo rods, they, too, have followed the cheapened methods of manufacture. I paid $25 for my first and $2 for my last; and it is a bold assertion to make, but I do say it, that in point of utility I do not see any great difference. I know I shall be hooted at and called no sportsman for such a statement, but the proof is in the fishing. It did not break and I caught as many fish with the $2 rod as I did with the $25 one. The trout did not apparently note the difference. My real standby, however, is an old greenheart rod that I have used for thirty years and that has a record of over 25,000 trout, many salmon (steelheads) and innumerable bass; but at last it shows signs of the heavy work that a salmon gives a light rod. It is sprung badly, and on looking at it the other day I was forced to the conclusion that its days of usefulness were over and it must be relegated to the attic with the old muzzleloaders, powder flasks, wad cutters, percussion caps and a chest of drawers full of obsolete sporting paraphernalia that at some later day the rising generation will amuse themselves by overhauling and have a deal of fun criticising grandpop's old traps.

Taking my semi-occasional walk through the market to-day, to look at the fish and game, I was surprised to see the small quantity of the latter and inquired of a dealer why. He informed me that the restrictions put on the export of game by the Supervisors of the adjoining counties and the preserving of the marshes by the shooting clubs had knocked out the market-hunter to a considerable extent and the receipts of game were small. Ducks were selling at $16 a dozen, quite a contrast to old-time prices, when a pair of mallards or canvasbacks brought but 40 cents and teal $1 per dozen, at which time salmon were 5 cent per pound, and in still earlier days but 3 cents; and I have seen cart loads unsold dumped into the bay. These were called poor man's beef.

At the rate the canneries on the coast above are packing them, it won't be many years before a salmon will be a curiosity. I saw a ship loading to-day with 150,000 cases for Liverpool, and this is no uncommon thing. The only wonder is that there are so many fish left at the present time in the Northern rivers, especially as as those caught are spawning fish. Think of the millions that are destroyed. One cannot but have sympathy for the next generation, for by the time it comes along the show for game and fish will be mighty slim. However, we old fogies will all be tucked away by that time, and like Bret Harte's Chinaman when curled up on the floor by a biff on the pit of his stomach, will take no further interest in the proceedings. All the game will be wiped out by this generation before we go. The next will have to fall back on Filipinos and such like live game. There's very good shooting down that way just at present—no close season. The only drawback is they have a bad habit of shooting back again, which is objectionable. What a lot of high cost breechloaders there will be in a few years reposing on brackets in attics which there will be no use for—no game left to shoot, and a deer or moose will be one of the menagerie curiosities, with the hippopotamus.

SAN FRANCISCO, Cal., Nov. 8.

Yukon Notes.

(*Concluded from page 304.*)

Changes in the Yukon.

THE other day I received some letters forwarded from Dawson City which had been two years all but two months in reaching me. Apparently they are getting postal matters straightened out on the Yukon. For seven months I heard nothing from my family, and when I came East I came to the wrong place and lost a day in seeing them because I was unaware that their plans had been changed and that they had passed the winter in another town. Everything has changed on the Yukon now. They have a railroad that carries goods across White Pass to the navigable waters of the Yukon for $6 a hundred where we had seen the rate $100 a hundred. There are fine river steamers on the lakes above White Horse and on the river below, and the route that caused so much agony and sweat but two short years ago is now opened to tourist travel. The telegraph has at last reached Dawson, and never again will the great log city—the greatest the world has ever seen—be cut off from communication with the outer world, as it was all through the winter of 1897-98. How like romance does the story of the first newspaper to reach Dawson when the river opened in '98 read! Already we begin to doubt the historic fact that $15 was paid for it on the river's front, and that the man who bought it earned hundreds of dollars reading from it the account of Dewey's victory to eager audiences who paid a dollar a head admission to the hall which he had hired to read it to them. We begin to doubt that snowshoes were ever $40 a pair at the Pelly, or that our simple meals of mush and bacon and scorched beans cost as much a day as we could have lived at the Waldorf-Astoria for. Yet a glimpse at the expense account in my notebook substantiates the latter fact. On the last of our journey we ran out of supplies and in three instances had to purchase limited amounts of food from persons who happened to have a surplus. For this food we paid from $1 to $1.50 a pound. The sellers had no scales and they guessed the weight of the food, and they did not always guess it to our advantage. A small cup was considered to hold a pound, whether it was beans or rice or flour, and it was always struck measure. It was surprising how small some of the cups really were. A man could hunt through house furnishing stores a long time before he could duplicate those cups.

To aggravate the high prices for the cheapest staples, we had insatiable appetites. Each of us ate our own weight in food in thirty days. Double the army ration would not have satisfied us. We were exposed to Arctic temperatures day and night and never thoroughly warmed, and an excessive amount of food for fuel was required. At the start we tried putting ourselves on rations of 3lbs. a day, but the plan was not a success. We felt empty and tired and unequal to the work demanded of us, though earlier in the year a less amount had amply filled our requirements.

We craved fat more than anything else. I have seen men eating their bacon raw in order to lose none of the fat, and from freshening our bacon in water at the start and frying it to a crisp, we came to barely brown it on our trip out over the ice. We could have eaten blubber or tallow candles.

One of our greatest dainties was raisins dipped in the grease of the frying pan when it was about the consistency of butter. A raisin with a chunk of pure grease on it the same size was a tid-bit that made one's mouth water in anticipation.

Supper and breakfast were eaten by the light of the camp-fire, which was the next worst thing to no light at all. We only saw what we were eating at one meal in the day, and at the others it was perhaps as well that we didn't.

Hughy Day, the Mail Carrier.

At White Horse we made the acquaintance of Hughy Day. Day is the man to whom the honor for bringing out the first news of the Klondike is said to belong. Six weeks before that July day in 1897 when the Portland brought the first fortunate Eldorado and Bonanza miners to San Francisco, setting the world wild with their story of the great gold strike, Hughy Day poled up the river in a Porterboro canoe and carried the news to Juneau.

The first reports of gold strikes are always sensational and Day's news did not receive the credence to which it was entitled. It was one man's say so, and though Day was known to be sober and reliable, most men waited to hear the report substantiated from other sources. And so it happened that the world at large knew nothing of the Klondike till nearly a year after its discoverey.

Day, though a young man, is an old-timer on the Yukon. He crossed Chilcoot Pass for the first time in '84. In 1885 he was one of the seventeen men who comprised the entire white population of a vast territory on the upper Yukon. Of these, three were Indian traders and the other fourteen miners. Day has made nine round trips from Forty Mile and Dawson and three from Circle. He believes in shaving off the mustache in winter to facilitate eating and talking. It is neither pleasant nor safe to have one's mouth frozen fast and to have the words locked in and the food locked out. Forty below zero is cold weather, and you can tell when it is forty below or colder by the white steam which the camp-fire gives off in place of smoke. In the winter of '96-'97 Day made three trips out from Dawson, and this, with one the following summer and one the winter of '97-'98, comprised his experience as a mail carrier.

Day said that the best time for traveling with dog team was in February. In the latter part of this month the sun begins to take effect on the snow and to form a crust, and the wind also helps pack the snow. With one man ahead on snowshoes to break trail and one to follow to hold up the sled fast time may be made. Day has averaged fifty-three miles a day traveling in this way, and covered sixty-eight miles in a single day between Miller and Forty Mile on the route between Dawson and Circle.

Day's tent and stove were marvels of lightness. Together they weighed only 21½lbs. The tent was a 7 x 7 A tent. The stove would burn 18in. wood and weighed only 6½lbs., including the pipe. It was made from two coal oil cans riveted together, and though it had no oven and could not be used for baking, it was satisfactory in other respects and warmed the tent very nicely. The average Yukon stove weighs from 25 to 40lbs., according to size and whether or not asbestos is used as a lining.

Day was traveling with Wm. Kinney, who owned the dog team and had just refused $1,500 for it. The team consisted of two full-blooded Malamoot, one Siberian and two other half-breed Malamoot and Siwash dogs. They fed the dogs on bacon, salmon and grits and rice. Day said that the bacon was first-class dog food, but heavy to pack. Salmon is better and very much lighter. King salmon are best. Dog salmon run late and are full of water, because there is no time to properly dry them before cold weather sets in.

Day was only thirty-six years old at the time I saw him, but he had had adventures enough to fill several books. He told us some of his hairbreadth escapes, but afterward said he was afraid it would worry his mother in Juneau if she heard of them and got the idea that his business was risky, and he asked not to have them repeated. As a sample of the hardships the pioneers had to put up with, he stated that in 1885 the miners on the Yukon, besides their flour, had only 30lbs. of bacon and what sugar could be held in a pocket handkerchief to last them during the winter.

At White Horse Rapids.

An ice jam at the foot of White Horse had backed up the water to such an extent that the rapids themselves had disappeared. It would have been hard to convince a man watching the oily black flow of the water between the basalt cliffs for the first time that the place was the famous rapid that had wrecked so many lives and fortunes. The construction of a dam and a lock at this point would make the navigation safe and easy. The neighborhood had changed a great deal since we saw it last. Work on two tramways was progressing, and already little settlements had sprung up at the foot of White Horse and the head of the cañon. Mr. G. A. Kline, of Tacoma, was building the best of these tramways. Practically his entire construction force were professional men or men with specialized training. Handling pick and shovel as day laborers were two experienced physicians, one marine chief engineer with papers of unlimited tonnage, two machinists, one Salt Lake City ex-police captain, two well-known caterers and restaurant proprietors from Salt Lake City, two expert bookkeepers and stenographers and an ex-mine superintendent. I believe Mr. Kline said there was only one man in his employ who had not left a good job when he came to Alaska. These men expected when they left home to handle pick and shovel, but they little thought this was to be their Klondike. It is to be hoped that some have dug to gold since then and found some substantial reward for their pluck and enterprise.

Sailing Over the Snow.

Mr. Kline believed that snow boats modeled after the plan of ice boats could be used to advantage for transportation on the lakes at the headwaters of the Yukon. "Back on the prairie in Dakota, near the Minnesota line," he said, "we were once snow-bound fifty miles from home. No horse or conveyance could get through the drifts, and the prospects for walking were not particularly bright. In this emergency one of the party rigged up a boat just like an ice boat, except that in place of steel runners he used wooden ones 3ft. in length cut from the front part of an old pair of skees. The snow was hard packed and the wind high. We made a bee line for home and reached there in such a short time that you would hardly believe me if I told you. Lots of the farmers were living in dugouts approached by a kind of otter slide where they went in. Once we sailed right over the top of one of these houses.

"The wind here in Alaska is all from the south. Every tree is bent down stream. It is a fair wind for men coming in, and they should take advantage of it."

Further on we saw sails frequently used on sleds with very good results, and Mr. Kline's suggestion often recurred to mind as a practical possibility.

Men with One Idea.

We traveled from the cañon to Marsh Lake in one day, but the day following we encountered a terrific wind and did not reach Tagish Post till forty-eight hours later. This was the headquarters of the Canadian Customs Department, and at that time the most important police post above Dawson. It is only seventy-five miles from Dyea, on the salt waters of the Pacific, and in that seventy-five miles, including White and Chilcoot passes, from 40,000 to 50,000 men were camped waiting for an opportunity to go through to Dawson. In view of the impatient spirit that characterized the majority in this waiting army, it is a significant fact that the number of men who actually journeyed down river into starvation land from the time the jams formed in November until the last of January, when we left the country, might almost be counted upon the fingers of one hand. First were the Government messengers, John Peché, Andrew Flett and Toissant

Colin; then the men who crossed from the Stikeen, McMillan and Pickett; then McNealey, and lastly Mr. R. H. Doud, of Boone, Ia., whom we met on Lake Labarge.

The last four men are in a class by themselves. Doud had started from Bennett with a party of fifty, and the deflection of these man had in no way affected his serenity of mind or altered his purpose. If I am not very much mistaken, all four of these men had in them the stuff from which the highest type of heroes is made. They were one-idea men, and personal suffering and danger did not weigh in the balance with the end they had set out to accomplish. The average man quails at the thought of starvation as he would from the terrors of the Spanish Inquisition, and it is only here and there that men can be found who are ready to meet dangers singly. Doud, like McNealey, was an old man. Both were quiet men, shrewd, but generous hearted, and as I think of them now, they suggest such types as Cooper's spy or Sydney Carton in Dickens' "Tale of Two Cities."

Atonement by Proxy.

The high wind of the preceding two days had been followed by a breathless calm the evening we approached Tagish Post. The black firs stood in motionless ranks behind the white parapet at the water's edge, and above the stars twinkled in a perfectly cloudless dome of regal purple. Far off in the darkness we heard the crisp metallic tread of some one approaching, walking rapidly with the rhythm of Kipling's "And for one the creak of snowshoes on the crust." The man proved to be a Tagish Indian, a member of a small but interesting tribe who form the connecting link between the coast Indians and those of the interior. Some fellow tribesmen of his were recently executed in Dawson for the murder of a prospector on the McClintock, no great distance from Marsh Lake. Their ideas on the subject of retribution, as brought out at the trial, were of a primitive kind. Several years before some white men had killed a relative of one of the Indians, and it seemed only natural for them to square the score when they got an opportunity to kill a white man without particular danger to themselves. Three Indians were convicted of the crime and two sentenced to the death penalty. The third, a boy, was let off with a term of imprisonment. The ringleader of the affair was a smart, intelligent Indian, but he failed to comprehend the equity of the sentence.

"Me kill one white man, you kill one Indian," he said. "You kill boy. Him no good."

From the Indian standpoint this was a fair proposition, and no doubt the boy would have thought it all right that he should suffer, a propitiating sacrifice for the others, but the authorities at Dawson only smiled and the Indian was told that the boy instead of being killed was to be released after a term of imprisonment. The man looked across at the lad, who was standing near by, and, grinning, remarked, "Him no live six months," whereupon the boy was visibly affected, though he had heard stolidly the proposal that he should be killed instead of the older Indians.

The Indians' reasoning seems childish and ridiculous, but it only proves that all mankind are the victims of custom. We submit to many obligations that are only less onerous in degree than giving up our lives as atonement by proxy. The other day a farmer said to me:

"I don't know whether you know it or not, but the minute you take cows off an old dry pasture and put them on your meadows they get unruly and make no end of trouble breaking fences.

"I think any one can learn sense by studying human nature in cows," he added. "They are contented with a little, but when you give them the very best they get swelled heads and want to roam all over creation."

Human nature as exhibited by Indians is a trifle more complex, but it helps us learn sense just the same.

Frozen Beans and Frozen Noses.

At Tagish we fell in with McBeth, the dog driver and Canadian Government mail carrier, who volunteered to give us a lift to Bennett with his team. We also met an acquaintance of the previous fall, Mr. Curtis, who asked permission to join us for the trip out. Curtis had a way of preparing beans for winter expeditions that commended itself. He would boil a large quantity of beans and then freeze them in square chunks of a size sufficient for a meal. These were packed in a sack for convenience in carrying, and in camp all that was necessary was to thaw the portions out in the frying pan with a little water, a very few minutes' time sufficing to put the beans in condition for eating.

Curtis and Mac and I left the post early the following morning in advance of the dog teams. Mac and I felt like men relieved from burdens and we seemed to walk on the toes of our moccasins and not in the old flat-footed way that we had dragged our sleds for nearly four hundred miles. My nose had been slightly chapped by the wind on Marsh Lake, and just before starting I rubbed it with a little Cuticura salve. By and by Curtis noticed this and he stopped and impressively picked up a handful of snow.

"What's the matter?" I asked.

"Your nose is frozen," he replied. "Don't be alarmed. I can restore the circulation in a minute."

I dodged the handful of snow and explained the matter, feeling my nose meanwhile to assure myself that there were no hard spots.

All three of us had stopped and were facing each other, and the circumstance revealed the somewhat singular fact that both Curtis' nose and Mac's were actually frozen.

When I told Curtis the fact, he thought at first I was joking, but soon both he and Mac were vigorously rubbing the imperiled members with snow, and by degrees a rosy tinge returned, and finally a few drops of blood welled to the surface of the abraided skin.

Not till then could they feel any sensation in their noses, and they were glad to be informed that the rubbing had gone far enough.

We traveled that day until about 2 o'clock, and then pulled up and had dinner and went into camp for the night. The following afternoon we reached the settlement of Bennett, and we felt once more in touch with the outer world. It requires a course of training to follow a dog team. The pace is a constant jog trot, and a single day of it makes a man who is unused to this kind of travel very sore and stiff.

Approaching Chilcoot.

At Lake Bennett the sled was left behind, and with our few remaining belongings in packs, strapped to our backs, Mac and I set out on the final stage of our journey to salt water. Feb. 3 was a beautiful light morning at Lake Bennett, but the coldest day of the winter, as recorded by the police post thermometer. We could learn nothing of the condition of the pass, and felt a little uneasy about crossing on account of the low temperature.

As we crossed the carry between Bennett and Lindemann we noted that a great deal of the scanty timber along the trail had been cut, and was being collected at various points for purposes of speculation. This meant real hardship for the poorer class of miners who were making their way to this point with a view of camping here till the river opened. One man told us that he had to go a long distance to get his fuel, and soon would be unable to get any at the rate it was being cut. With economy the trunks, roots and branches of one tree lasted him a day. The wood is mostly jack pine, which does not last long in a stove.

As we trudged along we thought of the fate of the first white man who tried to cross Chilcoot in winter, after having journeyed up the river from the mining country. It was in 1886, the year of the Forty-Mile excitement. The discovery of coarse gold had drawn to that point more men than could be supplied with food another year unless word could be gotten to San Francisco and an extra amount sent in by river boat when the Yukon opened. Capt. Williams volunteered to carry the message out. He traveled up the frozen river to its source, and worn out and weakened by starvation, essayed the final stage over the divide to the Pacific. Some faithful Indians stayed with him, and when at last he sank helpless in the snow they put him on a sled and dragged him along. Williams' brave spirit passed away before the goal was reached, but the letter which he carried with him went on to its destination, and his mission was not in vain.

We crossed Lake Lindeman on the ice and began climbing the steep ascent to Deep Lake. All along the trail men were sledding in supplies, but their caches were all a long way north of the summit, and they could tell nothing of the state of the trail beyond. They united in saying that no one had been across for two days, and it was the general opinion that the weather was bad on the ocean side of the pass. To check the sleds on the steep descents the packers bound chains around the runners where they would take hold of the snow, but at some of the turns wrecks on the rocks below showed the precaution had not always proved successful.

As we ascended, the snow steadily grew deeper, and before long the tents that were pitched beside the trail were often sunk in pits that hid them from view. One of the mounted police who happened along told us of a storm he had encountered in crossing White Pass the week before. Thirty men were cooped up for the night in a small wall tent that was so packed there was scarcely room to turn around. One of the occupants of the tent was ill with pneumonia, and during the night he died. As soon as the fact was discovered the body was rolled outside and the dead man's place taken by one of the living. Our informant also told us of a barber who had tried to cross White Pass to Bennett earlier in the season and who was found frozen stiff a short distance from the summit. This man had on, besides his trousers, only a slicker coat and cotton undershirt. The poor fellow did not realize the fact that a few short miles carried him from the comparatively mild climate of Skagway into a country of arctic temperatures.

We passed Deep Lake and crossed Long Lake on the ice, and after following a narrow defile through a country black and barren beyond description, came at last to Creater Lake, just below the summit. For the last eight miles there had been no firewood on the trail and no permanent camps. The whited, treeless landscape called to mind photographs of the surface of the moon. There was nothing homely or terrestrial about the frosted rock clefts, and the gaping crater bowl with its skeleton-white broken rim, and the quiet that brooded over the place was uncanny. Even the islands in the lake had a character all their own, different from anything we had seen.

On the last steep pitch from the lake to the summit, we met a party of men who had just come from Sheep Camp. They reported a terrific wind on the ocean side of the pass.

The Summit of Chilcoot.

Once on the summit we could well believe their words. Below us was gray vacancy, and from the flue-like hollow of the pass was shot upward with a series of pulsating blasts volleys of snow and débris from the lower levels. The huge timber jacks which had just been erected for the support of the aerial tramway were plastered on the south side with a curiously honeycombed fretwork of ice, which made them look more ponderous than ever, and the frozen surface at our feet and on either hand was grooved and worn as though etched by the sand blast process.

Mac and I turned our backs to the wind, and holding on to the life line and sticking our toes into nitches cut in the snow we began the descent. They say that to reach Sheep Camp from the summit, a distance of four miles, all you have to do is step off. In the first half-mile there is a drop of 1,100ft., and the angle commonly exceeds 45 degrees. We could hardly, though, have fallen to Sheep Camp against that wind, and before we had gone far we decided it would have been much easier to travel up hill with it than down hill against it.

Fortunately, however, it decreased for a time as we descended, and not till we had gotten below the Scales, where the trail more nearly approaches the horizontal, did we again feel its full force. Here the wind buffeted us just as the surf buffets a bather, and at times we were lifted from our feet and thrown to the ground with stunning force.

On all sides packers and workmen on the line of the tramway were hurrying to shelter, gray, spectral figures with only their eyes showing through the opening in the face masks. It was practically impossible to communicate with these men on account of the wind. All with common impulse were moving down toward the refuge at the timber line.

When we reached the Seattle House in Sheep Camp and stopped for rest and refreshment, we found there the body of an Indian woman and her ten-year-old child, who had met their death by freezing just below the Scales. They belonged to a party of Tagish Indians, and had fallen behind the others, and blinded by the snow, had missed the trail. Their bodies were found only a few rods from the beaten path, in plain sight of the army of packers, and only a short time after they had stumbled and fallen in the snow for the last time. The woman and child were already dead, but the baby, which the woman carried, was alive and well, for with the mother instinct she had taken off a large portion of her own scanty clothing and wrapped that round the baby.

On the Coast Once More.

It was not yet 4 o'clock, and we could have gone through to Dyea that night, but Mac and I decided to stop at Sheep Camp over night and secure a well-earned rest. In the morning we tramped the few remaining miles, and found that our actual traveling time from navigable waters of the Yukon to the salt waters of the Pacific was only nine hours. We were both in splendid physical condition, and instead of suffering from our trip out over the ice, had actually profited by the experience. Both of us had gained very considerably in weight. I forget Mac's figures, but for my part I had jumped from 145lbs. to 165. The editor of FOREST AND STREAM, who noted the improvement, said I should advertise Alaska as a health resort. As a matter of fact, if a man don't freeze or starve to death, he will grow fat in that country in cold weather.

At Dyea and Skagway we noticed a great change in temperature. There was scarcely any snow on the ground and there was no ice in the adjacent waters of Lynn Canal. We were told that the coldest weather to date had been ten above zero. The Japan current is, of course, responsible for this condition of affairs.

Skagway and Dyea have a serious drawback as winter resorts in the high winds that blow almost continuously. It is March there the year round, and owing to this fact and the salt air, Mac and I felt just about as cold on the coast with the thermometer just below the freezing point as we had at any time in the interior.

A dry cold is never hard to bear, provided one exercises freely and is fairly well clothed. The cold that penetrates to one's marrow and makes a man feel thoroughly miserable is only to be found in a moisture-laden atmosphere. At Seattle one of the reporters who interviewed us on landing, and who heard that we had traveled up the Yukon without stove or tent, asked me if I had not suffered severely from the cold, whereupon I told him that I had not suffered so much from the cold the entire time I had been in Alaska as I did on the occasion of the Grant Day celebration in New York in 1897.

As a result of the milder temperature on the sea coast the skin on our faces and hands began pealing off, and before long we had a new growth, which was lucky, for it removed some of the camp-fire burns upon which soap and water made no impression.

At Skagway we saw Baskerville, but personally I failed to see Herrington, owing to the fact that a steamer was likely to sail at any moment, and I was very anxious to get back to civilization with a scheme which, had it succeeded, as it almost did, would have proved of benefit to the entire party. Sheriff was wintering at Portland, Ore.

After I left, McKercher and Baskerville joined forces and went into the newly discovered Atlin mining country, where they just missed making a rich strike. Herrington went through to Dawson. At the present time Baskerville is the only member of the original party who is still in Alaska. The last I heard, he was doing well and liked the country.

Personally, I fully expected to be back in Alaska within a month or six weeks of the time of leaving Skagway, and I have never ceased to regret that causes beyond my control prevented the return.

One more incident remains to be told, and then I am through with these random notes. On our way over the three miles of salt water that separate Skagway from Dyea, the captain of the tug engaged in ferrying passengers across told us that a steamer, the Clara Nevada, lay at the next wharf to the one at which he was accustomed to land, ready to sail for Seattle. I determined to catch this vessel if possible, and as soon as the tug had made fast at her pier Mac and I started on the run toward the other boat, which we could see had steam up and was almost ready to start.

The rise and fall of the tide at Skagway is considerable, and the piers are very long. Several minutes were taken up in reaching the shore and crossing over to the neighboring pier, and just as we gained it we heard the steamer whistle, and shortly after saw her cast off and steam away into the offing.

A few seconds more and we would have gained her. First-class fares to Seattle were fifty dolars, and had the captain of the Clara Nevada seen us he would undoubtedly have waited and taken us aboard.

Naturally I was very much disappointed at missing the steamer, but a week later, when I reached Seattle, my feelings underwent a change. News had just been received that the Clara Nevada had been lost on the passage down the coast. Persons living near Burners Bay had heard an explosion and seen a fire at sea, and the next day the shore was strewn with the wreckage of the doomed vessel. Not a soul among the passengers or crew escaped. I am thankful to the Providence which spared me, but when my conscience is particularly acute I sometimes remember the old couplet:

"God took the good, too good to stay,
And left the bad, too bad to take away."

J. B. BURNHAM.

The Twenty-Second Time.

AN Illinois subscriber who, under date of Oct. 27, sends $4.25 for a new year of FOREST AND STREAM and an October *Woodcraft*, adds this postscript: "This is the twenty-second time I have subscribed for your paper; and it's all right. I'm an old sportsman myself, but the thing is about played out, and the next best thing is to read FOREST AND STREAM and make that do."

A Glimpse of Porto Rico.

LIKE a gem in its deep blue setting lies Porto Rico, the easternmost and the smallest of the four Great Antilles. It is a volcanic island ninety-five miles long and thirty-five wide, and has an area of 36,668 square miles, or not far from that of the Yellowstone National Park. It is densely settled with a population chiefly white, and is very productive.

Mr. Robert T. Hill, of the United States Geological Survey, recently submitted to the Department of Agriculture a paper on the forest condition of Porto Rico, from which much interesting information may be gleaned. We learn that practically its whole area is now, or has been, devoted to agriculture or stock raising. The principal agricultural products are sugar, coffee and tobacco, which are chiefly exported, but besides these there are the farms on which are grown the crops which subsist the population.

Although Porto Rico has actually been almost deforested, this would hardly be suspected by the average traveler. The coffee estates and farms have a forested appearance, because coffee requires shade, and can only be grown either among natural trees or those which have been planted. Moreover, as the coffee bush looks like underbrush, the coffee estate has the appearance of an open forest with much undergrowth. Sugar and tobacco, of course, can only be grown where the forest has been entirely cleared off.

Since coffee and tobacco take a great deal from the soil, there are large areas in Porto Rico, formerly devoted to the growth of the staples which will no longer produce them, and which have grown up to grass. Such areas are often occupied by farms devoted to cattle raising, of which there are many engaged exclusively in this industry. In all there are 26,650 farms in Porto Rico, or nearly 7.4 to the square mile.

Notwithstanding what has been said, there are certain small areas of forest in Porto Rico, though these have no great export value, although they are of the greatest importance to the inhabitants of the island. The large trees are, most of them, hard, heavy woods, which are used in construction and for other purposes. Some of them would make beautiful cabinet woods.

There are many species of palm upon the island, and as these trees are perhaps the most used by the natives of all the forest products, it is necessary to mention them. Combined in them are sustenance, clothing and utensils for the natives of the tropics. In Porto Rico the leaf of the palm is largely used for thatch and sheathing of the houses of the poor, and its broad leaves for washtubs and other domestic utensils.

The Palma Moriche (*Cocos mauritia*) grows in damp, marshy soil from sea level to an altitude of 834ft. In this palm the Guarannos Indians, who inhabit islands in the mouths of the Orinoco, find all that is necessary for food, drink and clothing; for building their houses and furnishing them; for making their boats, ropes and sails for their navigation, and apparatus for fishing and hunting. Concerning the uses of the Moriche or Sago palm, it has been said that "when the heat of summer has parched everything about this tree, travelers find at its roots water always cool, which escapes from subterranean veins. The most tender part of its fruit center serves as a garden vegetable to the natives, and from its young shoots they draw the cords which form their fish nets and from which they weave their hammocks. It is a refreshing nourishment before its fruit is matured, and when ripe it makes oil, soap and pastes, which are sweetened with honey. With the dry leaves of this plant the Indians cover their huts, from its sprouts they manufacture mats, blankets, hats and sails for their vessels. The trunk contains in its upper portion a sweet juice, from which a kind of wine is produced. From the trunk, boards and sometimes small boats are made. A natural texture which covers the cluster of fruit before it matures serves as caps for men and as skirts for married women. The palm, which does not bear fruit, furnishes a mealy pith, which is called *yuruma*, used for making bread and also pottage or soup. A thick, white worm is found in the rotten medulla, which is eaten and considered a great delicacy."

The yagua, or cabbage palm, grows on the plains and in the forests. It is very useful for covering houses, is tall, of ash color, and has the figure of a well-formed column; its pedestal is perfect, the trunk being larger in the middle and tapering to the point where the leaves appear and form a cornice, from which springs another column no less perfect, about 7ft. high and 2½ft. in circumference, of an emerald-green color, smooth and lustrous. The upper column of the yagua palm is denuded of its bark every month, and this is called *hoja de jagua* (lamina or leaf of the yagua). The bark is flexible, very durable, and serves to cover houses and divide their interiors, to make chests and boxes for storing clothing and for transporting rice and coffee. On a journey the leaves are taken as a protection from heavy rains, and they serve many other uses.

The palm most highly prized by the Porto Ricans is called the "Palma de gravia" (or grana?), the "Royal palm." Growing to 100ft. or more, its slender trunk is crowned near its summit by leaves. A great shoot, delicate and pointed, from 10 to 12ft. in length, constitutes the upper end of the trunk. At the base of this terminal portion a fruit cluster from three to four hands in length, divided into different branchlets, grows out about once a month. This cluster is full of a green, olive-shaped fruit, larger than the filbert, the interior nut being covered with a green substance. This fruit of the royal palm is very useful in fattening swine, which is the only use made of it. In the other islands they extract an oil from this fruit which is very good for lights and other uses. The central part (the heart) of this palm is cooked and eaten like cabbage, and is sometimes prepared as a salad. The Indians call it the "pira" (pile or pyre). In Porto Rico it is rarely used, although it has an agreeable taste.

The palms called "coyures" are taller even than the royal palms; the fruit grows in clusters, but is smaller, and the hard, round nuts, much like the above, serve as food for swine. At the foot of the trunk of this palm is formed a tuft like a pedestal, composed of a mass of small roots, from which grow thick fibers. These reach to the upper portion of the palm and form the stem through which the sap passes. The negroes extract from this palm a vinous liquid which is very agreeable and healthful. It is used as a specific in cases of fever.

The palm called "corozo" (oil palm) is very common. Its tall trunk is entirely covered with sharp thorns three fingers in length. At the top it is crowned by very long fronds. Its fruit is in small clusters, composed of nuts as large as eggs, whose yellow covering is very hard and bursts when ripe. The inner nut is white, divided into three parts, less solid than the outer shell. Its taste is agreeable, but it sours in a short time. In Porto Rico the corozo serves as food for swine, but foreigners extract from its nuts an oil which is medicinal, and useful for many purposes.

The coco palm is found in great numbers on the plains and coasts, and is a profitable plant for cultivation. The external sheath of the cocoanut is composed of a multitude of fibers which form a nap of a reddish color, which is excellent for calking boats, as it resists water better than tow, and endures longer. The Indians make a cordage from this fiber, and sails for their boats, and in the dockyards of Guayaquil, Ecuador, they use no other calking material in repairing vessels. Beneath this exterior fibrous covering is another, the color of chestnuts, which is very hard, and, although elastic, is easily broken. A fine oil is made from the meat of the cocoanut, which is used for lighting and cooking. The Indians make an intoxicating drink from the sap of the cocoanut tree, which at first has a bitter-sweet taste, afterward becoming sour. In Porto Rico the nuts are utilized by drinking the water from them when young, by making sweetmeats from the meat, and by manufacturing drinking cups and other utensils from the outside shell. From the trunks of the trees the best palm boards are made for houses, because of their resistance to the inclemencies of the weather. There are masses of fiber at the base of the leaves, which appear like bunches of tow or bast. These are the fibrous remains of dried leaves which have lost their fleshy portion, and appear like pieces of cloth woven from thick tow. This is used for filtering and sifting.

Hardly secondary to the palms in point of usefulness is the bamboo cane. This beautiful plant may be seen everywhere, growing in graceful, feathery clumps. Its stem is used for fence posts, telegraph posts and construction of the huts of the peasant. The individual joints are also used for utensils, flower pots, and for propagating the cocoanut seed.

Among the most useful of the plants found is the "emajagua," or "majagua." This is a small tree, or rather a shrub, from the short trunk of which sprout forth many long, straight twigs. From the fiber of these twigs ropes are made for all uses, especially for the rigging of native boats. Formerly this was the only cordage employed for the latter purpose, as it is very durable, although rough and difficult to handle.

No less useful and common is another small tree known as the higuereta (*Racinus communis* Linn.), also called the Palma-Christi, which abounds on the coast. This tree is smaller than the last mentioned and has many knotty and twisted twigs, the leaves being divided into five lobes. It produces a bunch of berries similar to the coffee, which, when boiled, yields very clear oil. This serves as an illuminating oil, giving a clear light without odor and without smoke. It is also much used as a purgative, as a remedy for fevers, and the Indians apply the leaves for relief from headache. Only the negroes make any use of it in Porto Rico. In some gardens of Europe this plant is cultivated as an ornament.

The tamarind is found in the plains and in the forests. It grows equally well on the warm coasts and in the cool mountains. The tree is very large and spreading. Its trunk reaches 10ft. in circumference. The wood is hard and red in color. The fruit has a pleasant taste, neither sweet nor sour. Diluted with water, it forms a delicate and wholesome beverage like that of the lemon, and is considered by some even more agreeable. Sweetmeats are made of the fruit; also remedies for fevers, vicious humors, scurvy, etc.

Porto Rico is especially well adapted to the growth of citrous fruits. The wild or Seville orange in the country is an indigenous tree, which would prove a source of considerable revenue if properly appreciated by the makers of jam and marmalades. Of the cultivated oranges there are two principal kinds which the people call "naranjos" and "chinos." The former term is applied to oranges in general, and the latter to an especially fine and sweet variety. No attempt has been made to cultivate the orange as an export product. Such trees as exist are the result of casual planting for shade, ornamental and family use, just as an American may set out an occasional peach tree in his yard. The art of orange culture as practiced in Florida and California is unknown. When one considers the perfection and abundance of the Porto Rican orange and the demand for that fruit in this country, it is obvious that its culture offers a most profitable opening to the American investor. Limes, lemons, grape fruit, shaddock, tangerines and other varieties of the citrous family can be cultivated with profit.

Although the banana is not properly a tree, still it is the most useful and the most cultivated fruit of the island, constituting the staple food of the inhabitants, especially the working classes. One is hardly ever out of sight of these plants, as they are grown around every hut and upon all the estates. They grow to a height of from 12 to 15ft., and their trunk is a large roll of leaves in sheathlike form, one within another, having neither wood nor bark. The leaves are green, smooth, lustrous and beautiful. Each stalk of the banana plant yields one bunch of fruit; this contains from 80 to 100 or more bananas. When the fruit is cut the plant is also cut, although it is renewed from the foot stalk three or four times, each shoot producing its bunch of fruit each year.

The species of banana called platanos or hortones are the most common and useful. When green and roasted they serve as bread; when ripe they are eaten raw, fried in butter, prepared in the Spanish dish called the olla-podrida, and baked. A very strong vinegar is also made from them. There are several other varieties of banana ("congos," "guineos," "cambures," "dominicos" and others) which are raised in the immediate vicinity of the houses; these plants differ from the hortones, being lighter green with smaller, sweeter fruit, more mellow and delicious in taste. All these species of banana are bundant and delicate in taste, according to the quality of the soil in which they grow. Generally, they are planted in a rich, humid soil, and require no other cultivation than to be freed from the weeds surrounding them.*

Notwithstanding the abundance of the banana in Porto Rico, no fruit is grown of the variety acceptable for export to our banana merchants. This is due to the fact that large and perfect bunches are required for this purpose, which the natives have never taken the trouble to produce.

Coffee is cultivated with great ease in all parts of the island, although in greater abundance and of better quality in some parts than in others. It grows rapidly and begins to yield in three years. The stem grows to a height of from 9 to 10ft., and is ordinarily from 4 to 6in. in diameter, the bark being whitish and smooth, the branches delicate and long, and the leaves, arranged in pairs, are always green, bright and smooth, without odor, and with no special taste. The flowers resemble the jessamine, and are fragrant. The fruit is somewhat like the cherry. This is gathered by hand, the exterior pulp removed, leaving a thin scale around the seed, which is taken off in water troughs or by pounding in wooden mortars.

The coffee of Porto Rico is highly appreciated for its flavor by foreigners, who mix it with the Asiatic and South American products. For this reason it is preferred to that of the other islands, and is much sought after. The production is considerable, with the prospect of rapidly increasing under the change of government.

Traces of the former culture of the cacao plant, the cultivation of which has been almost entirely abandoned, is still found in many places. It is now cultivated only as a curiosity, and in so limited a quantity that it scarcely supplies the demand. It begins to bear fruit three or more years after planting, according to the quality of the soil in which it grows. The branches are bent toward the earth, and need only be cleaned from the weeds in their immediate vicinity. They require much irrigation and warmth.

The yucca (manioc), which is commonly cultivated throughout the island, is a small tree, from 7 to 8ft. in height and from 3 to 4in. in diameter. Its bark is reddish, its branches are crooked and knotty, its leaves dark green and cut like the fingers of the hand, and its flowers are yellowish and drooping. The roots of the yucca, which the negroes call *magnoc* and the Portuguese call *mandioca*, are grated and pressed to extract the juice, which is a virulent poison. From the grated root, which is like sawdust, the cassava bread is made and baked in a slow fire. The poisonous juice after boiling loses its bad qualities and is used as a flavor or sauce in serving fish.

The Antilles are comparatively free from harmful animals and poisonous plants, but there are a few species of the latter with which the traveler should become acquainted in order to avoid unpleasant consequences. Three of these are alleged to be especially injurious—the guao tree, the manchineel bush and a small herb called the tibey.

The tree called guao (*Comocladia*), called by the Mexicans teilathiam, although useful for the juice extracted, is poisonous; it is alleged that it benumbs the person who rests under its shade and causes the hair of animals to fall off which rub against its trunk. It inflames for some days the hands and eyes of carpenters who work it. It is employed for making beds, because it drives away the chinch (or bed) bug, and its juice kills the wood borer which grows in articles made of wood.

The alleged effects of the guao tree upon man and animal have just been related, but more serious still are said to be the results of resting in the shade of the manzanillo or manchineel. This tree spreads throughout the seacoasts and river banks, is covered with regular leaves, its stem almost 2ft. in circumference, its bark smooth and delicate, the flowers rose tinted; it is loaded with small applelike fruit of a pleasant appearance and odor; the leaves resemble those of the pear tree; the entire tree is full of a milky juice, which exudes in the heat of the sun. According to current belief, as frequently related to the writer, the incautious traveler, attracted by the beautiful appearance of the manzanillo, reposes in its shade, soon finds himself poisoned, and if the lacteal substance falls upon him from the leaves, or if he touches the leaves, he suffers as from an application of some blistering substance. It is also said that a fish which eats the fruit becomes infected, the gills becoming yellow and black, and one who eats the fish in this state is said to fall into a profound lethargy, with a general relaxation of alll the limbs, according to the quantity of fish he has eaten. This effect, according to popular belief, continues twenty-four hours, and frequently results in death. The use of brandy or other spirituous liquors or the drinking of sea water is considered beneficial as an antidote.

A small herb called the tibey, the flower of which resembles the lobelia, grows in the meadows and pastures of the island. Its poison is said to be so active that a horse or other animal eating of it dies in a short time. The natural instinct of the animal teaches it to avoid this dangerous plant as soon as the odor reaches him.

The cowhage abounds upon the limestone soils of Porto Rico. This is a tropical climbing plant, with beanlike pods, very much resembling huge brown caterpillars. They are covered with a multitude of fine poisonous hairs, which, when disturbed, irritate the skin like the sting of nettles.

*Oviedo says "that the banana was brought to the island of San Domingo from the Gran-Canaria in 1516 by the padre friar Tomas de Barlanga, of the Order of Predicadores, and that from there they have been conveyed to the other islands and to the Continent, and that they originated in India, where they are called musas."

Eight Years of Satisfaction.

CHERITON, Va., Nov. 12, 1899.—Forest and Stream Publishing Co.: Inclosed please find check for $7.50 to insert my ad, again this year. Your paper has done me more good than all the other advertisements that I ever had. For eight years we have advertised with you, and the trade your paper brought me eight years ago, when our firm was Cobb & Spady, comes to my place now as regularly as the seasons come around. S. LUCIUS COBB.

[He must have been satisfied, to have advertised eight years; and they must have been satisfied, to have gone there eight years.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

Facts and Myths.

EAST WAREHAM, Mass., Nov. 6.—*Editor Forest and Stream:* In reading over "Beneath the Salt Sea Waves" I find I may give a wrong impression where I say "All of this string of pouches is produced inside the winkle's body and can be withdrawn by a pull." That is true in a sense, but it is not all produced like an egg or fœtus before any part is extruded; the winkle buries herself and begins at the bottom to deposit her anchorage, and works gradually up and off, producing the string by degrees; and at no time will there be more than three or four sections in her body. This can be pulled out, as written.

Following my article is the "Horn Snake" by the always interesting Coahoma. So many times we are just on the point of discovering a true myth. I was once told that a man of my acquaintance had dug swallows out of the mud. I went to see him, and I think my interview was reported in FOREST AND STREAM a good many years ago. I supposed (?), of course, that he was clearing out a ditch in the spring and had dug up a colony of hibernating birds, but it was not that way. He had seen a flock of swallows flying over the mill pond in the late fall. They had disappeared as if by magic, i. e., "had dived into the water." Next spring the pond was drawn off, and he saw some hogs rooting among the stumps and lumps that characterize the bottoms of artificial ponds, and found dead birds that the swine were eating—*Hinc illæ lachrymæ.*

Once in my life I met a man who had seen a stone just after it had been split, thereby releasing a toad that had been imprisoned for countless centuries. He saw the impressions made by the toad, and I tried to find what became of that interesting reptile. He could only tell what he had seen—and he had not seen the toad.

I saw on exhibition in Tacoma a slab of stone which had been split to show the petrified remains of a fish about 8 inches long and very perch-like in its general appearance. Several were shown, and they came from the Bad Lands country, I think.

How many have heard the common black snake make his tail buzz? He can do it, and it is loud enough to attract one's attention for several yards.

Why is it a small green snake common to Massachusetts cannot run on a carpet? I took one into my house years ago for the baby to play with, and it could only wiggle on the carpet; on the ground it was all right. After the little girl was tired of her new pet we let it go.

Once while fishing I caught a very small bullhead. The bushes were so thick I could not swing him up enough to get him out without some maneuvering, the fish meanwhile flopping round on the edge of the stream. When I did get a lift on him I brought up a striped snake also, which was trying to swallow my prize.

WALTER B. SAVARY.

"A Country Road."

Editor Forest and Stream:

In publishing such a charming picture as that which appeared in your last issue, and which you call a "Country Road," you have done us all a favor such as even FOREST AND STREAM rarely does.

There must be many a man whose heart was filled with sympathetic emotion when he looked at this bit of nature in black and white, and many in whom reminiscences of kindred scenes were called up by your print. And there may be those among your readers who will care to hear the experiences of others, and to them the writer offers this account of what happened to him one fine October day in 1898, and which has always seemed as noteworthy as it was unusual.

Of all thoughts connected with Bar Harbor that of seeing large game is perhaps most foreign to the average "tourist" who goes there to cool off in the sultry dog days and whose chief idea of the place is complicated by dinners and balls, by golf and by dancing, and who little dreams that there is another and entirely different world of life and sense and spirit for those who, making their happy summer homes there, linger on till chilling winds of autumn redden the trees and send away the birds of fine plumage to other more congenial climes.

But wait till those winds do come and then you know the island at its best, when with an atmosphere full of ozone you wake in the bright sunlight to find all physical labor a delight, and with a longing to fight the northwest wind as it flings itself fiercely on you when, fast broken, you tempt the outer air. On such a day start on your bicycle and take the road to Somerville, ready and eager for the windy fight which in other places would surely discourage all but the most professional "scorcher." Grind away at your pedals, westward, ho! Take easily the big hills on the road (once christened by an aggravated lady the Himalayas), climb them afoot or awheel, as best suits your wind and muscle, knowing that when once you have reached that haven for cyclists, McFarland's, three miles out of town, there are no more weary struggles for many miles, and that you have nothing before you but down grades and easy levels, and naught to keep you back but the headlong wind plunging and tearing at you as you fight your way toward the land where it lives. Keep on thus with me till we get to the "Norway" turn, but drop behind me then, if you please, for I want to go on silently and alone for another mile westward till I come to a stretch of road where the woods are thick and where no houses of men disturb the unbroken wilderness flanking beautiful Sargent's Mountain; for there it was on that bright October day the writer saw what he fears he may never have the happiness to see again, but which he heartily wishes some one else may be lucky enough to gaze at.

Through the thick woods the narrow road (every inch of it known to the writer) winds now up a trifling hill, now down, but always the best going for wheels on the island, till you reach a point where you can see that it turns rather abruptly to the left a couple of hundred yards away. Something unwonted at the far end caught the eye, but before even a thought as to what it was could be formed the swift bicycle turned the smallest little curve and shut out the sight, only to bring it back a moment later, when vision told that at least the unusual appearance was caused by animals of some sort—cows, thought the writer; now lost again, now seen for a moment till the way straightens, and there, less than 100 yards off, walked out into the road from the side where they had been browsing, with eyes intent and ears straining to catch the least sound, with nostrils vainly trying to snuff the scent blown far behind the rider and his wheel, a splendid buck in his best, and close beside him a beautiful doe; and there they stood through the lapse of time that the wheel consumed in taking itself and its burden so close to them that it almost seemed as if one could "catch them with their hands," and then, curiosity satisfied, and caution, but not alarm, aroused, they turned and trotted down the road a rod or two and then crashed into the sheltering woods.

Was not that a pretty sight to see so near a watering place? And is it not a pleasant thought that deer still linger close to balls and golf clubs and dinner dances? Not preserved or tame deer, but *Cervus* himself in all his natural ways, in his own chosen home, where he and his forbears have passed their successive generations. And is it not a still more pleasant thought to realize that, thanks to the sound wisdom of the Game Commissioners and to the good sense of the island community, these deer at least are forever safe from .30-30s and that men are not among the wild animals whom they must learn to dread?

QUILIBET.

An Australian Pigeon Post.

PERHAPS no other member of the feathered community has won so much fame for such extraordinary instinct, amounting almost to intelligence, as the homing pigeon. Only those who have participated in the hobby of homing can fully realize the fascination it possesses, and the ever-increasing interest that surrounds the birds. There is something noble about the appearance of the broad-chested, bright-eyed messenger of the air, as he skims through space, with scarcely a perceptible movement of his pinions, and alights at the entrance to the home he loves so well, after having flown hundreds of miles, looking as fresh as he would after a morning flutter around the loft. It is pleasant to note the intense satisfaction when he gets inside among his mates. Every feature of the sport is full of interest, and there is no better illustration of the fancier's enthusiasm than to watch him sky-gazing for hours at a time, starting up at the sight of every flying creature in the hope that it may, when closer, develop into the bird he is so anxiously waiting for.

The purposes for which the homer has been utilized are numerous. Before the electric telegraph connected so many country districts with the centers of population, the birds were used all over Europe for conveying news, and even now some English sporting papers maintain large lofts of homers for carrying results of racing events from outlying places. Extensive experiments have been tried in order to test the capacity of the homing pigeon as a medium for conveying naval and military dispatches in time of war, and the results in many instances have been highly satisfactory. But of all the accomplishments credited to the homer, probably none has been of such practical benefit as that of a number of birds of the Great Barrier Island Pigeongram Agency. These creatures are trained to carry messages to and from the Great Barrier Island and Auckland, New Zealand, and the system has expanded so much that it has now become a very important means of intercourse between the inhabitants of the island and their friends and business connections in the city. At the time of the wreck of the steamer Wairarapa* on the Great Barrier Island, it was four days before news of the calamity reached the capital, and this fact gave rise to the pigeongram system. At first but a few birds were available for the purpose, but in 1896, with the increasing population on the island, it was found necessary to reinforce the feathered army, and at the present time large numbers of messages are daily sent from the island to the metropolis, and vice versa, by this means. In the first place, 2s. per message was charged from the island to the city, and when a team of birds had been trained to fly from Auckland to the island, messages were sent at a cost of 1s., and the messages to the city were reduced to 6d. each. The reason of the extra expense from Auckland to the island is the difficulty experienced in getting birds to leave the city on their journey across the water. No messages for the island are sent from the city after 10 A. M., as the island is often enveloped in a fog after that hour. Some idea of the dispatch with which the birds deliver their messages may be gained from the fact that they average (bad weather and head winds taken into consideration) from sixty-five to seventy minutes, which journey is about fifty-seven miles. One bird will carry as many as four messages at a time.

The New Zealand Graphic gives the following information on the subject:

The messages are written on tissue paper (quarto size) with carbon leaf, the tissue paper being perforated down each side, and on being folded is sealed with the pigeongram stamp, which secures the privacy of the message. The messages are then wrapped round the pigeon's leg and covered with a water-proof legging. This protects it from wet in case of bad weather, or from the bird pecking it off during transit. To open the message the receiver cuts through the perforation. There are just 100 birds engaged in the service. At both termini the usual trap for homers is used, on entering which the wires fall back and strike an alarm. This notifies an attendant, who removes the messages, and the bird is permitted to enter the main loft.

As an evidence of the appreciation of the service the agency has been subsidized by a steamship company, by mining companies working at the island and also by merchants in Auckland.

F. T. C.

VICTORIA, Australia.

*A ship of about 3,000 tons. Nearly all the passengers were lost.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Pigeon History in New York.

POUGHKEEPSIE, N. Y.—*Editor Forest and Stream:* There has been no flight of pigeons in this part of the State for over twenty years, the last being in Ulster county in the town of Hardenburgh, in the early seventies.

In the forties these birds were quite abundant in this country in the fall, and I know of their being taken with net sin quite large quantities, but they were never killed with use of a cannon.

The last flight of pigeons in this county that I ever heard of came in the spring, and they nested in Missouri, then came to Michigan and nested again, and finally nested in the month of June in the Catskills, and the last time I ever knew of their nesting was in the early seventies between the Willewemoc Club house and the Beaverkill in the month of June, while I was at the lodge, and I never knew or heard of their nesting in this county, nor have I ever known of any being taken with nets since 1850, and I have never seen or heard of a flock of pigeons of any size in this county for over forty years.

J. S. VAN CLEEF.

How Bats Catch Insects.

IN the October number of the Zoologist is found a very interesting paper by Mr. C. Odham on the method by which bats secure their prey. It appears that when walking these animals carry the tail curved downward and forward, so that the membrane which connects it with the hing legs forms a sort of pouch or bag. If the bat meets with a large insect, it quickly seizes the creature, and resting on its folded wings, brings its feet forward, and then bending its neck and thrusting its head beneath its body pushes the insect into the pouch. When once in the pouch the insect rarely escapes, although it may struggle violently. Subsequently the insect is taken from the pouch in the same way and devoured. It is assumed that the same mode of capture is employed when the bat is on the wing, and the observations of a correspondent of the author confirm this.

Passenger Pigeons Seen.

PARKERSBURG, W. Va., Nov. 7.—*Editor Forest and Stream:* Wm. M. Paden, M. D., F. M. Kiser and I were east of town quail shooting on the morning of the 4th inst., when our attention was drawn to three long, drag-shaped lines of birds flying south, which we soon made out to be passenger pigeons. We estimated them at 700 or 1,000 birds, and were close enough to be positive regarding their identity. Any other sportsman noticing pigeons will please report through the FOREST AND STREAM.

Game Bag and Gun.

Cows and Licenses.

PROVIDENCE, R. I.—*Editor Forest and Stream:* Jeremiah Shea, of North Providence, was accompanied to the District Court last Monday morning. He had been caught hunting rabbits with a ferret, by Game Warden Nicholas F. Reiner, and it was on a private complaint of the warden that Shea was brought into court. To Judge Sweetland he admitted his guilt, and was fined $5 and costs. He settled.

On Saturday last a party comprising W. H. Cole and A. H. Cole, of this city; Charles T. Chase and wife, E. E. Dodge and wife, J. J. Arnold, E. W. Brown and William Pratt, of Saylesville, and H. D. Jourden and Miss Nellie Wood, of Grafton, Mass., returned from their annual trip to camp on the Macwahol River, Aroostook county, Me., after two weeks' absense. Three deer were shot by the party. A. H. Cole secured two and E. E. Dodge one. Mr. Chase shot a very handsome fox. The very dry and warm weather was unfavorable to securing more large game.

The members of the Camp Comfort Club, of Central Falls, who have been in Maine for the last fortnight, furnished the papers with material for long stories during the past week. There is a law in Maine prohibiting the transportation of game out of the State unless the game is accompanied by the owner. The officers at Bangor found a quantity of deer and moose marked for Pawtucket, and as there was no one on the train to claim ownership it was held up. This fact was sent out in the press dispatches, and a big seizure was chronicled. The members of the party had separated and had agreed to meet in Bangor. The game had been sent by express, and the members of the club followed later. The game was marked for Pawtucket, and there was nothing else for the wardens to do but seize it. When the party arrived at Bangor there was no further trouble. They were well known by the game wardens, and they continued on their way with the fruits of the chase. The members of the club are too well known in this vicinity for any one to suspect that they had been trying to evade the game laws.

The character of the hunters of a vicinity is established by the conduct of the meanest man in that vicinity who carries a gun. It does not matter how many good men go into the woods to hunt, if there is one who commits depredations the entire class of hunters has to suffer. This is the reason why so many hunters find their privileges abridged and why so many farms are posted to-day. It was not many years ago that the hunters were allowed to roam unrestrained wherever

they pleased, and were kindly received by the farmers. All is changed now. The man with a gun is looked upon with about as much fear as a highway robber, and well he might be.

At first the farmers had little to complain of at the hands of the hunters. Sometimes a careless man would fail to replace the bars of the pasture after passing through, and the cows would wander off, or perhaps in his unthoughtful moments he would pull down a stone wall in his endeavor to dig out a rabbit. Occasionally some wild youth having become disgusted at his success as a marksman with a partridge as a flying mark, would send a charge of shot into a barnyard biddy. These little misdemeanors have nettled the farmer until he has declared that he would allow no one to hunt on his land without a permit, and as a result the number of posted farms has increased rapidly and the hunter who has behaved himself finds many of his favorite haunts closed to him forever.

Having stopped hunting on their land, the farmers thought that their troubles would cease, but now a new element of danger has asserted itself. Men with guns walk along the highway, and for want of something better to shoot at fire into the herd of cows. At Limerock during the past week a young bull was killed in one pasture and a cow was so severely shot that it died from the wounds after suffering several days. In Attleboro, just over the Pawtucket line, another cow was shot while standing in the dooryard. With their property thus destroyed, one can hardly expect the farmers to welcome them to hunt on their property. They are not safe, it seems, on their own land, for in several instances three or four men, armed with guns, have driven into a yard and loaded vegetables and fruit into their wagons. In Lincoln these depredations have been so flagrant that the farmers are to petition the Town Council for protection.

It would seem that there are so many men at large with guns, and that so much damage has been caused, that the suggestion offered by Senator Freeman, of Central Falls, at a hearing before the Legislature last year in regard to the game laws, that every man who carries a gun should be required to take out a license, would have to be adopted. Such a license is now required in several States, but in these States the money received is devoted to replenishing the game supply. In this State it would have to be adopetd for the protection of the farmers, and they need protection when such acts of vandalism are committed as have been done during the past week. The law-abiding sportsman must suffer for the wrongdoings of the irresponsible handlers of guns.

The first arrest in years under the law that prohibits hunting with ferrets was made last week, and the man caught was fined for having a ferret in his possession, there being no direct evidence that he had hunted with it. The rigid enforcement of the game laws under the new system will meet with the hearty approval of all sportsmen, and it should meet with liberal contributions for the promoting of this work. The State makes no appropriation therefor, and what work is done must be paid for by private subscriptions. W. H. M.

EAST ROCKAWAY, L. I., Nov. 13.—The pot-hunters have been more numerous and aggressive this year than ever before. There is little or no game to furnish an excuse for roaming over the fields, but they have actually come out from the city in droves. Men husking corn in fields have been peppered with bird shot and cattle have been stampeded. Ducks, chickens and pigeons have suffered severely. In many cases flocks of pigeons kept by farmers have been nearly all killed. There should be a provision in the game laws providing a heavy penalty for the willful shooting of domestic animals and fowls.

In Rangeley Deer Woods.

RICHARDSON LAKES, Me., Nov. 4.—The season is now becoming wintry, with slight snow flurries and strong gales from the northwest. The lakes are very low, owing to the absence of heavy rains and the drawing off of large quantities of water for the Androscoggin River to supply the manufacturing mills at Lewiston. But an abundance of water still remains for the latter purpose, and probably not half of the available water has been drawn off from the Rangeley waters, owing to the admirable system of catchment dams which have been constructed. The average drawing down from the high water levels may be computed at 8 or 9 feet, with a possibility probably of an ability to draw nearly as much more in case of necessity.

The open season for deer killing has now been on since Oct. 1, although a large number of deer have not been obtained in this locality, despite quite a sprinkling of hunters. In September we had five special licenses, at $6 each, and obtained but two deer. Since Oct. 1—the open season—our number of hunters has been three, and we have killed but one deer.

About two weeks ago we observed an animal swimming in the water about a quarter of a mile from shore. Manning a boat, we soon overtook it and found it was a yearling doe, which, after some exciting work, as the deer was very active, we succeeded in capturing alive, and brouhgt it ashore. We confined it in an inclosure and supplied it with boughs to browse upon, and some boiled potatoes and oats, which it fed from during the first night, and fed regularly until yesterday, when we let it go back to the woods. It was very shy at first, but rapidly became tame, and when we let it go it seeemed loath to leave its pen, commencing to feed near as soon as liberated, and allowed us to approach quite near, but gradually worked its way into the forest and finally disappeared from view.

One of our party had a curious experience two or three years ago in this locality. He shot at a buck a considerable distance away, and observed it to fall, and when approaching discovered that in falling the buck had imbedded its horns in the ground and at the same time had thrust the front part of its head beneath a shelving rock, from which it was impossible to withdraw it, although the buck was not fatally wounded, having been struck in the shoulder, where the bullet remained, without passing through or breaking the bones. The struggles of the deer to disentangle himself were immense, but without avail, and his throat was cut after some difficulty. The deer's head was so firmly fastened beneath the rock and so held by its horns, that after its death it was so difficult to remove it that it could only be accomplished by digging out the horns. That the deer could never have liberated itself was quite apparent.

Several years ago, in January, while coming up the lake on the ice to camp, we observed something on the ice about a mile ahead, which we thought might be a broken boughs, as they often blow out on the ice when it is clear. As we came nearer we observed it had some movement, and upon a near approach we discerned it to be a large buck, stranded by his inability to stand on the slippery ice. He made desperate efforts to get on his feet as we came nearer, but the moment he got up his legs would divide and down he would go. How he got out so far, at least half a mile from shore, was a puzzle, and indicated the great tussle he must have had.

He probably had stepped out at first from the woods on some snow ice, and made a little progress on the lake, when his footing gave way; and in his misguided, struggling efforts he had worked away from shore instead of toward it. He was pretty thoroughly exhausted, although belligerent toward us still. His efforts to get up were incessant, but his legs would divide in a moment, which must have been very unpleasant to him. We concluded to give him a new start in life, so throwing a halter over his horns, we dragged him over the ice with our young and well shod nag to the shore, and then by hand and other efforts some 20 feet inland. Even then he seemed unable to get on his fet, so wounded in sinews he must have been from his battle on the slippery ice. We held on, however, until he got on his legs, and saw him well off on his tottering limbs, although his progress was slow and undoubtedly agonizing.

While I have killed many more than a score of deer in this locality, I find that their shooting is attended with a great deal of exercise. I may not be a very good hunter, but I find that I have to travel altogether more than a hundred miles for every deer that I get.

It seems that I am likely to get a deer about every time I go out, but I do not, nor one in a dozen times.

But the interest is unflagging. The pleasure of being out in the forest compensates for all exertions, and exertion is a pleasure. The forest, never tame, is always exhilarating, and leads on with its varied attractions. With a good compass and a tolerable knowledge of the localities about, it is a supreme satisfaction to be alone for a while and to be lured on by a charm which is indescribable to those who have not experienced it.

The object which fascinates the mind is before you, no matter whether you accomplish it or not. It may prove aimless as your rifle with good opportunity, but little does it count, for expectation is rampant, and hope lures on to the satisfaction of wholesome fatigue.

J. P. W.

CHICAGO AND THE WEST.

Illinois Law Sustained.

CHICAGO, Ill., Nov. 10.—The Illinois non-resident license clause has been sustained, or, more accurately speaking, partially sustained in the issue joined in the matter of the writ of habeas corpus asked by Frank Eberle, of Burlington, Ia., in the United States Circuit Court, Judge C. C. Kohlsaat presiding. Judge Kohlsaat to-day denied the writ and Eberle was remanded.

Frank Eberle, as earlier stated, is a resident of Burlington, Ia., and a member of the Crystal Lake Club of that city, whose grounds are located in Henderson county, Ill. Members of this club have held that, since they are taxpayers in this State, they are not amenable to the non-resident license clause of the Illinois game laws. Mr. Eberle offered himself as a sacrifice for the good of the cause, and taking himself over to the club grounds, proceeded to hunt without a license, was arrested, and on refusing to pay his fine was sent to jail. Sheriff J. P. Morrey, against whom the writ of habeas corpus was directed, came with Eberle to Chicago, and they return to Henderson county, enjoying those same intimate personal relations which have existed for some weeks between them. Mr. Eberle seems to have put his finger into the mill to see whether it is working or not, and at this writing it would seem that it is.

This is probably but the skirmish of the legal battle which will follow, and the case will not be dropped until it has been taken to the Court of Appeals, and perhaps to the Supreme Court of the United States. The decision of Judge Kohlsaat, which was handed in to-day, does not specifically pass upon the question as to the application of this statute to non-residents who pay taxes in this State, it appearing to his mind that the petition as written does not bring up that question. The full text of the decision is given below:

In the U. S. Circuit Court, Northern District of Illinois, Northern Division.

In re Eberle. 25,348. Kohlsaat, J.

This matter comes before me upon the petition of Frank Eberle for release upon habeas corpus from the custody of the Sheriff of Henderson county, Ill. This petition shows the following facts:

Petitioner is a citizen of the State of Iowa, and resides therein. He is a member of and stockholder in the Crystal Lake Club, an Illinois corporation authorized to acquire and own real estate in Illinois, and to use the same as a game and fish preserve; the charter of which corporation grants to the members thereof the sole right and authority to hunt and fish upon the lands owned by it. Subsequent to the incorporation of the club, the Legislature of this State passed a law regulating the manner and seasons in which hunting and fishing should be preserved in this State, in which the privileges of residents of this State were distinguished from those of non-residents, in that the latter were required to pay a license fee of $10, which license fee was not required of residents. Petitioner was hunting upon land belonging to the club during the season when residents were permitted to hunt, when he was arrested upon a criminal capias upon the charge of being a non-resident and hunting without a license. At the trial he was adjudged guilty of the said violation of the statute and was sentenced to pay a fine of $25 and costs and to stand committed until the same was paid. He is now in custody in pursuance of said sentence and judgment.

Petitioner alleges that he was hunting upon land belonging to himself and the other members of said club jointly; that the portion of the statute under which he was found guilty and sentenced is illegal and void, as being in contravention of the Constitution of the United States, and especially of Section 2 of Article 4 of the Federal Constitution, which provides that "the citizens of each State shall be entitled to all the privileges and immunities of the several States"; and Section 1 of the fourteenth amendment to said Constitution, which provides that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any State deprive any person of life, liberty or property without the process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

The decision of this matter depends upon the nature or status, under our laws, of animals *feræ naturæ*, and the rights which individuals, whether citizens and residents, or non-residents, may have therein or thereto.

In the case of Geer vs. Connecticut, 161 U. S., 519, this matter is quite elaborately treated, and the right of a State to regulate and control the manner in which wild game may be appropriated by individuals is sustained upon two grounds; 1st: the sovereign ownership of animals *feræ naturæ* by the State in trust for the benefit of its citizens; and 2d: the police power of the State which flows from its duty to preserve for its people a valuable food supply. In this case is cited with approval the case of Magner vs. The People, 97 Ill., 320, which is the leading Illinois case upon the question. In the latter case it is held without qualification *that there are no individual property rights in wild animals* within the State; that *"to hunt and kill game is a boon or privilege granted,* either expressly or impliedly, by the sovereign authority—*not a right inhering in each individual;* and consequently nothing is taken away from the individual when he is denied the privilege at stated seasons of huntng and killing game * * * the ownership of the sovereign authority is in trust for all the people of the State, and hence, by implication, it is the duty of the Legislature to enact such laws as will best preserve the subject of the trust, and secure its beneficial use in the future, *to the people of the State.* But in any case, *the question of individual enjoyment is one of public policy, and not of private right."*

In the case of People, etc., vs. Bridges, 142 Ill., 43, it is said, "We think the rule will not be questioned that a general statute regulating the killing of game, or restricting the right to kill it to certain portions of the year, applies as well to the game which a particular land owner may chance to find on his own premises, as to that which may be found on the land of others, or upon lands belonging to the public."

But petitioner says he is not challenging this right of the State. That admitting that the State has this power, yet he as a land owner can not be placed upon a different footing with respect to hunting game upon his own premises, from other land owners, simply on the ground that they are residents and he is a non-resident; and that the attempt to thus discriminate against him deprives him of an equal protection of the laws of this State.

I find that the petitioner has not brought himself within the rule he seeks to invoke. In his petition he states that he is a member of and stockholder in an Illinois corporation, which corporation is the owner of the land on which he was hunting at the time it is alleged he violated the statute. Without, therefore, determining whether a non-resident land owner would be relieved from the provision of the statute in question, when shooting wild game upon his own premises, I deny the petition on the ground that the allegations thereof do not entitle petitioner to the relief prayed.

The above decision, while not claiming to settle once and for all the question of the constitutionality of our non-resident license clause, offers some most interesting reading, more especially in reference to the Geer case and the Magner case, where there are laid down some principles of game protection which ought to be common knowledge to every citizen of this country. I have taken the liberty of underscoring a few of the sentences which appear to be most in point, and on referring to them I am surprised to see how closely this doctrine coincides with that independently discovered and laid down in this informal conversation by Hon. C. F. Cochran, of St. Joseph, Mo., whose little argument with Mr. Bishop, of Ludington, Mich., during the Congressional trip into Minnesota last month, I reported crudely in these columns at that time. If we could only get all American and non-American shooters to read and remember such principles as these, the task of game protection would be far less. The old American idea is that the individual owns all the game he can kill, wherever he can kill it, and that he can do with this game just as he pleases. If some of these individuals would listen to such men as Judge Kohlsaat and Mr. Cochran they would do so to their own advantage. The idea that the State owns the game and may control it is the one vital, essential and fundametnal principle upon which all our modern game legislation must be built. Year by year the decisions in support of this doctrine become more numerous and more strong. Let us hope that the Court of Appeals and the Supreme Court of the United States will reiterate so clearly this same doctrine that we shall come to hear less and less in Illinois and elsewhere the weak and egotistical claims of the individuals who at heart do not want to pay any license, who do not want to have any close seasons, who do not want any restrictions whatever upon their own selfish intentions of going out and killing all the game they can wherever and whenever they can, and at the least possible expense to themselves. When we meet in society, at the club, in the home, in the field, when we meet anywhere and in any capacity the man who is selfish and who wants it all for himself, we resent his selfishness and we rebuke his personality. The man who does not believe in game laws is such a selfish person, and in time he shall have his rebuke. The shooting license idea sits hard on all of us, but it ought to sit on all alike, and whether we like it or not it is clearly within the province of the State to impose this upon us for the good of all. The State of Connecticut for the East, and the State of Illinois for the West, have given the two strongest renunciations of that doctrine, and the thing to do is for

us to take our medicine, and to realize that we cannot both have our cake and eat it, as in the reference to the public food supply the judicial decision above quoted almost specifically states.

Non-Resident Deer Hunters.

Our deer season is now on both in Wisconsin and Michigan, and we can even at this time tell something in a general way as to the numbers of deer hunters who have gone into our North woods this fall. The conclusions are somewhat contrary to what would have been the natural supposition. There has been a great deal of shooting done this season, which means that there has been a great deal of non-resident sporting travel. Yet, so far from there being more deer hunters this fall in Wisconsin and Michigan, it seems almost certain that there are fewer this fall than last. The railroad men do not attempt to explain this, except on the general supposition that the license law is keeping out more hunters this year than last.

At the office of the Chicago, Milwaukee & St. Paul road it was stated that the number of deer hunters sent in over that line are much less this fall than formerly. Points on this line which are reported as especially good for deer hunting are Floodwood, Mich; Lena and Wausaukee, in Wisconsin. Lena is toward the southerly edge of the deer region, the country being cleared or burned largely to the south of that. Those who go in at Lena usually take wagon fourteen miles west to Kelly Lake, near which the deer hunting is reported to be good. Wausaukee is a point near the grounds of the Wausaukee Club, and this has long been held good deer hunting region. One can go north on the other line of the St. Paul road, reaching Minocqua, Star Lake, etc., and also be in very good country there. In fact, pretty much all our Northern muscallunge country is good deer country.

The Wisconsin Central Railroad sent out one party of twenty-five from Chicago this week. This railroad states that its best points are Prentice, Fifield, Butternut, Phillips, etc. A great many deer come out from Phillips every fall, and indeed every one of the towns above named is centrally located for a grand deer range.

The Chicago & Northwestern road also carries many hundreds of deer hunters north each fall, and its several branches tap magnificent deer country. Inquiries at a late hour do not enable one to judge very clearly whether or not the traffic of this fall on the Northwestern equals that of last year.

Doings of Western Sportsmen.

Much to the surprise of every one, there has been quite a little flurry of ducks in over this country within the last week, and there has been shooting wherever there was water enough for a duck to wet its toes.

Mr. Abner Price, of this city, earlier mentioned as having gone to Duck Island Club, near the Illinois River, for a shoot, has justified the prophecy made at that time regarding his prowess as a duck shooter. Mr. Price brought back ducks enough to last all winter. On one day he killed forty-odd, on the next day fifty, and on the next fifty-seven, nearly all mallards at that, and certainly a wonderful bit of sport for this day and age in Illinois.

That old and very much beloved Chicago sportsman, Mr. F. A. Howe, formerly for many years president of Tolleston Club, has enjoyed several days of good sport this fall in his favorite pastime of duck shooting. A few days ago he made a bag of over sixty ducks on the club marsh, one of the best of which I have heard for a long while. If any man deserves good shooting it is Mr. Howe, and everybody will wish him many such days in the future.

Mr. William Kent is another Tolleston member who has been mingling with the mallards to some extent recently. On one day about a week ago he made a bag of over seventy ducks, which is something like the good old days.

Down at Swan Lake Club, in the Illinois River country, they have had a good flight within the last week or so, and Mr. Thomas Parker, a member of that club, tells me that he brought back seventy-six birds as a result of his trip last week. He averaged about twenty-five birds a day. Swan Lake Club is naturally about as good a mallard country as ever lay out of doors.

On last Monday Messrs. Ira Morris and H. Levi, of this city, killed forty ducks on the big Nelson Morris ranch north of Demotte, Ind. This is the country where there was formerly situated the preserves of the De Golyer Club, of which mention in these columns was frequent some years back. Mr. Morris bought and drained the ground, and the gentlemen above mentioned say that the old marsh was dry as a floor, excepting one little slough well inland from the river.

Mr. W. H. Haskell went down to Maksawba Club today, and was to have been accompanied by Mayor Harrison, though the latter at last word was not perfectly sure he could start. There ought to be a few ducks to be picked up along the Kankakee, although the water is very low and the marsh dry in that vicinity.

Several very fair bags of ducks have been made in the Fox Lake and Grass Lake country in upper Illinois within the past week, and a number of parties started for those parts to-day. It is shot so much that a trip there is very much of a gamble, though now and then one may blunder into a decent bit of shooting there.

Quail are everywhere this fall, and nearly every one who goes out is successful. Messrs. Morris and Levi, above mentioned, bagged eighty-seven quail in a few days' shooting east of Roselawn, Ind., and that country is reported to be very well stocked with quail. It was mostly cornfield shooting, and the birds are described as very abundant.

Mr. O. von Lengerke, of this city, is just back from a trip near Dowagiac, Mich., where, during his shoot, he bagged thirty quail and thirteen partridges.

Mr. Thomas Parker and a friend or so will next week go to Swan Lake Club and remain two or three weeks shooting quail on the club reserves. Swan Lake Club has a preserve of a mile square which is said to be splendid quail country this fall.

Almost any point fifty miles south of this city, either in Indiana or Illinois, is offering good sport on quail this fall. One can hardly go amiss if he will go south on any of the Southern through lines and get off in a good farming country anywhere from fifty to one hundred and fifty miles south of here. The season has been good for these birds, and thus far the weather has been very pleasant, so that our shooters are enjoying the sport very much.

The deer season proceeds amain, and some of our Chicago hunters are beginning to come back with substantial trophies. Mr. Robert Shaw and party, of this city, who have been hunting at Mercer, Wis., brought back six deer, and they report a splendid time. They were at George W. Buck & Son's camps.

Mr. Frank Baker, of this city, this fall made a little antelope hunt out on the Laramie plains of Wyoming, and he has just had mounted four very nice antelope heads as evidences of his success.

Mr. and Mrs. Chas. W. Green, of this city, leave within the week for their place at Grove City, Fla., where they will spend the winter shooting and fishing.

Mr. Chas. Levings, of this city, is a gentleman very well posted on Florida localities. Four years ago Mr. Levings made a trip in a sail boat, going from Chicago by way of Canal,, the Desplaines and Illinois rivers and down the Mississippi River to its mouth, thence to Key West. Here he and some friends built a larger boat, which they still own, and now and then they take her out during the winter time and skirt the Florida coast, enjoying themselves as only those can who are favored by all the fortunes of this beautiful winter country. Mr. Levings I discovered to be somewhat of a traveler. He was telling me the other day of a trip he made some time ago into the Ottawa River country of Ontario. He is now just back from a trip of several weeks in the Yellowstone region. On this trip he tells me that his camp cook was an Austrian nobleman by the name of Von Wagner. Count Wagner lives in a cabin on Hell Roaring Creek, which comes into the Yellowstone River close to Billy Hofer's territory at Gardiner, on the northern edge of the Yellowstone Park. The Count has some fine furniture in his cabin, and even his frying pans bear his baronial crest, but he was glad to work for $50 a month as cook, and he was a pretty good cook, too.

The Stake Stove.

It was Mr. Levings, by the way, a civil engineer, a mountain traveler and a compact camper, who was the inventor of the handy camp cooking device which has been advertised by the Seymour Manufacturing Company, of Chicago, this fall, in the FOREST AND STREAM, and to which, I believe, I have earlier alluded. This "stake stove," as Mr. Levings calls it, is in principle very much like the "gun barrel stove" which my old camping friend and I used successfully for so many years, the idea being simply that of an iron upright driven into the ground, supporting a series of revolving rings and hooks to hold the coffee pot, broiler, frying pans, etc. In my own stove we had a heavy spike, with the rings supported at the top, but Mr. Levings simplifies all that by using a light piece of metal for his support, and making his kettle holders on the principle of a flying jenney, which grips the stake wherever it is placed, and is the steadier the more weight it has placed on it. The Levings outfit is only about one-fourth as heavy as our old gun barrel stove, and packs much more compactly—so small is it, indeed, that one can grip it all in one's hand when it is packed in its canvas wrapper. It is so cheap, too, that even newspaper men can afford it. I have tried all sorts of camp cooking outfits, and I must say that, for speed, fuel-saving and general sweetness of working, I would not care to camp out without a stake stove of this sort. You need next to no fuel, you do not burn your fingers, and best of all, you never spill the coffee. When a dish gets too hot, you swing it to one side, and you can operate two or three vessels at once as easily as you could take care of one tilting and hot-handled spider under the ancient ways of open-fire cookery.

Adventures of Mr. Scott.

A good many people go through life with an unappeased desire to meet such big wild game as moose and bear. They prowl around through the woods all their spare time, year after year, and hire guides and charter special cars and spend all sorts of money to gratify their ambitions, all to no avail. If you are looking for adventures you cannot find them. But what shall we say of the case of Mr. Fred Scott, of Pittsburg, who this week came down from northern Minnesota, where he had been on an iron prospecting trip, in the neighborhood of Two Harbors, Grand Marais, etc.? Mr. Scott had not lost any moose nor lost any bear, and was not looking for the same, and was not prepared for them. Yet one day he was treed by a big bull moose and was only rescued by a hunter who responded to his calls after he had been up the tree for three or four hours, according to his story. Not satisfied with this, Mr. Scott on another day started a bear from a hollow log, and he and his guide thought they might capture the bear. The result was the bear came very near capturing Mr. Scott. He shows some scratches to substantiate the stories he has told to some Minnesota men, and will go back to his home with the firm belief that Minnesota is a very wild country.

Bohemian Joe Burned Out.

The hunting ranch of Joe Vdzorak, more commonly known as Bohemian Joe, was destroyed by fire one morning this week. This resort was situated on Calumet Lake, and was well known by those who patronize that weird region. Several guns and all the household furniture were destroyed. The shanty was a landmark.

Mr. J. H. Amberg, one of our prominent Chicago sportsmen, left this week for a visit to New York city, where he will see the horse show and have a look at any trapshooting grounds which he may have time to visit.

Mr. Charles Antoine, of Von Lengerke & Antoine, this city, is also absent in New York city this week.

One Answer.

One answer to those who complain of the scarcity of game is to be found in the game markets. There would not be any game markets if the people did not want them. I have heard more than one sportsman and more than one so-called sportsmen take objection to the FOREST AND STREAM doctrine, "Stop the sale of game," and say, "Suppose I was not able to go out shooting and kill game for myself; how could I get a bird to eat for myself if I did not buy it?" The answer to this lies in each man's heart, and depends on the amount and quality of his human nature. The really wise and sportsmanlike answer to this last question is that it is not in the least necessary for you to eat game if you cannot go out and kill it. You can get along without that. But you cannot get along with it. If you want to buy a bird when you can't kill it, then you have got to face the high fences of the rapidly growing game preserves. You can take your choice, and you will come out on just that side of the fence where you really belong. I am naturally of a sweet and angelic disposition, but I am sometimes irritated when I hear men objecting to all kinds of game laws, objecting to game preserves, and objecting to the closing of game markets, and still expecting to have back the open shooting country of this once glorious Western region of America. Yet none of these men will escape actual justice. They will all come out where they belong.

City Shooters.

Yet it is a bit pitiful to see the way in which the people hang on to their love of the outdoor air and their wish to get out where they can shoot at something. I take great interest, while about town at different times of the day and night, in watching the different sorts of city shooters who are on their way out in a more or less pathetic attempt to get a little sport. Last week, one time at midnight, when I was going home from my office, I met a party of four or five young Germans, working men, I take it, who were headed toward the Dearborn Station for a late train south. These young men wore their rubber boots and shooting coats, and they carried their guns in limp canvas cases. They had with them two or three dogs of a fearful and wonderful make, apparently a blend of harrier, beagle and dachshund, which waddled gravely along behind fully conscious of their own importance in the campaign. Rabbits, mostly, I thought, as I saw this party, with perhaps a squirrel or so, and a few mud hens if possible. But they were bound to have a good time, I was satisfied. Very often out at Woodlawn, toward the southeastern part of the city, where I live, I see parties of similar make-up taking the Illinois Central or the trolley roads leading out to the southern edge of town. They come back Monday morning, a little muddier, a little more weary, perhaps, their gun cases as limp as ever and their shooting coats still more limp than when they started out. (For it is not wise to go on a shooting trip without abundant luncheon.)

This morning as I sat at breakfast I saw a sportsman go by on his way to the train. I don't know who he was, but he was a sportsman. He was an old man, sixty years of age, I should think, with gray hair and gray beard, yet his figure was straight and active, his face keen and his step quick and strong. He had on rubber boots, an old shooting coat, and a well-worn corudroy cap. These are just such clothes as you shall see on many men, but there is a difference in these clothes as carried by different wearers. This man, I am sure, was no novice. His get-up was businesslike, and he walked as though he was going somewhere and had been used to getting somewhere. Now, where he was going I wot not, but I wish him joy, even though I fear he will meet disappointment anywhere near this city at any time this week. This man I am sure was one of that great middle class of shooters who cannot afford long and expensive trips, but who dearly love a day afield now and then. For the sake of all these I wish we had the good old times back again and that they could be kept forever as once they were.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Cayuga Lake Wildfowl.

ITHACA, N. Y., Nov. 10.—The duck shooting at the "foot" of Cayuga Lake, near Cayuga village, Seneca Falls, and other nearby hamlets, has been pretty stiff kind of sport thus far, and the market-shooters have got into the game with athletic activity and a most deadly kind of pump gun precision.

Mallard, black duck, teal and redhead have been found unusually plentiful, and some large bags for this section of country have been made. The best day's work for one gun—thirty-two redhead ducks—was made by a Seneca Falls market-shooter. The commoner varieties of ducks are so plenty that the relentless market-shooter scarcely bothers to waste ammunition upon them. The slaughter, as carried on by these market-shooters, has already aroused public indignation, and protests have appeared in such influential papers as the Rochester Democrat and Chronicle, changes in the game law being advocated. All this argument is good enough in its way, but let it be understood that the only change that can be made really effective is FOREST AND STREAM'S straightforward and comprehensive platform, "Stop the Sale of Game." Then, like Othello in the play, the pump gun market-shooter will presently find himself minus an occupation.

On the Ithaca marshes the ducks have thus far been few and far between. The local gunners, however, are waiting patiently for an arctic wave or two to drive the birds in.

Either ruffed grouse are unusually plenty this fall or the market-shooters have grown more active than ever. The local markets have certainly displayed more grouse than for several years past. And the birds seem large and of prime quality. Four members of the South Side Gun Club were out one day recently in the vicinity of West Danby and bagged nineteen grouse.

M. CHILL.

Long Island Snipe.

QUEENSWATER, L. I., Nov. 13.—A well-known gunner who has heretofore made a very comfortable living shooting bay birds says that notwithstanding the glowing accounts of the snipe shooting in this vicinity, it is a fact that snipe are rapidly becoming extinct. This is especially true of the big yellowlegs, and other varieties which are of the greatest value to the market-hunter. They are hunted so persistently both in season and out of season they have very little chance to live long enough to raise a brood.

QUAHOG.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

An Ontario Deer Hunt.

On October 18th Sol, Al, Meyer and the writer took the morning train for Montreal on our way to Labelle for our annual deer hunt. At Place Viger Station we met the others of our party—Burns, of Montreal; Hibbard and Truax, of Farnham; Lefebvre, Beaulne, Taylor and MacFarlane, of Waterloo, or in all a party of eleven.

On board the train we also met a hunting party from Malone, N. Y., and Huntingdon, bound for Cameron Lake. The two parties practically took possession of the car, where stories of previous hunts were recounted, more or less truthful, while hope and enthusiasm beamed on the countenances of all.

We passed the night with mine host Nantel, at Labelle. It took three teams to take our party with duffle to the club house at Lake Chapleau, where we arrived at noon, wet and tired, but still full of enthusiasm. The rain poured down in torrents the whole journey; the roads were execrably bad, while our wagon broke down three times, necessitating a considerable amount of walking.

After a good dinner we got into our dry hunting togs, and the rain having held up a bit decided on going out for a bit of exploration on the still-hunt.

MacFarlane and Lefebvre went one way; they succeeded in jumping two deer, but did not get a shot. Beaulne went with one of the guides, putting up a deer at which the guide fired twice, wounding it; but although they found blood they did not secure the deer.

Early the next morning, the 20th, we started out to hunt the point opposite the club house with the dogs.

One of the boats had drifted away to the other side. I was told off with Sol and two guides with the dogs. On arrival at the other side one guide with the dogs, as well as myself, debarked. The guide was to hold his dogs until after all had been properly placed on their runways, about three-quarters of an hour wait. While he was helping me to tip the water out of the boat, one of the dogs got away. As he could not call him back, I told him to follow his dogs and keep them quiet, while in lieu of a proper dish I proceeded to bail out the boat with my hat.

I had barely started at this when I heard the dogs in full cry, they having picked up a fresh trail close to shore. Of course no one had time to get placed on the runways; those going to the furthest and best runways were very wroth.

Sol, with the other guide, had gone around the point to the upper bay, near Lac Noir, Burns and Taylor being on the runway near that lake. I rowed my boat round to the point, drew it up to shore and awaited developments. The dogs had long since gone out of hearing. Suddenly I heard a shot, followed by several more.

Soon after I saw Sol's boat putting out toward where the deer landed. They were talking loudly, probably making excuses for their bad shooting. Just as they arrived at the shore I noticed the boat suddenly turn and the oars threw up the water, showing great speed and excitement on the part of the occupants of the boat.

Several shots followed; then they disappeared from my view.

Shortly after I heard a Comanche yell, which I learned later had been delivered by Sol upon finding his deer dead in the woods abount 100 feet from the water. To say that he was delighted expresses it mildly. His song was louder than ever. "Les sables de mon pere." "I got him," he cried.

We all met at the club house for dinner, but had only one dog, the other two having disappeared.

We decided to run Marie Louise that afternoon.

At the dinner table Sol was bragging about his deer, declaring that no one could shoot like he could, and offering to bet that during the afternoon no one could get another deer.

I put up a dollar against his that we would get a deer. He said he would help even if he lost his dollar. I told him that he would be put on the Barrier runway, where the brook connects the two lakes. The bushes being thick on both sides, it would be necessary for him to shoot quick should a deer show up.

"Do you think a man who shoots eleven times at one deer can't shoot quick?" he retorted, referring to the fact that he had wasted that much ammunition in the morning.

The guide was instructed to wait one hour after we left, then to put in the dog near Gregoires' clearing. I put Al and Hibbard on the old wood road between Lac Chapleau and Marie Louise, returning with the boat to the gate, where I was to watch in case a deer took to the water. I was there fully a half hour before the guide showed up with the dog. He evidently thought he was late, so put the dog in near the gate. The dog soon had a deer going, which first seemed to come toward the gate, but swerved off toward the runways occupied by Taylor, Burns, Truax and Meyer. It swerved from them, however, and led off toward Marie Louise, but no one got a shot; hence we returned to the club house about 4 P. M. without a deer, and I lost my dollar.

The next day we decided to run the big point on Lac des Mauves. I placed Hibbard and Truax on two good runways near the bay leading to Trout Lake, while I took up my position in the boat on the opposite shore, where I had about one chance in a thousand.

About an hour after I heard the dogs coming our way. I heard two shots fired quickly; a minute after another shot. Truax did the shooting. His first shot turned the deer, a magnificent buck; at his second shot the deer stopped on a side hill in plain sight. Truax supposing he was hit and down, was congratulating himself, when the dogs appeared. The deer bounded forward. Truax firing a parting shot. None of his three shots had touched him, much to his chagrin, for which he was kick-himself for days after, especially that he did not shoot again when the deer was standing.

Shortly after I heard some fifteen shots lower down, where the other boys were posted. Silence having reigned for nearly an hour, I took Hibbard and Truax aboard. We rowed around the big point in search of the others. About 1 o'clock we saw the other two boats coming out of the lower bay. We turned and headed for a point, where we all debarked to partake of our lunch.

It appears that down in that neck of the woods where they had all the shooting a doe had come along by Lefebvre, who missed it. This one swerved, going toward Meyer, who fired at about 200 yards, also missing. He left his runway, where he had been placed, to see what had become of his bullet. While there he came to the conclusion that it was a better position than the one he had left. He was located there but a few minutes when he heard the dogs coming Sol's way. The deer stopped about 50 feet from Sol, who took careful aim, pulled the trigger, but no report followed. He had filled the magazine of his rifle, but had forgotten to pump a cartridge into the chamber. He said, "I worked that thing mighty quick and fired as she ran away."

Having killed his deer, he proceeded to load his gun, stood it up against a tree and started dressing the deer. While engaged in this he heard another shot some distance away, but paid no attention to it. Suddenly he heard a patter on the leaves. Looking up, he saw a deer suddenly stop in the act of jumping over him. On the impulse of the moment he made a jump for the deer; then thinking of his gun he jumped for it; but before he could secure it the dog had taken after the deer, and both were out of sight.

He finished dressing the doe, finding that his first shot had hit her in the neck, cutting a great gash. He had resumed his stand but a few minutes, when he again heard the dogs. A noble buck was coming down the hill, nose well forward, horns laid back, steering straight for him. When within about 30 feet he stopped behind a big ash tree. He was completely hidden except every little while he would poke his nose out. Meyer, with gun at shoulder, waited his reappearance. Suddenly the dog came over the hill, spied the buck, and gave cry. Instantly the buck made a bound. Meyer being in waiting and properly prepared, gave him a well-aimed shot, the buck dropping all in a heap. Practically he shot him on the fly. When the boys congregated there they found Meyer covered with blood, perspiring freely, and with a very exalted opinion of the Northern Woods as a place to hunt deer. From the shooting he had heard he naturally supposed everybody was getting deer as he was.

MacFarlane had shot a partridge with his rifle, but when he went to pick it up the bullet had made it about a yard long, so he left it. Lefebvre had fired three shots; Sol one. Total result: An eight-point buck and a three-year-old doe for Meyer.

Opposite the point where we had lunch was another long stretch of land jutting out into the bay from 50 feet to five acres across. The year previous we had hunted this, and although we had several shots, no deer were secured, principally, I claimed, because the dogs were put in, giving only running shots. I proposed, therefore, that five of the party go down to the lower point, near the mainland, spread out and still-hunt it up, three go about half-way down and place themselves on runways, two remain in a narrow place near the point, the others remain in the boat, but under no consideration use the dogs. This was thoroughly understood and agreed to. The five who were to walk up the point had started in when Lefebvre went further down with the dogs, put them in and started a couple of deer, which first ran up the point a bit, then doubled back on to the mainland, the dogs running them away out of sight and hearing, the result being that after waiting about two hours, the others came up, saying two of the dogs were lost and no deer for our trouble. By the way, the two dogs did not turn up until the day before we left, much to the disgust of the party and Lefebvre's chagrin, who on several occasions was properly roasted for having disarranged a prearranged programme.

The next day we concluded to hunt the big point again. The other guide had brought along his mongrel, so we had two dogs. McFarlane, Truax and myself went to the extreme part of the upper bay, getting on the runways—MacFarlane near Chapleau, I in the middle, and Truax near Lac Noir. The runways near the water were considered the best. After waiting about half an hour, we heard the dogs. At first I thought they were going to Truax, but they ran across to swing in to McFarlane. He saw it coming right on his runway. He had both rifle and shotgun on his stand. Thinking the deer would pass within about 20 feet of him on the runway, he picked up the shotgun. At that instant she stopped, out of range for the shotgun, evidently saw him, swerved, and the first I knew she made a magnificent jump over a great log and stopped about opposite me. I was fairly well hidden among some logs. She stopped behind some trees, offering only a good neck shot, upon which I took aim and fired, but missed. On the report of the rifle she turned, ran back, turned at right angles and followed the runway just the other side of me. It was fairly thick there, but as she stopped between two trees, showing a part of the shoulder, I again took careful aim and fired. She dropped in her tracks, the bullet having entered near the left shoulder, piercing the neck and coming out on the other side. I quickly pumped in another cartridge, waiting should she rise again, but soon saw that she had her death wound. Another reason for waiting was that the dog was still some way behind, and might be bringing another. When he came up I called to MacFarlane and Truax, who helped me dress her and haul her to the boat. MacFarlane declared he had no more use for a shotgun deer hunting; that if he had only taken up his rifle it would have been his deer instead of mine.

As this was quite early in the day, the guide not having put in an appearance, I told MacFarlane and Truax to resume their runways and I would take the dog back into the woods to try and start another. I worked up the point to opposite the club house, putting up one deer on the pine knoll, but the dog would not pick up the trail. The boats from the other bay were returning, so picked me up and returned to the club house for dinner.

After dinner we told the guide we were ready. He whistled for his dog, which came not, but had gone home some two miles distant. As it would take too long to go after him, we concluded we would do some still-hunting over the ridge off the upper bay. Mr. Walt. Taylor, who, by the way, is seventy-three years old, but a keen sportsman, thought he could not do so much walking. I told him that he might as well come with us, that he could keep near the edge and possibly pick up some partridges. After landing we divided up pretty well. In going over a small ridge well covered with fine spruce, I heard a woodpecker kicking up quite a noise. I thought something must be wrong, but look ever so intently, I could not discover anything. I carefully resumed my march, when I saw an immense owl fly away, lighting on a big birch.

Returning to the still-hunt in company with MacFarlane, we had proceeded but a short ways when we heard considerable yelling on the lake. I set it down that the boys were amusing themselves, and paid no more attention. We spent some two hours in the woods. I got on to seven different fresh tracks, but never saw a deer. Finally coming to a swale and windfall, I told MacFarlane to keep up on the ridge and I would go down in the swale and jump the deer up to him. He saw two that I sent up, but did not get a shot. In due course we got back to the lake, where we found that the others had been plenty of fresh sign, but none of our party got a deer.

On arrival at the club house we found Mr. Taylor greatly excited, much disappointed and calling himself all kinds of names.

It appears that one of the colonists was setting traps around the lake, when down in the further bay an immense buck took to the water. He was steering straight for Taylor's point, the boat after him, with the colonist yelling for some one to come out and shoot him. Mr. Taylor had only buckshot, but patiently waited for the buck to come within range. Then buck and boat disappeared on account of the sun shining in Mr. Taylor's eyes. When they reappeared out of the streak of sunlight, he perceived that the boat had headed off the deer and was driving it away from him, the man all the time yelling for help. Taylor, standing back in the bushes, called, "Drive him in here," but no attention was paid. "Drive him in here and I'll shoot him," yelled the old man. No attention being paid the old man, or papa, as we called him, got excited and yelled, "Drive him in here and I will give you ten dollars." No attention being paid, papa got wild, and with the full force of his lungs yelled, "Drive him in here. I'll shoot him; and if ten dollars is not enough I'll give you the deer, too." But the man kept circling the deer with his boat, all the time calling for some one to shoot him. The wind was blowing pretty strong against poor papa, whose voice did not reach the boatman, the result being that poor papa was disconsolate and could not be comforted.

In place of firing a shot, getting into his boat and going out, or showing himself on the shore or in some way attracting the boatman's attention, he came to the conclusion that the boatman was acting as guide for some other party, and was endeavoring to attract their attention, and would not drive the deer to him anyway. Meyer and Lefebvre had gone to look over some timber lots, where Meyer fired two or three shots at two deer, but did not get any. The result of the day, therefore, was the one deer I got in the forenoon.

Meyer, however, brought in two partridges. Lefebvre was loaded with buckshot in his double-barrel hammerless, when they saw the birds. He borrowed a bird shot shell from Meyer, slipped it into his right barrel, at the same time saying that he must be sure and fire that barrel, yet he was so excited that he fired the wrong barrel and missed his bird. It flew only about 40 feet, and Meyer shot it, much to Lefebvre's chagrin.

The next day we put the dogs in near the discharge, placing ourselves in an extended line over the mountain. While going to our places, five of us climbing the hill in a bunch, we jumped two deer. Burns was lower down, and I believe got a glimpse of them. He motioned to Truax and Hibbard, who were both still lower down, but they not seeing anything, walked cautiously. Hibbard, who was way down near the bottom, saw Truax bring rifle to shoulder, aim and fire. Almost immediately the deer swung around a point in full view, but going very lamely. Hibbard covered her in case she showed more life, but she dropped near him. As soon as Truax fired she bounded and disappeared over the brow of the hill. He took it for granted that he had missed. Pretty soon he came in view of Hibbard, looking at the trees critically. Hibbard hailed him, asking what he was looking for. He said he wanted to see where the bullet went, as he thought he had again shot too low. "You had better look in the deer for your bullet," said Hibbard. "No; I must have missed her," replied Truax. "No; she is right down here," said Hibbard. "What?" and it took him a mighty short time to cover the distance where he beheld his game. Naturally he was delighted, as he was afraid he had queered his luck when he missed his buck a few days before.

After we were all placed on our runways the dogs were put in, and soon had a deer going. MacFarlane fired three shots at her and Al one. They were confident she was hit, but the dogs came along and away she went. About this time I heard Meyer fire a shot from his shotgun barrel, which it appears was at a doe within 40 feet of him, but missed. He claimed his shell was not good, as it squibbed. Shortly after I saw Burns, who had not been properly placed, move over toward me. I was behind a windfall. He did not see me, although he came within 100 feet, standing out in plain view. Almost immediately I saw a deer coming over the mountain, making for my runway. The direction she was taking she would come to the right of me. I shifted my gun, as she was then too far off, but Burns fired at her on the run, missed, the deer saw him, swerved, going down another gulley out of sight. I left Burns there and moved off for a bit of still-hunting.

About this time Beaulne, who was some distance away, spied a feeding deer slowly approaching him. She was some distance off, so he calmly waited, claiming she was in view about twenty-five minutes. When she got close enough—we will not say what distance—he fired, hitting her near the shoulder, breaking a leg. She went on the run down the mountain, Lefebvre joining in the chase, and although Beaulne told him it was his deer, and that she was hard hit, Lefebvre wildly fired buckshot after her. She ran down near MacFarlane, crouching down below a log. Mac fired twice at her. She showed two bullet holes through her ears, the result of his shooting. She had then practically dropped through exhaustion, and was soon dead. This gave us two deer for the morning hunt.

After lunch we visited another point, spreading ourselves near a little lake and way over the mountain; I being on the last stand, was in view of Lac des Mauves. While going to our stands we put up two deer; as a matter of fact, the first I had ever seen wild in the woods, except when the dogs were after them. We got a second view

later, and although I took a snap shot, they disappeared. We heard the dogs once, but no one saw a deer.

The guides subsequently came up to me, when I told them to go around the little lake and try to put up another one to run it down to the other boys. I told MacFarlane that I would move over after them, wait till they started one, and if not would work down to the boats. I took a stand which I took to be near the upper end, but east of the little lake. I sat down for twenty minutes, but hearing nothing of the dogs, I started down, keeping the little lake, as I thought, on the left. In this way, by bearing to the left, I would either strike the little lake or the brook of its outlet, which would lead me to the boats. I came across two small brooks that appeared to me to be running the wrong way, but as there was a swale with thick timber on my left, I thought these were feeders to the little lake. I kept on, always bearing to the left, until finally I came to the conclusion that I was off my course. I climbed a pretty steep ridge, and momentarily was gladdened with the sight of what I thought was Lac Chapleau, but on closer examination I found that it was a blue mist resting on the valley below, while no water at all was in sight. I moved along another ten minutes. The woods began to appear strange to me, while ridge and valley commenced to look very much one like another. I ascended another ridge, saying to myself that if I did not then come in sight of water I would give my woods call.

No water appearing, I called, and called again.

No reply could be heard. I then noticed what a strange, lonesome silence pervaded the whole woods. The woods were thick. I looked for a decent tree to climb, but could not readily find one.

Then I fired a shot, and heard a reply way behind me. I thought to myself that some other of the party had become lost, and as misery likes company, I concluded I would look him up, which I proceeded to do with all dispatch.

After climbing a few more ridges I again called, and was answered. Finally getting a view of the lake, it appeared to me that the lake was in the wrong place, but I was satisfied to get back.

After getting out on the lake I located a big pine that I had come to in my wanderings, and concluded that instead of having the little lake on my left in the first place, I was then past it. My continually steering to the left would soon have brought me out to Lac Barrier. The day was cloudy, I had no compass and got turned round.

The next day we were going to put in the dogs near the Southeast Bay of Lac Chapleau, running toward Lac Noir, and another unnamed lake that empties into Lac Noir.

We left three on runways near Lac Noir, the rest of us getting across quite a large brook on a log. The guide was leading; I was the last. After we had passed the brook a piece, the guide suddenly turned round, saying one should remain there. As I was the last one, I dropped out. I gathered some gum on a convenient spruce tree and then looked around to find a proper stand. I finally found a place about a hundred feet from the brook, crouched down near a big log and awaited developments. I had been there about ten minutes, the guide still going on placing the rest of the party, when I hear a squirrel signal that something unusual was transpiring behind me. I looked around cautiously, and was considerably surprised to find a deer looking me up. He ran down by me, stopped within 30 or 40 feet, where I drew bead on him, and remembering that on short distance one is likely to overshoot, I drew fine behind the shoulder and fired. He immediately turned on his back tracks, ran about 50 feet and stopped again, offering only a small neck or paunch shot. I accepted the neck and missed. He ran another 50 feet, offering again practically the same shot. This time I tried the paunch as far forward as he would allow, but he ran another 50 feet or so on to the top of a hill under some spruce, offering only his rump. As the tail was down I could hardly get a bead; in fact, after getting on the bullseye, had to look over to be sure it was the deer and not a log. On the last run he had the tail down, so I knew he was hit; in fact, I thought I had hit him all three times, but although I thought I had a fine bead on him, the fourth shot simply set him running again. After waiting ten minutes I, like Truax, started to find where my bullets had gone, but could not find them, although subsequently some of the boys found where one had gone through a 6-inch balsam.

Finally I arrived where he last stood and heard him run again, but did not see him. Picking up his tracks I soon found blood. Another 50 yards I found where he had been standing. There was a great splotch of blood showing frothy. I followed on by the blood until I came to a big log covered with moss, which point seemed to be the converging point of a number of runways, and there lost the trail, as there were several fresh tracks there.

When the other boys came up, although I had been searching diligently for nearly an hour, they joined me. Lefebvre finally picking up the trail beyond the log. That was followed within 50 yards of the lake in swampy ground and again lost. I stepped to the shore and took a look out, but could not see him. We had practically given up the search, so I hailed the boat, about 300 yards away, to come after us. When it pulled up to the shore I stepped in, and glancing near the shore discovered my young buck within 10 feet of the boat.

On examination we found that the first shot had taken effect behind the shoulder low down, piercing the liver. The third had passed through the paunch. The other two were misses.

After lunch we were to try the point again where Truax and Beaulne got theirs. We spread out about as before, only I went across the valley to some evergreen timber, and there sat down for one hour. Sol was on the ridge across the valley from me. I was dozing when I heard a shot from his direction, which momentarily put me on the qui vive, but noticing a raven making quick tracks over Sol's head, saying "Quart! Quart!" or "Pork! Pork!" I concluded he had been firing at it. Beaulne was just a little ways from Sol when the shot was fired. Sol says Beaulne was asleep, which Beaulne denies. However, Beaulne saw Sol telling him that Meyer had fired a shot, but he was sure Meyer did not get the deer, as he now had buck fever, the proof being that when with Lefebvre he had chances at two deer that he missed. The day before he had fired at another at close range, but missed. He now felt satisfied that Meyer had the fever so strong that he could not shoot another. Sol said: "That raven was coming along over the trees; suddenly she stop; she smell gunpowder or something, but I shoot on her, when she got away, saying 'Pork! Pork!'"

In the meantime I thought I would go over my ridge, work down a bit on the still-hunt, then work back, and possibly drive a deer up. I started in very cautiously, probably taking fifteen minutes to cover a hundred yards, not making the slightest noise.

I noticed a windfall ahead, scanned it over very carefully, but could not see anything. I had not taken ten steps when I heard a crack. Looking quickly I saw the white flag going over the fallen tree to my left. From past experience I concluded that it was no use to follow a deer on her tracks, so made a detour. After going very slowly another hundred yards, where I could look down the valley, I thought I could see her standing about 250 yards away. Not being sure, I went a little further, took another look, but thought even then possibly it was one of my companions sitting down near the big tree. Going still further where I had a bit better view, I saw her raise her flag. I knelt down, raised the sights two notches, took careful aim and fired. She jumped, ran in a bit of a circle rather toward me, then swung down over the ridge toward a swale. I was cool as far as any tremble was concerned, but my blood was tingling in my veins, my face burning, and I am sure was redder than it was the first time I kissed a girl, playing forfeits. Slowly, noiselessly and almost breathlessly I made another detour, carefully scanning every object, but could not see her. Suddenly she whistled three times quickly, paused an instant, then whistled once more. I could just distinguish a part of her rump, showing a bit of white streak. She was, I estimated, about 125 yards, so lowering my sights to point blank, I took careful aim, and although I was tingling with excitement, my blood seemed burning in my veins, yet in drawing a fine bead the rifle was as steady as if I was shooting at a mark. On the report of the rifle she made a tremendous jump, ran over the ridge and disappeared. The guide was even then calling for me nearly half a mile away, but I paid no attention. Carefully going down to where she had been standing when I fired, I found three chunks of white hair with flesh adhering, also a piece of flesh about an inch long and half an inch wide on a leaf, while all around showed considerable white hair. Carefully picking up the tracks, I followed, finding a little blood at each jump. During all this time the guide was calling. It took me about twenty minutes' careful tracking to arrive on top of a ridge, from which point I carefully scanned the dense swale below me, but could not discover anything. While standing there, scarcely breathing, I heard her whistle several times below me, but the bushes were so dense I could not make her out. Suddenly I saw her running. She appeared to be quite strong, and as she disappeared I fired a parting shot and retraced my steps to the boat. I came to the conclusion that I had hit her on the downward shot just at the end of the tail, the bullet cutting off the small pieces of it, or white hair just under the flank, taking the piece of flesh and making only a flesh wound. I think I underestimated the distance—drew too fine. Had I raised my sights one notch I am satisfied she would have been my meat. I came to the conclusion, however, that while shooting deer before the dogs, or in the water, or ordinary still-hunting might be classed as sport, none of them held a candle to deer stalking, and hope next season to be able to try it again.

This gave to date seven deer for the party of eleven.

On the morrow we started for home, intending to hunt Cote à Beaulne and Laperle on the way out. It was a five-mile walk to Cote à Beaulne. At Lac Desert we picked up Lefebvre, Sol, Al, Meyer and Burns, who had been at a wedding and dance the night before. They had danced in a little log hut until 2 in the morning, then walked a mile over the mountain to Lefebvre's barn, where they had slept in the hay. They claimed they had had a great time. Meyer had a split lip which Sol claimed he received when trying to kiss the bride, but Meyer says that when dancing Sol acted like a jumping jack, that during one of the dances when the fun was fast and furious, Sol bobbed up serenely in an unexpected quarter, his head striking Meyer fairly on the mouth, thus splitting his lip. Be that as it may, they claimed the rest of us had missed a lot of fun.

Striking in behind Beaulne's barn, we spread ourselves over the runways, I going the furthest, being near Lac Desert. After waiting nearly an hour we heard the dogs coming rapidly along. I heard two or three shots; shortly after heard them talking, some one asking for a knife. I went down and found that MacFarlane had at last got his deer, making a nice standing shot, hitting her just above the brisket, face toward him, and dropping her in her tracks. While congratulating him, we heard the dogs again, instantly spreading ourselves, but no one got a shot, although Sol said he once had a deer covered, but did not pull soon enough.

Leaving Al and Burns to look after the deer, the rest of us started on our tramp to Labelle. It was raining hard. The roads were heavy, walking being a real hardship. When we arrived at Laperle there was not enough grit left in any of us to stop and hunt there, so we plodded on.

Beaulne and Papa has gone ahead with a two-wheeled rig and most of the baggage, while another rig with the lunch and some of the deer had also gone. The lunch was to have been left at Dr. Brisson's; but when we arrived there, wet, weary and forlorn, there was no lunch, as this party asked them if the "chasseurs" had passed. Supposing Beaulne and Papa were meant, they said "Yes," so the lunch had been taken on to Labelle. However, we had some bread and milk there, and as I had a blister the size of a postage stamp on one of my heels, I arranged for a rig to take three of us in.

The others started to finish the sixteen-mile walk, but happily when Beaulne learned that the lunch had come right through he sent a large team to meet us, in which we all embarked, sending back the small rig to pick up Al and Burns.

We all arrived at Nantel's Hotel about 6 P. M., very tired, very wet, and most of us very hungry.

Early the next morning we took the train for home. Meyer gave his doe to Lefebvre and I gave my young buck to Burns, so that nine out of our party of eleven each had a deer.

At home venison was distributed among our friends, some of whom were sarcastic enough to ask if we had bought it. Others kindly thanked us, at the same time saying it was the sweetest venison they had ever eaten.

On the whole, although we had a number of rainy, disagreeable days, we were thoroughly satisfied with the trip, which no doubt will be long remembered by us all.

A Montreal daily paper had published a report that a party of four—three English and one French—had been drowned up North on the Red River. Some lover of sensationalism coupled our names with this report, the result being that the day previous to our arrival people were lamenting our early demise, while other unpityingly said that it served us right for being so foolish as to go hunting.

No accident befell any of our party, but we all came back much healthier than we left. One and all, I have no doubt, will be glad to repeat the experience next year.

J. Bruce Payne.

Another Pet Deer.

Some things have been written lately about deer in general and pet deer in particular. All beasts of the field have been tamed of mankind, but none, in my opinion, offers a more interesting study than the deer. For a century it has been the noblest game obtainable over a great part of the United States, and with its related species over the whole world. Its habits and great reproductive powers, aided in some degree by laws, have prevented its extermination.

The poet has written of the beauteous eye of the gazelle. The form and movement of the deer has been a synonym of grace in all generations of writers. I once reared a young doe, and I heartily accord with all that has been written concerning the beauty of the deer and the real affection with which it regards those in whom it places its confidence. I do not even now believe I would find it in my heart to shoot a female deer, even for food; and I am quite sure I would find no pleasure in it.

In the matter of preserving and increasing the number of deer in our forests, there is a fatal dereliction regarding the slaughter of does and fawns indiscriminately and on every occasion. It is a matter of which our game laws take no note, in most States, and perhaps in all. I believe that therein—with proper enforcement of the present laws, or even without other law—lies the secret of the preservation of the deer. Of course the necessity of this has long been recognized on the other side of the Atlantic, but it may be it will only be recognized here when, like them, only the wealthy and aristocratic may engage in hunting at all.

Personally I am opposed to hounding, as being destructive of the quiet in which deer thrive, to say nothing of the number killed aside from still-hunting; but I am free to admit that many business and professional men of city and country would never see a deer under present conditions unless the hounds brought it in. They have not many days to go hunting, and the elderly, portly gentlemen who have amassed sufficient wealth to go hunting can never compete with the lean and tireless mountaineer in a hill-climbing, still-hunting expedition.

Still, hounding might be endured under restrictions, if there was less pot-hunting of young does and fawns. Surely the life of such a beautiful creature is more than meat. It would be refreshing to hear of a single instance of mercy being shown, and the guilty man would probably feel a delicacy in confessing to such weakness.

My elder brother and I picked up a fawn in the woods while on a berrying expedition in strawberry time. She grew and thrived, never being subjected to injurious handling—she always objected to being touched by any one but myself—and was as large and perfectly developed as a deer in its natural state. This is unusual in domesticated deer, and was often the subject for comment among old hunters who had seen deer, wild and tame. She jumped fences for amusement, and rather enjoyed a short run before the hounds, which she easily distanced for a mile or two, and would make straight for home as a house of refuge. The house dog was her friend and protector, and the two would lie near together for hours.

I remember with what delight I discovered she would follow my trail. It was the first time she had leaped the yard fence. I had gone to look at my line of traps and returned to find her gone. She had followed my trail into the woods. Returning, I found her tracks in a soft place. After that she was never confined, and I frequently tested her trailing powers. From some elevated point I would watch her galloping on the trail head to the ground for a few steps, then running on a hot scent, following every winding of my path, made perhaps an hour before.

When she came to where I was she would express satisfaction in the meeting by standing near to be caressed and then selecting a place near by with great care to lie down, unless I moved on, when she would follow at heel as faithfully as a dog.

No animal of so light a frame can compare with the deer for strength and poise. They are built for speed, like the racing yachts, and there is no question that in speeding like an arrow through woods they surpass all their kind.

My first photographic attempt was a picture of this deer as she lay on the shady side of the house on a warm day in early spring, all four legs sprawled out in a way that in any animal but a deer would be ungraceful, but a position I thought was particularly fetching. I have a faded print of that picture yet—it was never clear cut—but the dim outline serves to fix in mind a happy companionship.

The eccentricities of pet deer are found to be annoying to all but the one person who stands between the pet and the outraged neighbor who would deal summary vengeance for the wreck of kitchen garden or flower bed. Out of fondness for the creature, he soothes his friend and repairs the damage if possible; but the deer can never be taught to respect property rights.

We have yet to hear of a tame deer that lived out its days in peace. In its natural wild state every man's hand is against it; domesticated, its chances for survival are small. Only the wealthy could give adequate protection to a favored pet of the deer kind.

As remarked before, it is only when reared in his bosom, as the Arab's steed in his tent, there is a bond of affection between man and the beast only second to the human affection.

About a year after I had parted with it I heard that it was being mistreated by being confined in a pen, and I rode a dozen miles one day to rescue it at any cost. I knew she would follow me home. The poor creature had been removed in a wagon fifteen miles from home, and had returned in the general direction to within six miles in an air line, but had attached herself to a farmhouse as headquarters in her wanderings. She was gradually working out the problem of where her home and friends were, as I believed then and still believe. I have tolerably authentic information that she was shot by a hunter when not more than two miles from home, although I never saw her after I started to school in the fall more than a year before.

The day I went to find her I saw the place where the deer had been penned, and it was a sorrowful sight to me. She had walked round and round a narrow inclosure until a deep trench had been worn. But she had been released from this confinement—to a creature of a deer's spirit worse than death—and that day could not be found about the place. I never saw her afterward. Pity for her sad fate serves to keep in memory this beautiful and devoted creature, and the wish is framed in my mind that men would seek less to destroy the innocent, defenseless beings that abound in our fields and forests. To me it is more pleasure to see wild creatures disporting under the greedwood tree than the savage delight of laying them lifeless. The woods that afford pleasure to the lover of nature would be barren indeed without the charming animal life that abounds so freely where man has extended his dominion least.

Finally, it is but just and right to have regard for the rights of every living thing; and as man is given dominion over the creatures he should temper his power with justice and mercy.

"Who knoweth the spirit of a man that goeth upward or the spirit of a beast that goeth downward to the earth?" NORMAN PRICE.

MARLINTON, W. Va.

New Hampshire Birds and the Boston Market.

HUDSON CENTER, N. H., Nov. 4.—The bird shooting (especially the grouse) has not been what was expected up to the present time. Large bevies were reported as late as Aug. 1 from every section of the State, but from Sept. 15 (our opening day) up to the time of writing we can learn of no large bags being taken.

We regret to say that there has been more complaints of snaring in the southern part of the State than for years. A number of parties have been convicted and fined heavily, fines being paid and prison sentences suspended during good behavior. The cause for this increase in snaring, in our opinion, is the high price paid for grouse in the Boston market, $2 per pair, which is the highest price we have ever known to be paid for them. One of these parties arrested and being convicted after paying his fine, said "That he set snares enough in one day in '97, so that when he went to them the next day he took from them seventeen grouse."

One of the most difficult measures we have to guard against during the session of our Legislature is to keep a snaring bill off our statute books. We think that if Mr. Kinney, of Worcester, Mass., would take into consideration the fact that they allow them to snare in Massachusetts, and as I understand give the right to others, he would agree with me that this, with an open market, is the reason of the decrease of game in both Massachusetts and New Hampshire. We are at the present time more strongly of the opinion than ever before that if the sale of game is not stopped it will be but a short time when there will be very few game birds to be protected. N. W.

Bird Notes from Massachusetts.

WORTHINGTON, Mass., Nov. 6.—I never saw birds as scarce as they are this year. I have shot but four grouse, and all the gunners say the same, that they find but few birds. We do not find our best woodcock covers along the rivers, but on high ground among alders that have a few springs in them. I have never found many woodcock in July, but have always found them and their nests on high, dry ground.

I saw an article in FOREST AND STREAM a few months ago about night hawks, and in it was one thing that surprised me very much; it was that the night hawk "always has its nest on flat rocks" (or something like this; I have not the paper at hand). Now when a boy I found hundreds of their nests, and never found one on a rock or stone, but always found them among the cobble or flint stones washed out of the river, as we have them along our rivers. A. C. S.

[Observations made in the Laurentides and among the Hampshire Hills in Massachusetts and in the Green Mountain range usually discover the nesting places of the night hawks on the gray rocks. Practically there were no nests, the eggs being dropped on the bare surface. But the beds of old moraines or bars in rivers afford nesting places equally secure from notice, the eggs being scarcely distinguishable from pebbles.—ED.]

Stuck to Post with Hand Shot Off.

ALTOONA, Pa., Nov. 3.—Fainting from loss of blood and in terrible pain, Telegraph Operator Howard Lowman stuck to his post for six hours to-day at Garway Station, which is at a lonely spot on the mountain. Lowman had fired at a squirrel and his gun burst. He telegraphed to the superintendent: "Left hand shot off; relieve as soon as possible." Asked if he could hold out to take care of trains until afternoon, Lowman replied that he would stick to his post until relief came. When a train reached Garway the crew found Lowman half-conscious.—New York World.

The New York League.

As the date for the annual meeting of the New York State Fish, Game and Forest League is approaching, we wish to urge upon all clubs, associations and organizations within this State who are interested in the protection and preservation of our fish, game and forests, who are not already enrolled in the league, the great desirability of joining hands with us in order to secure yet more united effort in the attainment of these objects. The initiation fee of $5, including, as it does, the dues for the year commencing on the first Thursday after the first Monday in December, when our annual meeting takes place, gives to each club of fifty members or less the privilege of sending two delegates to the annual meeting, and where the membership is over fifty one additional delegate is allowed for each additional fifty members or fratcion thereof.

At present the game laws of our State, while by no means perfect, are in very much better shape than they were a few years ago, and we claim with reason that the league has had a most decided influence in helping to bring about this improved condition.

The constant tinkering by the Legislature with the game laws is, however, a serious menace to fish and game protection. Bills are constantly being introduced which, aiming to grant exceptional privileges to certain localities, create a general feeling of distrust and seriously interfere with the enforcement of good measures.

The careful weighing of the merits or faults of proposed game legislation by the persons most interested, the indorsement of what is deemed desirable and the opposition to what is deemed objectionable, is, after the election of officers for the ensuing year, the main business that comes before our annual meeting, and after the adjournment of the said meeting our legislative and law committee keeps careful watch of all proposed legislation affecting the game laws. Applications for membership should be made to the secretary, who will furnish blanks and information. ROBT. B. LAWRENCE, Prest.

ERNEST G. GOULD, Sec'y.

SENECA FALLS, N. Y.

In New England.

BOSTON, Nov. 11.—The late flight of woodcock along the Massachusetts coast towns has been better for the gunners than usual. Not all have taken note of the fact that the weather has been unusually fine and warm for several days; just the weather to cause the "flight birds" to linger. Some good bags have been made, however. Mr. W. H. Reed was out election day, and found that others had also cared more for trying the woodcock than voting. He got one very fine bird. His hunting companion got two, while the day before he got three. Mr. R. L. Jones, out the same day, bagged three birds, and Mr. P. T. Murphy got four. This they all consider good shooting on fall flight woodcock. Partridges they started in fair numbers, but the best dogs in the world cannot approach them so as to give the gunners a shot. They are off before the dogs get near enough for the gunner to catch more than a fleeting glimpse. Gunners say that they grow more and more wary each year.

Maine hunters continue to return with glowing accounts of deer and moose met and slain. Now and then a big black bear is brought home to Boston. One was sent to Clinton Market the other day, said to have been taken by a hunter from this State. The salesman had a chance to let it, to hang up in front of a market, for $1 a day, but preferred to sell it for $30.

Messrs. F. E. Whiting and W. H. Woods, of the Boston Herald Company, are just out of the Maine woods from a successful deer hunting trip. They went to Jo Merry Lake, and found deer very plenty, but still running mostly to does. They tried for bucks, but had to be satisfied with a couple of does each.

Still no traces of the missing hunter Knight, lost in the woods off from Bemis, Me., have been found. A posse of searchers, to the number of 500 or 600, was raised in the towns and cites below, and forwarded by train last Sunday. Though forming in line and marching over every rod of ground, no traces could be found. Another searching party is to hunt to-morrow, while a number of experienced guides are searching the woods individually every day. Men well acquainted with the woods in that part of the country say that there is little chance that he will ever be found alive. They believe that he has been injured in some manner, and died either from his injuries or hunger and exposure. It is also suggested that the falling leaves may have covered his body to the extent that searchers would not see it unless actually stumbling over it.

BOSTON, Nov. 13.—Shore shooting at the best points along the Massachusetts coast is improving. Black duck are coming into the creeks and inlets and the gunners are making some good bags. At Chatham better shooting is reported, with good shooting at Monomoy. Coot shooting is beginning at both these resorts, as well as at Annisquam, Plum Island and all the points along the north shore. Old and experienced gunners expect this sport to be at its height within a week.

Gunners who go to Maine have been holding back of late, waiting for snow. Fallen leaves and dry weather have made the hunting of deer very hard for a couple of weeks, with the result that fewer deer have been taken, according to Bangor and other game shipping point reports. It is even stated the month of November thus far is behind a year ago in the amount of game shipped out of the State, though October was considerably ahead. Snow, which is at hand already in some sections of that State, is expected to change this, however. Still, over thirty Boston hunters have brought deer out of Maine, via Bangor, the past week, with fully as many more to the credit of sportsmen living outside of Boston. To these numbers may be added as many more deer brought out from other sections of Maine. Among the number of hunters several ladies are noted, with deer to their credit.

After a close time of ten years, Waldo county, Me., has been thrown open to the hunting of deer during the month of October. In that time it is stated that about fifty deer were killed. It is also understood that the same month will be open to deer hunting next year, although it is in the power of the Fish and Game Commissioners to prevent hunting there, if they believe that the supply of deer is endangered.

I. N. Goldsmith, of Boston, has returned from a hunting trip to Cedar Lake, Aroostook county, with two deer. He was accompanied by W. I. Wood, of Portland, and Mr. Germaine, of Fisherville, Mass. Both got two deer.

Dr. Heber Bishop, of Boston, will start the 20th on a second trip after Canadian big-game specimens for the Paris Exhibition. He will be accompanied on this trip by W. S. Hinman and C. C. Williams, both of this city. Dr. Bishop's object is to add to the beautiful specimens he secured on his first trip, early in the season; the horns then being generally in the velvet. This trip will be for fine specimens with fully developed antlers. His permit from the Canadian Government allows him to take game for the Paris Exhibition at all seasons. He designs to lay out the exhibit there in the form of a forest, with the mounted specimens placed in the most natural manner.

SPECIAL.

The Adirondack's Northern Slope.

"VERY well, John, we will visit you about Oct. 20 if all goes well, and we thank you very much for the kind invitation."

Thus began our annual preparation for a hunt and rest in the Adirondacks, as John invited us to spend our vacation with him at a camp where he employed some fifty Frenchmen cutting pulp wood on contract. The 20th came very slowly, but at last it did come, and we boarded a train of the narrow gauge Chateaugay Railroad at Lyon Mountain, and after a slow ride of about thirty miles greeted John at Peet's Camp.

My chum being well acquainted with this section of the woods and with the choppers, I was at once "made acquainted" and ushered into the long log cabin, where the pipes I had brought with me were given out and a general smoke was indulged in. In an hour we were ushered into an adjoining camp, called the "hash" camp, where a rude table with seating capacity for twenty-five stood literally loaded with hearty food—baked beans in tin plates, boiled potatoes in the "jacket," fried pork, stewed venison, roast partridge, bread and butter, cakes and relishes.

After supper we again retired to Camp "Smoke," where the evening was spent in story telling, playing "chips" and smoking.

The next morning Old Sol came beaming over the mountain tops, starting Jack Frost from the valleys in the shape of banks of mist, a sure indication of a perfect day in the woods. After loading our game bags with lunch we started on our first day's hunt. We fairly crept up the mountain side among the beautiful virgin forest trees, down valleys, across ravines, coming to deer tracks occasionally and frequently flushing a partridge to keep our circulation good.

Is it true with all hunters that when they are hunting for deer plenty of small game is flushed, and vice versa? This has been my experience. When hunting for deer there seemed to be a quantity of birds because you did not want to shoot them. Thus we spent the forenoon without even starting a deer, to our knowledge. So, resolved to pick what birds we could rather than go to camp empty handed, we succeeded in bagging ten nice plump partridges and also in working up a most ravenous appetite for supper.

The next was another beautiful day—so still a shot could be heard to echo and re-echo from hillside to valley, the extreme quietness broken only by an occasional chatter of the squirrel or shrill yell of the bluejay. This morning we again started early and went in the opposite direction from the day before. We had gone scarcely a mile up the side of a steep mountain when, on looking across a deep ravine, what was our agreeable surprise to see five nice plump deer busily engaged in picking their breakfast from a clump of raspberry bushes. My chum singled out the one he was going to try for and I leveled on the next in size. After a whispered "One, two, three," away went our bullets and away went some of the deer. Only three went far, however, and I am not quite sure but they are going yet. The other two stayed. Mine dropped in his tracks with a bullet in his heart and his companion floundered about with both shoulders broken. Another bullet put an end to his misery and also satisfied our desire for deer this season, we both having resolved five years previous to shoot only one deer each per season under any circumstances.

Twelve o'clock found us in camp with our game, thanks to John and another good man. After dinner we went out for birds and succeeded in bringing home four more partridges and a few ducks.

It is a lamentable fact that hounding on the northern slope of the Adirondacks is still indulged in—in fact, only one day of the ten we spent in the woods passed without the barking of a hound, and some days two or three were heard. Is there no way to stop this unlawful slaughter to deer?

There seems to be a general impression among sporting gentlemen that the poorer class do not care how soon game in the Adirondacks becomes extinct, or they would not violate the law so much. This is not true, however. The poorer class—those who have homes in the vicinity of the mountains, who are industrious and in every way worthy citizens—mourn the loss of deer more than any one else. It is the "tough" hunter who is too lazy to work for a living and who has come to think the woods are his own, who does the slaughtering, without regard to man or his law. Is there no way our game warden can put these fellows to flight? Has he constables enough, or what is the matter with our wood detectives?

Being a native of the Adirondacks, I am sure I am not alone in feeling as I do, but that I voice the desires of many. G. W. HILLIKER.

Adirondack Deer Hounding.

Editor Forest and Stream:

I have just read the letter written by a friend of Game Protector Beede, which was called out by my communication to FOREST AND STREAM three weeks back, and note the threat contained therein to have me subpœnaed to furnish evidence because I have over my name dared to call attention to the way the hounding law has been evaded in Essex county. If Mr. Beede avails himself of this

club he will not get any evidence that will convict, for the simple reason that my trips to the deer territory have been for purposes of recreation and not to secure evidence of illegal hounding, and that I have taken good care to give the men who were using dogs as wide a birth as possible. I am perfectly willing to pass Mr. Beede's statement that my knowledge is nothing more than rumors and hearsay, and let the matter rest on the letter of his spokesman, who, while he admits the fact of hounding, only produces evidence of two arrests which are specifically stated to be for this cause, both made since the publication of my letter.

J. B. BURNHAM.

P. S.—Lest my letter be misconstrued I want to state that I believe at the present time Beede is doing good work. The fact that he has at last made arrests at Mud Pond is evidence of this. As I said before, game protectors have everything to contend with, and particularly because of the strong public sentiment in favor of hounding which exists throughout the Adirondacks. Beede is an expert woodsman, and is capable of making his territory a model one in the observance of the game laws, and I trust we will now see this end accomplished.

Seasonable Hints.

IT is a good thing to remember that moccasins, and particularly oil-tanned moccasins, burn very easily, if they are hung too near the fire when drying. A comparatively low temperature will take the life from buckskin or leather and render the footgear useless.

Men who have walked the city streets in shoe leather cannot very easily accommodate their feet to moccasins, and frozen ground soon makes shore feet. A good plan under any circumstances is to take along cork insoles or insoles cut from leather, or even from the leg of an old rubber boot. It is better to wear insoles than to be obliged to go back to heavy shoes, which are necessarily noisy in the woods.

A friend tells me that a cure for toothache which has answered in his case is to soak a rag in whisky and place it in the ear on the side effected. The effect is stimulating to the nerves and lessens the pain.

J. B. B.

North Carolina Quail.

KITTRELL, N. C., Nov. 8.—*Editor Forest and Stream:* On Nov. 6 Mr. G. A. Fales, of Boston, Mass., and Mr. A. F. Adams, of Newton, Mass., started seventeen coveys of quail in their day's tramp. They stayed in the field until 3:30 P. M., when their cartridges gave out, and then returned to the house with a bag of forty birds—all quail.

On Nov. 7 they again started out, well supplied with ammunition, and returned this time with a bag of sixty-one quail, having started twenty bevies during the day.

There are more quail here than ever this year, and also large numbers of wild turkeys.

The weather is delightful, being cool and clear.

DE FOREST & BUNCE.

Vermont Game League.

THE annual meeting of the Vermont Fish and Game League was held at Burlington on Wednesday evening of last week.

Then and Now.

I wish I had been grandpa's child,
That I could have had the joy
Of fishing in those good old days
When father was a boy.
For then the fish grew bigger far
Than they do nowadays,
And literally packed the streams—
At least, so father says.

They never caught a sucker then
That didn't weigh a ton,
And pickerel were longer than
A modern Armstrong gun.
They used to yank out halibut
In hundreds from our bays,
And chad ran up the banks to bite—
At least, so father says.

They never thought of using bait
To lure the wily trout;
They reached a bushel basket down
And simply yanked them out.
And in about an hour or two
They'd fill up several drays,
And show them through the neighborhood—
At least, so father says.

In short, they caught so many fish
That 'fore their sport was through,
The stream where they were fishing would
Go down a yard or two.
And not an angler failed to come
Home loaded in those days—
A habit father still pursues—
At least, so mother says.

—Cornish Telegraph.

In Pine Tree's Country.

WITH much interest I have read the communication and narratives of Pine Tree; much more interesting to me because I have hunted over most of the territory described by him, and now know why the Bloody Brook is called by its gruesome name. Many a nice woodcock have I shot on Cowle's meadow swamp, partridges in the large tract of forest between Northampton and North Hatfield, wood ducks on the romantic Mill River, and foxes in the meadows along the Connecticut.

C. F. B.

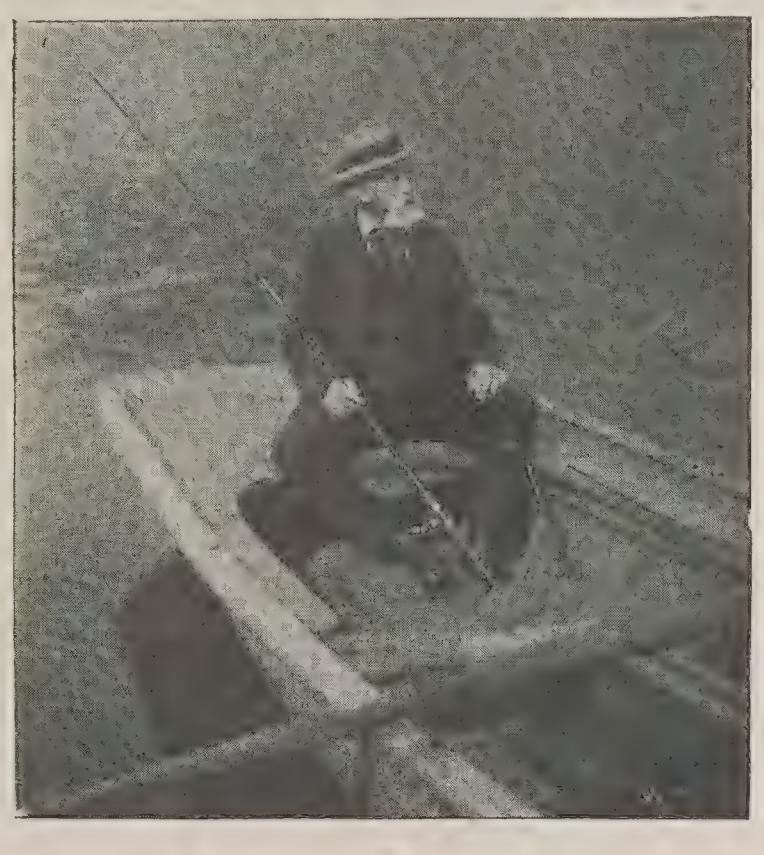
FIVE memberships in a fully equipped game club in the Province of Quebec, within easy access of New York city, can be obtained by the right kind of sportsmen. Moose, deer and partridge hunting. Trout, bass, pike and pickerel fishing. For particulars address A. I., FOREST AND STREAM.—*Adv.*

DON'T SHOOT
until you SEE your deer—and see
that it is a deer and not a man.

Sea and River Fishing.

Fishing Up and Down the Potomac.

The Close of the Season.



IT is time to put away the fly-rods. The water has chilled with the early frosts; the flies have disappeared off the face of the water; the moss beds where the bass hid are decaying masses of slime, and worse still the fall rains have muddied the streams past any hope of fly water till winter is with us; the bass are huddling to headwaters for winter quarters. So the flies have been packed way, fly-rods put up save those destined for the repair shop, and lines overhauled for their winter rest.

Wild stories of seventy-two mallards and 180 ortolan to two guns on the Patuxent, only a few miles down the Potomac—birds blown in by the late coast gale—gets in emergency orders for shells, and the hammerless is tenderly wiped and oiled in anticipation of future game dinners.

Not that fish may not be taken yet in these waters; that may be done with bait and sometimes with a spoon scraping the bottom as late as December, depending on weather, but to one who cares only for surface fishing the season is over.

But when it is learned that veteran author and angler Charles Hallock is in the city—the father of FOREST AND STREAM—the privilege of a day with him outweighs all objections to bait, and he was persuaded to go down to Occoquan Falls to see what the Fish Commission had done for the lower Potomac.

Then came the question of bait, always more serious than the actual labor of fishing. Neither mad toms nor branch chub nor goldfish were to be had; only gudgeons and pike smelt, and the latter were too small. There was

CHARLES HALLOCK ON THE POTOMAC.
Photo by Henry Talbott.

nothing left for it but the gudgeon or smelt, as they are called here. They are one of the best live baits, but soft. Their scales are put on with mucilage, and a poor quality at that, and they will not stand casting.

Three buckets of these were obtained—beautiful silvery fellows 5 and 6 inches long—and a depot porter was bribed to ice them. When we had ridden thirty miles by train and three by wagon they were still in first rate condition. But trouble was ahead. We dared not trust them in the river over night, for only an evening or two before enterprising boys had looted a minnow box and left the hopeless fisherman baitless. It is a temptation, for minnows are scarce here and hard to get. We borrowed a tub, brought it into the hotel kitchen and filled it with water from the well. The tub was clean, the water about the same temperature as that in the buckets, but very hard. The smelt were carefully put in this and seemed to enjoy their enlargement. At bedtime none were dead, though three or four were swimming on their backs, but we could not have expected less. The next morning two-thirds were dead as the proverbial herring, and another vow was registered to leave bait fishing to those who knew more about it, though Taylor, from whom we secured our gudgeons, sometimes loses half his catch between the net and the livebox. The bruising in the net, or crowding in the can, or simply picking them up, seems to be fatal; they will stand neither travel nor handling. But they are bright and silvery on the hook and will always be a popular bait when they can be saved. Well water is not always fatal, but this is hard and is possibly less aerated than may be necessary.

We had slept well, for our talk had been exhausted over the cigars by the fireside. Only those who have had the privilege can appreciate the delight of listening to reminiscences like Mr. Hallock's, extending as they do over nearly half a century, and so much of the continent from Florida to Alaska, when waters were virgin and the forests almost untracked. We caught trout in the Nepigon and ouananiche in the St. John; traveled from the Rangeleys to the Yukon, and always, whether in forest or by stream, upon the map of memory each place was marked by its own peculiar fin or fur or feather. Mr. Hallock may well be considered the dean of our craft, and his acquaintance covers nearly all the noted anglers since the fifties who have fished in American waters. Notwithstanding his devotion to the chase, and its lovers, he makes of it no "pent-up Utica." For several years he has been engaged in researches upon the ancestry of our aborigines, that puzzle picture whose many blanks increase the difficulties, but add to the interest, in permitting excursions into that dreamland of conjecture where the most practical sometimes love to revel.

It is worthy of note how the habit of observation grows on one, and developed in one direction unexpectedly affects our relations with our whole surroundings. Training the eye to note the slightest evidence of organic remains in the shingle of a creek bed, may lead the palæontologist to a facility in the detection of four-leaf clovers that deceives the unappreciative into the false notion of intentional indulgence in a childish and useless pastime, when in reality it is but the accident of a habit of noticing small differences. We waked from our first nap with a commotion among the chickens, which we had seen earlier in the evening, and appetite had marked them for our own; now visions of a barmecidal feast of shadows for the morrow disturbed us, but it was only a family quarrel and soon subsided. Expecting comment on the homely incident, it was a little startling to hear only "Pretty eyes." The inspiration for the observation had been earlier in evidence and there was no room for argument. He had seen a four-leaf clover. When we waked again it was time for breakfast.

A hundred yards from the hotel we take a boat. The water is cloudy and a dense fog is on the little river, but we cross and try at the foot of the Palisades opposite.

Mr. Hallock catches the first bass, as he should, but we do not find many below, and later on move up past the old water mill toward the foot of the falls. Here a surprise awaits us. It is the middle of the week and few fishermen are expected save on Sunday; but the morning train has brought a load, and from every rock there sprouts a rod. There were nearly three dozen anglers, native and imported, and all were getting good strings. Once we saw in a little eddy four bobs within a square yard.

There was no question of the great plenty of bass here nor of the popularity of the sport or of the resort. Two evenings later there were more than 430 bass on the porch of the hotel for the day's catch, and not all the bass caught come to the hotel. This is but a single point, and every station along the Virginia shore has yielded surprising quantities of bass this season. In the Maryland runs still more remarkable catches have been made, but these are inaccessible for a single day's fishing.

It is a demonstration of the wonder working results following the efforts of the Fish Commission. Comparatively few of the large-mouthed bass were planted in the tributary runs of the Potomac; at the most a few thousand, and these within the last six or seven years. Some of these were known to be lost, as one lot dumped in this same Occoquan from the 50-foot bridge on a skim of ice by a heedless messenger. But the conditions of this tide water river, with its shallow bays and embouchures of many tributaries, seem to have exactly suited this bass, and particularly the abundance of food, of which he secures a fresh consignment with every tide. So the bass have multiplied and grown as they probably have in no other water in the country.

They have been found above 8 pounds in weight, and as for numbers, more adult bass were taken with hook and line at Occoquan this year than all the yearlings ever put in the river.

And it is not alone the anglers who have benefited by this introduction of the bass, for the net fishermen have taken advantage of the fall run and shipped many barrels of these fish, mostly intercepted at the mouth of small runs. So great a showing has been made this year that it is to be expected a slaughter will be inaugurated in the spring in water so poorly policed as is much of the lower Potomac. It is to be hoped that the great territory and the unlimited food supplies will so far operate to the increase and growth of the bass as to withstand these raids and leave the anglers' stock unimpaired. The coming of the bass has already made a difference in the fishing at well-known points.

At Four-Mile Run, where in the great bay at its mouth it was formerly easy on almost any evening to get a hundred perch and sunfish with small flies, they cannot now be found. That they are not all eaten is apparent, for within a fortnight thousands of inch-long sunfish have been dipped, to stock an artificial pond, but the ancient colonies are deserted. As for perch, on some tides the surface of the pools are alive and noisy with their snapping, but the little coves where they used to feed undisturbed are empty and we have not been able to find them regularly this summer in the shallows where they were wont to be as "thick as autumnal leaves that strew the brooks in Vallombrosa."

A still more remarkable change has been noted at Choppewamsic. Here the pool had been for years a noted place for jack fishing, and no other fish was caught except perhaps an occasional yellow ned. Three seasons ago we found bass here, but our catches even with the fly were still more than half pickerel (*Reticulatus*), especially at the beginning and close of the season. Some of these were quit large—more than 2 feet in length and weighing above 3 pounds. This year it was all bass from beginning to end. No large pickerel were caught or even seen, and less than an average of one of the small ones taken for each day's fishing.

The bass may not have destroyed the pickerel, but he has crowded the latter out. The carp, too, which were formerly so plenty here, have practically disappeared. Although a 20-pounder occasionally makes his noisy flounder yet, it is but seldom, and the feeding places they once kept muddy are now clear and full of bass.

In warm waters the bass is king. HENRY TALBOTT.

New Hampshire Drought and Trout.

Editor Forest and Stream:

The last season in New Hampshire has been an average one for lake and pond fishing. The brook trout fishing, which ends Aug. 1, has not been so good for years, but the drought has been the severest in the memory of the oldest people. Brooks that have never been dry before have gone dry, killing the trout by thousands and practically depleting many of our best streams.

Our commission is making every effort to take all the spawn possible, and with the two million spawn purchased we intend to give our streams a better stocking than ever before the coming spring. With some of our brooks drying up occasionally and the increased number of fishermen, this is the only way we expect to have trout fishing in New Hampshire. N. W.

The Catching of Micropterus.

BY DR. CHARLES T. MITCHELL.

Inscribed to my fellow anglers.

ANGLING friends, again I greet you,
Greet you with my songs and stories,
Songs and stories of my idlings,
Of my boating and my fishing,
Of my hours of recreation,
Of my moments of reflection.
In this pleasant summer season,
When the days are warm and lengthened,
When the earth is bright and joyous,
And the sky is painted bluest.
In this season of vacation,
When we weary grow of working,
Take a resting spell from labor,
Spend the days in lightsome leisure.
Songs and stories of our lakeshore,
Fragrant with the water's odors,
Sparkling with the love of sporting,
Sung to music of the wavelets,
Keeping time with ripples breaking
O'er the bright and shining pebbles
On the shores of Chosen Water.*
When all Nature beckons, calls us,
Calls us from our business places,
From our homes in heated cities,
From the weary round of fashion,
To the cozy lakeside cottage,
Nestling 'neath the leaves and branches,
'Neath the vine-clad swaying branches
Of the elm trees, graceful bending,
Of the pine trees' cooling shadows.
When the sun is full of brightness
From its rising to its setting,
Filling all the earth with gladness,
Lighting up all dark recesses;
And the dancing lights and shadows
Fall in flecks and gleams upon us,
Through the drooping leafy branches,
As we walk in shaded pathways,
Far along the coving shoreline,
Tramp along the winding roadway,
Up the hillside, down the valley,
Through the glen's romantic archways,
Midst the growing ferns and mosses.
And the sky is often cloudless,
As the full moon sails across it,
Floats in dreamy mood above us,
Casts a silvery sheen about us;
And the moonlight and the starlight
Fall reflected in the water,
As we linger near the margin,
On the sultry summer evenings,
When the air is soft and balmy,
Laden with a sleepy mildness,
Fragrant with the clover blossoms,
With the odor of the grasses;
Tempered by the gentle south wind,
Cooled by frequent summer showers.
When the hills are green with verdure
Of the growing vines and cornfields,
Dotted yellow by the grainfields,
Ripening in the golden sunshine;
And along the country roadsides,
Cloudy with the dust of travel,
All along the old rail fences,
In the most neglected corners,
In the tangle of the forest,
Bloom the wild flowers in profusion,
Striving for the sunny places,
Breathing forth their sweetest perfume,
Filling all the air with fragrance.
Blushing as you look upon them.
When our little friends, the warblers,
Flit in silence through the tree tops,
Busy with their tiny nestlings,
Filling gaping mouths with food stuffs,
Teaching them the art of flying.
And the wild ducks seek the marshes,
Seek the inlet's swampy borders,
For their mating and their nesting;
Where are water lilies blooming,
Where are reeds and rushes growing;
Feed upon the wild rice ripening,
Plume and oil their silken feathers.
When the game birds in the uplands,
In the cover of their choosing,
Bring forth broods of downy fledglings,
Lead them out into the open.
Guard them from the owls and foxes.
When the swallows twitt'ring, flying,
Skim low down above the water,
Circle in their flight while feeding
On the insect life about them,
As the evening's dewy vapors
Gather on the leaves and grasses.
When the fishes from the deep pools
Seek the shallows of the margin,
Where are schools of minnows swimming,
Where are wary crayfish hiding,
Where are luckless insects floating,
Feed and gorge themselves upon them.
When at day's decline the outline
Of the west hill falls in shadow,
And the sun is slowly sinking,
Hiding in the deepest valleys,
Gilding all the sky with crimson,
Tinging all the clouds with golden,
Lighting up the whole horizon
With the grandeur of its painting,
And the hush of twilight deepens,
Deepens all the evening shadows,
Broods in silence all about us,
Soothing all unruly wavelets,
Calming all the undulations,
Beating down the swells that linger,
As if pouring oil upon them.
Then one feels that old-time passion,
Often latent in his bosom,
Since the days of boyhood's playtime,
Childish days long since departed,
Youthful days not yet forgotten,
Welling up with impulse bursting,
All the bonds of habit breaking,
And we yield to Nature's prompting,
Take our rod and go a-fishing,
Spend a little time in casting
With the lightest of fly tackle,
For the gamiest of all fishes,
For the bronze-back Micropterus,
Fiercest fighter of all fishes.
In my boat of pine and oakwood,
From the truest model fashioned,
With responsive oars I row me
Out upon the calm lake surface,
Shimmering in the setting sunshine;
Out a little from the shoreline,
Out beyond the slanting shadows,
Where the bottom, gently sloping,
Sinks abruptly from one's vision,
And the rocks upon the bottom
Seem as floating dimly past you
As you slowly glide above them,
As you silent float beyond them.
In my hand my favorite lancewood,
Trimmed with shining bands of silver,
Bound with silken cord in spaces,
Strength'ning its elastic fibers,
Holding rings through which the line slips.
At the butt the reel is fastened,
Furnished with a clicking movement,
That its music may be cheering,
As the silken line runs through it.
Leader made of gut of silkworm,
Fine as spider's web seen floating
In the sunshine of the autumn,
In the days of Indian summer.
Winged flies from Nature's patterns,
Brightly colored, deftly fashioned,
Like real insects flying,
Buzzing in the drowsy sunshine,
Sporting in the dreamy twilight.
From above the dark'ning water,
Flutt'ring in the breath of evening,
Down upon the trembling surface,
Fell the flies as falls the snowflake,
As a tinted leaf in autumn,
As the thistledown in summer
Falls and floats upon the water.
In a moment, in a twinkling,
As the flies were slowly sinking,
I could feel as something tugging,
Feel the slack line quickly tight'ning,
As the Indian bowstring tightens;
See the bending of the rod tip,
As the Indian bow in shooting,
Like the rainbow after raining,
As the strain increased upon it.
From the tugging and the straining,
I was sure 'twas Micropterus,
Biting at my hook of feathers,
Thinking it some insect floating
In the still transparent water.
With a gentle strike I hooked him,
Gave him line to ease the straining,
And the clicking reel made music
As the line ran swiftly through it.
Rushing wildly to the surface,
In his effort to escape me,
Leaped he straightway far above it,
Leaped with all his force of muscle,
In the fierceness of his struggle;
Then with other tactics strove he
To outwit the angler's cunning,
And obtain his wonted freedom.
But the hook was firmly fastened,
In his bony jaw was buried,
Nor his surging, nor his leaping,
Brought the freedom that he longed for;
But, instead it served to weaken
Both his muscle and his courage,
And in spite of all his gameness,
He must yield to skill and prowess.
Carefully I reeled him toward me,
Keeping taut the line upon him,
Let it neither slack or loosen,
Lest by chance he might escape me.
Through the shallowy depth of water
I could see him slow approaching,
Broken was his warlike spirit,
Weary was he from exertion,
From the tireless strain upon him.
Straight into my net I led him,
Safely in my boat I placed him,
And with quiet exultation,
With a smile of joy and triumph,
Looked with admiration on him;
Praised him for his form and beauty,
Praised him for his gamy tactics,
Gave him all the honor due him,
"Fiercest fighter of all fishes"
In the lovely Chosen Water.

Pratt Cottage, Pearl Beach, Canandaigua, Lake, August, 1899.

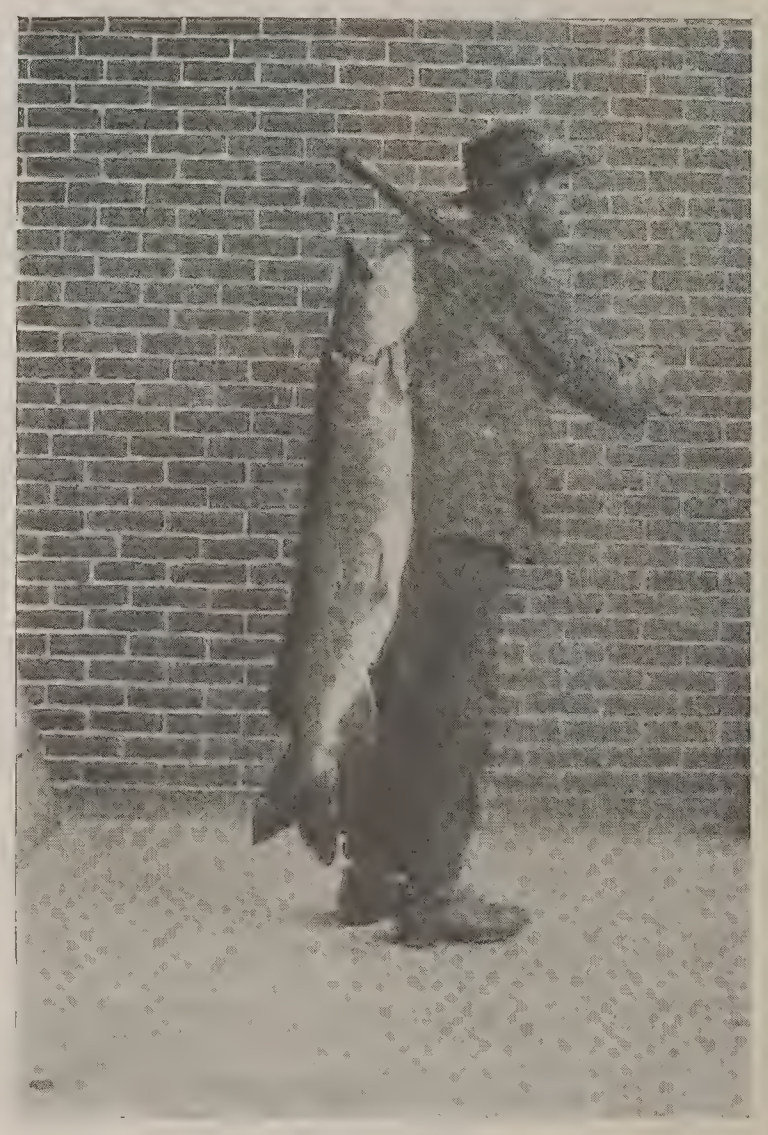
*Indian name (in English) for Canandaigua Lake.

New York Fish and Game League Meeting.

SENECA FALLS, N. Y., Nov. 7.—To the Officers, Trustees and Directors of the New York State Fish, Game and Forest League: You are hereby notified to attend a meeting of the said officers and trustees of the League above named, on the 23d day of November, 1899, at the Yates Hotel, at the city of Syracuse, at 12 o'clock M.

All clubs, associations and organizations within this State organized for the purpose of protection of fish and game and forests are urged to become members of this League, in order to secure united effort in the attainment of these objects. Applications for membership should be in the hands of the secretary (who will furnish blanks and information upon request) on this date. They will, however, be received at any time.

This meeting is called for consideration of introductory and preliminary work of the annual meeting of the League, to be held at the place aforesaid on the 7th day of December, 1899, and for such other business as may properly come before the meeting.



By order of
ROBERT B. LAWRENCE, President.
ERNEST G. GOULD, Secretary.

Muscalonge from Red Lake.

UTICA, N. Y., Nov. 3.—I mailed you a photograph of a 42½-pound muscalunge that I caught a man carrying through the streets of Theresa day before yesterday. I stopped and took him into a store, had him mount a pair of scales, and found that he tipped the beam at 170½ pounds. Then, after depositing the fish in the window of the post office, I marched the man and stick back to the scales, and found they weighed 128 pounds, which made the fish weigh 42½ pounds. Then I got a tailor's tape line and measured the fish, which was 49 inches long, 23½ inches girth and 11 inches across end of tail.

Mr. Hiram Townsend made the photo with his kodak.

Last evening I learned that a still larger fish was taken ten days ago, also from Red Lake, weighing 46

A MAN AND A FISH.

Wm. Sharp and his 42½-pound muscalonge, caught in Red Lake, Theresa, N. Y., Oct. 31, 1899. Length 49 inches, girth 23½ inches, width of tail 11 inches. Weighed by J. L. Davison. Photo by Hiram Townsend.

pounds. I was unable to learn that a small muscalunge had been taken this season, which still more convinces me that the lake pike (pickerel) have about cleaned out the muscalunge from the river and lake, as you will remember I claimed in my letter to you a few weeks since. The muscalunge have gradually decreased as the pike have increased in number and size.

I understand that these waters are to be restocked with muscalunge and black bass the coming year; but I doubt that it will do any good unless something else is put in for the pike to feed on, as, for instance, the German carp, as Mr. Mr. Henry Talbott proposes.

I found the "Grouse" supplement and editorial in my FOREST AND STREAM to-day, and it is good.

J. L. DAVISON.

The Antelope Park Club.

MR. D. C. BEAMAN, of Denver Colo., sends us the prospectus of the Antelope Park Club, organized to furnish its members, their families and guests a permanent outing place at reasonable expense, where the very best of stream fishing may be enjoyed every year, as well as good grouse and deer shooting while such game lasts in Colorado.

The club now owns in fee simple, free of all encumbrance, 160 acres of land in Antelope Park, twenty miles above Creede, Colo. On this property is about one-fourth of a mile of the Rio Grande River and about three-quarters of a mile of Clear Creek. Both streams rank with the best fishing streams in the State. The other property consists of a two-story stone and log building, a two-story and attic log building, a log kitchen, a log store house and some log stables. The property is that formerly owned by the Denison Rod and Gun Club, commonly called the Texas Club, and cost them over $3,000.

The Antelope Club is a corporation (not for pecuniary profit), and owns the entire property. It is proposed to secure the fishing privilege (under the new game law) on several miles of the river above and below the club property and stock both streams every year with at least 50,000 fry, so that the fishing will always be the very best and constantly improve. The number of members is limited to thirty. The membership fee is fixed at $50.

Mr. Beaman will give further details on inquiry.

Fishing North of Lake Superior.

A WISE law limits a fisherman's catch of brook trout to fifty in any one day within the bounds of the Province of Ontario. Had no such restraint been in force, I fear a good many more than that would have been taken by four rods one August afternoon in this present year of grace. Port Arthur is in the midst, or rather on the western verge, of an angler's paradise, and within a few miles there are three excellent trout streams, so that when my good fortune caused me to pass a week or two there this summer, I was not slow to renew my acquaintance with my old friend Fontinalis.

One day's sport will, I venture to think, bear relation, as any moderately good fisherman may do as well during July, August or the first fifteen days of September. Our party consisted of Mr. Neil McDougall, at present Government road inspector for a district as large as some petty kingdoms, an old Hudson's Bay officer and a famous fisherman; Dr. William H. Clark, pastor of the Immanuel Presbyterian Church, Detroit, who holds the 1898 record of fifty trout from one pool, and who may have duplicated it this year for all I know to the contrary; Mr. J. W. Crooks, a business man of Port Arthur, and a keen, successful rod, and, lastly, the writer.

On the morning of Aug. 8, notwithstanding a very threatening sky, we drove six miles along the old Dawson road, the same by which Lord Wolseley's troops marched toward the Red River in 1870, and which was also followed by the Canadian volunteers when they suppressed the second rebellion in the '80s—to a point distant but a few rods from a very trouty stream known as Six-Mile Creek. Here the horses were left, and a faint but good trail followed for some miles up stream. McDougall and Dr. Clark elected to fish the lower stretch, while Crooks and myself went to a place known as Silver Hill, five miles from the Dawson road.

At 2 P. M. we wet our lines for the first time, and at 5 o'clock we each had the limit, and our creels were quite heavy enough, considering we had to walk five miles back to the horses, through wet bushes, for it was now raining heavily. All my trout were caught on the blue dun and cow-dung, tied on Nos. 7 and 8 Limerick hooks. The fish were not heavy, but of a fair size, and the fishing most interesting, as the stream is a difficult one to cover with the fly, and the trout are as game as they make them.

McDougall and Dr. Clark had done as well as ourselves, and the boy had not slept all the time, either. The total catch was 230 trout; they made a handsome dish on our return, and were much appreciated by our friends.

The accompanying photograph shows my three companions at their usual off-time practice of swapping fish stories. As far as I can make out, McDougall is describing an old he-snorter he got in July on Nipigon; Dr. Clark is making a mental resolve to go and do likewise next year, while Mr. Crooks looks on condescendingly, preparing meanwhile to cap the climax by telling all about that 25lb. laker he hooked one fall out in the bay.

This, by the way, is not to be taken seriously, for I never expect to go out with three better fishermen, or more truthful ones to boot, than my companions of that grand day's fishing on Six-Mile Creek.

ST. CROIX.

TORONTO, Sept. 8.

The Genesis of Sportsmanship.

THE present is an iconoclastic age. The spirit of investigation is abroad in the land. The light of the nineteenth century has blotted out the myths of a less intellectual and more intolerant age. With thinking people fiction is no longer allowed to masquerade in the garb of historical fact. No longer is the Christ hidden until discovered by Martin Luther; nor is it now believed that purity was unknown and without a defender until the days of Henry VIII.

Although contrary to popular belief, that branch of sportsmanship which revels in the handiwork of the Creator—that seeks Him in field and forest, by lake and stream—has been in and of the world since the days of Tubal Cain, brightening its shadows and lightening its burdens. It is and has been peculiar to no class, condition or country.

The crown of royalty may adorn his brow, the judicial ermine clothe his body; his voice may be heard in control in the halls of legislation and his brilliant attainments may add new luster to the professions; his sword may carve out new nations and his iron will rule them; his pen may be the lever to move the world upward to better things, and his pencil win undying fame in the world of art; he may explore new fields in the domain of science and immortalize himself by new and brilliant discoveries—be these and more besides and yet be proud to claim and enjoy fellowship with the army of sportsmen upon less distinguished plane—men whose heart pulsations are manly beats and whose sentiments are kindly, pure and ennobling.

It is well known that all the children belonging to the great family of sportsmanship, while clearly akin, were not brought forth at a single birth, nor are they the progeny of the same parents.

A superficial investigation will demonstrate the fact that many of them were born at different times, under different circumstances and in different places—some having direct paternity and a particular time and place of birth, and others being an evolution from the necessities or civilization of mankind.

The time and birthplace of angling, one of the principal subdivisions of sportsmanship, like that of Homer, are lost in the twilight of fable. Good authorities claim it had its origin in primitive times when primitive methods were employed merely to supply the wants of man with food; but in a more intellectual age it is a higher view to accord it a more æsthetic origin.

Mathematics, being an exact science, came into the world with an advancing civilization, and there being so many analogies between an exact science and angling, and the exact truthfulness of anglers, that they seem clearly to stand in relation to each other as parent to child, if not that of twin brothers.

A few of the many examples which readily suggest themselves from our schoolboy experiences are herewith given in support of our hypothesis.

Geometry, like the angler, treats of lines, surfaces and solids.

A demonstration is a course of reasoning which establishes a truth. The angler is certainly a demonstration; but if his acquaintances, who may be less intellectual, refuse to believe, why should he be blamed? And who will say he will not eventually triumph?

An hypothesis is something upon which a demonstration may be founded, and here again mathematics and the angler touch elbows.

A theorem is something to be proved by demonstration. Who will say that the angler does not give theorem many a tumble?

A problem is something proposed to be done. And do we not know that nearly every angler is a problem, and that he is often "done"?

A proposition is something proposed to be done, or demonstrated, and may be a theorem or problem. The modern angler is all three—he proposes, does and demonstrates.

A corollary is an obvious consequence deduced from something that has gone before. The angler's "full creel" and "biggest fish" prove his close-up relationship to the corollary.

A scholium is a remark on one or more preceding propositions. As the angler is not slow to remark on the propositions which he encounters and elucidates, a very great harmony is seen to exist between the angler and the scholium.

An axiom is a self-evident proposition. Who will be so rash as to contend that an angler is not a full-fledged axiom?

But let us put some of these principles to the test and further prove the striking relationship existing between mathematics and the angling fraternity.

Anglers in the same camp or in the same boat, like the equal things of axiom 1, are equal to each other.

All worthy anglers proceed along parallel lines and they will not conflict or interfere with each other, however

A fishing trip may be projected any number of times long the trip may be extended.

in all directions.

The fisherman is easily reduced to lowest terms when the trout refuse his fly.

The sum of all the fish which any fisherman takes is not so great as the story he tells.

A fisherman, like extension, has length, breadth and thickness.

The sum total of a fisherman is equal to all his parts.

No fisherman can prolong his trips indefinitely.

The fisherman's story has no weight, but only magnitude.

The want of success may make the contents of the fisherman's creel less without making his story smaller.

The sum of all the angles of a worthy angler is equal to his circumference multiplied by his height in inches.

No mathematician has ever succeeded in extracting the square root of any fisherman, and it is now an open question if he has any.

GEO. MCALEER.

WORCESTER, Mass.

Quail Shooting in Cuba.

HAVANA, Nov. 6.—*Editor Forest and Stream:* Agreeable to the promise made you in my last letter, I proceed to give you some of my experience afield in this other planet so near to your own that the late little unpleasantness was sure to come, in view of the natural expansion of human populations and their material interests.

Luckily, the expansive wave from the active north has not to clash with powerful counter waves of various national interest, as must occur in the virgin African continent, and the local population of this island is not sufficiently numerous to maintain for long their unprogressive habits and customs, which must ere long be overwhelmed by the new civilization that is beginning to overflow upon it, and among the new comers there will be some that may be interested to know something about opportunities for the use of gun and dog here.

Well, from Nov. 1 abundance of quail are to be found in our fields sufficiently grown for shooting, and snipe begin to come to us about the same date.

November here, I got out my shooting traps, and my alarm clock announcing to me 5 o'clock A. M., I made ready for the 6 o'clock train for a half hour's ride out of the city in exploration of fields well known to me in other seasons, the uplands, interspersed with frequent sloughs, swamps and lagoons, where formerly, in high rubber boots and up to my knees in quagmire and soft mud, I had often made good bags of snipe; but now, alas! judge you of my surprise to find even the lagoons as dry as the hillsides, and I wandered in vain, seeking for soft places.

One luckless snipe alone, occupied in the same enterprise, I met with, and asked him to tarry and condole with me this dearth of feeding grounds for snipe near to us. The quail, on the contrary, were at home to us (me and my dog, and Sancho Panza, my biped retriever). We reached the field, and Dash located the first covey about 7 o'clock. It had been raining during the night, the grass and bushes were wet, the scent good and Dash did some good work in trailing from the next field. They flushed a little wild, but I scored a right and left as my first salutation of the new season, and I followed up the direction they took, and after looking over several fields finally struck a trail on a hillside where the grass was thin. The birds were running. Dash persisted on the trail, and at last came to a stand. I flushed the bird quite under my nose, and, being somewhat flurried, shot wild, but feeling chagrined, sent after him from the left barrel—with negative results, however. The bird continued its flight until out of sight, seemingly laughing in scorn at my lack of skill, and in fact Dash appeared to participate in the bird's disdain. But the incident indicated that we had found the field where the covey had got down, and soon Dash found another trail, and after following it some distance the bird flushed and tumbled to my right barrel, to the very evident satisfaction of the dog, and he manifested it in renewed activity. He soon struck another scent and followed it persistently at a steady walk until the bird flushed a little wild, and I sent after it my compliments in the contents of both barrels, which it did not apparently deign to notice in the least, but I felt so confident that its seeming indifference was only assumed that I followed it with my sight until it alighted, and followed it up. Having surely fixed upon the spot, I felt surprised at first that it did not rise; but Dash soon pointed the bird, in which the life was quite extinct.

It was now about 8:30 o'clock, and the rain of the night before was threatening to be renewed. A dark cloud was rapidly approaching upon the wind, and the thick foliage of a nearby grove of mango trees tendered us its shelter. Because of the threatening aspects of the morning I had prudently taken along an umbrella, which, together with the foliage, shielded me from a lengthy shower, and when this had passed, being shod in rubber boots, I again took to the fields; and when far from shelter it came on to rain again during an hour's time, and I under such shelter only as an umbrella can afford. From my waist down to my boots I had absorbed considerable moisture. By 10 o'clock the rain had ceased, and I took my course in the direction of a small village, where I expected to breakfast. En route we struck another covey of quail, and I scored two more birds and several misses, after which, while crossing a dried-up slough near to the village, I was startled by the well-known chaiche! chaiche! and a long beak rose from the canebrake, and was whirling away at break-neck speed, but not so fast but that an ounce of lead from a 12-bore Parker overtook him.

Reader, after such a tramp, under such circumstances, did you ever realize the real solid comfort of arriving at a country grocery to rest and exercise a voracious appetite upon such edibles as it is able to cook for you, completed by canned goods, beer or wine, according to taste? They are all good under such circumstances.

After resting till 1 P. M., the weather had cleared, though still cloudy, and I again took to the fields, and from that hour until 4 P. M. we were able to find three separate coveys, that furnished us with good sport, and seven more birds, making a bag of thirteen quail and one snipe for our day's sport.

By going further away from the city more birds can be found. Indeed I have brought in bags of forty and forty-five quail in other years. This year we shall have to do without snipe, as there are absolutely no feeding grounds for them; at least on this north coast of Cuba, although I presume there will be plenty of them in the great swamps of the south coast.

North American Field Trial Club.

The Derby.

WINDSOR, Ont., Nov. 7.—*Editor Forest and Stream:* The inaugural trials of this club opened with a Derby with an entry of nine starters and a large and enthusiastic crowd of sportsmen present. Unfortunately the weather was not favorable for good work, as the day opened with a cold, strong north wind blowing. However, the quality of work done by the puppies was of the highest order; with the exception of one or two dogs, they were fit to run in any company.

The winner, Bella Pointer, was a phenomenal puppy, being very accurate in her bird work, snappy and a high-headed, wide, free and independent ranger. This puppy will be heard of again.

The second winner, Duke of Vassar, was also a puppy of high quality, and did some excellent bird work; he is a good, high ranger, and only needs work to make him a dangerous competitor in any class. Both of these dogs are black and white.

The third winner, Dan Thiers, is a black, white and tan setter (one of the large kind), a slashing good goer; cuts out his fields well and carries a high head. His work was far above the average. Kate Thiers, a black, white and tan setter, a litter sister of Dan Thiers, is a very attractive bitch, having a good way of going; she is a persistent hunter, and only wants steadying up to make a good one.

Dash Trilby ran a good race, and only needs experience on birds to place her in a high class. Lady Vassar II., a puppy nine months old, made a good showing for her age, and bids fair to make a hot Derby entry for next year. Counter Mark, a litter brother of Dan and Kate Thiers, did not appear to be in form.

There were thirteen bevies of quail found here this day.

The order of running:

Marcon & Morton's Bella Pointer (Hal Pointer—Bell of Hessen) with J. Baugham's Duke of Vassar (Hal Pointer—King Bow's Vic).

J. B. Dale's Dan Thiers (Thiers—Dido III.) with W. E. Warner's Lady Vassar II. (Jack Pot—Lady Vassar).

R. Baugham's Dash Trilby (Dash Antonio—Forrest May) with G. M. Hendry's Dash II. (Dash Antonio—Forrest May).

Dr. Wm. Revell's Bob White (Jack Pot—Lady Vassar) with Marcon & Morton's Kate Thiers (Thiers—Dido III.),

J. B. Dale's Counter Mark (Thiers—Dido III.) with Lady Vassar II.

The winner of first prize gets a silver medal, presented by A. J. Green, Windsor.

The All-Age.

The All-Age was run on the 3d and 4th inst., with an entry of sixten starters. Although the weather was not favorable, a heavy rain falling on the 3d, and a strong north wind on the 4th, a large and enthusiastic lot of sportsmen and spectators was present. The work done by the dogs was of the highest order, and they proved themselves fit to run in any company. The winner, Duke of Vassar, is a snappy, high-headed, free, independent ranger, and will be heard from again. This is the same dog that won second in the Derby.

Sportsman, by Lock, was second; he is a handsome black, white and tan setter, did some excellent work and showed himself a bird finder; was accurate in his points and backing, and a good ranger.

For third place, Don, English setter, is a slashing good goer, cuts out his field well and carries his head high. His work was far above the average.

For fourth place Highland, English setter, is a fine, attractive dog, has an excellent way of going, and only requires a little work to make a high-class shooting dog.

The winner of the fifth place, Dan, is litter brother of Don, the winner of the third place; he ran a good race and has good ability as a bird finder and covers his ground well.

The sixth place was won by Miss Mischief, English setter; she is a wide ranger and fast mover, and only requires experience to make a grand shooting dog.

The winner of first prize gets a very handsome silver cup, presented by H. B. McKay, of Detroit, to be won three times by the same owner; also a rich piece of silver and cut glass, presented by Walker & Sons. The judge was John Davidson, of Monroe, Mich. The order of running was:

M. K. Cowan's setter dog Sportsman (Lock—Juno) with Victor Chauvin's setter dog Thorne (Dash Antonio—Maggie).

J. Baugham's pointer Duke of Vassar (Hal Pointer—King Bow's Vic) with Marcon & Morton's pointer bitch Bell Pointer (Hal Pointer—Bell of Hessen).

Marcon & Morton's setter bitch Dido III. (Cincinnatus—Daphne) with R. Baugham's setter bitch Miss Mischief (Dash Antonio—Patty B.).

Marcon & Morton's setter bitch Lady Rodfield (Rodfield—Mark's Nellie) with W. J. Camplau's setter dog Don (Toledo B.—Rose).

H. K. Cowan's setter dog Hurricane (Frank—Finglas' Fawn) with H. T. W. Ellis' setter bitch Maggie Murphy (Duke of Manitoba—Hickory Link).

W. C. Donaldson's setter bitch Nellie Brady (Dash Antonio—Nellie Breeze) with T. W. Brooks' dog Rex (Bob Anderson—————).

A. J. Green's ——— (Prince—Quail) with Victor Chauvin's setter dog Highland (Mingo, Jr.—Lonewalk).

George Mair's pointer dog Watford Boy (County Graphic—————) with Wm. J. Campeau's setter dog Don (Toledo B.—Rose).

R. M. MORTON.

Points and Flushes.

The famous black poodle champion Milo (A. 30101), owned by the Meadowmere Kennels, Southampton, L. I., died on Tuesday of last week. He was by Bob-Sylvia, and was bred by M. C. Lepage, Paris, France. He was whelped Feb. 11, 1888, so that he had reached an age which was old, as the ages of dogs are measured. He had a remarkably successful bench career.

Yachting.

THE daily papers on both sides of the ocean are each week nominating new challengers for the America Cup, but thus far all those mentioned have declined the honor thus thrust upon them. It seems probable that there will be no race in 1900, but that Sir Thomas Lipton will return in 1901.

THE Yacht Racing Association of Long Island Sound has taken two important steps at its recent meeting, in returning to the old Seawanhaka rule, and in finally abolishing time allowance within the classes. For the past year the Association has been nominally committed to the girth rule, adopted in October, 1898, by the Y. R. A. of N. A. While the old Seawanhaka rule was retained by the Sound Y. R. A. for the classes below 36ft., the girth rule was adopted for the 36ft. and all larger classes. The largest club in the Association, the Seawanhaka Corinthian, refused to acept the girth rule, and has sailed all of its races this season under the old rule; while the Larchmont Y. C., not a member of the Association, but an important factor in the Sound racing, has also refused to adopt the girth rule. This being the case, there has been practically no racing under the new rule and it has been a mere dead letter. The Atlantic Y. C., not a member of the Association, but now the only racing club of any size below Hell Gate, has tried the girth rule through the season, but also abandoned it. As most of the yachts in the Sound clubs are under 36ft., there has been no opportunity to test the rule in any way.

It cannot be said that the girth rule has had a fair test about New York, or that it has been rejected on account of proved defects; no yachts have been built under it and there has been merely a pretext at racing a few old boats. At the same time it is quite plain that the rule can never be adopted about New York or Boston.

When the rule was up for discussion before the Y. R. A. of N. A., two arguments were made for it, that it had worked well in actual practice in Great Britain, and that its adoption here would be a great step toward the union of yachting interests of the two great yachting nations, and would lead to the ultimate adoption of one better rule by both if this one proved unsuitable. We urged at the time that the test of the rule in Great Britain was by no means thorough and conclusive, and failed to prove in the face of certain obvious defects, that the rule was adapted to American yachting. That this view was correct is borne out by the result on the Great Lakes, where a dozen yachts were built under the girth rule for the 35ft. class, the winner being a shoal draft skimming dish. While in our opinion it is still an open question whether this type, as represented so well by Genesee, is superior to the English keel type, as represented by Beaver, under all-round conditions; the fact is incontestable that the rule permits the building of a type never contemplated in the most remote degree by its framers, and which they would not for a moment admit. The success of Genesee proves that the British designers, in framing the rule in 1894, failed to recognize one of its most potent possibilities; at least in the hands of American designers.

It has already been proved that the measurement of girth is not, as the British designers intended it should be, a strong inducement to fill out the section to a point that would be appreciable in added accommodation as compared with the fin type. Further than this, Genesee proves the additional point we made a year ago against the rule, that while the girth measurement as applied to the keel types does not induce a man to improve his model, when it is applied to the shoal centerboard types it offers strong inducements to cut down the depth of body and to make a yacht of limited headroom and easily capsizable.

The plea of uniformity in measurement on the part of England and America was plausible and inviting enough, and under the circumstances it was worth while to take some risk to profit by a peculiarly favorable opportunity for bringing together the British Y. R. A. and the American clubs. The one weak point was in the power of the young Union to induce the American clubs to accept the girth rule after the Union had formally adopted it as a law. The Sound Y. R. A., which is the parent of the Y. R. U. of N. A., went as far as it could in at once adopting the new rule and in urging its use upon its component clubs; but with small result. A year's trial has shown the impossibility of forcing the adoption of the rule about New York; while Boston from the first has declined even to attempt it. Under these circumstances it was useless to continue in a nominal adherence to the rule.

As far as the Lakes are concerned, it is plain that they were very much better off with the old proviso limiting the coefficient of midship section than under the girth rule; but having adopted the latter and built a number of yachts under it, they cannot now afford to change, unless for something very much better than either. The fact of the matter is that American yachting is no nearer to the much-needed new rule of measurement than it was a year ago, or two years ago.

IT would be hard to say how many years have elapsed since the FOREST AND STREAM began its attack upon the twin evils of time allowance and slovenly methods of starting; advocating, at a time when all such innovations were most unpopular, the adoption of the English methods of class racing by yachts of uniform measurement; and timing the start of a race from the gun instead of allowing ten to fifteen minutes' interval during which each yacht was timed separately. It is most gratifying to find that to-day both of these important principles are generally recognized throughout the United States, so much so as to be considered as American institutions. The Y. R. A. of Massachusetts some time ago gave a quiet and decent burial to time allowance, and now the Sound Y. R. A. has followed its example, to the lasting good of yacht racing.

THE knockabout idea, one of the best introduced in recent years, has been the victim of all sorts of perversions and misconceptions, but none worse than that of the Sound Y. R. A. of last year in establishing a so-called knockabout class with an allowance of 1,000 sq. ft. of sail for 25ft. l.w.l. It was evident when the class was established that the resulting boats could be but racing machines in disguise, and in no sense knockabouts. There is nothing surprising in the fact that after a fair trial the class has proved a failure and has been abandoned.

Columbia.

NOTHING positive is as yet known of the future movements of Columbia, and the New York Herald, in an article which we herewith reprint, states that the plan of sending her abroad has been abandoned. The Herald says:

At the finish of the last race between the yachts Columbia and Shamrock, just at the moment when scores of steam whistles and thousands of hearty cheers were telling the story of the home boat's successful defense of the Cup, both Mr. Iselin and Capt. "Nat" Herreshoff made significant remarks.

Mr. Iselin crossed Columbia's quarter-deck to where Mr. Herreshoff was standing, and shaking the designer's hand heartily congratulated him upon the result of the match.

Then Mr. Iselin, looking earnestly into the face of the designer, said deliberately:

"Mr. Herreshoff, this is my last America Cup race."

Capt. "Nat" returned Mr. Iselin's earnest gaze and replied in his quiet way:

"And it is also my last, Mr. Iselin."

From 1893 to 1899 Mr. Iselin and Mr. Herreshoff have been associated in the defense of the old trophy which Sir Thomas Lipton wanted to "lift" so badly. First it was with Vigilant, in 1893; next with Defender, in 1895, and then Columbia. All these winning boats were designed by Capt. "Nat" Herreshoff, and Mr. Iselin was the managing owner of each. This record needs no comment.

It required nearly a year to build Vigilant and get her into racing shape. Defender took a similar period, and it was about fourteen months from the time that Columbia's model was decided upon to the last of her races with Shamrock. The strain on both the designer and the managing owner, particularly in the late match, was so great their intimate friends may not now be surprised to hear that they have sailed the last of their cup matches.

Whether the decision made by Mr. Herreshoff means that he will not design another Cup defender has not and possibly may not be easily ascertained, as he is a man of very few words and keeps his own counsel; and it is not at all probable that Mr. Iselin will talk of his future plans. But there the case stands. The remarks quoted were made as given, and have been since repeated by those who heard them.

Should these gentlemen not change their minds the New York Y. C. will find it difficult to replace them in the event of another international match.

Unless Com. J. Pierpont Morgan and Mr. C. Oliver Iselin change their minds the successful Cup defender Columbia will not be sent abroad this winter or next spring.

It may have been the intention of the owners of Columbia in the early summer to give her a sea rig during the winter and send her to the Mediterranean, but that decision, if it were every fully reached, has been reconsidered, and the big cutter will remain on this side of the Atlantic.

Columbia is now dismantled and lies at anchor off Hawkins' yard, City Island, where she will be hauled out in a short time alongside of Defender, there to remain until needed. Every precaution will be taken to protect Columbia from the weather, and she will be housed over, and the curious who might visit City Island for the sole purpose of studying her model may save themselves the trouble of the journey, as the new boat will be hidden from view immediately after she is taken from the water.

The mast of Columbia was removed several days ago, and with the other spars was sent ashore, where all will be looked after by Mr. Hawkins. The sails, running rigging and movable deck articles have been stored in one of the many buildings on Mr. Iselin's grounds, at New Rochelle, that they may be under observation at all times.

Mr. and Mrs. Iselin will go to Europe early in December, and may remain away all winter.

Veritas.

THE keel sloop Veritas was designed in 1897 for James G. Averell, Esq., of Rochester, N. Y., by W. P. Stephens and built by the Spalding St. Lawrence Boat Co., at Ogdensburgh. She was designed for the then existing 22ft. class of the Lake Y. R. A., the measurement being by Seawanhaka rule, a total of four persons being allowed on board, but the waterline being measured without the crew. The order was for a cruising yacht, capable of making the circuit of the lake and with room for three persons, at the same time to be fast enough for the regular class racing. The S section was adopted in preference to the fin-keel as giving more depth of body and foot room and an abler type of boat than any of the fin-keels then in the class, such as Koko. The design is interesting mainly as a study in the employment of very full level lines as a means to the saving of measured waterline. At that time the fastest yachts of the same sail area were of the 25ft. special class, Smuggler, Nameless, and the fin-keels El Chico and Nemadjy, all carrying 625 sq. ft. of sail on a water line of 25ft. and a draft of over 6ft. It was determined to try the same area with 6ft. less waterline and over 1ft. less draft. The dimensions of Veritas are:

Length—		
Over all	30ft.	1 in.
L.W.L.	19ft.	3 in.
Overhang—		
Bow	4ft.	10 in.
Stern	6ft.	
Beam—		
Extreme	8ft.	3 in.
L.W.L.	7ft.	6½in.
Draft	5ft.	
Freeboard—		
Bow	2ft.	7 in.
Least	1ft.	9 in.
Counter	2ft.	1½in.
Displacement, long tons	3.52	
Ballast, lead keel, long tons	1.75	
Displacement per in. of immersion, lbs.	554	
Midship Section—		
Area	12.48 sq. ft.	
Coefficient	.33 1-3 per cent.	
From Station O	10.48 sq. ft.	
Lateral Plane—		
Area hull	56.41 sq. ft.	
Area rudder	7.34 sq. ft.	
Area total	63.75 sq. ft.	
Coefficient, without rudder	.58 sq. ft.	
C. L. R. from Station O, with rudder	11.32 ft.	
L.W.L. Plane—		
Area	106.48 sq. ft.	
Coefficient	.73 sq. ft.	

All measurements are for fresh water.

The yacht has proved very satisfactory in three seasons' use, having cruised from end to end of the lake, carrying a party of three young Corinthians with as much comfort as can be expected in so small a craft. She has also sailed a good deal in the home races of the Rochester Y. C. at Charlotte and in the L. Y. R. A. races at the different lake ports, and has won a number of prizes. The sail plan and details of construction will be given next week.

A well-attended meeting of the Yacht Racing Association of Massachusetts was held on Nov. 2 at Young's Hotel. The meeting, which was a special one, was called for the purpose of acting upon amendments to the by-laws, racing rules and limitations of cabin yachts.

The proposed amendments, aiming to alter the sail area of 21 and 25ft. cabin yachts, to amend Racing Rule XI. by adding new section to read, "In the 21ft. cabin class working sails only shall be allowed," to amend Racing Rule XXVI., Section 3, relative to protest by adding "or has altered or added to her sails so as to increase her sail area," and to amend by-laws, Article XIII., meetings, Section 2, by substituting "two-thirds of the," in place of the word "five."

All the proposed amendments, with the exception of the last two, were voted down; the one relating to sail alterations passing, and that of meetings the words "two-thirds" were changed to "a majority."—Boston Post.

An Inland View of Yacht Racing.

A READER of the Mail and Breeze writes us that he is deeply interested in the yacht race which they have been trying to sail for the last week over near New York, but that he is bothered by the nautical terms and wants some explanations. He says he sees by the papers that when the yachts got ready to start the weather was full of "flukes." He seems to be bothered with this expression. What is a fluke, and how did they happen to get in the weather? He also remarks that the account says that the "Columbia's clothes stood perpendicular to the head and did not sheet home to the gaff." He desires to know what clothes the reporter is talking about, and what he means by sheeting the gaff. "Furthermore," says the inquirer, "I see that the Columbia turned around on the Shamrock's beam and then jibed over. Then the Shamrock jibed a spell, and afterward tacked and eased off her sheets. What were they jibing each other for? Were these the same kind of jibes Shakespeare speaks of in 'Hamlet'? Then the accounts goes on to say that the Columbia 'tacked' on the Shamrock's beam and broke out her balloon jib topsail. What did the Columbia tack on the beam of the Shamrock? If she was near enough to tack anything on the beam, why didn't she nail it on while she was about it and not monkey with tacks? If she wanted to put anything onto Shamrock, she should have put it on to stay, as it seems to me. A little further on the account goes on to say that both yachts began breaking tacks. What did they want to break tacks for? What the American people want to know is, Why didn't they

SOUTHERN YACHT CLUB.

sail, and not fool around breaking tacks? Of what interest is it to the people of the great and bully West to hear about breaking tacks? It seems to me to be mighty small business for the representatives of two great nations to go to breaking tacks at a time when we want to know who can get there first. Some information on this subject will be appreciated."

This paper is no expert on maritime matters and never claimed to be. We have tried to get some comfort and information out of Webster for the benefit of ourselves and our inquirer, but the information isn't as satisfactory as it might be.

To begin with the first question in regard to the "flukes" in the weather, Mr. Webster says that a fluke is a flat, trematoid worm, with a lanceolet body and two suckers. If Webster is right about this and the weather was full of flukes, we gather that it was full of worms and suckers. We have no doubt there were plenty of suckers in the crowd, but weather that is full of worms is a new variety, and we thought we had seen about every variety of weather out here in Kansas that ever came down the pike. Webster also defines a fluke as one of the lobes of a whale's tail and also as an instrument for cleaning out holes. If the reader can get any comfort out of these definitions he can do better than we can.

Speaking of "jibing," Webster is more satisfactory. He says to jibe is to change the ship's course or shift the boom. Out here in Kansas we are not much up on jibes, but we know a few things about booms, and how to shift 'em. We started to boom out here and afterward shifted it over onto the fellows in the East, who put up their money in boom additions. Many of them were never able to shift it back.

Webster says "tack" means to change the course of a vessel and "beam" is one of the strong timbers placed across a vessel to support the sides. There are your definitions. If you can figure anything out of them you are welcome to do it. How the Columbia could turn on the Shamrock's beam without getting on top we don't know, neither do we know why, when Columbia had the Shamrock under it didn't keep it there. Webster gives us no light on the subject of "breaking tacks." Why they wanted to "break tacks" we can't say, but suppose there was nothing else on hand at that particular time and they wanted to keep the men busy. The account also says that both of the yachts "luffed" several times. Mr. Webster says that "luff" means to sail close to the wind. Why they would want to sail anywhere else than close to the wind we are unable to say. One would naturally think that a couple of vessels that go entirely by wind would want to sail around somewhere in the immediate vicinity of the wind, and that the smart thing to do would have been to get up next to it as early in the game as possible.

The descriptions given by the press reporters of this attempted yacht race are not satisfactory to the great body of the American people, who would not know a yacht from a canvas-covered ham. We are interested in hearing that the American yacht beat the daylights out of the yacht owned by the British nabob, and we want the story told in a way that we can understand.—Topeka Mail and Breeze.

Columbia's Crew.

STONINGTON, Me., Nov. 4.—Deer Isle to-night gave those of her sailor sons who defended the America Cup against Sir Thomas Lipton's boat and crew a mother's welcome home, for the islanders are justly proud of the husky lads who manned so well the fleetest yacht ever built to defend the blue ribbon of the sea.

The last sixteen of the thirty-eight members of the crew arrived this morning. The northeast wind and driving rainstorm had knocked the plans of the townspeople for their welcome all askew, and the plans for a parade of the crew, assisted by the school children and the sailors from a revenue cutter, were abandoned.

A band of twenty-five pieces had been brought from Belfast to play for the street parade and also to give an open air concert, and a band stand had been decorated with spruce and fir boughs and red, white and blue bunting. The rain drenched these patriotic fabrics and the wind spoiled them as they hung limp and bedraggled. Up the street an arch was built of evergreen, decked with bunting, and this also suffered from the elements.

To add to the discouraging outlook, Capt. F. P. Weed, who selected the crew for Mr. Iselin, was called yesterday to the upper end of the island, where a relative lies dangerously ill, and could not be here to help welcome his boys.

When the rain ceased the band gave a concert, after which there was a reception in the opera house. Here a reception committee, consisting of ex-Senator E. P. Spofford, W. B. Thurlow, S. B. Thurlow, Harry Gray, P. G. Merrill, Joseph P. Eaton, S. W. Barbour and George Beck, welcomed the Columbia's sailormen. A feature of the reception was the presentation to each man of the crew of an emerald and gold badge in the form of the burgee signal in the Iselin colors, red and black, and on back of each was engraved "Columbia, 1899, from Mrs. Oliver Iselin." These beautiful souvenirs were presented to the men by ex-Senator Spofford in a felicitous speech. A speech was also made by Alexander B. Eaton, Rockland.

After this came dancing, and the men of the Columbia's crew stepped as lightly as they ever stepped upon Columbia's deck when getting a sail up in stops. They wore their sailor clothes, with their blue sweaters that bore the word "Columbia" across the chest.

The dance was over by midnight, for Deer Islanders are respectful of the Sabbath.

The names of the crew with the posts they occcupied on the Columbia, follow:

William D. Scott, second mate; Rollins B. Staples, quartermaster; Charles H. Scott, quartermaster; William Haskell, quartermaster; Roswell Fifield, quartermaster; Everett J. Thompson, No. 1 masthead man; Samuel P. Bray, No. 1 bowsprit man; John E. Gross, starboard masthead runner; John T. Marshall, lazarette; Theodore Thompson, sail locker; Lafayette Thompson, starboard staysail sheet; Warren Bray, starboard jib topsail sheet; Arthur Young, assistant on topmast backstay; Cyrus Thompson, port masthead runner; Daniel Hall, No. 1 capstan man; William Young, second on starboard runner; Charles F. Gray, on spinaker lift; Edward T. Carman, second masthead man; Ernest Haskell, spinaker; Leslie W. Gray, topmast backstay; Montford Haskell, bowsprit; Alfred Pettee, port staysail sheet; Charles Barter, mess; Herbert Bray, port jib topsail sheet; Florestan McAuley, starboard jib sheet; Charles Bray, port jib sheet; George Stinson, bowsprit; Philip Haskell, mainboom port lift; Edward Greenlaw, mainboom starboard lift; John F. Eaton, bowsprit; William Eaton, bowsprit; Nelson Thompson, starboard jib sheet tackle; Augustus Thompson, topmast backstay; Nathan Law, halyard man; Edward Wood, capstan man; John Billings, spinaker sheet; Jason Gross, port forestaysail sheet tackle; Lyman Gray, backstay.—Boston Globe.

The Quincy Y. C. Challenge Cup.

THE Quincy challenge cup will absorb a great deal of the interest in local yachting next season. Already one challenge has been received from A. H. Higginson on behalf of the Manchester Y. C., and it has been rumored that another one is soon to come.

Mr. Higginson will undoubtedly make a strong bid for the cup. He is going to have a "trial horse" for his boat, and will spend the last three weeks before the cup races in the waters of Hull Bay, where he will be on the scene of the struggle and where his boat can be better tried out for her work than in any other place.

He talks quite freely of his coming challenger, and makes no secret of her proposed lines. The new boat is to be an improvement over last year's Hostess. She is to be a little more beamy, more powerful and quite a little longer on top. Mr. Higginson said in speaking of her: "Imagine a boat of extremely light construction, great beam, great power, very long and quite wide at the ends, and you have her."

This improvement over Hostess is all right, but what is Mr. Faxon going to do all this time? If there are going to be any improvements over last year's defender, it is quite likely that he will be in on the figuring. He will also have the benefit of Hostess for a "trial horse," and is in a better position to improve over her than any one else.

There is no doubt that the races for the cup will be close and exciting, but it will be very hard for any one to take that cup away from Quincy. If there are any tide rips around that bay which Mr. Faxon does not know they have been introduced very recently. Consider again that he is one of the finest small-boat skippers in this country, and figure the chances of "lifting" the trophy.

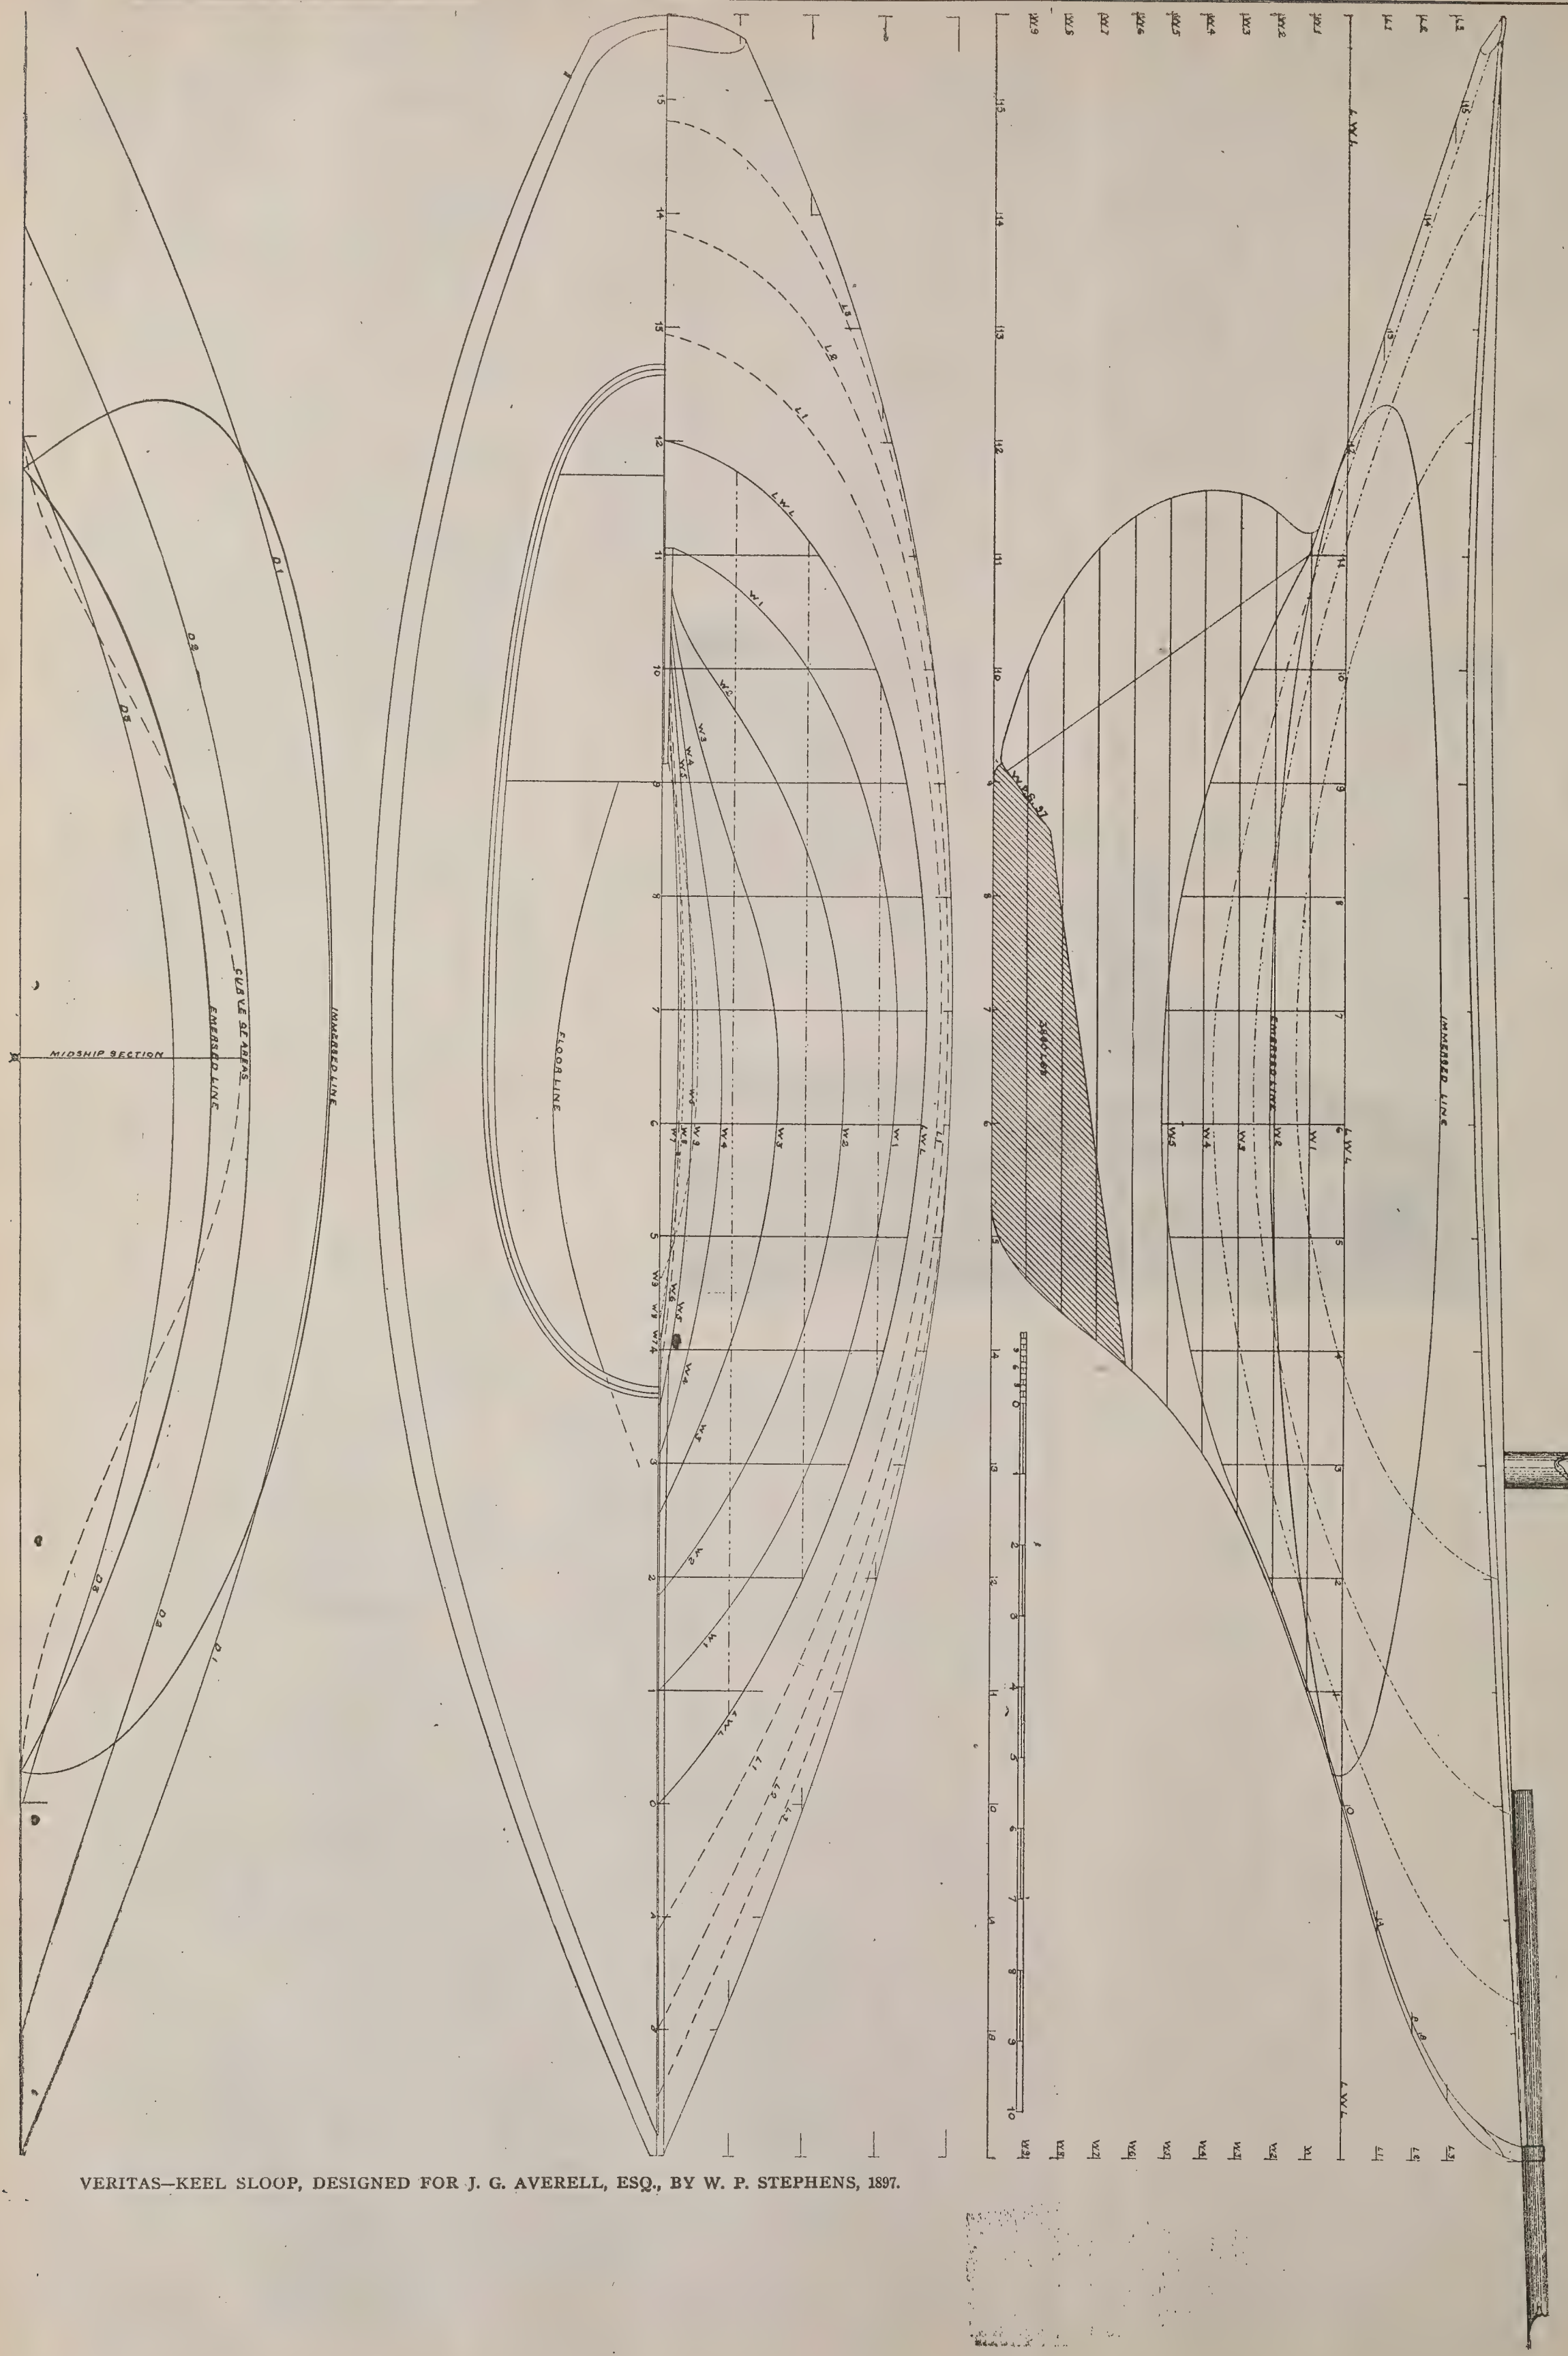
Of course he has not stated positively that he would build a defender, but when the time comes it is safe to say that he and Mr. Arthur Keith will get their heads together and talk improvements.—Boston Globe.

The Lake Yacht Racing Association.

THE annual meeting of the Lake Y. R. A. was held in Rochester on Oct. 26, the following delegates being present: President Alfred G. Wright, of Rochester; Secretary Frank M. Gray, of Toronto; T. B. Pritchard, J. E. Burroughs, Rochester Y. C.; George H. Gooderham, G. T. McMurrich, J. S. MacMurray, Royal Canadian Y. C.; H. H. Thomas, Queen City Y. C.; J. H. Fearnside, Royal Hamilton Y. C.; H. H. Gildersleeve, Kingston Y. C.

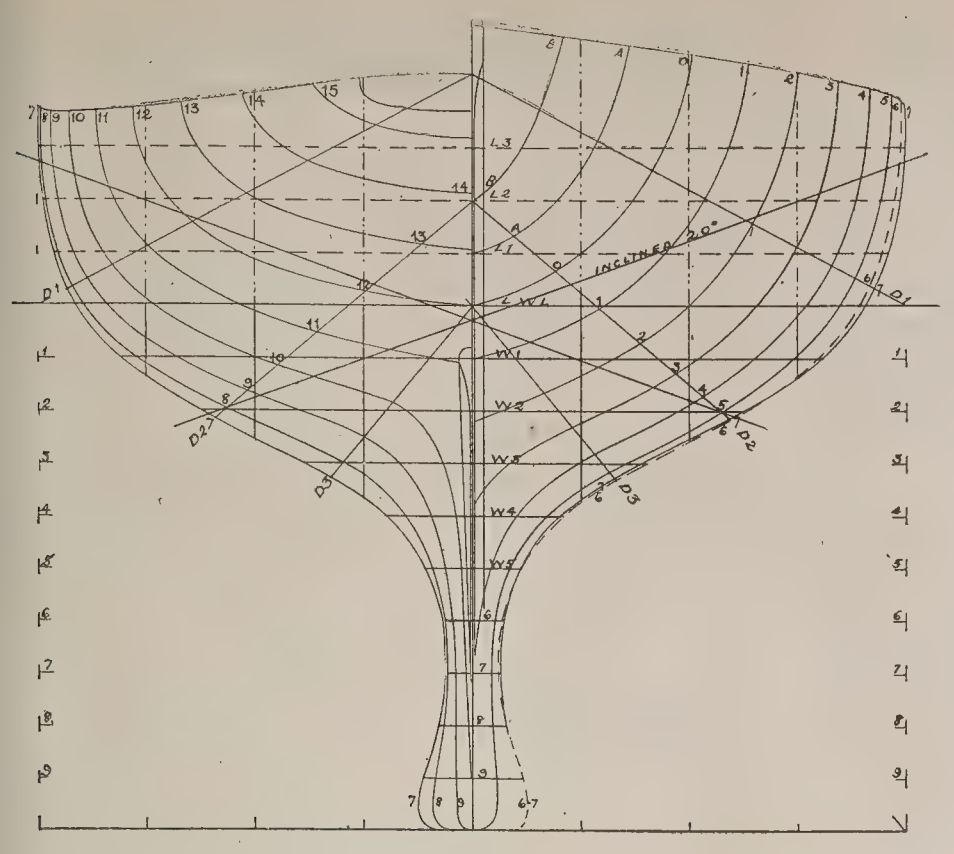
The only amendments to the rules related to the knockabout class, the following words being added to Rule 3, Section 2, "except in the case of the knockabout class"; thus allowing the yachts in this class to be measured without crew on board. It was also provided that the limit of sail for this class should be 650 square feet. The secretary was instructed to inform the Association's delegate to the Y. R. A. of N. A. that the Association was opposed to any present change in the girth rule until it had been more fully tried. The following officers were elected: Pres., Com. Richardson, Buffalo Y. C.; Vice-Pres., Com. R. A. Lucas, Royal Hamilton Y. C.; Sec'y-Treas., F. J. Campbell, Royal Canadian Y. C.; Members of the Council, John T. Mott, Oswego Y. C.; T. B. Pritchard, Rochester Y. C.; Com. Black, Kingston Y. C.; Owain Martin, Queen City Y. C. Æmilius Jarvis was chosen as delegate to the Yacht Racing Union of North America, and J. E. Burroughs, J. Frank Monck and F. J. Campbell were chosen as delegates to the Yacht Racing Union of the Great Lakes.

After selecting Buffalo as the place for the 1900 meeting, the meeting adjourned.

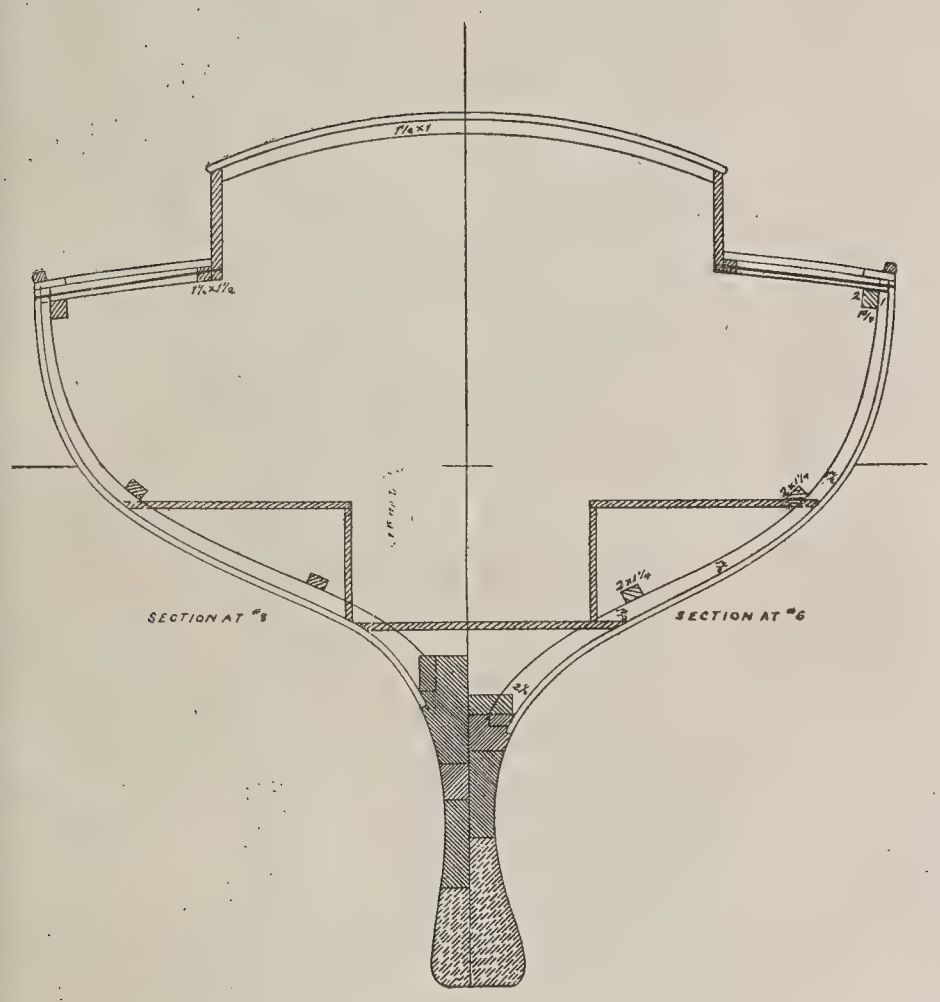


In the evening the visitors were entertained at dinner at the Livingston Hotel. The Association is now in a very prosperous condition, one evidence being the absence of amendments and proposed changes at the meeting. As the result of wise management and good legislation in the past, there is at present very little need for changes.

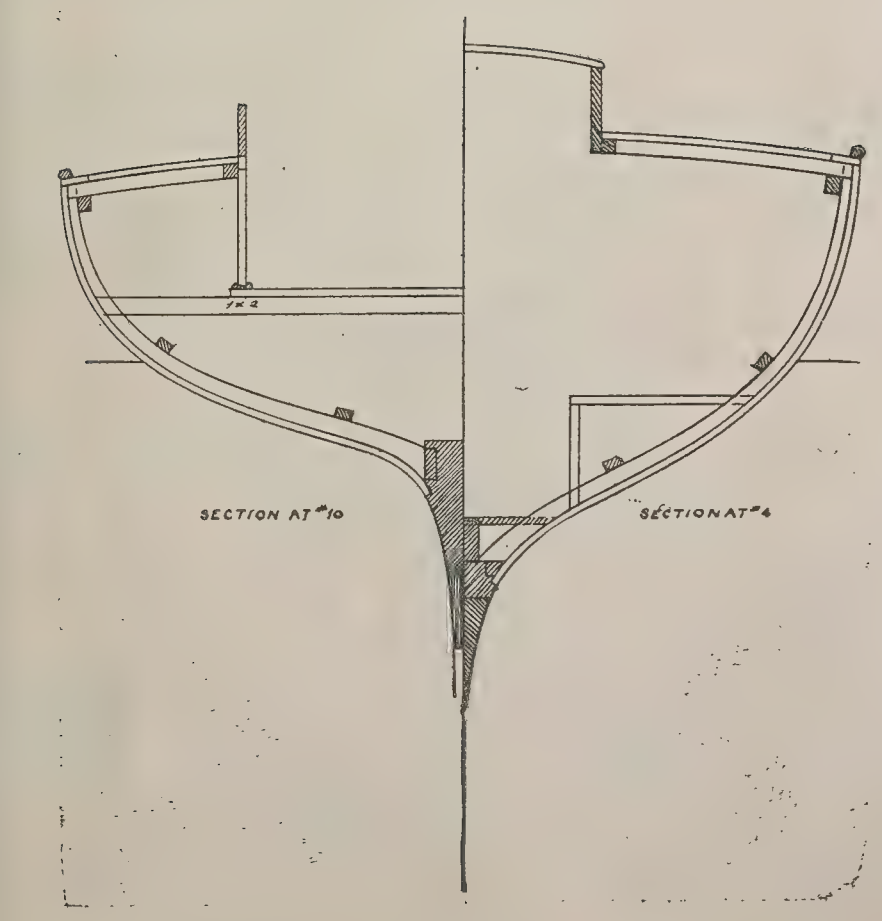
YACHTING NEWS NOTES.



FROM Boston, by way of New York, the Hudson River, the Erie Canal and the Great Lakes, 2,000 miles, is the trip just completed by Alderman Frank T. Fowler's sloop yacht Mirella, which entered Chicago River just at daybreak during the fierce northeaster of Nov. 1. She was in charge of Capt. Walter B. Howes, and had John King for a crew. The little craft, which measures but 31ft. on the waterline, had made the long journey in eighty-one days, part of which time she was windbound on the Lakes, and part of which was spent in unshipping the rigging at Albany to allow the passage of the Erie Canal, and in shipping again at Buffalo. Alderman Fowler bought Mirella two years ago, when he was summering in Boston. She was then one year old. After using her this summer he decided to bring her to Chicago and show yachtsmen here a thing or two about sailing.—New York Times.



The Field office, London, will shortly issue a new book on yachting by Mr. Dixon Kemp, a dictionary of general information.



At Lawley's the 100ft. composite schooner designed by C. H. Crane for G. L. Day, of New York, is fast nearing completion. She will be one of the finest cruising schooners in this country—a fine big-bodied boat, with ample accommodation below. Hull and deck are planked and caulked, and her hull is partly painted. The workmen are now busy putting in her fittings below decks. She will have two decks below. The upper of these, just below the main deck, will be laid out for staterooms, saloon, galley, pantry, etc., while below will be places for storing sails, clothing and chains, and a machine for making ice. The bulkheads and partitions will be of pine, painted white, and will be trimmed in butternut, mahogany, maple and black walnut. The interior arrangement is excellent, places being provided for every modern yachting convenience. There are plenty of staterooms, a large saloon taking in the full

beam of the boat, a fine galley, a pantry and plenty of room for the crew. In the same shed the keel is laid for a 25ft. knockabout. A similar knockabout has already been completed and is now in the boat shop. Another from the same lines is to be built, also a 21ft. knockabout. The torpedo boats are taking shape, but the work on them is necessarily slow. Boilers are now being put together, preparatory to being set up.—Boston Globe.

T. R. Webber, who designed and built the successful Surprise and Hussar for James D. Baird, is at work on a new yacht for the same owner, a centerboard boat of 51ft. r.m., about 44ft. l.w.l., 70ft. over all, and similar to the older boats in model.

The schooner yacht Chiquita went ashore off Miller's, Ind., on Nov. 2, and the body of D. S. Way, of Charlevoix, Mich., her owner was found lashed in the rigging. Those known to be dead besides Mr. Way are his wife and Rollin Frazine, of Charlevoix. The yacht was bound to Florida by way of Chicago, the canal, the rivers and the Gulf of Mexico. She left Charlevoix early last week, put into Holland and sailed from there Saturday for Chicago. She was caught by the gale on Wednesday, was sighted in distress off Whiting, and the alarm was given to the life-saving crew at South Chicago. In the night the yacht must have been driven ashore, for at daybreak on Nov. 3 the wreck was discovered three miles from the mouth of the Grand Calumet. Search is being made for the bodies of Mrs. Way and Franzine.—New York Journal.

Supervisor-General Dumont, of the Steamboat Inspection Service, has received from Inspector Starbuck at New York the latter's decision in the case of R. B. Brooks, of the steamer Idlewild, one of the steamers charged by Capt. Evans with having violated the rules of the recent yacht race. The local inspectors revoked Capt. Brooks' license as master and pilot of steam vessels. Inspector Starbuck reverses the decision of the local inspectors, and says that after carefully examining the testimony in the case he is satisfied the local inspectors misunderstood the rules governing the races.

At Embree's yard, at Quincy Point, work has been started on a schooner of 35ft. waterline for J. L. and L. H. Sturtevant, owners of the 25-footer Redskin. Judging by the moulds which are now set up on the keel, the boat will be much like Golden Rod, built this summer at the same yard for George E. Bruce. She is very long over all, with a blunt bow, flat floor, easily rounded bilge, and straight topside. She is an enlargement of the Cartoon type, and has its characteristic features. The schooner is 65ft. over all, 35ft. waterline, and 16ft. beam. She will have a fin, a casting of about two tons, in which will play a centerboard with a drop of about 3ft. The centerboard will carry 4,800lbs. of lead. The draft with centerboard up will be about 5ft. The boat is to be strongly built, and have good accommodations under a cabin house. Embree has an order for a 55--footer from a New York man as good as placed, and is expecting plans and specifications any day. Golden Rod will come up to the yard the last of this week and be hauled out. During the winter she will be given a new fin with less depth, as the boat now draws too much water for the places her owner desires to visit. The boat has been gotten into better shape than in her first Eastern race early in September, and is now said to be going fast and well. Hauled out at Embree's are the steam yacht Pilgrim and the sailing yachts Eleanor, Freyja, Countess, Eidelweiss, Posy, Tantrum, Medora and others.—Boston Globe.

Mr. R. T. Pritchett, the well-known marine artist, has just published a most interesting book, the result of his long voyages in foreign waters, added to his wide experience in Europe. The title is "Pen and Pencil Sketches of Shipping and Craft All Around the World"; rather a lengthy and comprehensive one, but the list of contents justifies it. The artist has caught with his pencil almost every sort of craft—Britannia and Vigilant, the Norwegian herring boat, the Nile dehabeah, the sampan, junk, koleh, the chasse-maree, the proa, and numerous others. Each is the subject of a spirited sketch with an excellent technical description. The book contains many illustrations, and is not only interesting to the yachting reader, but valuable as a reference in maritime matters. With the exception of the very small type, it is well made throughout. It is published by Edward Arnold, 37 Bedford street, Strand, London.

Rifle Range and Gallery.

Rifle at Armbruster's Greenville Park.

Jersey City, N. J., Nov. 7.—The seventh grand annual individual rifle championship match for 1899, at Armbruster's Greenville Park, Jersey City, was well patronized by some of the best of shooting talent. The event was open to all comers. Favorable weather prevailed. The conditions were 100 shots per man, 25-ring target, 1¾in. ring, distance 200yds., entrance $5. After deducting the expenses of the targets and suppers, the balance of the entrance money to be divided half winners and half losers.

Landlord Armbruster provided a good supper, and the winners feasted at the expense of the losers.

Mr. Michael Dorrler, the famous rifleman, established a new world's record, scoring 2246 points on the German ring target in the 1002-shot championship match. He also made the best 10-shot score—232—but no contestant was eligible under the rules to win two prizes, so it went to Mr. George Schlicht, who made 231. Six of the first eight, including the first three men, used Peters cartridges, which are loaded with King's Semi-Smokeless powder. The scores:

M Dorrler, Jersey City, N J	2246
F C Ross, Brooklyn, N Y	2208
Dr W G Hudson, New York city	2182
George Schlicht, Jersey City, N J	2170

Iroquois Rifle Club.

PITTSBURG, Pa., Nov. 7.—The twelfth annual tournament of the Iroquois Rifle Club began to-day. Each contestant fired 50 shots in 10 targets of 5 shots each on the reduced standard American targets. L. P. Ittel won the gold medal. His score of 471 is the highest made in a similar match in the club's history. The shooting in general this year was better than ever before. The scores:

L P Ittel	45	46	49	45	47	50	49	47	47	46—471
R R Phillips	47	45	45	43	43	49	43	45	45	50—455

H L Born	43	41	40	39	31	38	42	34	35	41—381

On the 8th inst. the all-comers' match will begin on the all-comers' targets, entries unlimited. The prizes are cash, ranging from $20 to $1. On the bullseye target only three shots are allowed, the best single shot to count.

Harry Sperling, although his first three targets were not up to the standard, shot very well.

On Friday Mr. L. P. Ittel, who took first place on the members' medal match, also took first pdize on the continuous match. Mr. R. F. Phillips took second on both. Shooting this year was an improvement over last year. O. L. Jacques did some very fine shooting. Mr. George Foerster, although not a crack shot, worked very hard for the financial end of the tourney. There were forty-four entries in the bullseye target event, O. L. Jacques taking first prize, which was $25 in gold, and Harry Sperling second prize, a fine silver plated revolver valued at $35. Scores in the continuous match:

L P Ittel	30	30	30—90	A G Andrews	28	26	20—74
R F Phillips	30	30	30—90	G Sperling	27	24	22—73

At the annual meeting of the Columbia Rifle Club, Rochester, N. Y., held Nov. 6, the following officers were elected for the ensuing year: President, C. H. McChesney; Vice-President, D. S. King; Secretary, E. S. Osborne; Treasurer, S. B. Williams; General Shooting Master, I. H. Andrews; Board of Directors, C. L. Gifford, G. F. Loder, A. A. Mosher, G. A. Bowman, C. H. McChesney, E. S. Osborne and S. B. Williams.

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 21-22.—Sioux City, Ia.—"Grand Interstate Handicap" live-bird tournament, open to the world, under auspices of Soo Gun Club. E. R. Chapman, Sec'y.

Nov. 22.—Ridgewood, N. J.—All-day shoot at live birds. H. Blauvelt, Manager.

Nov. 23-24.—Chatsworth, Ill.—Chatsworth Gun Club tournament.

Nov. 28-29.—Chicago, Ohio.—Deer Lick Gun Club's live-bird tournament.

Nov. 28-29.—Springfield, Ill.—Merchants Thanksgiving tournament, under auspices of the Illinois Gun Club. W. Colvin, Sec'y.

Nov. 30.—Newark, N. J.—Smith Brothers' grounds; 25 live birds, $10 entrance, and miss-and-outs.

Nov. 30.—Buffalo, N. Y.—Fourth annual Thanksgiving Day tournament of the Bison Gun Club. F. P. O'Leary, Prest.

Dec. 5-6.—Rahway, N. J.—Live-bird shoot of the Rahway Gun Club. Clarence Lambert, Mgr.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Dec. 16.—Batavia, N. Y.—E C cup contest for championship at targets, between Messrs. W. R. Crosby, holder, and Mr. Fred Gilbert, challenger.

Dec. 31-Jan. 1.—Milwaukee, Wis.—Amateur tournament of the Wisconsin Gun Club. P. Himmelstein, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

Feb. 13-17.—Hot Springs, Ark.—Third annual midwinter tournament; $1,000 added; 2-cent targets (Rose system) and live birds (high guns). Capt. A. R. Smith, Sec'y.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trapshooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Association's Grand American Handicap target tournament. Edward Banks, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Kansas City Star, concerning the inter-city contest, has this to say: "The Federation of Gun Clubs of Kansas City met at the Midland Hotel last night and repudiated the team selected by the committee appointed at a former meeting to shoot a rival team of Omaha wing shots, and a new committee, composed of Messrs. George Stockwell, Chris Gottlieb and F. N. Cockrill was appointed to name a new team and alternates. They selected the following regulars and alternates, and their action was promptly ratified: Regulars—J. B. Porter, R. K. Campbell, Geo. Stockwell, J. M. Curtice, Ed Hickman, Dave Elliott, C. Gottlieb, F. N. Cockrill and W. S. Allen. Alternates—J. W. Bramhall, Dr. Planck, A. E. Thomas, Nelson Jarrett, L. W. Scott, W. M. Howe, E. F. Swinney, R. P. Barse, C. E. Wright and F. J. Smith. A proposition to leave the individual members of the team selected open to challenge for their positions was protested by the committee on team. The team and alternates are requested to meet at Elliott's store on Wednesday evening to select a captain, and the committee on entertainment is requested to meet at the same place at the same time. The entertainment committee is composed of E. F. Swinney, C. C. Herman, J. W. Bramhall, J. B. Porter and A. H. Glassner."

Mr. Thos. Donley, of St. Thomas, Ont., writes us as follows: Thos. Donley's third annual tournament is to be held at St. Thomas, Dec. 5, 6, 7 and 8. Sixteen hundred dollars guaranteed and surplus money in all events will be added to the purses. This will be the biggest and best tournament ever held in Canada. Herewith is the programme of my shoot: First day, Tuesday, Dec. 5—Event No. 1, 10 targets, $1.20 entrance, $20 guaranteed; event No. 2, 15 targets, $1.80 entrance, $30 guaranteed; event No. 3, 20 targets, $2.40 entrance, $50 guaranteed; event No. 4, 10 targets, $1.20 entrance, $30 guaranteed; event No. 5, 15 targets, $1.80 entrance, $30 guaranteed; event No. 6, 20 targets, $2.40 entrance, $50 guaranteed; event No. 7, 10 targets, $1.20 entrance, $20 guaranteed; event No. 8, 15 targets, $1.50 entrance, $30 guaranteed. Second day, Wednesday, Dec 6—Event No. 1, 5 live birds, $3.75 entrance, $75 guaranteed; event No. 2, 7 live birds, $5.25 entrance, $100 guaranteed; event No. 3, 10 live birds, $7.50 entrance, $200 guaranteed. Third day, Thursday, Dec. 7—The same programme as on Tuesday, Dec. 5. Fourth day, Friday, Dec. 8—Twenty-five live birds, $20 entrance, $700 guaranteed, and surplus added as in all events, and also International trophy, valued at $250.

The programme of the Merchants' Thanksgiving tournament, to be given under the auspices of the Illinois Gun Club, Springfield, Ill., Nov. 28 and 29, providedes competitin at both targets and live birds. From the proceeds of the tournament the club will provide Thanksgiving dinners for inmates of the Home of the Friendless, the Old Ladies' Home and other Springfield charities. The grounds will be open at 9 o'clock. Competition is open to all amateur shooters. Guns and ammunition expressed to Mr. Geo. E. Day, the treasurer, will be delivered free on the grounds. The club announces over $300 in merchandise prizes, and the first contest for its $100 silver challenge trophy. There are seven events for the first day, of which No. 6 is a team shoot between the Garfield Gun Club, of Chicago, and the home club. Six events are on the programme of the second day. Of these the last event is a consolation shoot, open only to those who have not won a prize in the tournament higher than fourth. The programme mentions that any information can be obtained by addressing the president, Mr. H. M. Smith, Springfield, Ill.

Those who contemplate attending the tournament of the Soo Gun Club, Sioux City, Ia., should write to the secretary of the club, Mr. E. R. Chapman. It is fixed to take place on Nov. 21 and 22. There are three events on the first day's programme. No. 1 is at 7 live birds, $5. No. 2 is at 10 birds, $10 entrance, $20 added. No. 3 is at 15 birds, $15 entrance, $30 added. There are two live-bird events for the second day. No. 1 is at 7 live birds, $5. No. 2 is at 25 birds, $25 entrance, $50 added. The division of the money is as follows in the different events: Seven birds, two moneys; 10 birds, three moneys; 15 birds, four moneys, equal 25 per cent.; 25 birds, five moneys, each 20 per cent. Birds, 20 cents; targets, 2 cents. On each day there also will be six 15-target events, $1.50 entrance, handicap. Purses divided in target events, 35, 30, 20 and 15 per cent. In live-bird events the handicaps are from 25 to 33yds., and the handicap committee is Messrs. Fred Gilbert, Geo. R. Slocum, W. D. Townsend, J. W. Boyd and John Baldwin.

Mr. F. P. O'Leary, president of the Bison Gun Club, Buffalo, N. Y., writes us that on Nov. 30 the fourth annual Thanksgiving Day tournament of the Bison Gun Club, open to the world, will be held. A solid silver loving cup will be given to the winner in the 25-live-bird race. He adds: "This being our regular Thanksgiving Day tournament, we will have five events, 20 targets each, and one event, 25 live birds, $10 entrance, birds extra, handicap 27 to 32yds. To this the Bison Gun Club adds a handsome solid silver loving cup, which becomes the personal property of the winner. Targets 1 cent each, live birds 35 cents per pair. The programme will be mailed about Nov. 20. We now have assurance of at least twenty entries for the live-bird race."

Mr. Aaron Doty, one of the expert trap shots of America, has challenged Mr. J. A. R. Elliott to contest for the Republic cup at Lyndhurst, N. J., on Dec. 2, and Mr. Elliott has signified his willingness to meet the challenger. As an evidence of good faith a check for $50 is deposited with FOREST AND STREAM as a qualification of the challenger. Mr. Elliott's record is a most formidable one for this season, for in five matches he scored 487 kills out of 500 birds. On the other hand, Mr. Doty is one of the hardest propositions at the traps in the East. Mr. Elliott expects to attend Tom Donley's International the week afterward.

In a match between teams of the University of Pennsylvania and Prnceton University, at Fernwood, on Nov. 8, the former won by 8 targets. The conditions were: Teams of five men, 30 targets per man, unknown angles, thrown from three traps, the men shooting in two squads of four each and one squad of two, two men from each team making the squad. Baldwin and Singer did the best work for Pennsylvania and McMillan for the Princeton team. The scores were: University of Pennsylvania—Cooper 18, Carlisle 20, Parish 22, Baldwin 26, Singer 26; total 112. Princeton—McMillan 25, Carman 19, Elbert 17, Laughlin 23, Spalding 20; total 104.

If live birds were as cheap in the East as they are in the West, the trapshooters of the latter section would be able to engage in the sport much more extensively than at present. The Sioux City Gun Club has this to say as to prices: "Four thousand live birds will be required for the second annual fall live bird shoot of the Soo Gun Club, Nov. 21 and 22. The club is having the birds caught now for the shoot, paying from 50 cents to $1 per dozen for them. They come principally from South Dakota and Nebraska."

The target tournament of the Interstate Association, to be held at the new grounds, Interstate Park, on Long Island, in the week commencing June 11, is already engaging the attention of shooters. The famous West Virginia squad, which made such an excellent record last year, has entered and been booked as squad No. 1. Its members are as follows: Messrs. F. E. Mallory, S. T. Mallory, Dad Bower, I. F. Mallory and L. E. Mallory, Jr. Squad No. 2 will have to be active to get themselves booked in second place.

All matter intended for publication in this department should be addressed to Forest and Stream Publishing Co., and not to the editor of it, as he flops to Newton, N. C., for a month, there to take notes of dogs poking their noses over hill and vale in quest of the merry Bob White and the honors which come with successful competition; in other words, to attend the field trials where the swell dogs and fly birds afford competition.

Mr. T. H. Keller, the ubiquitous representative of the Peters Cartridge Co. in New York, is rapidly developing into an expert with the rifle. At the election day shoot at Armbruster's Greenville Park, Jersey City, N. J., he scored 1878 on the German ring target. This is not bad for one who has recently taken rifle shooting up, and shooting between busy hours.

Mr. Chas. Antoine, of the well-known firm of Von Lengerke & Antoine, of Chicago, departed for the great city by the lake front after a brief stay in New York. He complained that the exactions of business greatly interfered with his privileges as a shooter, his firm having so many orders to fill that there was no spare time for practice at the traps.

The Rahway Gun Club will hold a two-days live-bird shoot, Dec. 5 and 6. There will be three events each day. The birds will be 20 cents each. Visitors from New York can take the P. R. R. to Rahway; thence by trolley to the club grounds. Mr. Clarence Lambert (Pony) is manager and Mr. W. R. Hobart is to be the handicapper.

Mr. F. Meade, of Knoxville, Tenn., a famous trapshooter of that section, was in New York early this week en route to Europe, whither he sailed on the Oceanic on the 15th inst. The party consists of his wife, father and mother. They will spend the winter in Italy, previous to a tour through all Europe, and a visit to the Paris Exposition next year. Though Mr. Meade had thought he would forego any shooting this year, he took a hunt near his Knoxville home and bagged a number of quails.

The programme of the Deer Lick Gun Club, Chicago, O., has eight events for the first day, Nov. 28. Of these, four are at English sparrows—5, 7, 10 and 5 sparrows, the entrance being respectively $2.50, $3, $4 and $2. There are four events at pigeons, 5, 7, 10 and a miss-and-out, respectively $3, $3.50, $5 and $2 entrance. On the second day, there are twelve target events on the programme—180 targets all told—with a total entrance of $20. Mr. A. C. Griffin is the secretary-treasurer.

Feb. 13 to 17, inclusive, are the dates claimed for the third annual midwinter tournament, to be held at Hot Springs, Ark. The added money will be $1,000 and possibly more. Targets, 2 cents. The Rose system will govern target events. High guns will govern the pigeon competition. Capt. A. R. Smith is the secretary.

The contest for the special prize, a gun case, at the Brooklyn Gun Club's shoot last Saturday, developed a warm finish between Messrs. C. C. Beveridge and W. Hopkins, three ties at 25 targets being shot off before the winner was determined. There were 125 targets shot at all told.

Mr. C. C. Beveridge (Dominie) shakes the dust of New York city off his shoes for a few weeks, he taking a flight northward through New York State till the holiday season begins. His shooting eye seems to grow sharper and more deadly with the passing of the weeks.

We regret that an error occurred in our report of the Kentucky Gun Club tournament in respect to the ammunition used by Mr. Norvin T. Harris, of Lyndon, Ky. He used U. M. C. shells and Schultze powder. It was erroneously given as Leader shells and Du Pont powder.

We are much rejoiced to learn that Mr. Edward S. Johnson, of Atlantic City, N. J., has nearly recovered from the serious shooting accident of last September and is now able to shoot again, though whether or not with his former great skill is yet to be determined.

On Smith Brothers' grounds, Foundry and Ferry streets, Newark, N. J., there will be a live-bird shoot on Nov. 30, Thanksgiving Day. The main event will be at $25 live birds, $10 entrance, birds extra at 25 cents. Miss-and-outs and sweepstakes will be shot.

We are informed that the post holes are all dug and work begun on the great fence about Interstate Park, and that bids for the foundation work of the great casino are in, and under consideration. The work is being pushed energetically toward completion.

Mr. J. H. Cameron, of the Winchester Repeating Arms Co., was in New York last week looking calm and successful after an extended run through his vast sales territory in the North.

In a contest at 25 live birds, $25 a side, between Messrs. E. C. Burkhardt and McCarthy, on the grounds of the Bison Gun Club, Buffalo, Nov. 10, the former won. Score, 23 to 22.

Mr. J. J. Hallowell, of the U. M. C. Co., was of those who arrived in New York last week. He tarried but a short time before going to Philadelphia to make his parents a visit.

In the competition for the Arkansas championship, between Dr. A. U. Williams and Mr. C. E. DeLong, the challenger, at Hot Springs, Ark., the former won. Score 41 to 38. Date, Nov. 9.

In the contest for the November cup of the Crescent Athletic Club at Bay Ridge, Mr. Edward Banks, the scratch man, won on the very good score of 24 out of 25, on Nov. 11.

BERNARD WATERS.

Riverton Gun Club.

PHILADELPHIA, Nov. 10.—The first day's shoot of the Riverton Gun Club was not supported strongly in the way of entries. The events of the first day numbered three, as follows:

Six birds, $5 entrance, handicap:

J Hicks, 28	222222—6	R Welch, 29	221101—5
H Thomas, 29	202221—5	Y Dolan, 29	201222—5
H Bucknell, 29	122022—5		

Sixteen birds, $10 entrance, handicap rise; club members having bird allowance more in 1yd.:

Y Dolan, 29	2212121122111122—16
H Bucknell, 29	1121121202221112—15
H T Thomas, 29	2111122210121021—14
J C Hicks, 28	212122202222120 —14
R Welch, 29	00121221w

Twenty-six birds, $25 entrance, those handicapped 29 and 29yds. 1 extra bird:

H Thomas, 29	01112222222222222222222202—24
R Welch, 29	11211122022221212112111222—25
H Ducker, 28	11211111111211211102211001—23
H Bucknell, 29	01111110211*1111121212111—23
J Hicks, 28	00222221112222222222222202—23
Y Dolan, 29	11122022122211222112220002—22

To-day the Riverton 50-bird handicap, $50 entrance, will be held. Handsome cup and cash prizes will be awarded.

The 50-bird handicap, arranged to be shot on Nov. 11, was declared off for lack of entries.

Buffalo Audubon Gun Club.

BUFFALO, N. Y., Nov. 11.—Some very superior shooting marked the competition of the Buffalo Audubon Gun Club to-day. Donald Cameron, a visitor, scored 15 straight at targets and straight at live birds in the 5-bird event. Thus his record so far as he shot to-day was perfect.

Event No. 3 was the club badge shoot. E. C. Burkhardt won Class A badge and Jacobs won Class B. The scores:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	15	25	15	*	Targets:	15	15	25	15	*
Fannings	14	14	18	..	5	E W Smith	..	11	18	..	..

Bison Gun Club.

BUFFALO, N. Y., Nov. 10.—Good scores were a feature of to-day's shoot of the Bison Gun Club, and favorable weather added to the pleasure of those in attendance. In the afternoon Messrs. E. C. Burkhardt and McCarthy shot a match at live birds, the score being 23 to 22 in favor of the former. On Thursday of next week a match at 25 live birds, $25 a side, is arranged to take place between Messrs. McCarthy and O'Brian. The scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	15	15	15	20	25	25	Targets:	15	15	15	20	25	25
Cannon	5	13	9	14	21	17	E C B	12	12	15	..	..	20

McCarthy	7	6	12	..	21	16	333	..	..	..	19	16	16

Miss-and-out at live birds: McCarthy 5 out of 6, E. C. B. 8 out of 8, Foxie 8 out of 8, 333 2 out of 3, O'Brian 4 out 5, Stacey 6 out of 7.

Confabulations of the Cadi.—XX.

The Most Ancient and Honorable Guild.

ONE day was much the same as all other days in the life of the good Cadi. He arose in much the same way and at the same hour, sat down to his meals in the same position, made about the same number of motions in the same way with his knife and fork, arose from the table and walked thence with the same sturdy purpose meal after meal, day after day, to find the most comfortable seat in sunshine or shadow, according to the exigencies of the temperature. One meal being finished, he sat placidly till the next meal was announced by one of his heirs, or by the silvery voice of his spouse, his beloved wife patient Hopie Jane. Whether or not he had any companion to share his rest, he seemed to be calmly resigned to the inactivity imposed by his ill health, and as is commonly the case with invalids who are philosophical as to their mentality and pastoral as to their surroundings, his facial expression was one of benign vacuousness, giving no index whatever of the maelstrom of mentality whirling behind it.

While sitting on a log, a fence, a stump or a chair, though his exterior was reposeful and resigned in appearance, his thoughts might be rapidly skimming through the stars, or dwelling speculatively on what Hopie Jane might have for the next meal or on some new hocus pocus by which he might obtain another barrel of cider on credit; for the most delicately adjusted minds cannot wholly ignore the affinity of abstract contemplation for pork and beans, with some kind of liquid wherewith to float them. If the cares of contemplation betimes weighed too heavily upon the Cadi he jabbed a dose of morphine into his biceps and a new and more beautiful world thereafter soon dawned to him.

He and Moke had a friendly trait in common which endeared them much to each other. They could sit longer in the same spot hour after hour without stirring, save a lazy blinking of the eyes now and then and a reaching for the cider pitcher, than any other loafers in the whole neighborhood. Thus they had that quiet enjoyment of companionship,

"Two friends, two bodies with one soul inspir'd,"

if one can consider idleness and great stomach capacity as coming from soul inspiration.

One morning, after many moments of contented rest and silence, Moke remarked to the Cadi:

"I notice that I am losing a great deal of my skill in shooting, and I think it will be only a short time now till I am classed with the Has-Beens.

"Indeed?" remarked the Cadi with a rising inflection.

"Yep, I'm afraid it is so," Moke added in a tone of lazy regret.

"It is a matter of astonishment to me," continued the wise Cadi, reflectively, "when I consider the abrupt and unwarranted manner in which men snatch a membership in the Most Ancient and Honorable Guild of Has-Beens, the greatest Guild and the most imposed upon in the world's history. Now, a man may be personally no good on earth. He may be devoid of skill and nerve and knowledge, yet when the proper time comes he will regretfully declare that he is a Has-Been, for there is a certain degree of prestige in once having been eminently something or other, and it is deemed worth while by a great many men to assume and to maintain that once upon a time back in the procession of the years they possessed the qualities which time would ripen to a degree qualifying them for membership in the Most Ancient and Honorable Guild of Has-Beens. It is a matter of deep concern to the esprit de corps of real Has-Beens, if they look dutifully to their own interests. From the time of Adam to the present day, the world has seen the most marvelous growth of this great and good order.

"There were genuine Has-Beens in all ages and in numbers beyond computation. There are plenty of men whose capabilities are so absolutely worthless that they are ineligible to anything, past, present or future. Such men crave the honorable membership. The truly deserving candidate, however, is elected by the acclamation of his fellows and is somewhat loath to accept the honors conferred upon him. His feeling of unworthiness is so great that he will protest against this popular testimonial to his merits. This most ancient order is not to be entered unworthily. Some men are so modest that they will never bring themselves to believe that they are properly eligible to membership, while many others only discover their eligibility many years after it is discovered by their friends and acquaintances. A few men of good sense perceive that they have graduated into the Guild regularly on their merits. There is a large number of impostors, however, constantly endeavoring to sneak into our great Guild, on no other qualification than their own declaration that they are Has-Beens, being prompted thereto perhaps not by past deeds, but by their pride in their great natural fitness or the force of foreordination.

"The true, genuine Has-Been is still a man of spirit and still a man of ability, though his ability may be impaired. Your impostor is as he was always. Place a broken-down race-horse beside a broken-down cart-horse and there will be differences apparent to the most untrained eye. One has been a racer; the other has been always anything but a racer. As for yourself, friend Moke, I think that you have some of the qualities of a Has-Been, but none of the history—that is to say, as you are now, so you were always."

"It seems to me that you are taking a very roundabout way to tell me I never could shoot a little bit," Moke replied in a gentle, hurt tone as he reached for the cider pitcher with much firmness of purpose.

"You shoot at present just about as well as you ever did," the Cadi replied. "You are losing interest as you grow more rotund about the waist and more flabby of body and wit. You seem to be quite willing to be classed as a Has-Been on your own initiative. And after all it may be wisely ordained for the best interests of the human race that men believe that they are Has-Beens, regardless of whether they ever were qualified or not. Quien sabe? I have not the slightest doubt, my good friend, that after you have asserted a few hundred times that you are a Has-Been, and after a few more years have passed, you will have gathered up statistics sufficient in force and volume to prove your claim, regardless of the facts in the case. The illusion may cheer up your later years, after you have, from your indolence of mind and body, given up active sport with dog and gun. You then will look back upon the past as at a time when you too were a merry man and a superior performer at the traps or afield, in the skillful use of the gun."

"How about yourself, friend Cadi?" queried Moke.

"There was a time in my life, not so many years ago at that, when I considered myself as good as the best in the matter of skill with a shotgun; but, since ill health has overtaken me, I am not so good a man as I was, save in my ability to swallow, my throat being as efficient in that respect as it ever was. I am not a Has-Been, but I am not in my usual good form. There is a difference between the two qualifications."

"What is the limit to your unusual bad form—that is, where does the bad form end and where does the Has-Been begin?" and Moke grinned with the pleasant expression of a wolf showing his teeth.

"It would be quite as reasonable to ask me where this sunshine ends and where this wind then begins," and the Cadi with an effort swung his arm around in the air and sunlight to emphasize his point. "They are unrelated qualities. A man out of form may be in the zenith of his powers of mind and body. A true Has-Been is a man of permanently impaired ability."

"Well, with all due deference to you as a shooter out of your usual good form, I think that I could defeat you in a match at 25 live birds, for the price of the birds and, say, $10 a side just to make it interesting, and just to see how much of a never-waser I am at the present time;" and Moke affected a serious air, as if he had the most unlimited faith in himself and his proposition.

The Genesis of a Match.

"However much you may have missed what constitutes the beginning of the Has-Been, you have hit the nucleus of at least ninety matches out of a hundred. It is a good old time-honored starter, and the average shooter takes to it as kindly as you do to cider. It is a good, standard topic to interest lookers on."

"Well, what is it?" asked Moke.

"A bluff," replied the Cadi quietly.

"Humph," ejaculated Moke.

"Exactly," commented the Cadi. "That is the manner in which the bluff is continued. Now, if there were two or three of our friends here, and two or three of our friends' friends also here, I would not like to have you defy me in that manner. I would probably reply with a counter-bluff. You then in turn would rejoin, and probably add that you would make a little bet that I would not dare accept your proposition. The eyes of our friends and our friends' friends would be critically upon us the while, and, having carried the bluff so far, neither of us could retreat without at least an appearance of surrender, and with it an admission that the talk of a match had been all bombast and bravado. We, however, would have too much pride to admit that the bluff was not a genuine thing. To bear out our affectation of superiority and faith in ourselves, we would go further and further into the bluff till at last the match would be really made, and you would then wish that you had tried the bluff on some other fellow who would refuse to make any matches because he as a boy had promised his school teacher that he would never make a match as long as he was out in the cold, cold world alone. Now, if I had accepted your bluff and we had shot the match, what would be the result? If you lost it you would have to eat hay for a month or two; and if I lost it I do not know whether I ever would eat anything again within the present year. A man may lose all his credit at the grocery and still have something left to draw on in an emergency; but when he loses his credit and his money too, he is in a very bad way. The loss of $10 would come near to putting me out of my home, to say nothing about my business," and the Cadi half closed his eyes, meditating on the instability of all earthly matters.

"Is a pitcher of cider ever any factor in making matches?" asked Moke innocently.

"Never mind about that; that is another story," replied the Cadi. "It has more to do with color than with competition.

"'Nose, nose, nose, nose!
And who gave thee that jolly red nose?
Sinament and Ginger, Nutmegs and Cloves,
And that gave me my jolly red nose.'

"An incandescent nose is a distinct subject from making matches."

BERNARD WATERS.

Cincinnati vs. Columbus.

THE Cincinnati Gun Club sent a team to Columbus on Friday, Oct. 27, to compete with a team of the latter city for the Shooting and Fishing trophy and also the Sportsmen's Review cup, which emblems of competition were in possession of the latter club, though said club had to surrender them to the Cincinnati organization, as they were the victors in both contests.

The contest for the first-mentioned trophy is a five-men affair, and requires each principal to shoot at 30 singles and 10 pairs. In this event Arthur Gambell made the capital score of 46 out of 50, which was not only high score for the Cincinnati team, but the best of all. Frank Alkire led the Columbus team with 43. The Cincinnati team had a margin of 5 birds in this race over its opponents.

The second match was a four-men race, and at 50 singles per man. In this the Cincinnati team won more decisively, as they had 18 birds to the good. The entire team lost but 13 birds out of 200. Young Luther Squires ran 49 straight in this race, and then skipped his last one. Maynard also scored 49 out of 50. These two did the honors for their team. Murray, with 45 out of 50, made the best showing for the Sherman boys.

The weather was fine and the conditions most favorable. The Cincinnati shooters are much pleased with their trip, and are loud in their praise of the hospitable treatment accorded them by the members of the Sherman Gun Club.

PAUL R. LITZKE.

Being Careful.—"Leonidas!" exclaimed Mr. Meekton's wife, on his return from a journey, "I am at a loss to understand your conduct when we parted. I said good-by to you."

"Yes, Henrietta."

"Why didn't you say good-by in response?"

"I was just about to do so, Henrietta, but I checked myself. I was afraid you would accuse me of trying to have the last word again."—Nashville Star.

Friendly Comment.—"Last year I shot the biggest deer that was ever killed in the Michigan woods. You don't believe that, do you?" "Of course I do. It had to be enormous for you to hit it at all."—Indianapolis Journal.

Arkansas and the South.

Du Pont Gun Club, Omaha.

LITTLE ROCK, Ark., Nov. 10.—This energetic and active organization, the Du Pont Gun Club, closed its target-shooting season on Oct. 29 with a 100-target race for an elegant gold watch charm, but only members who had participated in at least sixteen contests were eligible to compete for this trophy, which became the property of the winner. Only nine members qualified for this race, but these represented the very best shots of the club, so that the outcome was a race very spirited and exciting to the finish. T. R. Kimball (Grant) and C. H. Curtis tied on the excellent total of 95 and then shot it off at 50 targets, which resulted in Grant winning, for he maintained his great stride, as he accounted for 48 of these, while Curtis let down perceptibly at the very last and scored but 43. H. S. Donald (Sandy) and Townsend also shot in fine form, as the former scored 94 and the latter 93.

The scores:

Grant	11111111111111111111111111111111111111111011111111110	—48
	11111111110111111010111111111111111111111111111111	—47—95
Curtis	11111111111111111011111111111111111111111011111111	—48

Shoot-off:

Grant	11111111111111111111111111111111111111101111111111110	—48
Curtis	11101111111111111111101111111111111111111011001010	—43

Appended will also be found the averages made by the members of this organization who shot at 60 or more targets during the season. The activity of this club can be readily inferred from the fact that during the season just closed it threw 33,000 targets, exclusive of those used in its tournament last September. Aside from the trophy mentioned above, the club gave a shooting blouse every week for the high score, the aggregate amount thus expended representing $86. There were also a number of merchandise prizes given from time to time, which did much to maintain the interest in the weekly contest. The club roster shows a membership of 125, and during the season seventy-four of these were active participants at one time or another.

Now that it is possible to procure good birds, the club will at once inaugurate a series of live-bird handicap shoots. The first of these will be shot Nov. 5.

The figures from which the appended averages were compiled were furnished by Mr. C. H. Curtis, and as he is usually very concise and painstaking in matters of such importance, I feel justified in saying that I believe them authentic.

Crabill, it will be observed, has the highest per cent., but I look upon the shooting of Kimball and Brewer as relatively better, as each of these shot nearly twice the number of targets that the former did, and his margin is only a fraction of 1 per cent.:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Crabill	140	128	.914	Morill	420	304	.747
Kimball	340	310	.911	Dvorak	80	59	.737
Brewer	240	203	.910	Banman	60	44	.733
Parmelee	220	199	.904	Goldsmith	120	86	.716
Curtis	520	464	.892	Windham	120	85	.708
Young	200	171	.855	Elborn	240	162	.658
McDonald	500	425	.850	Bishop	160	105	.656
Brucker	240	203	.845	Goodrich	240	157	.654
Fogg	80	67	.837	Melrose	100	64	.640

Read	400	303	.757	Ragan	60	25	.416

Soo Gun Club Programme.

The programme for this club's live-bird tournament, which is to occur Nov. 21 and 22, calls for three events on the first day—one of 7 birds, entrance $5; the second at 10 birds and the concluding one at 15 birds, the last two at the rate of $1 per bird entrance. There will be $20 and $30 respectively added to these events. On the second day there will be a 7-bird event, entrance $5, and a 25-bird handicap, entrance $25, and $50 added. This event is termed the Grand Interstate Championship, which is a very common error that clubs have drifted into of late. The term is inconsistent, from the fact that the winner of a handicap event can in no sense be a champion, as an event where concessions are granted to some of the participants at once loses caste in so far as this term is concerned. This comment is not made with a view of detracting one iota from this event, but only to correct a very common abuse of the term champion.

The purse in the 7-bird events will be divided two moneys—60 and 40 per cent. In the 10-bird event there will be three moneys—35, 35 and 30 per cent. The 15-bird event will have four equal moeys of 25 per cent. Finally, the handicap calls for five moneys of 20 per cent. This is again inviting the attention of the place hunter, and furthermore will never be conducive to the highest competition. Live birds will be trapped at the very moderate charge of 20 cents. Then the club has arranged a target programme of six 15-target events for each day, so as to appease the desire of those who may have a hankering for the saucers. Two cents will be charged for these, while there will be four moneys in these events, divided 35, 30, 20 and 15 per cent. The club is one of the best equipped in the West, and its previous tournaments have always been popular and successful affairs, so there is every reason to expect this one to be up to standard. One thing I can assure those who contemplate attending is that they will get fair play and first-class accommodations. Shooting will begin promptly at 9 o'clock, while E. R. Chapman, secretary, will impart any additional information.

Arkansas Championship.

Hot Springs, Ark., Nov. 9.—The match that has been pending between Dr. A. U. Williams, holder, and C. E. DeLong, challenger, both of this city, for the possession of the State target championship trophy, was shot to-day at Whittington Park, under most favorable conditions, as the day was absolutely perfect for a race of this kind. Notwithstanding this, however, the scores put up by the principals were of a very inferior nature, and that neither shot up to his accustomed standard can most likely be attributed to the reason that this was their initial individual contest, and it was evident to the close observer that both were somewhat nervous, as neither showed the time that characterizes their shooting under ordinary conditions.

The Doctor got a good start and at one time led his opponent 3 birds; but the latter kept plugging along, and when he finally went up in the air he was equal to the occasion and readily passed him, winning by 41 to 38. Only once previous was the medal won on so low a score, and this was in January, 1898, when Sumpter and Clements tied on 39 and Sumpter won in the shoot-off.

The targets were thrown about 40yds., but the background is very deceptive here. DeLong shot a Winchester gun, Du Pont powder and Smokeless shells. Williams shot a Smith gun, Du Pont powder and Smokeless shells. Capt. A. R. Smith was referee, Bob Price trap puller, and the writer acted in the capacity of scorer. The scores:

DeLong	00111011111110111111111101—20	
	11100111101111111111101111—21—41	
Williams	11111111100111111101101111—21	
	11110101101100011011111110—17—38	

Hot Springs Midwinter Tournament.

A meeting of those interested in promoting this event was held on the night of the DeLong-Williams match, and this was conducive to much enthusiasm. After considerable discussion I was requested to announce to the shooting public that an event of the kind would be held at Hot Springs, Ark., Feb. 13 to 17, 1900, with at least $1,000 added money, the present intention being to have three days targets and two days live birds. Furthermore, notwithstanding the large amount of added money targets will be thrown at 2 cents. The programme as at present outlined will consist of ten target events each day, six of 15 and four of 20, which would make 170 shots for the day. There will not be less than $25 added in each event and there will also be daily average money and general average money. The principal live-bird event will be a 25-bird handicap, with not less than $100 added, and a handsome silver trophy, which becomes the property of the winner. The methods of division at this tournament will be Rose system for targets and high guns for pigeons. It is the object of the promoters of this tournament to make it a competition of the highest character, and furthermore it is their intention to so arrange their programme as to make it possible for those in attendance who display marked ability to win some money. They further intend to cater to the masses, and this class of shooters will be mainly considered when the programme is finally issued.

The above is only an outline of what is intended, but the most positive thing is the amount of added money. The only possible change that would be made in this respect would be to increase it to $1,500. The tournament committee selected at this meeting will consist of Capt. A. R. Smith, Dr. A. U. Williams, Dr. S. P. Collings, C. N. Rix and Capt. O. H. Price.

These gentlemen are representative citizens of the highest type in the Vapor City, and their character and integrity are unimpeachable. Their financial backing is gilt edge, so that any pledge will most certainly be carried out to the letter. Mr. Jack Parker, of Detroit, Mich., has been selected to manage the tournament and Capt. A. R. Smith will act as secretary.

PAUL R. LITZKE.

ON LONG ISLAND.

Crescent Athletic Club.

Bay Ridge, L. I., Nov. 7.—No club about New York has grounds so pleasantly set as to surroundings and so conveniently situated for those who journey thither as has the C. A. C. The great club house faces on that fine stretch of water the New York Bay, with its ever changing panorama of the great and small crafts of pleasure and commerce steaming and sailing, some coming in to load or unload, others hurrying oceanward to the distant ports of the world. Across the Bay is the picturesque shore Staten Island, forming a pleasing background to the view. On the inshore side are the golf grounds, baseball and shooting grounds, polo grounds, etc., so that full provision is made for wholesome participation in the sports which the members follow.

The trapshooting grounds are equipped to meet fully and thoroughly the needs of the trapshooting members. Two sets of traps are installed, a magautrap and five expert traps, the latter so set in a pit that the trapping is done below the level of the field, and the targets thus come into view as if coming out of the ground. The background is good and favorable to good performance at the traps. Messrs. Carl G. Rasmus and Wilmot Townsend are of the shooting committee, the former being chairman, and they work earnestly and successfully in making the shoots attractive and enjoyable. Several of the members are showing marked ability and proficiency. Monthly and holiday cups are incentives to continued effort and competition.

On election day, Nov. 7, there were ten contestants for that day's cup. Mr. H. B. Van Deveer won with the score of 47. The conditions of the election day cup were 20 known angles, 20 expert and 10 magautrap. The handicaps and scores follow:

H. B. Van Deveer, 16, 47; H. A. Kryn, 5, 44; J. S. S. Remsen, 1, 43; C. J. McDermott, 10, 43; Edward Banks, 0, 39; H. A. Kenyon, 18, 39; W. Townsend, 9, 38; W. W. Marshall, 11, 36; Jere Scott, 4, 35; Grant Notman, 6, 33; A. E. Corlies, 18, 31.

Prize handicap, 10 pairs, magautrap, resulted as follows:

Grant Notman, 6, 18; Edward Banks, scratch, 18; B. Waters, visitor, 16; H. A. Kryn, 4, 16; C. J. McDermott, 8, 15; D. V. B. Hegeman, 4, 14; H. B. Van Deveer, 8, 13; W. W. Marshall, 8, 13; C. G. Rasmus, 8, 12; A. E. Corlies, 8, 12; H. A. Kenyon, 8, 10; J. S. S. Remsen, 2, 8.

Tie, shoot-off: Notman, 6, 17; Banks, scratch, 13.

Banks made the ground records at 50 and 75 targets, scoring 50 and 74 respectively, as against 49 and 73 scored by D. G. Geddes.

A number of 15 and 25 target events were also shot.

Nov. 11.—The second shoot for the November cup resulted as follows:

Second shoot for the November cup, 25 targets, expert rules, handicap: Banks, scratch, 24; Marshall, handicap 6, 24; Capt. Money, 2, 23; F. D. Mead, 10, 23; Henry A. Kryn, 8, 22; Hallock, 3, 22; H. L. Kenyon, 10, 22; Lowndes Rhett, 5, 20.

The prize handicap, expert rules: Hallock, 3, 25; Kryn, 3, 25; Capt. Money, 2, 24; Banks, scratch, 23; L. Rhett, 5, 19; Kenyon, 10, 18; Harrison, 10, 18; Mead, 10, 11. Shoot-off of tie for prize: Kryn, 8; Hallock, 7.

Ten pairs per man, magautrap: Banks, scratch, 19; Capt. Money, 1, 17; Marshall, 5, 17; Rhett, 4, 16; Kenyon, 4, 16; Hallock, 3, 15; Harrison, 1, 15; Garrett W. Cropsey, 1, 14; Mead, 4, 12; Kenyon, 2, 13.

Several other events were shot for practice.

Erie Gun Club.

Brooklyn, L. I.—On Nov. 8 eight members were present at the monthly live-bird shoot to-day at Dexter Park. In Class AA, 28yds., Charles Plate won first. In Class A, 28yds., H. Jankowsky won, and Roberts won in Class B. In the sweepstakes at 3 birds, miss-and-out, Jankowsky and B. Plate divided, Gref being first alone.

	Monthly Shoot.	Sweep, 3 Birds.	
F Gref	0111200—4	112	
H Jankowsky	2122212—7	021	2222
J Dohamans	2120101—5	111	
J Plate	2210202—5	020	
B Anderson	0210111—5	021	10
C Plate	1111111—7	021	1120
B Plate	0112000—3	202	2121
L Roberts	2221211—7	202	20

Brooklyn Gun Club.

Brooklyn, L. I., Nov. 11.—The shoot to-day was quite well attended, though it had no significance in respect to the prize series of shoots. However, there was a main event at 50 targets, the special prize of which was a gun case, and the competition was a handicap. This event developed a high-class competition between Messrs. W. Hopkins and C. C. Beveridge (the Dominie), and it was in turf parlance a ding-dong finish. At the end of the first 50 targets every one was shot out but these two gladiators. The light had become very bad toward the finish, and it required owlish eyesight to negotiate the targets in the cloudy twilight. Although this event is given as No. 1, so as to have the handicaps and scores together, it was shot toward evening, and was the interesting competition of the day.

Dr. Webber was tuning up a new gun, and the task made an hiatus here and there in his usual good scores. Mr. David is showing great gains in skill, and is handling and pointing his gun with the free and confident quickness of the well-schooled shooter. No. 3 was at 15 single and 5 pairs. The scores were as follows:

Events		1	2	3	4	5	6
Targets:	50	15	10		15	15	25
*Waters	43	14	9	19	15	9	21
Beveridge, 4	50	13	8	22	13	13	24
Lincoln, 14	44	13	8	18	10	11	..
David, 11	44	12	..	18	15	8	..
Lane, 14	49	..	..	..	8	12	..
Thompson, 7	48	..	..	..	10	13	19
W Hopkins, 6	50	..	..	..	12	14	25
Dr Webber, 7	49	..	..	..	13	10	24
*Bennett	..	7	6	17	10	10	..
*Allen	..	..	7	..	10	8	..

*Targets only.

The Dominie and Hopkins started in to shoot the tie off at 25 targets. The former had 2, the latter 3 misses as breaks. In the first and second shoot-off 25 the score was a tie with handicaps—each 25. In the third 25 Hopkins scored 21 and the Dominie 20. The Dominie lost most of his targets in the last 5 shot at, at No. 1 trap, the background being unfavorable there in the bad light.

Nov. 7.—The election day shoot of the Brooklyn Gun Club was a pleasant gathering of a few members. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	25	*	25	*	25	25	*			
Webber	22	22	23	21	24	24	..	22	23	..
Van Allen	23	23	21	21	17	22	15	23	21	19

Brigham	..	..	..	..	..	13	11	..	18	12
Seidel	..	..	..	..	..	7	10	10	..	..

*10 singles, 5 pairs.

WESTERN TRAPS.

Thanksgiving at Springfield.

CHICAGO, Ill., Nov. 11.—The Merchants' Thanksgiving tournament of the Illinois Gun Club, of Springfield, Ill., of which mention has been made in an earlier issue, promises to be a nice little tournament to bear in mind. This gun club is a strong one and includes such prominent names as those of Gov. John R. Tanner, Hon. James. R. B. VanCleave, State Fish and Game Commissioner H. W. Loveday, of Chicago, and other officials. The club offers $300 in merchandise prizes and a $100 silver challenge cup. The shooting will be at live birds and targets, and the proceeds of the tournament will be devoted to the Home of the Friendless and the Old Ladies' Home at Springfield. The dates of the shoot are Nov. 28 and 29.

Garfield Gun Club.

Twenty-three men came out to the third trophy contest of the Garfield Gun Club, to-day, and the scores show that they were up to the task in hand, though only one was landed straight. The day was gloomy, cold and uncomfortable, a chilly north wind making it bad for men and birds, the latter seeming to be chilled almost to the point of sluggishness part of the time, though after taking wing they proved to be sharp flyers. Most of the flights were to the right quarter, and many birds were stopped by the new wire boundary fence which has just been put up. It grew dark early to-day, and the concluding sweep was shot when it was so dark the men had to stoop down to see the birds against the sky line. Mr. Kuss' retrieving dogs did their work as usual in great style.

A painful accident happened last Monday to the good-natured secretary of Garfield Gun Club, Dr. J. W. Meek, and it might very possibly have proved more serious than it was. The Doctor was examining a shell from which the charge had been removed, and in some way exploded the primer while the shell was in his hand. The base of the shell was blown back into the fleshy part of his hand and imbedded so deeply that it had to be cut out from the opposite side of the hand. In spite of this ugly accident Dr. Meek was able to shoot to-day, and was in the first flight, killing straight except 1 dead over the wire. Following are the scores of the day:

Third trophy contest, 10 live birds:

M H Shaw	1221222*22— 9	E W Eaton	1211112*2$— 8
R Kuss	2*1212212*— 8	Dr Royce	2022011110— 7

RAVELRIGG.

IN NEW JERSEY.

Walsrode Gun Club.

TRENTON, N. J., Nov. 8.—The first event, at 15 targets, was to qualify for place, 10 out of 15 to be scored. The result was: Wedmann 14, J. Taylor 11, Lutes 11, Barwis 11, Hall 4, Coward 11, Thomas 10, Dutton 5, Coward 2, Woolverton 9, Cole 9.

For the gold badge the scores were:

Wedmann	111111111101111—14	Barwis	011000100001010— 5
J Taylor	001011010111001— 8	Bowers	110110111111111—13
Lutes	111100100011110— 9	Thomas	011001101111111—11

For the silver badge the scores were:

Hall	110011000111010— 8	Woolverton	111011101111011—12
Dutton	000100000100000— 2	Cole	110111010100110— 9
Coward	000000000000000— 0		

Team race:

Cole	1101110101001011—9	Hall	1001011101 —6
Lutes	1100111101 —7	J Taylor	1000011111 —6
J Taylor	0000100100 —2	Lutes	1111101011 —8

Wedmann	1111101111 —9—35	Barwis	1111001110 —7—36

Cincinnati Gun Club.

CINCINNATI, O., Nov. 8.—The final contest for the Fleischmann-Peabody cup took place to-day, Schuler winning by 1 bird. Below are the seven best scores of those shooting in that many events.

The Schuler trophy will commence the first Wednesday of next month and be shot for under practically the same conditions as those of the cup just finished. Fleischmann-Peabody cup scores:

								Broke.	Av.
Schuler	14	14	14	14	13	13	13	95	.904
Dick	15	14	14	13	13	13	12	94	.894
Huheey	15	14	14	13	13	13	12	94	.894
Gambell	15	14	14	14	14	12	11	94	.894
See	15	14	13	13	13	13	12	93	.885
Stephens	15	14	13	13	12	10	9	86	.819
Nye	14	14	13	12	12	10	10	85	.809
Ackley	13	13	12	11	10	10	9	78	.742

Final contest, Nov. 8, for Fleischmann-Peabody cup; entrance $5; division, 50, 30 and 20 per cent.:

Schuler, 30	222211221210121—14	Wanda, 30	2222222122222211—15
See, 30	022022222022222—12	Trimble, 29	222*22222222222—14

TIMOTHY SAMUEL LOVEL.

That is the rotund mouth-filling name of Sam's Boy, and as it was dear to Sam and Huldy we must all approve it. The story of the Vermont boyhood lived by this boy in the days of Danvis has been written by Mr. Robinson, and the beginning will be printed in our issue of Dec. 2.

MT. SHASTA AND ITS LIFE.

BEST known and one of the most beautiful of the volcanic snow cones of the Pacific slope, Shasta has been many times described. It is a lofty mountain with an altitude of 14,450 feet, and stands by itself completely cut off from the neighboring mountains by river valleys which flow to the north and to the south of it. It is the best known landmark in California, and when viewed from north, south and east appears as a great snow-clad cone, while from the west and southwest its outline is longer and it seems more like a ridge.

In Dr. Merriam's volume on Shasta, which is published as No. 16 of North American Fauna, and is entitled "Results of a Biological Survey of Mt. Shasta, California," we see this mountain in a new aspect. Usually it is written of from a distance, its majesty awes the beholder, and from reading of it we receive a general notion that it is vast and imposing, but we get little impression of the detail of the mountain. It is this that Dr. Merriam's report gives us. He has traveled back and forth over its slopes from crown to base. He has studied its forests, its flowering plants, its grasses and the Alpine species that flourish among the rocks far above timber land. He has climbed its rock slopes, exploited its cañons and glacial basins, and followed up its streams to their sources in the melting snow banks, or to where the hurrying milky torrent pours forth from beneath the glacier's mass. He has investigated its birds, and its mammals, and can tell us where they live and whence they came. As a result of his investigations five new forms of plant life and eight of mammalian life have been described as new, while there are others that remain unnamed.

The mass of Shasta is of volcanic rock, largely pumice, but often with cliffs of a solid lava. Its glaciers lie chiefly on the north and east sides, and there are a few on the south side, but not one on the west. From these glaciers the streams which descend the mountain have cut deep cañons which are usually straight and average about 1,000 feet in depth. Down near the water, where it is moist, there is considerable vegetation, but the upper portions are barren and almost devoid of plant life. Among the rock slopes which are above timber line and yet not covered by snow are found many small mammals feeding on the Alpine plants. One of the most noteworthy of these is the little chief hare, sometimes known as the rock rabbit or rock cony. In old times the big horn made its home on these heights, but it has long been extinct, and but rarely does the traveler come upon a whitening bone which tells of its old-time presence.

Rising from a region of forests, Shasta itself is continuously forest-covered up to an altitude of 7,500 or 8,000 feet. This forest is divided into three belts, determined by altitude and named from their most characteristic trees. The lowest is the yellow pine belt; then comes the Shasta fir belt, and last and highest the white bark pine belt. It is interesting to note that these belts coincide with three life zones of the mountain—the Transition, Canadian and Hudsonian.

As might be expected in so arid a region as this, these forests have been frequently devastated by fire. The greatest ravages have been in the yellow pine belt, and follow the course of the lumbering with great regularity. As yet the fires have not greatly damaged the middle or Shasta fir timber belt.

It can readily be understood that the life zones of Shasta form the chief subject of Dr. Merriam's study. These are well shown on a diagram giving an outline of the mountain. Down in the Shasta Valley, simmering in the drought and heat, lies a patch of upper Sonoran life. This is followed by a wide expanse of Transition zone, above which follow the Canadian, Hudsonian, Alpine and Arctic. The study of these life zones here is in some degree complicated by the excessive aridity of the mountain. Water is so scarce that many species which would be looked for in certain zones are lacking.

The extent of each of these zones is, of course, determined by the mammals, birds and plants found there. Lists of these are given for each zone, and the fauna and flora of Shasta are contrasted with corresponding faunas and floras of the Sierras and the Cascades, both as to the presence and the absence of certain species in those ranges. Standing alone as Shasta does, the question naturally arises whence come the northern species that are found on it? Which of the neighboring ranges has contributed most to the life of this mountain? The points discussed are of very high interest. Very useful, as bearing on the subject, are the fully annotated lists of mammals, birds and plants which close the volume of 180 pages.

The volume is very fully illustrated, chiefly from photographs of the mountain, its scenery, its trees, birds and mammals, and also by some of Mr. Fuertes' beautiful bird drawings and a few cuts that have already appeared in another connection. The work is of high interest to all students of nature, and indeed to all intelligent persons who have any fondness for outdoor matters.

WILL THE LICENSE DO IT?

ON a Long Island market garden farm the other day a man was sitting down in a field sorting turnips, when there came to him simultaneously the report of a shotgun and a charge of bird shot, which struck him full in front, wounding him in face and body. He rose to his feet with a frantic yell, only to see two scared "sportsmen" running away at top speed.

Last Saturday on another Long Island farm a man was working in a barnyard, when he was startled by the discharge of a gun close behind him and saw a barn dove fall wounded from the roof of the barn, shot by a "sportsman." On the same farm the next day, being Sunday, close attention was required through the day to herd the cattle out of range of trespassing "sportsmen."

The incidents are typical of scores and hundreds which are happening every day. The suburbs of our cities and towns are scoured by an increasing horde of ruffians and rowdies, armed with shotguns and fortified by liquor, who, in their reckless and impudent invasions of grounds and their random shooting at the cows, chickens, pigeons and small birds of field and orchard, are a constant menace to property and human life.

The existence of this class is an evil of serious moment to decent sport, since, as we have already pointed out, the ruffian shooters, by reason of their number and prominence, create in the public mind a prejudice against the real sportsman and his legitimate pursuit of game in legitimate ways. It is for the interest of respectable sport, then, that the lawless element should be suppressed. Indeed the time has fully come when sportsmen's clubs and game protective associations may profitably put themselves on record, defining their attitude toward this obnoxious class, and taking steps to secure abatement of the nuisance.

Where shall we find the remedy? From Rhode Island comes a suggestion that the solution of the problem may lie in a gun license system; and there are several considerations which appear to give reasonable color to the proposition. Assuming that before being permitted to go abroad on lands other than his own or than such as may be leased by him, a gunner were compelled to equip himself with a license bearing his name and address and subject to revocation upon violation of the conditions governing its possession and use, may we not assume that the holder of such a license would be subjected to a more strict personal accountability? If the holder of such a license were required to carry it with him while shooting and to exhibit to any person on demand, the very fact that his identity was thus subject to disclosure would certainly have the effect of restraining him in a degree from a course of conduct which as an unknown and unidentified stranger with a gun he might be quite ready to pursue. It it beyond question that the sense of unaccountability has a large share in influencing these fellows to make them bold to commit their depredations. They are away from home; the people they encounter do not know who they are, nor where they come from; and no one can call them to account; so they are under no restraint, and the coarse nature comes to the surface. If this were changed by the license system and William Shakespeare, of Stratford-upon-Avon, knew that he would have to show his license on demand and tell who he was and where he came from, he would walk a straight path and be careful how he conducted himself. And on the other hand the very fact that an intruder upon the land was obliged by the statute to show his license, and thus to disclose his identity, would be apt to give the farmer or the land owner more confidence in his dealing with the trespasser. The system might readily be so devised as to insure an observance of the conditions of the license, and these conditions could be made so comprehensive and specific that the result would be to hold the shooter accountable for his conduct from the time he left his home until his return to it.

We would be glad to have the opinions on this subject of those who have given the matter some thought. Is the remedy to be found in a gun license, and has the time come for resort to this expedient? If the license will not afford us the desired corrective, what will? In what way shall we suppress the cow shooter?

GAME IN TRUNKS.

COMMISSIONER JAS. H. WORDEN, of the Pennsylvania Board of Game Commissioners, sends us a report of a game seizure made the other day by Chief Game Warden Kalbfus. The individuals concerned were from Mount Vernon, a village adjoining Greater New York. Their names are not given; but we assume that they are of the average run of residents of that town, men who when at home do not dodge the police nor purloin bric-à-brac on their social calls nor steal the milk from their neighbors' stoops. Yet when they go into a neighboring State for shooting they do not hesitate to cheat the authorities and try to make off with stolen goods. And they got caught.

The law forbidding a sportsman to take home his game is a harsh one; so much cannot be denied. It deprives one of a privilege which is highly valued. One likes to have some tangible testimony to his skill, some evidence of his success; he wants to show his birds to his family and friends, and to share with them. Nevertheless if the privilege is denied, only one course is open to a conscientious and right-minded person; that is to accept the restriction philosophically and adhere to the letter of the law. The man who smuggles game in his trunk must leave something of his self-respect behind him.

These Mount Vernon shooters knew before they went to Pennsylvania, or might have known and should have known, that they would not be permitted to bring home any game. They therefore, when they went to Pennsylvania for shooting, undertook, in honor, to attempt to take no game out of the State, and they were bound by honor to refrain from any smuggling tricks. To keep faith with the people of the State whose guest one happens to be is much more worth while than to sneak out a few partridges to take home.

Here is a story with a moral. Mr. Maximilian H. Foster, of this city has long cherished an ambition to possess a moose head won by himself in fair quest in Canadian woods. In pursuit of the trophy he had made pilgrimage after pilgrimage, but only to return from each arduous expedition disappointed, until the years counted eleven. In all these years he had seen many moose, but the moose, the fellow with the head worth while, had eluded him. Now he has just returned from the twelfth annual moose hunt, and the fortune of 1899 has brought compensation in full for the disappointments that have gone before. This year Mr. Foster comes home from the Tobique with a moose head measuring sixty-five inches from tip to tip, the record head for that country. As we have before now alluded to Mr. Foster's phenomenal ill-luck, it is a great pleasure to record the success which has at last rewarded his pluck and perseverance.

Representative of the class of Western men of whom we wrote the other day as a "type that has passed" was the Colorado pioneer Philander Simmons, who died in Denver last week after a life full of wanderings and vicissitudes. America still possesses such picturesque types, but the changed conditions of modern life present few opportunities for us to discover them. There died recently in New York city a man who, originally a "Bowery boy," had run away to the Mexican war, had been a filibuster with Walker, had commanded a regiment in the Civil War, had been prominent in city politics, and in 1897, at the age of nearly seventy years, went to the Klondike as a gold seeker. The sparse population of the old far West made the salient characteristics of each man at once evident, while among the dense population of the present day it is only the strongest characters who come to the front.

The Sportsman Tourist.

Around and About a New Adirondack Camp.

ONCE more I am where I like to be—out in the woods, sitting at the door of a new log cabin and writing upon a home-made table, upon an Indian summer day. The sun shines bright and warm without, and the balsam gum, oozing from the pores of the green logs, fills the cabin with a delicious perfume. Outside the autumn leaves are falling, and their colors, varying from bright carmine to a rusty brown, as they descend and blend with the bright green of the balsam and spruce in kaleidoscopic changes, make a picture that no scene paitner can imitate.

Prostrate and decaying logs, once monarchs of the forest, now lie covered with green moss beside and over the brook down below, and the brook and the birds vie with each other in exultation, and all nature is joyous this autumn day as though improving the opportunity before the winter storms and cold make bleak this cheerful spot.

As I write I hear the boom of Guide Delmarsh's three-barrel gun away down the glen, and I believe that we will have broiled partridges for some late supper. The bird will be hot, but the cold bottle—Oh, well, a tin pail filled from the icy spring will answer. I also hear a slight knock on the window glass. A little bird—a sapsucker we call them—has flown in and bumped his head in trying to escape. I pick him up and hear his peep of fear; but would I hurt him? Oh, no! I take him out to a bough on the tree, and his claws prick my fingers as though clinging to a friendly hand and loath to part. He went away after a while and possibly told his mates in bird talk that a man who writes once in a while to the FOREST AND STREAM, because he likes to, gave him some assistance in time of trouble—maybe so.

Let us go back to the starting point. I left New York when thousands were going in, and I did so by agreement. The Deer Slayer made an appointment with Hurry Harry and agreed to meet him on a certain day in a certain place in this same forest, so Fenimore Cooper says, and I likewise agreed to meet a guide on a certain day, and inasmuch as Admiral Dewey would not change dates I could not stay to entertain him—but there were others.

On the way to the station I heard the pulsating of drums and the tingle of the spirit of '76 went through my spine, and though there be not hair enough on my head to stand up to the thrill, as I turned the corner and met the troops my rifle involuntarily came to right shoulder, and the words "Left, left, hay foot, straw foot, left" ran in my mind, and I marched along beside the soldiers with head up and stomach out as proud as the best until the spell was broken by the shout of a gamin, who yelled: "Hey, Mickey, see de ol' sport step out!"

Arriving at the station I saw a little white casket passed gently into a child's hearse, and then move slowly away, followed by father, mother, sister and brother in a coach. What a contrast of sadness and joy! Millions of people rejoicing at the coming of a great man, and a small family mourning the departure of a little child. So the occurrences of life weave in and out, and one has its effect upon the other, and the drift of the whole is toward the good in all things.

The Empire State Express, usually crowded, carried but few, and it was a simple stretch of the imagination to think myself a prominent statesman booming along in the president's private car to keep an appointment at some agricultural horse trot to tell the people what to do to save the country. The barns and fences flew by, leaving the letters of the words Sarsaparilla, Castoria and Soap in my eyes, and I thought of "that tired feeling," and that I heard the children cry for castoria, while the tramps did not the same for soap.

In due time Old Forge was reached. The place takes its name from its former iron industry, and near the Forge House there stand as relics of bygone days the old triphammer and anvil. The guides and loggers are still wont to test their strength in lifting the anvil during idle moments. I tried and failed.

The steamboat's whistle sounded its warning, and the few passengers—guides and gunners—gathered around the boilers, spun lying yarns about their prowess and discussed the merits of various brands of whisky.

Saturday was passed restlessly at Eagle Bay awaiting the arrival of Guide Delmarsh. The fitful sunshine came and went, and the intervals of disappearance were filled up with darkness, skurrying snowflakes and autumn leaves in a wild whirl of chilly wind.

Once when the sun shone brightly I tried to target the sights of a new Savage rifle, and in a few moments was drenched with snow and rain and numb with cold. Sunday morning I packed the garb of civilization in my trunk, and donning the hunting togs waited at the lake shore for my friend, and from over the sprayed whitecaps of the lake came a canoe propelled by a stroke that I knew so well. Then the broad blue-shirted back became plainer, until the prow of the canoe slid upon the sand at my feet. He asked me if I wished to wait until the lake quieted down before crossing, and I told him that I would start for Heaven in a hand-basket with him and bank upon a safe arrivel. True, it was rough, and at times it seems as if we would swamp, but with rare skill he carried me safely over the billows and through the troughs, and with packs and rifles we entered the forest and the cold wind was shut out by a natural roof, and our feet trod the woodland carpet. It is a carpet that fades and renews its changing pattern and colors often. It is ingrain and velvet by turns, and often full of rents and soiled; but it wears well, and at times can be bought at bargain sales.

Once more the cool fragrance of the woods is in my nostrils, and then suddenly I enter a flood of warm air, as though passing from a cool to a warm room, and look about in search of a camp-fire. There is none, and the cause of the warmth is one of the woodland's secrets. Anon the sun comes out to stay through the day, and the shadows of the falling leaves or of the wings of the birds in their flight overhead dart over the tree trunks and open glades, and the squirrels chase the shadows and themselves in wild frolic, and sputter at us with insulting grimace and flirt of bushy tails.

In descending the hillside the weight of my pack toppled me over as I stooped to pick a rare fern. I pitched my rifle toward my destination and, like Columbus when landing, kissed the earth; but there was no harm done beyond a wet stain on one knee and a pound of wet mould in my hand and up my sleeve. Whatever makes you laugh or causes others to do so adds to the pleasures of the trip, and then with reasonable success in securing game comes the good of it all.

Three hours of hard tramping brought us to our old open camp of previous years, and we decided to spend the night there rather than push on to the log cabin in process of construction three miles further in. We cut the huge backlog and the smaller wood for the night fire and pulled balsam twigs from branches for our beds, and from the camp lantern took kerosene to remove the pitch from our hands, and from within the hollow trunk of a neighboring tree we unearthed the camp tinware, and the dear old combination coffee and tea pot that brewed so many decoctions that "cheer but not inebriate" came up smilingly. Sooty and black outside, with the lid bound on with wire, and the handle leaning at a decrepit angle, it was ready for another heated argument with us. We scoured the cutlery by driving it into the ground, and we cooked our supper of eggs, potatoes and flapjacks, and condensed milk and maple syrup made rich coffee and cakes. We washed the dishes because we found—about the only thing around a hunter's camp that the hedgehogs will not chew up—a piece of soap, and this with a last year's rag that looked suspiciously like a remnant of underwear did the work.

Then we hit up the pipes and talked around the fire until late. Either the smoke of the fire or the pipes, or both combined, overcame us, and we rolled up in our blankets and slept the sleep of the righteous.

Before the first gray light of morning came we were up, and the fire snapped, and the odor of coffee and toasted bread blended with the aromatic smoke of burning silver birch. Then we stepped out into the forest while it was till dark, in search of the bounding buck, and found him not. When near camp upon our return a doe watched us calmly from a boulder on the hillside, but we do not shoot does, and in a desire to see the lithe beauty run I cracked the dead spruce near her with a shot, and over the hills and far away she sped, feeling better for the early exercise and probably wondering what those two things were and what they made that noise with.

We left the camp like parting with an old friend, and after tramping over the mountains for three miles heard the sound of the saw and hammer, and I remembered the expression "Busy marts of trade," an expression that is tabooed from modern literature as a "chestnut," and even "chestnut" is now out at compound interest; but the sound did not indicate the growing village or commerce—just the erection of a hunter's camp of unhewn logs, 12 x 14 feet inside and so low-ceiled that the silk hat of the minister would be crushed should he call upon us without uncovering. Overhead, under the steep pitched and spruce shingled roof, we can sleep when all is done, and we jump into the work with Father Delmarsh, Archie's brother Eri, and his cousin, whom I chose to call Longfellow for obvious reasons. We make the chips fly, and if "the workman is known by his chips," as they say, you would be well acquainted with us were you here. Being more proficient at ground than lofty tumbling, I chose to lay the floor, and some of it was blind nailed, and the rest looked as though I were blind instead of the nailing, so the others told me. Overhead the others were shingling and laying 7 inches to the weather, and breaking joints, and as I went out for another board they broke the staging as well. They came down like so many coons from a chopped tree, and felt themselves over for broken joints.

The cook stove came in on a sled team in the afternoon, and the sash and other necessary things, and we got the stove into place, and had the usual experience in putting up the pipe, and heard the usual expletives accompany the process. Each one knew more about the dampers than the others, and the word, or an abbreviation of it, was often heard before the task was complete. Then we nailed boards on the tree trunk near the door, and from amid the camp duffle came the wash basin and a bar of yellow soap, and rolling up the sleeves and unbuttonnig the collars of the flannel shirts, we bathed in the icy water of the brook. Those with hair combed without a mirror, and the absence troubled me not, as the towel answered nicely.

Then by the light of a candle stub came a supper of bean swagen, hot johnny cake, broiled venison, baked potatoes, etc., then the pipes, and before the desire to smoke was gratified came the call of wornout bone and muscle for rest, and all were too tired to replenish the fire in the night, and there on the chilly floor, surrounded by frosted logs, we passed the cold night in restless sleep. But the next night found us as "snug as a bug in a rug." With door and sash in place, and table and benches made, with floor and bunks complete overhead, and the walls frescoed with interior decorations, and chinked with moss from without, and plenty of wood, I passed the other nights in sound sleep, with no fear of fire or burglars, or of awakening by cats on the back fence, or by the song of the belated clubman, "We won't go home till morning," as he paddles along the street. True, the owls met and hooted on the peaked roof above me, and in the midnight stillness, unbroken save by the moaning wind an dtheir owlish love cooing, "Soft eyes spake love to eyes that spake again."

When the camp's construction was complete, the others left the guide and myself to enjoy it, and as they were about to start up the mountain side the boys said they heard partridges drumming off to the left, and touching the G. A. R. button of the gray-haired veteran, I said: "They are drumming you out of camp, Uncle." With fire in his eye he replied: "Birds can do it; man never did and never will." His answer was characteristic of the sturdy old man, and his boys are "chips of the old block."

One morning a messenger came down the hillside summoning the guide to county jury duty, and for once in my life I wanted to say "D—n the law and all disciples of Blackstone." There was no appeal, and the guide left me alone until at dusk his brother came back to camp as a substitute, and has been with me since, and on this later day I resume the process of writing, inasmuch as a knee, strained by long tramping, refuses longer to raise 210 pounds over the mountains without rest. "The spirit is willing, but the flesh is weak," and "a chain is as strong as the weakest link and the bridge as strong as its frailest support."

Eri is away hunting alone, but before he went he figured this way and said: "You carry 70 pounds more than I, on a lighter frame. There being 5,280 feet in a mile, and allowing at least 2,000 steps to the mile, you move in a ten-mile tramp 700 tons more than I do, and ought to rest." Perhaps the boy figures correctly—I do not know. I am only figuring upon a pleasant time. The statistics are more appalling than the actual process of moving so much.

If the reader doesn't mind I will tell him (or her) what I have seen in this wild wood in the way of living things. One bright day, mellow with sunshine, and with air laden with woodland aroma, the guide with rifle went one way for deer, and I went opposite with a shotgun for birds. After a while we swung in together on the other side of the mountain. I had stopped the flight of one hurrying cock bird and he was still in my pocket, and I had missed another and was thinking of the cause when I heard the sharp crack of nitro powder off behind me. I stood for a few moments beside a large moss-covered boulder in silence and my ears and eyes did double work. This rock, as though cut by man's and decorated by woman's hands, stood up with clean sides, while on top rich green and brown moss furnished nourishment for brake and fern. The trees around were evergreen, and no decaying leaves or twigs marred its cleanliness. While admiring its resemblance to a well-kept artificial fernery, there silently came up to me, almost within hand reach, the cleanest and most graceful animal that ever roamed through the wildwood or saw the forest opening—a doe with eyes like large ripe purple plums. She looked at me in astonishment, and I never even winked. The blue-brown ears, as long as the face, pointed toward me, and the glossy coat covering the supple form shone back clean to the white flag, and the white flag was white—"A Milk White Flag" indeed. The slight, graceful limbs, now rigid, would soon be in action, carrying the sleek brown body in bounding flight over logs and stones, over the beechwood ridge up yonder, and my day-dream would end in a vacant stare at the hole in the bush where the last white shadow faded. How came she there? In the charge of the Light Brigade some one had blundered, and I think that she, startled at the shot fired at a male of her own kind—possibly a brother—rushed, she thought, to a place of safety. Was she safe? Sure! Oh, I could have picked her up and kissed her if she would let me, and I could no more have shot her than I could a schoolgirl playing at recess.

The suspense was telling upon me, and I longed to see her run. I raised my hand as though in benediction, and said: "Well, you are a beauty!" With a look that might be considered as a reproach for undue familiarity, or as saying, "Don't you suppose that I know it?" she skipped away like a waltzing belle and was gone from me forever.

Then the bold Canada jays flew in and needed but little encouragement to alight upon the rifle barrel. At the base of a decaying stump the white-footed deer mice came out to see what jarred the earth. Their quaint little eyes blinked in the bright light, but ere long, when the snows come and cover them 4 feet deep with a cold mantle, they will pass in and out of the subways beneath snow, roots, logs, dead moss and leaves, and their activity will contravene the thought that they are buried alive, and though they may be buried, they will be on top again gnawing at discarded antlers when the cover is off in the nascent springtime.

Another time, while standing quietly, deep down in the mountain chasm, the dry leaves about my feet would turn over like the jumping beans from the tropics; and wondering at the cause and stooping to discover it a beechnut burr struck my hand, and then, looking upward in the leafy tree tops, I saw a number of red squirrels. By some mutual understanding they send down showers of nuts, and coming down together gather them and cache them for the winter's supply. I did not move, and presently from different points they descended, and one more bold than the rest came to my feet, but quickly dodged away and sputtered in anger, and then ran part way up a tree to a limb close by. He stood on his nose and fore paws and scratched savagely with his hind feet and barked, and I think he said to me: "I'd like to take a fall out of you. I'd sink my teeth in your nose and clutch an ear with each fore paw, and scratch the collar button from you with my hind feet, and bang your bosom with my tail." And I laughed at that little imp—that Ishmael of the woods—and suddenly noticed that they were gathering from all directions, and fearing a repetition of the scene of Gulliver and the Lilliputians, I left to them what was their right by priority.

Soon there was a swaying of the underbrush, and with as much crushing of twigs as a fawn would cause, a hedgehog—the fretful porcupine of Shakespeare—appeared, and in revenge for harm done me and my camps in years past I bowled the mischievous thing over with a bullet. No, they don't throw quills; they will swat you with a prickly tail, and the barbed quills come easily from them and painfully from the victim. Often have I pulled them from the face of an overzealous pup, while he submitted to the painful operation like a stoic.

In the brook called Red River the young trout were seen in masses, and I fed them with crumbs and said to them: "Uneeda biscuit." Although goldenrod and purple aster are rarely seen in these forests, I recall one spot, burned over in years past, that was bright with the blossoms of each, and there, gay in plumage, blue and white, flitted the bluejays great and small, and blackbirds, woodpeckers and others with names unknown to me, flew about in uncurbed joy, and saying to each other in bird language, "Life is worth living."

Passing under huge hemlocks, oaks and maples, where all undergrowth and vegetation save moss had given up the struggle for light and sunshine and died bewailing the greed of the powerful, the pillars of the canopy overhead could be seen for a great distance, and the covering shut out from sight the sun and clouds. When nearly through this cavern-like place I startled a herd of deer in an adjacent thicket. The gloom nearly hid from sight the dark-coated portions of the bodies, but the

white rear ends could be seen plainly darting hither and yon like the wig-wagging of a signal corps, or like the flutter of white skirts at a picnic at the cry of snakes. Then they went and all was still again save the dry leaves, stones and twigs under foot. Half a mile more through windfalls and spots where under the balsams the deer had yarded in winter and where the bones told me that some had died of old age or starvation, I came out into the plain. It is acres in extent and as level as a floor. It was burned over this season and the black and charred crust gave up a pungent dust, and I seek deer trails which cross it for better walking. The grass grows richer and greener in these paths, and the fire has left them undisturbed, as though they were ploughed trenches around a prairie home.

On the other side of the plains, away up among the mountains, there is a lake than which none is more beautiful. Some one said: "See Naples and then die." Why ring down the curtain for so small an inducement or put on a wooden overcoat when with corudroys one can wander in these wild regions upon an October day? I say to you, see a mountain lake in October and live. See it when the sun shines on the mirrorlike water; when the leaves in crimson, brown, green and yellow, still clinging to the supporting branches of the trees, are transferred in duplicate to the lake surface and seem to enter it even, and the moss-covered shore rocks that you think ought to sink float on the surface; and away back on another range of hills, where the warmth and fog from the lake surface has not access, see the frost and ice covered foliage glistening in the sunlight. See it all from the silent, gliding canoe, and thank the Creator that you are alive.

One afternoon, when, weary from long wanderings, I returned to camp, and leaning my easy chair (a board with a cross-section) against a tree I watched the setting sun. A huge yellow ball (the gold standard of the West) was dropping down behind the mountain top high up before me. I saw, or thought I saw, a mammoth, half bird, half animal, moving over and through the tree tops a mile up and away on the mountain. The first impulse was to shoot, but something weird, something uncanny in the aspect stayed the slaughter. It was a chance for the big-game hunter. The outlines of the monster were imperfect, and adjusting my glasses for better sight I discovered that I was the innocent victim of an hallucination. It was a bug on the vizor of my hunting cap. Whatever caused the distorted fancy or the conductive fancy which led to it still had its influence, and as my eyes closed in slumber there was left in them the picture of the sunset, and I thought of the happy hunting ground beyond, and believed that the portal thereto rested on the blue and gold cumulus cloud strata to the left, and I thought I left that earthly camp and darted through the forest and up to the mountain top and stepped off into space and floated in ozone until at last, with feet resting on steps of pearl and gold, I looked about for the janitor. Yet it seemed not to be a building—rather a walled estate—and I felt that I must find the lodge keeper before being apprehended by game keepers.

Then that old fisherman of revered memory, St. Peter, came to me and said: "What is it, man; what is wanted?" And I told him that I did not know yet and asked him to tell me if there was a place where the fires burned eternally; a place paved with infants' skulls and good intentions, and where all alike had a place in the lake of fire; and he told me "No"; told me that it was a myth invented by those who wished to rule by fear, and I asked him if there were a divine right to rule.

"Not where you came from, he said; "party majorities decide that."

"Can I walk around in there, St. Peter?"

"Go in; go where you please. We bar none. There is no posted ground, no game laws or preserves. Go walk beside the still waters and lie down in green pastures and there find those gone on before; those of your own ways and habits; those whom you have loved and who have loved you—no night, no storm, no pain—all serenity and sunshine."

And with friends all about and with no thought of time, I wandered about the celestial forest and streams, and I saw Tecumseh, Pontiac, Red Jacket, all of the Sagamores, and the Seminole chief who had forgotten that he said: "I'll taunt ye with my latest breath, I'll hate ye till I die." There were Uncas and the Pathfinder talking with the Iroquois and Hurons, while Fenimore Cooper and Francis Parkman stood by smiling. Yonder playing together were now living exemplifications of the destructiveness of the extremes of heat and cold—the Casabianca boy who stood upon the burning deck and the Alpine youth who cried "Excelsior" and perished amid snow and ice.

In due time dear old Fred Mather came, and gathering all the men that he had fished with retired with them to a leafy grotto and led them in singing "Shall We Gather at the River." Then Sam Lovel hurried by and on his shoulder he carried old "Ore-bed." He had smuggled in the only gun that I saw. I ran after him and said, "Sam, what are you up to?" and he told me that Rowland Robinson was coming, and that he and Uncle 'Lisha were mustering all New Englanders to give him welcome—"Come on." And when the good man came with sight restored and white hair and beard waving in the celestial zephyrs, like the plumes of Navarre, we cheered that Vermonter as only one other has been cheered, and then he led us in singing "Hurrah for old New England and her cloud-capped granite hills."

Daniel Boone, Dave Crockett, Kit Carson and the illustrious Buffalo Bill had organized a new Wild West Show, and the Rough Riders, led by our Teddy, did well their stunt. The impression gained from the earthly pictorial illustrations that the only angels having wings were women and children was verified, and the men do not fly about as on earth. All is passive, and the genial editor of the FOREST AND STREAM, with blue pencil over ear and shears pendent from his neck with golden chain, like Aguinaldo's whistle, informed me that he was to publish a new periodical called the "Spiritual Sportsman." All would be on the free list, and the paper would reach all old subscribers quickly under the impulse of a special delivery stamp. His old friends and correspondents were with him—all save Ransacker, who had remained below with chip on his shoulder waiting to have some one tell him what a sportsman is. Pine Tree, no longer sitting at his tent front on the great waterless Kansas prairie and harking back to the Hatfield Meadows and his boyhood days, is where we all see him, and I grasp his hand in comradeship, and while talking about the Connecticut River we heard in the distance the notes of the "Huntsman's Song." It was played upon the calliope operated by liquid air in expansion, and from around a bend in the silver-paved boulevard there came an automobile golden chariot propelled by that mysterious "power behind the throne," and Nimrod, "mighty hunter before the Lord," was motorman, and Didymus, from the Floridian everglades, was footman, and he said: "Say, you two exterminatory peregrinators, get in, climb up.

"'Climb into the band wagon;
Sit upon the golden dragon;
Sound the post horn; beat the drum;
Sand the tracks, let motor hum.'"

We rolled away for leagues, and amid fields Elysian, where grew all the flowers that clustered around my boyhood home in the New England hills. There were hollyhocks, sunflowers, marigolds, purple and white lilacs, asters, tiger lilies, white and yellow daisies, goldenrod, and the wild rose crept and carried its blossoms over the hedges and palisades. In the water near the lacustral shores the pond lilies bloomed and dispensed their nectaral perfume to mingle with that of the wild honeysuckle, and the game fish of the lake leaped into the bright light with sparkling sides, to fall back and send showers of iridescent spray into rainbow coloring.

Anon we passed an inclosed field on the uplands, and wandering about in corduroy and canvas clothing were hundreds of obsolete sportsmen, and I asked Didymus if they were game hogs in pound, and he, disgusted at the inelegant expression, jostled me and I fell—fell like a snowflake from Heaven to—to—well, to that hole back of the tree where I had gone to sleep in camp. It was dark around me, and the night dew falling on the dead leaves to prepare them for the morrow's fermentation in the sun's rays made with the darkness a dismal and damp contrast to the light and warm dryness of the happy hunting ground I had just been so rudely ejected from. I wondered if that boy guide had aught to do with hurrying me back, and I thought that if he had I would gladly attend his funeral, and even pay out a few dollars for flowers and let him take his chances of going where I did without a letter of introduction from me. But the boy was honest and faithful, for I heard a shot on the mountain and saw a glimmer of a lantern, and he, like Diogenes, was looking for an honest man. Two shots from the camp in reply brought him back, and he said:

"I thought you were lost. Where have you been?"

"A long way off, Eri, but I came back quickly."

While getting supper he was uneasy, and at the table he asked me again where I had been.

"I went to Heaven, boy."

The white of his eyes shone in the lantern light, and he stopped eating and said:

"Well, you must have had a high time."

The hot coffee that I was drinking met the exploding mirth from my lungs somewhere near the foot of the back stairs of my nose and I choked, and my cup ran over, and to avoid the scalding I arose quickly and upset the bench upon which he sat, and he went to the floor with the paper tablecloth that he grasped for safety, and all that was on it. We saved what we could and finished the meal, and he was consoled with a Pittsburg stogie while I reserved a Garcia Perfecto.

Then, taking candle and climbing the ladder to sleep aloft, we disrobed with no fear of "Peeping Toms," while the millers and moths batted against the unshaded glass to reach the candle flame. The bed-making process consisted only in arranging the new horse blankets in such a way that the neck buckle would not scratch "beauty that unadorned is adorned the most."

I slept out the night quietly, and before daylight tickled the feet of that boy with the burnt end of a still hot match and "Awoke him once, and he said: 'Awake me again.'" The words "deer hunting" brought him out, and we left the cabin, and a short distance away the fog from the mountain side hid it from sight. Say, you hunters, is not the dawn of day, or just before dawn, the best part of it? If you have been out at that time you know all about it, and if you haven't it will do no good to describe the joyful thrill. That morning, when the eastern gray light came in flat beneath the tree tops, I saw a buck coming out of the valley 150 yards away, and pointing him out to the boy, said: "Hit him on the run and he is yours." When he was ready a slight noise startled the deer, and as he went flying away the rifle cracked, the flag dropped, and then the buck—that boy had done it. Whirr, whirr, from the bushes, and crack, crack, from the shotgun—a deer and two grouse had come to us in a fair fight, and we trussed up the deer where he fell; and at the cabin fifteen birds hung where thirteen had hung before, side by side, with feathers touching, and I said to the boy, Eri:

"When the line reaches to the other end of the cabin I am going home. We are in for hot weather, and your meat will spoil. Go out for a pack horse and take in the deer and give it to the man who has been kind to you all summer by providing you with work."

I knew that was what he wanted, but he felt that the deer was mine and said so, and I reminded him of the fine heads that I have at home and of my statement made previously that I would not shoot another deer. It is not all of life to live, nor all of a hunt to kill. He got the horse, went out and came back the next morning happy.

The days grew warmer, the string of birds was complete, and one dry morning we cleaned camp and put all in order and left what seemed to me to be home. We took enough coffee and food to allow staying at the old open camp till the next morning, and after three miles of hot work reached it. In making the coffee over the open fire the nail in the end of the golf club burned out and the pail and its contents were spilled into the fire. The next attempt unsoldered the pail, and the second mess followed the first. The boy succeeded with the third portion, but we had none left for supper or for breakfast the next day, and inasmuch as I had rather be at home with coffee than in the woods without it, we started anew for the lake, seven whole miles away. But say, it was hot! and the only redeeming feature was that there was no chump around to say "Is it hot enough for you?" The pack weighed 45 pounds; the rifle 8, and the shotgun 7½ more, and there was no air stirring except what we moved, and perspiration ran off of my bald head in streams, and what little hair I have was dripping with moisture. The sweat blinded me as I stumbled along, and that boy said: "You ought to have gutters on your eyebrows." I made up for the leakage at every spring hole and brook, and we kept up steam until at last I tumbled into the bathtub at the hotel.

On the way out that old pack horse called "Doctor" passed us, and he bore the burdens of a lawyer sportsman from Kingston, N. Y. This lawyer was a giant in stature, and a typical sportsman, willing to spend his money, happy himself, though his luck was poor, and he spread an atmosphere about him that was a positve refutation of the anomaly "Circumstances make the man." The old horse remembered me, and he remembered that two years ago he threw me off and in the mud, the depth and thickness of which I have never seen since, and while resting on the trail side this year he came ambling up, and placing his grizzled head on my shoulder laughed with me, and we renewed a former friendship. I think that many readers of FOREST AND STREAM know the old horse, or of him, and that they love him as I do.

Upon the day of reaching the lake a Brooklyn lady with rare skill and the necessary paraphernalia secured a fine lot of small-mouthed bass. I complimented her to the extent of receiving an invitation to sit at their table, and Mr. Stevens, an expert angler himself, seemed pleased that Adam lost a rib in primeval times.

The tale is nearly told, and I am writing the last of it as the train speeds along the Mohawk Valley, where long years ago Isaac Joques the devoted Jesuit missionary, sacrificed himself piece by piece to the Indians in an endeavor to bring them into the fold, and the work of converting the heathen still goes on; and to-morrow—Sunday—as I sit at home at the midday meal of broiled grouse, One Lung, High Ball and Gin Sling will amble past the house on noiseless sneakers, with Bible up one sleeve and a pack of cards up the other, on the way to Sunday school, and entering while still chuckling at the result of a dog fight in front of the church, receive a chiding for their sporting proclivities, and the religious instruction meekly, while their almond eyes beam upon the Melican girl teacher.

There is an end to everything but a spliced rope, and in closing I trust that the sportsman reader will look upon the invasion of the happy hunting ground as but a dream, which in due time will be a reality, and that all will meet there.

After the hoops come off of the barrels,
And there is nothing to hold up the staves;
After the bung holes float off on the zephyrs
And all heads are low in their graves.

After Gabriel sounds the last trumpet call and shouts "All ashore that's going ashore—last call!" may we meet there, and then let me caution you to be discreet in conversation, inasmuch as away back, nearly nineteen centuries ago, the Pharisees were unable to answer a word and durst not ask more questions.

W. W. HASTINGS.

A Welcome for the Boy.

WYMORE, Neb., Nov. 13.—*Editor Forest and Stream:* There were expressions of delight in the family circle Sunday morning, when the announcement was read in FOREST AND STREAM that Mr. Rowland E. Robinson would continue the Danvis stories and tell us how Sam Lovel's boy acquired the "art of being a boy."

"Good! Bub will have a name now. Yes, and we shall have Uncle Lisher and Aunt Jerusha and Sam and Huldah and Antwine and Peltier, and all the old friends with us again. Won't that be jolly!" And so the comments ran. No books ever entered our house that gave more genuine pleasure than the four by Mr. Robinson: "Uncle Lisha's Shop," "Sam Lovel's Camps," "Danvis Folks" and "Uncle Lisha's Outing." They were read twice aloud to the family and once in the sick room, and each of the characters seems like a dear old friend to us all. And to hear some members of the family talk you would think they had been raised in old Vermont in the days of Granther Hill, "seems as how you would."

And while I am talking about books, there is another that belongs in the same class with those named above, and that is "Men I have Fished With," by Col. Fred Mather. When I want to get near to nature's heart I take this book and read the three chapters of "Antoine Gardepee." This is an outing classic that I dearly love. Are we never to have volume two?

I wish all the good things published in FOREST AND STREAM since I have been a reader of it were published in book form; one series in particular I remember was "Tales Told by the Camp Fire." I wish I had it, but have not even a copy of the paper that contains one. Well, I must close, and go out and shoot some quail.

A. D. MCCANDLESS.

A Well Poised Grouse.

APROPOS of the grouse meeting illustrated in the drawing of "A Country Road" in our issue of Nov. 4, Mr. J. L. Davison writes of another experience last September: "After dinner on Sunday I lit a cigar and started for a walk to a small piece of woods within the village limits, and within five minutes I walked up within a rod of a cock grouse under a small tree. Did he fly? No, indeed! He just spread his tail and ruff, and majestically walked out of sight under some small hemlock trees, as if he was lord of all creation."

Cruising on the West Coast.

FORT MYERS, Fla., Nov. 13.—Have just arrived from up the Caloosahatchee. Could not get through to Okeechobee. Water too low. Birds are plenty. Saw more plume birds than I have seen in five years. Game fairly plenty. Hunters, ditto. We go from here south as far as Panther Key—perhaps further. Shall see Old John if he is alive. Will tell you about it later. TARPON.

Beyond Mad River Mountain.

THINKING that perhaps a large number of the readers of the FOREST AND STREAM who have always lived in the old settled parts of country where large game such as deer and bear have long since become extinct through the onward march of civilization would like to hear something from a section of country where such game is still to be found in large number, I hope the following may prove of some little interest to them.

Having lived in Kentucky until three years ago, I had never had an opportunity of hunting anything but quail and cottontail rabbits, so you may imagine with what interest I listened to the tales of the old Forty-niners about the big game in the north Sierra Nevada Mountains. In July of last year I decided to organize a small party for an expedition in search of big game and adventure. The party consisted of Mr. Roy Sousley, a young Kentuckian; Mr. Jule Egger, of New York, and myself. The trip extended over a period of nearly three months,

Purchasing a full line of hunting and camping supplies in San Francisco, we embarked in a small sailing vessel for the north California coast. The trip was a pleasant one until we reached Cape Mendocino, about 200 miles above Frisco, where we encountered one of the most terrific storms of the year. Every one was ordered below, and the hatches were securely fastened down.

By permission of the captain Roy and I remained on deck dressed in our almost waterproof hunting suits, and if you want an experience that you will likely remember just remain on the deck of a small sailing vessel when the sea is breaking over her mountain high.

We were soon drenched to the skin, and were well satisfied to go below. Our game little vessel, after battling with the sea all night and the next day, landed us at Eureka, a little hamlet of a few hundred souls, entirely without railroad, telegraph or telephone connection with the outside world.

After a good night's rest in a bed that was not standing on one end half the time and on the other end the other half, we went to a neighboring stable to procure our pack horses, for as we were going into a section of country where there were no roads we could only use pack horses, wagons being out of the question. It was our intention to take four horses, one for each to ride, and one to carry most of our provisions; but when we informed the villager of the section we intended to explore, we were advised to abandon the trip, for they said that the mountains in summer were as barren as a desert, our horses would starve to death and we would be compelled to return.

At this we were indeed greatly disappointed and came near losing one of our party, who wished to return to Frisco; but we were determined to go on at any cost, and finally persuaded him to contnue with us.

After a consultation we decided to take only one pack animal to carry our provisions, and to make the trip on foot, thinking it better to starve only one horse than four.

Taking only such provisions as were absolutely necessary, such as bacon, lard, flour, rice, prunes and coffee, packing them on the horse, and strapping guns and ammunition on our backs, together with a few cooking utensils, we were ready to start. A crowd of about 100 persons had gathered about us, and amid shouts of "I'll give them four days to get back," and "They'll never reach the top of Mad River Mountain," we turned our faces to the north and our backs on Eureka.

We had traveled six or eight miles, when we came upon a country store called Freshwater, situated at the foot of a mountain. Indicating the direction we wished to go, we were informed it would be necessary for us to climb that mountain, the summit of which was 2,700 feet above where we stood. We commenced the ascent by a narrow winding road, which led us through a forest of gigantic redwoods or "big trees." They were indeed gigantic, but not so large as the big trees of Mariposa and Calaveras, in the region of Yosemite Valley. About half-way up the mountain we stopped for a light lunch, then proceeded to the summit, and to our great surprise found the top of the mountain covered with a most luxuriant growth of grass, reaching almost to a man's waist, and we began to think there was nothing in the tales that our horses would starve to death.

The sight from the top was indeed grand. Stretching away from its base to the banks of Humboldt Bay lay the valley we had just crossed, and beyond rolled the mighty waters of the great sea. The sun was just sinking behind a bank of white clouds, which added beauty to the scene. Being fresh from the city and unaccustomed to mountain climbing, we were tired out, and after a camp supper rolled up in our blankets, threw ourselves upon the ground, with nothing above us but the stars, and were soon fast asleep. Waking up about sunrise, we found our blankets drenched with dew. I mention this heavy dew for the reason, that, after this, night after night, week after week, we slept on the ground with no shelter, and not one drop of rain or dew moistened our shaggy faces.

After breakfast we were soon on the journey. Winding our way down the side of the mountain, we had traveled only a few hundred yards, when every vestige of green vegetation disappeared. What a contrast between this and the oasis we had just left. Anything that had probably grown there in the early spring had been dried to dust by the scorching rays of the sun.

On and on we tramped, hour after hour, through this parched section of the country, until 3 o'clock in the afternoon, when we came upon a small spring oozing from the base of a cliff, and encamped for the night. An accident occurred here which came nearly costing Jule a part of one hand. He and Roy had gone to cut wood for a fire. Roy, handling the axe and directing Jule to hold the stick, slashed away, driving the axe into the base of Jule's thumb, nearly severing that member. Fortunately I was well supplied with a medical and surgical outfit, and soon had the wound sewed up and Jule made comfortable.

By the time we had prepared and disposed of our meal night had settled around us. One of the boys, glancing upward, saw two shining balls of fire high up in a tree. We knew at once that they were the eyes of some animal, but could not make out what it was. The moon by this time had risen well up, and moving around until the fiery orbs were directly between us and the silvery background I took a rifle, and with a bang and a thud our game was on the ground. Hurrying to the spot, we found a ferocious wildcat. You may know that we felt relieved that he was out of the way before we rolled in our blankets for the night. Still, if there was one, there might be more, and you may be sure that that night we slept with one eye open, but were not disturbed.

As this part of the country through which we were passing was so destitute of pasturage we decided to push forward as rapidly as possible, with the hope of finding something upon which our horse could feed, so we were up and on the road before sunrise.

After a short distance of travel we began a rapid descent, and soon found ourselves on the bank of a river which we took to be the Mad River, spoken of by the villagers, and indeed it deserved its name, for such a wild and terrific confusion I had never seen in the bed of a stream before. Rocks of almost every conceivable size lie embedded in her sandy bottom, having fallen from the towering cliffs above. Had some tremendous upheaval occurred here the confusion could not have been greater. The stream itself had almost dried up, but what a sight this must be in the early spring, when the mountains for miles around yield their snow to the liquefying influence of old Sol and the waters rush through this narrow channel in their mad race to the sea!

To follow the course of this river would be an impossibility, so nothing was left but to climb the mountain on the opposite side, and it took hours of the most laborious work we had ever undertaken to accomplish this. We were compelled to stop a number of times from sheer exhaustion.

Reaching the summit, we stopped for a lunch; but as far as the eye could reach not a sprig of anything green could be seen for the horse, which was already showing signs of exhaustion from the scanty amount of food he had had since we left the redwood mountain. Thinking of a bag that contained about 30 pounds of rice among our stock of provisions, we decided to feed him some of it, which he ate greedily.

On and on we tramped, mile after mile, through this barren waste of mountains, for three days, most of the time without water, and not a bird nor any other living thing did we see. During this time the horse was making inroads on our bag of rice at an alarming rate, and we knew it would be only a short time until it would be exhausted, and then he would have to be turned loose to starve or his miserable existence ended with a bullet. Hoping to find better country, we decided to wait one more day before destroying our faithful friend.

By way of avoiding the steepest mountain, we had worked our way to the lower land again, and traveling on came to a perpendicular cliff which rose several hundred feet from the edge of a dried up stream, and seemed to bar all further progress in that direction. However, after a little investigation we discovered a ravine leading over the top of the cliff and on up the mountain. Through this we made our way. The ascent was the steepest we had yet encountered. The midday sun was beating down upon the rocks and parched earth until they emitted heat like a furnace.

On and on we dragged our way to within about 200 yards of the summit, when the horse began bleeding at the nose from the high altitude and exertion, and one of the party sank to the ground with a sunstroke. What a place for such an accident! Not a drop of water was near, for it must be at least eight miles back to the last spring. Quickly unpacking the horse we improvised a tent with the blankets to shelter the patient from the sun. Water must be had, and Roy volunteered to go back down the mountain for it, taking the thirsty horse with him. It was late in the night before he returned, but thanks to his efforts he brought a good supply of the refreshing liquid, and the patient rapidly grew better under its influence. One of the peculiarities of these mountains is that no matter how hot the days the nights are invariably cool, and this night was no exception, for before morning we had to wrap snugly in the blankets to keep from shivering with cold. The cool night air had its good effect on our patient, and at daybreak he was up with the rest of us.

After disposing of breakfast we decided it would be folly to venture further in these desert mountains, and that the safetst plan would be to hasten back as rapidly as possible to civilization.

Examining the bag of rice, we found there was not enough left to keep the horse alive until we could reach pasturage, so we decided to shoot him rather than turn him loose to die of starvation. But who could have the heart to shoot the faithful beast which had packed our provisions for days and days? It would indeed seem like shooting one of ourselves. However, it must be done, so we casts lots, and it fell to me.

Picking up a rifle and taking the poor brute by the halter, I started toward a dense clump of dried bushes some 50 yards away with the intention of making him fast, so that if the first shot did not kill him he could not dash away wounded, thus adding to his torture. I had reached the edge of the bushes, when I was startled by a rushing, sweeping noise, and looked up to see a fine buck deer dash away toward the summit. Dropping the halter of the horse I fired two ineffective shots at the fleeing shadow. The boys, who had been watching from the distance, took in the situation at once, and a yell went up that fairly deafening.

We realized instantly that if deer could live here there must be better country near at hand. Hastily packing up our effects, we made for the summit in the direction the deer had gone, and less than 300 yards on the other side we met a sight that fairly transformed us into other beings. Stretching away down the mountain side into a vast valley lay one of the most beautiful sections of country I have ever seen; trees innumerable, large and small, of every variety known to that region, grew beautiful and green; a luxuriant growth of grass covered the ground waist deep; the chirping of birds was heard on all sides; squirrels with their bushy tails curled over their backs leaped from limb to limb; quail and grouse flew up in large droves here and there; deer, sometimes one, sometimes three or four together, would start up at our intrusion and dash away.

Could this great change be a reality, or was this the mirage of maddened brain, diseased from the intense sun of days before? No, it was a reality—a hunter's paradise!

Making our way to the valley, we came upon a creek varying in depth from 1 to 6 or 8 feet, and filled with fish. Here we encamped.

Having been without fresh meat for days, we must have a deer, so we set out for a hunt. We had gone only a short distance, when we came upon several, but we experienced all the nervousness of the new hunter for big game, and our shots went wild. However, our nerves soon became steadier, and we bagged a fine buck and carried him to camp. That night, after a hearty meal of venison steak, we gathered around the camp-fire, lit our pipes and were thoroughly enjoying the situation. The night was still, not a murmur was heard but the wind sifting its way through the tops of the trees, and the fire had died down to a few smoldering coals, when there came a splash! splash! splash! from the stream, not 20 yards away.

The night was dark, but not dark enough to prevent our making out the form of a bear on its way across the stream. Old bruin had smelt the fresh blood from our newly slaughtered deer, and had come down to investigate. Going direct to the spot, he proceeded to make a hearty meal from the undesirable parts we had thrown away. We did not stir, and so intent was he upon his meal that he seemed unaware of our presence. Having satisfied his appetite, he made his way back across the stream and disappeared in the forest.

It was late in the afternon of the following day when we returned to camp from another hunt, bringing in three deer and eight grouse. Dressing the game and swinging it high in a tree, out of the reach of any animals that might pay us a visit, we built up a log fire, ate supper and rolled in our blankets for the night. How long we had been asleep I am unable to say, but we were awakened by something that sounded like a human voice coming from away up the mountain. Listening, we soon realized that it was getting nearer and made answer.

Presently into camp rushed a fellow with "Hello, thar, boys, by gad I'm glad to see yer! I ain't seen a man fer so long Ise most fergot how he looked. How in ther devil did yer fellows git in here?" We explained where we were from and our mission. Our new friend proved to be a miner, by name Paddy Miles. He was a man probaly fifty years of age, slightly above the medium height, but with a massive frame that would do credit to a giant, a mass of black hair, fully 20 inches in length, hanging down over his shoulders, and a beard reaching half-way to his waist. This is his story:

About four miles by a winding way up the mountain he had built a little cabin, where he came to live each summer. He was suffering with a severe toothache and could not sleep, so coming out of the cabin he discovered our camp-fire and came down "to see what the devil it meant; didn't think I'd see white men—thought I'd run on a band of them redskins from 'way up North." He explained that a small party of Indians had passed through that section three summers before.

Having a pair of dental forceps in my surgical case, I extracted the offensive masticator, which put our new friend in great spirits. He said, "That's being lifted outer trouble to get rid of that acher. I know you fellers ain't miners, so I don't min' tellin' yer a few things. I've got a mine up here in these hills, and I come here every summer, dig out a few hundred or so in gold and then go back to the burg and live like a king in the winter. Folks down thar at the burg would like mighty well to know whar Paddy goes, but I always give 'em the slip when the snow melts, and they don't see Paddy till the snow comes ag'in."

The "burg" spoken of by Paddy was a little village that lay more than a hundred miles to the south. Paddy was a hunter as well as a miner. We explained about the visit of the bear the night before, and told him we were preparing to hunt him down the next day.

"Well," he said, "thar's plenty bear in here, but yer needn't fix your caps fer that, 'cause yer could hunt for a whole week and wouldn't see a hair of 'em, he'd keep so far in front. It takes a dog to find them slippery cusses, an' I got two up at the cabin—best that ever sniffed a trail."

With this he drew a cow's horn from his shirt bosom, sounded two long blasts, and down the mountain came two dogs, yelping at every bound. Paddy remained the rest of the night with us, and promised us a bear hunt with his dogs the next day.

We were up and off long before daybreak, and had traveled about a mile, when the dogs were heard to bark and Paddy exclaimed, "Thar! they've got a trail, an' they'll have him up a stump afore yer kin wink yer eye." Well, we were compelled by twigs and branches striking up in the face to "wink our eye" many times as we rushed forward in hot pursuit up and down the side of the mountain, climbing in and out of gulches and ravines and hugging the edges of almost perpendicular cliffs for two hours before they "had him up a stump."

Finally, hearing an unusually loud barking, and hurrying to the spot, we found a tree about the size of a man's body projecting over a cliff, some 20 feet high, and up this was old bruin, all defiance. Quite an argument arose as to who would do the shooting. We each wanted to, as this was our first bear. We were about to toss a coin to decide the matter, when the bear decided it for us. Starting back down the tree, with the white froth flowing from his mouth, it was evident he inteded making an attack. Three shots rang out almost simultaneously, and his fighting days were over. After this we had several bear hunts with Paddy and his dogs and killed two more.

Returning after the hunt just described, we moved our camp up to Paddy's cabin and remained there about six weeks.

How far this beautiful section of country extended I am not able to state, but we hunted over miles and miles of it, and were never at a loss for an abundance of game, although after the first week or two the novelty of shooting deer wore off somewhat. We killed only enough to supply the camp with meat.

There is one incident of this trip that I hesitate to relate, fearing my readers may think I am "stretching the blanket" a bit, but as it actually occurred and is neces-

sarily a part of the history of the trip I feel that this article would be incomplete without it.

We had been at Paddy's cabin probably three weeks, when our stock of coffee and flour began to run low. Laying the matter before Paddy, we were informed that about thirty or forty miles across the mountain lived an old miner, who usually had a good supply of provisions, and would probably sell us what we needed, so we decided to dispatch Jule on horseback for the necessary articles. He was on his way before sunrise of the following day. We thought he should reach his destination by evening, rest over night and return to camp late the next day; but the next day and the time we expected him to return came and passed, together with a greater portion of the following day, and still no Jule appeared.

Fearing he had met with accident, we decided to institute a search. So leaving Paddy at the camp, Roy and I set out across the mountains on foot. We were pushing along through a thickly wooded section at the base of a mountain, the sun had gone down, and that time of day called twilight was setting in, when we heard a rustling of the leaves and branches, and looked up to see a large brown bear not 20 yards away, coming down the mountain.

From the manner in which he was moving, it was evident he was unaware of our presence, and would have passed on had not Roy, who was carrying a shotgun (which contained only a charge of small bird-shot) thrown it to his shoulder and fired. This was the most unfortunate thing that could have happened, for it did no further damage than sting him into a violent rage, and with a vicious snort he made at us. I being in front received his attention. I made for a small tree not larger around than a man's head, Roy for another. I did not have time to climb it; there was no other chance of escape, and I saw there was nothing left but to fight. Drawing my hunting knife, which fortunately was a large one, and using the tree for protection, I drove it into his heaving side, with all the power I could command. This for a moment—but only for a moment—checked his onslaught, and I saw nothing short of death would stop him.

One of the peculiarities of a bear in making an attack is that he will invariably raise on his hind legs, with the intention of grasping you with his paws. This gave me a great advantage, for each time he would raise up his movements necessarily became slower, and with a lunge I would drive the knife into his breast, hoping to reach some vital spot and end the struggle.

Around and around the tree we went, the bloody froth pouring from his mouth and nostrils—the knife had entered his lungs. Was ever a beast so vicious before, and would he never succumb to those terrific thrusts? How long we fought I do not know, but it seemed a week. Finally he staggered and almost fell. The loss of blood was telling, but he rallied and came again. This time, however, he was slower, and I was better able to choose my place to strike.

Throwing myself forward and straining every muscle, I plunged the knife into his neck, severing the windpipe, and he sank to the ground in a heap. Springing upon him with an agility born of desperation, I drove the knife again into his carcass to make sure that the fight was ended, and it did not end any too soon, for had it lasted a few minutes longer I surely should have succumbed to exhaustion. The sleeves of my sweater were torn into shreds and my arms were scratched and bleeding, but the tree had protected my body from injury. In fact, had it not been for this small tree I fear I would not be here now to write this account of it.

Examining the body, we found seventeen knife wounds that had been inflicted; however, a number of them were made after he had fallen. A few minutes after this Jule came riding up, having secured a good supply of coffee and flour, and we made back to camp.

To give the reader an idea of the amount of game in this section, I think it will be safe to say that had we so desired we could have killed a hundred or more deer and other game in large numbers during our stay.

Frequently we would awake in the morning to find Paddy missing. He usually remained away all day, returning about night. These expeditions we of course surmised were to his mine. However, we made no attempt to watch him, feeling he did not care for us to know of its location. Finally one day Paddy inquired how much longer we intended to remain, and being informed that we would take our departure within three or four days,, requested us to wait until the end of the following week, when he would be ready to return to the "burg," and would show us a way out of the country much easier of travel than the way we had come in. To this we gladly consented.

On the day before we were ready to break camp Paddy asked me to accompany him on a little hunt, and we started off together. We were moving down the side of the mountain probably a mile or more from camp. Paddy had marched along for some distance without uttering a word; his eyes were fixed on the ground, and he seemed in a deep study. Presently he turned around and said, "Look er here, pard, you've done me some good turns since you've been here, 'specially pullin' that darned tooth, for I spect I'd er had toothache all summer ef it hadn't been fer you, and ef you tell me I kin trust you never to tell a soul I'll show you what no other livin' man ever seed before, my mine."

Extending my hand at once to seal the promise of secrecy, we started on. Pushing our way further down the mountain, we came to a deep ravine, and climbing down into it, followed along its course for some distance; then taking another smaller one leading to the left, where we were compelled to wade in water up to our knees most of the way, we finally came to a black tunnel-shaped hole in the side of the mountain, large enough to walk in without stooping.

Lighting a pine torch, we entered. To an inexperienced eye it seemed nothing more than a tunnel in a bank of sand and gravel.

"Well, pard, we're here, and I'll show you what 'tis to dig out gold," said Paddy. Taking a miner's pan which was handy, he put in three of four shovels of sand and gravel, walked back to the stream and proceeded in true miner's fashion to wash the sand and gravel from the glittering nuggets. After he had finished, he exclaimed: "By gosh, Pard, she's gettin' richer every foot—there's nigh on to three dollars in that pan." That amount is considered by miners to be a very large yield to "the pan of dirt."

"Now," he said, "you've promised never to tell a soul, but I'll say this: I ain't got no kin livin', and Paddy will never tell any one else, and I ain't going to live all the time, so if ever you hear of me bein' dead you can come here and take it for yourself. Now, I'll put this in with the rest," indicating the gold he had pust panned out, "and show you what I'm goin' to take back to the burg."

Pulling aside a rock which covered a hole in the sand, he drew forth a bag, which he said contained "eight hundred or so."

"Paddy," said I, "what name have you given your mine?" He answered, "I ain't named her." Upon this I asked him the privilege of naming the mine, and said. "If you agree, I shall name her after one of the most beautiful girls in old Kentucky, my native State. We shall call her the Alice Castleman."

I trust the lady in question will pardon the liberty I, a stranger, to her, took in using her name—for he consented at once, saying, "That's fine, by gosh! An' ef she's as purty as them shining nuggets I'd just like to dig out enough to go thar and see her."

So now there lies buried away in one of the most inaccessible sections of the great Sierra Nevada Range one of nature's treasure vaults, bearing the name of one of Kentucky's fairest daughters.

DR. F. S. BYINGTON.

SAN FRANCISCO.

Philander Simmons.

DENVER, Colo., Nov. 15.—*Editor Forest and Stream:* I hand you newspaper notices of the death of one of the few remaining old-time mountaineers of this region. I knew him very well. The papers treated him very fairly and with reasonable correctness. He was buried the 13th by the Colorado Pioneers in the ground of the society.

WM. N. BYERS.

We quote from the Rocky Mountain News report Mr. Byers sends:

Philander Simmons, pioneer of Colorado and the West, mountaineer, trapper, miner and guide, died at the county hospital yesterday afternoon. Death was due to the infirmities of old age and the wear and tear upon his constitution during a life of hardship in the wildest part of the West.

Three years ago the old pioneer, upon earnest solicitation, wrote an autobiography. The manuscript of this book is now in the possession of Nathan A. Baker, of 1525 West Fourteenth avenue, and he says that it will be published soon.

The story of the life of Philander Simmons reads like a romance. Its scenes are laid in all parts of the globe, and the adventures participated in by him are thrilling in the extreme, so many and of such a varied nature that perhaps few living men can lay claim to a similar life history. He was born at Batavia, N. Y., in 1821, and celebrated his seventy-eighth birthday last summer. In his biography he states that his parents died when he was very young, and that he was thrown upon the world at the age of fourteen.

Always having a strong liking for the sea, he made his way to New York and became a member of the crew of a whaling ship bound for the Southern Pacific. On this ship he went around Cape Horn and spent some time in Chilian waters. The vessel cruised about for months, and then went to the Sandwich Islands, where he met an old man and woman who told him the story of the murder of Capt. Cook, which they had witnessed. From there the ship went to Japan, and eventually returned to New York.

In 1836 Mr. Simmons left St. Louis, where he had drifted with a trading party bound for Mexico, but the party failed to get through. Leaving this party he spent some time on the plains, and eventually fell in with Bill Williams, one of the old trappers.

Accompanying this character he made his way up the Arkansas River to a point near where East Pueblo now stands, reaching there in 1842. From there he went to Fort Laramie, visited Sand Creek and went up the Ute Pass in the vicinity of where Manitou now stands.

That was the first visit of Philander Simmons to Colorado. He made several subsequent visits to the State. Probably the most important of these was the one in which he piloted the famous Cherokee expedition to Pike's Peak in 1858. His own account of that expedition has appeared in public print and is very clear and interesting indeed.

Upon his first visit he remained but a short time and put in most of his time hunting and trapping in the vicinity of Fort Laramie. For some time he was with the trader Bent, and visited the old fort named after that dealer.

In his travels about the State he followed the Platte River to where Denver now stands. The biography is very interesting at this point. The writer tells of killing a big buffalo on the ground where now stands the eastern section of the city, and one member of the party killed a bear on the site of West Denver, and two deer were killed in the forests where now is North Denver.

While he was at Bisinet's Fort, Simmons met John C. Fremont, who was then on his first expedition. In 1884 he returned to St. Louis, and in the same year returned to Colorado with a teaming outfit. On this visit he engaged in the trading business himself and made trips into the Crow Nation and the Blackfeet Indian country. During this visit to the country he became acquainted with Jim Beckwith, Kit Carson and many other famous characters of the time.

In 1848 he again returned to St. Louis, met General Fremont and was urged to accompany him on his famous trip into the Rocky Mountains. He attended the funeral of General Kearny. Simmons refused to accompany Fremont and went to St. Paul and from there again worked his way westward, and eventually returned to Colorado in 1852.

After various adventures on the plains and in the mountains he went to San Francisco, reaching there in 1855 and going from there to St. Louis via Nicaragua and the Mississippi River. From there he went to the lead fields of southwestern Missouri and in 1858 joined the famous Cherokee expedition, which he assisted in guiding to Pike's Peak.

Simmons did not remain with this expedition until the gold discoveries were made, but went to the city of Taos and from there to New Mexico and Texas. While he was driving stage in Texas he heard of the gold discoveries and returned to the State and went to the scenes of the alleged discoveries. Finding them not to his liking he returned to Denver in 1859 and went from here to the Arkansas Valley country and from there to New Mexico.

Refusing to take any part in the war, he engaged in mining in the vicinity of Cañon City, Black Hawk, and went again to Santa Fé, Las Vegas and Albuquerque in 1866, and returned to Silver City in 1873. In 1874 he made another visit to St. Louis and returned the same year to Cañon City.

Since that time he has lived in Cañon City and Pueblo, being so worn out that he was maintained generally by his old pioneer friends or by the authorities out of the public funds. About 1895 he came to Denver and has lived here ever since. Members of the Pioneers' Association and others assisted in his maintenance, and he was for a time at the county poor farm. Later he was allowed to occupy a house owned by W. J. Curtis and lived in it for a short time. Three years ago he was allowed to move into the little cabin at 1926 Center street, owned by Nathan A. Baker.

True to his manner of living in his early days of roughing it on the plains and in the mountains, the pioneer lived much as a recluse. He refused absolutely to live in a house with other people, and kept his little cabin just as he did in the long ago when he was miles and miles from civilized habitations.

The little cabin was arranged in true frontier style, and in it the old pioneer appeared to be perfectly happy and contented to entertain all with his wonderful tales of adventure when the Indians roamed the plains. On the walls hung his rifle and long keen hunting knife, and the bundle of herbs which every old mountaineer learned to use in his dealing with Indians and the rude and primitive furniture made of the abode a sight that gave a glimpse into a past full of events.

Natural History.

American Ornithologists' Union.

THE seventh congress of the American Ornithologists' Union convened in Philadelphia Nov. 13 and continued until Thursday, the 16th.

The evening or business session was held in the Council Room, and the public meetings, commencing Tuesday, the 14th, in the Lecture Hall, of the Academy of Natural Sciences.

The active members present were Prof. Witmer Stone, of Philadelphia; William Brewster and C. F. Batchelder, of Cambridge, Mass.; Drs. J. A. Allen, Jonathan Dwight, Jr., and Messrs. Frank M. Chapman and William Dutcher, of New York city; Drs. Fisher, Merriam and Richmond and Mr. William Palmer, of Washington, D. C.; Chas. B. Cory, of Boston; Dr. Thos. S. Roberts, of Minneapolis; Hon. Geo. B. Sennett, of Youngstown, Ohio; William E. Saunders, of London, Ontario, and John H. Sage, of Portland, Conn.

The associate members present during the session were: Mrs. Julia Stockton Robins, Miss Lucy H. Baird, Miss Elisa W. Redfield, Miss Emeline Maddock, Josiah Hoopes, George Spencer Morris, C. J. Pennock, Samuel N. Rhoads, Wm. A. Shryock, Henry W. Fowler, W. E. Clyde Todd, Dr. Spencer Trotter, Dr. Thos. H. Montgomery, Jr., Frank L. Burns, David McCadden, Chas. A. Voelkner, C. Few Seiss, H. L. Coggins, Wm. L. Baily, August Koch, J. Harris Reed, I. N. DeHaven, Dr. W. E. Rotzell, Walter W. Maires, Joseph W. Tatum, Dr. W. E. Hughes, Ernest L. Clark, Arthur Cope Emlen, Ernest M. Evans, Stewardson Brown, Nathaniel E. Janney, Robert D. Carson, John A. Nelson, H. L. Coggins and Wm. M. Maule, of Pennsylvania; Mrs. Olive Thorne Miller, Miss Mary Mann Miller and Samuel Wright, of New York; F. C. Kirkwood and Henry H. Hindshaw, of Maryland; Vernon Bailey, H. C. Oberholser, Mrs. John Dewhurst Patten and Nelson R. Wood, of Washington, D. C.; Walter Deane, Geo. C. Deane, Reginald Heber Howe, Jr., R. M. Strong and J. D. Sornborger, of Massachusetts; John W. Daniel, Jr., of Virginia; Mrs. Elizabeth B. Davenport, of Vermont; Miss Margaret T. Hubbard, of Minnesota; Henry Hales, of New Jersey; Dr. Louis B. Bishop and Judge John N. Clark, of Connecticut

Robert Ridgway was re-elected President; Dr. C. Hart Merriam and Chas. B. Cory, Vice-Presidents; John H. Sage, Secretary; William Dutcher, Treasurer; Charles F. Batchelder, Frank M. Chapman, Ruthven Deane, Jonathan Dwight, Jr., A. K. Fisher, Thomas S. Roberts and Witmer Stone, Members of the Council.

W. R. Ogilvie Grant and Arthur H. Evans, of England, were elected corresponding members.

The report of the committee on protection of North American birds, read by its chairman, Mr. Witmer Stone, showed that an increased interest is taken in the preservation of wild bird life at the present time. Investigation proved that many of the birds now used in millinery were imported from countries where there are no bird laws. The committee had used its influence to prevent excessive collecting of eggs and skins for commercial purposes. The report will be published in the Auk, the official organ of the Union, and reprinted as a separate pamphlet.

A donation of $100 was reported as having been received from Miss Juliette A. Owen, of St. Joseph, Mo., an associate member of the Union, to be devoted to any ornithological purpose that might seem fitting to the Council. Miss Owen wrote that the amount sent was about the cost of the journey she expected to take in order to attend the congress, but was prevented from going.

By courtesy of Miss Lucy H. Baird, Witmer Stone was able to compile and read the letters of John J.

Audubon to Spencer F. Baird, then of Carlisle, Pa. These covered the period from the time Baird, as a lad, inquired of Audubon the identity of a fly-catcher, until about 1842.

The Union was honored by the presence of Dr. Samuel W. Woodhouse, of Philadelphia, after whom Prof. Baird named the Woodhouse's jay (*Aphelocoma woodhousei*) more than forty years ago. Dr. Woodhouse is hale and hearty and still interested in scientific work.

In view of the recent return of the Harriman Alaska Expedition, the story of the trip, as told by Dr. A. K. Fisher, proved of exceptional interest. The notes of the birds referred to were imitated by Mr. Fuertez, also a member of the Harriman party.

The Zoological Society of Philadelphia invited the members of the Union to visit its gardens, and like courtesy was extended by Dr. W. P. Wilson, director of the Philadelphia Commercial Museum, to visit the Exposition and also the two museums under his control.

On Friday, Nov. 17, after adjournment of the Union, at the invitation of Mr. W. H. Wetherill, owner of the property, Mr. Geo. Spencer Morris conducted a party to Mill Grove, on the Perkiomen, the former home of Audubon. Mrs. Morris F. Tyler, of New Haven, Conn., wife of the treasurer of Yale University, a granddaughter of Audubon, was one of the party.

The ornithological treasures contained in the museum of the Academy of Natural Sciences, the wealth of rare scientific volumes in its library, together with the enthusiasm displayed and cordial welcome shown by the local committee and members of the Union, proved an incentive to making the attendance of members much larger than at any previous congress of the Union. They came from various parts of the United States and Canada.

Invitations were received from the Governor of Michigan and the Mayor of Detroit to hold the 1900 congress in the latter city.

The next annual meeting will be in Cambridge, Mass., commencing Nov. 12, 1900.

Following is a list of the papers read at the sessions:

1. Notes on the Flammulated Screech Owls. Harry C. Oberholser.

2. Three Years' Migration Data on City Hall Tower, Philadelphia. Wm. L. Baily.

3. A Quantitative Study of Variation in the Smaller American Shrikes. Reuben M. Strong.

5. Bering Sea Arctic Snowflake (*Passerina hyperborea*) on its breeding grounds. C. Hart Merriam.

6. On the Plumages of Certain Boreal Birds. Frank M. Chapman.

7. On the Perfected Plumage of *Somateria spectabilis*. Arthur H. Norton.

8. The Summer Molting Plumage of Eider Ducks. Witmer Stone.

9. An Oregon Fish Hawk Colony. Vernon Bailey.

10. Exhibition of a series of field sketches made from absolutely fresh birds, showing the true life colors of the soft parts, mostly in the breeding season. Louis Agassiz Fuertes.

11. The Sequence of Plumages and Molts in Certain Families of North American Birds. Jonathan Dwight, Jr.

12. The Ranges of *Hylocichla fuscescens* and *Hylocichla f. salicicola*. Reginald Heber Howe, Jr.

13. On the Occurrence of the Egyptian Goose (*Chenalopex ægyptiaca*) in North America. Frank C. Kirkwood.

14. Remarks on Some of the Most Interesting Birds of the Harriman Arctic Expedition. A. K. Fisher.

15. Further Remarks on the Relationships of the Grackles of the Subgenus *Quiscalus*. Frank M. Chapman.

16. Audubon's Letters to Baird—compiled from copies of the originals kindly furnished by Miss Lucy H. Baird. Witmer Stone.

17. A Peculiar Sparrow Hawk. William Palmer.

18. The Requirements of a Faunal List. W. E. Clyde Todd.

19. Report of the A. O. U. Committee on Protection of N. A. Birds. Witmer Stone.

20. An Account of the Nesting of Franklin's Gull (*Larus franklinii*) in Southern Minnesota. Illustrated by lantern slides. Thos. S. Roberts.

21. Bird Studies with a Camera. Illustrated by lantern slides. Frank M. Chapman.

22. Home Life of Some Birds. Illustrated by lantern slides. Wm. Dutcher.

23. Slides—Series of Kingfisher, Gulls, etc. Wm. L. Baily.

24. The Effects of Wear upon Feathers. Illustrated by lantern slides. Jonathan Dwight, Jr.

26. Language of the Birds. Nelson R. Wood.

27. A New Wren from Alaska. Harry C. Oberholser.

28. The Molt of the Flight-Feathers in Various Orders of Birds. Witmer Stone.

29. Some Cuban Birds. Jno. W. Daniels, Jr.

30. On the Orientation of Birds. Capt. Gabriel Reynaud, French Army.

A Familiar Deer.

It was a sultry afternoon about the last of August, and we had been paddling since early morning up a wild and lonely river of northwestern Maine. We found ourselves in the midst of an excellent feeding ground for deer, extensive meadows on either side of the river. The guide ran the canoe close to the shore and stood up to see what game there chanced to be in the tall grass. Presently he whispered for me to stand. I eagerly but quietly obeyed, and perceived a small buck feeding about 100yds. from us.

After watching him for some time he began to show signs of nervousness, probably bashfulness, and we immediately observed that he had found our scent, and we also perceived that he was unable to tell from which direction it came. Finally he made a bold guess, but at the same time a serious mistake. Instead of taking to the woods he made straight for us. Each bound brought him nearer to the canoe, but he left off the last one, which would actually have brought him into the canoe if not beyond it into the water. We stood absolutely motionless, but the creature discovered our human forms when he had come within a yard or two of us, at which point, with eyes half out of his head, he stiffened his forefeet with surprising promptness, and turning, bolted for the woods like an Indian pursued by a small-pox germ.

If I had not been so dumbfounded at his sudden approach I actually believe I could have grasped his dainty horn or ear; but afterward would probably have regretted somewhat my affection.

J. S. Seabury.

Partridge Parasites.

Winterport, Me., Nov. 6.—*Editor Forest and Stream:* In dressing partridges this fall, in one I found a number of worms. The five that I took out were white and measured 2¼ to 2¾ inches. After being exposed to the air for a short time they turned pink. They seemed to lie between the intestines and the flesh; but I am not positive about that, as two dropped out. Later I went to examine the intestines and found three on the outside. Having killed partridges for a great many years and never seeing worms before is my excuse for this communication, thinking that it may lead to some knowledge as to why we have so few birds when the season has seemed favorable for the broods to develop.

Samuel Atwood.

Animals of New Jersey and Pennsylvania.

Philadelphia, Pa.—*Editor Forest and Stream:* The Academy of Natural Sciences has requested me to prepare a report on the mammals (furred animals) of Pennsylvania and New Jersey for publication in their "Proceedings." During the past seven years I have not only been making a complete collection of stuffed specimens of the living mammals of the two States and studying their range and habits, but have also been searching for all the records of those which have been exterminated or are becoming extinct.

Readers of Forest and Stream are earnestly invited to give me such information as they may on the points designated below:

Please give only the most reliable facts of which you have no reasonable doubt regarding those mammals on the list which have become very rare in your locality or are now extinct, giving in each case as near as possible the year of record, the name of person or persons making the capture or observation, and the place where said animal was captured or seen, and whether it was preserved and the specimen can now be examined.

Specimens of any of these animals are much desired. If sent in the flesh they should be disemboweled, and if too large to be sent by mail should be expressed to the Academy of Natural Sciences, Philadelphia, in my care.

Bison or Buffalo.—Give former range and when last seen.

Elk or Wapiti.—Give range and last killing, especially for northern New Jersey and southeastern Pennsylvania.

Virginia Deer.—Give present range. Number killed last season.

Snowshoe or White Rabbit.—Give past and present range. Specimens in flesh greatly desired.

Beaver.—Name old beaver dams and the date of last capture.

Porcupine.—Give range. Is it decreasing?

Ground Hog or Marmot.—Give its occurrence in South New Jersey.

Black Rat (not the gray or Norway rat).—Is it totally exterminated?

Cave or Cliff Rat.—A large hairy-tailed, long-eared rat found only in the mountains. Give range.

Water Rat (long-tailed; not the muskrat).—Found only on tide meadows of South New Jersey. Makes a floating nest like muskrat. Is two-thirds size of common rat and same color. Give places where it is found. Specimens much desired.

Black Squirrel.—How often seen. Is it as numerous as the gray squirrel?

Fox Squirrel.—Give range and recent capture. Send specimens.

Prairie Ground Squirrel.—A small bushy-tailed gray animal which was accidentally introduced from Illinois near Tuckerton, N. J., about 1873 and spread over the country almost as far as Red Lion. Living only in burrows in the open country. Is it exterminated? Give last date of capture.

Least Weasel.—Only found in higher Alleghanies; much smaller than common weasel, with tail only 2 inches long. Am anxious to see specimens of this rare animal.

Otter.—Is it exterminated in your region?

Wildcat.—Records and specimens from New Jersey specially desired.

Canada Lynx.—Only found in higher northern mountains. Don't confound this with wildcat, from which it is distinguished by greater size, tufted ears, large heavily furred legs and feet and light gray, spotless winter coat. A Pennsylvania skin or fur of this animal specially desired. Give last record of capture. Also former range.

Panther.—Give last record and former haunts. Are they all gone?

Wolf.—Give same answers as for panther. Don't give records of fake wolf stories based on wild dogs, escaped coyotes, etc. These abound in the papers.

Wolverene.—Animal twice size of coon, with same shaped body, but long-haired, blackish-brown, with short, bushy tail. No authentic record of this animal from Pennsylvania or New Jersey, but it was once found in the northern Alleghanies at rare intervals, according to tradition. Give any record or hearsay of this animal.

Marten or Sable.—I have no records from New Jersey so far. Give latest record and former range.

Pekan or Fisher.—Dark brown; three times size of marten, but of same shape, with long, bushy tail. Was it ever found in your locality? Give last record.

Black Bear.—Give relative abundance as compared with thirty years ago. Also last record.

Star-Nose Mole.—Any records.

Seal.—On New Jersey coast or Delaware Bay shores.

Whale.—Same as for seal.

Any news about rare animals not given in list is solicited.

Samuel N. Rhoads.

Academy of Natural Sciences, Philadelphia, Pa.

A Typical Maine Camp.

Cutler, Washington County, Me.—The modern camps in this vicinity are very comfortable. The lower part of the building is partially excavated and sided up with logs. The roof is made of scantling or any sort of waste lumber covered carefully with tarred roofing paper battened down. They are very easily made and are almost as comfortable as a house. I send photo of a last year's buck shot by Willeby Corbett, of Rockville Center, L. I. It was shot while crossing the highway, about 150 yards from the gunner. Deer are quite plentiful in this vicinity and there are occasionally signs of bear, but none have been killed recently.

A Big Bag.

Quebec, November, 1899.—In the "Bulletin des Recherches Historiques" of this month we read that in July, 1630, when on his way to England as prisoner, "The founder of Quebec passed twelve days at Tadousac, hunting with Kertk (his captor) and killing more than twenty thousand pieces of game." The kinds of game are not mentioned, but if mosquitoes are included the story can readily be believed.

G. de M.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Nova Scotia Moose.

Editor Forest and Stream:

I suppose it is because of the high fee of $30 charged for a license to shoot and the distance away that Nova Scotia has been visited by the busy sportsmen in search of big game less often and in fewer numbers than any other one of the Provinces.

The large number of men going into Maine, and the possibility of a "stray bullet," caused me to look at new fields for sport, game and safety. Having ben successful and willing that some one else should enjoy the pleasures of this ideal spot I am prompted to write you this account.

I believe that if a man wants one or two moose, caribou, bears or any number of small game, and the very best possible fishing in season, Pessquess Lake, with surrounding country and lakes, is the very best place possible.

Leaving Boston on the Prince Arthur at 4 P. M. on a beautiful October evening, we (my wife and I) arrived at Yarmouth, N. S., on the following morning in season to catch the Halifax express. After passing muster before the customs officials, and leaving the necessary deposit on guns, I made a call at the game warden's office in the court house and laid down my thirty hard earned dollars for the necessary piece of paper which gave me the right to "shoot all the game for one year not protected by law." This seemed like considerable money, but when one considers that the territory is small and game limited to that territory, I am convinced that the law is as it ought to be. Continuing our journey, we arrived at Annapolis, eighty-seven miles from Yarmouth, where, after a good lunch, a coach was taken and a drive of fifteen miles over the hills brought us to Milford, the home of our host and hostess, Mr. and Mrs. A. D. Thomas, proprietors of a nice little hotel, well known to many anglers, and called the Milford House.

After a good warm supper, Mr. Thomas and I lighted our pipes and sat down to arrange for an early start on the morrow. By the time one of the famous moose steaks prepared by Mrs. Thomas was disposed of, we found a coach and pair, with John up, including all necessary camp utensils, ready at the door. A pleasant drive of eighteen miles brought us to the home of Thomas Canning, on the shores of Fairy Lake, previous arrangements having been made with Tom, who is considered one of the most expert all-round woodsmen, hunters and trappers to be found in the Province, having spent his life in this locality, his earlier training coming from the Indians. With two canoes, camp equipage, etc., we paddled out upon Fairy Lake at daybreak of the next morning. Passing down this lake, which is ten miles long and three to five wide, we landed at the first, or Hardwood Carry, one and one-half miles, at the end of which is a mountain lake two miles in length and one-half to one mile wide. Passing down this lake and over Mountain Carry, we embarked on the waters of beautiful Lake Pessquess, which is about six miles long and one to two miles in width, dotted here and there with beautiful islands, covered with green trees, which, by the way, is about all you do see that is green. After a paddle of about four miles, we landed and pitched our tent. The country has twice been burned over and now has a growth of small white birch, hardhack, berry bushes, etc., making an ideal feeding ground and home for large game. The pot was boiled, Mr. Thomas had put together a dinner such as hungry men appreciate, a good long pipe smoke, a huge camp-fire of birch logs, and we rolled ourselves in our blankets and slept as tired men can sleep on freshly cut fir balsam boughs. At dakbreak we were again astir, and after breakfast Tom and I shouldered our rifles (I my new little .30-30 Winchester, Tom his old trusty—an altered-over old Sharps, with a caliber as large as one's thumb, but which with Tom behind it will cut the head off a duck at almost any range), and started to look for big game signs. We had not far to go before we were "in it." There were moose and bear signs in plenty; fresh tracks, birches hooked over, ground pawed up, and every sign one could ask for of the presence of big game. Returning to camp, we found Mr. Thomas and a good dinner awaiting us. Then taking enough food for two meals, with necessary camp utensils, etc., we went about one and one-half miles further up into the country and camped for the night. After pipes were out Tom rolled over and remarked that owl hooting out there in the timber means a good still morning and the prospects of a moose."

Awaking at the first rays of daylight, we crept silently up to the spot selected by Tom to call, and posting us where we could see and be seen, he mounted a well-concealed rock and gave what to my ears seemed the most unearthly of calls. We had but a few moments to wait before the trained ear and eye of Mr. Thomas caught the much-desired sound and sight of the game we were after. On he came, rushing and crashing, now fearless and then cautious. Tom called four times; the moose was working around to windward, more than 100 yards away, upon a rise of ground fully 100 feet above us. The birches and underbrush partially concealed him from view, but with the aid of Mr. Thomas I finally sighted him. I could only see his right hindquarter, but I raised my little Winchester and pressed the trigger. The object came down, but was instantly up and off. My guides assured me, however, that he had been "hard hit" and would not go far. We came upon him not more than 50 yards away, and upon our approach he turned and lowered his massive head. Now was my chance, for I had time to look for the side shot. The little Winchester spoke once more, the lead missile went true, and my huge game dropped dead in his tracks, with a hole through his lungs into which I could thrust my four fingers. There he lay, 1,100 pounds (approximately) of moose, monarch of the forest and beautiful, even though dead. Congratulations from the guides, something to eat, and I took the following measurements: From between the antlers to root of tail, 8 feet 4 inches; height at wither, 6 feet 10 inches; girth, 6 feet 8 inches; spread of antlers, 36 inches, with 13 points. While the spread is not large, the palms are very broad and heavy, and curve in instead of out. The bell measured 18 inches in length; color is black, with

long silver-tipped hair showing above all, which gave him the appearance of a silvertip. As moose go he had an exceptionally pretty head. The guides estimated that he was four or five years of age, and above the average size; larger ones are frequently killed, however. Having bagged our game, we dressed and hung up the meat, and returned well pleased with the day's sport, to our lake camp. The next day was spent by the guides in bringing down the meat, salting the hide and getting ready for our homeward journey, which was accomplished during the next two days without incident worthy of mention.

And now a word about the guides, game and country. Thomas Canning, of New Grafton, I found moose caller, hunter, trapper and guide. Remember there were only four calls, consuming less than one-half hour, late in the season (Oct. 23), and a dead moose. Can the record be beaten? Mr. A. D. Thomas, Milford, Annapolis county, is an experienced guide, hunter and fisherman, While he makes no claim as an expert caller, yet he imitates Tom very closely. His life has been spent in this locality, and he knows just what, when and how to do the proper thing at the right moment; and for getting up a camp meal, well, his "moose stew" is unequaled, especially if your clothing is a fit before dinner. The two, Thomas and Canning, made a pair hard to beat.

Annapolis and Queens counties are ideal for moose, caribou, deer and other game, such as bear, wildcat, ruffed grouse, etc. The absence of deer at the present time is accounted for from the fact that no money is spent by the Government to increase the game, as instanced by the liberation of only thirteen deer several years ago. They are to be seen, but with the present laws they will soon be as numerous as in Maine. Caribou are numerous, but one must go back to the Blue Mountains to find them in any numbers. The fee charged for a shooting permit seems large, but when one considers that he is practically sure of his game, permit good for one year, cost of food and transportation very much less than elsewhere, getting to and from the game very much easier and quicker, this sinks into insignificance. The people are a cordial and hospitable class, and will do all in their power to make your stay pleasant and profitable. The guides charge $2 per day and furnish their own canoe and get to and from and at the game with all possible dispatch. The lakes in this region are ideal fishing spots, full of various kinds of fish. Ruffed grouse have been protected by law for a number of years, and have become so numerous that one could almost knock them over with a stick in places. The law is off Oct. 1, 1900. Large flocks of ducks frequent the different ponds, and in fact it seemed like a sportsman's paradise.

In the future, as I look upon my trophies here in my "den." I cannot but feel with some just pride that I brought him down at a good distance with the little Winchester .30-30 soft-nosed bullet in a province very little written about or known by American sportsmen.

WILLIAM L. ROBERTS.

SPRINGFIELD, Mass.

In the North Woods.

Editor Forest and Stream:

The condition of affairs in the northeastern part of the Adirondacks, of which Mr. Burnham has told, and that here in the northern part of Herkimer county are very similar so far as game is concerned. In both regions the men who should be protecting the deer are not doing it. The deerhounds are loose and the runways manned. But the worst is yet to be told.

The other evening I attended a dance in the hall at Ohio City. There was a notable gathering of woodsmen present. Hy Waite, the man who passes for the protector of game hereabouts, was there, and while Hy was going through the figures of a square dance at the head of a set I listened to a story:

"Yes; we had a blank of a time. We were just above the reservoir on Little Black Creek, near Cotton Lake—six on us. [The narrator gave the names.] You know them little swamps 'round there? Well, sir, you just orter 've seen what happened. There were eighteen deer right around us and we got every one of them. The snow was 'bout 4 feet deep on the level. Say! Will took the axe and chopped one's back right in two. I cut another's throat clean off with this 'ere knife. George rid one 'bout 40 rods with his arm 'round its neck swearin' cause he couldn't git his knife out. When he did! Lordy! He slashed the jugular and held his head in the runnin' blood so's he'd look pretty, I reckon. I tell you, yeh never seen sech sport in your life. Nothin' but blood, hair an' snowshoe tracks all over. The blood's on my snowshoes yet. You'd 'a' thought it was a slaughter house, everybody was so bloody. We piled the fore quarters all in a heap to let folks know we'd been there. Even then we had to make two trips with our packs to git the best meat out."

I have seen homeless men clubbed and arrested for sleeping in an areaway in New York city, and boys locked up for playing ball and little girls sent home crying for dancing to the music of a hand organ, but I have yet to hear a cruster of deer even deny his deeds in the North Woods. They are proud of what they do. When asked about the game protector:

"Huh! We always know when he's a-comin'." That is to say that somehow or other, when the game protectors are rustling in the brush a bit to roll up a bill of expenses, the violators of the law, who are usually voters, are not at their work. But even the boys violate the law—they man the runways, they tramp on snowshoes, they sit at the paddle or bow of jack-lighted boats, and kill more deer than the law allows, and are proud of it.

I am informed that Mr. Hy Waite does not violate the game laws. The woodsmen here say that so far as known he has always strictly obeyed the mandates of the law in so much as he is a private citizen. In fact, it is stated that he couldn't violate the law if he tried. No one denies him the ability to follow a wagon road even through a clump of woods—in fact, he is a lumberman.

A game warden should be the best woodsman and hunter in the country. He ought to be able to follow a walking deer's track on bare ground—or a man's. He ought to know the country well—every hunting ground thoroughly, the runways and still waters especially. He should be willing to travel long miles to the swamps where crusting is done, and able to maintain himself there on a chunk of salt pork and a box of matches just like any good woodsman. That he must be fearless goes without question, and as well he must stand to his duty.

What could such a man do in the northern part of Herkimer county? There is not one pond or still water in that region which does not feel the silent jacker's beam of light before the season opens; not a deer on the outskirts of the woods but hears the "mellow bay" of a hound on its trail before the season is a month old; not one deer within fifteen miles of Northwood, within ten miles of Wilmurt or five miles of Noblesborough which survives the winter.

"I never saw a game protector," a man told me in Northwood the other day. And the fellow who told me about the eighteen deer didn't know Waite from Adam. All that is needed to correct the abuses of the game regions is to have a man whose idea of duty is duty and not something else. The very presence of such a man in the woods would keep nine-tenths of the violators at home. They think that the protector couldn't find the Twin Lakes or the Black Creek reservoir without assistance if he tried. Therefore they are not afraid.

Just suppose Fred Wood was game protector here in Herkimer county. He is twenty-five years old, more than 6 feet tall, agile as a cat, can cut a thousand trees to any other man's eight hundred, can still-hunt a deer successfully anywhere, knows every trail from Grant to Honnedaga Lake, from Moose River to Morehouseville, and can follow them in the dark—has followed most of them at night some time or other. He knows every man here by sight or better, can hold his own in a fight and knows every trick and device used by the law breakers. He is frequently chosen to be floor manager where trouble is feared, and as deputy sheriff stopped a prize fight where lumbermen were the spectators. He is one of the best all around woodsmen in the Adirondacks. He would square matters beautifully.

Curiously enough, the law breakers give as an excuse the trite saying: "If we don't somebody else will." And they say, too: "If the others would stop we would." And men who have habitually violated the law are working now to have a first-class woodsman put where his training will do the most good.

Just another instance, then I will close for the present: All summer long a man named Davis has been at North Lake, a Black River canal reservoir owned by the State. He claimed to be a "game protector" and showed papers to that effect. He threatened to arrest people who were walking along what is believed by woodsmen to be a public highway on a charge of violating the game law, and Fred Wood, one of the men, told him that if he (Davis) wanted to get law breakers, why didn't he go to Twin Lakes, where hounders were? Davis, the State protector of game, said that he was employed by a private sportsmen's club and couldn't leave its preserves. Davis is also said to have had the cheerful habit of ordergin people to stop fishing in the State reservoir.

This is only a little of what might be said on the subject, but I expect that a different story will be to tell next summer, for we are hustling to get good men where good men are needed.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

Arkansas and the South.

LITTLE ROCK, Ark., Nov. 17.—Every shooter in this neck of the woods and the fuel men as well have been beseeching the weather dispenser to turn on a cold wave that would at least contain the semblance of a frost, and thereby put an end to the summer-like warmth. Here it is in the middle of November and still overcoats and fires are unnecessary, while we have also had very little rain within the past three months, all of which has done much to disappoint the shooter as well as upset his calculations. What gave every promise of being one of the very gest game seasons that we have experienced in the South within a decade has turned out a most disappointing one, not because the game supply has not come up to expectation, but simply through adverse weather conditions. From most all localities come the reports of abundance of game, such as deer, turkey and quail, but at the same time every one says that it is out of the question to enjoy a good day's shooting, owing to the extremely warm weather and the drought. The drought has caused much of the big game to leave its usual haunts and move in toward the water courses, for many of the smaller bayous, lakes and sloughs are dry, and it is seldom that water can be found anywhere except in the larger streams, so that it is along these the big game is most likely to be found. It is almost impossible to hunt quail at present, notwithstanding their largely increased numbers, as the dry, hot weather precludes the possibility of a dog smelling them at any distance. Then, too, they can only be found in the fields and openings early in the morning and late of an evening, when they come forth to feed and roost, as the rest of the day they generally spend in the thickets and wood where they are protected from the sun.

The vegetation is unusually rank, and though we have had several killing frosts, this has done very little to diminish the cover, for though most of this is dead, it is necessary that we have a beating rain to knock it down, so as to enable one to keep his dog in sight. Of course the native game will keep, and no doubt as soon as the weather becomes more favorable the expectations of fine sport will be realized. However, it is the duck hunter who is suffering most by the conditions, for if the weather had been colder we should certainly have been enjoying royal sport with these birds, as there is an abundance of mast, and the scarcity of water would have forced them to concentrate where this does exist. This was demonstrated during a little cold snap we had about the 21st of last month, at which time for the brief period of a week the shooting was better than for several years past, and some very good bags were made, while it was no trick for even the juvenile shooter to bag a few ducks. At Flagg Pond, just below the city, Mayor Woodson and J. K. Thibault made some fine bags—in fact they actually got all the duck they wanted, and quit when it was possible for them to materially increase their bag. The best bag that has come to my knowledge was made on Unknown Cypress by Will Schaer, who bagged forty-seven in less than a day's shooting. The most disappointing part of the duck situation is that while doubtless we shall yet get good shooting, their stay with us is apt to be of very short duration, for as soon as it gets cold enough to form a thin skim of ice on the lakes and ponds they go further south, and we shall have to wait another year for our duck shooting or else follow them to the Texas coast.

The above conditions apply generally to the South, and will be found very similar in Arkansas, Mississippi, Tennessee, Louisiana and Texas. However, deer, turkey and quail are very abundant in most of these States.

In a number of localities in Arkansas forest fires are raging, and this will naturally drive the game to the parts that escape devastation. At present there is little sign of relief, as there are no indications of rain or colder weather to be discovered on the weather chart.

PAUL R. LITZKE.

Just How it Happened.

AWAY down the valley above the tree tops the long, gray streaks were broadening in the eastern sky. We qnickened out pace, and Frank swung into his long, awkward mountaineer stride. We wanted to get to the flat before the day had fully dawned.

The morning was crisp and the frost on the dead leaves made still-hunting difficult. The frozen clods crunched beneath our feet as we hurried on munching in silence the cold biscuit and hunks of venison hastily snatched up at camp.

Turning sharply to the right, we slackened the pace to almost a crawl, and worked our way down an old trail toward the river. Frank did a star equilibristic act on the frost-covered log across the Big Logan, then stood and solemnly watched me "coon it" across in a painfully undignified but silent manner.

The woodsman waved his hand toward the river and turned down the valley without a word. I watched him with some admiration as he went noiselessly over the leaves toward the lower end of the flat. He made no sound as he carefully placed his weather-worn shoe pacs now on a mossy pad, then on a stone, always choosing well and making good progress.

My station was an open space 200 yards off, midway between the Logan and the river. I commanded a good view across the flat.

It was daylight now, and the broad brow of old Lunkasoo wore a golden crown, a gift from the God of the morning. The open elm timber in the flat afforded an excellent opportunity for a long shot. This was what I wanted. The Lyman receiver sight with the white jack sight forward was a combination unbeaten. Not a shot at game had missed, and some of them were not too easy. Then, too, nothing had ever moved a foot after the crash of the .45-70.

Assuredly a deer or moose running down that flat had no show of getting across to the ridge beyond. So much was self evident.

Presently from down the flat came the sharp crack of the guide's rifle. It meant that game was afoot. Another shot told that something had started toward the river, and that Frank was trying to turn them down my way. Then came a wait amid deep silence.

For the benefit of youthful hunters I wish to state that I was cool and confident. Scarcely a quicker movement of the pulse; respiration regular.

The receiver sight was flat down; a movement of the thumb would raise it a notch or two if need be. Suddenly came the noise of hoof beats on the resounding earth. Closer and still closer they came, till I saw a large buck running almost straight toward me. He swerved to the right to keep on the lower side of a 3-foot embankment made by the spring floods, and I saw right behind him two large does. They were running together in single file. I chuckled with the humor of the thought that they might be "playing steam cars." I saw that they would cross my open space 60 yards to the left. It was up to me to "cast loose and provide."

The right sight remained flat. It was too scandalously easy. The buck had handsome antlers. Concealed somewhere about each of the does were sundry succulent steaks. I realized, suddenly, that mine was little else than a butcher's job.

But we were out of meat at the camp. I needed those horns in a vacant space to the left of my sideboard. Thus was the still small voice of conscience hushed.

The deer were running easy, apparently satisfied that they were now en route to safety.

It was natural for me to fashion a smile of satisfaction at the present monumental "cinch." Two deer in three seconds. That was to be the story. Of course one doe would be allowed "life, liberty and the pursuit of happiness."

The old .45-70 never roared out such a loud command to halt. Back from the sheer cliffs of Lunkasoo came the quick echo rolling midway of the mountains until the valley was full of thunder. The deer became three statues carved in granite.

Figuratively, I advanced to the footlights to hand myself a large bunch of American Beauty roses. Then that venison procession started down the valley. Whereupon the roses withered and died. Man's vocabulary was unequal to the occasion. So I called on my Winchester for a few remarks. It spoke many times and loudly. But it failed signally to make a "hit" with our quadruped friends. The "Golden Gate Flyer" couldn't have caught them. In fact, they soon went out of the transient target business altogether, retiring from view in the leafy boudoir toward the ridge.

Down at camp they counted twenty-one separate and distinct shots, and dipped the colors out of respect to the national salute. Of course, they counted the echoes which reverberated like the b-r-r-r-t of a Gatling.

At the top of the ridge we left the trail of the three unharmed deer and returned to a breakfast where salt hoss was the pièce de résistance.

GRAY BROTHER.

DON'T SHOOT
until you SEE your deer—and see
that it is a deer and not a man.

CHICAGO AND THE WEST.

Shot While Hunting.

The deer season is now approaching its close in our northern woods, and we may tell a little something alike of the deer and of the hunters that have been killed. In Wisconsin there has been no tracking snow of consequence, and the still-hunters have had very bad luck at their sport. The law against shipping game out of the State is gradually gaining weight in Wisconsin, hence I presume that more deer were killed for sport and less for the market this season than last, though I admit most of this to be mere conjecture. At last accounts I had word of six deer hunters who had been killed outright or fatally shot this fall in Wisconsin. It seems to be of little avail to give good advice on these matters, for the man who shoots on sight still goes into the woods.

Western Quail.

Still more encouraging, and indeed still more wonderful, are the reports that come in of the quail crop in Illinois and Indiana. Every one seems to agree that there never was such a season, and the birds are present in many localities in such numbers as to cause surprise. Down in the Okaw bottoms of Illinois, far down south in the State, the birds are to be counted fairly in swarms. My friend Ernest McGaffey is just back from there, and says he killed eighty-seven quail in a three days' shoot, and did not work very hard at that. The lower half of Illinois and Indiana is safe country now for any one who wants a quail shoot. From all I can learn, however, the birds are more abundant along that latitude than they are in Michigan and Wisconsin. Michigan has a fair crop of quail, but I do not think so good as last year. Lower down in Michigan there are more birds than in the upper part of the south peninsula. Wisconsin offers much the same conditions of a wet breeding season and bad weather, so I suppose that the crop there may be classified much like that of Michigan. Yet this is not to say that one cannot have fine sport in the proper localities of almost any of the Northwestern States. Bob White is doing his noble best to retrieve the reputation of the West as a shooting country.

Our ducks have now gotten pretty well to the south, and I do not hear of any one this week who seems to care much to go duck shooting. Up at Puckaway Lake in Wisconsin there are this week four hunters who I presume will not care to go duck shooting for some time. They had several busy days which lasted until after sunset, and their twilight sport cost them $25 each, with suitable and appropriate cost on the side.

The Southern National Park.

They seem to be moving with energy in the matter of the Southern Ntaional Park Association, of Asheville, N. C., of which editorial mention was made in last week's FOREST AND STREAM. The literature put out by the committee shows that the preliminary meeting or interstate convention is called for Wednesday, Nov. 22, at Asheville. I take it that the plan is much that followed out this summer by the Minnesota National Park and Forestry Association, and of course it is to be hoped that both movements will meet full measure of success. Mr. A. H. McQuilkin, chairman of the Park and Forestry committee, writes me requesting details on the movement in the Northwest. "I have read that there has been incorporated in Chicago," he says, "a national park and forest reserve association, and would be very much obliged if you would furnish me promptly a copy of their constitution and by-laws. The time is short for us to make adequate preparation, so that any aid you can offer in the way of literature and suggestions would be very highly appreciated."

I have been forced to reply to Mr. McQuilkin that there has been no formal constitution or by-laws, and no permanent organization of the Minnesota National Park and Forestry Association. All that was desired to be accomplished by that body was to carry out a Congressional investigation of the country in question, and when this was done it was considered that the main purpose of the organization had been obtained. The rest is left entirely with Congress. This may or may not be the safest and wisest plan, but it is the plan which was pursued, and any future organization of the members of the party concerned with the Northwestern trip will be for social or personal reasons rather than with the purpose of prosecuting further the movement toward securing a national park in Minnesota. As to the methods pursued in this preliminary organization, I can best refer Mr. McQuilkin to the files of the FOREST AND STREAM, dating from the first of May till the middle of October, the attempt having been made there to record the progress of the movement very fully. It would appear that much of the preliminary work has been carried out by this Southern organization as was done by the Northern body. The Southern men have with them Dr. C. A. Schenck, who was a member of the Minnesota party, and whose counsel will prove of value. Col. J. S. Cooper, 701 Tacoma Building, Chicago, would no doubt be glad to assist in any way he could.

Here in Chicago we often hear of North Carolina as a sporting region or a good resting ground. I have had a number of parties write to me asking if I could assist them to select certain tracts of wild land for game preserve purposes. Yet Chicago has always regarded North Carolina as out of its natural line of travel, and I do not know a great many Chicago sportsmen who go there. Should there be a strong movement made on the lines proposed for a national park, the agitation and advertising which would ensue would no doubt bring North Carolina into greater notice here as a land for the sportsman tourist. Should the park be really established it is practically sure that it would secure for the State a much greater proportion of Northwestern travel than it has ever had hitherto.

This seems to be a great year for forestry movements, and one peculiar phase of the topic is the prominence in the forestry movements of women's clubs in different parts of the country. This is said to be especially true in the East, where women's clubs have taken up the study of forestry matters. Attention has already been called in these columns to the fact that the Federation of Women's Clubs was the prime mover for a national park in Minnesota. Minnesota may claim the oldest forestry association in the country. It also pays out $20,000 annually as tree bounties in the treeless counties. It has a forestry board and a good fire warden law, and is indeed a model to all States, East or West, for emulation in the little understood and not very popular, yet very vital, matter of forest preservation.

"Just About a Boy."

It goes without saying that all readers of FOREST AND STREAM have read with delight the charming sketches published in the FOREST AND STREAM, "Just About a Boy," and I doubt not they will have remembered the name of the author, El Comancho, as connected with other good and pleasant reading on the outdoor matters which FOREST AND STREAM has most to do. To all this family of friends it is a matter of interest to know that the Boy sketches have this week been published in book form by the prominent firm of Herbert S. Stone & Co., Chicago. The elegantly made little volume is in my hands as I write, and I find it very delightful from cover to cover. The dedication itself is a pleasant one.

"There are boys still in this old world of ours," says the author, "happy, bright little savages who have still to become civilized and learn a language. Until then they will love the woods and the wilds, and become friends with all the vast population of the wilderness, and so learn its secrets. Such a boy is a safe boy if he follows his natural bent, for there is nothing vicious about the wilderness, and to the boy who loves it the world over, this little book is dedicated."

Mr. Phillips gives himself the best of examples of his doctrine that there is nothing vicious about the wilderness. I know of no man who has yielded to the yoke of civilization more grudgingly than he, yet I know none with a sweeter and more unspoiled disposition. He has no grievance with life or with humanity. Hence he writes with that sincerity which is necessary in the best of literary art. The very artlessness of this book is its chief charm and his chief claim to actual art. A cleaner or more wholesome volume was never opened by either boy or man, and he who reads it must concede that it was done by one who was a manly boy and is a manful man. The FOREST AND STREAM readers have already read the book, so one need not add anything in its praise, except to say that now the whole book can be held in one's hand and turned over leaf by leaf. Each story is complete of itself, and the only connecting thread is the personality of the Boy, whose doings, very wonderful sometimes for a boy, it must be admitted, are recorded by the author as actual happenings. Indeed they are for the most part actual happenings, for the Boy was an actual boy, though now grown up. To-day I saw a letter from him to the author of this beautiful little book, and I know that the author and the Boy are friends, in one of those friendships not made in the city, but in the woods, by the stream, among the mountains, where things are always beautiful, always sincere, always abiding. As friends of El Comancho, square-jawed, blue-eyed, happy-go-lucky, plucky and uncomplaining El Comancho, we may all be glad with him in the success of his literary venture. We may wander with him along the old Blue, and through the thickets, and among the mountains of the Black Hills Range; we may read the signs of the little things written upon the ground, and perhaps we may read of the great things written on the hills. When a good man succeeds, all his friends ought to rejoice with him, and it appears to me that Mr. Phillips has attained a success worthy the sincere congratulations alike of reader and of critic. "Just About a Boy" is a sweet little book, and well worth having.

Delaware Indians in Oil.

This is a swift and singular country. The tribe of the Delaware Indians were once known as the Leni Lenape, prominent in the great Algonquin confederation of the East, and they used to own the country where Philadelphia and a few other cities now stand. Two hundred years ago or so they made their treaty with William Penn, said to be one of the few Indian treaties which ever "stuck." From then till now is a wide step in the history of the Delawares. Shrunken to a little body of less than a thousand souls, the Delawares were practically amalgamated with the Cherokees some twenty years ago. They bought lands of the Cherokees down in the Indian Nations, and oil has been discovered on these lands. Chicago capitalists naturally have gone after these oil lands, and have obtained leases from the Cherokees which the Delawares claim the latter have no right to give. Here you have it. Leni Lenape, Chicago, oil, Indian Nations. And this in a country which a few years ago was one of the best hunting grounds in the world. When the oil men and timber men and mining men get through with the West there will not be many Indians nor many hunting grounds.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Quebec Game Fields.

THE hunting season has been an extra good one in the vicinity of Sherbrooke, Que., this fall. Grouse have been more plenty than for several years. Probably twenty-five deer have been shot within ten miles of the city.

During the ten days' open hounding season the fox hunters tried their hounds on the deer, but with poor success, only one, an extra good 220-pound buck, being secured. Lack of experience in this particular branch of sport was undoubtedly the trouble. The general verdict is that it can't compare with fox hunting, and we don't care how soon the ten-day law is repealed.

Foxes are very plenty, but little hunting has been done yet, as other game has occupied our attention. Three foxes have been accounted for in five morning runs, and each time the boys were home for breakfast by 9 o'clock.

The first snow came on the 11th inst., and the deer hunting was perfect. Three deer wre killed, all within a few miles of town.

J. E. W.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

In New England.

BOSTON, Nov. 18.—Local gunners continue to find some sport and often in unexpected quarters. Mr. G. H. Morse, of the Boston Herald reportorial staff, has lately succeeded with quail better than he had anticipated. In one instance he located the birds when out on his bicycle, and least expecting them. It was among the cabbage fields between Arlington and Lexington. He saw from the road about a dozen quail alight among the cabbages, evidently to feed. He calculated that they would be there another day, and immediately applied to the farmer whom he supposed owned the field. He says: "Have you got a gun?" "Yes; there are some quail down there almost every day." Readily he consented that Mr. Morse should hunt the field with dog and gun. As soon as possible Mr. Morse, a friend, a camera and his setter dog were there. They did not have to range the field but a little while before the dog came to a handsome point, all of which was duly secured with the camera. Then three of the quail were secured, and then another good point by the dog, under the camera. Mr. Morse is pleased with such success in an open field, and so near the big towns. He proposes to be there again after the rest of the quail, there being eight or ten left, and that is the reason he does not want me to tell exactly where he found them.

Maine has had a big fall of snow for so early in the season—6 to 8 inches near the towns and nearly a foot in the north woods. This has set the deer and moose hunters almost crazy, and a great many deer have been taken. The trains are bringing a good many already, and there are more to come. Still the Boston markets are disappointed that they are not getting more deer—not half as many as a year ago. It is understood that the extra exertion of the wardens at Bangor and other points is keeping the deer away from the markets here.

The search for the missing young hunter Knight, lost in the woods at Bemis, was not continued last Sunday, as planned; the earth was covered with nearly a foot of snow in that section, rendering the search entirely impracticable, even if men could have been found ready to undertake it. Opinions have changed in regard to the case. Prominent men, well acquainted with that region and having full knowledge of what has been done to find him, begin to believe that Knight is not lost in the woods at all. A noted detective has taken up the search and says that he expects to find that Knight is alive.

Mrs. J. Parker Whitney, the lady whom I mentioned a couple of weeks ago as watching for a deer on the shores of a pond in the deep woods, secured a good buck at last. Pluckily she watched the shore of the pond where she was sure that deer were coming down for five days and two nights. The first night a deer came down, but her aim was unsure. Later she did better. She was accompanied by a guide and her son. Women can hunt deer and can secure them, but it takes courage and determination. Mrs. Whitney was bound to shoot a deer herself, and she did it. At Mr. Whitney's beautiful camps, on Molechunkamunk, they caught a deer alive in October and kept him for several days. At first it was very wild, but soon began to tame rapidly—so tame that it was deemed best to release it, since its life would be endangered by having no fear of hunters.

Nov. 20.—Odd moose and odd moose stories are in order. Mr. A. D. Shipp, of Boston, brought from the woods last week an odd set of moose antlers. One was perfect, but the other was distorted in a curious manner. It began to curve a little above the skull, and then turned downward till it entered the right eye, rendering the moose blind of that eye. Mr. Shipp will have the head mounted as a curiosity. An odd moose story has got into the papers: Mr. Fred Houseman, of Springfield, Mass., has been arrested for having parts of two moose in his possession, brought out from the Allagash region. Before the trial justice, Houseman's story was so convincing that he was suffered to depart on his pledging himself and signing a bond to appear before the Supreme Court in the spring. He claims that he saw two moose at battle, one a small bull, light and agile, with undesirable antlers, the other old and scraggy, but having a fine set of horns, which he wanted. After butting heads and goring each other for several rounds, the little bull got the advantage over the old one, and tipped him over in the mud. Then the small moose reared on his hind legs and brought the sharp hoofs of his fore feet down on the throat of his antagonist, completely cutting the arteries and windpipe. This, the hunter says, he stood and saw the younger moose do; still goring and mutilating the body of the fallen moose till he feared the antlers would be broken. He shot the victor moose. Then he saw that he had broken the law, or rather feared that he would be accused of breaking it. But he decided to bring out the dressed quarters of the young moose and the antlers of the old one, and with these in possession he was arrested by the warden.

The hunters are getting lots of deer on the snow, which has covered the ground in the Maine hunting regions for over a week. Railroad men have been successful, as well as merchants, preachers; everybody, in short. But Maine hunters have done most of the hunting and killing since the snow. D. J. Flanders, Dr. H. F. Libby, W. E. Baker and Eugene Nelson, of Boston, are just out of the woods in the vicinity of Ashland, bringing four handsome buck deer. John E. Clark and C. G. Simpson, of Boston, have been hunting in the Millinocket region, and have secured their two deer each. Messrs. O. W. Whittemore, N. J. Hardy and G. A. Cushing, of Arlington, have just returned from a deer hunt, being quartered at the Monotony Club camp on the Northeast Branch of the Penobscot. They had the good fortune to secure six fine deer, and the novel experience of coming out of the woods in a driving snowstorm before the middle of November. Over fifty deer are set down to the credit of Boston hunters for the week. Still the number of deer recorded at Bangor this season is ahead of last year, while the number of moose is not equal to that of last autumn. Up to Nov. 18 the number of deer shipped through that city was 2,301; last year up to the same date, 2,046; increase, 255 deer. The number of moose shipped up to the same date was 95; same time last year, 105; decrease, 10 moose.

SPECIAL.

In Cuban Quail Fields.

HAVANA, Nov. 13.—*Editor Forest and Stream:* I was out again yesterday in another direction, also about half an hour by rail from this capital. Although the day was quite windy, and I found the fields covered with a rank growth of grass and bushes, I got up four or five good coveys of quail and one of wild guinea fowl. These last when flushed always go in a bee line directly for the woods, which are here generally not far away and usually consist of small and thick growths of trees, intelaced by abundance of tangled vines, which render them nearly impenetrable. These also furnish the safe refuge of the quail when flushed. Indeed these are frequenters of bushy pastures near to cultivated fields, and a couple of snap shots on first flushing are very generally all the sportsman will get to each covey. If he gets one covey scattered in open field in each day's sport he may consider it good fortune.

My first covey yesterday was in the very edge of impenetrable cover, and flushed under my very nose.

Under these circumstances two snap shots brought me nothing to bag and no satisfaction other than the pleasurable anticipation in presence of the standing attitude of the dog, which is always pleasurable excitement to the sportsman.

My second covey flushed wild, but arriving at the spot a laggard bird rose and fell to my racket, turning up its toes within the brush, but came to bag. After industrious examination of several fields, Dash finally came to a stand near to a high stone wall separating us from the next field, and I prepared for a pair of instantaneous snap shots before the wall could interpose between us and the whirring covey, which every sportsman knows requires a considerable amount of nervous control for successful work. The wall being on the crown of a hill, I well knew that from the instant the birds crossed the wall they would be out of my sight, so I patiently stood some distance behind the dog, because if I went up to flush them I would be so near to the wall and them that my shot would not spread out enough to catch them, or if so would make hash of them. After waiting until quite rested and calm, while the dog stood as immovable as a statue, I cast a stone into the grass and bushes in front of the dog, when a startling whir made the atmosphere lively in front of us, and, as I expected, across the stone wall, not 10 feet from where they flushed, and I scored a right and left, both birds dropping close on the opposite side of the wall.

Elated by my success, I clambered over and retrieved one, looking some moments in vain for the other. Dash, however, soon struck its trail, and it rose in labored flight at some distance, and I brought it to bag at the expense of another cartridge. After flushing and killing two more of the scattered birds, I then took the direction toward the farmhouse of a friend, where I was to breakfast. Crossing the bushy and woody hill where I had killed my first bird, Dash made a stand at the same clump of bushes. I approached, expecting to find the same covey returned to a favorite refuge, and judge of my surprise when a flock of wild guinea fowl rose with a thundering whir that made the woods ring. I had only quail cartridges in my gun, but as they got up near to me both barrels counted, a fat guinea turning up its toes on either side of me, which I retrieved and went on to my breakfast, well satisfied with my morning's sport.

After enjoying a social breakfast with friends and resting until 2 o'clock P. M., I again took to the field, followed by two friends without guns to see the sport of the afternoon. Dash soon located a covey in a field of few bushes, but thick grass. I flushed the covey and scored a right and left, and marked down the scattered birds in the same field, of which Dash successively located three, which I flushed and scored three straight kills. We then crossed through a piece of woods, and in doing so flushed and bagged another guinea fowl. In the next field I completed my bag of thirteen for my day's outing and then returned to the railroad station and took the train back to Havana, arriving home in time for dinner, well satisfied with my day's outing.

DR. ERASTUS WILSON.

A Seizure of Game in Trunks.

OFFICE OF BOARD OF GAME COMMISSIONERS, Harrisburg, Pa., Nov. 16.—*Editor Forest and Stream:* About Nov. 1 or immediately after the opening of the rabbit season in Pennsylvania, a party of six gentlemen, hailing from Mt. Vernon, N. Y. (names known), came into this State equipped for a lengthy hunt. Dogs to the number of twenty, nine of which were bird dogs and the rest beagle hounds, came with them; trunks were packed with hunting paraphernalia of all kinds, hunting horns and ammunition galore. They located at Stevensville, Bradford county, and from this center covered a district of many miles in circumference, going out with teams and hunting back or returning by team as they desired. "All went merry as a marriage bell," game fell in abundance before their unerring guns, and no shadows fell across their pathway—at least, none that they were aware of. Toward the close of their stay report said that quail and pheasants were being grassed by the hundred, and that at least two shipments had been made to their home in Mt. Vernon, N. Y.; and of these shipments, the gentlemen making them and those aiding and assisting in the same are very likely to hear later on. Saturday, Nov. 11, came with rain and storm, and with it came the time of departure of those gentlemen. Their belongings were duly packed, their landlord and abettor, W. W. McCain, of Stevensville, was bidden farewell, and the party divided, the dogs being taken to Wyalusing, Bradford county, by one of the gentlemen for shipment, and the remainder of the party striking the same road (Lehigh Valley) at Laceyville, Wyoming county, twelve miles further down the line. Checks were secured for their baggage—four trunks and one box—from Laceyville to New York, and they settled down to a long ride and a quiet laugh at the dullness of the Pennsylvania game authorities, little dreaming that their every move was known to said authorities, and that they were speeding as rapidly as steam could carry them to a sure fall for the entire party.

At Wilkesbarre they were first brought to a realization of the danger of the situation when the officer on their track called the attention of one of the gentlemen to the facts as they existed, and demanded that the baggage be exposed to his search. Again on the train between Wilkesbarre and White Haven was the demand made of the same gentleman in the hearing of his friends, all of whom the officer knew were in the car. At Mauch Chunk the train was met by a search warrant in the hands of a duly authorized constable, and to prevent delay of the train and wrong to innocent persons the baggage, as described by check number, was removed to the depot and there broken open and searched, with the result that in the last trunk opened were found forty-five pheasants, eleven quail, one woodcock, five rabbits and eight gray squirrels.

The act of June 4, 1897, absolutely forbids the carrying or shipment, or the attempted carrying or shipment, of the game birds or game mammals of Pennsylvania out of the State, and says:

Sec. 6. "No person or persons, company or corporation, or the agent or the employee thereof, shall at any time catch, take or kill, or have in his or its possession or under, his, her or its control any of the birds or game mammals of this State, the killing of which at any or at all times is prohibited by the laws of this State, with intent to ship or remove the same beyond the limits of this State, or with intent to allow or aid in the shipment or removal thereof out of this State," etc., and finally says, "Whoever shall offend against any of the provisions of this section shall be liable to a penalty of not less than $50 nor more than $100 for each offense, or by imprisonment in the county jail for a period of one day for each dollar of penalty imposed."

The act of 1899, Sec. 3, says, among other things, that the constable or warden after demand may cause any building, inclosure or car to be entered and any apartment, chest, box, locker, crate, basket or package to be broken open and the contents examined by said warden or constable and that "all birds, animals, fish or net or fishing appliance or apparatus seized by said constable or warden shall be disposed of in such manner as may be directed by the court before whom such case is tried."

As the game in this case was liable to spoil in short order, being packed in bulk, and could not be sold in the State, it was given to the bystanders by the said justice before whom complaint was made. And while the officer was confident that the entire outfit as seized by him came within the term apparatus, as a precautionary measure an attachment was issued with bond to the railroad company, and a hearing had, as is usual in the case of non-residents. The killing of the birds in Pennsylvania was proven, and the attempt to ship out of the State, as shown by checks, after which judgment was given for $100 against each individual, the claim being made by the officer that this was the third shipment out of the State to his knowledge, and that a judgment for the maximum penalty should follow.

An inventory of the several trunks was made, showing by letters found therein that the names of the parties as entered of record were the correct names, and revealing among other extensive shooting paraphanalia five fine Parker guns with one extra set of barrels, some of which are of splendid make, and all high grade. These, with the other belongings, will be held the proper time, and unless redeemed will be sold for what they will bring, which amount will be credited on the judgment and an attempt be made to collect the balance from the property of the parties in New York.

The Game Commission of Pennsylvania is determined to make it as dangerous as can be to violate their game laws; and transportation of game out of the State will be prevented if possible. We hope this may be a lesson; and the Commission will have no sympathy for others who may fall as these have fallen.

JOSEPH KALBFUS,
Secretary of Game Commission.

Deer in Connecticut.

Editor Forest and Stream:

Inclosed find account of a deer chase in Hamden, Conn. The clipping is from the New Haven Union of Nov 6:

"The quiet village of Hamden was yesterday again the scene of a most unusual occurrence. A wild deer was the cause of the excitement. The animal ran through fields, over roads and leaped brooks, followed by a crowd of over fifty eager nimrods. The good people of Hamden were on their way to church when the procession passed through the town at a high rate of speed—first the deer, then a dozen dogs of all degrees, and lastly two score or more of panting citizens. The honor of first discovering the deer belongs to Tippo, the beagle owned by Edward Farrell, son of Prosecuting Agent Farrell, of Hamden. The dog aroused the suspicions of its owner by his peculiar action. He seemed possessed to have his owner go into the woods. Farrell has often heard stories of the intelligence of dogs, and how they have saved lives by bringing their owners upon the scene of trouble. With this thought in mind, Farrell followed Tippo into the woods and to his surprise the dog chased a beautiful deer out of the brush. Farrell, to his keen regret, didn't have a gun. The chase started near William Fennis' barn. The deer ran in a bee line for Farrell's house, jumping two fences and passing within 20 feet of the house. From here on the deer took the road and the crowd kept increasing in a chase after the deer. She passed the Children's Home, and went on toward West Rock. The crowd which was chasing it dropped off one by one and residents of Hamden to-day stated that Walter Dillon, of Fair Haven, who kept up the chase after the others had given up, followed the deer past Springside Home and to the east of West Rock."

Believing this to be but a newspaper yarn, I investigated it thoroughly, and found witnesses whose veracity cannot be questioned. Not only did the chase take place, but two deer, a buck and doe, have undoubtedly been seen a number of times, and within half a mile of where I live.

Mr. Thompson and family (next-door neighbors of mine) were driving home from church, when Mrs Thompson noticed a large deer feeding among a drove of cows on Mr. Robert Dickerman's farm. She called the attention of the rest to the animal, and all watched it until the cows, apparently, commenced to run after it. The deer loped along in an easy manner, and cleared fences and brooks quite handily. It jumped the wire fence bordering the road near the Thompson wagon, and crossed so close that the horse was stopped not 2 rods away. The deer then jumped the fence on the other side of the road and disappeared in the woods on Cherry Hill.

A family named Lorenzen saw a deer feeding among the cows on Mr. Burton Gilbert's farm, and Italian laborers saw a buck and doe on Cherry Hill.

Mr. Wilbert Thomas, an experienced deer hunter, found a deer track, followed it and found where the deer had lain down. Judging from the size of the track, Mr. Thomas thinks this deer must have been a buck. Mr. Thomas is cautious and skeptical on such matters, but he is thoroughly convinced that deer are here at present.

In this State deer are protected until 1903, and the fine for killing one is $100. Many farmers and others have pledged themselves to report to the authorities any person who should kill a deer in this neighborhood.

Reports have come from other parts of the State of deer having been seen, and it speaks well for the law when the animals begin to appear in a section where they have been practically extinct for years; especially is this so when that section is within five miles of the heart of a city of over 100,000 inhabitants.

WILLIAM H. AVIS.

HIGHWOOD, Conn., Nov. 15.

Not a Red-Letter Day.

MUCH has been written of red-letter days, but the average sportsman is loath to mention certain days of continued bad luck; they might be called hoodoo days. These are days which are certainly not coupled in retrospection with those of unalloyed pleasure. Just such a day I experienced during the first week of this month, and must tell of it.

We have had a considerable run of weakfish and bass this summer. Black ducks are always plentiful, but it has been many years since canvasbacks have been here in such numbers as this fall. Mr. F. Brandreth, one of our best shots, succeeded in gathering three geese; this was something unprecedented in fall shooting.

Now for the hoodoo day. We started off with five live decoys—three black ducks and two male mallards. We reached Yellow Bass Rock, which is about a mile from town and overlooks the outlet of Croton River. Here our troubles began. First I fell overboard, which in itself wouldn't have been so bad if the water had been a trifle warmer and the mud hadn't been a foot or so deep. I finally got out, and after removing several buckets of mud from my shoes and trousers legs assisted in getting out the decoys. It was now about 5 P. M., and the flight of ducks was expected any minute. For each duck we had a half-brick on several yards of line. The first one out was a mallard drake. He swam across the bow of our duck boat, and his string caught in a loose nail on the bottom of the boat. This didn't feaze him in the least; he just put on a little more steam and started for the shore, brick, duck boat and all. We tried to untangle the string with an oar, but it wouldn't work, so my companion reached down and tried to disentangle it with his hand. His boot slipped out from under the stern, where he had it braced, and over he went, the box of four remaining ducks slipping off the bow as the boat righted. Now the ducks began to fly into the marsh from the Hudson. Our ducks in the crate set up a great quacking, which drew the black ducks beautifully to within 100 yards of us, and then seeing the mess of stuff floating about, veered off to our more fortunate fellow shooters in the upper marsh, where a continuous fusillade spoke of royal sport. We swore, splashed and fumed, but by the time we got things straightened out it was 5:45, and too dark to shoot. This was the only real good flight of ducks we have had this season. We tried it several times after, with fair luck. A good nor'-wester will bring them down. I hope by the end of the season to be able to recount the doings on a red-letter day.

CHAS. G. BLANDFORD.

SING SING, N. Y.

Concerning the Weed.

Editor Forest and Stream:

While many things are improved on as the world grows older, the days of the "fragrant weed" appear to have permanently passed away. From twenty-five to fifty years ago it was possible to get cigars that it was a positive delight to smoke. Not that all had the delightful fragrance of the old Cabanas and some few other brands, for the country was flooded then, as now, with common rank tobacco, and it was seldom and with difficulty that a box of high grade cigars could be procured, even as late as twenty years ago. It has been at least that long since I smoked my last fine flavored weed, and when I found I could no longer get them at any price my cigar smoking pleasures ended.

Now, the puzzling question with me is whether the art of making those cigars is lost, or whether they are all secured, as some contend, by wealthy Europeans. Many knowing ones insist that guano has ruined all the best tobacco land in Cuba, and if they have been loaded with that rank fertilizer for the purpose of producing heavy crops it undoubtedly has imparted its nauseating qualities to the plant, which seems to be of such a delicate nature that no other part of the world could produce it to compare with that of Cuba. Men of wealth habitually smoke cigars that I am compelled to throw away after a few short puffs, and I am sure that if they had been a few years earlier and had smoked a real "fragrant weed" they could not possibly enjoy the quality of tobacco they are forced to smoke at the present time. None but "old stagers" know the difference between the now and then, and they probably never will.

I am compelled to resort to cigarettes of my own make, and up to within a short time I have smoked tolerable cigarette tobacco manufactured by a firm in Richmond, but after they had established a reputation and pocketed their millions the all-devouring "trust" absorbed them, and since then I have tried in vain to find anything that I consider fit to smoke.

DIDYMUS.

ST. AUGUSTINE.

Joseph M. Hoadley.

JOSEPH M. HOADLEY died last week at his home in Derby, Conn. He was one of the sweetest characters and best sportsmen that ever followed a dog afield. Mr. Hoadley was a veteran of the Civil War, and during the last years of his life was a great sufferer from on old hurt received while in the discharge of his duty. He was about seventy years old.

He was devoted to shooting and to fox hunting, and up to within the last ten years of his life gave much time to the practice of these sports in their season. He was a great lover of good setters, possessed a strain of unequaled "partridge dogs," and, from his experience with his own animals, his extraordinary knowledge of the ways of birds, his infinite patience and his unfailing good temper, was remarkably successful in handling dogs and in bringing out the best that was in them.

Notwithstanding the fact that he was in almost constant pain, and besides was a large man, he was untiring in the field, and could easily walk down many a younger and sounder person.

Mr. Hoadley's knowledge of the shooting grounds of Connecticut was perhaps greater than that of any man in the State. He had shot there for nearly fifty years and not only knew most of the covers, but also the spots attractive to birds which each one held. He was systematic in his pursuit of birds, and when a piece of woods or swamp was to be beaten, always endeavored so to organize his force that the best should be successful. As attractive as the day's work in the field were the hours after dinner spent in the old farmhouse, when with tired limbs but actively reminiscent mind the incidents of the day were reviewed, the novel woods lore stored up in the old gunner's memoryy brought out, and his witty stories or allusions poured forth. With such interesting material Mr. Hoadley's mind was well furnished, and this made him one of the most interesting of companions. He was a man whose nature was unusually kindly and sympathetic, whose sense of right and wrong was keen and unswerving, and he was a devoted patriot. He sometimes said to those who sympathized with him in his almost constant suffering that he had nothing to regret in his war experiences, and that notwithstanding what he had endured he would go through it all again if the need for it arose.

Joe Hoadley, as his intimates called him, was a man who was above all things lovable, and days spent with him in the field increased alike one's admiration for his good sportsmanship and one's love for his character.

A Goat Hunt.

My hunting partner had been home for a visit, and on his return to the wild and woolly Weest he brought back with him one of his uncles and a young friend from Missouri for a hunt.

Now, Uncle Jim is an old war veteran and a crack shot. George, our young friend, never had been out before, so all camp life was new to him. Bill is the crack hunter of this section of country and one of the best men with a Winchester that I ever saw.

We left my house with four saddle and three pack horses. Bill was in front, and after going about five miles he killed a whitetail doe; we then sent the strangers ahead, as we had meat enough, so they might get a shot at a deer before we reached camp; but here is one trouble: New men do not know what a deer looks like in the woods until it moves or is in an open place. We behind the horses saw two that evening. We camped in a miner's cabin that night, as it was the end of our trail, and as it rained most all the next day we only fished a little. Rain is one great drawback to goat hunting, as in the fall in the Rockies we have lots of it high up, and also fog.

The next day we got a good start, and after a hard trip cutting trail reached our camping place in the rain, cold and tired. George said that we had crossed 5,000 logs, and rode in places that were not meant for a horse to go over.

On the fourth day we started out for a hunt. Bill and I had been here three years before. There was plenty of bear sign all over the country. We intended to go in two parties, or in twos. In going up a snowslide I saw a blacktail buck trotting across it at which I shot three times; but as there was so much open space for that small bullet to get lost in, I did not connect. Uncle Jim was with me, but did not see the deer.

Immediately afterward I heard two shots in quick succession, so I knew Bill was in trouble, and on our return to camp that night he told us that he had shot at a large black bear and broken its front leg or shoulder; the bear was running in the brush and he could not see him well. This was all the large game we saw that day.

On the fifth day we went out to fish for small brook trout. As I do not care to fish I carried the four Winchesters and went on ahead to a lake which was the head of the stream that we were camped on. This lake is fed by a small glacier and above it I knew we would find goats. On taking my glasses I soon found two high up on the mountain. As the fishing was good (no one ever fishing there before), the rest of the party did not arrive until 1 o'clock. We ate lunch and then started for a hard climb. Bill was carrying the fish, cleaned and heads off—about 20 pounds. The goats were in a snowslide, so it was quite easy to stalk them. We went up through some timber which was on one side of the slide and reached a rocky point within about 250 yards of the game. Bill thought that by going back and above we could get closer, so I told him to take Uncle Jim and try it, while George and I would wait until they commenced the shooting. They got within about 175 yards and Uncle Jim on the first shot killed his goat, at which two more ran out from the brush and rocks, and then we each picked our game. You should have heard the reverberations of our shots with a perpendicular peak right in front about 2,000 feet high and a high, rough mountain to our right. I will leave to your imagination the noise. The four goats (for there was another which put in an appearance) made one for each, and this was enough, even if Bill and Uncle Jime did shoot all of their cartridges away at the fifth, for he went their way, trying to get him to camp with us, but to no effect.

George wanted one skinned to mount whole, and as one of them was as fine a specimen as any one would wish, I skinned him out, which made hide, head and legs weigh about 75 pounds. Bill, who in strength and stature is a giant, kindly offered to carry it, so I took the fish and other goat hide, and we set out for camp. It was about sunset and we were high up on the mountain, with no trail and two or three miles from camp. Bill and I knew it was a layout, as our friends were very tired and not used to the rough walking. We did the best we could and got down to water and a friendly log jam about 9 or 10 o'clock, kindled a fire and made the best of it, which was not pleasant, as none of us had a coat, and toward morning it commenced to rain, to make things more enjoyable. At the first sign of day we were on the move for camp through the wet brush, which we reached very tired and hungry, some even more so. And what a camp! The horses had been in, and what they could not eat they had stamped in the mud. Our 5-pound firkin of butter one horse had kindly put his foot in; the salt was all gone; there was flour over everything, and even the tent was partially down. I did manage to fish the flour sack out of the creek and get enough for three small loaves of bread; and then it was fish, meat and bread without salt. Poor George said that if he had known the condition the camp would be in he never would have got there. And so ended that goat hunt.

PROSPECTOR.

Make a Smoke.

Editor Forest and Stream:

You know how the redskins of old used smoke signals? Now, let every sportsman in Maine or elsewhere who gets lost in the woods make a smoke, and the chances are one hundred to one that the searchers who are looking for him will find him within a few hours. Start the smoke on a bare rock on a side hill. Make a thin smoke, and keep it up. Sit down and take it easy and vary the programme by gathering fuel for the smudge or boughs for a wind break or camp bed in the possible chance of having to lie out over night. Look for water to drink. No trouble to find your way back to your rock with the smoke to guide you.

Every professional guide who takes out a party of sportsmen should instruct them in these particulars. It will save painful worry, hunger, starvation and too frequent death. To a tyro in woodcraft I would much prefer to recommend making a smoke than an attempt to study the divides, or even to follow a stream out. In a country of limited area, where the streams are all short, and seldom over fifteen miles from the crown of the divide to tidewater, as in Nova Scotia, the latter would be the best plan—to stick to the watercourses and follow the downstream current. In a wilderness tangle a smoke is the best, though in a perfectly flat area of dense forest it is a hard chance for a man unsophisticated, smoke or no smoke. No man should ever be without matches in a waterproof safe and a serviceable jackknife in his pocket. And above all things, study the lay of the land before you start out and see in which direction the hills and valleys run. Getting lost should be impossible when nature makes all her paths so plain; at least it seems so to me at these presents. But then, I have had fifty-odd years of experience in all regions and latitudes. As a rule, a bewildered man when he finds himself lost has not traveled far from his starting point. Distances seem vastly greater in a strange woods than they do on a turnpike. Indeed, a man cannot travel fast and far through an undergrowth. So the logic of the situation is to stand still, halloo often, fire both barrels of your gun, and, finally, make a smoke in a safe place, if you cannot find a sightly one as well; and if you keep the blaze smothered with moss, punk and green boughs it will not run, and it will give one employment to fill up anxious time.

CHARLES HALLOCK.

Wanted—A Sportsman's Exchange.

JONESVILLE, Mich., Nov. 10.—*Editor Forest and Stream:* I gave the FOREST AND STREAM flies a fair trial, and they were an unlimited success. I caught Eastern brook trout in Willow Creek (Yellowstone Park), Loch Leven trout in the Iron River and salmon trout in the Firehole—also in the Big and Little Spokane, the Clearwater, Selway, Ooskoskia and Lock Saw. The best trout in the lot though are the native mountain trout, to be had in the little nameless streams of Idaho. I caught none with gold nuggets in them, but I did locate in or about them the jewel of improved and robust health, and am willing to make a "divvy" on that. I spent about four weeks in the Bitter Roots with a pack train, but adventures were few and far between, and I fear would be of little interest to the readers of FOREST AND STREAM.

The crying need of sportsmen situated as I am is a "Sportsman's Clearing House" for the purpose of bringing together sportsmen desiring to take certain long trips. For instance, I might plan a trip to Arkansas, North Carolina, Dakota or any other place where I believed game of any given brand to be plentiful. Well, I post myself thoroughly on question of location, outfit, laws, guides, etc., and am prepared to go into the country with a fair amount of knowledge as to essentials; all that I need is a companion or two, and these I cannot find in this community if the trip is extended and likely to take much time or money. If FOREST AND STREAM can start such a "Clearing House" they will deserve and receive the thanks of an army of sportsmen. V. W.

New York Game Protectors.

AT a meeting of the State Fisheries, Game and Forest Commission Nov. 15, six of the State fish and game protectors were summoned to answer criticisms concerning their work which had taken the form of complaints made to Governor Roosevelt at various times, alleging that the State Commission's agents were not seeing to it that the laws for the protection of fish and game were being observed.

The complaints made a special point of violations of the anti-deer hounding law which it was declared had occurred at different points in the woods. Five of the protectors present yesterday were not punished after the Commission had conferred with them as to their work, but the sixth, Protector Carlos Hutchins, of Indian Lake, was removed from office for neglect of duty, harboring violators of the deer law, and violating his oath of office. Hutchins was appointed a protector in 1895. He is a hotel keeper, and it is claimed has entertained at his house guests whom he must have known were hounding deer. The State Commission will bring action against him in the courts for violating his oath of office.—Albany Argus.

Two for One.

NEWFOUND LAKE, Bristol, N. H., Nov. 18.—The Fish Commissioners have finished the stripping of trout and salmon at this lake, about 1,000,000 eggs being placed in the hatchery. This is much less than used to be spread out on the trays, but the adult trout do not show up on the beds in numbers as they used to each year less than the previous one, which is attributed by fishermen here to the annual stripping business. Three or four trout have been placed in tanks to be sent to the Sportsmen's Exhibition at Boston, each weighing from 15 to 18 pounds.

Our local hunters are in high feather as regards the increase of deer in this locality, a number having been shot within five miles of the town. Frank Calley and Charles Tukey, while out driving, saw three together, and they shot one of them, weighing 200 pounds. Elmer Hammond and Charles Keezar got one, Harry Pike one, Frank Tilton one, Ed Towns a fine buck of 190 pounds. State Representative Hammond, who is a believer in game protection, and thinks one deer at a time is enough for any man, was somewhat mystified the other day while looking for venison. At first he thought he must have been looking upon the wine when it is red, for he got two deer for one. He ran across a deer in the pasture, fired, wounding her somewhat. She ran into a small thicket; he followed, and saw what he thought was the deer standing still. He fired again; it ran out. Tracking it for a short distance, he found his deer dead, and then discovered that this was not the first deer he had shot at, so taking his other track he found his first deer, killed, and his neighbors rejoiced with him in his killing two deer for one. As the law allows only two deer to a person each season, H. H. says he has got to wait a whole year to look at a deer over a rifle barrel.

LANDLOCKED SALMON HOUSE.

To Dry Rubber Boots—A Wrinkle Worth Knowing.

TWO of us were off for our annual quail hunt, and were entertained by people who were hospitality itself, and yet we had to sleep in a cold room. It was in a good coal region, and that farmer paid 25 cents a hundred bushels for his coal, going to the coal bank, digging and hauling the coal himself, or sending his farmhand to do the work. Coal—and good coal at that—was cheaper than gravel, and yet there was no stove in the guest room of the house.

It was a problem how to dry out our hip rubber boots, which we had to wear part of the time of our stay. In the sitting room there was an open grate fire, which was covered every night with fine coal and a few shovelfuls of ashes, so that the room never became quite cold. We found that if we heated a piece of old flannel as hot as possible and stuffed it down into the foot of a boot and stood the boot in front of the fireplace it was as dry as a bone next morning. The handiest thing to keep the boot leg open is a spring steel corset rib about 18 inches long by ¾ inch in width. (Behold the advantage of being a married man.) This combination acts to perfection, and beats all hollow the troublesome arrangement of a clothes line and keresone lamps, which may be necessary if the boots have been full of water, but quite unnecessary if they are simply damp because of the perspiration of the feet and legs. D.

North Carorlina Game.

IT is safe to say that not in many years have there been more partridges. It was feared by many persons that the extreme cold weather and the deep snow last February would destroy them. The birds are in all that part of the State east of the Blue Ridge and extending to the tier of counties bordering the sounds. From Danville to Greensboro, thence as far west as Morganton and eastward to Goldsboro there are birds in abundance. Greenville county offers good sport, and so does Person.

The Legislature, at its last session, enacted a law for a number of counties, requiring hunters to have the written permission of land owners when hunting on the latter's lands. This was aimed at pot-hunters. In parts of the State, mainly in the High Point and Hickory sections, Northern sportsmen, to a very large extent, pay the taxes on the lands and have all the privileges. East of Guilford county this is not done. The large land owners make things particularly pleasant for sportsmen, but some of the smaller ones give trouble sometimes.

It is not permitted to ship birds out of this State. The law is violated by taking birds away in trunks and in such packages as would not be suspected to contain them. A number of live birds were sent to Virginia last spring. New Bern remains the center for the best deer shooting. It is said there are more wild turkeys in the lower Roanoke River country than elsewhere.—New Bern Journal.

Rhode Island Game Fields.

PROVIDENCE, R. I., Nov. 18.—*Editor Forest and Stream:* Black ducks are plentiful in the river and bay. They are now shot from blinds on the river banks at night and by the use of decoys. One hunting party recently bagged a dozen down the bay in the day time by shooting from a steam launch, but this method of hunting is rarely successful, as the game has been hunted so much that it is very wild.

Gray squirrels are very plentiful in the woods of the easterly part of Warren and neighboring parts of Swansea. Quail are very scarce, all the flocks having long

since been broken up by gunners, and partridges are said to be scarcer than for many previous years.

Reynolds Lillibridge, the veteran trapper of Exeter, is reported as dangerously ill with an affection of the heart. Mr. Lillibridge is well known by sportsmen of this and adjoining States, who frequently make his place, near the West Greenwich line, their headquarters when on fishing and hunting expeditions in the wilds of that portion of Rhode Island. W. H. M.

The Same Theodore.

CUSTER COUNTY, Idaho, Oct. 18.—*Editor Forest and Stream:* Is the Theodore Roosevelt whose name I see in your advertising columns as the author of a number of books on hunting in the West the same man of whom we heard so much during the war with Spain as the Colonel of the Rough Riders, and who is now, I believe, the Governor of the State of New York? Some of us were talking about this the other night, and some thought that the writer was a man who had a cattle ranch out West, and that the Colonel of the Rough Riders was a New York city man. Will you please tell us which were right? We live a long way from the railroad and don't see many papers, and this is why we ask you.

A. R. WILLIAMS.

[There is but one adult Theodore Roosevelt—so far as we know—and he is Governor, Colonel, author and ranchman. Mr. Roosevelt's activities have extended in many directions. His books give delightful pictures of life in the further West.]

The Virginia Game Fields.

CHASE CITY, Va., Nov. 14.—*Editor Forest and Stream:* The hunting season is now on. Quite a number of sportsmen from a distance have been here, and all seem delighted with their experience in the chase for deer, or in quest of turkey or quail. Among those here at present are Dr. R. U. Pierce, of Buffalo, N. Y., who, though not having hunted quail for some years, is rapidly getting "his hand in," bringing home from twenty to thirty quail as the result of a day's hunt. A party from Cannonsburg, Pa., brought in a deer last Saturday, killed within half a mile of this place, and another deer the following Monday (yesterday), a couple of miles out. The season for quail shooting is at its best from now till the middle of December. W. D. PAXTON.

Currituck Ducks.

CURRITUCK, N. C., Nov. 11.—Yesterday was our opening day for ducks at Currituck. The weather was very mild and fine, and only about 3,000 ducks were killed; but they were in splendid condition owing to ten days longer to get fat in. Our season has formerly opened Nov. 1, but this year it opened on the 10th. MORE ANON.

Christmas Books.

WITH the approach of Christmas comes the necessity of buying Christmas presents, the selection of which is not always easy. Many people find it difficult to make up their mind what they shall purchase, and so put off the operation of buying until the last moment. As a recult, when the time comes they are likely to be hurried, confused, and at last select things that in their cooler moments they are not satisfied with. It is the old story of going through the forest looking for a straight stick and finally coming out with a crooked one.

A person who is wise will purchase Christmas gifts long in advance of the day. There is then plenty of time for careful selection; one is not troubled by the crowding of other persons who also have postponed their purchases until the last moment; the dealers having plenty of time, can ship their goods in a deliberate and orderly manner, so that they will reach the purchaser and not be mixed up with the orders of other people. We say nothing about the woes of the unhappy storekeeper, who is anxious to please every one, but who in the rush of custom which comes just before Christmas makes mistakes which no one regrets more bitterly than he.

The Forest and Stream Publishing Co. begs its readers who intend to purchase from it books for Christmas gifts to make their selections as early as possible and to send in their orders without delay. There is a full month before Christmas—ample time for books to be ordered, received and put away for the great day. But if these orders are postponed for a month, till the Chrismas rush, many of the purchases may fail to reach the customer until after Christmas, and some part of the pleasure of the day will thus be lost.

On another page will be found a list of books interesting to sportsmen. The angler has a range of choice among books which describe fishes, the modes of taking them, the tackle with which they are taken, and the men who take them.

Hunters, trappers and outdoor men may choose from books on trapping, hunting, woodcraft, ranching, Indians and travel and exploration. Especial mention may be made of Mr. Chas. E. Whitehead's superb volume, called "Camp-Fires of the Everglades," of the various Danvis books by that charming writer Rowland E. Robinson, and the different volumes of the Boone and Crockett Club, "American Big Game Hunting." "Hunting in Many Lands" and "Trail and Camp-Fire," to which Gov. Theodore Roosevelt so largely contributed.

If the reader be a yachtsman or canoeist he has here a large choice in books which run from the splendid $10 volume "Small Yachts" down through all the range of boat building, boat sailing, canoe handling, sailing and camping, to a half-dollar booklet which tells how to build a canvas canoe.

There are no doubt many big-game hunters whose libraries already contain most of the printed works on their favorite subject. These cannot fail to be interested in the superb artotype pictures "Alert" (moose), "The Challenge (wapiti or elk), "Listen" (blacktail deer), and others, which are now being issued, and which, framed and hung on the wall, will offer to many a man stirring reminders of some fortunate hunt in past years either in the East or in the West.

For their own sakes, as well as for its own, the Forest and Stream Publishing Co. urges its customers who purpose to buy books within the next month to examine the book list in FOREST AND STREAM—or better still to send for its free illustrated catalogue—and to send in their orders without delay.—*Adv.*

Sea and River Fishing.

Some St. Lawrence Fish.

Editor Forest and Stream:

There was a time not many years ago when anglers vied with each other to see who could kill the greatest number of fish. In those days there was little or no thought of the future, or, in fact, of present needs, the chief aim being to make a great catch in as short a time as possible. In case the angler was successful enough to take more fish than he could use himself or give away, it mattered little to him, for he had accomplished his purpose by making a big record as a fisherman. Fortunately, however, things have changed materially within the past few years, and there is a strong and growing tendency among anglers to discountenance fishing for the sole object of establishing a record, on the ground that it is unsportsmanlike. Of course, this does not mean that there has been any falling off in point of enthusiasm on the part of anglers or that they are less anxious than heretofore to make good catches. It simply means that there is an unwritten law among them that no one shall kill more fish than he can use to advantage. This laudable sentiment, however, does not prevent the angler from keeping a record of fish captured during the season, including the number and weight, and the one who makes a good showing while keeping within the limits of both the game law and the unwritten law is the one who can be justly proud of his achievements.

Probably there are no public waters where the laws are more carefully observed and fishing is carried on in a more sportsmanlike manner than at the Thousand Islands or in what is known as the State reservation on the St. Lawrence River. The special provisions in the game laws relating to the waters of the Thousand Islands make the open season for black bass, Oswego bass, pickerel, pike, wall-eyed pike and muskallonge from June 9 to Jan. 1. Bass less than 10 inches in length cannot be legally taken. No person is permitted to catch, kill or possess more than twelve bass in any one day, and where two or more persons are fishing from the same boat, they cannot take to exceed twenty-four bass in a day. The Anglers' Association of the St. Lawrence River, a large and influential organization composed mainly of prominent business and professional men from different parts of the United States who have summer homes among the islands, and also including many of the principal citizens of Clayton and Alexandria Bay, is entitled to great credit for the healthy sentiment regarding fishing which prevails within the reservation. It is largely due to the efforts of the Association that the international park exists, that the special protective provisions were enacted and are enforced, and that the sentiment in favor of sportsmanlike angling is so strong.

During the first few weeks after the season opened this year the fishing was not very good in the river, owing to the great numbers of menhaden. For some time the bass, muskallonge and pickerel all displayed utter contempt for the angler's hook, trolling spoon and live bait evidently finding their wants fully supplied by the myriads of little fish mentioned. About Aug. 1, however, the game fish began to bite vigorously, and they kept it up so that as a whole this has been one of the best fishing seasons known on the St. Lawrence for many years.

The average weight of the black bass which are caught in the waters of the Thousand Islands is from 1 and 1½ to 2 pounds, and a 3-pounder is considered quite a big one. When one is caught which tips the scales at 4 pounds it is an event which is worth bragging about, and every ounce above that weight is counted as of great importance. Once in a great while a specimen is taken weighing 4½ or 5 pounds, but such occurrences are extremely rare. The St. Lawrence pickerel or pike proper average from 3 to 7 pounds in weight, and a 10-pounder is a big one. It is not a very uncommon thing, however, to see them weighing from 12 to 16 pounds, and in rare cases they are taken weighing 20 pounds, or even a trifle more. The muskallonge frequently attains great size, and while those which weigh from 14 to 20 pounds are counted as good ones, hardly a season passes without the capture of a specimen weighing from 30 to 40 pounds, and once in a great while even the latter mark is passed.

Following is a list of some of the noteworthy catches which have been made by anglers on the St. Lawrence River during the past season:

About the middle of August last Charles Lavier, Jr., Walter Kemball and Fred Bowen, of Ogdensburg, who were camping near Terrace Park, captured a 22-pound muskallonge.

On or about the same date P. Canfield, of Ogdensburg, with Eddie Gill as oarsman, caught near Big Island a muskallonge weighing 35 pounds.

On the morning of August 28, H. C. Shafer, manager of the Hubbard House in Clayton, brought in a muskallonge weighing 19½ pounds, which he took off Bartlett Point, about a mile above the village.

During the last week in August T. W. Kingsley, of Potsdam, while fishing near Hamilton's Island, landed two muskallonge, one of which tipped the scales at 18 pounds. Shortly before that his brother, M. H. Kingsley, who also went out from Hamilton's Island, captured a 36-pound muskallonge.

On Aug. 24 and 25 a party of gentlemen who were stopping at the head of St. John's Island, made a splendid catch of bass. The party, which consisted of Byron A. Brooks, Messrs. Conant and Dorrance and G. B. Lyons, of New York, went out in the naphtha launch Sylvia, belonging to the former, early on the morning of Aug. 25, and returned the following evening with sixty-eight fine bass, the largest weighing a little under 4 pounds, and many of the catch ranging from 2 to 3 pounds.

On Aug. 30 Mrs. Thomas D. Jordan, of New York, and her niece, Miss C. J. Trice, of Jersey City, who spent the summer at the Hubbard House, Clayton, brought in twenty-one pickerel, all good size, the heaviest one weighing 9 pounds and the smallest 4 pounds. The catch was the more remarkable in that it was the work of lady anglers, who were unaccompanied by a guide.

Dr. R. W. Amidon, of Chaumont, who has a cottage on Point Salubrious, on Sept. 5 caught, among other large black bass, one weighing 4½ pounds.

About the middle of September a party consisting of Mr. and Mrs. Morgan and Mrs. F. M. Bacon, who, with a guide, went out from Clayton for a day's fishing, returned with 66 pounds of pickerel.

Late in September one of the guests at the Frontenac, Round Island, captured a muskallonge weighing over 30 pounds.

About the same time A. E. Hume, cashier at the Crossmon House, Alexandria Bay, went out with an oarsman for a day's fishing near Brown's Island, and returned with twenty-two black bass, an 8-pound wall-eyed pike and a 9-pound pickerel.

C. O. Rogers, of Adams, N. Y., whitefishing with his brother, O. N. Rogers, near Clayton on Oct. 16, took a pickerel 34 inches in length and weighing 10 pounds.

E. G. Wykoff, of Ithaca, who was stopping on Carleton Island, caught a muskallonge in August which measured 3½ feet in length and weighed 27 pounds. In September Ozman Wykoff, a lad, also one of the Carleton Island party, brought in one weighing 18½ pounds.

E. M. Knight, of Farmersville, caught two muskallonge in September, one weighing 9 and the other 15 pounds.

Oarsman Jacob Putnam, of Carleton Island, while fishing near Mile Tree Point in September, took in a muskallonge which weighed 18½ pounds.

One of Utica's most enthusiastic and successful anglers is ex-Supervisor William Howarth, who has a summer residence on Carleton Island. Mr. and Mrs. Howarth went to the river on June 25 this year and remained until Sept. 24. They enjoyed splendid fishing, and a good deal of the time they had friends visiting them who shared the pleasure. They had two boats, and usually there were four persons fishing and two oarsmen. The time devoted to fishing would perhaps average five hours a day, although there were some days when it was so windy that no one went out. A record of the season's fishing, as kept at Mr. Howarth's boat house, makes this showing: 698 black bass, 1,218 perch, 35 pickerel, not one weighing less than 5 pounds, and from that mark up to 13½ pounds; 4 eels and 1 muskallonge. The latter, which was captured by Mr. Howarth himself, weighed 10½ pounds. All of the fish but the pickerel were caught on rods. The muskallonge was taken on a light steel rod. It made a lively fight, but succumbed after a struggle which lasted about twenty minutes.

In three or four hours' fishing one day during the latter part of their stay on the river, Mrs. Howarth caught sixteen black bass which weighed from 2 to 3½ and 4 pounds each.

During September David Burke, of Utica, who was a guest of Mr. and Mrs. Howarth at Carleton Island for a few days, captured a black bass which was 22 inches long, 14½ inches in circumference and weighed 4½ pounds.

A few days afterward Mr. Howarth had the good fortune to catch one that was 21½ inches in length, 15 inches in circumference and weighed 4¾ pounds.

Black bass have been very numerous in the vicinity of Cape Vincent this season, and oarsmen have found profitable employment in fishing for the market. Quantities of them have been sold for five cents per pound. It is said that a gentleman named Wicks from New York, together with his guide, have taken 3,500 pounds of black bass in the lake off from Cape Vincent and off Stony Island. The waters around Cape Vincent are not included in the State reservation of the St. Lawrence River.

Dr. Henry Dean, of New York, who has a cottage at Alexandria Bay, visited the Rideau in August and fished Troy and Griffin lakes. It was reported that he caught fifty-one black bass, all weighing over 4 pounds, besides a number of excellent specimens of the Oswego tribe.

During the latter part of July several very large wall-eyed pike were taken in the river opposite Fine View. They were caught in deep water. H. R. Clark, of Jersey City, N. J., a guest at the Fine View House, captured a dozen in one day.

Capt. W. E. Gerard, of Brooklyn, while a guest at the Pullman House during the summer, made some splendid catches of pickerel and bass. One day during the first week in August he took twenty-four pickerel, all of good size. W. E. WOLCOTT.

UTICA, N. Y., Nov. 11.

The Landing Net Case.

JUDGE CRAIG handed down a decision on Nov. 16 in the Pennsylvania case brought against Messrs. Wetherell and Elliott to collect a penalty for the use of a landing net in taking trout. The circumstances of the prosecution have already been related in these columns. The law under which the action was brought prescribes that no person shall kill any trout "with any device save only with rod, hook and line"; and the point under consideration was whether such a provision made unlawful the use of the landing net. Justice Gruver, of the lower court, had held that the net was prohibited, and had imposed a fine of $100 upon the defendants, who carried the case up on appeal. Judge Craig's decision reverses this, and holds:

"Manifestly if we interpret the words 'rod, hook and line' within the limitation of their literal import, then it would be obnoxious to this act to use a reel or fly or bait or bob or sinker or squid in connection with rod, hook and line when fishing for game fish, for these are appliances for catching fish in the general sese of the terms. Such interpretation would practically defeat all catching of game fish.

"Much argument was expended on the question: Was the fish caught when hooked, or was it not caught until it was put into the physical possession of the defendant by means of a landing net? The preponderating weight of the evidence is that a game fish is caught when hooked,

and that the landing net is used, either conveniently or necessarily, for bringing the fish into the physical possession of the fisherman.

"We cannot believe that the Legislature in using the phrase 'rod, hook and line' intended so narrow and unreasonable a construction as is urged by the Commonwealth. So common and universal is the use of reels, fly hooks, bait, bobs, sinkers and squids in fishing with rod, hook and line that we may take them to be included in the phrase 'rod, hook and line' in ordinary and popular use. Therefore, if we construe the legislative language according to its popular acceptance, we are bound to hold that the appliances or things just named were understood and intended by the Legislature to be included in the phrase 'rod, hook and line.'

"But the contention is that a landing net is not of such common and universal use as to be included in the phrase 'rod, hook and line.' Certain it is that the landing net was in common use by fishermen as far back as 1653. All the testimony in this case is to the effect that the landing net is and has been in ordinary, common and almost universal use by those who fish for trout with rod, hook and line. In our view, therefore, the landing net was as much within the legislative intent when using the words 'rod, hook and line' as was the fly hook, reel, bait and such like appliances. Landing nets are not named in any of the acts. Hand or cast nets are, in the sixth section of the act under consideration. But hand or cast nets are not landing nets."

Salt Water Fishermen's League.

Editor Forest and Stream:

On March 20, 1898, a body of anglers formed the Protective League of Salt Water Fishermen, which organization was lately incorporated under the laws of the State of New York. The forming of the League was caused by the failure of the angler in securing the same amount of sport in striking the fish as in former years. How is this? Can any of the anglers answer the question? If not, the league can and will.

Upon investigation we find that the waters about New York and neighboring places are being polluted by the dumping of refuse and the infusing of oils, acids, dyestuffs and other injurious and poisonous matter into our rivers and bays. This causes the bed of the waters, which is the natural feeding grounds of the fish, to become poisoned, thereby driving the fish to other parts far remote, and thereby incurring a big expense on the angler and hours of travel to seek his prey. All our rivers and bays have branches and creeks of salt water, wherein the fish attempt to enter and spawn, but are prevented from so doing by the continuous placing of nets at the entrances, and the fish are secured before they spawn, thus killing the spawn and preventing the hatching of millions of fish.

The menhaden fishermen are another detriment to the hatching of fish; they net everything that comes their way, edible as well as menhaden. They should be compelled to return the edible fish to the waters, and they refrain from so doing, and at present it makes no difference to them, all go for oil.

No one should be deceived by the rumors that are being circulated that the league is seeking to deprive the net fishermen from making a livelihood. The league is only too glad to assist them that we may all have an equal chance; but the league is against the unscrupulous methods the netters employ in securing the fish by netting more than they can dispose of, and sending tons upon tons of fish to Barren Island to be made into fertilizer. There are some farms along the Hudson River where there were tons upon tons of fish strewn over the land as fertilizer. This happens every spring, and the matter has now been placed in the proper authorities' hands, so as to arrest the violators of the game laws, as the fish so used were mostly undersized striped bass. If this should keep up what will become of our fish? There would be very few left, as seems to be the case nowadays, and you all know it.

The league has advanced and grown to be a factor in New York, and has among its members men of prominence in all walks of life. We want everybody of good character and who has any interest in fishing to join; and there are thousands of them who enjoy the sport. Come forward, anglers, and become members. Show that you are alive to the issue and willing to do your share of the work of the league. The future of the anglers is at stake. Do not let the few do the work, for there are thousands of you who should have a say in having the laws enforced and new ones enacted. Now is your time to act. The Legislature meets Jan. 1, 1900, and the league will then present their grievances to that body. Do not hold back. Come like true sportsmen and assist in framing a bill that we are going to present, so that in the future you will not say, "Why did not the league do this and that?" The dues are only $1 per year, and no other expense. When all the members of a fishing club desire to join the league in a body the annual dues for that club are $5, and each member of the club receives a membership card without any additional payment for the first year. It is the duty of every fishing club to be in league with us and have some of their members present at our meetings to offer suggestions as to the best methods to be used in securing improvements of fishing.

Illustrated lectures and useful information to anglers will be given from time to time at our meetings, which are held every third Monday of each month, at Wall's Hotel, 106 West Thirty-first street, New York city, at 8 P. M.

Fishing vs. Picnic.

MARLINTON, W. Va.—*Editor Forest and Stream:* I inclose a photo of a catch of bass made by my brother, Calvin Price, on the Fourth of July last. He did not hesitate a moment between going fishing and attending a "picnic," as Fourth of July celebrations are called here, and the result of his devotion was this fine bass (3¾ pounds) and a dozen smaller ones.

A bass of this size is unusual in the headwaters of Greenbrier River. N. P.

At Experience at Roberval.

Editor Forest and Stream:

We, the undersigned, have been through an experience which may be of interest to sportsmen contemplating a trip in the waters of Lake St. John, P. Q., especially to those who believe it is more blessed to give than to receive.

Two years ago we made a trip up the Peribonca River under the superintendence of the Hotel Roberval, a convenient arrangement for those desiring to part with $7 per day for one canoe, two guides and provisions. Of that sum $5 we were allowed to believe was paid to the guides, the rest going for provisions. The river seemed fished out; yet we had the luck in eleven days to catch three small pike. What more could sportsmen desire?

This year, thinking that we might be able to save to a considerable extent, we dealt with the guides in person, engaging them several months ahead of time and laying in a stock of provisions. We understood that the lands were open to guests of the hotel, and with no questions asked about our proposed trip—be it understood that the management usually takes great interest in the proposed trips of its visitors—we embarked after checking our trunks and depositing our valuables in the hotel safe.

After a two weeks' trip up the Mistassini and the Samagua, where we had fair luck with small trout in a little lake, we returned to the hotel. On the afternoon of our arrival the management sprung a little joke on us in the form of a bill for $41.25 each, based, as they said, on the profit they would have made had they fitted us out. We asked to see the wording of the lease granted by the Government, and were satisfied that the hotel held the right to sublet the fishing privileges "of the Mistassini River and its tributaries," for which it paid the Canadian Government the sum of $20 per annum. Ignorance of the existing circumstances and the law of course did not excuse us, but the contemptible way in which the trap was set for us, and the extortion practiced upon us, was enough to call down upon the heads of the management all the epithets of a sportsman's vocabulary. Realizing that we had done the hotel an injustice, and were subject to indictment as poachers, we were willing to pay for the privilege of fishing in its water, for be it observed we were ignorant that the hotel held the lease of the river, and we had not the least intention of encroaching upon private grounds, or of fishing otherwise than openly. On our protesting against paying the hotel for what it had not furnished us, the manager informed us that he could charge us whatever he chose—an evidence of his generosity in letting us off with $41.25 each. He told us that the guides received but $1.25 per day—half of what we had supposed before, when there was no need of our knowing the enormous profit the hotel made. The manager informed us that as the hotel did not pay, the profit of the establishment had to be made on the privileges of sportsmen, and he took it out of men in search of fishing. The natives and Indians, it may be added, fish to their heart's content—even with nets—and pay nothing in the way of a tax. Moreover, the waters are in nowise policed or protected, and sportsmen sent out under the hotel supervision suffer in consequence of the slaughter.

Being pressed for time, we were compelled to pay the $41.25 apiece, though it seemed a little high for one ouananiche and a few brook trout.

By publishing this you will confer a favor on us and advise sportsmen of a paradise which, although void of caribou, moose, deer, or other four-legged game, affers the rarest and most costly fish to be found in any waters.

Respectfully yours,

C. P. M. RUMFORD.
ROBERT R. LOGAN.

WILMINGTON, Del.

Rod and Reel at Galveston.

This is the time of year when the attention of Northern sportsmen is drawn strongly to the Southern sporting grounds. There is really no hard and fast shooting or fishing season in the United States, for when our Northern marshes are frozen the Southern shooting is at its best, and when our streams have gone out of commission in the North the sea fishes of the South are just getting into the field. A gentleman who wishes himself to be known as "A Galveston Fisherman" writes as below about the kind of sport they are having right now down in Texas:

"In improving the entrance of Galveston Harbor from 13½ to 27½ feet in depth, Uncle Sam built two jetties, each over five miles in length, about a mile and a quarter apart and capped each with roughly fitted cubes of granite of fifteen to twenty-five tons weight. The sea moss, small oysters, crabs, etc., furnish food, and the base of the jetties gives protection for the fish, which are stopped in their movements by the jetties, and hence so concentrated that along these jetties is to be found some of the best fishing for salt water fish to be had anywhere in the country. To stand on a flat rock, no larger than a small dinner table, five miles out at sea and see the white sharks, tarpon, Spanish mackerel, redfish and sheepshead feeding in the clear water 30 feet deep is a novel and pleasing experience in sea fishing. There are but few places where rod and reel fishing for sea fish can be had except when cramped up in a small boat.

"It is no uncommon thing to see here ten to fifty tarpon an hour, or to lose half a dozen hooks or perhaps your whole tackle during an afternoon. For four months this summer the fishing was splendid on Spanish mackerel, the weight running from 1½ to 5 pounds, and it was a bad afternoon when one could not average 10 pounds of mackerel to the rod. In casting one would not know whether he had mackerel, trout, tarpon, sheepshead, sea bass, pompano, or Junefish. One man this summer caught over 500 pounds of Junefish in an hour, though this fish runs from 50 to 200 pounds in weight.

"The mackerel is the gamest fish for his inches and weight in the world. He fights with a rush and strength in the water which is only explained when you see his yacht-like lines. Out of the water he dies game and is ready to take a piece of your finger if you give him a chance. The mackerel come in June and leave in October, and we have fine fall fishing.

"To-day, Nov. 11, Dr. A. F. Sampson assembled a few friends on his naphtha launch, the party being made up of six men and two ten-year-old boys. It could be seen that the waves were high enough to make it sloppy on the jetty rocks, so the launch was turned toward the north jetty, where the waves were less rough. By 1:30 we were on the jetty, and in a few minutes Fred Van Hartin's rod was at work on a 4½-pound sheepshead. Ten-year-old Joe Sampson had a hard struggle with a 2-pound redfish, but landed it without assistance. From then till 5 o'clock the fishing was good. Dr. Sampson and Capt. Betherson each took a double on sea trout. Gus Dreyfus, after landing five sea trout and a lot of sand trout, not counted, hung a 3-foot shovel-nose shark, and while playing him his second hook was taken by a 7-pound catfish. He was using a light lancewood rod, but landed both fish. Mr. Rowley led with 11 trout, 2 redfish, in all over 20 pounds. Arthur B. Homer caught two sheepshead, a 3-pound redfish and some trout. G. E. Mann caught 3 trout aggregating over 5 pounds. The weather was perfect, and several of the party fished in their shirt sleeves. The tide on the south side of the jetty was running out at six miles an hour, but on the north side the water was tideless and smooth as a mill pond. We did not see a single tarpon, and they have probably gone for the winter. A few porpoises were playing tag and scaring the skipjacks. The total catch of the party was 40-odd fish, a total of over 70 pounds, which is not a bad but an extra good catch for the season.

"The Galveston Tarpon Club, whose membership includes 100 local and a large number of non-resident members, will by next spring have club house facilities which will give the stranger in our waters all the opportunity he may wish to play the tarpon in as good a day's sport as can be had anywhere."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Boating on the Potomac in 1863.

BOATING on the Potomac during the Civil War was rather a precarious pastime, as will be conceded after a perusal of the subjoined letter from a gentleman who crossed the river from Leonardtown, Md., on the night of Feb. 17, 1863. He is writing to his wife in New York, who was hoping to follow him. The journey into Dixie was precarious, not only because of the vigilance of the Federal gunboat patrol, but because the flotilla had broken up every craft within sight or reach by which it was possible to effect a clandestine crossing. The boat used on this occasion was an old seine boat which had apparently survived its usefulness:

Westmoreland County, Va.—Dear ——: At last I am in Dixie, having reached here this morning at 8 o'clock, after a seven hours' pull at an oar, just one week since I saw you. I feel convinced that you will never attempt to reach the Confederacy by running the blockade, at least by my route, although I understand that four ladies ran through last Saturday. You may infer that I feel quite safe now, although I may tell you that in the two Eastern counties of Virginia, of which Westmoreland is one, there are some 3,000 Federal cavalry constantly roving about to intercept blockaders, contraband goods, recruits for the Southern army, etc. Though nominally under Confederate rule, the Yankees seem to hold it by possession, and the residents are much harassed by raids from foraging parties from both sides. They have a sorry time.

Thus far we have been very fortunate in getting through successfully. Almost every day for three weeks past parties have been arrested who came by the same route, and one lady had her arm shot through. I gave you a hint of some of the difficulties of the journey up to date of my last letter, written from Leonardtown. My experience since then has been far more fruitful of adventure and excitement. Yet there is genuine pleasure in it, although one's life is in God's hands. I will give you a little outline.

During Monday, while we were at the hotel, information came to us (there were nine in our party by this time) that a Federal officer had declared that there were five blockade runners in town that he could put his hand on. This of course was mere suspicion on his part, for no hint had been dropped by any one of us. That would have made no difference, however, for the soldiers have repeatedly taken suspected persons from their beds at midnight, not only at the hotels, but in private houses, and sent them to Washington as prisoners. They confiscate goods, plunder the residents, and occasionally shut up stores. It was evident that we should have attention paid to us before midnight. Accordingly, our arrangements having been previously made, we prepared to decamp forthwith. As soon as it was dark we were just in the act of leaving the hotel, when one of the soldiers came in to see if the game was still there. The landlord invited him down cellar to have a pitcher of cider, when you may suppose there was some tall scampering. We all left in a body by the back door, across the kitchen garden, over fences, through bushes, and across fields and wet weather gullies, to the river side, where a boat was in waiting to take us. Our baggage had previously been put aboard in secret. Included were several large trunks filled with goods and personal effects, chests of tea and clothing, for the most part owned by four Jews who were in the business venture. I felt sorry that I sent my trunk back from Charlotte Hall, you may believe, as the sequel proved that the contents were worth a big price in Confederate money. It was very dark. We were soon aboard and off in a jiffy, our darky oarsmen (for the slaves still stick to their own against the Yankees) pulling for dear life to escape the pickets who swarmed everywhere.

"We were well down Brittain's Bay, which widens into the Potomac, when a signal rocket was sent up; but the men pulled the harder, the oars muffled and not a word spoken except in lowest whisper. We soon got pretty well out of reach, and a Minie rifle ball whisted us good-by—tolerably near, too. The rocket must have shown our position.

Silently we sped on, but the boat was very old, rotten and leaky, and we soon found that it had nearly filled with water, when we made all haste for the shore When within a rod or two some one carelessly step-

on a weak plank and stove it through, and the boat immediately sank in 3 feet of water. This was on the Maryand side, of course, we not yet having reached our starting point for crossing. Many of the goods were consequently damaged. Most of the party jumped out into the water at once, but after they had waded ashore I and two others threw them a rope and persuaded them to haul us up to terra firma with wet feet only. The goods were immediately put on shore and secreted in the woods to secure them from the launches of the gunboat flotilla, which are always cruising along shore. There we camped for about two hours. In the meantime we procured a seine boat from a fishing shanty, and at 1 o'clock proceeded on our perilous journey with an experienced pilot and a sharp lookout. The price charged for taking the party over waas $150 in greenbacks. Nevertheless, one of the men we had bargained with became timid and backed out, and as no one else could pull an oar I took his place, though I didn't get his pay, as I ought to have done. About $5,000 worth of goods went over on that trip, and it is estimated that nearly $1,000,000 worth have been supplied to the Confederates in this way from a single town. This is one reason why the town is so carefully guarded.

Nothing exciting occurred until we had gotten some ways out on the river. It was cloudy and dark. Just then a gunboat was discovered going up, but she was past us. When we had reached the middle, another was seen bearing directly upon us. It was a critical time. We ceased rowing, lay low and kept the bow of the boat always toward the steamer, so as to present the smallest possible object. She came so near that we could see the gunners through her lighted ports. Fortunately she did not observe us, and we moved on. After that we grounded on a sandbar, and had more trouble to get off without noise. Sounds were heard very distinctly in the humid atmosphere. Soon afterward a drizzling rain commenced. It grew very dark, and directly we almost ran into the revenue cutter which is stationed off Pope's Creek as a guard boat. I happened to be looking at a light on shore when it became momentarily obscured, and looking sharp we discovered the vessel, whose masts had passed between us and the light! We were not hailed!

One more gunboat avoided and we approached the Virginia shore. Meanwhile the rain had changed to a wet snow, which drenched us all to the skin and almost froze us. Rowing was what kept me warm. When near the shore we had to look out for launches again, as well as for Federal pickets on shore. But the weather became very thick, and we succeeded in finding a landing after a long and laborious search, thanks to our pilot. Our baggage and goods are now stored in a private house. On Saturday and Sunday the pickets were moving about, and we lay perdu under some haystacks where their horses were eating until we thought they would stamp our feet off, though we drew them under as close as we could. After they had gone we couldn't stand, we had been so cramped. It wasn't a bit funny. To-day the coast was clear, so you see providence has been kind to us from the beginning.

Our party is a tolerably select one, apparently, as we have two Confederate officers, one of whom served in Texas before the present war; a prominent Baltimore banker, a Southern Express agent and a young man who is going to joint the Southern army. The first said that in all his experience he had never had a rougher time than last night. I was the only one beside the boatman who didn't complain, and I had pulled a heavy oar almost continuously for seven hours. It was the worst of all my checkered experiences. All agreed that if it had not been for me, we would now be aboard of a United States gunboat. I think so too. I never worked so hard in my life, but I am feeling as well as though I had my regular night's rest for a week past. Snow is now 8 inches deep on the ground. We are waiting for the storm to abate. To-morrow we go on to Lloyd's in a private team, and will probably be at Fitzhugh Lee's headquarters at Bowling Green in the evening. At Milford, two miles distant, we take the train for Redmond.

CHARLEY.

P. S.—I was just about to seal this note to send by the boatman going back, when our attention was called to three gunboats at anchor just off the mouth of the creek where we ran in. Too late, Mr. Federal! C.

Speaking of Dogs.

SAN FRANCISCO, Nov. 12.—*Editor Forest and Stream:* Lives there a man with soul so dead who never to himself hath said, "I love not dogs"? Such were the thoughts that came to me a moment since as I stood at the window observing my old setter Sly, as he lay sunning himself on a bed of ivy vines, with three cats lying on him and between his paws fast asleep, and evidently much to his discomfort, as he raised his head and looked at them with an expression which plainly said, "I wish to gracious you would get off and let me scratch that flea that is giving me fits." But rather than disturb his companions he endured the flea. I said to myself, "Would a man have as much consideration?" which led to the reflection of how little we appreciate the good qualities—I may say gentlemanly qualities—and characteristics of the dog. I have been ridiculed all my life for my weakness for dogs, and—I suppose I should be ashamed to say it—for cats also; in fact, animals generally. From this fondness and observation I have discovered qualities that only a close observer and lover of animals ever does.

How often I have noticed the expression of the face of a horse when he was being badly handled and abused. He was saying to himself, "What does this devilish fool want me to do? He don't know himself," and then to see the distressed expression of his face when, being overloaded, he is whipped to make him exert himself beyond his strength. Animals must think and reason; the evidences are of daily observation, and what must be their opinions of mankind? How often do we see the driver when a horse slips or stumbles take out his whip and give him a cut, punishing the poor horse for an accident, the result of a badly paved street or a smooth shoe. And how often the impulse has been almost irresistible to sally out in the street and give the driver a lick over the head with my cane.

There are two institutions that deserve the aid and encouragement of every good citizen. One is the Salvation Army and the other the Society for the Prevention of Cruelty to Animals. I have seen such evidences of the self-sacrificing devotion to the poor and unfortunate by the Salvation Army, and the good they do, that I have a respect for them; and as for the Society for Prevention of Cruelty to Animals, every lover of dumb beasts should give it his unqualified indorsement.

I had an idea in my head when I lit my pipe and sat down to gossip with FOREST AND STREAM. It was to suggest that as you have had a run on bears, skunks, wildcats, coons and varmints generally, why it would not be a good idea to branch off on dogs for a change. It is true lovers of dogs do get in a good deal of dog talk; but who ever gets tired of it? Let us have a department of "That reminds me" on the dog—experiences, anecdotes, instances of their doings, and their intelligence. It might include other animals as well. I think it would be a very interesting column. It would certainly gain many friends for the FOREST AND STREAM among the women and children. I could write pages about the dogs I have owned, for when I had a place to keep them I never had less than a dozen of assorted breeds and degrees. I had a den sacred to pipes, guns, fishing tackle and dogs, where the smaller pets spent the evening with me, greatly to my entertainment, and whose society I much preferred to the two-legged species that were much less entertaining.

Speaking of dogs, my old dog Sly is an illustration of a dog with true gentlemanly, unselfish instinct. When ever his dinner is prepared for him he refrains from touching it until the cats are ready to share it with him; and he lets them have the choice of the tid-bits on the plate, and when they get the largest share he expresses no dissatisfaction. In the morning he is very partial to his cup of coffee, which is always prepared for him, with milk and sugar, and if by accident the sugar is omitted he tastes it, sits down and waits patiently until it is added. It is the only instance I ever knew of a dog being fond of coffee—I have never tried him on tea. His coffee is made of the same strength as for the family; and he don't swear if his dinner is sometimes late, wherein he differs from the average man of the house and rises superior to him.

Many men and women too own dogs that occupy a large share of their affections, and who, if the FOREST AND STREAM adopts my suggestion, will doubtless be glad to tell us of their perfections, and give the dogs the prominence they desire, and an equal show with the bears, coons, and the gentlemen in the perfumery line.

PODGERS.

Western Massachusetts Fox Hunt.

THE Western Massachusetts Fox Club, of Westfield, Mass., held its twelfth annual hunt on Wednesday and Thursday, Nov. 15 and 16. That it was a success is readily seen when it is stated that eight brushes were secured—all the first day. The hunters covered the same territory both days, which no doubt accounts for the poor showing of Thursday. The conditions on both days were excellent for trailing. On Wednesday there was a half-inch of snow on the ground, which held the scent admirably, while on Thursday, although the snow had melted, the ground was left just damp enough to hold the scent for a long time. But there were no foxes running the second day, and the members of the club who had hopes of beating all records in the number of pelts secured (their hopes being raised by the fine showing of Wednesday) were doomed to disappointment. Westfield is an ideal place for the holding of such a hunt. The town is situated just at the foot of the famous old Berkshire Hills, and a drive of a few miles brings the hunter to the hilly country. The hounds are generally loosed at the foot of the mountain, and the sportsmen may take the choice of ascending the mountain or station themselves along the base of the range of hills or else at some favorite runway on the rolling plains of the north and east. The sly creatures abound in this farming section known as Pochassic and Montgomery, and in spite of the fact that the club has hunted there for seven or eight years, and slain in all nearly fifty foxes, the ground still remains a great favorite, and Reynard is kind enough to keep migrating into that territory. Through the pasture land on top of the mountain and on the low ground at the foot of the range there are scores of favorite runways, and it is no wonder that these annual gatherings attract many a hunter from distant towns and cities. The view from the top of Montgomery Mountain is superb, and a poor lover of nature is he who could fail to derive inspiration from the glorious outlook. There you find yourself less than a half-dozen miles from Westfield, yet from 1,000 to 1,200 feet above her spires. The valley spreads out before the vision, and you ponder on the glories of old nature, and finally are able to appreciate the beauty of the whole scene. To the west can be seen a wide, deep valley, and then the eye takes in the Blandford Hills, fully 300 feet higher than where you are standing. You look upon an almost unbroken forest, but a glance along the crest of one of the highest points reveals, standing out against the clear sky, a white church that appears like a solitary sentinel guarding the mountain fastnesses. It looks like a mere toy, but it stands year after year on its foundation of solid rock, faithful to its trust and unmoved by the raging elements.

While the first day this year was an ideal one for tracking, the elements were not as favorable to the hunters. The snow of Tuesday night turned to a mist and sleet by Wednesday morning, and for the first few hours of the day the men stood by their positions with chattering teeth and benumbed hands and feet. The mist wet through several thicknesses of clothing, and gathered on gun barrels until a thick coating of ice was formed. The disagreeable conditions continued through the day, but the true fox hunter cared little for such trifles when his keen ear received the welcome tones of the dogs as they drove the fox over mountain and plain. Some of the driving was the most exciting for several years, and in a number of instances the foxes were chased by from five to ten dogs. This, of course, made music dear to the hearts of the seventy-five listening hunters, and as the pack came closer every nerve was steadied in the watch for the much coveted brush. The hounds did their work to perfection, and the two score of dogs deserve their full share of credit for the great success of the first day. The Kinney-White pack from Worcester was represented by five dogs, headed by the well-known Logan. He is a veteran of the Westfield hunts. Several youngsters were put in for experience, and followed along the trail like veterans. A few others, that appeared to have all the fine points of good hounds, seemed startled at all the excitement, and either hung around some farmhouse or sneaked along at a hunter's heels. The snow not only aided the dogs, but furnished a great deal of satisfaction to the sportsmen who were engaged, as they went through the woods to see the tracks where a fox had passed along during the night or early morning. One peculiar dog was noticed with a tail like a setter and the head and body of a hound. He belonged to a farmer in the neighborhood, and was out on his own account after a fox. He struck a scent on top of the mountain and worked back and forth on the single trail a dozen times through a long swamp, before he started on. He was a queer dog, with a voice similar to that made by a hog being butchered. He was independent also, and failed to understand why such a crowd was on hand to interfere with his sport. Every hunter that he caught sight of would receive a warm reception. He would leave the trail for a moment and run toward the hunter, growling and barking with hair standing on end. After such a protest he would continue his work and proceed until he got sight of another stranger. From the way he worked he couldn't have covered more than a couple of miles all day. One of the hunters related a story that he had seen a fox chase and kill a woodchuck, and that he then gave chase to the fox. A brother hunter thought it strange that he should have chased the fox when he had a gun in his hand, and still another reminded the story teller that a woodchuck is not generally jumping around in the snow at this season, for such animals hibernated a month ago. The farmers in the Montgomery and Pochassic region are exceedingly kind to the men and dogs, and food is distributed with a willing hand. On the first day, hot coffee and rousing wood fires served to warm the inner and outer man at noon time, and the groups that gathered for shelter, food and warmth discussed with fervor the experiences of the day. Some, of course, had seen no less than a half-dozen foxes just out of range, and the enthusiastic owners of certain dogs were sure their animals had been in at the death of no less than half of the total number of foxes whose tails were hanging from the pockets of the fortunate and much envied hunters.

The first fox was shot just before 7 o'clock way off to the north of where the best driving was done, and was bowled over by Henry Herrick, of Montgomery. Fred Brass, of Westfield, had the good luck to knock over two during the day, and Seth Sharp, of Granby, Conn., secured his brush in the middle of the day in front of a single dog. Jabez Ripley, of Granville, a wildcat trapper of renown, was on a ledge far up the side of the hill. when he caught sight of a sneak fox at long range, and brought him down. Leslie Fowler, of Westfield; George Marvel, of West Springfield, and Edwin Williams, of Southwick, complete the list of the successful hunters.

The second day not a single fox was seen, nor was there a drive of consequence. In past years one or two women have usually taken an active part in the hunt, but this year on account of the storm only one ventured out. She was Mrs. John T. O'Neil, and withstood the sleet and cold like a veteran. She is an expert with the gun or rifle. Woe be to the fox that comes her way.

The familiar figures of Congressman John R. Thayer and A. B. F. Kinney, of Worcester, were missed this year, as was also Big-Hearted George W. Roraback, the father of the club. Congressman Thayer was detained by business, and Mr. Kinney by illness. Mr. Roraback has been sick this summer, and did not dare take any chances in the storm. He was at the banquet, though, and out the second day. Judge Huber Clark, of Willimantic, Conn., Secretary of State of Connecticut, was one of the active hunters, and he is an enthusiast.

The banquet in the evening at the Gem Opera House was a delightful affair, and 180 men gathered about the tables to partake of the bountiful spread. In the galleries a hundred women looked down on the merry scene, wishing inwardly, for the time being, that they were men and could partake of the good things. The admitting of the women as spectators was an innovation, and the speakers all complimented the club upon its action. After the course had been served and cigars passed, Lawyer Richard J. Morrissey was introduced by President John T. Way as toastmaster, and he presided in a most creditable manner. The speakers all told a string of capital stories, many at the expense of the ladies, and altogether it was a session of wit and eloquence. George W. Roraback was called upon to tell of the starting of the club and how it was inspired by the gift of a hound. Principal C. S. Chapin, of the Westfield Normal School; Lawyers H. W. Ely and A. S. Kneil were the other Westfield speakers, while the orators from abroad were Congressman George P. Lawrence, of North Adams; Col. C. L. Young, of Springfield; Judge Clark, of Willimantic, Conn., and Parley A. Russell, of Great Barrington, a member of the Governor's Council. It was after 11 o'clock before the enthusiastic gathering "broke up," and then followed the election of officers, with John T. Way, of

Westfield, still at the head of the organization. Thomas J. Cleary was elected secretary, and Charles N. Lewis treasurer.

E. F. T. Club's Trials.

The Members' Stake.

NEWTON, N. C., Nov. 18.—There was a large gathering of the club members at the twenty-first annual field trials of the Eastern Field Trial Club, such as brought to mind those of years ago at High Point, N. C., when the hotels were taxed to their full capacity to accommodate their guests, and the livery stables were forced to draw on the surrounding country for additional horses wherewith to supply the demand for teams and saddlers.

The trials at present, however, are a distinct gain over the old trials in the matter of sport, the management of the competition, the pervading good fellowship, and in point of club interest and attendance much greater than its trials of recent years.

There were present Mr. and Mrs. James L. Breese, of New York; Mr. and Mrs. H. B. Duryea, of Red Bank, N. J.; Messrs. F. R. Hitchcock, Arthur Stern, F. O. Beach, F. Newbold, Theodore Sturges, James E. Orr and O. W. Bird, New York; Messrs. J. Murray Mitchell and Edward V. Dougherty, Philadelphia; Mr. R. V. Fox, Harrisburg, Pa.; Dr. G. G. Davis, Philadelphia; Messrs. P. Lorillard, Jr., and G. R. Preston, Jr., Tuxedo Park, N. J.; Mr. S. C. Bradley and daughter, Miss E. B. Bradley; the veteran Capt. C. E. McMurdo, Mr. D. F. Pride, of Cincinnati; Major J. M. Taylor, Messrs. C. E. Buckle, J. M. Avent.

The class of the competition in this stake was far inferior to that of the Members' Stakes of the past few years. The dogs did not average well as good performers, but no doubt the competition was impaired by the prevailing unfavorable weather conditions. The ground was so exceedingly dry that a light cloud of dust marked the trail of the horses over the stubble fields. A scantiness and thinness of vegetation was noticeable everywhere, and there seemed to be a limited food supply. There was a noticeable absence of weeds everywhere, so that the birds did not venture far from cover.

Several of the dogs were known to be good field performers, but there was not any work in the stake that would indicate even ordinarily good abilty.

The judges were Messrs. F. R. Hitchcock and S. C. Bradley, both of them thoroughly experienced and highly competent. They handled the competition with admirable skill, and their judgment was sound in determining the winners. They were warmly praised by the competitors for their ability and fairness. They, however, had a most difficult task, owing to the difficulty of obtaining data for their decisions.

On Wednesday evening, a special meeting of the club was called, and new members were accepted as follows: Messrs. H. R. Duval, J. L. Breese, F. O. Beach, Clarence Mackey and Dr. G. H. Palmer. This of itself denotes a wholesome revival of club interest.

The prizes were: To first a silver cup, donated by Mr. W. Gould Brokaw; to second a silver cup, donated by Mr. G. Crocker. Both cups are very beautiful. To third a meerschaum and amber cigar holder, donated by Mr. James L. Baker. Prof. Edm. H. Osthaus paints a portrait of the winner and donates it to the owner.

The pointer dog Neb B. won first on a most mixed performance. He showed marked ability in ranging and finding birds, but he pressed his birds too closely, moving in by degrees after pointing, showing a lack of stanchness which seriously marred his work. He ranged well and with judgment. He also showed a jealousy in respect to his competitors, particularly in his last heat with Peconic on Saturday morning. Before the stake was ended, his owner sold him to Mr. H. B. Duryea for $200.

Jeff, at the commencement of the last heat, had every prospect of being the first prize winner, but notwithstanding the pointer's bad work, Jeff was vanquished on his poor performance and justly put in second place. He ranged well and displayed good judgment and knowledge, but the peculiar weather conditions no doubt impaired his work.

Mollie ran a race of mixed performance, good and bad, but was justly third. It was the poorest Members' Stake of years.

The dogs were drawn to run as follows:

H. B. Duryea's b., w. and t. setter dog Joe (pedigree unknown) with Arthur Stern's l. and w. pointer bitch Bootsie S. (Young Rip Rap—Dolly Jingo).

P. Lorillard, Jr.'s, b., w. and t. English setter bitch Clara (Loris—Paula) with Theo. Sturges' b., w. and t. English setter bitch Vivian (Gath's Mark—Gossip).

Dr. J. S. Brown's b. and w. pointer dog Ned B. (Rap—Lady Grace) with H. B. Duryea's b., w. and t. setter dog Peconic (Count Gladstone IV.—Hester Phryne).

James L. Breese's b. and w. pointer bitch Mollie (Rip Rap—Croxie Kent) with H. B. Duryea's b., w. and t. English setter dog Jeff (Orlando—Dollie Wilson).

H. R. Duval's liv. and w. pointer dog Falmouth Dixie (Rip Rap—Blodwen) with Fred O. Beach's liv. and w. pointer dog St. Clair (Capt. McMurdo's Rob—Ripsey).

Second Round.

Peconic with Ned B.
Lena Belle with Jim Signal.
St. Clair with Jeff.
Clara with Mollie.

Third Round.

Jeff and Neb B.

Winners—First, Ned B.; second, Jeff; third, Mollie.

The conditions of the stake were: Entrance $10; 50 per cent. to first, 30 per cent. to second, 20 per cent. to third. Winners in previous trials barred. The dogs were handled by owners.

First Day.

The weather was distinctly unfavorable for good field performance, the morning being warm and cloudy, with an entire absence of moisture, judging from the needs of the dogs as to weather conditions in their relation to bird seeking. Later, the clouds dissipated, the sun shone forth, and the temperature was uncomfortably warm. As the horses passed over the stubble field a light cloud of dust marked their trail, and this circumstance indicated the exceeding dryness of the ground, the absence of scent and the consequent inability of the dogs to do good work owing to the unfavorable conditions. The grounds were very bare as a whole, owing to the scant, weak vegetation, the stubble fields rarely having any weeds, and such a thin, light stubble that there was neither food for the birds nor means of concealment.

The start was made at Gibson's Well. The dogs as a whole worked diligently, but the amount of work on birds is no index whatever to the diligent effort exercised during the day.

First Round.

Joe and Bootsie S. were cast off at 9:15. A rabbit afforded a few moments' diversion to the dogs, and continuing their ranging, Joe pointed a bevy, which Bootsie flushed in the pine woods close by, and on the scattered birds Joe made some flushes. Down 1 hour and 2 minutes. Joe was a fairly good ranger and was the better in judgment, range and performance on birds.

Clara and Vivian were cast off at 10:30. Both showed good speed, but Clara was the better in manner and beating out her ground and the scope of her range. They were both diligent workers to the gun. Vivian was lost for a few moments in heavy cover, and when found was pointing stanchly; Clara backed to caution, but nothing was found to the point. Next, in an open wheat field, Vivian pointed close by a ditch; Clara backed; Vivian moved on and Clara pointed, and then Vivian backed. The owners did not have, apparently, the proper confidence in their dogs, and after they had moved on Mr. Lorillard, walking ahead, flushed a single in the ditch and then the bevy flushed. The birds went into heavy switch cane and were followed. Clara made game and a single flushed from the opposite side of the cane. The birds had run and were abandoned. On a side hill, in stubble, Vivian pointed and Clara backed to caution; nothing found. Vivian showed a disposition to tarry on false scents. The heat ended at 11:40.

Ned B. and Jim Signal were started at 11:51 and ran 38 minutes. Ned roaded in a cornfield accurately to a bevy, but pressed cautiously too close into it and flushed one, his handler at the time being close up to him. Each pointed on the scattered birds. Next, in the open stubble, Ned pointed a single, and Jim, about 20 yards away, pointed independently the same bird a moment afterward. Next Jim pointed a single bird nicely. He worked diligently, but his range was not wide. Ned had a good, useful range and worked out his ground with good judgment.

Lena Belle and Peconic were cast off after lunch at 1:58. The sun was then shining hot and the ground was exceedingly dry. Peconic pointed a single in pine woods. Afterward he made a point to which nothing was found, and later made a similar point. Lena made a point and nothing could be flushed to it. Peconic showed a disposition to range beyond control at times. They were run 1 hour and 6 minutes. Both were diligent workers.

Mollie and Jeff were cast off in a cotton field at 3:10. Jeff pointed a bevy in pines and Mollie backed. On the scattered birds in pines Mollie pointed a single and made two flushes, while Jeff pointed, probably on foot scent. Jeff was the better and more regular worker, though both were diligent, and they had hard ground to work.

Falmouth Dixie and St. Clair were cast off at 3:55. Dixie pointed a bevy. The birds were followed. Dixie pointed and roaded and the birds flushed behind him. Clair, in thick cover, pointed a single and Dixie backed nicely. Then Clair moved on a few yards in the thick cover and pointed the bevy. Dixie worked out his ground with the better judgment and had a more uniform range, while Clair made a very creditable performance on birds.

Second Round.

Peconic and Ned B. were started at 4:42 and ran 33 minutes. Peconic made two points, to which nothing was found. Both were fast rangers, but Peconic at times ranged beyond control. He showed a disposition then to ignore the gun. This heat ended the day's competition.

Second Day.

The morning was warm, calm and pleasant—as balmy a morning as one could wish if personal comfort and pleasure were alone to be considered; but it was far from a good morning for the best work of the dogs. There were birds in abundance; but the finding and pointing of all the dogs were far from good, and indeed there was not even a patch of the day's work which could be classed as superior. Soon after the first brace was cast off birds were found, and from that time till lunch, when competition in the stake ended, there were birds in plentiful numbers. The last brace of yesterday was to continue their unfinished heat.

Peconic and Ned B. started at 9 o'clock. Soon after they started the horses flushed two bevies. Next Peconic flushed a bevy in a place where the conditions were in his favor for pointing it, and on the scattered birds the dogs had no success in pointing, though their handlers walked birds up. The dogs were ordered on in a new direction. Ned was making game about 200 yards away and drew to a bevy in woods and was steady to the shot. Ned flushed a single of the scattered birds, and Peconic, further ahead in brush, flushed several. Turning back over the ground where birds were marked down, Ned flushed several. The heat was noted for the great number of good opportunities afforded for good work and the errors which the dogs made. Up at 9:30.

Jim Signal and Lena Belle were cast off at 9:39. Jim flushed a bevy in open sedge, and on the scattered birds there was no meritorious work, the dogs flushing. Sent on. In open sedge Lena pointed, moved on a few yards, circled back and a single bird popped up and lighted again and Lena dropped to a point. Jim, 10 yards away, joined in the point; both were steady to shot. Jim next flushed a single bird and shortly afterward Lena pointed a rabbit and was backed well by Jim. Up at 10:05. Lena was the better ranger. Jim did not run in the form shown in his previous heat. The work on birds was imperfect.

Jeff and St. Clair started at 10:18. Jeff pointed a bevy on a side hill in pines, after which he pointed one of the scattered birds and made another point, presumably on the foot scent. Clair did not do any work on birds. Jeff had the better of the heat in every respect. The ground worked over was irregular and the cover of such a character that it was difficult for the dogs to make a good showing. The heat ended at 10:43.

Mollie and Clara were cast off at 10:50. Mollie pointed a bevy stanchly on a side hill in sedge and bushes, and was steady to wing. The birds were marked down in cover close by and were followed. Clara pointed near the creek; nothing found. Mollie got among the scattered birds and flushed twice. Both ranged well and fast. The performance on birds, save the one bevy point, was very poor.

Jeff and Ned B. were cast off at 11:18. Jeff flushed a bevy in open weeds and sedge, under favorable conditions for pointing it. Next Ned pointed a single, drew in close to it and the bird flushed. He was able to find and locate, but was far from stanch. Ned made several flushes—four or five—in succession on the scattered birds. Both dogs were over eager and careless in flushing. The bad work of Ned for a while seemed to have put him into second place hopelessly; but soon in the open he found and pointed a bevy nicely and was backed by Jeff. On the scattered birds in pine woods Ned pointed a single and was a bit unsteady, and afterward he flushed a single. Up at 11:54, and the Members' Stake was ended.

B. WATERS.

New York State Trials.

EGG HARBOR, N. J., Nov. 14.—A big white frost and frozen ground under foot, and a hazy sky were the conditions which existed on both days. There was scarcity of birds throughout. The soil was sandy and vegetation light in the open, and the cover dense where there was brush or trees. The work in the All-Aged Stake was evenly divided. Domino and Tony Rogers' Gale were far the best, while the other two were ordinary.

The Derby was an ordinary one. The Derby was started on the first day, and it and the first series in the All-Aged Stake were completed on the first day. Dewey Rogers is a good dog, obedient, worked well to the gun, was diligent and covered a useful area of ground.

The judges were Major J. M. Taylor, of New York, and Mr. Francis G. Taylor, of Philadelphia. Birds were scarce. There was a good attendance of spectators.

Robert Kelley's b. and w. English setter bitch Kalmia Doll (Cincinnatus' Pride—Maude III.) with Arthur Stern's b., w. and t. English setter bitch My Tony S. (Antonio—Robin's Cora).

Arthur Stern's l. and w. pointer bitch Bootsie S. (Young Rip Rap—Dolly Jingo) with A. G. Lotz's l., b. English setter dog Doc (Emperor Tony—Gwinne).

George Battison's b. b. English setter dog Dewey Rogers (Tony's Gale—Daisy B. II) with Dr. C. L. Thudicum's b. and w. English setter dog War Song (Ezra Noble—Fan Gladstone I).

A. G. Lotz's l. b. English setter dog Emperor Pilot (Emperor Tony—Nellie M) with Charles A. Griffith's b. and w. pointer bitch Kittie Gibson (Jingo—Kate's Kent).

Dr. C. L. Thudicum's b. and w. English setter dog War Dance (Ezra Noble—Fan Gladstone II.) with Arthur Stern's b., w. and t. English setter bitch My Sue S. (Antonio—Robin's Cora).

Second Series.

Dewey Rogers with Bootsie S.
War Song with My Sue S.
War Song.

Result.—First, Dewey Rogers; second, My Sue S.; third, Bootsie S. and War Song.

Arthur Stern's b., w. and t. English setter dog Domino (Antonio—Ruby's Girl) with C. L. Thudicum's l. and w. pointer bitch June (Dave Kent—Rip Rap's Daisy).

Geo. Battison's b. b. English setter dog Tony Rogers' Gale (Tony's Gale—Daisy B. II) with Dr. S. C. Tremaine's b., w. and t. English setter dog Don (Admiral Drake—Tony's Bell).

Second Series.

Tony Rogers' Gale with Domino.

Result.—First, Tony Rogers' Gale; second, Domino; third, Don.

Continental Field Trials.

NEWTON, N. C., Nov. 13.—*Editor Forest and Stream:* I send you entries for the All-Age Stake of the Continental Field Trial Club as follows:

Setters.

J. W. Hamer's b. and w. dog Toby's Bob, 4yrs. (Brighton Tobe—Rill Ray).

J. W. Hamer's b. and w. dog Toby's Mark, 4yrs. (Brighton Tobe—Rill Ray).

P. Lorillard, Jr.'s, b., w. and t. dog Roland, 5yrs. (Eugene T.—Lou).

P. Lorillard, Jr.'s, b., w. and t. dog Pink's Boy, 3yrs. (Gleam's Pink—Belle of Pauling).

P. Lorillard, Jr.'s, b., w. and t. dog Jack, 4yrs. (Eugene T.—Maud).

P. Lorillard, Jr.'s b., w. and t. bitch Lena Belle, 4yrs. (Top Mark—Minnie B.).

W. J. Baughn's b., w. and t. dog Count Danstone, 3yrs. (Count Gladstone—Dan's Lady).

Royal P. Carroll's lem. and w. bitch Lem Gladstone, 3yrs. (Antonic—Cosette Gladstone).

H. R. Edwards' b., w. and t. dog Colonel R., 3yrs. (Harwick—Trap, Jr.).

H. K. Devereux's b., w. and t. dog Uncle B., 4yrs. (Harwick—Dan's Lady).

W. G. Brokaw's liv. and w. dog Wandering Willie, 4yrs. (Dick Roble—Jennie Stephenson).

Dr. C. I. Shoop's b., w. and t. dog Roderick Dhu, (Thiers—Barker's Queenie).

J. J. Rooney's b. b. dog King's Rod, 3yrs. (Kingston—Mark's Ruby).

Edward A. Burdett's b., w. and t. dog Sam T. II., 3yrs. (Sam T.—Belle).

S. W. Carey, Jr.'s. b. and w. bitch Shot's Kate, 3yrs. (Albert's Shot—Sal English).

Leon Earnest Seay's (Agt.) b., w. and t. dog General Gladstone, 4yrs. (Gladstone's Boy—Buena Vista).

R. V. Fox's b., w. and t. dog Dave Earle, 5yrs. (Count Gladstone IV.—Dan's Lady).

Miss C. Parsons' b., w. and t. dog Berber, 3yrs. (Antonio—Laska).

S. Murry Mitchell's b., w. and t. dog Pink, 4yrs. (Sandy Gladstone—Jennie M.).

Herbert Parsons' b., w. and t. dog Dmoko, 4yrs. (Antonio—Laska).

George Crocker's b., w. and t. dog Sam T., 5yrs. (Luke Roy—Betty B.).

George Crocker's lem. and w. dog Gilt Edge, 3yrs. (Count Gladstone IV.—Lillian Russell).

George Crocker's o. and w. bitch Minnie's Girl, 4yrs. (Antonio—Minnie T.).

Pointers.

Jas. L. Breese's b. and w. dog Bang III., 4yrs. (Rector—Dinah).

E. H. Osthaus' liv. and w. dog Paladin, 3yrs. (Ripsaw—Cricket).

Charlottesville F. T. Kennels' liv. and w. bitch Rana, 3yrs. (Riprap—Toxic).

Charlottesville F. T. Kennels' b. and w. bitch Ranee, 3yrs. (Riprap—Toxie).

Chas. T. Barney's liv. and w. dog Mac (Roderick—Rose).

A. J. Clark's liv. and w. dog Master Rush, 5yrs. (Rush of Lad—Topsy M.).

Geo. J. Gould's liv. and w. dog Furlough Mike, 5yrs. (Duke of Hessen—Furlough Cliney).

Geo. E. Gray's liv. and w. dog Young Jingo, 4yrs. (Jingo—Pearl's Dot).

W. G. Brokaw's liv. and w. dog Fairview Tom, 2yrs. (Sir Walter—Van's Pride).

THEO. STURGES, Sec'y.

Points and Flushes.

LANSINGBURGH, N. Y.—I do not know the heaviest recorded weight of the largest dog; but while on my vacation this fall I met up with a dog that weighed 265 pounds. He impressed me as being quite a chunk of a dog.

F. J. T.

Yachting.

ON Sunday, Nov. 19, the cutter Shamrock arrived at Gourock, after a passage of fifteen days seven hours ten minutes from New York. She was towed a great part of the way by the Erin, casting off at Wolf Rock and continuing to the Clyde alone. The weather was stormy during the passage. She was taken on Monday to the James Watts Docks, Greenock, and stripped for the winter.

FOR some time past there have been rumors of further trouble between the Royal St. Lawrence Y. C. and the Seawanhaka Corinthian Y. C. over the disputed race of last July. A meeting of the former club will be held on Wednesday, Nov. 22, to consider a communication from the latter.

IT is reported that Mr. William Clark, of Paisley, Scotland, owner of the steam yacht Tuscarora, has purchased Valkyrie III. and will race her next season. Various reports are current as to the future movements of Columbia, but all are unreliable; the yacht is still afloat at City Island, and it is not known when she will be hauled out.

THE Canada cup has at last reached Rochester, after being held by the U. S. customs officials on account of the duty. It will remain on exhibition for a short time and will then be forwarded to Chicago. The date for challenging has now passed and no challenge has been received, so there is little chance for another race before 1900.

Veritas.

THE following are the specifications for the keel sloop Veritas, whose lines appeared last week:

Specifications.

FRAME.

Keel—White oak, sided 4in., moulded as per drawings, about 12in. amidships.

Stem—White oak, sided 2½in., moulded as per drawings.

Sternpost—White oak, sided 3in. at tuck tapering to 1½in. at heel. Heel tenoned into keel. Score for rudder on after side.

Horn Timbers—White oak, sided 1in., moulded 6in. on sternpost and 3in. at after end, which shall be jogged into sternpiece and well bolted.

Chock—Pine, 3 x 2½in., fitted between two horn timbers and projecting ¾in. to form rabbet.

Rudder Trunk—To be carefully built of 1½in. white pine on sides and back to form, with sternpost and horn timbers a water-tight box. The joints to be made with cloth and caulked where required. The lower end to be closed with an oak chock, fastened with brass screws. The bottom of trunk to be wide enough to permit rudder to ship easily.

Sternpiece—Oak, shaped as per drawings, including round of deck, with rabbets for planking and decks. To be well bolted to horn and quarter timbers. All superfluous wood to be cut away, to save weight.

Quarter Timbers—Oak or hackmatack, shaped as per drawings and well fastened to sternpiece, plank sheer and sheerstrake.

Mast Step—Oak, well bolted to stem. Long mortise, with room for wedges.

Deadwoods—Oak or yellow pine, as per drawing.

Stopwaters—Of dry white pine, ½in. diameter, to be carefully placed in all joints of stem, keel, deadwoods, etc.

Frames—Every third frame to be single sawn from an oak knee of the proper sweep, to be sided 1¼in., moulded 2½in. at heels, 1½in. at turn of bilge, and 1in. at heads; two frames at mast to be sided 1½in. Two bent frames to be placed between each pair of sawn, to be sided 1in. and moulded 1in., from heel to head. Frames to be spaced 12in. centers. The heels of all frames to be jogged into keel and deadwoods and securely bolted.

Floor Knees—Each sawn frame in wake of lead keel to have a forged floor knee of flat iron 1¼ by ⅜in., with arms 1ft. 3in. long, these knees to be carefully forged in the throat. The bent frames to have solid floors of 1in. oak plank, well bolted to keel and heels of frames.

Shelf—Clear spruce in single length, sided 2in., moulded 1¾in. for middle third of length, tapering to 1½ by 1¼in. at ends.

TABLE OF OFFSETS.

Over all, 30ft. 1in.; fore overhang, 5ft. 10in.; after overhang, 6ft.; l.w.l., 19ft. 3in.; draft, 5ft.; beam, 5ft. 8in.; beam, l.w.l., 7ft. 6in.; stations spaced, 1ft. 7¼in.; diagonals as per body plan; level lines spaced 6in.; rail, 1in. from fore end to station 12, then reducing to ½in. at stern; planking to finish ¾in. thick, reduced to ⅝in. in rabbets of ends; plank sheer, ¾in. All measurements to outside of plank.

Bilge Clamps—Two on each side, at turn of bilge and flat of floor, of spruce, in single lengths, 2 by 1¼in. for middle third of length, tapering to 1½ by 1in. at ends The ends fastened to stem and horn timber.

Rudder—Locust stock with hard pine backing, shaped as per drawings.

DECK FRAME.

Deck Beams—Hackmatack. Main beams, at bitts, partners, fore and after ends of house, and transom, to be sided 2in. All other beams and half beams to be sided 1in. Beams to be spaced 10in. centers. All to be moulded 1¾in.

Side Pieces—The trunk and coaming will be carried on side pieces or sills of yellow pine 3in. deep and 1½in. wide, the top projecting ½in. above deck and worked with cove to bring the seam well clear of the deck. These pieces will carry the ends of the half beams, which will be mortised into them. They will be bolted to wales with five bolts of ⅜in. galvanized steel or iron, to prevent the side deck from springing when caulked.

Knees—Oak or hackmatack, sided 1½in., three on each side, one abreast mast, one in middle of trunk and one at after end. Also one lodging knee abreast mast and one at after end of house on each side.

Diagonal Struts—Several light struts of oak 1 by 2in. will be required on each side, in bows and counter, from upper bilge clamp to deck beams.

Partner Piece—Oak, ¾in. thick, 12in. wide at after end, tapering to 6in. at fore end; to be fitted from fore end of trunk to after side of stem. The space between deckbeams at the partners to be filled in solid; also just abaft stem (to form breasthook).

Planksheer—Oak in single lengths, ¾in. thick and 3½in. wide amidships, tapering to 2½in. at ends. To be fastened to sheerstrake and deck beams with galvanized iron screws, after end butted on and fastened to top of quarter timber.

PLANKING AND DECKING.

Planking—White pine or white cedar; wales of yellow pine in single lengths. Other planking to have not over one butt in each strake, such butts to be made on butt blocks of ⅝in. oak, and to be at least four frames apart on adjoining strakes; and if in the same frame, space, to be separated by not less than three strakes The planking to finish ¾in. throughout middle of hull, but the rabbets from the waterline up may be cut ⅝in. deep, the planking being squared down to that thickness at the ends. The planks from the bilge upward to be not over 3½in. wide. All seams to be close on inside, with full 1-16in. opening on outside for caulking. The entire outside of hull to be carefully planed off.

Deck—Clear and dry white pine, not over ¾in. thick and 2in. wide, laid straight, fore and aft, with ends properly supported and fastened. Seams of deck to be caulked with cottom and payed with marine glue.

DECK JOINER WORK.

Rail—Oak or elm, in single length if possible, 1in. deep and 1in. wide, around edge of plank sheer, with scupper holes.

Cabin Trunk and Coaming—Oak, ¾in. thick, side of trunk about 1ft. high, coaming about 5in., well edge-bolted to side pieces with ¼in. galvanized steel. Two oval windows of ¼in. plate glass in each side of trunk and brass hinged deck light, 6in., in fore end. Roof and companion slide of ¾in. cherry, tongued and grooved and laid in varnish. Door to swing downward. Rail of cherry, 3 by ¾in., around coaming.

Cockpit—Sides and floor to be made perfectly water-tight; floor of the same material as deck, sides of cherry.

Fore Hatch—Coamings and hinged hatch, opening 18 by 15in., all of cherry.

Bitts—Locust, 3½ by 2¼in., running down to stem piece and well bolted; keyed below deck. Locust keyed 1½ by 1in.

Cleats—Locust, for sheets.

FASTENINGS.

Keel Bolts—Of best quality of Tobin bronze, with good heads and standard nuts and washers. About ten bolts of ¾in. diameter.

Blunt Bolts—All deadwood, keel and frame bolts to be of good quality iron or steel properly galvanized and neatly headed over washers of the same metal. Stem, keel, horn timbers and deadwoods to have ⅜in. bolts; heels of frames to be fastened with ¼in. bolts or spikes; plank floors to be fastened to stem, keel and horn timbers with two ¼in. bolts through each; iron knees to be fastened to keel with two ⅜in. bolts; planking to be fastened with galvanized iron boat nails in all frames and at hood ends. Deck to be fastened with 1¼in. galvanized iron screws, one in each strake on each beam, with deck plug over. All parts not specified to be fastened in the usual manner. All plank fastenings to be set in for putty stops, and all fastenings about deck and trunk to have wooden deck plugs set in varnish.

INTERIOR JOINER WORK.

Floor—Ash, ¾ by 2½in., tongued and grooved, in battened sections fastened down with brass screws.

Ladder—Cherry, with three steps, each with rubber tread.

Lockers—¾in. white pine, one on each side for seat and berth, shelves and lockers in forecastle, for dishes, etc., sail bins. The interior work to be as light and simple as possible. Moveable table in cabin.

METAL WORK.

Lead Keel—To weigh about 4,000lbs. to be in one casting, soundly and accurately cast to shape and well smoothed up; to be bolted to hull with ten Tobin bronze bolts, ¾in. diameter. Lead to be furnished by builder.

Rudder Braces—Two pair, of gun metal, neatly fitted and well fastened to post and rudder. Brass cap with name of yacht on head of rudder stock. Brass ring around rudder stock on deck.

Chain Plates—Two for main shrouds and two for runners, of 1½ by ¼in. iron. Two for bowsprit shrouds, of 1¼ by ¼in. iron.

Gammon Iron—2½ by ⅜in. iron. Bobstay plates, bobstay of ⅜in. iron, with turnbuckle. Cranse iron for bowsprit end, traveler for main sheet, three pair of ⅜in. turnbuckles of approved pattern. Gooseneck and spiderband, spinaker boom gooseneck.

Brass Work—Fittings for rudder, rudder cap, two leading chocks on bow and two on quarters, eyebolts and leaders for jib sheets, screw deck plate for pump, hasp, hinges and lock for cabin door, brass hinged deck light.

PLUMBING.

Pump—Single barrel copper yacht pump, 2½in diameter, with 1¼in. suction pipe to well, galvanized iron pump spear and brass screw plate in deck.

Scuppers—Of 1in. lead pipe, fitted in cockpit floor, one on each side, to drain below waterline.

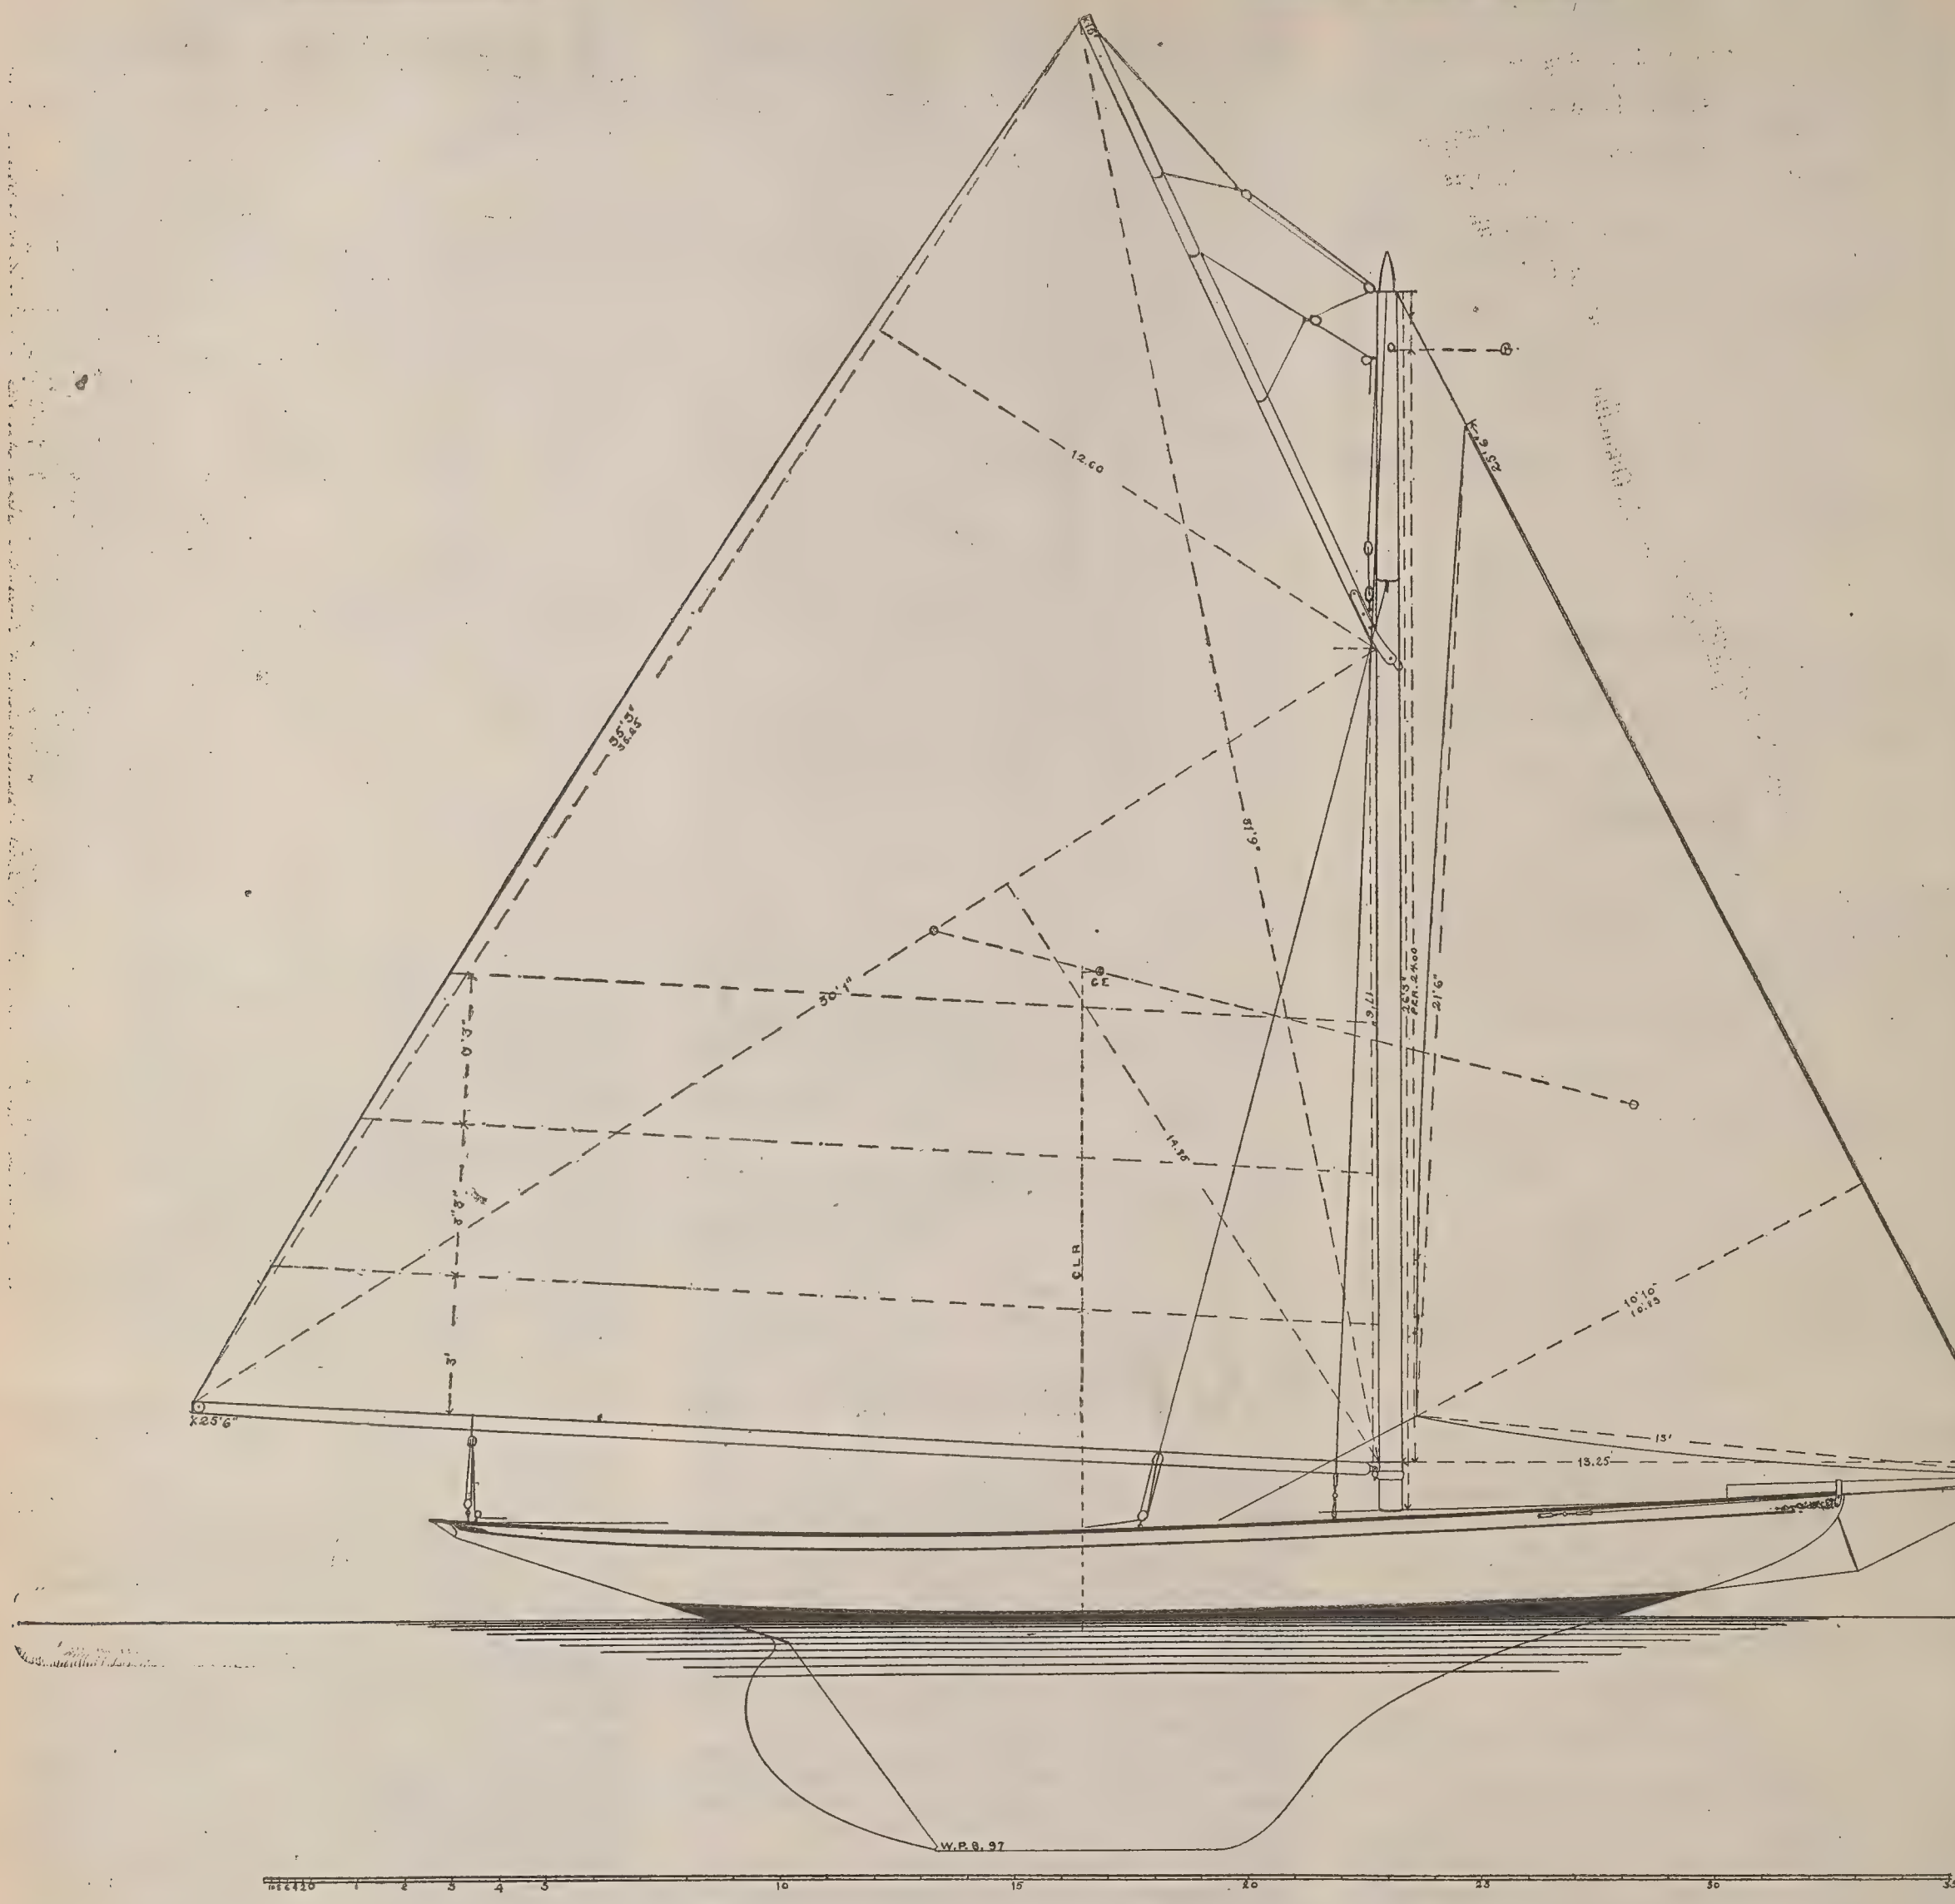
FITTINGS.

Tiller—Locust, tenoned into rudder stock.

Boom Crotch—Oak, as per drawings.

CAULKING AND PAYING.

All seams of planking to be properly caulked with cotton, run with paint and payed with putty. All seams of deck and cockpit to be carefully caulked with cotton, using no oil nor grease on iron, and run with Jeffries' marine glue, as per directions furnished by maker. All nail and screw holes about decks to be filled with wooden deck plugs set in varnish; all other fastenings to have putty stops.



PAINTING.

Inside, below floor, to be painted with one coat of red lead and linseed oil.

Bottom—To have two priming coats of red lead and oil and one finishing coat of anti-fouling composition, smoothly applied.

Topsides—Up to rail to have two priming coats, the first of red lead, both well rubbed down, and one finishing coat of best black or white; no oil to be used.

Varnishing—The spars, rails, plank sheer, deck, cabin trunk and all deck work to have one coat of filler and

VERITAS.—KEEL SLOOP, J. G. AVERELL, ESQ., DESIGNED BY W. P. STEPHENS, 1897.

two coats of best spar composition, each coat being thoroughly dry before the next is put on. The interior of cabin to have one coat of filler and two of good varnish.

Carving and Gilding.—A 5/8in. cove to be run along topside, with carved scrolls and bow and stern, all laid in best gold leaf. The name and port to be placed on the stern in brass letters 3in. long, neatly gilded in best gold leaf.

RIGGING.

Standing Rigging—Two main shrouds to each side, mast head pendants and runners, jib stay, of best quality steel wire rope. All to be neatly spliced.

Running Rigging—Of manila rope.

Blocks—Best quality yacht blocks, with patent sheaves, brass.

SAILS.

Mainsail and working jib of special 8oz. cotton; No. 2 jib, storm jib. Spinaker and balloon jib each of Union silk.

This construction has proved amply strong for cruising. The original sail plan was altered this spring, the mast being lengthened and other small changes made, the sail plan here shown being the one carried this season. The spars were all hollow, made by the Spalding St. Lawrence Boat Company. The dimensions of the sail plan are:

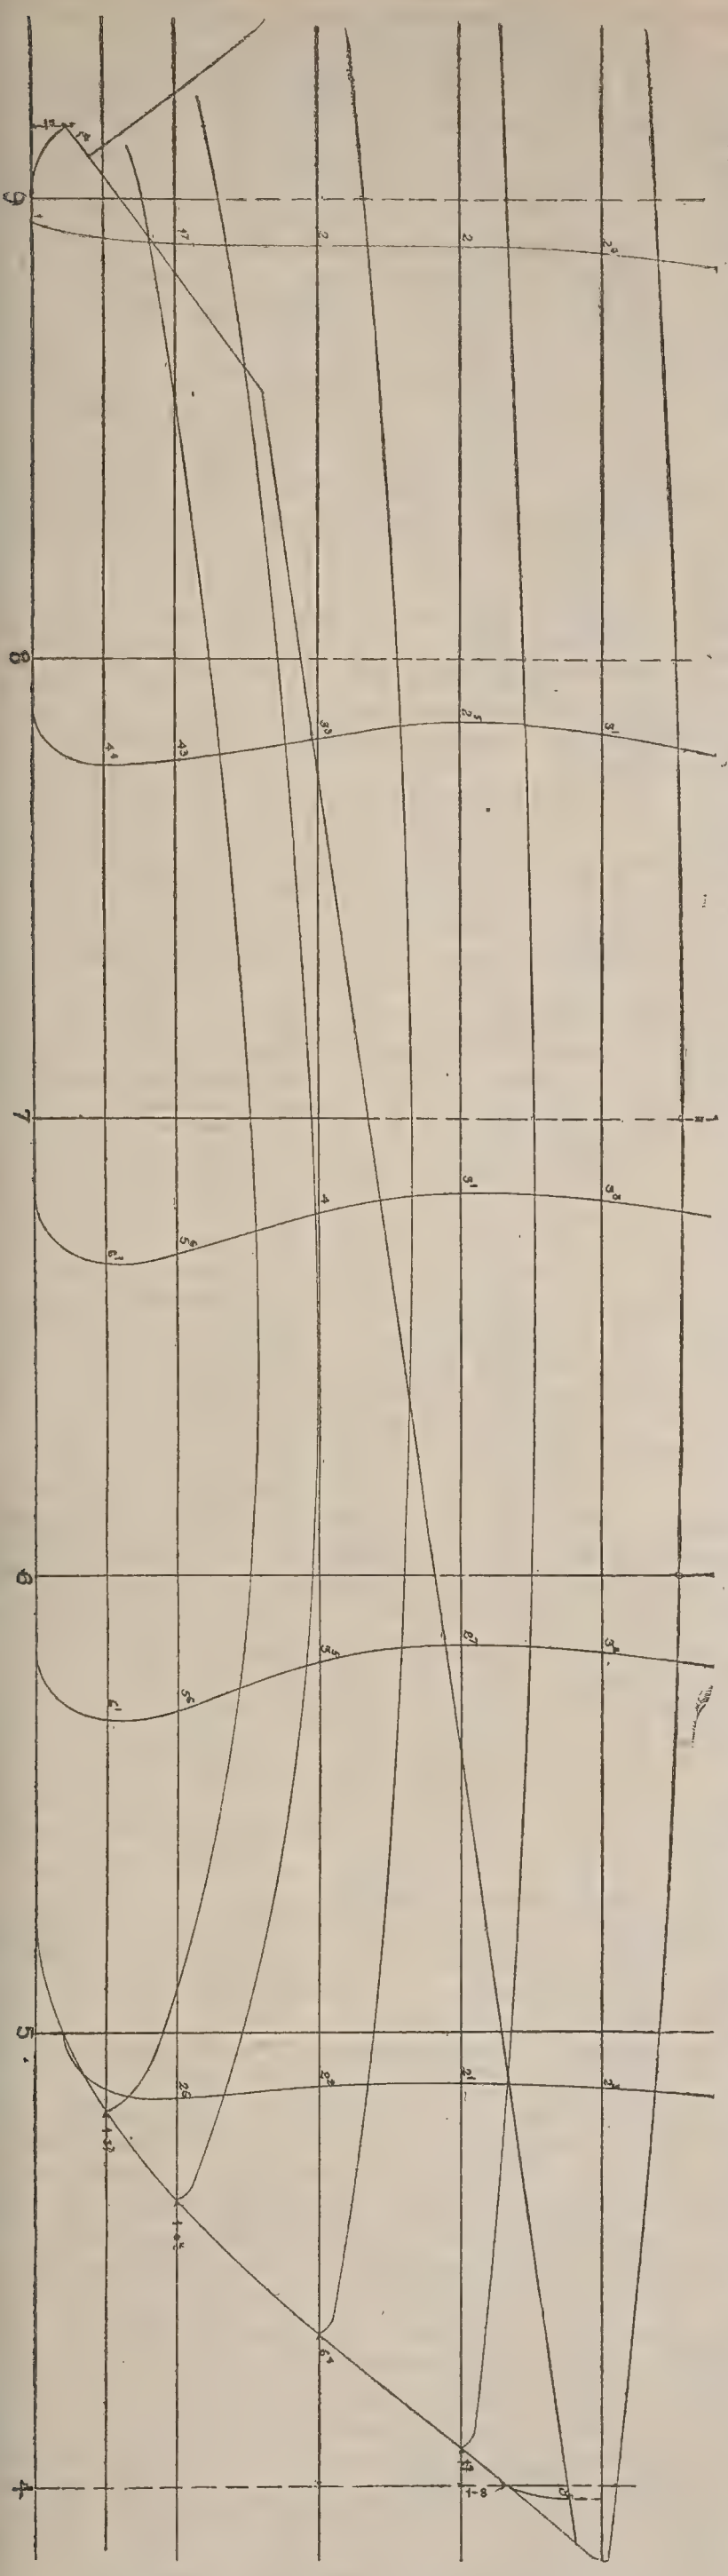
Mast—			
From station O	4ft.	9	in.
Deck to hounds	20ft.		
Deck to truck	26ft.	3	in.
Diameter at deck		6	in.
Bowsprit—			
Over all	6ft.	5	in.
Outside gammon	3ft.	9	in.
Diameter in gammon		3½	in.
Boom—			
Length	25ft.	6	in.
Diameter		4¼	in.
Gaff—			
Length	15ft.		
Diameter		2½	in.
Mainsail, actual area	445	sq.	ft.
Jib, actual area	143	sq.	ft.
Total	588	sq.	ft.
Head triangle	159	sq.	ft.
Total as measured by rule	604	sq.	ft.
Girth as measured by rule	14.4	oft.	

The yacht has raced in the knockabout class for the last two seasons, but she almost fits the regular 25ft. class, her measurements being:

L.W.L.	19.25
Beam	8.25
¾ girth	10.80
½ √sail area	12.28
	2)50.58
	25.29

A very slight reduction of draft (less than ½in.) would put her well inside the limit. The measurement of head triangle is taken with the spinaker and jib halyard blocks no higher than the line a, b; with the height of cabin house shown, the gooseneck will require to be a little higher than as shown in the sail plan. The bitts may well be carried forward from the fore end of L.W.L., as shown in the construction plan, as there will still be sufficient housing of the bowsprit if they are located just abaft the second frame.

The yacht was not designed for the girth rule, and she pays rather heavily under it for the wide, flaring side; but the design as it stands will make a very good boat for the Lakes. In salt water the displacement would be 3.61 tons. The sections and lower level lines of the lead keel and deadwoods are given on a larger scale.



Society of Naval Architects and Marine Engineers' Seventh Annual Meeting.

New York, Nov. 16-17.

THE Society of Naval Architects and Marine Engineers held its annual meeting last week in New York, two days being devoted to the technical proceedings, while on the second evening the annual banquet took place. The president of the Society, Mr. Clement A. Griscom, being abroad, his place as chairman was taken by Rear-Admiral F. M. Bunce, U. S. N., one of the vice-presidents. Among the many members present were Sec'y-Treas. Bowles, Naval Constructors Capps, Woodward, Tawresey, Baxter and Watt; Geo. W. Dickle, of the Union Iron Works, San Francisco; W. I. Babcock, of the Chicago Shipbuilding Company; Mr. Newman, of the Globe Shipyard, Cleveland; Lewis Nixon, of the Crescent Shipyard; Capt. W. G. Randle, Lt. H. von R. Paschwitz, Imperial German Navy; Capt. Chas. L. Ottley, R. N., British Naval Attaché at Washington; Col. Edwin A. Stevens and John Hyslop.

The report of the secretary-treasurer showed a membership of 573, with a balance in the treasury of $3,586.75. The following officers were elected: Pres., Clement A. Griscom; First Vice-Pres., W. T. Sampson; Vice-Presidents, Francis M. Bunce, Charles H. Cramp, Frank L. Fernald, Philip Hichborn, Charles H. Loring, George W. Melville, George W. Quintard, Irving M. Scott, Edwin A. Stevens; Sec'y and Treas., Francis T. Bowles.

A list of 100 candidates for membership was presented, the applicants being elected. After the reading of an address from Pres. Griscom, resolutions were passed expressing the feelings of the Society over the deaths of two of its most honored members, Wm. H. Webb and Gen. Thomas W. Hyde. The following papers were read and discussed:

VERITAS.—LOWER LEVEL LINES AND LEAD KEEL.

1. Coaling Vessels at Sea. By Spencer Miller, Esq., associate.

2. Causes for the Adoption of Water-Tube Boilers in the U. S. Navy. By Engineer-in-Chief Geo. W. Melville, U. S. N., vice-president.

3. Suggestions as to Improved Appliances for Launching Ship's Boats. By John Hyslop, Esq.

4. The Electric Plants of the Battleships Kearsarge and Kentucky. By Naval Constructor J. J. Woodward, U. S. N., member.

5. The Increasing Complications in Warships, and How Simpler Arrangements Might be Adopted. By Geo. W. Dickie, Esq., member of council.

6. Beam Formulæ Applied to a Vertically Stiffened Bulkhead, with Some Results. By H. F. Norton, Esq., member.

7. Notes on Sheathing the U. S. S. Chesapeake. By Naval Constructor Lloyd Bankson, U. S. N., member.

8. System of Work in a Great Lake Shipyard. By W. I. Babcock, Esq., member.

9. Overhead Cranes, Staging and Riveter Carrying Appliances in the Shipyard. By James Dickie, Esq., member.

10. Designs for the Denver Class Sheathed Protected Cruisers. By Chief Constructor Philip Hichborn, U. S. N., vice-president.

11. Novelties in Ship Fittings. By Ass't Naval Constructor R. M. Watt, U. S. N., member.

12. Progressive Speed Trials of the U. S. S. Manning. By Prof. C. H. Peabody, member of council.

13. Tactical Considerations Involved in Torpedo-Boat Design. By Lieut. A. P. Niblack, U. S. N., associate.

14. On the Action of the Rudder, with Special Reference to the Motion of the Ship While the Helm is Being Put Over. By Prof. Wm. F. Durand, member of council.

YACHTING NEWS NOTES.

The annual meeting of the Lake Michigan Y. A. was held in Chicago on Nov. 11, the following officers being elected: Prest., W. R. Crawford, Chicago Y. C.; Vice-Prest., Alex Mather, Milwaukee Y. C.; Sec'y, H. P. Finney, Chicago Y. C.; Treas., W. S. Bougher, Columbia Y. C. The details of a proposed knockabout class were discussed, and a meeting will be held on Dec. 9 to take further action in the matter.

On Nov. 7 the charges against Capt. Theodore Heilbron, of the steam yacht Vamoose, were heard before the local board of steamboat inspectors. Capt. Heilbron was charged with taking his vessel within the patrol lines on the second race between Shamrock and Columbia. It was proved that permission had been given by an officer of the guard fleet for Vamoose to speak the committee boat, as she was attempting to do when stopped. The case was dismissed, there being no evidence against Capt. Heilbron.

On Nov. 15 the will of William H. Webb, the shipbuilder, was filed for probate in the Surrogate's office. The value of the estate is placed at $600,000, which does not constitute nearly all of the fortune, as Mr. Webb owned much real property in other parts of the country. To his widow Mr. Webb bequeaths all of the contents of his late home, at 415 Fifth avenue. She is also to receive $5,000 for her immediate personal use, together with the income of 250 shares of stock of the Third Avenue Railroad Co. and of a trust fund of $30,000. The will further transfers to her several pieces of property in the vicinity of Tarrytown and the leases of three parcels of real estate at Forty-second street and Fifth avenue. A trust fund is created for the benefit of the son of the testator, William E. Webb. The fund includes 625 shares of stock of the Pennsylvania Coal Co. and 200 shares of stock of the Third Avenue Railroad Co. Upon the death of both Mrs. Webb and her son the trust funds are to go to Webb's Academy and Home for Shipbuilders. Besides this, the academy receives an oil painting of Robert Fulton and several other works of art. To the Metropolitan Museum of Art Mr. Webb bequeaths several paintings, including one entitled "Columbus Unveiling America to the Rest of the World," and a statue of Venus. Numerous bequests are made to relatives and the widow is the residuary legatee.—New York Times.

At a meeting of the Royal Canadian Y. C. on Nov. 11 the following Sailing Committee was elected: F. J. Campbell, W. H. Parsons, G. A. Macrae, Æmilius Jarvis, J. S. McMurray, F. M. Gray and J. W. Rutherford. Mr. H. C. McLeod, designer of Minota, was elected a life member. The club will present Mr. McLeod with a loving cup. No action was taken toward challenging for the Canada cup.

The Spalding St. Lawrence Boat Co. is already very busy with new work. Mr. W. H. Post, of Ogdensburgh, whose steam yacht Vailima was sold last summer, will replace her with a larger yacht, designed by C. H. Crane and built by the company. She will be 80ft. long. The firm is also building a 42ft. electric launch for George B. Bidwell, of New York, from designs by Gardner & Cox; a 30ft. racing launch for Harry Scullin, of its own design, and ten electric launches for the Electric Launch Co., of New York. It is also building from Mr. Crane's designs four racing sloops for the 19ft. class of the Lake St. Regis Y. C. and a set of davit boats for the steam yacht Virginia.

The Gas Engine & Power Co. will launch the U. S. torpedo boat Bailey on Dec. 5 at its yard at Morris Dock, N. Y. A special train has been provided for the guests of the company.

Canoeing.

American Canoe Association, 1899-1900.

Commodore, W. G. MacKendrick, 200 Eastern avenue, Toronto, Can.
Secretary-Treasurer, Herbert Begg, 24 King street, Toronto, Can.
Librarian, W. P. Stephens, Thirty-second street and avenue A, Bayonne, N. J.

Division Officers.

ATLANTIC DIVISION.

Vice-Com., H. C. Allen, Trenton, N. J.
Rear-Com., Lewis H. May, New York.
Purser, Arthur H. Wood, Trenton, N. J.

CENTRAL DIVISION.

Vice-Com., John S. Wright, Rochester, N. Y.
Rear-Com., Jesse J. Armstrong, Rome, N. Y.
Purser, C. Fred Wolters, 14 East Main street, Rochester, N. Y.

EASTERN DIVISION.

Vice-Com., Frank A. Smith, Worcester, Mass.
Rear-Com., Louis A. Hall, Boston, Mass.
Purser, Frederick Coulson, 405 Main street, Worcester, Mass.

NORTHERN DIVISION.

Vice-Com., J. McD. Mowatt, Kingston, Ont., Can.
Rear-Com., E. C. Woolsey, Ottawa, Ont., Can.
Purser, J. E. Cunningham, Kingston, Ont., Can

WESTERN DIVISION.

Vice-Com., Wm. C. Jupp, Detroit, Mich.
Rear-Com., F. B. Huntington, Milwaukee, Wis.
Purser, Frederick W. Dickens, 1306 Grand avenue, Milwaukee, Wis.
Regatta Committee: R. Easton Burns, Kingston, Ont., Can., chairman; Herbert Begg, Toronto; D. B. Goodsell, Yonkers, N. Y.
Meet of 1900, Muskoka Lake, Aug. 3-17.
Official organ, FOREST AND STREAM.

A. C. A. Membership

APPLICATION for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.
Initiation, $1. Annual dues, $1.

Muskoka.

August 3 to 17, 1900.

Editor Forest and Stream:

I have spent the evening sitting in my den, toasting my feet at a cheerful grate fire, ruminating on some things that have come to my notice since starting at holding down the job of commodore to that large aggregation of canoeists and kickers known as the A. C. A.

The evening and my third cigar were pretty well spent when I reached the conclusion that the chief thing that the A. C. A. members lacked was canoeing news to keep up their interest in the sport from one meet's end till the next one came around.

It has come as a surprise to me to find how very few members of the executive committee take or see the FOREST AND STREAM at all regularly, and our executive committee is usually composed of the most active canoeists. What then must be the condition of those members who do not take such an active interest in the sport?

It is quite probable that this lack of news is due to the fact that A. C. A. members do not now write to the FOREST AND STREAM as much as they did years ago, and I should like to take some means to stir up their interest to the pitch that was in vogue from 1884 to 1890. Throwing the butt of my third cigar into the grate I surprised my better half by jumping up with the remark that "I guessed I had better set them a good example."

Turning to a scrap book which I keep as a memento of the days when I was an active canoeist—'84 to '90—I found columns of FOREST AND STREAM items to which are appended such names as Retaw, Dot, Snake, Cruiser, Mac and numerous others. Where are they now? If there had been a sailors' union in those days the chances are that one Dot would unanimously have been given the post of chief kicker; but old members will remember that while we did a power of kicking when the draft regatta programme was posted, etc., we had little or, if memory serves me aright, no kicking at the meet.

Perhaps many are like the writer, whose efforts to keep "my then boarding missus" from seizing my trunk and later in endeavoring to keep the bailiff out of my own back yard has kept me so engrossed with chasing the nimble dollar that beyond paying my annual dues I have not kept track of canoeing matters since '91.

As I sat in my easy chair my mind drifted back to a trip taken to that canoeist's and fisherman's paradise, Muskoka, on Oct. 13 to try and locate a site for next year's camp, and it crossed my mind that it might make interesting reading for A. C. A. members.

I had passes for two from the Grand Trunk Railway Co., but after asking six different men to go up and finding them all too busy, we started ("me and my raincoat") at 8 A. M., and reached Muskoka Wharf about 11 A. M. The Muskoka Navigation Co. has steamers meet the trains and running to the three large lakes which are connected with each other. In the season one boat runs to different points in Lake Muskoka, which we will call Lake No. 1. Another boat takes the shortest cut through Lake Muskoka to the lock at Port Carling and then makes calls at the different points in Lake Rosseau—No. 2—stopping at the private wharves erected by the cottagers when they have passengers or freight. A third boat runs through Lake Muskoka, skirts the lower end of Lake Rosseau and stops at all points in Lake Joseph.

We got off the boat at Beaumaris, which is situated about half way up Lake Muskoka, and is surrounded by dozens of cottages, owned mostly by people whose winter homes are in Pittsburg, Pa. We put up at the Beaumaris Hotel, a temperance house, about 2 P. M., rented a rowboat and headed for Grand View Island, the lower part of which had been offered to the Association for a camp. The island is nicely situated, with a splendid sheltered channel alongside, a mile long, while the lower end of the island commands a magnificent view of several miles of open water. After climbing through and all over the island we found it so rough that for an A. C. A. camp it was out of the question unless some one would donate a large supply of dynamite. About 6 P. M. we rowed back to the hotel, accompanied by a pair of wet feet, mementoes in the way of burrs in our trousers, and a row of blisters on the palm of each hand; not to mention an appetite that mine host Prouse successfully satisfied with sundry portions of a toothsome turkey.

The following morning Mr. Gill, of Pittsburg, took us out in his fast steam launch, picking up Mr. Wilmott, the game warden of the district, and Hugh Neilson, skipper of the old Boreas from '83 to '86. We ran across the lake to a site near Balla offered by Mr. Smith and then to Butler's Bay, where we spent some time, but had to hurry back for lunch.

We started out after lunch in a rowboat, the owner of which predicted a big storm; but as it was only a fifteen minutes' row to Mr. Neilson's island we chanced it and got caught in a thunder storm. The raincoat kept everything dry execept boots and hat. These received attention in front of Neilson's grate fire. When the storm blew over we started again for Butler's Bay to see if we could find a suitable place for Squaw Point, did not find it, but learned that we were as far from Beaumaris as from Port Carling, where we wished to see a site next morning. Placing a map of the lake on the floor of the boat we started for the latter port, a six-mile pull, just to freshen up the blisters a bit. In the channel of the river we were practicing the Cambridge stroke, about thirty-five to the minute, when something struck the bow of the boat, throwing the oarsman into the bottom thereof. We were somewhat surprised to see that it was only a 10in. spar buoy which marked the steamer channel. After checking it off we continued the trip with one eye

a-weather for obstructions. Reached Port Carling at 6:30 P. M., tired and hungry; got a man to help carry the boat over the lock and turned in for supper.

Up at 6 A. M. next morning. The cook not being around, we lifted a few soda biscuits and a bit of cheese off the dining-room table into coat pockets, launched the skiff and rowed four or five miles around Tobin's Point, which used to be the meeting ground of the Indian tribes; a raised circle marks their council chamber yet. Walked all over the point, munching the biscuits and cheese; did not notice that there was a young bull among the cattle in a field we were going through; he seemed to notice a red sweater we wore, however, and to save him from hurting his horns we ran for the nearest fence—not that we were afraid of him, but he was such a nice-looking bull we did not like to put him to any inconvenience. Our early training as member of the Society for Prevention of Cruelty to Animals came in handy, and we walked a mile, skirting through bush and swamp just to show Mr. Bull that he could have the field all to himself if he felt that way about it. Got back at 10 A. M., had breakfast and caught the 10:30 boat which passes the hotel steps, went up in the pilot house with the captain and kept him smoking 5-cent temperance hotel cigars while I plied him with questions. He liked the cigars, and I enjoyed his talk, so we broke even. Had a good dinner on boat—40 cents—got to Muskoka wharf 1:30 P. M., hired a rowboat to take us to the Sanatarium for Consumptives, met a friend who was a patient and had put on 11½lbs. in three great air lots of Ozone, 700ft. above Lake Ontario, just the place for a summer outing.

Caught the train at 3:15, got back to Toronto 7:30, after a very enjoyable three days' trip. We go up again next week.

WILL G. MACKENDRICK.

TORONTO, Nov. 18.

Doing Nothing.

I WAS walking along King street the other day peacefully chewing an after-luncheon toothpick, when I met a man—a man with mahogany face, hollow cheeks and a peeled nose.

"Hello!" he exclaimed. "Where've you been? I've missed you around the bay lately."

"Nothing strange about that," I replied; "I've been in Muskoka for ten days."

"Have a good time?" inquired the weary-eyed apparition.

"Immense."

"What did you do?"

"Oh, nothing."

"Nothing!" he cried. "What's the fun in that?"

"Lots," I said, if you go about it in the right way and have some one to help you. But," I went on, "you look as though you had been away somewhere. What did you do and where did you go?"

His eyes lit up with the burning fire of the self-sacrificing devotee, and he broke out: "Say! I've had a great time. Been back among the lakes in Peterborough and Victoria counties. You know Stony Lake, Balsam Lake, Lovesick Lake, Buckhorn, Chemung, Sturgeon and the rest of them. Why, we covered 300 miles in ten days, and one day we paddled fifty miles. When we struck Coboconk the boys there just stared when we told 'em we'd left Bridgenorth that morning."

"Pretty place—Stony Lake," I hazarded.

"M—m; not bad. Had a hard time, though, paddling up Clear Lake at this end of Stony. There's no shelter there, and it took us an hour and a half to go four miles, the wind was so strong."

"Did you visit Fairy Lake, near Juniper Island? It's a charming little lake—just like an emerald dropped down among the rocks and trees many feet above the level of Stony Lake."

"No; didn't have time. We were in a hurry to get to Eel's Creek, toward the other end of the lake, and over the portage. We wanted to camp the other side of the falls."

"I enjoy a camp," I broke in. "I like the quiet and the solitude, the cool peaceful woods and the magnificently spangled heavens. Then, after a good meal, it's grand to sit beside a roaring camp-fire and watch the sparks soaring up and mingling their fiery spangles with the silver of the stars. I know Eel's Creek well; just there you can camp and have the tinkling of the falls as a cradle song when at last you turn into your warm blankets and drowse into the land of dreams."

As I spoke I saw the enthusiasm fade out of his eyes, and I asked what kind of a time he had on Eel's Creek.

"Oh, not bad; but Tom had forgotten the bread and we had to make our supper off corned beef and cake. Confound him! He was thinking so much about that cake and the girl who gave it to him that he hadn't any room in his head for bread. Yes; and the mosquitoes were awful that night. I had three or four bites active all night, and by the time one got better a new mosquito would get me somewhere through the blankets. We got up about 5, ate some beef and cake and started up the creek about 6 o'clock."

"What did you think of the Indian carvings on the rocks up there?" I put in.

"Indian carvings? I didn't see any. Oh, yes; when I come to think of it there were some funny looking rocks on one side; but we wanted to go up to the head of the creek and get back into Stony Lake and as far on the way toward Young's Point as we could before night, and we couldn't stop. We did it, too, and camped near Juniper Island; but it rained all that afternoon and our blankets got wet. We might have landed and camped at noon, but we didn't like to waste the time. Gosh! it was chilly and damp that night, and the wood was so wet we couldn't make a fire. I warmed up the wet spots in my blankets pretty well by morning, but it was pretty tough getting into my clothes again, they were so cold and damp. Tom was worse off than I. He'd left his where they got the drip from a small hole in the tent."

A reminiscent gleam of satisfaction shone in his eyes as he though of Tom's feelings and remarks while struggling into his clothes.

"Oh, well," he went on, "that day made up for it. We had the wind with us, and the way we cut up to Burleigh and then kited along Lovesick and Buckhorn after passing the Burleigh portage was a caution."

"What did you live on?" I asked. "You couldn't carry much in your canoe."

"Oh, oatmeal and bread and butter and cheese and bacon mostly. We had some canned meat, but hadn't room for much. Tom forgot the bread once and once it got wet, and we had to dry it in slices in the frying pan. When we could get milk we had porridge morning and night—it was filling at the price. When we had no milk we had porridge for breakfast and bread and cheese for lunch and fried bacon for supper."

He paused thoughtfully and then added with a revival of enthusiasm: "But we had a great trip. No fellows in the club came near making the record we did."

I looked at him pityingly, and then, taking him by the sleeve to prevent his leaving me, spoke to him thus:

"My friend, listen to me and I'll tell you what I didn't do and why I had a pleasant holiday.

"I didn't live on porridge without milk, and mouldy bacon.

"I didn't need to fry my bread to dry it; or my socks either.

"I didn't cover so many miles in so many hours and take my fun out of doing it. I had plenty of time to look at all the beautiful things we passed, and even had time to go out of my way to find them.

"I didn't lose an unnecessary hour's sleep; and always had three good meals a day, rain or shine; and if any Tom forgot the bread there were always plenty of cooks to make biscuits."

I held him pitilessly and continued to pour into his ears the story of my uneventful holiday. What I said to him I will shortly relate to you, but you must imagine for yourselves the changing expression of his face as it gradually dawned upon him that possibly one might find enjoyment that was not measured by the mile or even by the number of events that could be crowded into an hour.

One day toward the end of August I started out with the fixed intention of doing nothing for a while, and boarded the Muskoka express at Toronto, bound for one of the best places I knew of for that purpose. The usual people were on board—friends from the city, strangers from the city and visitors from the States, the latter generally recognizable by the large number of expensive rings worn by the women. Two of the travelers, neither at all old, but indeed almost new, chiefly attracted my attention. One, pale, solemn and owlish, gazed upon everything and everybody with a calm blasé air that made one wonder what secrets of eternity were leaving memories in his mind to make him so indifferent to things temporal. The other took the liveliest possible interest in everything and flirted so outrageously with me that I had no hesitation in asking the mother how old she was. As age is a tender point with ladies, the exact months of the young lady must remain my secret.

The time went by, and at the usual hour we were on board the staunch Medora. It was interesting to me to recall my first impressions of Muskoka on gazing once more upon the scenes I had almost forgotten. Lake Muskoka gave me a feeling of keen disappointment when first I passed through the narrows and entered its waters. Now, having no extravagant expectations, I thought it delightful rather than otherwise, and readily overlooked the gaunt stems of the fire-swept pines or worm-killed hemlocks. Though the whole scene may fail to make what the artist would call a "picture," the eye can readily pick out "bits" which are charmingly effective.

Those bold rocks to the right, for instance, at once attract attention by their contorted ruggedness, suggestive of vast durability and an impassive resistance which was yet unable to successfully oppose the violence of primeval fires and the slower action of air and water.

Their sides are marbled with lichens, sage green, yellow, orange, red, brown. Their tops are covered with bright green moss and behind them rise gnarled and twisted evergreens with black green splashes of foliage standing clear cut against the yellow white of the smoke from some distant forest fire. The foreground holds as its points of interest the ripples of the water and the waving, dancing reflections of the rocks. To the left in the foreground a crimson canoe balances the picture and gives effect to a distance made up of wooded islands and a mass of tumbled cumulus clouds with shining marbled crests. I look, and long for a camera to take it, color and all.

Stop after stop the steamer made, dropping pale city folks with miscellaneous baggage, or sometimes taking on a nut-brown camper with no impedimenta but a canoe and a dingy dunnage bag.

At last, at 8:30, we circled into Cragie Lea dock and a familiar complicated whistle announced to me that my friends were waiting to row me over to Patience, where my holiday was to be spent—at least at such times as I did not happen to be somewhere else.

Having arrived at the scene of lack of action it may be well to give an outline sketch of those who were to assist me in my laborious task of doing nothing. First of all, there was the baby, who was generally asserted to be related to me, and, to tell the truth, I usually admitted the fact. Then came the baby's mother, also related to me, but only by marriage.

Afterwards came Grandma, usually found when wanted worshiping at Baby's shrine; several aunts, also more or less devoted, and an uncle, between whom and her father the baby distributed favors with a great degree of impartiality.

Now began sweet *dolce far niente*, and for ten days we got up when we were tired of sleeping and went to bed again when there was nothing to be gained by staying up longer; ate our meals when they were ready and between times helped to get them by rowing for bread, milk or butter. Then, just as the spirit moved us, we swam, read the latest fiction, walked, loafed and minded the baby. When I say "we did this" or "we did that," you must understand that "we" stands for a variable quantity, composed perhaps of almost any combination of three or four that could be made of the company.

Craigie Lea, the chosen scene of our idling, is a beautiful bay situated on the mainland between the mouth of the Joseph River and the entrance of Little Lake Jo. It is screened from the open waters of Lake Joseph by Cliff Island to the northwest, Chief's to the west and Loon Bottle and other small islands to the southwest, and is indeed an ideal spot in which to live an outdoor life.

One night, guided only by the stars and our knowledge of the chart, we rowed out into the darkness and headed down where Bottle Island marked the southernmost corner of Chief's. There is a peculiar charm in finding one's way at night in those dark channels full of the black reflections of the islands and the twinkling images of the stars—a charm compounded of a slight thrill of uncertainty about the way, a mysterious sense of having embarked in a more or less risky enterprise and a final glow of triumph when, through a hitherto unexplored channel, the familiar lights of home are once more seen.

Another such a night we pushed out through the channel between Cliff and the mainland and off across the Lake to Yoho. Behind us the shore and the islands soon became an indistinguishable dusky blur, but in the sky the stars shone clearly and the light of Yoho blazed in invitation. Straight to it we raced before a fresh wave-cresting wind, then swung about and pointed our slapping bow back for the northern corner of the square of Pegasus, in line with which our channel opened out. With splash and swish and long, strong pulls we swung along till the blur ahead took form and shape and revealed again the well-known places we had left behind not long before.

Then again, one clear afternoon, we rowed up Little Lake Joseph, perhaps some four miles long. At the far northeastern corner of the lake the rocks and rising woods crowd close about the lake and in the absolute calm of the evening projected themselves so deep into the lake that the world below seemed as real as the world above. I shouted a loud "Ha! Ha!" and such a burst of hideous laughter broke from the wooded heights on our right that it might well have seemed we were trespassing on a realm where fairy castles and demon-haunted glens could still be found. My companions frankly confessed to a creepy feeling, inspired by the gathering gloom, the mysterious reflections, the shadow-haunted land and the mocking echoes.

Right at the corner of the lake we landed where the timber slide-way comes down through the solemn woods of the natural park. On the shore our camp-fire, piled high with well-dried cedar boughs, sent cascades of flaky sparks roaring upward to meet the arching boughs above, and around it we sat eating our frugal meal with forest sauce and drinking fragrant tea from the little brown pot toasting and steaming on a log beside the fire. Behind us the timber road stretched up and away among the trees till lost in shadows fancy filled with moving forms. The rustling of a squirrel, the complaining of a whippoorwill and the booming of a frog alone reminded us we were not in a land where no living thing existed to rest on nature's bounty. Gradually conversation dropped, till at length we sat musing silently, then regretfully we embarked, after dashing out the fire with a pail of water, leaving the spot in the gloom of night.

Yet another day we took our bathing suits and rowed quietly down to the little bay to the south of Patience, where the sandy bottom and shallow water made the spot the delight of the fair bathers of our party.

At one side of the rocky point forming the southernmost horn of the bay was a secluded bower where the girls could dress; on the other side the men were out of sight of all intruders. I undressed slowly that afternoon and sat on a log in my bathing suit. Suddenly I heard an inquisitive chattering near at hand. The log on which I sat ran up into the bushes, and not 10 feet away was overhung by a little tree. Running up the tree I saw a little red squirrel, gazing intently at me the while with bright, bold eye. I chirruped to him and he ran out on a branch as near to me as he could get and looked me over. Evidently the examination was satisfactory, for he ran back to the trunk of the tree, ran down it and came along the log to within 6 feet of me. Then he ran back and took a walk around his tree. Again I chirruped and back he came, this time in most friendly fashion running up to within about 3 feet of my motionless form. His alert fearlessness and general friendliness were most refreshing, and gave sufficient evidence that he had not as yet made the acquaintance of many small boys. But voices were calling me from around the point and I rose to my feet. My little friend took it as a hint to go and scuttled off among the trees with his confidence in humanity still unshaken.

A plunge into the cool clear water washed away the cobwebs from our minds, the heat from our bodies, and left us with a cool freshness of feeling that made a good row a mere playful exhibition of the superabundance of life within us. Down the shallows and deeps, the curves and reaches of the Joseph River we went, leaving a wake whose spreading ripples reflected the sunset color in trembling threads of gold. A river it is called, but two channels connected by a narrow strait more accurately describes it, for a long, generally narrow arm from Lake Rousseau has been connected with a shorter arm from Lake Joseph by a short channel blasted out of the solid rock. Toward the lower end is a lakelike expansion, and here we landed, to light the indispensable fire and eat the equally indispensable supper. It is strange what a charm there is in a meal eaten afar among the woods or beside the restless waters. Simple fare is as welcome as the best creations of a Soyer, one's own exertions as all-sufficing as the assiduous attentions of a black-coated waiter, and the art of camp cookery as fascinating as the most engrossing arts of civilization. Man was a savage for many thousand years before he acquired an advanced civilization, and it is hard to make him forget the at-homeness-in-the-woods he inherits from his sylvan forbears.

But we could not linger long after supper, and once more got afloat and headed for the wooden bridge spanning the river just below our landing spot and forming a link in the road from Port Carling to Rousseau. It was dark by the time we got to Gregory's on Rousseau, and landed for mail, and so once more we had the fascination of groping our way in the darkness up the windings of the Joseph River, and only a careful noting of the stars saved us from inadvertently running up a blind channel ere we got into the straight and narrow waters where the steersman could not err.

One Sunday afternoon, after a week of summer breezes, Keewaydin, the northwest wind, awoke from sleep and blew his fierce strong breath down the channels between Cliff and Chief's and on across the bay, throwing up the water in snapping crested waves against the rocks at our door. The channels lying in the course of the wind were inky black save for the running crests of white, and

in the bay the changing shades of the water revealed every shallow or hidden rock. Most of the party looked askance when I proposed a row, but Baby's mother, with a confidence begotten of some years of experience, volunteered to join me. Then began a struggle which stretched the shoulders, stiffened the fingers and made the forearm harden like a board. Right into the wind's eye we went till Chief's gave us a welcome lee. Welcome indeed, as when the rush of wind came strongest our craft scarce held her own or at best bored through the wall of wind with a slowness like the piercing of a block of granite by a diamond drill. Then, sheltered from the fierce blasts, we paused, glowing with the exertion, the rude caressing of the wind, and the warm touch of a September sun.

Streaks of cloud shadow raced across the water, touching the waves with a shade of purple. Through the trees the wind whistled and sung, sending stray puffs through tiny glades or around corners of the rocks to streak the sheltered waters with ruffled darkenings running out to join the dancing wave crests in the open. What a pleasure it was to loiter in the quiet waters, basking in the genial sun and drinking in the breezy panorama of green islands with their waving plumes, dark waters running with never weary creamy ridges, and the deep, deep blue of the sky across which the clouds sailed in majestic battalions. Then for a dash into a channel where the wind invited us to a struggle from which we could at any time retire with honor and renew just when and how we pleased.

A good finish often atones for much that is disagreeable in what has gone before; but when it follows a succession of pleasurable experiences it is like the sugar and cream placed on the top of a dish of luscious berries. We crowned our morning's enjoyment with a dashing run before the wind just after a hard row a short distance up the windward channel between Cliff and the mainland. A most fascinating run it was, for nature flatters you when you are rowing or paddling before the wind and easily deludes you into believing that the rapid motion and the presto change of landscape are due to the tingling life which reaches from your heart's core to the very blade tips of your oars.

I still held my victim and poured much more into his ears of which I will spare you the recital. Then I shook him a little to arouse him from the dazed condition into which he had been reduced by the gradual upsetting of his most cherished ideas, and addressed to him these farewell words:

"My friend, I have shown you that it is possible to have a good time without breaking a single record or knowing how many miles you have covered in a given number of hours. I have shown you that startling incidents and hairbreadth escapes are quite unessential to holiday enjoyment. I have shown you that you have gone along all the days of your life with your eyes blind to many sources of pleasure which lay all around you, and finally I have demonstrated in my own person that it is possible for a man to come back from our lake regions without looking as though he had just been down for thirty days' hard labor breaking stones at Kingston penitentiary and living on skilly and dry bread. Promise me the next time you come back from a holiday you won't say a word to me about how far you traveled or how long you took to do it, or I'll stop you right up and straightaway tell you about everything I did all summer."

This alarmed him, and he hastily promised me all I desired; then took me around the corner to drink the health of "Doing Nothing" in a special quantity of "nectar" he happened to know about.

J. EDW. MAYBEE.

TORONTO, Sept. 30.

Atlantic Division.

A MEETING of the executive committee of the Atlantic Division was held on Nov. 18 at the residence of Vice-Com. H. C. Allen, Trenton. There were present Rear-Com. May, Purser Wood and Messrs. Smythe, McMurray, Hewitt, Wilkin, Hattersley, Rickey, Stephens, Fritz and Wilt. The guests were entertained at dinner by Com. Allen, the business affairs of the division being taken up informally with the coffee. The Atlantic Division is now in a very prosperous condition, with a good membership, a balance in its treasury and an active executive committee which has given due attention during the past year both to the local interests of the division and to its Association interests at the annual meet. After a discussion of the affairs of the division, it was decided to hold a division meet on the same date as last year—Decoration Day—and after the plan which then proved so successful. Two or three days will be given to a short cruise down the Delaware River, while May 29-30 will be spent in camp at Park Island. Races will be held during these two days, and arrangements were made for securing suitable prizes. Most of those present have planned to attend the A. C. A. meet at Muskoka in August, and every effort will be made to take a large delegation from the Atlantic Division. The meeting adjourned in time for the visitors from New York and Philadelphia to catch their trains at 11 P. M., after a very pleasant evening.

The Eastern Division Report.

LOWELL, Mass., Nov. 6.—*Editor Forest and Stream:* I notice that the report of the American Canoe Association gives the purser of the Eastern Division the credit for not turning over his report. It perhaps will be only justice if you will publish a statement to the effect that his accounts are ready and have been for some weeks awaiting auditing, but this has thus far been impossible, for the Secretary-Treasurer of the A. C. A. has failed to forward certain receipts to him. When this is done he will see that his part is completed.

WM. W. CROSBY, Purser 1898-1899.

HAVERHILL, Mass., Nov. 8.—*Editor Forest and Stream:* Apropos of your comments on the recent Year Book, the first three items that I had occasion to look up all contained errors, although copied from the 1898 Year Book. This would seem to justify the assassination of the proofreader, at least, and one is reminded of the notice which is said to have been displayed on a time in a Western bar room: "Don't shoot the pianist; he is doing the best he can."

I have received no copies of the "Official Organ of the American Canoe Association" (large letters, please) for several months, but I am going to try and worry along through the cold snap, as though I didn't care, nor "let concealment, like a worm i' the bud, feed on my damask cheek" (or table cloth, either).

Seriously speaking, I think it about time the American Canoe Association, if it can afford no journal of its own, should bank on some reliable journal, with a reputation to sustain, to represent its interests, instead of trading with every boy that has a whistle to offer. Very truly yours,

C. J. HALPEN,
A. C. A. 2968, Vice-Com. Pemigewasset C. C.

CANOEING NEWS NOTES.

Com. MacKendrick spent Monday, Nov. 6, in Ottawa Ont., looking up some old A. C. A. members. It is possible that Mr. D'Arcy Scott will spare time from his aldermanic duties to get himself in shape for the A. C. A. paddling trophy in Muskoka.

Mr. F. H. Gisborne and Mr. Baldwin are figuring on spending their holidays at the next A. C. A. camp.

Members who were at Hay Island well remember W. T. Lawless, captain of the Britannia war canoe crew, who carried off a number of prizes, among them the first swimming prize. Mr. Lawless holds the rank of captain in the Governor-General's Foot Guards in Ottawa, and is now first lieutenant in the Ottawa company en route to the Transvaal to assist in pounding reason and enlightenment into the cranium of one Oom Paul. In the same company, acting as second lieutenant, is Gordon Stewart, of Ottawa. Their experiences should make good story telling around the camp-fires at the next A. C. A. meet in Muskoka.

Rear-Com. Edgar Woolsey, of the Northern Division, is laid up for a few repairs to his face. Being of an inquisitive turn of mind, he went to inspect the fire in the carbide factory in Ottawa. He arrived in time for the explosion, and now poses as an authority on the bursting properties of molten carbide.

Rifle Range and Gallery.

On the Shell Mound Range.

SAN FRANCISCO, Nov. 13.—Yesterday at Shell Mound range was turkey day in addition to the regular matches. Three shots are allowed to each member in both the Germania Club and the Schuetzen Verein. Those making 70 rings or over get an order for a 15lb. turkey; between 60 and 70 rings, a 13lb. bird, and under 60, a 10lb. bird; 108 members of the Schuetzen Verein competed, but only a few got heavy birds. Scores of the Verein:

Champion class, F. P. Schuster 432 rings; first class, John Gefken 405; second class, J. D. Heise 410; third class, Otto Lemcke 397; fourth class, John Beuttler 377; best first shot, H. Zecher, 24; best last shot, A. Mocker, 25.

In the turkey shoot those who will get fowls and the scores made were: E.Goetze 65, A. Jungblut 65, Charles Thierbach 65, John Utschig 64, R. Stettin 64, H. Zecher 63, H. Stelling 62, J. C. Waller 61, F. P. Schuster 61, J. D. Heise 61, A. H. Pape 60, Louis Bendel 60.

The programme of the Germania Schuetzen Club included all kinds or rifle competition—class, medal, special prize and turkey shooting. In the three-shot annual contest for cash prizes the race for the $100 in gold is close. Dr. L. O. Rodgers leads with 723 rings in ten scores, followed by D. B. Faktor with 721 and F. P. Schuster with 720. The Germania's scores in the several events were as follows:

Class medals, 20 shots, German 25-ring target: First champion class, J. Utschig, 431 rings; second champion class, R. Stettin, 403 rings; first class, John Gefken, 432; second class, A. Jungblut, 380; third class, H. Lilkendey, 370; best first shot, C. Thierbach, 25; best last shot, J. Gefken, 25.

Best scores on the special cash prize re-entry match, three shots, German 25-ring target: F. P. Schuster 73, D. B. Faktor 72, N. Ahrens 72, D. W. McLaughlin 72, L. Haake 71, J. Utschig 70.

Bushnell championship medal, 10 shots, German 25-ring target, one entry a month: D. B. Faktor 226, F. P. Schuster 223, Dr. L. O. Rodgers 221, D. W. McLaughlin 216.

Turkey shooting, 3 shots, one entry, German 25-ring target, highest scores: F. P. Schuster 70, H. Huber 68, J. Utschig 64, W. Ganns 63, Dr. L. O. Rodgers 63, J. Gefken 62, C. Thierbach 61, L. Siebe 60, J. Hartman 61, N. Ahrens 60, L. Ritzau 65, H. Zecher 60, L. Klotz 60, A. Jungblut 59, W. Glindemann 58, E. H. Goetze 58, L. Bendel 59, R. Stettin 57.

There was a full attendance of the members of the Golden Gate Rifle and Pistol Club, and the shooting on the 200 and the 50yd. ranges was up to the average. On the pistol range Dr. L. O. Rodgers made eight 10s, of which five were successive. A change of light gave two low shots. The scores were as follows:

Rifle class, 200yds., 10 shots, German 25-ring target: D. W. McLaughlin 226 rings; F. W. Belknap 222, 209; F. E. Mason 221; Dr. L. O. Rodgers 220; C. M. Henderson 213, 196; J. E. Gorman 204, 191; G. Tammeyer 204; J. F. Bridges 202; J. Kullman 189.

Pistol, class medal, 50yds., 10 shots, standard American target: F. E. Mason 90, J. E. Gorman 90, Dr. L. O. Rodgers 94, C. Roberts 77, J. F. Bridges 77, J. W. Tompkins 70, J. Kullman 50, C. M. Henderson 83, D. W. McLaughlin 80.

On Election Day, Nov. 7, several of our good shots met at Shell Mound to engage in a 100-shot contest for the individual championship. Unfortunately only three of our champions turned up, but they had a fine race. Conditions, 100 shots, 25-ring target, entrance $2.50; highest score to win. Messrs. Henderson and Belknap also entered the match and did remarkably well for beginners. McLaughlin had an accident to his rifle which weakened his score somewhat. Scores: F. E. Mason 2,209, F. P. Schuster 2,204, D. W. McLaughlin 2,181.

All hands partook of a fine dinner after the shoot. ROEEL.

Iroquois Rifle Club.

PITTSBURG, Pa., Nov. 18.—Following are the scores made for the week ending Nov. 18:

Members' Medal Match.

H L Born	39 37 37 43—156	B Kestner	40 38 42 46—166
	37 38 39 39—153		37 35 40 38—150
	39 43 39 36—157	O L Hertig	42 41 43 44—170
			48 39 39 44—170

Daniels Cup Scores.

R R Bennett	40 46 43 44—173	W Riebling	40 30 33 44—147
	37 42 39 43—161		

Members' Record Match.

R R Bennett	40 41—81	O L Hertig	42 40—82
W Riebling	38 41—79		40 40—80
	42 45—87	B Kestner	39 40—79
L P Ittel	46 49—95		42 43—85
	48 48—96	R F Phillips	47 47—94

HENRY SPERLING, Sec'y.

Conlin's Gallery.

THERE will be prize shooting for Thanksgiving at Conlin's gallery, 513 Sixth avenue, for rifle and revolver at long and short range. All amateurs are cordially invited to visit the gallery, read the rules and regulations, see the prizes and try their skill at shooting. The shooting will end Nov. 30.

JAMES S. CONLIN.

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Nov. 22.—Ridgewood, N. J.—All-day shoot at live birds. H. Blauvelt, Mgr.

Nov. 23-24.—Chatsworth, Ill.—Chatsworth Gun Club tournament.

Nov. 28-29.—Chicago, Ohio.—Deer Lick Gun Club's live-bird tournament.

Nov. 28-29.—Springfield, Ill.—Merchants Thanksgiving tournament, under auspices of the Illinois Gun Club. W. Colvin, Sec'y.

Nov. 30.—Newark, N. J.—Smith Brothers' grounds; 25 live birds, $10 entrance, and miss-and-outs.

Nov. 30.—Buffalo, N. Y.—Fourth annual Thanksgiving Day tournament of the Bison Gun Club. F. P. O'Leary, Prest.

Nov. 30.—Chicago, Ill.—Thanksgiving Day shoot of the Garfield Gun Club. Live birds. J. W. Meek, Sec'y.

Nov. 30.—Hutchinson's Mills, near White Horse, N. Y.—Thanksgiving Day shoot of Walsrode Gun Club. Geo. N. Thomas, Sec'y.

Dec. 5-6.—Rahway, N. J.—Live-bird shoot of the Rahway Gun Club. Clarence Lambert, Mgr.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Dec. 12-15.—Burnside Crossing, Ill.—Watson's Park tournament. John Watson, Station R, Chicago, Ill.

Dec. 16.—Batavia, N. Y.—E C cup contest for championship at targets, between Messrs. W. R. Crosby, holder, and Mr. Fred Gilbert, challenger.

Dec. 31-Jan. 1.—Milwaukee, Wis.—Amateur tournament of the Wisconsin Gun Club. P. Himmelstein, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

Jan 16.-19.—Hamilton, Ont., Can.—Annual tournament of the Hamilton Gun Club; $1,500 in prizes. Open to the world. H. Graham, Sec'y.

Feb. 13-17.—Hot Springs, Ark.—Third annual midwinter tournament; $1,000 added; 2-cent targets (Rose system) and live birds (high guns). Capt. A. R. Smith, Sec'y.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

April 18-21.—Lincoln, Neb.—Third annual amateur tournament of the Lincoln Gun Club. Live birds and targets. W. S. Stein, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trapshooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Association's Grand American Handicap target tournament. Edward Banks, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

In the absence of the Editor of this department all communications intended for publication should be addressed to the Forest and Stream Publishing Co.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail allsuch matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Trapshooters who have attended the tournaments at Sherbrooke, Quebec, will regret to learn that Mr. J. W. McNicol, of the Sherbrooke Gun Club, who often acted as cashier, met with a serious accident on the 13th inst. while hunting at Little Magog Lake. Mr. McNicol and three other members of the club had each started a deer and separated. A couple of hours later his deer joined one, followed by one of the other men, and the two men came together just afterward. Mr. McNicol's companion stumbled and one of the hammers of his gun came in contact with a tree with sufficient force to break the half-cock and drive the firing pin clear through the primer. The heavy ball with which one of the shells was loaded passed through Mr. McNicol's ankle, shattering the small bones, but missing the actual joint and long bones. It was an hour and a half before his companion could get the rest of the party to the spot, and the three-quarter-mile journey to the railroad was a painful one. A handcar was fortunately just passing, and freight train and ambulance completed the trip. The doctors hope to save the foot, but recovery will be long and painful. The accident was one which might happen to the most careful hunter, and emphasizes the caution necessary for the safety of ourselves and others.

Mr. James Dupuy, of Ironton, O., whom many of our readers met at the Cincinnati shoot, writes pleasantly of seeing the boys there: "I notice by the label on my old reliable that it is time to pay up. My, oh, my! how time flies. I really can't get along without the paper. I am still sick; hardly able to go at all. I do love to read of the others who have a good time afield. I went to the Cincinnati shoot to meet the boys, and the greeting they gave me did me good. By the way, I got a shell of each of them—the kind they were shooting then. I intend to frame them as mementoes of the shoot. This is grand, glorious weather. I do not hear of any one killing any game. Report says that quail are plenty. How I would love to try it again, but I am deprived. If you know of any one having secondhand hunting books for sale cheap will you let me know?"

Platt Adams, who, although not exactly a resident of New York just now, still belongs as much to this city as to any other portion of the United States, has taken to field shooting and finds that he never "fudges" on ruffed grouse. While hunting recently in the vicinity of Smithville Flats, N. Y., in company with G. P. Finnigan of that place, he made his debut as a "partridge" hunter, covering himself with glory and his shooting sweater with grouse feathers and burrs. Mr. Adams now has had an anti-fudging apparatus affixed to the triggers of his gun when target shooting, and believes that it fills the bill; anyway he shot through the whole of Saturday afternoon last at the Crescent Athletic Club's trap at Bay Ridge, N. Y., shooting better than ever without a single flinch.

The Elliott-Doty match for the Republic cup, which is set for Saturday, Dec. 2, at Lyndhurst, N. J., ought to be of more than passing interest. Elliott, of course, has been doing some great work on live birds recently, and will naturally be favorite for the match. Aaron Doty, however, is an excellent shot, and has made some big scores on the Lyndhurst grounds on Tom Morfey's fast birds; he will therefore have a good fighting chance, as Morfey promises to provide some especially strong birds for the match in question. The match will commence at 1 o'clock. An all-day live-bird shoot will be held on the grounds that day in connection with the match.

One of the most interesting features in the trap world this week will be the Omaha-Kansas City intercity team race at live birds, which takes place at Kansas City during the latter half of the current week. Kansas City managed to lower the colors of the Chicago shooters about two years ago, but F. S. Parmelee, colonel commanding the Omaha forces, has every confidence of pulling his team out ahead. John J. U. M. C. Hallowell left New York on Saturday afternoon last for the scene of the coming battle, and expressed himself as looking forward to witnessing a great race. May the best team win.

Thomas Reynolds, a clerk at Spicer-Fanning's, caught a large partridge on Nineteenth street near Tower, last Sunday. Mr. Spicer had the bird caged and taken over to his cottage on the point, where, it is said, he will try to teach it to talk "what the wild waves are saying."—Superior (Wis.) Leader.

After issuing the Interstate Association's Review of Tournaments of 1899, Mr. Elmer Shaner took a well-earned vacation and went into the woods of Pennsylvania for a quail and ruffed grouse hunt. Mr. Shaner is a member of a Pittsburg camping organization known as the Rainmakers, that always has a good time when it goes into camp, and that is not out so much for meat as for sport pure and simple. Each member of the club is limited to a certain number of birds per day. The Rainmakers believe in leaving some game for posterity and—next year.

Messrs. Will K. Park, trap editor of Sporting Life, and John J. Hallowell, of the U. M. C. Company, will accept our warm congratulations on their decision, recently arrived at, to enter the order of Benedicts. While Mr. Hallowell's fiancée is not personally known to us, the same cannot be said of the lady who has honored Mr. Park by her choice. Miss Maggie Kirkwood, the Miskay of the Boston, Mass., Gun Club, has always been a welcome visitor at the office of FOREST AND STREAM, and as Mrs. Park she will receive no less hearty a greeting.

If the present mild weather continues, Sec'y Dressel of the Interstate Park Association expects to harvest a crop of hay before the Christmas holidays. The grass on the new ground of Interstate Park is several inches high and the forty-odd acres of level greensward presents a remarkably pretty picture. The building of the fence, which is now well under way, and the excavations for the foundations of the casino, which have also been commenced, do not mar the prospect much.

The Fulton Rod and Gun Club will hold an all-day shoot on Dec. 10, on the club grounds, Crescent street, near Old Mill, Brooklyn, N. Y. There are eighteen sweepstake events on the programme. In addition to these a match of 100 birds will be shot between Messrs. Richard Phister and S. M. Van Allen. Shooting will begin at 10 A. M.

R. A. Welch, for several years about the best shot in the city of Philadelphia, has changed his residence recently, and now hails from Greater New York. Mr. Welch will probably find New York quite as much to his liking as Philadelphia, and will certainly get plenty of chances of indulging in his favorite sport of shooting at good, fast birds.

John Wright, of the Brooklyn Gun Club, contemplates holding one of his usual popular invitation live-bird shoots very shortly. Great pressure has been brought to bear upon him to hold the shoot early in December, but Mr. Wright is a very busy man, and cannot promise anything for a date earlier than the third week of that month.

The tournament to be held at St. Thomas, Can., Dec. 5-8, commonly known among trapshooters as Tom Donley's tournament, has every promise of being a thorough success. Mr. Donley travels around tournaments quite a bit, and makes many friends who don't forget him when it comes to supporting his efforts in the trapshooting line.

Mr. Graham secretary of the Hamilton Gun Club, informs us that his club will hold its annual tournament at Hamilton, Ont., Can., on Jan. 16, 17, 18 and 19, 1900. This tournament is open to the world, and $1,500 in prizes is offered. Programmes will be issued later.

The Walsrode Gun Club will hold a Thanksgiving Day shoot at Hutchinson's Mills, near White Horse, N. Y., on Nov. 30. There will be sweepstakes for cash prizes and turkeys. Targets will be thrown from a magautrap, and shooting will commence at 1 P. M.

If present intentions and arrangements go for anything, Mr. Edward Banks, secretary of the American E. C. & Schultze Gunpowder Co., will spend the whole of next week on Long Island, with the idea of annexing a few ducks and quail.

"Gone to the dogs." FOREST AND STREAM's trap editor is attending the field trials now in progress at Newton, N. C.

IN NEW JERSEY.

At Guttenburg.

Nov. 18.—Following are scores of a trapshooting event held at Guttenburg Race Track to-day. The birds were a fast lot, and were materially aided by the wind. Messrs. Ehlen, Peters and Otten scored some remarkable kills. Loeble won the Class A medal and C. F. Peters Class B medal. Afterward a team race was arranged, Capt. Loeble picking a lot of crackerjacks and Capt. Peters picking most Class B shooters, who were called Lobsterettes, and were supposed to be inferior shots, but the totals show that the latter team won. The club members enjoyed a good day, with plenty of sport:

Loeble, 28	1222011222—9	Otten, 28	0212212120—8
Intermann, 28	1121111102—9	Rottmann, 28	0112212100—7
Peters, 25	2022211221—9	Rohlfs, 28	2120222002—7
Meyer, 25	1110212111—9	Hainhorst, 28	0110212001—6
Ehlen, 25	111201*211—8	Foehrenbach, 25	0022102110—6
Mohrmann, 25	111211*021—8	Kroeger, 28	01002*2111—6
Lott, 33	1212010222—8	Bohling, 25	0010200212—5

Ties for Class B medal: Peters 1, Meyer 0.

Team race:

Loeble's Team.		Peters' Team.	
Otten	11122—5	Peters, captain	12222—5
Intermann	21222—5	Hainhorst	11211—5
Loeble, captain	12011—4	Meyer	21222—5
Lott	02222—4	Ehlen	2211*—4
Rottmann	02112—4	Mohrmann	22*22—4
Kroeger	00212—3	Rohlfs	10022—3
Foerhenbach	01020—2—72	Bohling	22001—3—29

ON LONG ISLAND.

Sheepshead Bay Rod and Gun Club.

Nov. 16.—The monthly shoot of the Sheepshead Bay Rod and Gun Club was held to-day at the Cedars. Koch won with a clean score:

H Koch, 29	1211111—7	I McKane, 28	12022*0—4
G McKane, 25	2222021—6	W Boyle, 25	2101020—4
J Voorhies, 28	2112010—5	Von Fricken, 25	0102021—4
J Pillion, 27	2102202—5	J Byrnes, 25	0012022—4
G Morris, 26	222202*—5	A Soeller, 21	1010201—4
Dr Wood, 25	222*201—5	Beard, 23	2002100—3
A Busch, 24	1202022—5	Smith, 25	0001200—2
H Montanus, 28	22***11—4		

Sweep, 5 birds: I. McKane 5, Voorhies 5, Pillion 5, Wood 4, Byrnes 4, Koch 4, Beard 4, Montanus 3, Morris 3, Von Fricken 2, Boyle 2, Smith 2, Busch 2.

Match, 5 birds: Montanus 5, I. McKane 5, Pillion 4.

Brooklyn Gun Club.

Brooklyn, N. Y., Nov. 18.—The attendance at the regular weekly club shoot of the Brooklyn Gun Club held here to-day was not as large as usual, owing to the fact that field shooting is now in full blast. However, sixteen members took part, which is not a bad attendance. The seventh monthly shoot for the Francotte gun, offered by the club, was shot to-day, as was also the shoot for the Stevens .22 rifle. In the latter event Hopkins finally won from Lincoln after a hot race, which lasted till darkness set in. The scores:

Webber	1111101101111111111110111	
	1111111111111111111111111	—47—5—50

WESTERN TRAPS.

Eureka Season Results.

Dr. C. W. Carson, the able secretary of Eureka Gun Club, has completed the season summaries for that representative shooting body. It seems that Mr. F. P. Stannard won in Class A on the season averages, Dr. R. B. Miller in Class B, R. B. Carson in Class C, Mr. J. G. Lovell in Class D. Mrs. Carson, being an honorary member, is not eligible for a trophy. In the contest for the Mussey trophy Mr. E. M. Steck won on the shoot-off with Dr. Miller.

This has been a most successful year with the Eureka Gun Club, and the season closed has been a very busy one. The club membership is now full, and so are the coffers of the treasury, so that next season may be opened in a blaze of glory, as the secretary puts it. During the season Eureka Gun Club has thrown 47,379 targets. The live-bird season will soon begin, and the membership of the club will still continue to shoot actively and industriously throughout the winter. Following table shows the seasons averages in the different classes:

Class A.

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
V Cunnyngham	250	225	.900	A C Paterson	25	21	.840
C Antoine	250	209	.836	Geo Roll	25	17	.680
F P Stannard	250	234	.936	A G Courtney	50	40	.800
W D Stannard	250	232	.928	Fred Gilbert	25	25	1.000
E M Steck	250	220	.880	R Heikes	50	48	.960
A W Adams	250	218	.878				

Class B.

A C Borroff	250	163	.651	F H Lord	25	21	.840

Chicago Sportsmen's Trophy.

Nov. 18.—Yesterday did not seem favorable for a large attendance at Watson's for the Chicago sportsmen's live-bird trophy. It was decidedly raw and rainy in the morning, and though it cleared during the afternoon, with a fresher air, the conditions seemed so unpropitious that only about a dozen shooters came to the score. Mr. R. Clempson won the diamond medal and also the high average medal for consecutive kills, having to his credit the remarkable score of 43 straight kills, missing only his next to the last bird in the sixth frame of five tie birds. This is certainly a pretty hot gait, and Mr. Sturdevant, who stayed with the winner neck and neck to the finish, may feel that he lost not without honor. Clempson ran straight without any handicap, though tied by White, Leffingwell, Parker, Hollister, Eaton and Sturdevant, each of whom needed something from his handicap. George Roll and Silas Palmer divided in the tie on 13, there being no 14, and H. Levy and Dr. Shaw divided in the tie on 12. The occasion was one worthy of a bigger crowd, and as the winter progresses and the live-bird season becomes still more interesting it is likely that the attendance will be greater than it was yesterday. The following are the scores:

Clempson, 30, 1	222221121222121	—15
Dr Shaw, 30, 0	222012022222202	—12
J L White, 30, 2	2122021222222222	—15
W B Leffingwell, 30, 1	1212222122202222	—15
Parker, 30, 1	21122211221222*22	—15
Hollister, 30, 1	112211112111*212	—15
G Roll, 30, 0	202211211122012	—13
H Levi, 30, 2	12222201*12022002	—12
T Eaton, 28, 3	0122*1121202211112	—15
E Sturdevant, 28, 2	22202222022221222	—15
S Palmer, 30, 1	1222221222202*2*2	—13

Ties on 15:

Clempson	22211	21222	22121	21122	22212	12202	—29
Sturdevant	22222	22222	22222	22222	22222	2200w	
White	210w						
Leffingwell	22220w

RAVELRIGG.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Nov. 11.—The fourth shoot for the Keystone challenge cup, emblematic of the championship of Philadelphia county, was held here to-day. Eames won the event with a clean score. Vandergrift has won the cup twice, and Henry and Eames have each won it once. The conditions are: 10 live birds, 30yds. rise, open to residents of Philadelphia; subject to challenge every two weeks; $2.50 entrance. Following the cup shoot was the regular weekly club shoot at 10 live birds, handicap, $2.50 entrance. Scores:

	Club Shoot.	Cup Shoot, 30yds.
F M Eames, 30	1121222221—10	2212122222—10

Answers to Correspondents.

No notice taken of anonymous communications.

E. T., Nyack.—We have had an argument in regard to the flights of birds. I claim that they fly in the night time going south, my opponent claiming that they do not. Do robins migrate in the night time? Ans. You are right. Many birds migrate by night. Robins migrate both by day and by night.

C. L. L., New York.—In an argument the other day you were chosen to decide the following, upon which a wager was made: A is in the habit every spring and fall of visiting the Rangeley region and claims that genuine brook trout exist there, and that he has caught them ranging in weight from 6 ounces to 8 pounds; and further claims that the said trout are genuine brook trout and not lake trout. B claims there never was a brook trout known to reach the weight of 5 or 5½ pounds, either wild or cultivated, and says the trout A refers to must be lake trout. Ans. Genuine brook trout have been taken from the Rangeleys weighing up to 10 pounds and over; so that genuine brook trout of 8 pounds may have been caught by B if he were fairly lucky.

Pintail, Montreal.—I notice that Mr. Rowland E. Robinson used the term "Bostonnais" as applied to Americans in his interesting article on "Pioneer Days." I have heard this word used by lumbermen on the St. Maurice River, but the explanation given of its origin was unsatisfactory. Would Mr. Robinson be kind enough to tell us how the word originated? I say "us" since there may be others as ignorant as myself on this subject, though there are apparently none so inquisitive. Ans. Mr. Robinson explains that "Bostonnais" is Canuck for a New England man, meaning a Boston man, the same as Canucks call each other "Canadien," 'or "Canadienne"—Canada man or woman.

F. M., Brooklyn, N. Y.—Do vultures ever cry when hovering in the air, and do they ever hover in considerable numbers? The other night I was reading a poem in which I came across these lines:

"While vultures hover in the fatal air
And fill his fearful ears with rancorous cries."

I immediately asked myself "Is that scientifically correct?" for I had always thought vultures silent birds. Ans. The flight referred to is the poetic flight. Vultures do not hover in the sense in which the word is commonly used, but soar or sail. The American vultures are silent birds which sometimes hiss, or may utter a dull croak.

SAM'S BOY.

WE begin to-day the publication of Mr. Rowland E. Robinson's new serial under this title. The story will run through several weeks, and we need not assure our readers of the several Danvis series which have already been printed that in these new chapters they have a treat in store.

"WHAT'S THAT."

FROM far beyond the low banks of the Saskatchewan on the Northern plains, south to across the Rio Bravo del Norte, and out on to the dry cactus deserts of Mexico, the antelope had his range. To the east he dipped his slender muzzle into the Great River when he drank, and from the Missouri away westward the prairies and the little parks in the mountains and the high dry sage plains of the Central Plateau were dotted with his grazing herds, until at last he trotted or galloped over the arid valleys of the San Joaquin.

This was in the olden times. Now the antelope's range is more circumscribed. In all directions where it used to live, people have come, guns have been fired, farms have sprung up, fences have been built. Now, only on the dry plains where, as yet, farms are impossible, can we see the white rump patch, or marvel at the twinkling feet.

It was in the spring, just as the prairie was becoming green with its new growth, that the little kids were born in some shallow hollow or on a side hill—at all events, in the last place in the world that they would have been looked for. Here they lived for a time, following their mother for short distances on tottering legs, but most of the time carefully hidden by her by that means of concealment which is of all methods the most artful, which consists not in hiding, but in the simulation of some common object of the plain. Often indeed the hungry coyote searched for these young ones and was driven away by the angry mother, and searched again, and again was driven away; but he never found them; and at length they grew strong, sturdy and nimble footed, and for a little way could run nearly as fast as their mother. When this time had come the mother joined some other family.

Out on the yellowing grass of the far-stretching prairie were scattered the little families, making pleasing pictures. The old buck, short bodied, round and powerful, cropped the grass and paid little heed to his wives and children. He often looked out over the prairie, closely scanning it for danger, as did the older does, which raised their heads between each mouthful of grass. The yearlings fed contentedly, trusting in the superior wisdom and sagacity of their elders. The little kids, well able now to travel, chased each other round and round, and then suddenly stopped, and as if frightened, threw up the long hair of the white rump patch till it stood above their backs like a great brush. So they fed and played and lived their innocent, harmless lives, until, if undisturbed, the little group drew away to the top of some nearby bluff and there lay down to rest, until hunger again called them to their feet.

With the frosts of autumn the family for a little while drew apart; the kids kept more and more by themselves, and the old bucks chased the does furiously over the prairie and made a long line of dust in their headlong flight. Later still, as the weather grew colder, and the frost locked the infrequent pools and streams, and the last leaves let go their hold on the trees, and the first snows of winter came, the antelope gathered in great herds, sometimes numbering thousands, and fed close together. Rarely at this season dared the prowling coyote to interfere with them, though sometimes if one or two well-grown kids wandered off from the herd, he would chase them back to it; and again the great brown war eagle might swoop with swift flight and rustling feathers at a careless or wandering kid.

So the winter sped and the kids had become yearlings. Inquisitive, inexperienced and foolish, the bucks trotted about alone over the prairie, and whenever one saw something that he did not comprehend, he came near to inspect it. So, he often drew upon himself a shot or two from a traveling white man, or dodged the arrow flight from an Indian bow, or walked up in the gray of the morning to a hunter's tent, and in many other ways put himself in jeopardy.

Many of them died that summer, but those which survived became in a year or two later big, strong bucks with families of their own, and having always a keen eye for the dangers of the prairie. When to such a one some strange moving object showed itself over the distant hill, he was the first to see it, and staring steadily at it for long, he at length made it out to be some innocent thing; or if it seemed dangerous, he swiftly led his family to the top of a distant hill and from the summit watched until all fear of harm had passed.

THE PLANK IN MASSACHUSETTS.

THE meeting of the Massachusetts Commissioners and sportsmen the other day to discuss game protection interests is full of promise. The attention given to game by the Commission in the past has been slight; if with the reorganized board an intelligent endeavor shall be made to enforce the present laws and to supplement them wherever necessary, the officials will surely find themselves sustained and seconded by the support and co-operation of individuals and clubs. The fact is that such united action as has been taken by Massachusetts sportsmen in the past has been for the most part independent of any whole-hearted and effective joining of hands by the Game Commission. Once the sportsmen of the Commonwealth are assured that their interests will be given attention, a decided improvement may be looked for.

The step recommended at the conference—to stop the sale of Massachusetts game in Massachusetts markets—is a decided advance. That is precisely the expedient which common sense and long experience point to as an essential measure of protection. The game-marketing conditions in Massachusetts are scandalous. Not only do the Boston game stalls invite the sending of game legitimately killed, but they are ready at all times, in season and out, to encourage the snaring of game contrary to the statute. So long as the market is open to the game so long will game be killed for the market. This has come to be recognized as an axiom by those who are most familiar with these things.

For the sake of Massachusetts game, the projected statute might be made broader still—so broad, in fact, as to forbid the sale of game entirely without regard to where it may have been killed. Not until such a measure shall be enforced will the problem be solved and solved right and once for all. Of course, we all know perfectly well what the reply to such a proposition is: "The lobby," it is said, "is too powerful to permit any such thing." But is it? Would it be so powerful as to prevail if the sportsmen of Massachusetts were a unit in support of the FOREST AND STREAM'S Platform Plank?

SNAP SHOTS.

A case which has excited much interest among shooters was tried in the Supreme Court at Albany and decided last week. The plaintiff, an Italian named Petro Favio, sued to recover $5,148 damages for a thumb blown off and hand otherwise maimed by the bursting of a gun. The gun was a high grade arm of standard American make. The defense was that the gun had been improperly loaded. It was shown by test of some of the unused cartridges in court that the arm had been loaded with a charge of 52 grains of a nitro powder of which, according to the testimony of experts, 45 grains was the highest charge allowable, while less than one-half of the 52 grains was the proper load. It was also shown by the defense that this over-charge of powder had been improperly loaded. The jury found for the plaintiff in the sum of $2,648, and the defendants have very properly appealed the case. From such evidence as was brought at the trial the presumption appears to have been entirely that the fault was with the ammunition and the careless way in which it was loaded. The case well illustrates the change which has come about with the development and perfection of ammunition. As is pointed out in another column, the improvement in this direction has been rapid and radical, but the new equipments and agencies are quite as safe as the old ones, provided only that they are used intelligently and as they are meant to be used and made to be used. If the user ignores the directions for loading a nitro powder shell, the casualty which may result is of his own bringing; he may reasonably not charge upon powder maker or gun maker the responsibility for his own fatuous conduct.

It must constantly be borne in mind that with the ammunition of to-day the old happy-go-lucky mode of pouring a handful of black powder into the muzzle and blazing away has passed. The new explosives must be used by rule. So used, they are safe and effective. Used in another way they may be destructive and disastrous, but for the disaster he alone is responsible who brings it upon himself.

We have recently received several communications inclosing money for articles ordered, but neglecting to give the names of the remitters. This is extremely annoying to us, and may be assumed to be more or less distressing to the correspondents, who, not receiving what they ordered, probably think hard things and say hard things about the Forest and Stream Publishing Company. It is always a good rule, when sending money by mail, to give one's address along with it. A word to the wise is sufficient, but all the cautionary words in the dictionary would not suffice to insure in every case the name of the careless letter writer.

Podgers sends us a report, printed in our game columns, of a test case made by the Hunters' Union of Merced county to test the constitutionality of a county ordinance forbidding the shipment of game for purpose of sale. In the lower courts the law has been upheld, but the Union will carry it up. We advise the Merced market-hunters to keep their money. The higher they carry the case the greater its fall when it topples over.

Reference was recently made in the FOREST AND STREAM to a party of bird skinners which had left Long Island, sent out by a factory there, to visit Florida and other waters and to get a cargo of plume birds. The vessel is to be absent all winter, all sorts of birds are to be killed and at frequent intervals shipments of skins are to be made to New York.

On Nov. 22 the factory occupied by the concern which sent out this boat load of bird skinners was destroyed by fire, and its whole contents, including many thousand bird skins, were burned up. It is said that in the factory there were 10,000 sea gulls, 20,000 wings of various birds, and 10,000 heads of birds. The factory was a building 100 by 50 feet, one story high, and employed 50 hands; and we are told that the concern had gunners shooting for it all along the Long Island coast, as well as in Massachusetts, on the islands off the coast of Maine, and at various points along the shores of the Southern States. The record for numbers killed by any one man employed by the factory is said to have been 141,000 birds killed in a single season in Florida.

During the last year the demand for feathers has been practically limited to the long so-called eagle feathers, which are taken from eagles, hawks, herons, swans, geese, turkeys and turkey buzzards, and to the long wings of gulls and some other sea fowl. It is hoped, however, by the manufacturers that the coming season will show a more general demand for birds of all descriptions.

The New York law says "wild birds shall not be killed or caught at any time, or possessed, living or dead. This provision does not affect any birds the killing of which is prohibited between certain dates by the provision of this act, nor does it protect the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird and kingfisher."

We do not know that in this State the game protectors have ever made any attempt to enforce this law. It is a fact that at various times in the past, wild birds trapped in violation of the law have been openly sold in many places in this city. It is certain also that the trade of furnishing bird skins to milliners was carried on here until birds became so very scarce that it was no longer profitable to continue it. On Long Island, however, where rents are low and labor is cheap, the wicked operation of turning fresh bird skins into hat ornaments still continues.

There is here an opportunity for the Audubon societies, in which great interest continues to be felt, to do something which shall be more than mere speech-making and the passage of resolutions. The societies of the different States should join forces, and should make an organized effort to discover what factories of this sort are engaged in violating the law.

The Sportsman Tourist.

Sam's Boy.—I.

When the little boy who had so long been known only as Bub actually acquired a name, Uncle Lisha thought him worthy of more particular attention, and at once began to instruct him in the art being a boy.

One soft blue and golden morning the plover was wailing his heart out in the pasture, hovering on arched wings above the springing sward that shone beneath the azure vault like another sky of green with its spangles of dandelion stars. The red-headed woodpecker was hammering, squawking and croaking in the tall elm, and now and then turning fly-catcher to make an airy loop and gather in a passing insect. Down by the brook the thronging blackbirds gurgled and chattered louder than the pebble-bottomed water that foamed and sparkled beneath them.

The old man gazed wistfully out of the open door and eagerly sniffed the breath of sweet fresh air that drifted in among the odors of leather, wax and stale tobacco smoke. The hammer fell more and more listlessly on the lapstone the more merrily the woodpecker's taps resounded, the more plaintively the plover wailed, and the louder the blackbirds gurgled and chattered, and the more abstractedly the old shoemaker's eyes wandered from his work out across the green fields to the climbing sweeps of woodland and the beetling crests of the ancient hills.

In spite of all virtuous resolutions his heart would go a-loafing and he was fain to follow it out of the shop, though customers went barefoot. Then, when no more than a plume of a butterfly's wing was needed to tip the scale, there was a quick patter of little feet along the path and the child appeared at the door panting with excitement as he held forth a new-found prize—a big, fat angleworm that wriggled and squirmed about the soil-stained fingers no bigger than itself.

"Oh, see what me got, Unc' Lisher! Great big worm. An' me want to go fishin' right off!"

"So you du, dear heart; an' so you shall if Mammy'll let us!" the old man shouted, never gladder of a pretext to quit hammer, last and lapstone; and tumbling them unceremoniously on to the floor with a clattering thud as they rebounded from the heap of leather chips. "Ju' look a' that, naow!" he said, regarding with admiration the brave grip of the little fingers on the lithe worm. "If that 'ere was a snake not no bigger, haow quick he'd drop it! It's nat'ral, an' the boy is a borned fisherman. He shan't be nipped in the bud if I can help it."

Uncle Lisha sloughed off his leathern apron upon the leathern-seated bench and went into the kitchen.

"Huldy!" he called, hearing the mother busy in the pantry above the splash of his scrubbing in the sink, "I wanter take the boy a-fishin'. He's got his bait"——

"Why, Uncle Lisher, he's tew leetle, hain't he?" Huldy half protested, appearing at the door with whitened hands and a smutch of flour on her face.

"Not tu go along wi' me," said the old man. "Why, Sammy's a borned fisherman if ever the' was one. He's be'n an' got him a worm half as long as his arm, an' he's a-teasin' tu go. I tell ye; fishin's good for a boy. It l'arns 'em patience, an' dependin' on the'selves, an' obsarvin,' an' a-thinkin' aout things. The' hain't no fool never goin' tu make much of a fisherman. Naow, you du him up a maou'ful t' eat, an' we'll be off tu rights. I've got it in my bones tu go fishin' tu-day."

Huldah made no further objection, but began preparing a bountiful lunch for the two, while they went behind the woodshed with an old spade and a battered tin tobacco can. Uncle Lisha turned up great clods of moist soil and pounded them to pieces with the back of the spade, and Sammy, eager-eyed and alert, pounced on every worm that was uncovered, learning to pinch the black heads and draw forth with a humoring pull such as clung to the stiff soil. Now he nibbled a leaf of catnip or held up a young leaf of motherwort to shine yellow-green between his eyes and the sun.

"There, we've got enough, duckie," said Lisha, straightening his back before shouldering the spade, and leading the way to the house.

They presently set forth, Sammy holding on to one big waxy finger and making his short legs fly briskly to keep up with the longer strides of his companion. They made their way toward the merry babble of the brook where it glistened in the full light of the sun as it came out of the dark woods, and leaped over an obstruction of logs into a gray, green and golden water. When Uncle Lisha had cut and trimmed a shapely pole for his pupil and affixed the line and carefully baited the hook he approached the pool with the greatest caution, cast in the hook and directed Sammy to do the same. There was a wild rush and the two hooks were struck by a simultaneous electric shock; there was a twitch and pull, two upward flying streaks of iridescent light and two gaping trout were threshing the dry, hard leaves among the squirrel cups.

The boy's exultation over his exploit was as great a delight to Uncle Lisha, who saw his own experience repeated and in some measure felt the thrill of his first capture, so long ago, yet only yesterday, with all the hard realities of a long life but as a night of troubled dreams.

"Where's the little fish's mammy, Unc' Lisher?" the child asked, beginning to pity his gaping victim.

"Oh, I do' know. Mebby someb'dy's ketched her an' mebby she's in there a-wonderin' what's come o' him."

"You s'pose she's sorry, Unc' Lisher?"

"Oh, I guess not, Bub. She'd jes' as soon eat him as not. Mebby she's sorry she didn't."

"Don't mammy fish ta' care o' their little boys? Birds does. I seen 'em—the robins in the apple tree does."

"No, I don't believe they do—not as your mammy does. Le' me bait yer hook, Sammy—there, chuck it int' the bile ag'in. He was hatched aouten an aig 'way up in the shallers, an' he had tu look aout for hisself as soon as he was borned; an' a tough time he hed on't, I tell ye. One day a crawfish jumped aouten a hole an' made a grab for him an' ketched one o' his brothers. Another time a kingfisher come a-rattlin' along overhead an' stood stock still in the air, right over him an' a mess o' others, an' then come daown kerslosh right amongst 'em, head fust; an'one leetle feller got in his big bill; an' some on 'em was washed ashore, high an' dry; an' some went a-scootin' ev'ry which way, so scairt they didn't know which eend was a-goin' fust.

"Then one day, when he got bigger, he was swimmin' along comf'table, lookin' up tu see 'f they wa'n't a fly or suthin' t' eat, an' he seen a black head a-pokin' aout above a rock, an' tew little black eyes a-shinin' at him, an' then daown it all come, an' a long slim body arter, ju' like a black arrer, an' arter the leetle traout that went a-skivin' this way an' that, until he run 'n under a stun an' got away; an' that 'ere was a mink. So that 'ere leetly traouty he lived 'long, one way 'n' other, sometimes a-gittin a water snail, an' sometimes a worm 'at come a-tumblin' an' squirmin' 'long the bottom; an' sometimes a grasshopper 'at ondertook tu jump acrost the brook at tew jumps an' never done it; an' sometimes it was a fly a-buzzin' along on top o' the water, an' that was the most fun; or a white miller in the evenin' that made his thrut as dusty as the middle o' the rhud, so's he hed tu drink more water 'n he wanted tu; or mebby it was a big maou'ful of a bumble bee 'at gin him a jab in the maouth as he went along daown—an' that wa'n't so much fun.

"Ho got so he thought he knowed it abaout all, when one day along come an'ol' man an' a leetle mite of a boy 'at hadn't never be'n a-fishin' afore; an' he dropped a worm int' the water, an' that 'ere traout he grabbed it, an' next he knowed he was a-flyin' aouten the water like a bird, an' lit in the grass, where he never was afore; an' then he wished he hedn't; an' arter the leetle boy got over his fust bein' tickled I guess he wished he hedn't, tew."

"Was that 'Bub,' Unc' Lisher?"

"Wal, mebby so. I guess it's all right; he was made a-puppes tu be eat some time or 'nother, an' it's jest as well for him tu hev his insides took aout for a crow t' eat an' his head cut off for a mink t' eat an' his body fried brown by Mis' Lovel for a good leetle boy t' eat as for him tu be swallered hull by a mink or a kingfisher an' not du any good tu only one. Yep! Good airth an' seas! I guess here's his mother!" And Uncle Lisha tore a big trout from the pool and dropped it beside the other.

"I guess not," said Sammy, mournfully. "She don't act a mite glad tu see him, but jes' slaps him an' jumps on him. Oh, I got another, Unc' 'Lis'er!" and he fell to rejoicing over a fresh victim.

So the two happy comrades pursued the gentle craft, stealing along the brink of the brook where it cooled its waters in the scented shade of evergreen and wound among sprawling alders and babbled merrily over pebbly shallows, braiding itself in a many-stranded ribbon of silver, gold and blue and green, caught from sun and sky, overhanging tree, sheen of sands and pebbles.

They met a winged fisherman announcing his progress with noisy clatter, and turning back as he came upon his plodding rivals; and also a mink gliding along behind the rooty screen of the bank, lithe and sinuous as a serpent, now disappearing, now thrusting his vicious head from a hole, now galloping across a point, now taking a pool, swift and silent as a fish.

Concerning both Uncle 'Lisha promised stories to be told some evening or rainy day; and at last, having all the fish they needed, strung on slender withes of elm, Uncle Lisha proposed that they should taste the first fruits of their skill. Four trout were dressed, a fire burned to a rosy bed of coals, the fish spitted on sharpened sticks, each with a slice of pork laid inside him, and so broiled, diffusing a fragrance that might awaken hunger well laid to rest, but sharpening theirs, not yet a jot abated.

It was Sammy's first taste of outdoor cookery, and its new, unaccustomed relish was never forgotten. Years afterward, by camp-fires under Southern stars, in the hunger of prisons, the odor of the broiling trout, the breath of the May day air, the ever-changing yet monotonous babble of the brook came back to him through all the years of change, over all the weary, weary miles that lay between him and childhood and home.

What a proud boy he was when he showed his catch at home, and how sweet the unstinted praise that grandfather, Aunt Jerusha, father and mother gave the little fisherman!

Rowland E. Robinson.

[To be continued.]

Recent Discovery in Alaska and Game Distribution.

The Klondike excitement, which drew the attention of the world to the semi-Arctic northwest portion of the continent, has resulted in by far the most systematic exploration of the interior of Alaska which has yet been undertaken. Hardy prospectors have ranged the country from the Rockies to Bering Sea and from Dixon Entrance to the Arctic Ocean, and the secrets of a vast extent of unknown territory have been unlocked and given to the public, largely through the medium of the newspapers of the Pacific Coast.

More important still, because more exact and trustworthy, are the results obtained by the Government expeditions embodied in the U. S. Geological Survey's "Report on Maps and Descriptions of Routes of Exploration in Alaska," which has recently been published by the Department of the Interior.

The work was provided for by an appropriation of $20,000 passed by Congress in January, 1898. Early in April members of the Geological Survey sailed from Seattle. At Skagway a division of forces was made, and during the summer there were four parties in the field. The last of these parties to return did not reach Seattle till Nov. 11, after an absence of seven months.

The extent to which our definite geographical knowledge of Alaska has been increased by these Government expeditions may be inferred from the following extract from the report:

"The map of that portion of Alaska lying south of the Yukon has been almost completely reconstructed. Rivers previously known have been for the first time accurately surveyed, and many new lakes and rivers have been discovered. The source of the Kuskokwim has been found far distant from where it was supposed to be in high mountains where a swampy plain had previously been believed to exist. The mountain systems have been traced out, and magnificent ranges 12,000 to 20,000 feet in altitude have been found where previously the maps presented blanks."

A comparison of the general map of Alaska accompanying the report with the map issued by the U. S. Coast and Geodetic Survey in 1897, known as Chart T, forcibly illustrates these changes. The new map is based on the other, but parts have been taken out and new material supplied by the aid of photography, and a large portion of the interior south of the Tanana and north of Cook Inlet and Prince William Sound now bristles with close-set mountain ranges.

The mountains have an intricate and rugged topography and an approximate average height of 8,000 to 10,000 feet, but they are sharply saw-toothed and relieved by numerous peaks of a considerably greater height. The loftiest and most rugged mountains are those constituting the Sushitna-Tanana divide, which culminate in the highest peak on the North American continent, Mount McKinley, 20,464 feet in elevation. Mount McKinley is about 120 miles in an air line from the head of Cook Inlet, and a little further from Weare at the confluence of the Tanana with the Yukon. Mount St. Elias, which formerly claimed the honor of the highest elevation with its 18,024 feet, is now reduced to third place with a good prospect of sliding still further down the list. Mount Logan, just behind it, has been ascertained to reach more than 1,500 feet further skyward.

An important part of the work of exploration was with a view of locating a practical all-American trail from the coast to the upper Yukon. The chief point of the dispute in the recent boundary controversy between representatives of the United States and Canadian governments centered at the last on the concession to Canada of a port on the Pacific which should give her free access to the headwaters of the Yukon. Fully 80 per cent. of the travel into the Yukon mining country at present crosses White and Chilcoot passes to Lake Bennett, and must pass through both American and Canadian territory, and as the customs duties of both countries are very high on the classes of goods taken in, the importance to Canada and the United States of routes free to their own citizens or to those who trade with their citizens is apparent. Not only are these routes to the headwaters of the Yukon 60 per cent. shorter than the water route up the river via St. Michael's, but they are also open to general travel twice as long, and in fact never become impassable, as does the St. Michael's route for practically nine months in the year. White and Chilcoot passes are the door to the Canadian Yukon. The nearest practical crossings through American territory are from Prince William Sound and Cook Inlet, which are about 300 miles distant from the upper Yukon. The Geological Survey map, published in January, 1898, just as last year's expeditions were being organized, shows a "Copper River Trail," as it is called, from Port Valdez, on Prince William Sound, through Scoloi Pass to the headwaters of the White River, an affluent of the Yukon for the most part in Canadian territory. This route was undoubtedly put down on the map for want of better information. It possessed two vital defects, one being that it was not an all-American route and the other that it was impassable for men having the ordinary miners' outfit to carry into the country. Allen in 1885 and Hayes and Schwatka in 1891 had crossed over the chief portions of this route, and aside from their explorations almost nothing was known of the country south of the Yukon, which comprises nearly half of the main area of this great domain. It would be unfair to attempt to trace any part of the incalculable misery that resulted from the rush to the Copper River country to the Government publications of this utterly impractical trail, for the reason that the publication was made after the rush had already begun; but it certainly was a serious error—apparently a concession to the popular misinformation fostered by various unscrupulous transportation enterprises.

Scoloi Pass is over 5,000 feet high and is occupied by a great glacier, and White River abounds in rapids too rough for loaded boats.

As a matter of fact, the difficulties of surmounting the cataracts of the lower Copper River on the one hand and the Valdez Glacier on the land trail sapped the strength of the miners at the very outset, and very few succeeded in crossing to the Yukon by the much more practical Millard trail through Mentasta Pass.

At the present time the United States Government has settled upon the Mentasta Pass route, and a trail through to the Yukon at Eagle City or Forty Mile and already the portion of the pack trail from Port Valdez to Copper Center has been completed, avoiding altogether the Valdez Glacier and gaining the interior by a pass of much lower elevation.

This work has been in charge of Capt. Abercrombie. The Geological Survey expeditions co-operated in part with the military expeditions and had men with both Capts. Abercrombie and Glenn.

In addition to the Mentasta Pass route two other routes to the Yukon have been explored as far as the Tanana, beyond which river their probable continuation would be by way of the trail to Circle; and still another has been followed up the Kuskoquim River to a point where there is a rumored Indian trail to the lower Tanana near Weare. The unexplored section of Alaska south of the Yukon has thus been cut in four places at average intervals not much in excess of a hundred miles, and only the country west of the Kuskoquim and the McKinley range is now marked as "unexplored." The Tanana itself, though fairly well known and mapped before, has been explored from the head of Mirror Creek a distance of over six hundred miles, and the results accomplished by the expedition making this trip are not among the least important.

Particular attention in all these explorations has been paid to determining the food resources of the country, and the information relating to the game, though necessarily meager, is of considerable interest.

The Cook Inlet Country.

The Cook Inlet section is probably the best game country in Alaska. Cook Inlet is a structural basin of vast size, open to the North Pacific at its southern end. At present the sea occupies about half the total area, the remaining portion having been filled and elevated until it now forms a broad valley 75 to 100 miles wide by 150 to 175 miles long. The inlet passes through and behind the barrier of ranges which confront the navigator in a nearly continuous line from British Columbia north to Prince William Sound.

The country is well timbered with poplar, spruce and

birch, the latter on ridges and other elevated portions. Meadow and swamp land alternate with the wooded areas, and lakes form a conspicuous feature. The timber line in the mountain valleys reaches as high as 3,000 feet above sea level, and above this the alder growth extends 500 or 600 feet further to moss-covered slopes on bare rock. Berries abound, including high and low bush cranberries, the salmon berry (which resembles the dew berry in size and shape), blue berries, moss berries, bear berries and currants, all of fine flavor. Pack animals are able to live off the native grasses during June, July, August and a part of September.

Cook Inlet is closed above the East Foreland by ice for five months of the year. Prince William Sound, however, which is reached by a twelve-mile portage across the isthmus at the inner end of the Kenai Peninsula, is open to navigation at all times.

The Sushitna River flows through the center of the game country, but unfortunately the gentlemen who explored this river have omitted to report on the game.

Two other expeditions had to do with parts of this region, however, and their reports help supply the deficiency.

The following has to do with the country to the east and north:

"In the high St. Elias Mountains on Kenai Peninsula and the mainland the white mountain sheep (*Ovis dalli*) is found in great numbers. It has as yet been hunted but little, and is an important source of food for the prospector. This sheep is found also, but apparently in less abundance, in the Alaskan range.

"The moose is plentiful throughout the valleys of the entire region explored, but is very shy and difficult to obtain by the inexperienced hunter. Caribou are very plentiful in the foothills of both the coast and Alaskan ranges. They select the hard, dry ground above timber line, seldom or never descending into the valleys, and were not seen at all in the broad interior basin. Although their distribution is thus somewhat limited, they are easy of approach, and, within the districts where they are found in such numbers, form an important addition to the explorer's food supply. Brown and black bear may be found in the mountainous districts everywhere, but are absent over the interior plateau. Fur-bearing animals occur in limited and constantly decreasing numbers; among the most important are the silver-gray, black, red and cross fox, the wolverine, the otter, the beaver, and the gray wolf. Waterfowl in great numbers and variety throng the tidal marshes of the coast during the early spring and late fall, and are found during the summer season on the innumerable lakes of the interior plateau. Among the land game birds, ptarmigan and grouse are by far the most important, the former frequenting the unimbered uplands and the latter living in more or less abundance within the spruce and birch forests everywhere."

The explorers of the Kuskokwim who crossed over from the Skwentna, which is a tributary of the Sushitna, have an interesting not about the birds. They say:

"The migratory birds return very early to Cook Inlet. The sparrows, the robbins, the warblers, the swallows and the thrushes were seen here during the early part of the month of May. By the end of May the birds had commenced nesting, and we frequently disturbed the wild geese, the arctic tern, the ducks, and the gulls as we passed by. Along the Skwentna River we found sandpipers and other shore birds in plenty, with gulls and terns; redpolls were very common, and several species of grouse were constantly met with. From the alders on the river bank the startling "Whoo-pee" of the fly-catcher was constantly sounded. On the portage at the head of the Skwentna we saw a number of warblers, including the common yellow warbler, and two species of three-toed woodpeckers, which are common in all northern countries. The hawk owl and the goshawk were occasionally met with in the woods. On the very summit of the pass, which is about 4,400 feet high, we found very few birds; here, besides the ubiquitous redpoll, we occasionally came across a brood of ptarmigan, and once we saw two pretty arctic finches living among the high rocks. As we approached the summit we heard the scream of a golden eagle, which had its aerie in a crag near by. The general bird life of the Kuskokwim is very nearly like that which has been noted for the Skwentna."

The Skwentna and Kuskokwim.

"The Skwentna and the Kuskokwim both flow through what is in general a remarkably poor game country. During our whole trip along these rivers we saw only two moose and one bear; and, moreover, there were no signs of any great number. Small game was very scarce, for although grouse and ptarmigan were occasionally met with in the woods they could not be depended upon; and rabbits were almost absent, only one small individual being seen. The extremely scanty population of Indians on the Skwentna and Upper Kuskokwim shows how small the game supply must be. In an abandoned Indian camp at the head of the Kuskokwim, however, we found splendid horns of the mountain sheep, showing the presence of this animal in that region.

"The mountains lying between the Kuskokwim and the Togiak form apparently better hunting grounds than the Tordrillo Range, the signs of bear being especially abundant. Near Cape Etolin, between Nushagak Bay and Bristol Bay, our natives killed two caribou, which were the only large game we saw between the Kuskokwim and the Naknek River. The Alaska Peninsula has apparently comparatively good hunting grounds, the bear in the vicinity of Katmai being very numerous; we also saw two moose in the neighborhood of Katmai Pass. On the whole, however, the entire population of the country we traversed subsists essentially upon fish, which are usually plentiful, especially salmon, which ascend all the rivers in large numbers annually. In some of the streams, also, especially the Sushitna, the small greasy candlefish forms an important article in the diet of the natives."

The Copper River Country.

The Copper River country at the head of Prince William Sound, though further south than Cook's Inlet, is not nearly so desirable from the sportsman's standpoint. The timbered lowlands are much more closely hemmed in by rugged mountains, and the climate is not nearly so pleasant. Rains and fogs are of common occurrence, and owing to the heavy snowfall of 8 to 10 feet in winter the timber line along the coast is a thousand feet lower than at Cook's Inlet.

Mr. F. C. Schrader, who incidentally lost nearly the whole summer as a result of the non-appearance of the reindeer which were to convey him into the interior, has the following to say of the fish, game and other life of this section:

"In the lakelets in the Copper River country several species of handsome lake trout occur, but the fish most relied upon for subsistence by the natives is the salmon, notably the king salmon, which normally ascends the Copper and its tributaries in great numbers annually. Large quantities had already been dried by the prospectors on Lake Klutena early in August, and the fish were still running late in September between Taral and Copper Center.

"There is large game in the Copper Basin—several species of bear, caribou, and some moose. In the mountains toward the coast Rocky Mountain sheep were shot by prospectors, and wolf are also said to occur. Beaver are present on most of the tributaries and lakelets. Red and gray squirrel, though usually of small size, are abundant throughout the timber. No rabbits were seen by us, though they were long ago reported by Allen. Porcupine are common. A species of field mouse was seen, and a third-grown or dwarf frog.

"The eagle, black crow, hawk, goose, duck, ptarmigan, grouse, sea gull, sandpiper, snowbird, American robin, brown thrush, oriole, blackbird, woodpecker and many other migratory species of birds were seen.

"During the months of May, June and July the mosquito is a veritable pest. Sand flies and gnats also occur later in the season. Flies, grasshoppers, beetles, butterflies, moths and several species of Neuroptera were seen on the mountain slopes at the foot of Lake Klutena late in August."

The Tanana.

The Tanana is a central Alaskan river flowing into the Yukon 800 miles above its mouth. Its general direction is west, and it lies between the Upper Yukon and the coast. Game, as elsewhere in the interior, is a rather uncertain quantity. Messrs. Peters and Brooks state: "Moose, caribou and several varieties of bear are common in many parts of the basins, while the mountain goat and the big-horn are found in the higher mountains. One of the chief sources of the food supply of the natives is the salmon, which ascend the White probably as far as the Klotassin and the Tanana to about the foot of Bates Rapids."

Forty-Mile Creek.

Of the neighborhood of Forty-Mile Creek, which rises in American territory and flows into the Yukon a short distance above the international boundary, the report presents the following interesting facts:

"Moose, caribou, black and brown bear and mountain goat are found in this section, and the big-horn or mountain sheep is said to live on the east side of the Yukon. On the bare hill summits numerous ptarmigan are found. The moose are rather scarce, and as a rule are found in the thick brush along the streams.

"The caribou are quite numerous and are found in small bands on the ridges during the summer. In winter they herd, and are said to migrate. They are easily killed, since they are curious and will approach close, and large numbers are killed every winter by the Indians. The remains of a brush fence that extended for several miles were found by our party. There were openings at intervals in this fence, and some rawhide lariats cached near one of these openings made it clear to us that in the openings nooses were set and the caribou trapped.

"Grayling are found in most of the streams, and in the deep pools of even small ones. King and dog salmon ascend the Yukon in July, August and September. They are caught in great numbers by the Indians and dried for winter use and for dog feed. The king salmon is especially good eating, although not very plentiful; but even the dog salmon is a grateful change from bacon."

In a general way it is stated with regard to the Yukon district that the large game has been for the most part driven away from the vicinity of the mining camps and the more frequented routes of travel, while wildfowl are still abundant. In various parts of the district moose, barren-ground and woodland caribou, several varieties of bear, together with mountain goats and sheep are found; but the fur trade has nearly ceased. It is also stated that the salmon which ascend most of the tributaries of the Yukon for long distances furnish one of the main sources of the food supply of the Indians. Rabbits, which at times of plenty are an important article of diet, have for the past few years been almost an unknown quantity all over Alaska. They are periodically carried off by plague. A few years hence we may look for their return in considerable numbers, and count with equal confidence upon a renewal of the fur industry in the interior, as the foxes and smaller carnivora will multiply and keep pace with the rabbits.

On the coast in the neighborhood of Prince William Sound and elsewhere the business of raising blue foxes for their pelts has attained a considerable development.

A country which promises well for the sportsman and which seems to have been pretty generally overlooked by traders and prospectors is that adjacent to Bristol Bay, and particularly along the lower course of the Nushagak River. The valley of the Nushagak is said to be densely wooded, and in one of its tributaries trees are found which attain a diameter often in excess of 3 feet. Reports indicate that this is the coming moose country of Alaska. Cook Inlet is a little too well advertised to last.

J. B. BURNHAM.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Natural History.

A Nightingale's Outing in Brooklyn Streets.

JUST a week has passed since we extended an open-window invitation to *Daulius luscinia,* a long-time guest of ours, of classical fame, to take an outing and graciously condescend to become acquainted with life as found in a Brooklyn street.

Our offer was not hastily acted upon.

But by certain graceful gestures, characteristic of such folk of gentle breeding, not easy to describe, it was plainly to be seen that our courtesy in the matter was well understood.

Now, heretofore on several occasions when we have extended similar acts of courtesy to our guests of the feathered race, but of commoner sort, we have been sorely grieved to note with what unseemly haste our kind offices have been taken advantage of—indeed, with that sort of folk their unmannerly way amounted to nothing more than a sudden rush through the window and a departure without even a note of thanks thrown backward.

But to be sure, from such folks—mere flyaways, anyhow—nothing better could have been expected of their ill breeding. Not thus was the way of our sedate and high-toned Philomela.

From the table on which stood her cage, with door open, to the window sill she leisurely flitted, and then, standing on the outer edge for a moment, she would crane her neck, cant her head with graceful turn, peer curiously up and down the stret and return to the starting place for further reflection. Every now and then these actions were repeated, until nearly an hour had elapsed and we had almost concluded that she was not in the mood for an outing.

But finally we missed her from the room.

Now this is the season and time when "Philomela her tongueless vigil keeps," as the poet expresses it, and her departure therefore was made without adieus.

Dropping my pen and looking through the window, I presently caught sight of her as she sat on a branch of the maple just in front. She was calmly preening her feathers and seemed well pleased with the prospect.

Now, lodged in the branches of this tree, which grows at the curbstone, are to be seen two nests, bulky and roughly made, from which during the present season several broods of young house sparrows have emerged, and while I stood watching a score or more of the feathered gamins were twittering and gossiping among the leaves. But none of them by his actions appeared to evince the slightest curiosity as to the presence among them of so distinguished a stranger.

As I stood now an interested observer, a female sparrow flew up from the pavement carrying a mouthful of food and alighted by the side of the nightingale. Instantly from a near parallel branch a pair of noisy younglings came fluttering and with more than half-fledged awkwardness plumped themselves down, one on each side of dignified Philomela, who, straightening herself up to full height, eyed them in mild surpise. The mother bird immediately began to pop food into the gaping mouth of the fledgling on the right, who was crowding and twinkling his wings against the stately stranger, while his brother on the left, now frantic at being separated, began screaming and struggling in desperate effort to scramble under or over the obstacle to his share of the provender. This crowded all four birds into a quivering bunch, and it was exceedingly curious and entertaining to observe how our gifted pet was in some measure able to maintain her equipoise and calm dignity in the mêlée, and yet scorning to beat a retreat. Presently, however, the mother bird darted down to the pavement; the unfed scrambler from the left tumbled after her, and his stuffed brother on the right settled down on the branch with an air of indolent satisfaction to digest his meal. Our prima donna then quietly sidled a few inches away from the sleepy young gamin, leisurely rearranged her disturbed toilet and then softly flitted to a branch of the mulberry tree shading the front of the house next door below.

Toward evening, as I again stood at the window, the nightingale had returned to and was resting on the same branch of the maple. We now tried coaxing words and offered tid-bits as bribes to induce our bird to come in for the night, but failed of success.

It might here be proper to tell that the block in which we reside is situated about a mile eastwardly from the City Hall and between two of Brooklyn's busiest thoroughfares; and for a residence block it is favored, or troubled, with about an average share of noisy traffic, peddlers, mischievous small boys and marauding cats. Our block, however, is notable, we think, for its goodly showing of shade trees and the houses mostly have grass-terraced courtyards in front. Some of these courtyards are also set off, as is ours, with a few ornamental shrubs, and shrub-bordered alleys lead from them to gardens in the rear.

The next morning early, looking down from the window, I espied Philomela in the courtyard searching for her breakfast. I immediately filled her own cup, from which she had long been accustomed to feed, with toothsome morsels, to to speak, and hurriedly descending placed it under the spirea bush, while within a few feet of me she stood on the ground bowing, in manner characteristic of her species, the compliments of the morning. She was looking bright and chipper after her night of camping out. After I had backed away a few steps she flitted to the cup, scanned its contents and without partaking of any portion turned indifferently way.

After we had breakfasted, and as for a while, through the basement window, we watched, we saw our bird dart up from the ground to the rim of an urn, seize and carry away in her bill something whitish to the concealment of a thick clump of mulberry sprouts. Was she feeding on the caterpillar of the tussock moth? This occurred to our mind only because such game was quite too plentiful, to the detriment of the beauty of the trees in our block. But we could scarcely believe that our dainty warbler would refuse our choicest morsels in order to tickle her palate with such husks as these.

We had heretofore on many occasions tested the appe-

tites and tastes of various individuals of our feathered pets with a variety of crawling things collected in the garden, but had never thought of offering any of such hairy creatures to them as are the caterpillars of the tussock moth. We had read, of course, that the cuckoo (or rain crow) varies his diet by feeding on such hirsute caterpillars, but this bird, half dovelike, half hawklike, is a great giant in comparison with with our delicate little pet, Philomela. Occasionally at this season of the second brood of these caterpillars the cuckoo's notes—but softened or subdued—are heard in our street, though owing to his slyness and wit of skillful concealment among the foliage, he is seldom caught sight of. But on several occasions we have been able to catch glimpses of him as he lurked in our maple. It is said that in feeding on such caterpillars the cuckoo bolts them down whole, and that afterwards the wooly parts are expelled from his bill compressed in the form of wads or pellets. This doubtless is true, though we have never witnessed either act of the performance.

But now our nightingale is back and hunting again. Let us watch and learn of her ways. There! She has in plain sight snatched from the iron railing a full-grown tussock caterpillar and now runs with it under the spirea bush. Now she drops it on a bare spot of hard ground; she pecks it, lifts it up and bangs it down again. She continues to do this until, after many inspections, she finds it entirely deunuded of all its hairy covering; and now, quite a slender morsel as thus prepared, she deliberately swallows it.

In the afternoon of the third day of Philomela's outing she came to the basement window sill, enticed by an offer of meal worms. While she was pecking them, as dropped from my hand, a cat came sneaking through our neighbor's courtyard to the corner of some herbage, within easy charging distance of our pet. Puss was quickly routed from her ambuscade, but our bird became so badly frightened that no coaxing or offer of tid-bits can prevail upon her to come near this spot again.

We surmise that our pet must have had some narrow escapes from her feline foes, who so frequently come prowling through the courtyard, or lie in wait in the expectation of making prey of the innocent feathered stranger. At times probably the friendly warnings of the vigilant and cunning sparrows may have saved her, as in many instances has been the case with the thrushes that sojourn with us for a short period during the autumn.

Yesterday morning, peering down from an upper window, I caught sight of our nightingale. She was under the spirea bush and busily taking breakfast. Then turning my eyes to the left my attention was arrested by a pair of shining objects flashing and flickering at the edge of the mulberry clump growing at the further side of the courtyard, about five paces from the spirea. Presently, as from my point of vantage, curious, I gazed, the shining objects were discovered to be luminous orbs belonging to a slender flattened figure, of which I caught glimpses as it slowly curved around the border of the clump. Then, as the moving object approached and turned at an angle to the right, a cat's figure was revealed as now it stealthily crawled, and now glided snakelike for a space through the low herbage to the concealment of an intervening stone step; then a brief period hidden and a pair of eyes glared furtively for an instant just over the verge of the terrace; next the cunning stalker glided quickly to the cover of a nygelia shrub within 6 feet of the place where the busy bird yet lingered, apparently unconscious of danger. A moment's pause, and while with bated breath my eyes were held fixed to the place where the enemy lurked, a furry mass, as if shot from a mortar, struck the spot where the bird stood, and I caught a glimpse as I gasped of a twisting body, glittering eyes, darting claws, a flutter of tiny wings a fraction of an inch above the claws and the flitting of a bird in safety from the scene.

But in spite of the many perils by which she is surrounded in her novel haunts, Philomela is plump, sleek and still appears to be enjoying her days of gypsying. And toward evening, when the grateful coolness of the breeze reaches where we sit just beyond the doorstep, the gypsy strain somewhere in our own blood stirs within us as we look for the visits of this wild gentle thing which comes softly flitting nearly to our feet. Then, later, as twilight wanes, it is very pleasant to watch her as in witching grace she glides about us and to and fro, until, like a denser spot of shadow among shadows moving, she is absorbed by the deepening darkness.

Then when night has fallen around us as we sit, a hope for the morrow up springs, as we await, that Philomela will have one foe the less, as we yearn for a near enough sight on that cat.

THOMAS PROCTOR.

BROOKLYN, N. Y.

The Animals Then.

IN a recent number of Science Mr. O. P. Hay publishes an estimate of the total number of fossil vertebrate animals which are known to have been found in North America north of Mexico. The list is the more interesting because it is the first wholesale attempt to estimate on this subject. Mr. Hay finds that the whole number of genera which he is willing to acknowledge as valid found in North America is 1,118, and the whole number of species 3,234.

Of these the fishes are represented by 297 genera and 1,110 species, the batrachians by 44 genera and 94 species, reptiles by 209 genera and 598 species, birds by 59 genera and 102 species, and mammals by 436 genera and 1,182 species. Besides these 63 genera and 147 species have been described from foot prints alone.

The number of birds included here is noticeably small. Among them are 33 species which still exist. The author calls attention to the well-known fact that the tendency of birds' bodies to float for a long time after death would lead to their being devoured by large fishes and reptiles. There are more than a thousand species of birds now known as inhabiting North America, and birds were unquestionably very abundant in later geological times, but on the other hand it must be remembered that a very large proportion of birds are extremely small, and that their bony frame work is very delicate and extremely liable to destruction under a vast number of conditions.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Locomotion of Serpents—Mimicry.

HOLYOKE, Mass., Nov. 20.—*Editor Forest and Stream:* Your correspondent's query, in current issue of FOREST AND STREAM, as to why "a small green snake common to Massachusetts cannot run on a carpet" affords a fitting text for a few brief remarks concerning the locomotion of serpents. Likewise the reference by the same correspondent to the "buzzing" sometimes made by the blacksnake turns attention to the question of mimicry among this class of animals.

Although destitute of limbs, most serpents are capable of rapid locomotion, both on the land and in the water. In the latter medium snakes swim after the manner of eels, wriggling in such a way as to offer resistance to the water by curved portions of the posterior part of the body, while the anterior parts are extended forward in more direct lines. On the surface of the ground it is, however, different. Here the snake progresses more particularly by the use of its numerous ventral scales, which, having their free ends pointing backward, are, as the body is curved from side to side and the movable ribs are advanced, spread out and fixed against the irregularities of the ground, and then dropped back against the body as the hind parts are, in graceful curves, drawn up for the further advancement of the anterior portion of the body. These factors of progression, when rapidly executed, send the reptile swiftly over all surfaces that are not too smooth and regular. But this account of the mechanism of locomotion scarcely suggests the swiftness or the beauty of what Ruskin calls "one soundless, causeless march of sequent rings, and spectral procession of spotted dust, with dissolution in its fangs, dislocation in its coils. Startle it; the winding stream will become a twisted arrow; the wave of poisoned life will lash through the grass like a cast lance."

Progression can also be effected by sliding the body along against a fixed object, as a twig or stone. This manner of moving forward is not only employed to a certain extent upon the surface of the ground, but is particularly called into play by serpents when climbing.

The reason why the "small green snake common to Massachusetts" (*Liopeltis vernalis,* De Kay), which in fact ranges the entire realm of North America excepting the Pacific and Sonoran regions, does not succeed in running on a carpet is explained by its inability to secure a suitable "footing," if we may be pardoned the metaphor. This beautiful little snake is not one that often attempts very rapid progression, even on the ground, but enjoys lying idly among verdant grasses and foliage. Thus ensconced, it requires keen eyes to detect its presence, so quiet will it lie and so like the surrounding green is its own color.

The common blacksnake (*Bascanion constrictor*), in common with certain other non-venomous serpents, certainly makes use of its tail to apprise intruders of its presence. The first evidence the writer had of this occurred when he was but a mere youth. While crossing a hayfield one day in the month when cherries are ripe in New Jersey and the timothy is just filling out, he, much engrossed with devouring cherries from a large branch, carried in one hand, had his hat nearly lifted from his head by the elevation of his hair, as, lifting his eyes at a series of distinct and quickly repeated rappings, he beheld at his very feet a large blacksnake. The sidelong jump made must have likewise startled the ophidian, for, with head elevated quite to the top of the knee-high grass, he set a rapid pace for a nearby pile of stones and brush. This was a rapping, but we have since heard the blacksnake "buzz," and also "rattle."

The buzzing or whirring sound was once distinctly heard by us as we approached a blacksnake with a view of capturing it in our hands. This snake, which measured nearly 5 feet in length, did not run at our approach, but remained coiled, and as we crept nearer and nearer vibrated its tail in precisely the same manner as does a rattlesnake; but the sound produced was only a faint buzzing. This snake, instead of running away, "showed fight," which led to its easy capture.

The rattling sound was produced under precisely the same circumstances as the buzzing, except that in the latter instance the tail vibrated free in the air, while in the former it beat gently against some dried leaves, producing a sound strikingly similar to the rattling of the rattlesnake. We have also observed our friend the "puff adder" do exactly the same thing, thus adding to its apparent relationship to certain of our venomous serpents.

The question naturally arises, Is this conscious mimicry? When a harmless snake apparently seeks to intimidate the disturber of its solitude, instead of seeking safety in flight, can we concede that it appreciates the full importance of the peculiar powers of the venomous serpent which it so admirably mimics? I believe not. There may be instinct in it, but surely not complete reasoning, as the chain of circumstances leading up to the conclusion is too complex. The vibrating and buzzing of the tail are more to be likened to the pawing of an impatient horse, while the manifestation of courage in facing an intruder with flattened head, coilings and hissings doubtless results largely from the fact that the reptile finds such doings more suited to its idle nature than running away, coupled with an inborn combative tendency. Moreover, these actions are as perfectly in accord with the anatomical structure of most non-venomous serpents as with the *Crotalidæ.*

DR. J. HOBART EGBERT.

Adirondack Deer Law Violators Punished.

AT the meeting of the New York Fisheries, Game and Forest Commission last week, these convictions were reported:

Joseph L. Kelley, of North Elba, Essex county, fined $133.45 for killing deer out of season.

De Witt C. Flanagan, of Long Lake, Hamilton county, fined $100.50, and Charles C. Robinson, of the same town, fined $25 for hounding deer out of season.

Max S. Bevans, of Long Lake, for killing deer out of season, had a judgment rendered against him for $194.99.

The charged negligence of duty by protectors was under discussion, and the Commission is reported to be ready to take action in a number of cases.

Game Bag and Gun.

In Old Chesterfield.

HAVING read the experiences of several huntsmen in th FOREST AND STREAM, I thought perhaps I might intere some of you with little experience of mine in hunting th noble and swift deer in old Chesterfield. Having bec born in a low flat country on tidewater, in Virginia, an not knowing anything about a hilly country, you ma know I was a greeny when I struck some of the hig hills on the noble James, for it was all new to me. Th scenery was grand. Ascending some of the high bank on the James I looked down on the beautiful low groun in the distance, with the corn in the shocks and catt grazing in the large fields below, and the tinted forests the distance, where nature's hand had painted the leav in their different hues.

Having arrived at a small village some five miles i land from the James, I met my friends, who of cour were delighted to see and welcome me. You know ho it is in a small country town—when a stranger comes i everybody wants to meet him and see what he looks lik I soon got acquainted and found my new friends ver agreeable and kind. As it was a little early in the seaso to hunt deer, I made myself contented sitting around the country stores on the counters telling fish stories ar about the grand Chesapeake Bay and boating, which course was interesting to those who had never seen larger body of water than the James, from 150 to 200 fe wide. The days I would spend strolling around with m friends, the old pioneer deer hunters of that section. course, the main topic of our conversation was about th swift deer, their habits and where they crossed the diffe ent stands. Our main dependence was in the four larg deerhounds, Rattler, Mary, Music and Rover. Four be ter dogs never sounded their voices in the forest. Tim went by fast, and I was well up in the life of the deer, I thought, and in my mind I built great castles in the air what I should do in the getting of game. There were good many deer in the neighborhood at that time; w could see their tracks crossing the stands going to the grazing ground. I never was a good shot at anything, ha ing to shoot from my right shoulder and sight wi my left eye; so you see I was a daisy on a deer stand this fix.

The day was set for the grand drive of the season. Ever thing was in readiness and it fell to my luck to get a goo horse, for as the hunting grounds were several miles aw we had to use horses to ride to our stands. At 4 A. M several heavy raps aroused me from my sweet slumber and I was soon at the table. Everything was full of th hunt. There were five of us in the party, all good-natur and full of fun. The old driver was soon on hand an gave several long blasts on his musical horn, which r sounded on the cool morning air for miles. There we but few seconds before all the dogs were barking at ou feet; and you may know it was a musical time for a whil It made me have a queer feeling, such as I never had h before.

Off we started on our prancing steeds. Taking a roa that ran near the railroad track for a mile or so, on ou way we met our friend the railroad section boss comi up the track on a hand car. Knowing our plans, h stopped to tell us that he had just seen two fine does cro the track a mile or so down.

You may imagine our good feelings after that new Putting spurs to horses, we were soon where the gan had crossed shortly before. There was no trouble to g the dogs off, for hardly had we gotten there before all th dogs were under full blast, hot on the trail, and music the air all around. We had to do our thinking quic We soon found we could head them off by taking a sho cut, so we put spurs to horses and flew over hill and da We were soon at our stands, a mile away. Coming to cross-road where two footpaths came into it, I was to to stand behind a small oak bush and tie my horse son distance off from my back. The others rode down th road a half mile or more, to take their stands.

So there I was on my stand, listening to the sweet mus the hounds were making in the distance. It was gran Standing behind the oak bush with my gun cocked, wai ing for the precious moments to pass, I thought of ho I would have his skin tanned for a rug for my room, an how my friends on the seashore would enjoy a quarter fine venison. I had but a few minutes to wait. The do were within a half mile of me under full cry. Every mi ute was bringing them straight for me. I began to feel little queer feeling coming over me and began to get trifle shaky about the knees. I thought it would soo be over, but not so, for lo and behold, 100 yards off I sa two fine does coming as straight for me as if some on had sent them to me. I remember putting the gun to m right shoulder and trying to sight down the barrel wi my left eye. Bang! bang! and I thought I could see the both drop through the smoke. Dropping my gun started to see my first deer prize. What a beautiful ru I would have. But fate had planned it otherwise, f when I got a few yards from my stand and out of th smoke, I saw one run within a few yards of where I w standing, and the other I saw turn and go back into th swamp. The dogs by this time were very close to the and as luck would have it all of the hounds kept after t one that had passed so close to me, making for the rive My buck fever having full control of me, and forgettin all about my gun and everything else but the thought the fast fleeting deer, I started off, running in the dire tion the game had gone. Not knowing the country we I soon found myself on the banks of the James a mile more away, viewing the far-off other side, where the de was in perfect safety.

After getting control of myself for the first time sin I had taken my stand, I thought it would be best to r trace my long run. So getting all the dogs together started back. After walking a good distance I saw m companions coming to look for the man who had tri to outrun a deer. Then I had to tell my tale of woe a make excuses for missing at so short a range. But th was not all. After I had told them, as I thought, a there was to tell, they wanted to know where my gun wa After pondering it over in my mind I did come to t conclusion that I had had a gun when I started out.

told them I remembered turning one deer back. We soon came to the field of action, where I had met with such a defeat so short a while before. On looking around we found my gun 8 or 10 yards from my former stand. Of course the old deer hunters wanted to see where I was standing and where I had shot. We searched all the tree trunks in the direction the deer had come, but the scars we were unable to find, and finally gave it up as a bad job and started out to see if we could not find the deer I had turned back.

I was given a stand about 50 yards down the road from my former stand and the others were put on stands three-quarters of a mile away. We were hardly in position before we could hear the dogs filling the woods with their sweet music. It was not long before I was fully under the claws of the buck fever again, standing behind a bush with my teeth chattering as if they would break off; but to my great delight I heard in the distance the report of a gun, and in a few seconds the sweet strains of music from the horn wafting to me on the gentle breezes the intelligence that the hunt was over and the deer was bagged. Like a wild man I was soon on the scene, standing over the noblest animal that roams the forest, but now dead as a rock.

The custom in a deer hunt is to award the hide to the owner of the dogs, so you see my friends on Tidewater never got the venison, nor did I get the skin to rest my weary feet on.

But if you don't think I can shoot, just give me another chance. ELLIS C. RICHARDSON.

Quail Shooting in Cuba.

HAVANA, Nov. 21.—*Editor Forest and Stream:* Yesterday I took my third outing among the colins, which I found at home to me, and they entertained me with a good day's sport. In fact, eighteen came home with me to stay. Dash was in good form and also greatly enjoyed our suburban visit. A half hour on the 5 o'clock train took us to the fields, and our first reception was by a single bird, which came to bag just as the orb of day was peering above the horizon. A quarter of an hour later Dash located a bevy that flushed wild, but I marked some of them down, and after some skillful perseverance of the dog we persuaded three of them to come with us, to the evident delight of my four-footed companion, manifested in lively thanks for my expressed satisfaction for his good half-hour's work.

Several fields were then examined with negative results; but 8 o'clock discovered to us a covey running in the clear that flushed wild and went into a thick cover of guava bushy trees. We however invaded their cover and flushed several of them, taking a snapshot at one as it passed a small opening between the trees. I was unable to see if it was down, but calling in the dog, I went in the direction taken and Dash soon announced game in the outskirts of the thicket in tall thick grass, interwoven in prickly rat-pine hedgerow. Here Dash got in some of his fine work, now plunging under the tangled growth, now backing out and changing his point some distance away until I wished to give up the bird as lost; but Dash insisted that it was his bird, until finally in changing its hiding place to another the dog was too vigilant and quick for it, and thus it came to bag. We had marked down at least the direction the birds had taken, and we now turned our attention to finding them.

After nearly half an hour spent in their pursuit, Dash at last came to a stand. I flushed a single bird in comparatively open field and missed with both barrels.

The dog looked up at me as if scornful, but this one bird indicated that we were on the right track of them, and after diligent work we struck a trail and finally the dog came to another stand. I flushed the covey, which seemed to have got together again. This time I scored a right and left, but retrieved only one bird, and as they fell among bushes and prickly hedges we abandoned the other. We then commenced working in the direction of a small hamlet, where in a grocery store we expected to breakfast from 10 to 11 o'clock. On our way we flushed and bagged a galluela or meadow hen, and in a bushy pasture the dog made another stand. I flushed a large covey of quail and scored a right and left and followed them up, making several very mortifying misses but bringing three more to bag, or rather to my string, for I use here a leather belt strung over my right shoulder and left arm with leather strings about ½ inch wide and 1 inch apart, so that my birds hang in the air by the necks 1 inch apart, so that they are thus better preserved in this climate; also smoother to look at.

After a comfortable breakfast and a two hours' rest I again took to the fields in slow stages, stopping frequently to cool off under the shade of trees and enjoy the cool breezes and give rest to the dog. Thus we gradually worked back to our starting point and returned on the 5 o'clock train to Havana with a bag of seventeen quail and one meadow hen, which, carried strung out as before described, made a very handsome showing to admiring spectators. DR. ERASTUS WILSON.

The Thousand Islands Park.

THE New York State Fisheries, Game and Forest Commission will erect pavilions on the sites selected as public reservations on the St. Lawrence River, where angling parties and pleasure seekers may find shelter from storms. The sites chosen are Burnham Point, near Cape Vincent; Cedar Point, opposite Clayton; Picnic Point, near the foot of Grand Island; Canoe Point, at foot of Grand Island; Watterson's Point, on the Canadian side of Wellesley Island; Dewolf Point, near the middle of Lake of Isles; Mary's Island, opposite Alexandria Bay; King's Point, at the end of Goose Bay, and at the foot of Cedar Island.

The Cuvier Banquet.

THE annual game dinner of the Cuvier Club, of Cincinnati, brought together a goodly company of members and guests in the handsome banqueting hall of the club house on Nov. 22. President Alex. Starbuck and his committees had arranged everything so perfectly that the occasion was without suggestion of mar. State Game Warden L. H. Reutinger was the evening's guest of honor.

A Hunting Trip in Eastern Maine.

AFTER innumerable pipefuls had been consumed, railroad guides consulted, a goodly number of sma' wee hours used up, we had almost decided on spending our hunting trip in the vicinity of Kingfield, Me., when an unexpected invitation from our friend Will S., of Meddybemps, changed all our plans.

The morning of Oct. 14 found us—my friend Chas. Y and myself—bag and baggage awaiting the eastbound train to land us in Boston in time to catch the St. Johns boat, a twenty-nine hour trip.

At Eastport we changed to the Rose Standish with four more hours of travel up the St. Croix. We found our friend Will S. and team awaiting us at Calais; and a drive of two and one-half hours through a blinding snow storm landed us at the comfortable farmhouse of our friend.

After a good night's rest, we were up bright and early the following morning in quest of any game that might be rustling for its morning meal. A two-hour hunt brought to bag one lone rabbit. Returning to the house and dispatching a substantial breakfast, we shouldered our rifles and started in search of deer. A steady all-day tramp scored us one rabbit and one partridge.

In the week following we found rabbits and partridges in abundance and plenty of deer nooks, but owing to the dryness of the leaves we were unable to hunt them successfully. Saturday evening we held a council of war and came to the decision that if we returned with deer meat we must penetrate further back into the country. Packing the buckboard with fixings for a week's sojourn in the wilds was the work of but a few hours. We turned in in good season Sunday night to assure an early start the following morning, and the sun rising over the neighboring tamaracks found us well on our way to Fletcher Mountain, forty-three miles distant. Before starting, we made one addition to the company in the personage of Otis B., a capital story-teller, a good guide and cook, and who on an all-day tramp could give a fair handicap to an ordinary locomotive. After two days' drive we went into permanent camp on the site of the old Hemmenway farm, at the foot of Fletcher Mountain, within a half-mile of the spot where was enacted the slaying of two game wardens by Graves.

In the following four days of hunting we saw innumerable tracks of both deer and bear, sighted thirteen deer, obtained five shots and secured one doe and kept the table well supplied with partridges and rabbits. Had we been able to spend one more week, we could easily have bagged our full quota of deer each.

We were obliged to build our own camp, as some unscrupulous person or persons made it their particular business to burn all the old lumbering camps in this section of the country. On our return we met a party from Machias, who, on their way up, had killed one doe and a wildcat, the largest specimen either party had ever seen in all their hunting career. Its weight was estimated between 85 and 90 pounds; extreme length, 4½ feet. It had been met in a crouching posture in the road and dispatched with a well-directed shot in the head.

We secured a goodly number of partridges by the roadside while walking ahead of the team, but found them only at sundown and sunrise.

Arriving at Meddybemps, we had one day remaining of our vacation, and all hands put in a full day's hunting in the surrounding country. It fell to my lot to score the biggest miss of the party, which happened in this wise. Arising at 4, I went to a stand in the meadow, where I waited till sunrise, but did not sight any game. Then I started for the house, and I fairly stumbled upon a doe quietly feeding. I am still at a loss to know which was the more surprised.

I made a hasty snap-shot, and scored a clean miss, which, by the way, not infrequently happens when I am at the butt plate and pointing the gun at big game.

I stood in a meditative moode, watching the graceful bounds, and wished for a gun which would enable me to fill a ten-acre field chuck full of leaden missles at one pull of the trigger. Then I espied three other deer, which immediately bunched within 60 yards, including the doe fired at, making in the whole three does and one magnificent buck, all four of which could have easily been covered by a good-sized blanket.

I hastily pully myself together and tried hard to suppress an ice-water feeling which was slowly but surely creeping up my spinal column. Dropping on one knee, I pictured in my mind's eye my carving his lordship with my (tr-r-r-u-s-t-y) knife, and the shade of green which would steal over the boys' faces when their optics rested on those antlers.

Slowly I brought the ivory bead to bear just back of the foreshoulder (but forgot the back sight), caught my breath and pressed the crescent-like piece of steel on which so much hung in suspense. Two hundred and fifty-five grains of lead were immediately started at an angle which would surely have placed them in the right spot, providing that the deer had had 4 feet added on their pedal extremities.

As the smoke cleared I saw the meadow filled with white flags, and not a single thing damaged but the feelings of the shooter, whose chin had dropped and was now resting on the top button of his vest, in which position it remained the following twenty-four hours.

I reluctantly shouldered my rifle and returned to the house, and with a George Washington expression o'erspreading my face related the story to the boys. But it was there and then decided that the buck was our particular piece of venison, and the antlers of course were to fall to me. The plans made for his capture were based on the following facts: He would return at sundown (this was assured by a full vote), we would go down just before, secrete ourselves, and when he showed up all we had to do was to punch him full of holes, dress him, go up and get the team, drive down, tote him back to the house, and the deed would be finished. To further assure success, Otis procured a .45-90 Winchester from one of the neighbors, deeming it a more fit weapon for this size of game, and preceded us to the meadow, we following one-half hour afterward. When crossing the particular strip referred to above, we saw the buck, accompanied by one doe, quietly feeding at a distance of 150 yards. As the position of Otis warranted a better shot, and as he was armed with the deadly .45-90, we stood perfectly still, with the expectation of hearing the aforesaid weapon pour forth her death-dealing missiles. We looked at the deer, the deer returned the gaze, turned broadside, blew twice, waved their flags and disappeared in a neighboring thicket without one grain of powder being burned. We congregated and returned homeward with feelings better imagined than described.

We were up at 3 A. M. the day following, in time to catch the down boat from Calais. When within one-half mile of Baring and just as day was breaking, we saw a buck quietly eyeing us from a neighboring field. We immediately dismounted from the team, unpacked our rifle, and added one more clean miss to our score. At the report three does jumped from the grass and disappeared in the woods.

In ten days' hunting we saw twenty-three deer and one fox, large numbers of rabbits and partridges, and returned with a satisfied feeling of a vacation well spent, a voracious appetite and enough reminiscences to last us 365 more days. SHARPS.

Sixteen Days in Wisconsin.

Editor Forest and Stream:

As my partner and I had a good time in the Wisconsin woods, we thought some brother sportsmen would like to hear of our trip and will relate it.

After many days of planning and a good bit of map-looking, we decided upon Wisconsin and made our objective point Phillips, in Price county. Arrived there we made inquiries of several parties, among whom we were fortunate in forming the acquaintance of a Mr. Fish and a Mr. Sperry, gentlemen in every sense of the word and not afraid to help a brother if found worthy. Securing a team, we started on what proved to be an awful ride of twenty miles over the worst roads I ever saw. I have seen some bad roads in my time, but this took the prize. We had a light platform spring wagon and a tolerably good team of horses and got through some bad places that looked to a city man impossible. However, we progressed until finally the road we were supposed to be following lost itself and we had to back-track a piece, where we found an admirable camping place. The tent was up in short order, with the sheet-iron stove, and we made things snug for the night. The next day we got up wood and fixed up camp in fine shape.

The following day we took a stroll through the timber south of camp and saw one deer, which I took sight at but did not shoot, as we were out for fun and not to kill all the deer we saw. For several days we rambled around to get acquainted with the country and saw deer every day. Red squirrels, hares and grouse were abundant; also porcupines. On Nov. 3 I told Dick that the dishes (tin pans) had to be washed and that I would stay at camp and clean up. At about 9 o'clock I heard several shots fired to the east of us, and as we were camped on a runway I took my rifle and steppod out of the tent. I had gone not more than 50 feet when I saw a streak of gray coming up through the trees. I picked out the most open space in the small trees, and when the deer showed through the sights let go, and over the deer went. It was on its feet in an instant, when I shot it through the head. Then I dressed it out and dragged it to the tent and hung it up between two big hemlocks. About 4 o'clock Dick came in hungry and tired. Putting his hand in his pocket he took out some bone and said:

"What are these?"

"Bone of a deer's foreleg, and high up," said I.

"Yes. Had four shots at a deer and broke a front leg, and lost it in the swamp. I will get one yet."

The following Wednesday we started early for a big runway south of camp, agreeing that if either one of us got a shot and made a kill we would signal to the other one. In about an hour Dick shot four times in rapid succession. After waiting for several minutes and hearing no signal, I thought Dick had missed, so I walked over to him. Just as I got to him he was shaking like a man with the ague. He said:

"Don't go near her! There she is!"

And there on the ground lay a nice four-pronged buck, and Dick's rifle shaking in his hand and his teeth rattling like an end-man's rattle bones. I offered Dick my knife to cut the deer's throat, and he said: "You do it; I cannot." So I dressed his deer and smeared him with blood, telling him this was a part of the regular initiation in deer killing. Dick wanted me to take the rifles and he would carry the deer; but he was soon convinced that he could not carry a big deer on his back. We dragged it to camp.

The people we met in the deer country were obliging and seemed to try to make our stay pleasant. The country where we hunted is where the great fire a few years ago wiped out so much timber land and destroyed the town of Phillips. My rifle is a Marlin .40-60-260, '81 model—a heavy gun, but a killer. My deer was killed after the bullet had gone diagonally 3 inches through a maple limb; then went through the deer and went 8 inches into the sand.

After staying in the woods and waiting for snow which did not come, we pulled out for home. A four-horse team going out for supplies came over and took our stuff to the railroad. We had a most enjoyable time and hope to try again some day. HUGHES.

TOLEDO, Ohio.

North Carolina Quail.

KITTRELL, N. C., Nov. 21.—Mr. Wm. McIlvaine, of Philadelphia, who has been making quite a stay with us, has been finding a good many quail, averaging eight coveys per day, out of which he brings in his share of the birds. Another of our guests, Mr. R. P. McNeely, also of Philadelphia, is averaging ten coveys of quail per day. He is a new hand at quail, having shot larger game. One of the crack shots of Kittrell is Mr. Olmstead Capehart, who, on Nov. 14, found eleven coveys. On Nov. 15 he started fifteen coveys. On Nov. 17 he, with a friend, started twelve coveys. Don't think they are easy to kill; those who have been in the habit of hunting them know what a game little bird they are, and this is the kind of sport the true lover of the gun is looking for.

BUNGE.

John Dunn and the Wolf.

In these end-of-the-century days when the nation's pulse is afire with military fever, and military lions wander around seeking whom they may kiss, it may not be out of place to recall some unrecorded instances of real heroism in one of the most romantic and desperate struggles in which Americans ever engaged. The history of that struggle was written in blood. It has never been written in ink. But it is one full of strange stories, which, if not history, are yet worthy of perpetuation as romance, more romantic than the deeds and days of chivalry. It was the fate of the Kentucky pioneers to enact their parts in thé silence of the wilderness, and their lives are enshrouded in the shadows of the far-off forests upon which the night of forgetfulness has descended. But they were patriots and heroes, and their names should not be suffered to perish. They were men of Spartan mould, who "feared the Lord, but kept their powder dry," who were equally ready to throttle a wolf or scalp an Indian.

Two miles from Shepherdsville the county road leading to Huber's Station passes through a gap in the knobs, and the beautiful Blue Lick Valley is spread out before you, bounded by the heavy pine-clad hills, which rise up all around in rugged, irregular, brawny masses. To the right of the road, at the base of the knobs, overlooking the valley, stands a quaint old brick house. A single glance will suffice to show that it was built in a day when a man's house had to be his castle. There is no man living to-day who knows when John Dunn built this home in the wilderness. But in the stone-walled burying ground beside it the headstone over his children's graves, who were buried there over a hundred years ago, shows that this house is among the oldest in the State. What tales those massive old walls could tell if they could repeat the sounds to which they echoed when the Wyandotte chief, who is buried where he fell on the hillside, came into the valley; when Cahill was bound and burned at the stake on top of the knob which stands isolated, sentinel-like, overlooking the valley and still bears his name; when the fires of a hundred furnaces flared up through the forest and a thousand men were at work at "the Licks"; when Louisville could boast but half a dozen cabins, and the buffalo slept about the base of Capitol Hill.

In that early day of settlement this region was the seat of two most important manufactures to the pioneers, salt and iron. Here the first settlers in the blue-grass region came for hundreds of miles, braving untold dangers, to carry back with them a little bag of salt, which was certainly more precious than gold when it is considered at what risk it was obtained. But it has been many a day since either salt or iron has been manufactured in Bullet county, and now "the Licks" are as wild and lonely as when the savage first contested the supremacy of the solitude—and right bitterly did the Indians debate the question of proprietorship with the pioneers. It was their favorite hunting ground. Not only could they get salt here, which was as prime a necessity with them as with our ancestors, but vast herds of bison, elk and deer were to be found at the Licks drawn by the same necessity for an essential element of life. Over the ridge, a mile or more above the old Dunn house, can still be seen the old buffalo trace, resembling a sunken road, worn by the wild kine in their journeyings to and fro through countless centuries, before the white man came.

Many were the ambuscades, surprisals and reprisals, deadly onslaughts and daring deeds of high adventure before the pioneers were able to convince the red men that this region belonged to them by virtue of

> "The good old rule, the simple plan,
> That they may take who have the power,
> And they may keep who can."

It is true that Dan'l Boone and Isaac Shelby had bought all this country from the Cherokees at Watauga for a trifle of beads and colored glass, but by a proclamation dated Oct. 7, 1763, George III. had "strictly enjoined that no private persons do presume to purchase from the Indians, any lands," reserving that right solely for his own greedy royal highness. Besides which there were a dozen other Indian tribes who disputed the Cherokees' right to this great game reserve as bitterly as they did the white men's pretensions—the Chickasaws, Choctaws, Creeks, Shawnees, Delawares, Wyandottes and others.

The home of no tribe, the hunting ground of all, subject to the periodical incursions of these roving gentry, harried by friend and foe, it was like the Scottish borders of yore. Every salt lick, canebrake, mountain and valley was the subject of hard battles and long talks, for our forefathers, it is said, were medicine men as well as warriors and vindicated their claims by arts as well as arms. The topographical nomenclature is suggestive of those troublous times. Floyd's Fork to-day designates a beautiful bass stream, but there was a time when the pioneers distinguished it from the others with a sigh and a shudder, recalling gruesome recollections, as "the Fork where Col. Floyd and his men were ambushed." And so with many other places in this vicinity that came to have "a local habitation and a name" through some deed of blood.

As may be imagined, it required a man of no little courage, hardihood and ability to succeed under such circumstances in not only conquering the stubborn wilderness, with all its privations and dangers, but in the face of such savage opposition. Nowhere in all the dark and bloody ground did the Indians make such a fierce and relentless fight as for the possession of the salt licks. That John Dunn not only kept his scalp, dying peacefully in his bed at an advanced age, but made this palatial home in the wilderness, is evidence sufficient that he possessed in no common degree those qualities of the hardy backwoodsmen which Byron immortalized in Daniel Boone. He was one of the original pioneers accompanying Boone upon his second trip into Kentucky, although it was several years later before he settled on Blue Lick. Here, after several years' wandering through the trackless wilderness, he found an ideal home in the beautiful little valley. Its broad bottoms yielded well, the creek flowing by his door was alive with fish and the woods filled with game, while the salt licks just beyond the rangs of knobs afforded a fine field for commercial enterprise. It was one commodity which the pioneers must have. It is said he had nearly a hundred slaves employed in the salt works before he died.

He is described as a man of powerful physique, over 6 feet in his moccasins, and of great strength and courage, as well as great violence in the exercise of it when once aroused. His pertinacity and fearlessness were strikingly exhibited in the pursuit of a band of Indians who upon one of their incursions had killed Fossett and several other settlers, besides stealing a number of horses. The pursuing party followed them as far as the Ohio River, where the majority turned back; but Dunn, and a few others equally determined and smarting for revenge, followed on, and overtaking the Indians fell upon them, but were outnumbered and forced to flee. In the engagement, however, John Dunn had retaken one of the stolen horses, and being too hard pressed to regain the canoes by which they had crossed he swam the river in the middle of winter, and then rode the captured horse all the way to Lexington to restore it to its owner, who lived there. The latter, however, refused to accept it, properly enough, and Dunn kept the animal until it died, refusing to part with it at any price, although he was a great trader.

I suppose no one living to-day can recall the winter of 1804 in the wilds of Kentucky. But it was a bitter one, according to the tradition which I have heard, and which illustrates the character of the man, as incidents always do, much better than mere description. There was no danger apprehended from the Indians. But the elements had conspired to do their worst toward making the pioneers' lot harder than ever. The severe and protracted cold threatened all live stock with extinction. Game disappeared, and the wolves gathered together in packs and became ferocious. The loss of a cow or a horse was a severe one for the pioneer in those days. It could not be very readily replaced. He couldn't get another on six months' time from his next neighbor. His next neighbor might be a hundred miles away, and short on live stock, but long on troubles himself. It became dangerous to venture out at night. One man rushed out to the rescue of a heifer attacked by the wolves and narrowly escaped with his life, but was crippled ever after. From sunset to sunrise the wolves howled and hunted in packs over the crusted snow. But suddenly the big pack that had made night hideous in the Blue Lick valley disappeared. At first the settlers were nonplussed. Soon it was accounted for by the appearance of an enormous gray timber wolf which hunted alone, and before which the other wolves faded away. Startling tales came from Bullit's Lock of the animal's colossal size. He was said to be almost white. He had killed and dragged a horse away single-handed; he was seen by day fearlessly invading the barnyards, and at night came snuffing under the doors. He had run down and killed a big deer hound belonging to one of the settlers. They had banded themselves to hunt him down, but their hounds refused to take the animal's trail, turning tail the moment they were laid on it, and they had tracked him in the snow in vain. Traps were set for him with all the skill with which the pioneers knew so well how to deceive the wariest of wild animals. But with incomprehensible astuteness he seemed to divine their best laid plans and betook himself off. There were no end of uncanny tales about the beast. Many believed him to be the devil in disguise.

The great wolf signalized his advent in Blue Lick by killing John Dunn's finest heifer. There could be no doubt about it being the beast of whom every one stood in such terror. No other could have exhibited such strength, tearing its way into the pen as if the stout poles of which it was constructed were but dead, rotten sticks. Inflamed with anger, Dunn started out at dawn with all his men and what neighbors he could summon, his heart swollen with fury. From daylight until dark they trailed the wolf and beat the thickets in vain. Arriving back home after nightfall, he found the wolf had been before him and made off with one of his fattening hogs.

His friends who had assisted in the hunt were seized with uncanny fear of this mysterious beast, and vowed they would hunt him no more. They were satisfied if they escaped harm themselves. They gathered close around the fire and told the fantastic tales they had heard about the strange wolf. In the pauses they listened if he would perchance howl outside the door. But the mournful silence of the frozen night was upon the woods. No wild thing moved there unless it was the great wolf, and, unlike the others, he was never heard to herald his coming with those horrible wolfish cries. Perhaps the cowardly wretches only did it to keep up their own courage as a timorous boy whistles in the dark when he is afraid. They told how the people over on Bullit's Lick said that when the great wolf snuffed under the doors the candles flared and flickered and went out in his fierce breath. John Dunn said nothing, but nursed his wrath, and watched the candles. But they burned steadily. The wolf came no more that night.

The next day John Dunn, with all his men, worked hard enlarging his barn, making a great log pen-fold in which to house all his live stock, and which he fondly hoped would resist the attack of the savage destroyer. The superstitious fear of his companions could not help impressing him, and their talk about the beast annoyed him. The sun was setting before they completed their task.

"I've hunted and trapped all kinds of varmints, and I know a wolf from a wolf," said one sententiously.

"Yes," said another. "Look how red the sun is setting. 'He' will do some harm to-night, mind what I tell you."

They no longer called the animal a wolf; it was "he."

Leaving them to place the last logs in place, John Dunn set off to drive up the stock. Their foolish talk irked him. As he strode across the crusted snow the shadows thickened. The acute cold made the trees crack. From across the field came crisply through the keen air the crash of brittle stalks, snapped by the cattle feeding at the fodder stack. The ever thickening ice upon the creek at intervals rumbled hollowly, as if the stream rested uneasily in its bed under its icy mantle, and was troubled with dreams. No other sounds disturbed the frozen silence of the solitudes. He wondered where the great wolf was, and stopped to listen if in that intense silence he might not hear the animal howl somewhere on the far mountain side. But there was something frightening and strange about the deserted woods. It seemed as if all the wild animals that usually tenanted them had fled away, not from the cold, but before the advent of that great grizzly apparition. His friends' talk did not seem so silly now.

He had just started on his way again, his mind troubled, when out from the woods before him a great shape passed, gray as the gray shadows. It was the beast. He stopped where he stood, and a shock of sudden terror shook him.

But it was only for a moment. The dread prowler, with eyes only for its quarry, glided swiftly over the intervening space, with a sound as faint as the soft rustling of dead leaves upon the snow, and with a great spring launched its lank form through the air. The affrighted cattle ran together in a bunch, but the fattest one of them all lay struggling supinely stretched upon the snow, ham-strung and with the great wolf at its throat.

Passing abruptly from fear to anger John Dunn shook with inordinate rage. It was pure bravado by the monster, an insult direct, a defiance. Clenching his hands until the nails sank into the palms, he darted forward swiftly, and was upon the wolf before it saw him. With bristling hair, the beast sprang up from its slaughtered victim, its back arched, its eyes gleaming like lambent points of flame. The fodder stack was behind it, and it could not escape. John Dunn could have yelled for joy. He raised his hand—it held nothing but the whip with which he had started out to drive the cattle. Hurling it from him he threw himself barehanded upon the monster. It snapped at him as he did so, but eluding the vicious jaws, he seized it by the throat. Wildly the fierce animal struggled with the strength of twenty wolves, but he felt himself strong enough in his rage to strangle two such murderous marauders, one in either hand. He laughed, rejoicing madly, as he tightened that terrible grasp until the monster's eyes rolled blood-shotted in its head, and its breathings ceased altogether with its struggles. At last its body was lax. The gray wolf was dead!

There are no wolves in Kentucky now. And there are no pioneers. Many of their decadent descendants superciliously doubt that either such men or wolves ever existed; but the house is there, and in a quiet corner of the burying ground, beneath his grass-grown mound, the old Indian fighter who built it sleeps on undisturbed by the doubts of a scoffing generation, who owes its present ease and comfort to him and his companions, who made such changed conditions possible in the dark and bloody ground.

All of John Dunn's sons seemed possessed by the same restless instinct which had actuated their ancestor. They were born pioneers. With every inducement to remain in Kentucky, a home unsurpassed in comfort and elegance at the time, surrounded by slaves, broad and fertile fields theirs for the asking, that nomadic spirit which had impelled their progenitor to cross the Alleghanies and penetrate the wilds with Boone, was strong in them, and one after another they left the old home as soon as they arrived of age. Some of them penetrated into the unknown North, where their descendants still reside about Darlington, Wisconsin; others crossed the Mississippi, and were among the California pioneers before the great gold rush began. In his will, John Dunn provided that the home place, with 500 acres in the Blue Lick valley, should not be sold or divided with the rest of his estate, but retained intact for the benefit of any of his children who should desire to return there to live. But none of them ever came back. All his children are dead now, and his only lineal descendants living in Kentucky are Mr. B. B. Ball and John Thompson, who still live in Bullit, and who are sons of his two daughters, Ann and Sarah. Throughout the great West John Dunn's descendants are scattered like those of so many other Kentucky pioneers, and who, like their ancestors before them, have devoted their lives to conquering the wilderness, moving ever westward, and building up the great empire, whose prevailing spirit certainly is one of constant annexation, and which is now reaching out to grasp the Phillipines for a new generation of pioneers.

FRANCIS J. HAGAN.

A California Game Sale Test Case.

Several counties in the State have adopted ordinances prohibiting the shipment elsewhere for sale of any kind of game killed within their limits. The object of these prohibitory laws purports to be the preservation of game from extermination by the market-hunter. The passage of each of these ordinances was, however, stimulated by the sportsmen's clubs, which secured thereby a virtual monopoly of the right to shoot, game not intended for sale being free for shipment.

Stanislaus is one of the counties in the San Joaquin valley that adopted the ordinance, and the Hunters' Union of Merced county decided to test its constitutionality. One of its members, consequently, deliberately attempted to ship from Newman a pair of ducks shot within the county and intended for sale outside of it. His arrest and his trial and conviction and a nominal sentence by a justice of the peace followed, according to prearrangement. An appeal was taken to the Superior Court, and that tribunal has rendered a decision sustaining the constitutionality of the ordinance, on the ground that the killing of game is a police regulation not in conflict with the Constitution. The Court also holds that the powers of the Supervisors are derived direct from the Constitution and not through the agency of any statute.

Of course, the Hunters' Union will carry the case to the Supreme Court, for the very life of the occupation of the market-hunter depends upon the result. If the ordinance stands the test in the court of final resort, his occupation will have gone, for what with club preserves covering the natural haunts of game and an inability to ship out of the county for sale any game which he may kill outside of the preserves, he will have no chance to make ilving. We are getting dangerously close to the obnoxious game laws of the Old World.—San Francisco Chronicle, Nov. 18.

Massachusetts Game Interests.

A CONFERENCE of the Massachusetts Fish and Game Commission and representative sportsmen was held in Boston last week. The meeting was entirely successful, says the Boston Herald, in point of numbers and suggestions made. The gradual extinction of game was commented upon, and the market-hunters, so called, were scored severely, but were not entirely without defenders.

The fisheries played an unimportant part in the conference. A few allusions to the necessity of protecting mackerel and the prohibition of seining within certain limits constituted practically all the talk on fish.

The attention of the board was mainly directed by the speakers to the necessity of preserving game in the State, especially partridges. By some the depletion of the partridge ranks was ascribed to the success of those who hunt for "the market," by others to the inroads made by the sly fox and other partridge-loving animals.

B. C. Clark, ex-president of the Massachusetts Fish and Game Protective Association, dwelt briefly on the mackerel question, suggesting that the period of prohibition for the importation of mackerel, other than Spanish mackerel, should be made twenty years, instead of five, by Congressional enactment. If it should come to pass that his Association should take the matter to Washington it was almost essential that it should have the indorsement of the Fish and Game Commission. Mr. Clark then presented to the conference the draft of a bill for the better protection of game birds.

This bill, with its clause in reference to marketmen and provision dealers, formed the basis of debate and suggestion. It read as follows:

"Section 1.—Whoever sells or has in possession, with the intention of selling, for a period of ten years from the passage of this act, any ruffed grouse (commonly called partridge), quail, woodcock, rabbit or gray squirrel, taken or killed in this commonwealth, and whoever takes, kills or has in his possession, except for breeding purposes, for a period of five years from the passage of this act, any English or Mongolian pheasant, shall be fined $20 for each and every above named bird, rabbit or squirrel so taken, killed, held, kept or offered for sale. Provided, that any person may keep Belgian hares for breeding, and may sell them between the first day of December and the first day of March.

"Sec. 2.—All marketmen or provision dealers having in possession or purchasing any of the above-named birds or game, and all railroad corporations, express companies or any person acting as a common carrier, having any of the above named birds or game in possession, shall keep a record in a separate book of the name and address of the person from whom the said birds and game were received, and said book shall be, at all times, open to the inspection of the Commissioners on Inland Fisheries and Game, and their deputies, and to the State police.

"Any person violating any of the provisions of this section shall be punished by a fine of not less than $100 nor more than $200."

Mr. Clark was succeeded by M. E. Hawes, appearing for the East Weymouth Fish and Game Club. Mr. Hawes would fix the close season for black duck at March 1, instead of April 15, as at present. He saw the necessity of further legislation and the proper enforcement of the same, and that co-operation with the State Commission was necessary to that end.

At this point Fish Commissioner Brackett said: "The board is ready and willing to do anything for the preservation of game in this State. But the board needs co-operation, which should be given even at the sacrifice of personal feelings for the public good. The passing of the game is rapid. Perhaps some better laws are needed. The hands of the Commission should be strengthened. It is for the sportsmen to decide whether the game is to go or not.

"I see no objection in the passage of a law to prohibit the sale of game. That would relieve the situation of the present drain because the commercial character would then be removed. It was to discover along just what line this board should act that this first meeting has been called."

Secretary H. H. Kimball, of the Massachusetts Fish and Game Protective Association, indorsed the spirit manifested in the Commissioner's remarks.

Remarks were made by E. H. Palmer, of New Bedford; President A. B. F. Kinney, of the Worcester County Game Protective Association; N. W. Gardner, of Weymouth; H. A. Estabrook, of the Fitchburg Rifle and Gun Club; Dr. Spalding, of the Hingham Gun Club; William E. Weaver, of the Webster Rod and Gun Club; C. J. Russell and others. Among those present at the conference, which will now be an annual affair, were the following: John F. Cumming, Worcester; William E. Weaver, Webster; Otis Thayer and C. N. Hunt, Quincy; C. L. Russell, Colerain; A. B. F. Kinney, Worcester; G. H. Palmer, New Bedford; H. Ware Lincoln, Boston; B. C. Clark, Boston; H. A. Estabrook, Fitchburg; H. H. Kimball, Boston; I. O. Converse, Fitchburg; E. J. George, Haverhill; R. V. Joyce, Somerville; H. A. Mower, A. T. Canterbury, L. Crocker, G. H. Mackay, F. R. Skinner, Boston; M. E. Hawes and N. W. Gardner, East Weymouth; C. H. Moulton, Waltham; F. J. Manly, North Brookfield; John Goulding and J. H. Eaton, South Sudbury, and Henry Hanson, Fall River.

WORCESTER, Mass., Nov. 24.—*Editor Forest and Stream:* I send you clipping from this morning's Worcester Telegram. This is in line of what you advocate, and there is no middle grounds to be taken. We have been tinkering the game laws in this State for the last twenty years, and the birds have been growing less and less each year, till there is hardly one to be found. The market-hunter has done it. I know we shall have your support.

A. B. F. KINNEY.

Commissioner Elisha D. Buffington, Deputy Warden Henry A. Mower and President A. B. F. Kinney, of Worcester County Game Protective Association, attended a conference called by the Commissioners of Inland Fisheries and Game at the State House, Boston, yesterday morning. There were present delegates from sportsmen's clubs in nearly all sections of the State, and the meeting was for the purpose of ascertaining the sentiment of sportsmen generally on the proper course to secure better protection for game and game birds.

After a prolonged informal discussion, it was unanimously voted to introduce a bill in the next session of the Legislature recommending that the sale of game be prohibited in the State of Massachusetts for ten years. It was also decided to recommend to the lawmakers of the commonwealth that the open season on game and game birds be limited to October and November. The latter bill, if passed, would shorten the season practically six weeks.

A. B. F. Kinney was one of the principal speakers, and his remarks were to the point and carried great weight. Mr. Kinney is one of the increasing number of sportsmen who believe that unless strenuous measures are soon adopted looking to the preservation of game birds it will not be many years before there will be no game birds to protect and legislation will be too late.

Mr. Kinney especially advocated the absolute prohibition of the sale of game, on the ground that such a measure would strike at the root of existing evils. Massachusetts, he said, is the dumping ground of illegally killed birds from all parts of the country. In many States during a season when birds are not allowed to be sold or exported, the market of this State is open for violators of the law, and large quantities of illegally killed and illegally shipped birds are unloaded in the Boston market which cannot be marketed elsewhere in New England.

In Connecticut there is a law against exporting game birds. In Maine they cannot be legally offered for sale, and in New Hampshire the laws have been so rigidly enforced against the illegal shipment of birds that the supply for the Boston market from that State has been shut off to such an extent as to materially raise prices in the Boston markets.

Mr. Kinney advocated the prohibition of the sale of game altogether, and a shortening of the season for shooting. He emphasized the necessity of doing something by way of bettering game conditions, or sportsmen would shortly find it too late to do anything, for there would be no game to protect. His words were received with approval, carrying as they did the added authority of Mr. Kinney's position as president of Worcester County Game Protective Association, and vice-president of the Massachusetts Fish and Game Protective Association.

On his return from the meeting last night, Commissioner E. D. Buffington said the conference was significant in that it was the first attempt ever made in the State to learn the sentiment of sportsmen generally, and to attempt to unify sportsmen to work together for a common end. For this reason the meeting was unique.

Heretofore almost annually little quotas of sportsmen in various parts of the State have sharpened axes and set out to hew down obstacles to obtain the passage of one or another insignificant measure. Some have labored for a law making Sunday close season, others to have the first two weeks of September added to close season, while a third set has been at work to have shooting prohibited in December, or perhaps to have the law on black duck or that on quail changed.

These efforts have been well directed and are believed to be along the right line, but sportsmen have been divided, while the dealers in cold storage birds and the marketmen have presented an unbroken front in opposition to any and all measures which were directed toward their tills and profits.

The conference yesterday is only the first of its kind, and others are to be held in the hope of massing sportsmen for furtherance of the passage of adequate protective measures. Among Worcester sportsmen the significance of the meeting is appreciated, and it is believed it is of prime importance as showing the disposition of the new chairman of the Commission of Inland Fisheries and Game. Capt. Collins made a favorable impression on the Worcester men.

Henry A. Mower, who for many years has been at the State House at hearings and meetings to consider game measures, says Capt. Collins impressed him as a gentleman and a business man thoroughly interested in game protection. In a brief opening speech he set forth the object of the meeting, and appealed to the sportsmen to throw aside prejudice and work together for a common end.

To the strong appeal of Capt. Collins, Mr. Mower attributes the willingness of representatives of the western part of the State to forego a part of their woodcock shooting and of sportsmen from the Cape to give over their superb December quail shooting, in favor of an open season, which shall include only the two months of October and November, if such a law can be obtained.

The impression of the Worcester men who attended the meeting is that at last something is to be done on the subject on which sportsmen have been talking much and doing little for a dozen years.

Moose on the Tobique.

WE recorded last week the return to New York of Mr. Maximilian Foster with a 65-inch moose head from the Tobique River country, in New Brunswick. Mr. Foster's companions were Messrs. P. Chauncey Anderson, of New York, and Robt. Boyd, of Montclair, N. J. Their guides were George Green and Henry Lewis, of St. Elmo, N. B., of whose abilities and character Mr. Foster speaks in terms of high commendation. While very many moose were seen, and Mr. Anderson secured a head, no rival was discovered to match the mammoth brought down by Mr. Foster.

On the Gulf Coast.

MARCO, Fla., Nov. 20.—Arrived here 12 M. to-day. All well. Have got a bear story growing. Leave here to-day, bound for Panther Key, to see Old John.

TARPON.

An Old Hunter writes to the Rochester Democrat and Chronicle: I noticed in Sunday's issue that Frank Biegle, of Charlotte, has just returned from the North Woods with an 800-pound deer. Mr. Biegle is certainly a very fortunate man, for no doubt when he comes to dissect this wonderful animal he will find several smaller deer swallowed by the larger one. The railroads missed a golden opportunity by not running excursions Sunday to see this great curiosity.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Maine Big Game.

BOSTON, Nov. 24.—Mr. G. B. Lehy, of Boston, with his hunting companion, Mr. R. B. Andrews, of Leominster, are just out of the woods from a Maine moose hunt. They went to the Katahdin Iron Works, and thence to G. H. Randall's camps, twenty miles into the woods, by tote team. In the summer this trip can be made in part by canoe, which somewhat relieves the labor of getting there. The camps are on the borders of a pond at the foot of Baker Mountain, where they did their moose hunting. There was plenty of snow for tracking and moose were soon located. Tracking them only a couple of days, they came upon two bulls and shot them both. Still Mr. Lehy thinks that the moose shot were not the ones they first tracked. He feels very sure that moose are increasing in that part of Maine. The game was killed four or five miles up the mountain from camp. With the great beasts shot their troubles had but just begun. The woods were pretty dense, with only a partly grown-up lumber road to follow, full of windfalls and blow-downs. A horse, used to such work, was got up to the game and a rude sled improvised. The men cut trees and bushed out the road, while the hunters sawed off logs with a crosscut saw to be moved out of the way of the sled. It took two days to get the moose to camp, and then they had to be toted twenty miles to the railroad. The hunters got their full quota of deer and consider themselves very lucky. Mr. Lehy's moose weighed 700 pounds—about as large as they grow, all stories to the contrary. The antlers spread 52 inches, with eight or nine points.

The Maine wardens and Commissioners seem determined to stop the sending of deer out of Maine into the Boston markets illegally. Prominent commission receivers have been met by the wardens from Maine this week and urged to give the names of the game shippers. This they claim they have no right to do, though willing that the illegal shipping of game shall be stopped. It is pretty certain that they have given the wardens some points, however, and the shippers of game by underground railway may look to find themselves in hot water almost any day. Still there is one sort of shipping of game out of Maine and directly into the Boston markets that it is not in the power of the Commissioners to stop, and that kind of shipping is being done more than ever this season. The whole system is explained in a shipment received at a prominent commission house yesterday. It consisted of four deer, a moose and a bear, a list of game that the two hunters who came with it had a right to ship where they pleased. The men who sold the game tell me that the deer came to about $60. The moose brought almost as much, while the hunters sold the bear, a small one, for $25. Here is nearly $150 the hunters received for the game they brought out of Maine. They were from somewhere in New York State. Almost all of the big game being received in Boston this fall comes via the American Express Company, which gets a big revenue for forwarding it directly into Boston markets.

Nov. 27.—Deer in New Hampshire are showing up better than a year ago, and local gunners seem to be getting the most of them. Reports mention about thirty deer taken within a week or two, by local gunners, in the northern wooded regions of that State, or since the snow of a couple of weeks ago. Last Wednesday the snow was replenished by another light fall, and better hunting was the result. Twelve deer have been shot around Crampton during the past two weeks. Colebrook, Stratford and the Diamond region seem to be the best locations this year.

Maine gunners are now shooting more deer than outside sportsmen. Another fall of snow came on Wednesday and made much better tracking, the former snow having been literally "worn out with tracks" in the best deer sections. The week showed a record of about thirty deer to Boston hunters, recorded at Bangor, a smaller number than for several weeks previous. This decrease is accounted for on the theory that outside sportsmen have generally gone home. Bangor reports suggest that the number of deer killed is still running a good deal ahead of last year. The big game season closes in that State Dec. 15, three weeks earlier than in 1898, and still it is figured out that the total kill of deer will be ahead of last year. The Bangor record now promises to be from 300 to 400 more than last year, while other sections also report an increase. Still much will depend on the weather and other hunting conditions for the coming three weeks. The number of moose killed is running behind a year ago. This is accounted for in various ways by writers and talkers who are only anxious to make it appear that this noble game is not being extinguished. They claim that more moose are seen, but that they are yearlings and cows, which cannot legally be shot.

The record of bears killed in Maine this fall and brought out by the hunters, so far as reported, is fifteen, with the claim that they are of larger size than ever before. This scarcely tallies with the reports of Boston marketmen—and a great many of the bears killed in Maine find their way to this market; they say that the bears they have handled have generally been small.

New Brunswick gunners are returning every day or two, and they are bringing good accounts of deer, with occasionally a moose. Reports on partridges continue better from that section than a year ago. Mr. George Loud, with several hunting friends, is out from his camps on Lake Magaguadavic. They bring several deer, with accounts of bears, and all the partridges they cared for. Duck shooting was also good. H. G. Smith comes home from the Tobique region with a moose. Partridges and small game he also found in fair abundance. The only drawback to Boston sportsmen complained of is the shooting license.

L. T. Carleton, chairman of the Maine Fish and Game Commission, has recently returned from a hunting trip of a week in the Spider Lake region. Augusta reports say that Mr. Carleton got a big deer, which some of his friends jokingly call "Carleton's moose." It was generally understood that he had gone for a moose. He says that he never saw deer so plentiful as this fall, but moose are very scarce. The whole time that he spent in the woods he did not come upon the tracks of a bull moose. The reason for this, the Commissioner thinks, is that the big bulls have been killed off. There were a good many cows and young bulls in the woods, but no big fellows.

SPECIAL.

CHICAGO AND THE WEST.

Weird Times in the Rockies.

Nov. 24.—Mr. Frederick Jenkins and Mr. C. F. Hotchkiss, both prominent attorneys of Binghamton, N. Y., whom I mentioned as having gone west on a big-game trip some weeks ago, to-day arrived in Chicago on their way east. I gave these gentlemen the address of Mr. William Wells in Uinta county, Wyoming, and at first they thought they would go to Mr. Wells' Gros Ventre Lodge. When they arrived at Denver, however, they met a lawyer friend by name of Mr. Jones, who counseled them to take a trip which he thought would be made more quickly. Under the advice of Mr. Jones a correspondence was struck up by wire with Mr. W. H. Ryckman, still another lawyer, and a well-posted hunter, who lives at Evanston, Wyoming. On very brief notice arrangements were made for a meeting place, and the start was made from Kemmerer, sixty miles from Evanston. Mr. Ryckman attended to all details, and got together a pack train of nearly a score of horses. Mr. James Benedict, still another lawyer, of Denver, joined the party, as did Mr. Will Alexander, of Richards, Wyoming. To complete the legal aspect of the expedition, still another attorney, Mr. W. J. Hill, of Evanston, went along as far as a little station called Big Piney, where he announced that he had a law suit to try. The Eastern men began to think they had struck the West of the story books, when they found that the two wagons of the outfit were driven by two of the best lawyers of that part of the State, one of whom was to officiate as attorney for the prosecution and the other as attorney for the defense in this law suit which was to be part of the programme of the big-game hunt.

Mr. Jenkins was telling me something to-day about this law suit. It seems that Big Piney consists mostly of one log building, with a saloon down stairs and the hall of justice up stairs. The court was an individual 6 feet 4 inches long, with a face of ponderous wisdom, and a feeling of great importance. The prisoner at the bar, who entertained rather shady relations with certain citizens of that vicinity, was charged with breaking and entering a store and taking therefrom certain quantities of bacon, flour, beans and other articles conducive to the personal comfort of any good and true man who was facing a long Wyoming winter. The testimony was a little vague, though it was watched with interest by a crowd of some fifty or sixty hard looking citizens who had drifted in to see the show. It appeared that some of the witnesses had discovered certain bacon, beans, etc., in the cabin of the accused, which looked like the bacon, beans, etc., which they had seen at the store. It appeared further that the trail of the burglar had been marked by a string of white beans which had leaked out of a sack. Witnesses swore that one white bean had been found in a crack in the bottom of the prisoner's wagon bed. It also appeared that other witnesses had seen the accused with a sack with a hole in it. These things having come in to proof, Mr. Hill made an eloquent plea for the State, and the justice looked very thoughtful. He remarked without going further into the case, that it seemed to him the evidence was sufficient for the holding of the prisoner. This gave Mr. Ryckman his turn, and springing to his feet he exclaimed:

"What, your Honor—does the court intend to hold this prisoner on the evidence of one white bean, in a country where every citizen lives on white beans?" This staggered the justice, and he dmanded time for thought. Meantime Mr. Jenkins, who wanted the party to be getting down to their hunting grounds, tried what he could do with the court, who had heard of him as a distinguished lawyer from the East. "Your Honor," said Mr. Jenkins to him aside, "it seems to me you ought to have more than one bean in order to convict this prisoner. Moreover, if you will examine this sack you will find that it is darned all over, and that the hole is in the bottom and not in the top of the sack, as was sworn to. It seems to me you ought to discharge this man."

"That's so," said the justice. "But don't it beat h——l how careful a feller has to be in this here business!" Order was then again called in the court, and the judge announced that he did not think the evidence sufficient to hold the prisoner. This brought Mr. Hill up with a violent protest. "But the court has already said the prisoner was to be bound over," he said.

"I reckon a feller can change his mind," said the court.

"Yes," shouted Mr. Hill: "and this is after listening to the specious argument of counsel for the defense, that Evanston imbecile, with a beaver slide running from his dome of thought to the bridge of his nose!" (This was referring to Mr. Ryckman's bald head.) Mr. Ryckman, who was nearly doubled up with laughter, hurried over to the prisoner and whispered to him: "Git out now, Jim. Pull your freight or the judge will change his mind again!" Jim pulled his freight, and so also did the hunting expedition.

Our Eastern shooters thought that they were getting into a pretty weird country. Nearly every man at Big Piney wore a big hat and a big gun, and there was a general air of belligerency. The cook of the party declared openly that he was himself just out of prison.

"Say," said the cook, "I'll bet I've slept in more jails than anybody you ever saw. It seems like, somehow, I git arrested every time I git into a town where there is a policeman or a marshal. I expect I'll be in jail again as soon as I git in off'm this hunt. Was either of you fellers ever in jail?" Mr. Jenkins and Mr. Hotchkiss took no chances about getting into the jail themselves and complied with the letter of the game law as soon as they possibly could, for the local sentiment was anything but friendly to the outsiders.

The party now proceeded down to their hunting grounds, which were in the Gros Ventre Range, on the North and South Cottonwood and North and South Horse creeks. They established a central camp and hunted on horseback, having sometimes to ride twelve or fifteen miles to the game country proper. They met very deep snow and suffered some discomfort from frozen noses, fingers, etc., but they made a very successful hunt. Mr. Hotchkiss killed a fine bighorn ram, whose horns measured 15 inches at the base, and which stood 40 inches at the shoulder. Mr. Jenkins killed a sheep, an elk and a lynx, also a couple of antelope. Mr. Hotchkiss killed a bob cat and a couple of antelope, and others of the party killed two more antelope, so that on the whole they had a very fair showing of game under the circumstances.

These gentlemen say that the slaughter of game in the Gros Ventre and other nearby country is something terrible. Last winter two hunters by name of Butts and Sykes killed fifty-four elk in one day on the Green River. On one day in last January, Jack Howard and party killed fifty elk in one bunch. They did their shooting toward night, and did not skin out the game. On the next morning they thought it would be easier to kill some fresh elk, which would not be frozen and which would be easier to skin, and they accordingly did so without touching a knife to the enormous quantity of game which they had killed the day before. A great many elk are killed for the teeth, and are not even skinned. The elk do not come down out of the mountains until the snow gets very deep, and were this fall turned back by the numerous party of hunters who were waiting for them along their regular trails. This turning back of the elk made the hunt less successful, for the party above referred to, but they were very well pleased with their luck. As showing the expensiveness of Rocky Mountain big-game hunting in these days, I might state that Messrs. Jenkins and Hotchkiss think that their trip from Binghamton and back will cost them about $1,500, and they are very well pleased at that. They report several parties from Mr. Wells' camp hunting in the Gros Ventre country. They say that they saw a great many tracks of mountain lions, and think that with dogs it would not be hard to get a lion. They are delighted with their experience in the West, which seems to them to be a singular and somewhat bizarre region, more especially as regards the practice of the law. Two pleasanter gentlemen nor any better deserving of a good time could not be found.

From Alberta.

All the way from Calgary, Alberta, comes a pleasant letter from Jim Tomlinson, who may be a good way off, but yet seems very close. He says: "I have read the Forest and Stream for a considerable time, and have thoroughly enjoyed it. Although a good way off, I find great enjoyment in following the many contributors, and look forward every week for the paper, which is passed around among a large number of brother sportsmen. I can report good chicken hunting this fall, the birds very plentiful and very strong, No. 4 shot seldom killing outright. Large quantities of geese, and ducks in thousands, though they have all gone south now. Blacktail deer are coming down in big numbers, and there are lots of antelope, too. Good-by for the present." I hope Mr. Tomlinson's good-by is indeed only for the present, for sportsmen like to read of the far Northwest, which is yearly coming closer in a sporting sense. The British possessions north of us and the Mexican semi-tropic regions are bound to be the next regions invaded by the American sportsmen, and the attractions of the great and little known Northwest country already appeal very strongly to the better posted of our big-game hunters.

He Never Works.

This morning as I was going down the street I heard a cheerful hail and turned to meet the bright, glad smile of my old friend Mr. George W. La Rue, whom I had not seen for several years. Mr. La Rue has always been one of the puzzles of my acquaintances, for he always has time to go shooting, and he never works. In fact, he once told me that he quit working when he was twenty-one years of age, and never intended to do so any more, as he thought it was a bad habit. I don't know where Mr. La Rue lives, but think it is mostly where the shooting is good. Once in a while I hear of him with a street railway franchise in Mexico, or a rubber concession in South America. But these things he does as pastimes, just as he does his shooting. Mr. La Rue told me that he was just back from a partridge shoot over in Michigan, and he wanted me to go back with him this evening, which I told him I could not do. Then he exacted a promise that I would go quail shooting with him in a week or so down in lower Illinois, where the quail are destroying the crops and threatening public safety. (I have been invited to-day to go on two quail shoots, one partridge shoot and one prize fight, and I regret that Saturday is my busy day.) While shooting last week in lower Illinois, Mr. La Rue killed seventy-two quail in two days, and on two other days he shot all day without making a miss. I think Mr. La Rue is one of the best quail shots I ever saw. When I asked him if he had any good dogs along, he said that he had a few scrubs which could barely stand up, but he thought he might worry along until the end of the season. It is a pretty safe proposition that he will have some good bird dogs pretty close around when he goes out shooting. I recall that some years ago Mr. La Rue, Mr. R. B. Organ, of this city, and myself, shot over the pointer Dame Bang, and had a very pleasant time. This was the occasion of the death of Mr. Organ's borrowed dog, poor Molly O'Brien. Roll Organ thought it was a good joke to borrow a man's dog and then take nothing back but the collar.

Some Big Bags.

I have been saying all along that this was a phenomenal year for quail in Indiana and Illinois, and results seem to indicate this. I have heard of several parties who have been out, and nearly all report splendid success. Messrs. J. L. Jones, A. W. Adams and W. McCaughey, all well-known shooters of Chicago, had a very pleasant hunt at Logansport, Ind., from which they returned some days ago. They drove out into the country about thirteen miles, and in two days they bagged a little over sixty quail.

Awhile ago I reported the fact that Mr. W. L. Cunyngham, a prominent trap shot of this city, had gone to South America on a mining expedition. Mr. Cunyngham was unable to get into the country he wished to reach on account of the Venezuelan revolution, and he returned to Chicago recently. He and Mr. Charles Antoine, of this city, have been out quail shooting near Rochester, Ind., this week. They got back this morning, and while neither has yet been interviewed, I learn that they had a very big bunch of quail which they were leaving among their friends.

All of Indiana in a belt about eighty or one hundred miles south of here is alive with quail this fall. The best country is that between Newton and Disco. Servia, Ind., where Fred Donald took a party of us in his private car some years ago, is once more blessed with a tremendous crop of birds. Mr. C. C. Hess, of this city, well known as a member of Eureka Gun Club, says that he will guarantee he can put up twenty-five to thirty bevies of quail any day in that section of Indiana. On opening day of the season he hunted three hours and put up eleven bevies, out of which he killed forty-one quail.

Mr. Hess has been having good luck with his shooting this fall. A week ago to-day at Lorenzo, on the Santa Fé road, and in the Kankakee country, he killed thirty-seven mallards, and says that had he had a pusher he could have killed more. There was a very heavy flight of mallards, which were feeding on the cornfields and coming into the few little sloughs in the evening. I should not be in the least surprised to hear that Swan Lake Club and Lake Senachwine were turning out big bags this week, for the mallards are hanging around this country still. I hear there are some up at Fox Lake, and where there is water there is sport along the Kankakee.

Probably the largest bag of quail made by any Chicago parties this fall was that brought back from near Ashley, Ill., last week by Dr. C. W. Carson, secretary of the Eureka Gun Club; Dr. R. B. Miller, of the same club, and Dr. J. N. Shallenberger. This medical coterie broke into the warmest quail shooting of which I have ever heard. They brought back to the city over 300 birds. Drs. Carson and Miller, between 8 o'clock and 2 o'clock one day, bagged 109 quail, and this they did out of eight coveys, the country being open and suitable for marking the flights. I have not heard of any such shooting as this anywhere. The man who kills fifty quail in a day's shooting is usually a mighty busy man, and I do not know that I have ever seen it done in my own personal experience. Yet Mr. Hess tells me he is satisfied he could easily kill that many birds a day in Indiana this fall.

The above statements will easily justify all that has been claimed in these columns as to the phenomenal abundance of quail in this section at this time. For points I would suggest Newton, Rochester, Effingham, Jerseyville, but these may be no better than any one of dozens of others.

Frank Bissel, of the Audubon Club, is now absent in Indiana on a quail shoot, and is no doubt having an enjoyable time.

Mr. W. P. Mussey, of this city, was down at Bloomington, Ill., recently and met a snow storm which spoiled his sport. On the first day he killed only three quail and three rabbits. For the unprofessional conduct in shooting rabbits, Mr. Mussey justifies himself by asserting that there were no quail, and that it was good rabbit weather. On the next day, however, he killed eighteen quail, with a close choke gun in which he was using shot spreaders. He did not seem to like the combination. As Mr. Mussey wants one more day with the quail, I have sent him over my old cellar-door gun, with which nobody was ever known to miss a quail except myself. I keep this gun mostly to lend and almost anybody can have it if some other fellow has not got it.

Mr. A. C. Smith, of the Chicago Fly-Casting Club, is back from Colorado, where he had the enjoyable experience of being arrested for breaking the game laws, or rather on the charge of having done so. Mr. Smith killed a deer and it was skinned and cut up by his guide. It was not a doe, but a kind citizen of the neighborhood suspected that it might have been a doe, and had Mr. Smith arrested as a little piece of blackmail. Naturally, Mr. Smith was very indignant, and the dismissal of the case on his proof that he had not broken any game law hardly made him feel entirely satisfied. It is getting so it is not safe to go out shooting any more.

Our distinguished fellow citizen, Bill Haskell, this week made a hunt down at Maksawba Club in Indiana, and he brought back eleven quail and two turkeys. He said that the turkeys were wild turkeys, and offered to prove it to anybody who doubted the assertion. It seems that there is a peculiar crook in the Indiana law as applied to the Kankakee country, which allows any one to kill any straggling turkeys and throw them in the public highway. Mr. Haskell complied with the law strictly. Finding the turkeys near the highway, he killed them, threw them into the highway for a few minutes to satisfy the law, and then brought them home to satisfy himself.

While I am speaking of big bags and interesting shoots, I ought to mention a little partridge story which my friend La Rue tells me. He says that Mr. H. C. Crosby and "old John Davidson," the famous dog authority, of Monroe, Mich., were out partridge shooting for two days this fall, and actually bagged eighty partridges in that short time. This beats any record on ruffed grouse of which I ever heard, and I should like to hear from Mr. Davidson whether the facts are reported correctly. Mr. Crosby I do not know personally.

North Carolina.

Mr. Charles Hallock writes me from Washington, D. C., regarding the sporting resources of North Carolina, with which State he is very well acquainted. He says: "I see you state that parties sometimes write you for information regarding good hunting tracts in North Carolina. Send them to me, and I can give them the finest tract in the land, that has every known species of fish, fowl and animal game found in the State, except brook trout, all in the same tract together, besides oysters, scallops, diamond back terrapin, shrimp, etc." While I have never pursued the scallop or the shrimp in any of my shooting trips, I am disposed to think that Mr. Hallock must have a pretty good country down where he is, and anybody looking for an all-round proposition would better write to him.

Movements of Western Sportsmen.

Nov. 22.—About once a year nowadays we hear from Billy Hofer, and I have a suspicion that he divides his time out in the Yellowstone Park country between reading novels and catching bears and others wild animals. It seems that he has gotten together another lot of animals for the National Zoological Gardens at Washington this year, though I regret to say that I was unable to see him as he passed through Chicago this time, and indeed would not have known he was here except for the following communication, which I received to-day:

"Somewhere on the Belt Railroad in Chicago, Nov. 22.

-I have been trying to get a wire to let you know I was ere, or going to be somewhere, sometime (they are acking up now). I think I am on my way to South hicago. Have been here in the yards all night and could et no information about street cars or telegraph wires, nd besides I could not leave the animals. Vick Smith iled to send the goats, so I have only elk, mule deer nd whitetail deer (we are backing some more now). he railroads have done everything they could to kill the nimals this morning, commencing at 3:30 A. M.—such umps that I would shoot ahead or back a foot or so hile lying on the floor. The poor animals had a hard me. If possible I will wire you from South Chicago if ere is any use in your attempting to come down. I want o go on East as soon as possible. (We are moving ead again by jerks.)"

Since receiving the above I have not again heard from illy and do not know whether he stopped this side of outh Chicago, went on East or gave it up and went to eep. The odds are that he will deliver the goods at ashington in good order. It is always like a breath om the mountains when Billy comes through with his range wild pets, and I am sorry that I failed to see him.

Mr. C. A. Zimmermann, of St. Paul, Minn., paid Chi- go a hurried visit this week and made a brief stop at e FOREST AND STREAM office. Mr. Zimmermann is well nown as the painter of the most popular ducking pictures er put on the American market. His home is on one of e most beautiful portions of beautiful Lake Minne- nka, which is well enough described as the "Enchanted land." Once a famous duck hunter, Mr. Zimmermann s of late years practically given up the sport and taken the sordid pursuit of commerce.

E. HOUGH.

180 CAXTON BUILDING, Chicago, Ill.

Guns and Powders.

THE evolution of firearms has shown many startling isodes. From the time gunpowder and projectiles were vented there have been accidents; but careful investiga- on has revealed the fact that except in rare instances cidents happen because of carelessness. Many illustra- ons of the results from the careless handling of fire- ms are constantly being made public, and frequently of e the punishment of careless and reckless shooting has en urged.

But a new menace has come before us in the person who ignorant of the proper use of firearms and ammuni- on, and in view of the late developments in ammuni- on he is a dangerous person in a community.

Intelligent sportsmen are aware that firearms of to- y are vastly superior to those made twenty years o; they know they are stronger, lighter, and more mmetrical. They know, too, that there have been many anges in ammunition. There was the period of black wders, but those powders had their faults. Nitro or nokeless powders were demanded and created. They ere acknowledged an improvement, and guns were made r those powders. When nitro powders were first in- oduced guns were burst when using those powders, but the peculiarities of nitro powders became better known, cidents became fewer. Not many years ago guns were t warranted for nitro powders; to-day nearly all guns e made for such powders, and guaranteed when properly ed.

But there are many grades of nitro powders; most ortsmen know there are nitro powders which are called lk for bulk nitro powders, which means a charge of ch powder corresponds in bulk with a charge of black wder. Other nitro powders of later creation are known dense nitro powders, which means a charge of such wder equaling in strength or power of a charge of lack powder is less in bulk. Dense nitro powders meas- ed the same as black powders or bulk for bulk nitro wders means a very much more powerful charge of nse powder.

The tendency at the present time is economy of bulk in nmunition. Modern rifle and revolver ammunition illus- ate this. They are more compact, but equal or superior power to ammunition using black powders. Economy bulk is phophesied for future shotgun ammunition. uch ammunition is growing in popularity. This means nse nitro powders. The latest creations of powders for otguns have been of the dense kind.

American guns are made to shoot the various types of nmunition when properly loaded. Nitro powders of the o types are safe when loaded by our factories. Guns e now made so the owner can with safety use black wders, bulk for bulk nitro powders, or dense nitro wders in the same gun, if properly loaded.

It might seem from the foregoing that with firearms rfected so as to shoot with safety any ammunition when operly loaded, the condition of affairs was faultless.

But this appears not to be the case. The gun maker ust make his products for all powders or retire from siness; the powder maker must keep abreast of the mes by adopting improvements or be distanced by his mpetitors; the cartridge maker must produce cases for e latest powders or see his industry crippled. To re- eat, we have at the present time one style of gun shoot- g many styles of ammunition.

Manufacturers of guns, powders and ammunition make xhaustive tests to prove the safety of their products efore they are placed on the market. Later, accidents re reported. Investigations have repeatedly disclosed ese facts; that nitro powder was used in an obsolete rm; a quick shotgun powder was used in a rifle or re- olver; a dense nitro powder was used in the same bulk s a black powder, or low power nitro powder charge. roducers give conspicuous directions how to use their roducts, but the reckless and the ignorant person heeds em not. All powders and shells are one and the same ind to them, to be used in any way; consequently, acci- ents happen. Then the one thought and purpose of the ictim is to sue and recover damages.

This article is prompted by a suit for damages recently rought against a prominent company. A gun made by is company was purchased by a well-known sportsman veral years ago. In course of time, after hard usage, e disposed of it, and after passing through several hands ith similar usage, it was purchased by an Italian, who t once procured some reloaded shells charged with 57 rains of one of the densest nitro powders made. This ammunition when fired burst the gun and damages are sued for.

This is but one of many similar incidents that are frequently occurring. Unfortunately, the inclination of juries is to discriminate against corporatons or firms, and as a result the American firearm maker, the powder producer, and the cartridge company are being mulcted without justice at the present time. The main attack is against the gun maker, perhaps the least responsible of all. It seems like penalizing progress and putting a premium on carelessness.

Concerning Big Bags of Ducks.

ST. AUGUSTINE, Fla., Nov. 18.—*Editor Forest and Stream:* It's very disagreeable to growl and snarl, but the spirit moveth me to do a little of it at the present time, though it will probably be of no avail.

Your efficient and interesting Chicago correspondent has roused the spirit by his reports of the doings of Chicago ducking clubs. While FOREST AND STREAM and "me too" are wielding our powerful pens in condemnation of the sale of game, and market-shooters in particular, to shield ourselves against the bitter curses of posterity folks, these highly respectable men of wealth and leisure do precisely what is getting to be universally denounced by all true sportsmen, i. e., competing against each other for big bags instead of shooting for the pleasure of it. (N. B.—No member of a club should be allowed to shoot more than twenty-five ducks in one day.)

Why is their slaughtering any better than the common old Western way of choosing sides and peregrinating through the country to see which side can slaughter most?

Here is the text I am preaching from: "Mr. Price (of the Duck Island Club) brought back ducks enough to last all winter. On one day he killed forty-odd, on the next day fifty, and on the next fifty-seven, nearly all mallards at that, and certainly a wonderful bit of sport for this day and age in Illinois."

Here is a bag (or two-horse wagon load) of 150 big ducks for three days' shoot.

"A few days ago Mr. F. H. Howe made a bag of sixty ducks in the club marsh. * * * If any man deserves good shooting it is Mr. Howe, and everybody will wish him many such days in the future." Now, I consider myself one of the everybodies, and as uneducated opponents have sometimes said to me, "I deny the fact!"

There are several other like items in my text which I will pass over. But, my brethren, I want to say that a man who knows better and doesn't do it deserves to be "wolloped," and I venture the assertion that these very men are drawing largely on their denunciatory vocabulary against all kinds of exterminatory proceedings on the part of market-shooters and other tribes.

Somewhere among New York literary scraps I have seen a "game hog" stuck on a Neptune's trident and held up as a warning to slaughtering transgressors, but it may not have reached Chicago yet! And come to think of it, if the Chicago people had seen it they probably would not have been deeply impressed by it, for the very man who thus pictures himself as impaling the "game hog" on his trident is none other than that same Coquina, whose own personal record of a wanton and wasteful butchery here in Florida we shall never see surpassed. Chicago folks and others understand this very well, since I showed up his exterminatory peregrinations in your columns last summer.

DIDYMUS.

An Ambitious Rhode Island Project.

PROVIDENCE, R. I.—*Editor Forest and Stream:* I have a plan of purchasing a large territory for a hunting and fishing club. This tract contains about seven square miles and is entirely surrounded by roads. There are at least five miles in length of trout streams which have yielded large numbers of trout for the last century. In addition to the streams, there are three ponds sutable for trout, having strong dams which have withstood all freshets since my recollection. There is one natural pond, one mile in length and one-half mile wide, being one of the best places for black bass in this State. This pond is surrounded by a very wild country, some parts of which it is nearly impossible for a man to get through, making excellent cover for deer and other large game. There is another large pond, which I believe is particularly adapted for pickerel and perch. Partridges and quail have always been fairly plentiful. This tract comprises about twenty-five different farms, some of which have been abandoned. There are some houses on these farms which are in fairly good condition, suitable for the help required on the preserve to live in.

My plan is to get two hundred gentlemen to take one share each of stock at $500 per share, to cover the cost of the land, fencing same with woven wire 8 feet high and strong enough to hold moose and other large game; the building and furnishing of a club house to be used by the members of the club and their families; horses and carriages, etc., to be used on the place and to carry the members to and from the station and to different parts of the preserve; also the purchase of 400 deer, so that each member shall have the right to shoot two each year, beginning in November, 1900. I also wish to have one male and three female moose and let them accumulate before shooting any; also one male caribou or elk and three females, to be left to increase before shooting any; also 800 Mongolian pheasants, 1,600 partridges, 3,200 quail, 800 gray squirrels, 100 jack rabbits, 50 raccoons, 12 wild boar, 10,000 brook trout, 2,000 pickerel, 2,000 yellow perch, 10,000 black bass and 400 landlocked salmon, fishing to begin April 1, 1901. My idea is that it will cost $10,000 per year to produce such food as the game requires and to keep the stock of deer and other game and fish up to the above numbers; also to have men patrol it every day to see that there is no break in the fence and to keep off all poachers, and to assist as guides. I think the dues for the first year should be $25 each, and thereafter $50 per year. The feathered game could be got in time to commence shooting Oct. 1, 1900. I think it would be essential to give the fish a chance to grow for one year.

L. A. T.

A Massachusetts Deer Episode.

THE Springfield, Mass., Union reports: D. H. Eaton, of Wilbraham, had an exciting experience with a buck deer on the old road on the Wilbraham Mountains this morning. Mr. Eaton undertook to play peek-a-boo with the deer, and the animal entered into the game with so much zest that Mr. Eaton barely escaped being seriously injured.

Mr. Eaton started out this morning in quest of foxes. He had gone some distance, and was waiting for his dog, which is a fine hound, to strike a trail, when he heard a rustle behind him, and saw a large animal at some distance sniffing the ground and apparently following him. He paid no attention at first, thinking it was a donkey belonging to Mr. Bowles, of Wilbraham. As the animal came nearer, however, he discovered it was a fine buck deer.

Mr. Eaton stepped back into the bushes, intending to jump out with a terrifying war whoop at the animal, and have the pleasure of seeing it dart off in fright. The first part of the programme worked beautifully, but when Mr. Eaton gave the war whoop the animal looked at him in mild surprise for an instant, then threw up its head and charged at him. Mr. Eaton was not long in vaulting over a fence nearby, but the deer also could jump fences, and landed on the other side about the time that Mr. Eaton did. Over the fence again went the would-be deer frightener and the buck followed. In his second jump Mr. Eaton lost his gun in the bushes, and the buck was now keeping him too busy to pick up anything but his heels. The vaulting match continued until Mr. Eaton was pretty well tired out, and then his hound came to the rescue.

It grabbed the deer by the throat, and hung on for half a minute, when the buck made a plunge and threw the dog about 20 feet. It then started off on a run, and the dog followed. The last Mr. Eaton saw of the two they were disappearing on a run with the dog hot on the trail of the buck. Mr. Eaton says that the buck would surely weigh 300 pounds, and he was satisfied that he would have been seriously injured if his dog had not appeared on the scene.

Camp-Fire Flickerings.

"That reminds me."

"Show Us the B'ar."

"GREAT day for b'ar," said the gas man of Bulwagie Bay as he watched a honey bee emerge from the hive, brush the morning dew from his eye and shoot skyward.

"Guess I'll get the boys together and take a run over to Mt. Tom, where Colie Waitt saw a big lame bear while on his way to the Doorsajar House at Dead Waters with Brooks and his party, about a week ago."

A messenger was quickly dispatched for the most noted bear hunters of the county, of which there are many. An hour later a party of half a dozen men, headed by Long Ben Babcock, of Pelfishere, were seen wending their way up the old Moriah Railroad toward Mt. Tom, each carrying a Winchester and a canteen.

Big Lige Smith, of Mill Brook, said it was "the fust time he had ever hearn of any one carryin' cartridges in a canteen."

As the hunters were nearing the old saw mill at Mill Brook they were startled by the appearance of a lone horsemen, who came tearing down the Mineville road like a racer on the homestretch. When the new arrival reined in his foaming steed he was at once recognized as big Bill Owens, better known as little Willie, the hermit of Eagle Cliff, near Chapel Pond.

"Boys," said Owens, excitedly, "I'm glad to meet you. I was on my way to look you up. Fact is, I had been expecting you, and yesterday I went down to Roarin' Gulch and got a five-gallon demijohn of the finest applejack I ever sampled. I put it under the big spruce stump tree near the spring, where it would keep cool, because Brooks kicked about the ginger ale being warm the other day. Well, when I crawled out of my shack this mornin' I went to take a look at the demijohn, but there was no demijohn there. It was gone! gone! stolen!"

"Them loggers from the Wash Bowl," muttered Mose Rumsey, of Snappin' Turtle Creek.

"No, it wa'n't no loggers stole that ar' whisky," said Owens; "it was a b'ar and an old whopper at that. Why, he makes a track bigger'n our Stevie, and Stevie is nigh onto twelve years old."

"Show us the b'ar," said Cobe Green, of Birch Bottom, "and we'll have steak for dinner."

"Hold on, boys," said the gas man from Bulwagie Bay; "I think it rather risky to shoot that ar' b'ar, owing to the nature of the stolen goods he has in his possession. I think we ought to get a warrant and replevin that whisky."

All sanctioned the wise counsel of the gas man, and quickly hied away to Roe's grocery, on the back road, where the necessary document was secured. They then started to replevin the whisky.

They wended their way slowly over the old post road until they reached the watering trough near Sherman's old place, where they stopped to slake their thirst.

As big Bill Owens raised the cocoanut shell cup to his lips he detected a strong odor of whisky. He dropped the cup, exclaiming: "My whisky! My whisky! That b'ar's been here and used the shell to drink the whisky!"

A hurried examination of the ground disclosed numerous tracks of a large bear, which had headed toward the Feeder Pond.

The trail was easily followed through devious swamps and across numerous streams until the hunters arrived at an open field near Stove Pipe City. Near the edge of the field they saw the bear clutching the demijohn and dancing a jig on an old door that he had pulled from the cow stable of cross-eyed Ike Hull, one of the hunters.

"There's the crittur!" shouted the gas man of Bulwagie Bay. "Now we'll soon have the demijohn."

The party advanced within about 20 yards of the dancing bear, when they halted. The gas man then pulled the legal document from his pocket, and after quoting Blackstone for a few minutes and trying to impress on the bear the enormity of the crime he had committed, in a few well

chosen words demanded that the bear return the stolen whisky to its rightful owner. Instead of the desired effect, the bear seemed to take the matter as a huge joke, and with a broad grin took another hooker from the demijohn and began to dance the "Babcock Twist" in a manner that made the old door rattle.

A groan went up from the hunters as they saw the much-prized whisky disappear to satisfy the apparently long thirst of the bear.

"Boys," shouted the gas man, "we've got to take the law in our own hands and lynch the crittur; he won't listen to law or reason."

In an instant six Winchesters were drawn up and sighted at a vital spot on the bear. There was a moment of intense suspense as they waited for the signal to fire, which did not come. Instead the gas man said: "Hold on, boys! My gun is only loaded for woodchuck, and I fear it is not safe to shoot a fi'tin' b'ar with so small a charge."

"My gun is in mighty bad shape too," said Mose Rumsey, of Snappin' Turtle Creek.

There also seemed to be something wrong with Long Ben Babcock's weapon. It was now discovered that they did not have a single gun fit to do battle with such a formidable foe as the half tipsy bear.

A council of war was called and Zig Slawson, of Baulky Swamp, proposed that a committee be at once dispatched for Jack Howe, the only man in the mountains who has a record of killing three bears in one day.

Long Ben Babcock was delegated to hurry after Jack, whom he found oiling his express gun. When Jack learned that he was wanted to perpetuate the good record for bravery of the hunters of the county, he quickly buckled on his cartridge belt, and an hour later the skin of the jovial bear was pinned to the ground.

About one-half of the fluid was recovered and divided among the hunters, and there was great rejoicing in Stove Pipe City that night. REDNER.

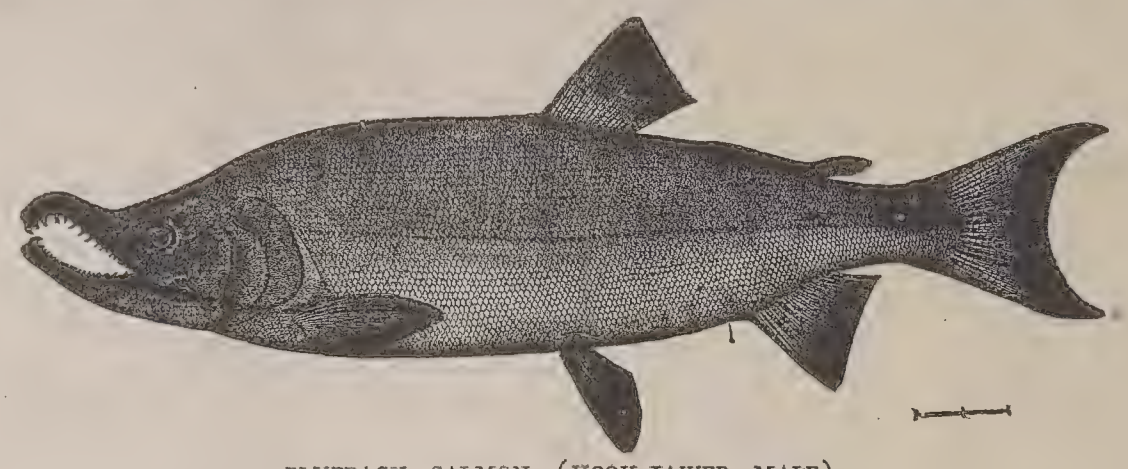
NEW YORK, Nov. 15.

Sea and River Fishing.

Steelheads and Salmon.

Editor Forest and Stream:

In response to the courteous questions which Podgers propounds to me in your issue of Nov. 4, regarding the Pacific salmon and the steelhead trout, permit me to call attention to what Dr. David Starr Jordan says of the Pacific salmon: "They were first recognized in 1731 by that most exact of early observers, Steller, who described and distinguished them with perfect accuracy under their Russian vernacular names. * * * These species may be called (1) The quinnat or king salmon (*Oncorhynchus tschawytscha*). (2) The blue-back salmon or redfish (*O. nerka*). (3) The silver salmon (*O. kisutch*). (4) The dog salmon (*O. keta*), and (5) The humpback salmon (*O. gorbuscha*)." Speaking of this genus, he says: "That it differs from all the rest of the salmon family, in the fact that the number of rays in the anal fin is from fourteen to twenty, while in all the salmon and trout on the other side of the Atlantic this fin contains no more than eleven rays. The usual number is nine to ten. These fish are, therefore, in strictness, not salmon at all, but something more intensely salmon than the salmon of Europe itself is. They have, therefore, been placed in another genus known as *Oncorhynchus*. For the lack of any other common name, they are always spoken of, and will always be canned, as long as the canning industry lasts, under the name of salmon. The Chinook (Indian) name *Quinnat* was early applied to them, and if we feel the need of some other name to distinguish them from real salmon, we may call the Pacific Coast salmon quinnat or quinnat salmon."



Of the steelhead trout, Dr. Jordan says, in speaking of Pacific Coast trout: "Another California trout is the so-called steelhead, often known in California as salmon trout, a fish really very much like the salmon trout of Europe. * * * The name comes from the color of its head and the hardness of the bones of its skull as compared with the bones of the quinnat salmon. Its scientific name is *Salmo gairdneri*, named for Dr. Gairdner, of Fort Vancouver, a bright, young naturalist in his day, in the employ of the fur company, who first discovered the species and sent it to John Richardson."

These quotations are taken from a lecture delivered in 1891 by Dr. Jordan before the California Academy of Sciences. Until this distinguished scientist called the attention of the Coast to the fact that the steelhead was a trout, it was generally known and called a salmon, and even now, eight years after, the fish is still commonly called a salmon.

On the Smith, Klamath, Eel, Navarro and other California coast streams the question is still being discussed. I have been told, in substance, by many an old fisherman in this region, that he had lived there for many a year and that the fish had always been called a salmon, and was a salmon, and he would be d——d if he thought any doctor from the East could come out there and expect him to believe that the salmon was a trout, the parent of all the brook and mountain trout in the streams of his section. Even among our anglers, few call the steelhead a trout. Many of our expert anglers, who know them to be trout, and that special laws regarding their capture have been enacted, continue to call them salmon. Why is it that so few anglers take interest in learning the names and the history of the fish they so ardently seek?

As Dr. Jordan has shown, the steelhead might easily be confounded with the Atlantic salmon, but on the Pacific there is no such excuse. Podgers and others may easily familiarize themselves with the outward distinctive differences between the quinnat and the steelhead. In the former the anal fin—the fin between the vent and the tail—has from fourteen to twenty fully developed rays, and the inside of the mouth is black; with the steelhead the anal fin never has over thirteen fully developed rays, and the inside of the mouth is white. Then again, Podgers, the adult salmon does not feed while in fresh water, and dies after spawning, while the steelhead does feed in fresh water, and is particularly ravenous on its return from its spawning beds to the sea.

Regarding the statement that the salmon does not feed while in fresh water, let me say that it is true that the quinnat in the McCloud and other streams is occasionally taken with hook baited with roe, and that the young males—commonly called grilse—are taken with the fly, but the fact remains that they do not feed, the stomach being contracted and without food of any kind while in fresh water. Probably the fish picks up the roe or seizes the fly in idle

BLUEBACK SALMON (HOOK-JAWED MALE).

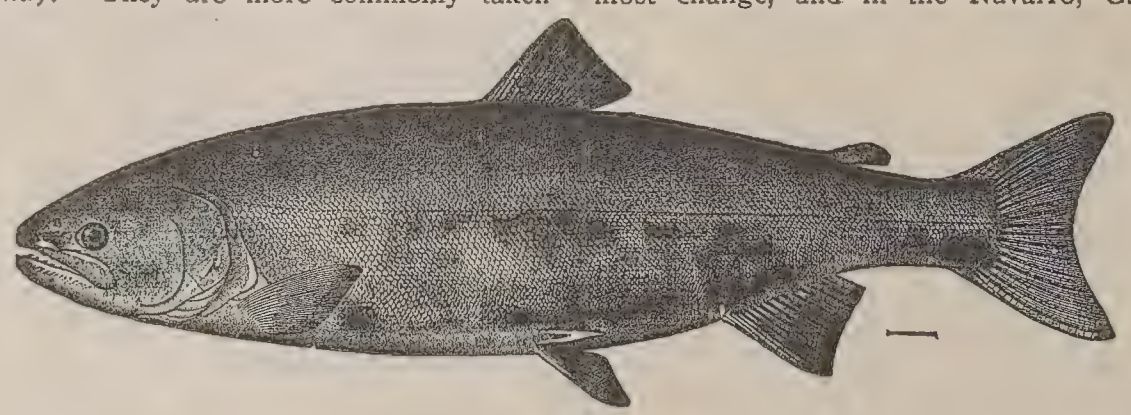
sport, or, possibly, in remembrance of its younger days in the river before it knew of the richer fields for food which later it found in the sea. Now that I have spoken of the McCloud, let me say to you, Podgers, that from my own investigation and from the knowledge gained in talking with Dr. Jordan, Livingston Stone and John Babcock, I do not believe that the sea run of steelhead ever reach the McCloud. Unquestionably, the large salmon-like fish you caught there with roe was a simon pure quinnat salmon (*O. tschawytscha*). They are more commonly taken there with a Wilson spoon—either copper or silver color. You will find the sport—once attained—of casting this spoon for these salmon much more engaging and reliable than taking them with roe; then, too, the large rainbow trout of the McCloud will often take the Wilson spoon when they will not come up for a fly.

Podgers, the fish which you caught in Monterey Bay, near Santa Cruz and the town of Monterey, with spoon and sardines, is also the true quinnat salmon. I have never known of a steelhead being taken there in that way, though the steelhead must be in Monterey Bay, for he enters the estuaries of the coast streams that empty into that bay and passes up into the streams to spawn.

Regarding the "hooked-nosed salmon" Podgers speaks of, they are the breeding males of the salmon. The heads of all the males of all varieties of the Pacific salmon undergo a marked change as the breeding season approaches. Of these changes, Dr. Jordan says: "As the season advances, the difference between the males and females becomes more and more marked, and keeps pace with the development of the milt, as is shown by dissection. The males have:

"(1) The premaxillaries and the tip of the lower jaw more and more prolonged; both of the jaws become finely, strongly and often extravagantly hooked, so that either they shut by the side of each other like shears, or else the mouth cannot be closed.

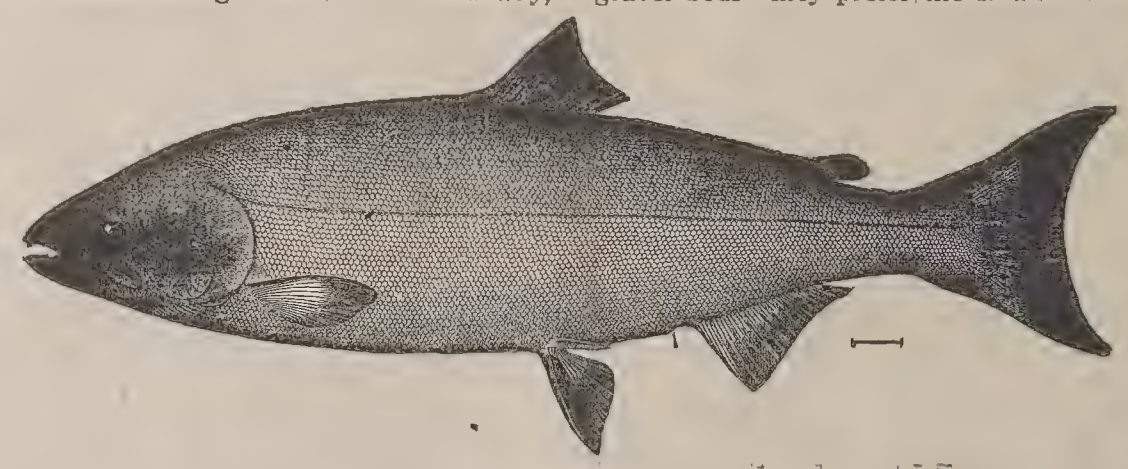
"(2) The front teeth become very long and canine-like, their growth proceeding very rapidly until they are often one-half inch long.



"(3) The teeth of the vomer and tongue often disappear.

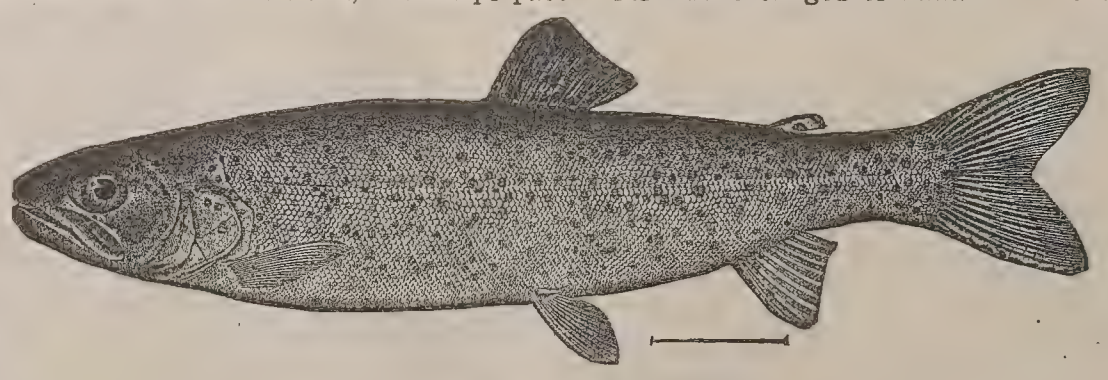
"(4) The body grows more compressed and deeper at the shoulders, so that a very distinct hump is formed; this is more developed in *Oncorhynchus gorbuscha* (the humpback), but is found in all.

"(5) The scales disappear, especially on the back, by the growth of spongy skin.



"(6) The color changes from silvery to various shades of black and red or blotchy, according to species. The blue-back turns red, the dog salmon a dull blotchy red and the quinnat generally blackish. * * * At the time of the spring run all are symmetrical. In the fall, all males, of whatever species, are more or less distorted."

To Jordan's descriptions let me instance that I have seen the heads of the male quinnat that were so distorted that you could place your hand in the side of the mouth and close down the jaw until they met at the ends and yet leave the hand free to be removed without striking the doglike teeth. The head of the dog salmon undergoes the most change, and in the Navarro, Garcia and other neighboring streams is usually known as the "hooked-nose" or "hooked-bill" salmon.



HUMPBACK SALMON.

It may be interesting to note again that the salmon that enter the large coast streams pass as far up stream as possible—those that enter during the spring months passing to the extreme headwaters—where they deposit their spawn and then, strange as it may appear, die. Few, if any, return to the sea. The steelhead, on the contrary, enter the large and small streams, pass to favorable gravel beds—they prefer the small tributaries rather than the main stream—where they spawn, and then, the water permitting, return to the sea. The jaws of the male steelhead undergo but little change as compared with the salmon, but there is quite a marked change during the breeding period. The steelhead also assumes a band of red along the side, but nothing like so marked as the salmon. With the steelhead it often occurs that before spawning is accomplished the water in the stream falls to so low a stage as to prevent the return to the sea, and the fish is obliged to remain in the deep pools until the streams again rise. This will account for the presence of what is, on the Pacific Coast, called "landlocked salmon." These landlocked steelheads are usually much deteriorated in flesh and flavor and have lost much of the gameness that has so endeared them to the heart of the angler; for, know you, Podgers, that the steelhead has no equal in fresh water as a game fish. The salmon of the East or of Monterey Bay, where you find him at his best on the Pacific Coast, does not equal a "fresh run" steelhead—a fish that has just entered fresh water from the sea—as a game fish. No, Podgers, when you hook and are playing a steelhead, don't lose your interest in him because he is not a salmon, for he fights better, "eats as well," and

"WHAT'S THAT?"

Copyright, 1899, by Forest and Stream Publishing Co.

you are right "to stand up for him," for none of the sportsmen that I know consider him "a little off color." He is a worthy object of pursuit and the angler who lands one on light tackle may well be proud of the achievement, and when he has brought him to gaff or "beached" him should remove his hat and say, "Steelhead, you have no peer in fresh water," for not even his full brother, the rainbow trout, over which the scientists have so long puzzled their brains to find a distinguishing difference, is more game than he. And, again, Podgers, let me tell you that no section in America offers you better sport in fresh water than your own California, when it permits you take the steelhead in tidewater with hook and line at any time. Have you never been surprised that so few of the anglers in California know anything of this fishing?

The quinnat salmon is never so game and interesting a fish to fight as the steelhead. In my opinion, none of the Pacific salmon are game fish. True, many of us enjoy trolling for them in Monterey Bay, but they are "not in it" with a fresh-run steelhead. There is more "sulk" in the Pacific salmon than fight. No, Podgers, it does not detract from the sport that you so enjoyed on the Navarro to find that you were taking the steelhead and not the salmon. I almost envy you the recollection of that trip, but you are welcome to all the remembrances that come to you from catching the Pacific salmon, for I have caught a few of them in different waters on the Pacific Coast, and I would "swap" all of them for one good play with the clean-cut and immaculately white steelhead.

And one thing more, Podgers: Don't neglect that red ibis fly when you go for steelheads, for they are fond of it —especially toward evening. This past season it was a prime favorite on Eel River. I have used it often, and next to a large royal coachman it has attracted the most fish. And don't be afraid of using large flies for the steelhead; but as Mr. Mather would say, "That is another story."

STEELHEAD.

San Francisco, Cal., Nov. 17.

"In Their Midst."

They say that the oyster crab is far more abundant this season than ever before. This will not affect the consumer of oysters in the slightest, for the succulent crab and the hospitable mollusk are separated at an early stage of their respective commercial careers. The oyster crab is collected until enough are on hand to appeal to the epicure, and is finally served in a small dish at a large price. It's only in Baltimore and Washington that one sees now the once familiar sight of the twin-banded shrimp-pink little crab in the bottom of the stew. The crab lives under the mantle of the oyster, which seems to suffer no inconvenience. Most animals thus afflicted would sneeze or do something to rid themselves of the intruder; but the oyster is of an apathetic disposition, as much so as its distinguished substitute, the clam. The crab is not really a parasite of the oyster. A parasite is one which draws its support from the animal on which it lives; where the intruder simply lives with its host and derives its food from other sources it is known as a commensal. The oyster crab does not live on the juices of the oyster, but finds its food in the currents of water which the mollusk sends swirling through the folds of its mantle.

The oyster is not the only animal that has lodgings for the smaller crustaceans. The whale is known to suffer from the commensals which find lodgment on it. There are several varieties of crustacea, ranging in size from a dime to a nickel, which attach themselves to the eyelids and the corners of the lips of the largest whales, and even find their way into the ears of the cetaceans. The ear of the whale is peculiarly keen and all sound is remarkably magnified. It must, therefore, be exquisite torture to the whale when the crab walks over the ear drum with a noise like thunder. Observant whalemen regard this as the cause of the leaps and breachings of whales when no attack is being made on them, the idea being to get rid of the foreign substance from the ear very much after the fashion of the small boy jigging up and down on one foot after bathing.

The student of zoology who is responsible for these remarks as to the whale had another instance to offer of existences packed much like the skins of onions in concentric layers.

"The most perfect instance known to science of the commensal and the parasite," he continued, "is that afforded by the trepang or sea-slug of the Philippine waters, a near relative of the sea-cucumber found on the New England coast. When fully grown the trepang is about 18 inches long and shaped in other dimensions very much after the ground plan and elevations of the leberwurst of delicatessen commerce. From end to end of the animal there runs a tube through which a current of sea water is continually forced past the mouth and the breathing organs, which are all within the trepang at intervals along this tube. In more than three-quarters of all trepang which have been examined there has been found a single fish in this tube—a long and slender fish between 6 and 8 inches long and no bigger around than one's little finger, colorless and almost transparent, as befits an animal living always in the dark. This fish is known as the fierasfer, and it is unknown except as found in these peculiar lodgings. If a trepang be cut open and its guest be shaken out into the water it seems bewildered in such roomy quarters and in such a blaze of light. It darts about aimlessly until it finds another trepang, and then with a sudden rush it disappears into the odd abiding place which it has chosen. According to the scientific reckoning of such things, the fierasfer is not a parasite, but a commensal of the trepang.

"But it does not end there, by any means—in fact, this is only the beginning of the menagerie, as the trepang might say, 'in our midst.' Now take the fierasfer and see what is to be found. It is translucent, and that makes it possible to examine into its works without dissection. Many specimens exhibit one or more dark spots in the gills. By a little manipulation these dark spots can be dislodged from their place and brought to light for examination. They seem to be leaden pellets about the size of swan shot. Put one of these pellets in a drop of water and then add a particle of gurry. Immediately the shot unlimbers a bunch of legs all in one spot and the work of gathering in the food is seen in full operation. The seeming shot turns out to be a hungry crab, which has chosen its abode in the fierasfer, and is found nowhere else. It also is commensal and not parasitic. First the trepang, then the fish that lives in the trepang, then the crab that lives in the fish that lives in the trepang. That begins to approach the 'ad infinitum' rhyme of the poem 'other fleas to bite 'em.'

"Dissect any one of these bullet-shaped crabs and more revelations follow. Coiled under the shell in many instances will be seen a white filament. If that be carefully unrolled it will be found to be two or three feet long. It is a nematode worm, a parasite on the crab, which it eventually destroys, yet it has no power to harm either the fish or the sea-slug. And last of all, this worm is also in many cases itself infested with another worm, a parasite on a parasite. When you compute all of these animals, each living in the midst of the one next outside it, and then figure up the oyster with only its own shrimp-pink crab with two light stripes, why then the oyster isn't so many and the trepang of the Philippines strikes one as the regular five-story flat of animal life.

Llewella Pierce Churchill.

Steamed Squeteague.

Providence, R. I., Nov. 22.—*Editor Forest and Stream:* I send you an account of the way in which some of us "chained-to-business" fellows had a little recreation the past season.

The edible qualities of the squeteague or weakfish are in much dispute among the anglers of this section, some claiming them to be the equal of any fish that swim, while others will not eat them at all. We had at least one the past season that certainly was equal to any bluefish ever cooked; but the secret lay in the catching and cooking. The way we did it was this: We spent the night near the fishing grounds, got up just before daylight the next morning, threw up a handful of gravel to our neighbor's window and he soon joined us. The shrimp, rods and landing net were put into the skiff, and we rowed off to the buoy.

The man in the stern had the first strike, but lost his fish; then my float disappeared with a rush, and we soon had five heavy squeteague in the old feed bag astern. We pulled up killick, rowed ashore, had breakfast and caught the 7:09 A. M. train for town with the heaviest fish in a basket.

Arriving at the shop, the fish was turned over to the engineer, who on this occasion was to be the cook. He had prepared a pickle barrel by boring a hole in the bottom and running a ¼-inch steam pipe through it, and connecting it with the supply pipe was ready for business. The man from Bristol brought up about a bushel of fresh rockweed, some of which was placed in the bottom of the barrel, and also lining the sides. In the cavity thus formed a peck of clams was put, a bag containing common and sweet potatoes and green corn; then came the squeteague, carefully dressed, with slices of pork inside and outside, all wrapped in clean toweling, with a final layer of rockweed on top. The cover was put on, and at 11:30 the engineer gave her the "pizen," as he called it, and when the wheels stopped whirling at noon the bake was opened, and there was a dinner fit for a king—a dinner such as only those who are familiar with the Rhode Island clambake can appreciate. To them words are unnecessary; they have only to recall the fragrance of steaming clams mingled with the salty smell of fresh rockweed and—it is enough.

A large drawing board covered with wrapping paper served as a table, and was supported by a frame on the boiler-room floor. The silence of the feast was broken by the merry tinkle of many clam shells as they fell on the hard cement, dropped from six pairs of hands.

The fish was completely devoured, all pronouncing it one of the finest they had ever eaten, and thus testifying to the skill of our chef. We finished with a dead ripe watermelon and 'tis lucky that we were not finished also.

S. S. B.

Rhode Island Frost Fish.

Providence, R. I., Nov. 25.—*Editor Forest and Stream:* Game this season is scarce about Wickford, only a few quail having been obtained, with now and then a partridge, and the sportsmen to get a good day's shooting are compelled to seek it in the coverts of South Kingstown and Exeter, where, while not abundant, birds are more plentiful.

From the river it looks as if the shores of Narragansett Bay on both sides below Field's Point are thronged with lightning bugs every night. Lights bob back and forth in profusion, winding in and out, on the Pawtuxet side and on the Riverside shore as well. The display is interesting, as well as confusing to one ignorant of its meaning. It is simply the annual fall rush for frost fish, which the piscatorial expert knows only as whiting.

The frost fish is a small fish of the smelt family, although less in size and even inferior in intelligence. During the day they remain out in the river, but at night they chase the schools of minnows and small fry in, driving them inshore in the shallow water, where they may be easily caught. In the pursuit of the smaller fish the frost fish find their own undoing, for they run in so close on sandy shores that a man walking in the water 6 feet or so from its edge can easily get between them and the land, and kick them ashore or haul them in with rakes and small nets.

The fish are good eating, although the number consumed by a hungry man in a meal is something large. A sandy shore is the best place to catch them, for the walking is easier than in mud, and Bush Pasture Point, Edgewood, opposite the residence of ex-Mayor Hayward, and Still House Cove, at the foot of Ocean street, Pawtuxet, are both thronged with the fishermen every night.

Large numbers of these fish are being taken each night, the average catch being about one hundred to each person. They will average about four to sixteen fish to the pound.

W. H. M.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Transporting Rainbow Trout at High Temperature.

Cape Vincent, N. Y., Nov. 18.—*Editor Forest and Stream:* Permit me to hand you the inclosed translation of a contribution of Herr Jaffe to the Allgemeine Fischerei-Beitung. I think it is worthy of publication on account of establishing the fact that rainbow trout can be carried at such a high temperature.

Livingston Stone.

As announced in the January number of one of the French fishing journals, live rainbow trout were safely transported upon one of the steamers of the Messageries Maritimes line, from Bordeaux to South America, between the 5th and 25th of December of the previous year. They were carried in a zinc can, such as is commonly used for transporting live fish, which held from fifty to sixty liters and was provided with means for introducing sufficient air.

The transportation was really undertaken from Paris with yearlings of seven or eight centimeters in length, and fifty in number; but of these twenty-two died on the train on the way to Bordeaux. Of the survivors, nine stood the long journey by sea, and were placed in a small river at Eusada, in the vicinity of Buenos Ayres. Mr Moussion, the owner of the river, and under whose auspices the immigration had been effected, wished to try the experiment of introducing into that country this valuable member of the salmon species.

The interesting fact connected with the transportation, however, is the proof that rainbow trout can endure for several days a very high temperature, for on the equator, as well as at the latitude of Rio Janeiro and on the Tropic of Capricorn the water in the can, in spite of additions of ice, stood at 25 degrees Réaumur (88 degrees Fahrenheit), showing that the rainbow trout can stand such a high temperature as that noted for somewhat over a week.

S. Jaffe, Sandfort, Germany.

The Conductor's Fish Story.

There were but few passengers on the early trip. As the conductor saw by my rod that I was going a-fishing, he sat down and chatted. He said: "I'm not much of a fisherman myself, though people down our way say I'm the best fisherman in the town. They say that when Hank goes out he always fills his creel. Now I don't say that of myself, for I know that I'm not much of a fisherman, though I will say that I always manage to get fish." (With a wink and knowing nod.) "Now, my way of fishing is this: First I put on me bait fish; then I have me six flies" (holding up six fingers). "I have me two brown hackles" (two fingers up); "I have me two Seth Greens, and me two—well, any kind of flies—not so particular so long as I have me two brown hackles and me two Seth Grens. Then I let me bait fish go down stream 50 feet, 100 feet, 150 feet, 200 feet, 250 feet, 300 feet, or even 350 feet, and then when I get a fish on me bait fish I comb me flies through the water and I catch other fish, see? Sometimes I catch 'em in the head, fin, tail—anywhere—that's the way I get 'em. I fill me creel every time. But then" (with a prolonged wink and an elevation of one corner of the mouth), "I don't go every day. I go when I know the conditions is good, see? I study the weather and I know just when to hit it.

"Then I have another way I fish. Along in June I go down to the stream just about dusk and I use a white miller—just one, but a big one—that big" (measuring 2½ inches), "and in one hour I fill me creel. You see, when I fish, I fish, see? Now there's a lot of these fellows that say a fly aint no good, but I know better. I can do more with me six flies and me one bait fish than any man I know can with a tub full of worms or any other bait. But then a man wants to know how to use 'em, see? Flies is all right; give me flies every time."

Beaver Kill.

New Jersey

"Jess: Bits of Wayside Gospel."

Under this title is published by the Macmillan Company a volume by Rev. Jenkin Lloyd Jones, containing a number of chapters which first came to the public as sermons in Chicago, and which now are offered to a wider public. They are such sermons as one could wish the world had more of. Not sermons about doctrine nor of the conflict of science and religion, but sermons about the very commonest things of our everyday life.

Jess, who gives the title to the book, was Mr. Jones' saddle mare, and he writes of her with a feeling that at once brings the reader into sympathy with him. And what he tells about her is after all only a sermon on kindness and mercy to those over whom we are set. It is well told and worth reading.

So with his chapter on the "Religion of the Bird's Nest," where he says that "A good field glass is a double-barreled gun that brings down the birds without injuring them." Then follows his sermon about the birds and their ways, and the good that they do, and what they feel, and how civilized man has come in to overthrow the balance of nature and to tear down that which it took millions of years to build up.

Mr. Jones' book was worth publishing, and it is certainly well worth reading. Books that have so much breadth and so much sweetness as this, cannot fail to do good.

AS A CHRISTMAS GIFT.

The Forest and Stream—in a year's subscription—is an appropriate and sure to be appreciated gift for a father, husband, son, brother, cousin, uncle, nephew, or one's pastor, lawyer, pupil, teacher or friend. The giving will be for fifty-two weeks. And with the paper may well go, for this year's Christmas, one of the large engravings "Alert" (moose), "The Challenge" (elk), "What's That?" (antelope), "Listen" (blacktail deer), "Close Quarters" (Mr. Osthaus' painting of Ripsey on point). These are on plates 12½ x 19 inches, on paper 22 x 28 ("What's That?" is slightly smaller). Price of engravings $3 each, or by a special rate the Forest and Stream for one year and any one of the engravings will be sent for $5.50.

Eastern Field Trial Club's Trials.

The open stakes of the Eastern Field Trial Club's twenty-first anual trials began on Monday, Nov. 20, and were carried over into the following week. There was a most gratifying interest in them, and a general strengthening of support, which presaged prosperity for the future.

The trials were run on the club's preserve at Newton, N. C., although there were certain signs which indicated that the significance of the club's lease had its significance in name only. There was a kind of rumor that the preserve was quite as much at the service of local shooters as it was at the club's. Some bevies were found which were broken; traps for birds were found in the grounds, and poachers were caught almost redhanded during the trials. This created a good deal of discontent among the club members, and it is possible that, unless the landowners feel some responsibility for their pledges to the club, the latter may sooner or later seek new grounds.

The judges were Col. Arthur Merriman, of Memphis, Tenn., and Messrs. N. Wallace, Farrington, Conn., and Theodore Sturges, New York. They were diligent in their duties and men of long and high experience.

The club held a meeting on Friday night, Nov. 24, and elected officers as follows: President, Pierre Lorillard, Jr.; Vice-President, Theodore Sturges; Secretary and Treasurer, S. C. Bradley, Greenfield Hill, Conn.

The twenty-second annual trial will be held at Newton, N. C., on Nov. 18, 1900, commencing with the Members' Stake, and the following week the Derby, All-Age and Subscription Stake will be run. The same purses will be offered as were competed for this year. The secretary was instructed to lease 2,000 acres of land in addition to what the club already controls. The Board of Governors was elected as follows: Dr. J. S. Brown, J. L. Breese, J. L. Baker, S. C. Bradley, George Crocker, Edw. Dexter, H. B. Duryea, F. R. Hitchcock, J. A. Hodgeman, P. Lorillard, Jr., Geo. F. Nesbitt, Edm. H. Osthaus, J. E. Orr, Chas. Phelps, R. V. Fox and Theodore Sturges. New members elected were Messrs. James L. Breese, Clarence Mackey, F. O. Beach, Dr. Palmer and H. R. Duval. This was the greatest accession to the membership of the club which has occurred in some years, and undoubtedly portends great success for the future.

A large party followed the trials from day to day, and on the whole there seems to be a revival of general interest, though from a different and more wholesome motive—the motive of sport instead of the motive of business. The dominant interest of business which was so harmful to field trials in the past is now no longer dominant. Sport is in the ascendent, as it properly should be.

Mesdames H. B. Duryea and J. L. Breese and Miss Bradley were quite as interested in the running, and followed the judges as persistently, watching the competition, as did any of the sterner sex. They rode through ditches and cover with as much skill and coolness as the veterans of the sport.

The visitors from afar who were lookers on were: Geo. F. Nesbitt and A. G. Nesbitt, Wilkesbarre, Pa.; Dr. J. S. Brown, Montclair, N. J.; James E. Orr, New York; H. B. Duryea and wife, Red Bank, N. J.; R. V. Fox, Harrisburg, Pa.; S. Murray Mitchell and Edwin V. Dougherty, Philadelphia; James L. Breese and wife, New York; T. R. Hitchcock, New York; D. F. Pride, Cincinnati; J. M. Taylor, New York; P. Lorillard, Jr., and F. Newbold, New York; Arthur Stern, New York; S. E. Seay, Salisbury, N. C.; Dr. C. T. Shoop, Racine, Wis.; Edm. H. Osthaus, Toledo, O.; A. V. Dively and wife, Altoona, Pa.; Mr. H. R. Duval, New York; Dr. Palmer, Fernandina, Fla. Those who were present professionally were: S. C. Bradley, Greenfield Hill, Conn.; Geo. E. Gray, Appleton, Minn.; J. H. Johnson, Carlisle, Ind.; C. E. Buckle, Charlottesville, Va.; C. Tucker and J. Tucker, Tennessee; W. W. Titus, West Point, Miss.; J. M. Avent, Tennessee; John N. Lewis, Ramsey, N. J.; D. E. Rose, Lawrenceburg, Tenn.; W. H. Hammond, Eldred, N. Y.; G. W. Owens, East Islip; R. Storey, Thomasville, N. C.; Victor Humphrey, Lexington, N. C., and Luke White, Baltimore, Md.

The All-Age Stake.

There were twenty-four starters in the All-Age Stake, a number most encouragingly in advance of the similar stakes in several of the recent past years. There also was an equally pleasing support from sportsmen who were new to field trial interests.

This stake was for all setters and pointers which had never won a first prize in an all-age open stake at the Continental, United States or Eastern field trials. The prizes were: First, $250; second, $150; third, $100. Forfeit, $10, and $20 additional to fill. Entries closed Oct. 1.

Colonel R., the winner of first, is a small dog, of extraordinary speed, nose, diligence and execution, as displayed in this stake, though he fell off greatly from the form of the All-Age competition when he subsequently ran in the Subscription Stake. His range was wide and his speed great, and he beat out his ground with good judgment. His finding and pointing were marked by quickness and correctness, and by success as to quantity. He was easily the first in the stake.

Minnie's Girl, second prize winner, had a range from medium to wide, it varying considerably; but for wisdom in selecting likely places for birds, working them with judgment and locating and pointing with honest play to the interests of the gun, she was surpassed by none. She was a good second.

Jack, third, is less than medium size, but he ranged fast and well, and was specially strong in his point work on scattered birds. He had a wide fling, but did not always cast with the best judgment. He, however, was a good third and was very close in merit to the winner of second.

The dogs were run as follows:

C. T. Barney's liver and white pointer dog Macclesfield (Roderick—Rose), John White, handler, with L. E. Seay's black, white and tan setter dog General Gladstone (Gladstone Boy—Buena Vista), owner, handler.

Pierre Lorillard, Jr.'s, black, white and tan setter dog Rowland (Eugene T.—Lou), C. Tucker, handler, with George E. Gray's liver and white pointer dog Young Jingo (Jingo—Pearl's Dot), owner, handler.

Pierre Lorillard, Jr.'s, black, white and tan setter dog Jack (Eugene T.—Maud), C. Tucker, handler, with Charlottesvill Field Trial Kennels' liver and white pointer bitch Nana (Rip Rap—Toxie), C. E. Buckle, handler.

J. L. Breese's black and white pointer dog Bang III. (Rector—Diana), with W. P. Austin's liver and white pointer dog Lad of Jingo (Jingo—Pearl's Dot), D. E. Rose, handler.

W. Tallman's (agent) liver and white setter dog Gough (—— —Sunset), agent, handler, with G. G. Williamson's black, white and tan setter dog Lady's Count Gladstone (Count Gladstone IV.—Dan's Lady), D. E. Rose, handler.

H. R. Edwards' black, white and tan setter dog Colonel R (Harwick—Trap, Jr.), Geo. E. Gray, handler, with Wm. Tallman's (agent) liver and white setter bitch Donna (Dick Noble—Donna), agent, handler.

Wm. Tallman's (agent) black, white and tan setter dog Admiral Drake (Bald Rock—Nellie M.), agent, handler, with H. R. Duval's liver and white pointer dog Falmouth Suffolk (Rip Saw—Blodwen), George W. Owens, handler.

Pierre Lorillard, Jr.'s, black, white and tan setter dog Pink's Boy (Gleam's Pink—Belle of Pawling), C. Tucker, handler, with Avent & Duryea's black, white and tan setter dog Roysterer (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler.

Avent & Duryea's black, white and tan setter dog Prime Minister (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler, with George Crocker's orange and white setter bitch Minnie's Girl (Antonio—Minnie), S. C. Bradley, handler.

Luke W. White's (agent) orange and white pointer dog Ponce (—— — ——), agent, handler, with H. R. Duval's liver and white pointer dog Falmouth Dixie (Rip Saw—Blodwen), G. W. Owens, handler.

Fox & Blythe's black, white and tan setter dog Dave Earl (Count Gladstone IV.—Dan's Lady), D. E. Rose, handler, with W. J. Baughn's black, white and tan setter dog Count Danstone (Count Gladstone IV.—Dan's Lady), G. E. Gray, handler.

Miss C. Parsons' black, white and tan setter dog Berber (Antonio—Laskie), John White, handler, with H. K. Devereaux's black, white and tan setter dog Uncle B. (Harwick—Dan's Lady), Geo. E. Gray, handler.

The Derby—Monday, Third Day, Nov. 20.

The morning was calm and pleasant, with a hazy atmosphere which pleasingly softened the lines of hills and timber in the landscape. As the sun mounted higher the temperature rose, till toward the middle of the forenoon it was uncomfortably warm.

Birds were found in abundance in parts of the grounds, while in other parts there were not enough to make the competition interesting. A high order of merit was necessary to display a good performance, even when birds were plentiful, the grounds being difficult to work, while in the poorer parts of the grounds diligent seeking met oftentimes without any reward in the way of finds and points. The running brought a number of very good performances to public notice, and notwithstanding the mixed conditions the dogs as a whole rated high as good workers. The stake was handled very skillfully. The order of drawing was as follows:

J. R. Blake's lemon and white setter dog Don Noble (Don P.—Jessie), W. W. Titus, handler, with Avent & Duryea's black, white and tan setter dog Pontiac (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler.

Geo. F. Nesbitt's liver and white pointer dog Rip (Gamester—Sally), W. W. Titus, handler, with D. E. Rose's (agent) black, white and tan setter bitch Minnie M. (—— — ——), agent, handler.

C. I. Shoop's black, white and tan setter dog Harwick Boy (Harwick—Spot's Girl), J. H. Johnson, handler, with George Crocker's black, white and tan setter bitch Queen Lill (Tony Gale—Lightfoot), S. C. Bradley, handler.

C. I. Shoop's black, white and tan setter dog Count Hunter (Count Gladstone IV.—Hunter's Queen), J. H. Johnson, handler, with Dr. M. F. Rogers' liver and white pointer dog Brant (Rip Rap—Pearl's Dot), D. E. Rose, handler.

George Crocker's black, white and tan setter bitch Miss Bangle (Tony Gale—Lightfoot), S. C. Bradley, handler, with W. W. Titus' black, white and tan setter dog Joe Cumming, Jr. (Joe Cumming—Laura), owner, handler.

Avent & Duryea's black, white and tan setter bitch Sioux (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler, with Pierre Lorillard, Jr's, black, white and tan setter bitch Geneva (Tony Boy—Lena Bell), C. Tucker, handler.

W. Gould Brokaw's liver and white pointer dog Fairview Tom (Sir Walter—Van's Pride), R. K. Storey, handler, with Charlottesville Field Trial Kennels' liver and white pointer dog Khartoum (Rip Rap—Toxie), C. E. Buckle, handler.

James McKey's black and white setter dog Pride (Cincinnatus Pride—Queen Vic), D. E. Rose, handler, with L. C. Clarke's black and white pointer dog Frank F. (Gamester—Sally), John White, handler.

H. B. Holmes' black, white and tan setter dog Glen Noble (Glen—Lem Gladstone), John White, handler, with Avent & Duryea's black, white and tan setter dog Ute (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler.

Leon E. Seay's black, white and tan setter dog Max Gladstone (Greenway—Buena Vista II.), owner, handler. Withdrawn.

Geneva, the winner of first, ran a very meritorous race. She ranged with judgment, had good speed and industry, and beat out a great deal of ground in an intelligent manner. Her finding and pointing was excellent, and she won quite nicely on her good performance.

Sioux, second prize winner, is fast, but ranged out of bounds at times, with a disposition to self-hunting, and was very hard to handle. Her work lacked the finish of the winner, and was very faulty in respect to working to the gun. Speed and lawless range were her most conspicuous characteristics.

Count Hunter, third, ran quite a good race. He was a fast and wide ranger, and hard to handle betimes. His pointing and finding was fairly good, though lacking in nice clean finish.

The conditions of this stake were as follows: For all setter and pointer puppies, whelped on or after Jan. 1, 1898. To first, $300; to second, $200; to third, $100. First forfeit, $10; second forfeit, $10, and $10 additional to start.

First Round.

Don Noble and Pontiac were cast off at 8:28. The latter pointed and Don backed well; then the pointing dog drew on and gave up the trial. Don ran on about one hundred yards and pointed; nothing found. Don in weeds roaded to a good point on a bevy. On the scattered birds, Don made three points, one flush and a point to which nothing was found. Sent on, Don made a good find and pointed on a bevy. Pontiac seemed headstrong, and was hard to keep to the course. Don showed good bird work, but he located his birds with his nose close to the ground and in a somewhat slow though accurate manner. Up at 9:43.

Rip and Minnie M. started at 9:55. Rip pointed and roaded, but found nothing; Minnie backed well. A bevy was marked down and the dogs were turned back and worked toward it. Minnie flushed the scattered birds. Rip put his nose to the ground frequently and wasted time thereby. Each had good speed, and a middling range. Up at 11:01.

Queen Lill and Harwick Boy were cast off at 11:11. Lill flushed a bird of a bevy, and taking a small circle near the bevy stopped then to caution. It was a poor piece of work. She was steady when the gun was fired. Boy at the time Lill was pointing came up and stopped to caution. Boy pointed a bevy in woods. Lill flushed scattered birds in woods and chased. Boy flushed a single in woods and stopped to wing, and more were flushed ahead of him. Boy pointed a single, and stopped to order when the gun was fired. Boy pointed a bevy by the edge of a ditch, and along the ditch made two points on singles. Next he dropped to the flush of a bevy. Next he pointed in weeds, on the footscent, no doubt, as a bevy was flushed a short distance further on. Up at 12:02. Boy had much the better of the competition in every respect. The party then went to lunch.

Count Hunter and Brant were cast off at 1:25. Brant pointed a bevy, the dogs being separated at the time. Count made a point on the scattered birds; Brant backed; both were steady to shot. Brant made three flushes on the scattered birds. Count made a point in pines and nothing was found. Brant made three points on scattered birds and Count made one. Up at 2:25. Both dogs worked diligently and showed good speed and range.

Miss Bangle and Joe Cummings, Jr., were cast off at 2:44. Joe made a find on a bevy and pointed it; Miss at the same time came up and made a point on it; Joe turned his head, saw her on point and backed. Both were steady to shot. Joe pointed; nothing found. Joe next ranging through corn, jumped prettily into a point on a bevy, and was slightly unsteady to shot. On some of the scattered birds near by, Joe pointed, roaded and pointed, and one of the birds flushed wild. Up at 3:31. Both dogs were wide, fast rangers, and they showed good judgment and ability. They made a very favorable impression by their high performance. Miss was the better in style, while Joe was slightly the better in range and judgment.

Sioux and Geneva began their heat at 3:35. Sioux made a point, and some barnyard fowls were seen close by. Geneva pointed a bevy stanchly and accurately. The dogs were separated at the time. They were brought together and the scattered birds were followed. The horsemen flushed a number of birds; in the sedge Sioux pointed a single; next Geneva pointed and a single flushed wild. Both were steady to shot. On further seeking, each made a good find and point of a bevy; on the scattered birds of the first, Sioux pointed a single and then Geneva pointed, footscent probably, and was well backed. Up at 4:28. Both were fast, good workers, though Sioux cast entirely too wide at times, and then was out of bounds.

Fairview Tom and Khartoum were cast off at 4:35, and they ran till 5:10. The heat was a ragged one, though Khartoum made by far the better competition. He pointed a bevy and was backed. Neither dog ranged with judgment.

Tuesday, Fourth Day, Nov. 21.

The morning was darkly cloudy and calm, with signs which portended rain, but gradually the clouds dissipated and there was a hazy breaking out of the sun for awhile. The conditions seemed to be favorable for the birds to seek a food supply, for they were out in good numbers. A moist air was a condition for road work. A start was made near the gold mine, some five miles from town.

Pride and Frank F. began at 8:39. A bevy of birds were seen to flush, and both dogs were near it at the time. On the scattered birds, Pride pointed and nothing was found. Frank pointed a single, which flushed, and Frank broke in. In a large stubble field, Frank eagerly chased a dove which was flying high in air. Nearing the side of the large field, he stopped suddenly on a point on a bevy. The heat as a whole was a poor one. Up at 9:24. Their range was irregular and middling, and their work on birds was inferior.

Glen Noble and Ute began their competition at 9:33. Glen pointed in a draw; nothing found. One of the handlers walked into a bevy, but it was not followed. In the meantime a bevy was marked down by the spectators and the dogs were worked toward it. Glen pointed a single. Ute backed, and broke shot. Ute pointed and moved on, and the scattered birds flushed wild. The work on birds was very inferior. Glen next pointed and flushed the bird. Up at 10:28. Both had speed, but their range was without much judgment.

Second Series.

Four dogs were retained in the second series. They were Count Hunter, Geneva, Sioux and Brant. This was rather a severe cutting down of the competition, and not justified by the circumstances of it, for there were several other dogs entitled to more consideration on their merits. There were also Harwick Boy, Miss Bangle and Joe Cummings, Jr., the latter with a most excellent record of finding, pointing, ranging and general good performance, though deficient in style.

Count Hunter and Geneva were cast off at 10:46. The dogs were soon tangled up with a bevy in a dense thicket, and were ordered out into the open where their work could be seen. Count pointed a bevy in stubble and was steady to caution. Count pointed a rabbit, and about fifty yards away Geneva pointed some remaining birds of the bevy, which had run. Next she pointed footscent, then she pointed a single bird about one hundred yards further on in the stubble. Sent on, Geneva pointed a bevy and Count refused to back. Up at 11:24. Both dogs were fast and wide rangers. Geneva made a good showing in this heat.

Sioux and Brant were cast off at 11:29. The heat was disorganized more or less from start to finish, though the failure of Sioux to keep on the course. Most of the time the handlers were apart, out of sight of each other. Part of the time, Sioux was working to the gun, and part of the time she seemed to be self-hunting. She was lost part of the time, and according to the exigencies of the case, her handler was far to the right or far to the left of the course, but seldom on it. Her bad work in this respect was quite sufficient to have disqualified her in view of the fact that there were so many other good puppies in the stake, puppies, too, which worked reasonably well to the gun. Sioux made a wide cast to the left at the start off, presumably following some of the wagons, and her handler started across a big wheat field after her, but she was making a so-called cast, and after a time turned back to the course. She pointed on a side hill in stubble, at the edge of pines; nothing found. Brant pointed a bevy in open stubble and was steady to wing. Sent on. The dogs became widely separated. On hunting up Sioux she was found pointing a bevy in woods. The birds were followed, but nothing was done on them. Rose was held in check in the open meanwhile; there was erroneous management at this juncture, for when one dog was working alone, the other one had an equal right to work alone also. The dogs were brought together again, and soon Sioux was lost again. She was found on a point, to which a single bird was flushed, but it was averred by some that she had a bevy and the main part of it flushed before the judges arrived. She was steady to shot. The dogs were again brought together. Brant pointed a bevy and made two points on singles; Sioux also made two points on singles. Up at 12:34. Sioux had speed and style, but very poor judgment in beating out her ground, and seemingly had a dull perception of the proper manner of working to the gun. Brant's range was ordinary and his speed irregular. He showed fairly good ability in his work on bevies and singles. Up at 12:34.

The judges announced the winners as follows: First, Geneva; second, Sioux; third, Count Hunter.

Wednesday, Nov. 22, Fifth Day.

A solid mass of black clouds obscured the sky when the start was made, and the ground was thoroughly saturated from heavy rains which fell in the early morning hours. The first brace was cast off on the grounds near Conover. The competition was hardly well started before rain set in and delayed it some minutes. Afterward showers of more or less length fell during the day, but the judges kept the competition going till dark regardless of the bad weather. Birds were found in numbers varying greatly with the different parts of the grounds, some sections containing plenty, other sections a dearth. Eight braces were run.

First Round.

Macclesfield and General Gladstone started at 8:45, and rain falling soon afterward, the party went to shelter some minutes till it ceased. Macclesfield pointed a bevy and General made a point on the scattered birds. They ranged irregularly, middling wide at times, but showed no field trial ability. Up at 9:43.

Rowland and Young Jingo started at 10:01. Jingo went fast and wide, but lacked good judgment in beating out his ground. Jingo pointed a bevy and Rowland backed, and both were steady to wing. On single birds Jingo roaded and pointed and the birds flushed wild. Jingo flushed a single and pointed the bevy and was backed. Rowland flushed twice on sigles. Toward the latter part of the heat he lessened his range and speed, showing some signs of weariness. Jingo was the better ranger and the better performer on birds, though his point work was not so good as it might have been. Up at 10:47.

Jack and Nana were cast off at 10:56. Nana made game on a bevy and flushed it. The birds were followed into pine woods. Jack made six points on the scattered birds. Nana had a good nose, but when on birds was over eager and flushed them. Up at 11:35.

Bang III. and Lad of Jingo began at 11:49. They cast about in a large wheat field; Bang, with a high nose, ran several yards up wind and pointed; Lad, crossing from the right in front, took the point; nothing was found, but one of the judges said a bevy had flushed near the dogs. Lad pointed a lark and was backed. On some scattered birds Bang made a point on a single, and again pointed and no bird was flushed to the point, though one was flushed close by after he had moved on. Lad pointed a single. Up at 12:56. Both ranged wide and fast, beat out their ground with indifferent judgment and their point work was very ordinary. Lunch was next in order.

Gough and Lady's Count Gladstone were cast off at 1:59. Lady soon rooted up a bevy willfully, and Gough, coming in soon afterward, flushed a remaining single. The birds were followed into pines. Both did some roading and pointing without results. Lady dropped to a flush on a single and Gough backed. The dogs were next worked on a bevy which had been marked by spectators. Lady made two points to which nothing was found and made a point on a chicken. Gough flushed a bevy. The heat was poor in every particular. Up at 2:32.

Colonel R and Donna began at 2:37. Colonel started a fast and wide range, which he maintained with judgment to the close of the heat. He pointed a bevy nicely, which flushed wild while he was held on point for Donna to be brought in to back. Donna made an indecisive point on a single, and next she made a good point on a single in pines and was steady to shot. Colonel made a good point, and after being sent on each at the same time pointed a bevy respectively some yards apart. Colonel finished with a good point on a single. He made an excellent showing, and was head and shoulders over all competitors of the day.

Admiral Drake and Falmouth Suffolk started at 3:29. Suffolk pointed a bevy nicely in open stubble at the edge of pines, and Drake backed. Both were steady to shot. Suffolk made a good point on a single. The dogs, after taking a long cast across a wheat stubble, were found on point about 25 yards apart; the bevy flushed close in front of Suffolk. Suffolk made three or four accurate, good points on singles in the pine woods, and Dash made one and was promptly backed. Up at 4:24. The range of both was middling as a whole. Suffolk showed excellent capabilities on birds.

Pink's Boy and Roysterer were cast off at 4:32. Roysterer pointed in corn by the side of a ditch about 60 yards from the judges. Avent went forward to flush and fired his gun; no one saw any bird fly. On some scattered birds flushed by horsemen, Boy made a point; then each pointed scattered birds independently in heavy weeds. Then both did a lot of drawing and false pointing, Roysterer offending the more by many repetitions of the fault. He made a point on a single in oak woods. He made several other points and made game frequently but failed to locate. Up at 5:16. Both dogs had speed, but they made a poor showing, partly from rank bad handling and partly from bad performance. This ended the day's work.

It was near dark and rain had set in. On the whole it was an uncomfortable day, showery betimes and wet under foot always.

Thursday, Nov. 23, Sixth Day.

The morning was dark and somber. More or less wet clung to the grass and to the branches of trees and bushes. A light breeze favored good scenting conditions. Toward noon the weather cleared up, the sun burst forth and the temperature was much like that of late summer.

Birds were found in fairly plentiful numbers, and good work on them was done by some of the best performers in the competition. A start was made near the Hewitt farm.

Minnie's Girl and Prime Minister began the morning's work at 8:36. Some birds were seen to fly in woods, but no one could see the course of their departure. Minnie pointed a bevy in woods. Sent on, she pointed, then started to road the bird, which had run. Minister cut in ahead, jointed in the roading, and both pointed the single bird. Sent on, and the dogs ranged wide over some large wheat fields. Minnie displayed the better judgment in beating out the ground. She pointed a bevy by a farm road 200 or 300 yards away, and a colored lady who was hobbling along close to her flushed the bevy. Minnie behaved well to wing. Minnie next pointed a bevy in a thicket and standing in a creek she pointed, and two or three birds were flushed from the dense briars on one bank of it. A bevy in the meantime had been flushed and marked down. Minister pointed by the edge of a ditch where the birds were and several flushed some yards away. Next he pointed and a single flushed further up the ditch. Minnie pointed a single in corn. Up at 9:47. Both had good speed and went wide in their range, but Minnie displayed much the better judgment in beating out her ground and was far the better in pointing and finding.

Ponce and Falmouth Dixie were cast off at 9:54. Both started out with middling range, but as the heat progressed Ponce went out wider. He made four points on single birds and Dixie made one. Each backed well. Up at 11:14.

Dave Earl and Count Danstone were cast off at 11:20. Dave flushed a bevy, after which he worked about and pointed on the trail, Count joining in the work. Count pointed a single in woods. Next Dave pointed a bevy in open field and Count backed. The scattered birds afforded a number of opportunities, but no points were secured. Up at 12:04. They were fast and wide rangers, fairly good in judgment, but their point work was not up to the clean finish the circumstances required.

Berber and Uncle B. were started at 12:18. Each made a point to which nothing was found. A large bevy was marked down in woods, affording a number of opportunities for points. Berber made a point and nothing could be flushed to it; but after he had moved on a single was flushed close by. Up at 1:10. The heat was a poor one. Uncle was much the wider ranger and had the most speed. The party went to lunch.

Second Round.

Eight dogs were continued in the competition and were run as follows:

Young Jingo and Jack were cast off at 2:39. The judges rode up a bevy and it was followed on the side hill in sedge. Jingo pointed scattered birds and Jack caught scent as the bird flushed wild. Jack was lost in pine woods; he pointed a bevy. Searching for the scattered birds, he made two points to which there was nothing found, one point on a single, one flush and a point as the bird flushed simultaneously. Jingo was not in the competition in the meantime, he being held up while Jack was lost till his return after working on the single birds. Jack showed the better judgment in beating out his ground. Each ranged wide and fast. Up at 4 o'clock.

Lad of Jingo and Colonel R. started at 4:11. Lad pointed a bevy in weeds and Colonel backed well. On the singles Colonel secured one point and Lad dropped to a point on a bird, which flushed wild. Sent on, Colonel took a long cast up through fields about an eighth of a mile away and pointed by the edge of a small but dense briar thicket. Lad, coming in from the left, saw him and drew in till he also pointed the bevy, refusing to back. The birds were flushed with difficulty. The dogs went around the thicket and each got a point on singles. Some of the birds were marked down in a draw. Lad pointed once and Colonel twice on singles, Lad a bit unsteady to the last flush. Both were fast and wide, but Colonel was the faster and showed the better judgment in range and the better performance on birds. Up at 4:48.

Donna and Prime Minister were cast off at 5:05. The judges flushed a bevy in the open weed field which the dogs missed finding, though Minister passed close by it. Donna made a point on a single and two points on as many bevies, and was steady to shot. Donna had a medium range, and good work on birds. Minister ran fast and wide, but his bird work was indefinite, as he found nothing. Up at 5:35. This ended the work of the day.

Friday, Nov. 24, Seventh Day.

The morning was raw and cloudy, with a threatening rain, but toward noon the clouds gradually broke away and the temperature rose to a comfortable degree. In the afternoon the sun shone forth bright and warm. Birds were found in fairly good numbers, though the quantity, as usual, varied much with the grounds and the dogs which were running. A start was made early. There was a good attendance of visitors, notwithstanding the bad weather and the several days of competition.

Minnie's Girl and Uncle B. were started at 8:24. Soon Uncle pointed in sedge in woods, and a cat was seen sneaking away from it. Minie pointed a bevy in sedge, and was steady to shot. The dogs were separated wide apart for some minutes. Uncle in the meantime pointed a bevy. Next, Minnie pointed a bevy on a side hill in sedge. Up at 9:16. Minnie had the better of the heat. She ranged with judgment, and her work on birds was marked with wisdom and good finish.

Third Round.

Colonel R. and Jack were cast off at 9:45. Beside a fence Colonel pointed a bevy and Jack apparently backed. Working on the scattered birds, each made a point and nothing was found. Sent on. Colonel pointed a bevy in woods. The dogs were sent on to find another bevy. Colonel pointed in woods, and moved on; Jack coming up, pointed at the same place, and flushed a single; then he drew on and located the bevy some distance further in the woods. On the scattered birds, Jack dropped to a flush. Up at 10:39. Both were fleet and good rangers; Colonel the better.

Minnie's Girl and Lad of Jingo started at 10:52. Minnie made a point, to which nothing was found. Next in woods, Minnie pointed a bevy and afterward a single bird. Next on some running birds by the side of a ditch, Lad refused to back Minnie's point; he stole the point and Minnie backed him. Minnie next pointed to a flush. Lad found the next bevy in weeds and was nicely backed. Next he flushed a single. Lad next made a flush on a single, and Minnie made a point, to which nothing was found. In open sedge, Minnie flushed two of a bevy, and then pointed the rest of it. Up at 11:55. The party then went to lunch at the Hewitt place.

Final.

After lunch, the judges announced that Colonel R. and Minnie's Girl would run together three or four minutes, and they were cast off in an open stubble close by. Colonel took a cast, and soon was on a point, but the dogs were ordered up at that juncture, the purpose being more to comply with the rules than to race the dogs. The judges announced the winners as follows: First, Colonel R.; second, Minnie's Girl; third, Jack.

The Subscription Stake.

There were twelve starters in this stake, several of them being competitors in previous stakes of the present trials. This raised some mild complications, for as drawn, dogs which ran in the All-Age Stake on Friday would have to run again in the Subscription Stake on that day. To establish an equity, discretionary power was conferred on the judges to change the order of drawing if it was necessary to do so to maintain a proper equity. The competitors were:

Avent & Duryea's black, white and tan setter dog Dot's Roy (Orlando—Dolly Wilson), J. M. Avent, handler, with Fox & Blyth's black and white setter dog Dave Earl (Count Gladstone IV.—Dan's Lady), D. E. Rose, handler.

Geo. Crocker's black, white and tan setter dog Sam T. (Lake Roy—Betty B.), S. C. Bradley, handler, with Charlottesville Field Trial Kennels' blue belton setter bitch Pinmoney (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

Avent & Duryea's Sioux, J. M. Avent, handler, with Geo. Crocker's Minnie's Girl, S. C. Bradley, handler.

Pierre Lorillard, Jr.'s, Pink's Boy, C. Turcker, handler, with Geo. Gray's Young Jingo, owner, handler.

H. R. Edwards' Colonel R., George E. Gray, handler, with P. Lorillard, Jr.'s, Jack, C. Tucker, handler.

W. P. Austin's Lad of Jingo, D. E. Rose, handler, with H. K. Devereaux's Uncle B., Geo. E. Gray, handler.

Sioux, Minnie's Girl, Pink's Boy, Young Jingo, Colonel R., Jack, Lad of Jingo and Uncle B. ran in the previous stakes, and their ownership and breeding will be found in the summaries.

At the conclusion of the All-Age, the Subscription Stake was begun. The first brace was taken with a view to guard dogs which had run in the forenoon.

First Round.

Pink's Boy and Young Jingo started at 1:04. Jingo made two good finds and points on bevies, and also four points on single birds. He apparently made a flush on a bevy, as he was suspiciously close to it. Boy made two finds and points on bevies, two points to which nothing was found, and flushed a single which Jingo pointed. He also made a point and a bird flew out of the tree top overhead. Each backed well, and ranged with good judgment. They maintained a good uniform speed, and the heat as a whole was quite a good one, the dogs working nicely to the course and honoring each other's points promptly. Both were going strong at the finish.

Dot's Roy and Dave Earl began at 3:10. The work on birds was ragged. Out of five bevies found, only two were pointed by the dogs, each having one to his credit. In the second hour both dogs showed signs of weariness, and they ranged but moderately thereafter. They showed a degree of merit less than what was required for good competition.

Saturday, Nov. 25, Eighth Day.

The weather was raw and damp, with a cloudy sky and signs of rain. The spectators had fallen off greatly in

numbers, though there were a few of the sterling enthusiasm which impelled them to stay from start to finish. A start was made near the Gibson place.

Minnie's Girl and Sioux were cast off at 8:10. Neither dog ranged in the form shown in previous competition of the week, and they missed a number of good opportunities to point bevies, which were in the course worked over. Bradley walked up a bevy and Girl was then seen to be pointing, she having been on point before the birds were flushed. She made two points on singles. Sioux flushed a single bird, made a false point, and passed within a few feet of a bevy which he should have pointed, and pointed a bevy toward the close of the heat. The judges rode up two bevies on the course.

Sam T. and Pinmoney were started at 10:15. They began roading in opposite directions in a bottom, pointing now and then, till they were three or four hundred yards apart, and each pointed a bevy. Soon Pinmoney was lost for some minutes. The heat was resumed, and run over the two-hour limit to make up for the lost time. During the further running, Sam pointed three bevies and made four good points on single birds. He pointed a number of times on footscent, and seemed to be overcautious. He backed promptly and prettily. Pinmoney pointed two bevies, and made another point, apparently on a rabbit, but when sent on a bevy was flushed a few yards ahead of the point. She made a false point or two. Both were fast and beat out a great deal of ground. Pinmoney showed the better judgment and better execution on birds.

Colonel R. and Jack were cast off after lunch at 1:04. They ran in a form far inferior to that of their previous competitions. Jack false pointed repeatedly, and Colonel seemed frivolous, and lacked interest in his work. Jack went wide and would have made a good showing but for his bad errors in pointing false. He made five points before he made a true point, his sixth being a good one on a bevy. He made two points on single birds in woods and one flush, after which in open stubble he made another false point. Colonel was not doing any better. He first flushed a single bird found alone in the open. Then on single birds of Jack's bevy he made two flushes, and in the open by the edge of the woods he pointed and some birds were seen to flush. The heat was a poor one in respect to bird work, and was inferior in respect to range and judgment.

Lad of Jingo and Uncle B. were cast off at 3:12. The heat was marked by plenty of bird work, though the pointing and locating were rather erroneous. Lad showed distinct ability in finding and locating, but he preferred to flush rather than point, and many of his points were from sharp caution, instead of honest inclination on his own part. However, a few times he pointed honestly at a distance, after choosing his own distance from the birds, which was generally as close as he could get to them. He has promising material in him, which will be in more useful shape after further experience and discipline. He has a bad habit of refusing to back and stealing the point. On the other hand, Uncle backed stanchly and well. He found and pointed four bevies, made three points, to which nothing was found, and pointed eight times on scattered birds. Uncle made two bevy points, divided three points on singles, and made two points on them alone. Both were going well when the heat ended.

Monday, Nov. 27, Ninth Day.

Second Series.

Four dogs were retained in the morning, namely, Young Jingo, Sam T., Lad of Jingo and Pink's Boy.

Monday Morning, Ninth Day, Nov. 27.—The rains fell yesterday and throught the night; this morning there is no prospect of its clearing up.

Monday Night.—Special to Forest and Stream: The second round was begun to-day at 1:58. The grounds were muddy and the birds proved very hard to find. None of the dogs ran in their previous good form. Young Jingo beat Sam T. in an ordinary heat. Sam's overcaution and indecision scored against him. He pointed a bevy and twice on singles. Jingo pointed a bevy and next stopped to the flush of a single, and the bevy flushed wild to a point.

Pink's Boy beat Lad of Jingo, being stancher and more obedient. Boy pointed two bevies well, and roading scattered birds he pointed, Lad roading them to a flush.

The heats were one hour long. The winers were: First, Pink's Boy; second, Young Jingo; third, Lad of Jingo. The decision gave satisfaction.

B. Waters.

Chat of the International Trials.

Editor Forest and Stream:

I trust there is no apology necessary for a short script upon anything pertaining to sporting matters seeking entry into your journal. Having just returned from our annual international field trials, the feelings and associations connected therewith are still strong upon me, and it is a pleasing revery to review the memories of that occasion—to mentally enjoy them again—perhaps to furnish something of the same sensation to many who were there present, as well as to some of your readers who had not that privilege.

Field trials to all who have once contracted that disease are an annually recurring malady, which has its regular onset, manifestations and course, like other endemic diseases. Often discouraging and disappointing in results as far as our favorites and anticipations of their success are concerned, yet to the conscientious follower of them in their true object and purpose there intermingles a sense of enjoyment and enthusiasm on the whole, urging us on afresh to further efforts and a stronger desire yet to down the other fellow's dog some day; while the associations connected therewith generally are and will be a source of pleasure to recall. Our old-time sporting friends we can reasonably hope once more to meet, to hear the same old chestnuts, brag about our dogs—what they can do and have done—tell about the wonderful bags and shooting made and how Dash made that wonderful point, standing on his ear, tail straight up in the air.

Very well, then; to go on to practical matters. Our trials this year were rather dampened by the weather interfering with the work at first and the enjoyment of the outing; yet on the concluding day the birds, having lain up for two days, were all on the feed and we were scarcely out of birds for ten consecutive minutes during the day, furnishing abundant opportunities for the dogs and facilitating the work of the judges. So many birds I have never seen in the many years I have attended these trials.

In both Derby and All-Age stakes we had the pleasure of seeing a real good dog at his work under the best conditions to show his quality, and no man who loves a good dog would have failed to enjoy it. The work of the winner of the All-Age was exceptionally fine, and all he did marked him as a very superior dog. It is a matter of much regret that we have likely seen the last of him, as he has been sold to a gentleman of New York city. It is dogs like these that truly exemplify the object of field trials; and to see their work is a good liberal education in dog knowledge, as well as a stimulation to raise or get one as good. The gentleman who bought him is to be congratulated on his purchase. If he is not suited with him, he will be a mighty hard man to suit.

The Derby winner proved herself a very smart bitch and well deserving of the place. Her work stood out sharply from that of the rest. The second dogs in both stakes, owned by Mr. Wells, of Chatham, were also of the first class. Old Cleo, notwithstanding her age (nine years), and having ran three hard heats inside of five hours (the last two consecutively), was as fresh in her concluding heat as in her first, ever busy among her birds and never long out of them. She is a rare bit of stuff, though too diminutive to show up well in field trial work. She does not catch your eye with stylish points, dashing style and picturesque work, yet she is out strictly for business and generally is strictly in it, too. One could not but be in sympathy with her, battling for a place and to retain her reputation in the face of her declining years.

In Milo Mr. Wells has the material for a very promising dog who will likely be heard from in the future. Joseph M., winner of third in the All-Age, started in well and did some high-class work, but failed to maintain it in his concluding heat. The winner of third in the Derby, while a very good little bitch, failed to make the most of her opportunities, chiefly when most needed. She will with age do better. Dan Thiers, fourth in Derby, a large upstanding dog with a very good head, was inclined to get beyond killing range and at times was a little hard to get. With more experience and under better control he will make a good one. Of the remaining dogs it might be said that some of them ran in hard luck and some did not come up to expectation. The judges had no difficulty in picking the best of them according to the work shown. There were of course more or less differences of opinion in the judgments given. On the whole the awards were thought satisfactory.

And thus terminated a very enjoyable meeting. Had the weather been a trifle better it would have been more so. Yet it could hardly have been better adapted to the purpose of the meeting itself, forcing the birds out on the last day into the stubbles to feed, making it a red-letter day for dog work.

There is only one drawback to this location for the trials, and that is the long drive and the horrible roads. Once at Mitchells Bay and under Host Raymond's hospitable roof we are all right, and right among the birds, which after all is the main consideration.

We missed many old-time faces this year that had become almost a feature of these trials, such as Messrs. T. Johnson, Jno. Davidson, Hough, Hayman, Taylor, Lacy, L. H. Smith and others; but other and younger men are cropping up. Soon these will become the old-timers in their turn, and we old fellows will have joined our old favorites in the happy hunting grounds in the Indian's paradise and nought remain of us but a memory. I doubt if the young fry will get more enjoyment out of it than we old fellows have. I trust the foundation we have laid they will continue to build upon and maintain the standard of excellence the old chaps have worked hard to establish. Adieu till 1900.

Vox Canis.

Points and Flushes.

The host of friends of Mr. W. W. Titus, the famous handler, whose home is at West Point, Miss., will be profoundly grieved at the great loss which befell him while at Newton, N. C., attending the E. F. T. C. trials. His barns and kennels were burned, with about thirty tons of hay and 200 bushels of corn. The dogs were all liberated, but two ran back into the kennels and were burned to death. On Monday night the sportsmen present subscribed $200 for Mr. Titus, as a testimonial of the sympathy they felt for him, and as a partial lessening of the calamity. The loss was estimated at about $1,000.

Indian Child Life.

All persons who are interested in outdoor life, and above all in hunting, feel also an interest in the primitive American hunter—the Indian—about whose doings so much has been published in Forest and Stream. In fact, as time goes on and the occupancy of this country by the Indians becomes more and more remote, the public at large is becoming anxious to learn more and more of this departed race—what were his beliefs, how he lived and loved.

Evidence of this increased interest is seen in the publication in popular periodicals of stories of Indians and in the more frequent publishing of books about them, which meet with ready sale. One of the last of these, published by the F. A. Stokes Co., is a little book entitled "Indian Child Life," the joint production of Mr. and Mrs. E. W. Deming. The text, by Mrs. Deming, is written for very small children and serves merely to explain the pictures, though giving also many suggestions as to the child habits of various tribes of Indians.

Mr. Deming's eighteen pictures in color, however, appeal to the eye of any age. They give a very clear insight into the camp life of the little Indian child, show his sports and games, the pets that he has, the accidents that may befall him, the instructions that he receives, and in one case the dreadful punishment that comes to him when he disobeys the advice given him by his parents. The text is copiously illustrated by black and white sketches, which are full of character.

We know of no one who catches the true flavor of Indian life as Mr. Deming does, and in these pictures of the little red children and their friends he is at his best. The volume is one which cannot fail to delight all the young, and the best thing about it is its fidelity to nature.

Yachting.

The Canada cup has at last reached Chicago, after a brief stay in Rochester, and it was the centerpiece at the banquet given by the Chicago Y. C. to those of its members who took part in the challenge for it. The banquet took place on Nov. 23 at the Chicago Athletic Club, the guests being Vice-Com. G. R. Peare, Rear-Com. George Warrington, S. H. Smith, D. D. Griffiths, J. B. Berriman, Sec'y C. H. Thorne, W. R. Crawford and H. G. Lytton. F. K. Bull was absent, being in Racine, and Com. Morgan was prevented from attending, having been injured in a buggy accident in the afternoon. Messrs. Burroughs and Van Voorhis, of the Rocrester Y. C., and Mr. C. G. Davis were invited, but sent letters of regret. The Canada cup was shown on the banquet board, draped with the American and Canadian flags, and the same scheme of decoration was followed out in the fittings of the hall. Charles E. Kremer presided as toast master, and different members responded fittingly.

As relating to a well-known international trophy, the dispute between the Seawanhaka Corinthian Y. C. of Oyster Bay and the Royal St. Lawrence Y. C. of Montreal is far more than a mere private quarrel between two clubs; and we give as fully as possible such of the proceedings as have been made public. The main point of issue, whether the course laid out by the Royal St. Lawrence sailing committee was in accord with the conditions of the declaration of trust, is a difficult one to decide; and a fair decision can only be reached through a consideration of the evidence on both sides. So far as the friendly relations of the two clubs are concerned, the letter of the Seawanhaka race committee has put matters back where they were on the night of the receipt of the famous Kerr-Dresser telegram in 1898.

From one point or another about the Lakes a report comes every week of a new challenge for the Canada cup, but none has yet been sent, and there is very little probability of another match before 1901.

Sir Thomas Lipton has offered his steam yacht Erin to the British Government free of cost as a hospital ship; but the offer has been declined.

The death was announced by cable last week from London of Dixon Kemp, for many years yachting editor of the Field, at the age of sixty. Mr. Kemp's work for yachting was such as to demand a more extended review than is possible on this short notice. Another English yachtsman who has recently passed away is Sir George Curtis Lampson, the first owner of Miranda, schr., designed and built for him by John Harvey in 1875.

There is afloat about City Island a vague rumor that in the event of a challenge for the America Cup for 1900 a defender of the Cartoon type will be built there by F. T. Wood, builder of Syce, Kestrel, Norota, Pyxie and other fast yachts, from the designs of Gardner & Cox.

The Herreshoff Manufacturing Company is already at work on four of the new one-design cutters, for Messrs. W. K. Vanderbilt, Jr., H. P. Whitney, E. D. Morgan and August Belmont. The dimensions are reported to be 104ft. over all, 70ft. l.w.l., 19ft. 6in. beam and 14ft. draft; 77ft. R.M. These yachts will have as tenders a class of one-design steam yachts of the torpedo boat type, also built by the Herreshoff Manufacturing Company. They will be 81ft. over all, 72ft. l.w.l., 11ft. 6in. beam, with flush decks and no deck houses. Messrs. Morgan, Vanderbilt and Belmont have already placed orders for them.
